PROF. CHARLES SMITH MORRIS, A. M., LL. D.

Of the Philadelphia Academy of the Natural Sciences

With the Assistance of the following

ASSOCIATE EDITORS AND SPECIAL CONTRIBUTORS:

PROF. FREDERIC A. LUCAS, M. D., Ph. D.
Curator Department of Comparative Anatomy, U. S.
National Museum, Washington, D. C.

PROF. MARCUS BENJAMIN, A. M., Ph. D., F. C. S.
Of the Smithsonian Institution, Washington, D. C.

PROF. AMOS EMERSON DOLBEAR, A. M., Ph. D.
Professor of Physics, Tuft's College, Mass.

PROF. LEWIS SWIFT, Ph. D., F. R. A. S.
Director of Echo Mountain Observatory, California.

PROF. J. MARK BALDWIN, A. M., Ph. D.
Professor of Experimental Psychology, Princeton
University.

PROF. SIMON NEWCOMB, LL. D., M. N. A. S.
Director U. S. Naval Observatory, Georgetown, D. C.

REV. JOHN F. HURST, D. D., LL. D.
Bishop of the M. E. Church, and Chancellor of the
American University, Washington, D. C.

ISIDORE DELSON
Department of Bridges, New York

CHARLES S. DOLLEY, A. M., M. D.
Late Professor of Biology, University of Pennsylvania.

REV. GEORGE T. PURVES, D. D., LL. D.
Professor of New Testament Literature and Exegesis,
Princeton Theological Seminary.

PROF. DANIEL G. BRINTON, A. M., M. D.
Of the University of Pennsylvania, and President of the
American Association for the Advancement of Science.

WILLIAM C. HUNT
Chief Statistician for Population, Twelfth Census.

ARTHUR BLES
Officer of the French Academy.

ace, he allied himself with Isabella, queen and the barons who shared her discon-
 cealed him as her paramour, and
 aid from the count of Hainault, they
 and in 1326, deposed and imprisoned the
 rned the kingdom at his will. The
 young prince was proclaimed (Edward III.); *M.*
 was created earl of March, and took a large share of the es-
 tates of the Spencers; the deposed king was shamefully
 murdered by his orders; and at last Edward, weary of
 subjection to this insolent usurper, and backed by the
 public hatred of him, assumed the government. *M.* was
 seized at the castle of Nottingham, and hung at Tyburn,
 1330.

Mortimer, EDMUND, EARL, espoused Philippina, daughter
 of Lionel, second son of Edward III., king of Eng-
 land — ROGER, son of the preceding, was declared heir
 to the crown in 1385, but died in 1399, leaving an only
 daughter, who married Richard, Duke of York, giving
 to that family a claim to the throne of England. Hence
 arose the wars of the "Red and White Roses," between
 the houses of York and Lancaster.

Mortimer, in Illinois, a village of Lake co., about 45
 m. N. by W. of Chicago.

Mortise, (*môr'tis*), *n.* [Fr. *mortaise*, probably from Lat.
mordere, *morsus*, to bite, to
 bite into.] (*Carp.*) A cut or
 hollow place (*a. a.* Fig. 1862),
 made in timber, to receive
 the tenon, *b. b.* of another
 piece of timber.

Fig. 1862. — MORTISE.

Mortise-joint, a joint made
 by the cohesion of a mortise
 and tenon. — **Mortise-lock**, a
 lock constructed to fit into
 a mortise cut in the stile of a door. — **Mortise-wheel**, a
 wheel of cast-iron, having wooden cogs let into mortises
 on its periphery.

Mortise, *v. a.* To cut or make a mortise in. — To cut by a mortise
 and tenon; as, to mortise a beam into a post.

Mortising-machine, (*-mô'sheen*), *n.* A machine
 for the construction of mortises.

Mortling, *n.* Same as MORLING, *q. v.*

Mortmain, *n.* [Fr. *mort*, dead, and *main*, hand. See
 MANUAL.] (*Law.*) Possession of lands or tenements in
 dead hands, or hands that cannot alienate. *Alienation*
in mortmain is an alienation of lauds, tenements, or
 hereditaments, to any corporation (sole or aggregate),
 guild, or fraternity. The reason for the title, according
 to Blackstone (book i. c. 18), is that such alienations
 were usually made to ecclesiastical bodies, the members
 of which (being professed) were reckoned dead persons
 in law; laud, therefore, holden by their might, with
 great propriety, be said to be held *in mortua manu*.

Mort-ne', *n.* Same as MORNE, *q. v.*

Morton, JAMES DOUGLAS, 4th EARL of, regent of Scotland,
 was younger son of Sir George Douglas, of Pittendreich,
 and studied at Paris. Having married a daughter of
 the 3d earl, the earldom was transferred to him on the
 death of his father-in-law, in 1553. He favored the
 Reformation, though not at first very boldly, and was
 made lord high-chancellor of Scotland in 1553. Three
 years later he took part in the murder of Rizzio, and
 fled to England; he soon, however, obtained the queen's
 pardon, through the influence of Bothwell. Informed
 of the plot against Darnley, he refused to share in it,
 but did not reveal it. He was one of the leading oppo-
 nents of Bothwell, was again made chancellor, and in
 1572 was appointed regent of the kingdom. His ad-
 ministration was arbitrary and burdensome, and having
 made himself odious to the people, he resigned in 1577.
 He found means of recovering his high offices soon after-
 wards; but in 1581 he was charged as accessory to the
 murder of Darnley, tried, condemned, and beheaded, 3d
 June. He died with great calmness, firmly maintaining
 his innocence.

Morton, SAMUEL GEORGE, an American physician and
 ethnologist, was b. at Philadelphia, in 1793. He studied
 medicine at his native city and at the university of
 Edinburgh, graduating M. D. in both places, and in 1824
 settled at Philadelphia, where he not only practised
 his profession, but distinguished himself as an ardent
 student of physical science. Ethnology at length
 became his chief study, and as a basis for investigation
 of differences in the structure of the skull in the dif-
 ferent races of men, he formed an immense collection
 of skulls, both human and brute. He published the
 results of his researches in the works entitled, *Crania*
Americana; *Crania Egyptiaca*; and *Types of Mankind*.
 In 1839 he became professor of Anatomy in the medical
 college of the University of Pennsylvania. He was a
 member of the Academy of Natural Sciences in Phila-
 delphia from his 21st year, and its president for a num-
 ber of years before his death; he left to this institution
 his collection of skulls—about 1,500 in number—900
 of them human. Died May 15, 1851.

Morton, WILLIAM THOMAS GREEN, M. D., an American
 dental surgeon, and the reputed discoverer of anesthet-
 ics, b. in Mass., 1819. In 1840 he commenced the study of
 dentistry in Baltimore, and two years later commenced
 practice in Boston. In 1844, in the latter city, while en-
 gaged in experimental study, Dr. *M.* discovered and intro-
 duced ethereal anesthesia, which he patented under the
 name of *letheon*, offering its advantages, however, free of
 cost to the charitable institutions of England and the
 U. States. The committee of the French Academy award-
 ed the Montyon prize of 5,000 francs to be equally di-
 vided between Dr. Jackson and Dr. *M.*; but the latter re-
 fused to receive this joint award, protested against the
 decision of the Academy, and in 1852 received the Mon-
 tyon prize medal. D. 1868.

Morton, OLIVER PERRY, an American statesman, b. in
 Ind., 1823; educated at Miami University; began prac-
 tice of law in 1847; elected circuit judge in 1852, lieut.-
 governor in 1860, governor, 1861-7. He was active in
 support of the Federal government during the war. In
 1863, he was opposed by a Democratic legislature, who
 contemplated taking the military power out of his
 hands, and placing it in those of four of their party.
 The Republicans defeated this attempt by withdrawing,
 leaving each house without a quorum. He borrowed
 money upon his personal responsibility to carry on the
 State government, which was subsequently repaid. U.
 S. senator in 1867; one of the Republican nominees at
 the convention of 1876 for President. In 1877, selected
 as one of the electoral commission, (*q. v.*) D. Nov., 1877.

Morton, in Ill., a p. v. and twp. of Tazewell co. — In
 Miss., a p. v. of Scott co. — In Mo., a v. of Ray co.

Mortuary, *n.* [Fr. *mortuaire*, a funeral-pall; Lat.
mortuarius, having reference to the dead, from *mors*,
mortis, death.] A customary gift, claimed by, and due
 to, the minister of a parish on the death of a parish-
 ioner; also, a burial-place.

Mortuary, *v. a.* Pertaining or having reference to the burial of the
 dead; as, a mortuary chapel.

Morumbidgee, (*môr-um-bid-jé'*), a river of Australia,
 rising by many heads, in the co. of Murray, N. S. Wales,
 and after a S. W. course of 400 miles, joining the river
 Murray, in Lat. 34° 48' S., and Lon. 143° E.

Morus, *n.* (*Bot.*) The typical genus of the order
Moraceæ, *q. v.*

Morven, in Indiana, a village of Shelby co., abt. 40 m.
 S. E. of Indianapolis.

Morven, in N. Carolina, a village of Anson co., about
 115 m. S. W. by W. of Raleigh.

Mosaic, (*mô-ză'ik*), *n.* [Fr. *mosaïque*; L. Lat. *musivum opus*, mosaic-work; Gr. *mouseion*,
 the temple of the Muses, *mouseios*, belonging to the
 Muses, from *Mousa*,
 a muse. See MUSE.]

An assemblage of
 small pieces or
 cubes of glass, mar-
 ble, shells, pebbles,
 precious stones, &c.
 (*a. a. a.* Fig. 1863),
 of various colors,
 cut, and fixed to-
 gether by a ground
 of cement in such a
 manner as to form
 ornamental pat-
 terns. Work of this
 kind is of great antiquity; and it is believed to have
 had its origin in Asia. In the book of Esther, mention
 is made of a "pavement of red and blue, and white and
 black marble," in the court of the garden of King
 Ahasuerus. This was without doubt a pavement of
 mosaic-work. In Greece, during the time of Alexander,
 mosaic pavements, made with variously colored marble,
 were among the sumptuous decorations of the period.
 These were for the most part geometric in design; but
 Pliny mentions a celebrated work of Sosos of Pergamos
 — the "Unswep Hall." This was a pavement of inlaid
 work, representing the crumbs and fragments left on
 the floor after a banquet. The art was carried from
 Greece by workmen to Rome, where it was called *opus*
musivum, and acquired universal popularity, and soon
 came to be applied not only to floors, but also to walls
 and ceilings. In Italy, and in most of the countries oc-
 cupied by the Romans, many floors ornamented with
 mosaic-work have been found among old ruins. They
 consist generally of a centre-piece, frequently of human
 beings or animals, with a border or frame of a regular
 pattern. The different parts of which the mosaic is
 formed consist of cubes of different colored stones or
 earthenware, cemented together. Some exquisite spec-
 imens of this kind of mosaic-work have been found at
 Pompeii. One of the finest examples found is supposed
 to represent the battle of Issus, and was found in 1831
 in the Casa del Fauno. In the 5th century, when the
 arts and sciences were driven from Italy, the art of
 mosaic-work was preserved by the Byzantine Greeks,
 and was restored to Greece in the 13th century. It at-
 tained its highest perfection at the beginning of the
 17th century, when Clement VIII. had the whole of the
 interior of the dome of St. Peter's ornamented with
 mosaic-work. Giambattista Calandra improved mosaic
 by the introduction of a new cement. He, and other
 artists who followed after him, employed the art for
 copying original paintings by celebrated artists. One of
 the great advantages of this kind of work is its wonder-
 ful power of preservation, by which many of these paint-
 ings are represented in all their original freshness and
 beauty. Guercino's "Martyrdom of St. Petronilla," and
 Domenichino's "Communion of the Dying St. Jerome,"
 were thus preserved. A school for mosaic was founded
 at the beginning of the 18th century in Rome, by Peter
 Paul of Christophris; and many of his pupils carried
 the art to a high degree of excellence. In modern
 times, two kinds of mosaic are particularly famous —
 the Roman and the Florentine. In Roman mosaic, the
 pictures are formed by joining very small pieces of
 stone, which gives greater variety, and facilitates the
 representation of large paintings. In the Florentine
 style, the mosaic is made of large pieces of stone, and
 is consequently more troublesome, and only adapted for
 small paintings. The Italians call mosaic-work in wood
tansia or *tarsia*; the French, *marqueterie*. (See MAR-
 QUETRY.) In the most costly mosaics, precious stones

Fig. 1863. — MOSAIC.

have been cut to furnish materials; but in common
 works of this art, enamels of different colors, manufac-
 tured for the purpose, are the materials employed.

Mosaic, *v. a.* Pertaining, or having reference to, or composed of,
 mosaic-work; variegated; tessellated; as, a mosaic
 pavement.

Mosaic, *n.* [From *Moses*.] Pertaining,
 or having reference to Moses, the leader of the Israel-
 ites; as, the Mosaic law.

Mosaicism, *n.* The doctrinal tenets propounded by
 Moses; adherence to the Mosaic law, rites, or institutions.

Mosaleu, in Iowa, a twp. of Dubuque co.

Mosau'rus, *n.* [Lat. *Mosa*, the
 river Meuse, and Gr. *sauros*, lizard.] (*Pal.*) A large
 extinct aquatic saurian, which existed during the depo-
 sition of the cretaceous strata. Its remains have been
 found both near Maestricht and in the cretaceous de-
 posits in America.

Moschus, *n.* (*Zoöl.*) The Musk, or Musk-deer, a
 genus of *Luminantia*, family *Cervidae*. These animals,
 which give name to the well-known perfume, inhabit
 the great extent of elevated country which occupies a
 large part of Central Asia, and are principally found in
 Thibet, Nepal, Tonquin, and the districts adjacent to
 the N. of India and China. Their favorite haunts are
 the tops of mountains covered with pines, where they
 roam in places most difficult of access, resembling in
 their manners the chamois and other mountain quad-
 rupeds. In size and general appearance, the Musk-deer
 is not very unlike a small roebuck, the length of the
 body being about 3 feet 4 inches. The upper jaw is
 considerably longer than the lower, and is furnished on
 each side with a curved tusk, about 2 inches long, the
 inner edges of which
 are quite sharp. The
 general color of the
 body is a kind of deep
 iron-gray. The ears
 are erect, about two
 inches long, of a deep-
 brown color external-
 ly, and pale-yellow
 within; the hoofs long
 and much divided;
 and the tail extreme-
 ly short. These ani-
 mals are hunted for
 the sake of their
 musk, which is con-
 tained in an oval re-
 ceptacle, or small
 glandular pouch, situ-
 ated at the hinder part of the abdomen, and peculiar to
 the male. The unctuous secretion contained in this re-
 ceptacle is of the most powerful and penetrating nature;
 but from the ease with which it can be adulterated,
 very little of it reaches Europe in a pure state. The
 follicle containing the musk is covered with short
 brown hair, and is more or less full according to the
 age, health, &c., of the animal. The musk, when dry,
 is of a dark reddish-brown color, has a bitterish sub-
 acrid taste, and a fragrant smell, agreeable at a distance,
 but so strong and pungent as to be highly unpleasant
 when quite near. It is held in high estimation as a
 medicine among Oriental nations.

Fig. 1864. — MUSK-DEER,
 (*Moschus moschiferus*.)

Moscow, [Russ. *Moskwa*, (*mô'sko*),] a govt. of European
 Russia, between Lat. 54° 50' and 56° 40' N., Lon. 34° 50'
 and 38° 50' E., having N. the govt. of Tver, E. Vladimir
 and Riasan, S. Toula and Kalouga, W. Smolensk and
 part of Tver. Area, 12,300 sq. m. The surface is level,
 with the exception of an elevated tract in the S. W. The
 soil is indifferently fertile. The rivers are the Moskwa,
 Kliazma, and Oka. Min. Limestone and yellow marble.
Manuf. Woollen, cotton, and silk fabrics, carpets, pap-
 er, &c. Large numbers of horses and cattle are reared.
Pop. (1902) 1,092,360.

A large city of European Russia, capital of the above
 government, long the residence of the sovereigns, and
 still one of the capitals of the empire, on the river
 Moskwa, 400 m. S. E. of St. Petersburg. The city, which
 was founded in 1147, is one of the most singular in the
 world. It is of a circular form, and covers a large ex-
 tent of ground. The central part, on an eminence, on
 the N. side of the river, is occupied by the Kremlin, or

Fig. 1865. — THE KREMLIN.

Citadel. The outer quarters of the city lie around this
 central nucleus, increasing in magnitude according as
 they diverge from it. On the outside of all are the *slo-
 bodes* or suburbs. The Moskwa, which has a very tor-
 tuous course through the city, is crossed by various
 bridges, some of stone, but the greater number of wood

Previous to the conflagration of 1812, which destroyed two-thirds of the city, *M.* presented the most extraordinary contrasts,—palaces alternating with huts, Asiatic with European buildings, and open fields and gardens, with crowded streets. The Kremlin, which has been completely repaired since 1812, comprises the imperial palace, the archbishop's palace, the cathedral of the Assumption, in which the Russian sovereigns are

Fig. 1866.—ST. BASIL'S CHURCH, (Moscow.)

crowned the churches of St. Michael and the Annunciation, and the Pokrovskoi cathedral, constructed of 20 churches joined together. It also contains the belfry of Ivan Veliki, a tower 269½ feet in height, containing 32 large bells. At a short distance, on the ground, is the great bell of *M.*, weighing 360,000 lbs. Prominent among the other public buildings are the Palace of Arms, the Imperial Theatre, the Palace of the Senate, the Daschkoff Palace, the church of St. Basil, the University, and the great Military Hospital, founded by Peter the Great. *Manuf.* Principally silk, cotton, and woollen fabrics, and hats, are carried on extensively; but in the adjoining towns and villages there are also numerous tanneries, breweries, &c. *M.* is the grand entrepôt of the internal commerce of the empire. A great deal of the commercial intercourse between the city and adjacent and distant provinces is carried on in winter by the sledge-roads, and at other times by means of railway and water communication. *M.* was founded in 1147, and was from 1300 the capital of Russia. In 1703, Peter the Great removed the seat of government to his new city on the Gulf of Finland, and thereby for many years materially injured the trade and prosperity of the city, which was almost annihilated by the conflagration in the year 1812. In that year, in obedience to their sovereign's order to drive the French out of the country by destroying their winter-quarters, the inhabitants set fire to the city, and with such good-will and dispatch, that more than two-thirds of their venerated city was soon reduced to ashes; and Napoleon, aghast at the ruin of all his hopes and schemes, commenced that fatal retreat which, between Moscow and Wilna, utterly disorganized and routed one of the finest armies that ever followed the French standard. *Pop.* (1897) about 754,550.—*M.* has become the centre of a network of railroads, and is, or soon will be, the commercial and industrial capital of the Empire.

Mos'cow, in *Ind.*, a p.-v. of Rush co., abt. 40 m. E.S.E. of Indianapolis.—In *Iowa*, a town and twp. of Muscatine co., abt. 25 m. E.S.E. of Iowa City.—In *Ky.*, a p.-v. of Hickman co., abt. 6 m. S. of Clinton.

Moscow, in *Maine*, a township of Somerset co.

Moscow, in *Michigan*, a post-village and township of Hillsdale county, about 60 miles south of Lansing.

Moscow, in *Minnesota*, name of a post-village and township of Freeborn county, about 8 miles W.N.W. of Austin.

Moscow, in *Missouri*, a village of Lincoln co.—A township of Washington co.

Moscow, in *New York*, a post-village of Livingston co., abt. 35 m. S.S.W. of Rochester.

Moscow, in *Ohio*, a post-village of Clermont co., abt. 29 m. S.E. of Cincinnati.

—A village of Licking co., abt. 8 m. S.S.W. of Newark.

—A village of Lucas co., abt. 20 m. S.W. of Toledo.

Moscow, in *Pennsylvania*, a post-village of Lackawanna co., abt. 13 m. S.E. of Scranton.

Moscow, in *Tennessee*, a post-village of Fayette co., abt. 40 m. E. of Memphis.

Moscow, in *Texas*, a post-village of Polk co., abt. 100 m. N.N.E. of Houston.

Moscow, in *Wisconsin*, a post-township of Iowa co.

Mose, an island in the E. Archipelago, N. of Timor-laut; Lat. 6° 20' S., Lon. 131° 30' E., 20 m. in circumference.

Moselle, a river of W. Europe, rising in the French dept of Vosges, Lat. 48° N., Lon. 70° E. After a N.N.E. course of 300 m., in which it flows through the E. part of France and the S. part of Rhenish Prussia, it empties into the Rhine at Coblenz, Lat. 50° 22' N., Lon. 7° 33' E.

Moselle, (*mo-sel'*), a dept. of the N.E. of France, formerly part of Lorraine, having N. Luxembourg, Rhenish

Prussia, and Rhenish Bavaria, E. the dept. of Bas-Rhin, S. Meurthe, and W. Moselle; Lat. between 46° and 49° 30' N., Lon. 5° 30' and 7° 40' E. *Area*, 2,390 sq. m. The surface is generally mountainous, and the soil indifferent. The rivers are the Moselle, Sarre, Orne, and Nied. *Prod.* Wheat, oats, barley, flax, and hemp. *Min.* Iron, coal, lime, and salt. *Manuf.* Woollens, lace, paper, carpets, leather, glue, &c. The chief towns are Metz (the cap.), Brieg, and Thionville.

Moselle, (*mo-zell'*), in *Illinois*, a village of Jo Daviess co., abt. 10 m. S. of Galeua.

Moselle, in *Missouri*, a post-village of Franklin co., abt. 50 m. S.W. of St. Louis.

Moselle, in *Wisconsin*, a post-township of Sheboygan co. Now usually spelled *Mosel*.

Moselle, in *W. Virginia*, a village of Hampshire co., abt. 20 m. S.W. of Cumberland.

Moselle, *n.* A description of white German wine, named from the river Moselle.

Moselle-cup, *n.* (*Drinks.*) A fancy beverage, concocted of Moselle wine, limes, sugar, and ice, dashed with cognac, and judiciously intermixed.

Moses, [*Egyptian mo*, water, and *use*, saved.] (*Script.*)

The son of Amram and Joahabed, of the tribe of Levi. This great Jewish historian and lawgiver was born in Egypt, during the rigor of the decree that commanded the death of every new-born male Israelite; to save her child from this cruel edict, his mother made an ark, or basket of rushes, and carefully placing the infant in this cradle, committed it to the river, in a place where she was aware that the daughter of Pharaoh was in the habit of bathing; the mother secreting herself among the reeds to note the effect of her stratagem. The princess, pitying the child thrown thus on her mercy, adopted the infant, gave it to the mother to nurse, and took charge of the child's future education and welfare; and Moses, being brought up in the court of the king, became "learned in all the wisdom of the Egyptians." When he had attained his fortieth year, Moses, seeing an Egyptian officer ill-treating an Israelite, killed the task-master, and hiding the body, fled into the wilderness, where he pursued the calling of a shepherd for forty years, marrying the daughter of a priest of the people among whom he had found shelter and protection. While so employed, the Almighty appeared to him in the "burning bush," and commanded him to return to Egypt, and lead his people from the house of bondage. In obedience to this command, Moses, after many oppositions, eventually brought the Israelites out of Egypt, passed the Red Sea, and within sight of the Promised Land; when, in consequence of the transgressions of the people, they were turned back, and condemned for forty years to wander in the wilderness, till the whole generation of offenders had died. Even Moses was not allowed to enter the land of Canaan, but merely to rejoice his eyes by a prospect of the rich and fruitful vales which constituted the Land of Promise. Having seen the glorious country from the heights of Mount Pisgah, Moses calmly prepared himself for his end, and died in his 120th year, on the confines of Canaan. Moses is the author of the first five books of the Old Testament,—Genesis, Exodus, Leviticus, Numbers, and Deuteronomy,—or, as they are collectively called, the *Pentateuch*, or the "Five Books." The life and institutions of Moses present one of the finest subjects for the pen of a Christian historian, who is, at the same time, a competent biblical antiquary. His institutions breathe a spirit of freedom, purity, intelligence, justice, and humanity, elsewhere unknown; and above all, of supreme love, honor, and obedience to God. They moulded the character of the Hebrews, and transformed them from a nation of shepherds into a people of fixed residence and agricultural habits. The above account is that given in the Hebrew Scriptures. It will suffice to say, in conclusion, that many Biblical critics doubt, for various reasons, that *M.* was the author of the books of the *Pentateuch*.

Mosh'erville, in *Michigan*, a post-village of Hillsdale co., abt. 55 m. S. of Lansing.

Mosiertown, (*mo'zier-town*), in *Pennsylvania*, a post-village of Crawford co., abt. 9 m. N.W. of Meadville.

Mos'inee, in *Wisconsin*, a post-village of Marathon co., abt. 15 m. S. by W. of Wausau.

Moskwa, or **Moskva**, a river of European Russia, traversing the govt. of Moscow, and after an E. course of 200 m., falling into the Oka at Coloma. During the invasion of Russia, Napoleon I. attacked the whole Russian army, intrenched at the village of Borodino, situated on the left bank of the River Kolotcha, about 2 m. above its junction with the *M.* After a sanguinary engagement, both armies encamped on the field of battle, but the Russians withdrew during the night. The killed and wounded amounted to 80,000 men. In 1839 the Russians erected a mausoleum on this battle-field. This action is called *battle of the Moskowa* by the French, and *battle of Borodino* by the Russians.

Mos'lem, *n.* A Mussulman; an orthodox Mohammedan.—*a.* Mohammedan; Islamic; or belonging or having reference to orthodox Mussulmans.

Mos'lemism, *n.* Mohammedanism; Islamism; the religious doctrines of the Koran.

Mos'lings, *n. pl.* Thin strips of leather shaved off in dressing and preparing skins.

Mososan'rus, (*Pal.*) Same as *MOSASAURUS*, *q. v.*

Mosque, (*mosk*), *n.* [*Fr. mosque*; *Ar. masjid*.] A Mohammedan temple or place of worship. They are generally distinguished externally by cupolas and minarets, but internally they are little remarkable, forming merely a single hall or apartment, with numerous lamps, the floor covered with carpets, and the walls with arabesques and mosaics. The principal Arabian and Syrian mosques are remarkable for their vast quadrangles, sur-

rounded with numerous columns. The revenues of the mosques are often considerable, and connected with them are usually institutions for education, hospitals for the sick, asylums for the poor, &c. The principal mosque of Constantinople was originally the Christian

Fig. 1867.—GREAT MOSQUE AT DELHI.

church of St. Sophia (Fig. 458), built by the Emperor Justinian in the 6th century; but it is surpassed in beauty and taste by that of Solyman the Magnificent, begun in 1550. The mosque of the Prophet at Medina, the great mosque at Mecca, and the mosque of Omar at Jerusalem, are considered peculiarly holy, and are among the finest extant specimens of Moslem architecture.

Mosquit'ia. See MOSQUITO TERRITORY.

Mosquito, or **Musquito**, (*mus-h'eto*), *n.* [*Sp.* from *mosca*, Lat. *musca*, a fly.] (*Zoöl.*) A troublesome little insect, resembling the gnat; and belonging to the family *Culicidæ*. (See GNAT.) It is a native of the W.

Indies, the American continent, S. Africa, and India. The common mosquito, *Culex mosquito* (Fig. 1868), is about the same size as the gnat, and possesses a sucker, with five sharp-pointed, needle-like organs, with which it pierces the skin, and sucks the blood; but that which renders it so dangerous, as well as troublesome, is, that the proboscis not only makes a wound, but injects into it a poison which causes inflammation. The mosquito seldom appears in the daytime; but at night, in the tropics, when the unhappy traveller endeavors to sleep, the tantalizing little insect generally succeeds in banishing all idea of repose, both by its power of suction, as well as the continuous buzzing sound made by its wings.

Recent research has proved that mosquitos of certain species are subject to infection by the germs of malaria, yellow fever, and perhaps some other infectious diseases, and transmit these to the blood of their victims, in which they propagate and produce the disease. By screening the windows of hospitals and sleeping rooms, so as to keep out these insects, such diseases can be prevented from spreading. This has been demonstrated in the yellow-fever districts of Cuba and the malarial Campagna of Rome. As the mosquito infects men, so diseased men infect the mosquito, and the disease is thus transmitted to new victims. Vigorous efforts are being made in some regions to eradicate the mosquito by destroying its water-bred larva. This has been successfully done by covering the surface of the water with petroleum, and by other means.

Mosquito Territory, or **Mosquito Shore**, called also **Mosquitia**, a region of Central America, occupying the E. portion of Nicaragua, and bordering on the Caribbean Sea; between Lat. 11° and 16° N., and Lon. 83° 10' and 86° W. *Area*, abt. 26,000 sq. m. *Rivers*, Cape, Tuguan, Bluefields, and Rio San Juan. *Surface*, mountains in the W., but more level along the coast; *soil*, exceedingly fertile, producing every variety of W. Indian vegetation in luxuriant abundance, including mahogany and other cabinet-timber, dye-woods, drugs, &c. Minerals are said to abound in the interior, and the finest quality of tortoise-shell is obtained upon the coast. The country is inhabited almost entirely by the Mosquito Indians, an active and daring race, whose chief claimed the title of King of Mosquitia. The English maintained a foothold in *M.* until 1860, when it was terminated under a treaty with Nicaragua. *Cap.* Bluefields. See also WALKER, WILLIAM.

Moss, *n.* [*A.S. meos*; *D. and Dan. mos*; *Ger. moos*; *Fr. mousse*; *Lat. muscus*, moss.] A small herbaceous plant, with a simple branching stem, and numerous narrow leaves, growing on trees, rocks, &c., mostly in humid places; a lichen.—In botany, the mosses comprise the alliance **MUSCALES**, *q. v.*

(NOTE. Moss is sometimes employed in the formation of certain self-explaining compounds; as, moss-clad, moss-covered, moss-grown.)

Moss-agate, *n.* (*Min.*) See AGATE.

Moss'-bunker, *n.* (*Zoöl.*) See MENHADEN.

Moss'er's Valley, in *Pennsylvania*, a vill of Union co.

Moss'-pink, *n.* (*Bot.*) See PINK.

Moss'-rose, *n.* (*Bot.*) See ROSA.

Moss'-trooper, *n.* (*Eng. Hist.*) One of a class of rovers or marauders that in former times infested the

Fig. 1868.—CULEX MOSQUITO. (Magnified.)

Scottish and English borders;—the name is taken from the aspect of the tract over which they trooped, it being, for the most part, morass or moss.

Mossyville, in *Illinois*, a post-village of Peoria co., abt. 16 m. N.N.E. of Peoria.

Mossy, *a.* Overgrown or abounding with moss.

"Old trees are more mossy far than young."—*Bacon*.

—Fringed or bordered with moss; as, "mossy brooks."

Cowley.

Mossy Creek, in *Tennessee*, a post-village of Jefferson co., abt. 212 m. E. of Nashville.

Most, *a.* (*superl.* of *MORE*.) [*A.S. mæst*, *superl.* of *mycel*, *great*.] Greatest; largest; consisting of the greater number or quantity;—*plurally*, numerous beyond others.

"Sweet bird, . . . most musical, most melancholy!"—*Milton*.

—*n.* (Used as a substitute for a noun omitted or understood.) The greatest number or part; the chief or major portion.

"They all repair'd, both most and least."—*Spenser*.

—The greatest degree, quantity, or amount; the utmost; generally used in the phrases *at the most*, *to the most*, *to make the most of*, &c.

"A covetous man makes the most of what he has, and can get, without regard to Providence."—*L'Estrange*.

—*adv.* In the greatest or highest degree.

"That which will most influence their carriage will be the company they converse with."—*Locke*.

Mos'tar, a town of European Turkey, pashalic of Bosnia, prov. of Herzegovina, on the Narenta, 48 m. S.W. of Bosnia Serai: Lat. 43° 20' N., Lon. 17° 52' E. *Manuf.* Swords and fire-arms; and has an extensive trade in cattle, corn, and wine. *Pop.* 8,000.

Mostard'as, a village of Brazil, about 50 m. S.S.E. of Alegret; *pop.* 3,000.

Mos'tic, **Mos'tick**, *n.* Same as MAHL-STICK. *q. v.*

Mos'tituba, *n.* See MUSTAIBA.

Mostly, *adv.* Chiefly; for the greater part; in the major degree, in the main.

Mos'tra, *n.* [*It.*] (*Mus.*) A little mark at the end of a line, showing what note the next line begins with.

Mos'ul, **Mosel**, or **El Mosul**, a pashalic of Asiatic Turkey, comprising the most part of Turkish Kurdistan, between Lat. 35° 30' and 38° N., Lon. from 43° E. to the borders of Persia. The surface is mountainous. The principal rivers are the Tigris, the Great and Little Zab, and the Khaboor. The chief cities are Mosul (the cap.), Arbil, and Al-Hadhr. *Pop.* Unknown.

Mosul, the cap. of the above pashalic, situated on the site of the ancient Nineveh, on the Tigris, 193 m. N.N.W. of Bagdad. The principal ornaments of the city are a college, the tomb of the sheikh Abdul Cassim, and the remains of a fine mosque built by Nouredin, Sultan of Damascus. It formerly had considerable commercial importance, but is now very much decayed. *Manuf.* Cotton cloth.

Mot, (*mō*.) *n.* [*Fr.*; *Lat. motto*.] A pithy, pungent, or witty saying; a repartee; an epigrammatic figure of speech; a witticism. (*A Gallicism*.) See BOX-MOR.

—A note sounded on a bugle. See MORT.

Motacilla, *n.* (*Zool.*) See WAGTAIL.

Mota'gua, a river of Guatemala, rises on the S. part of the State, and flowing N.E. enters the Bay of Honduras, abt. 15 m. W. of Omoa, Honduras.

Moth, *n.* [*A.S. motto*, *moththe*; *D. mot*; *Ger. motte*; *Dan. mol*; akin to *Lat. mando*, to chew; *Sansk. matka*, a bug. See MEAT.] (*Entom.*) The name given to the *Heterocera*, a numerous and beautiful division of Lepidopterous insects, readily distinguished from butterflies by their antennæ, which in the moths may be any one of a variety of shapes—filiform, setiform, fusiform, serrate, pectinate, filiciform, and plumose—but are never thread-like, with a knob on the end, like in the butterflies. The bodies of the moths are comparatively much larger than in the butterflies, and of a more hairy or downy character. The *Lepidoptera* were at one time divided into diurnal, nocturnal, and crepuscular, the latter flying at dusk; but these divisions are no longer used, as while most of the moths are nocturnal in habit, there are many species that fly in the hottest sunshine, and some of the so-called diurnals (butterflies) are crepuscular as well as some of the moths. The butterflies, and many of the moths, are all provided with a tongue for gathering their food; but a great portion of the moths are destitute of that organ, while in others it is exceedingly small: a considerable number of them, therefore, must pass the whole of their winged state without food. The larvæ or caterpillars from which the various moths are produced exhibit nearly the same variety of appearance as the winged insects which spring from them. Some are large, while others are extremely minute. They have six small feet and a number of auxiliary feet, or prop-legs, as they are called. They grow very rapidly, and cast their skins a number of times, and when full-grown transform into a chrysalis (pupa). Many species spin cocoons, inside of which the chrysalis remains apparently dead for a time, but eventually the perfect insect emerges. The cocoons are often formed of silk spun from the salivary glands, but in many cases cocoons are formed of the hairs on the body of the caterpillar, which it pulls out; also leaves, sticks, moss, or other similar materials. In other instances, the caterpillar goes into the ground, and, by wriggling around, forms an oval hole with hardened sides, in which it transforms into a chrysalis and remains through the winter. When summer comes the chrysalis works its way to the surface of the ground by the aid of its movable abdominal segments, and the perfect moth emerges. All the moths were included in the genus *Phalena* by Linnaeus, but since the time of that great naturalist they have

been divided by Cuvier, Latreille, and others into a number of different groups, the classification of which is too complicated and embarrassing to be thoroughly explained in this work. We may remark that there are several thousand species of moths, varying in size from a line in breadth to eleven inches, and even more. The variety of form and color is endless. The principal species will be found described elsewhere in this work under their proper name, or the name of their genus, as *Cossus* for the Goat-moth; *Sphinxidae* for the Hawk-moth, &c.

Moth'-eat, *v. a.* To consume or devastate, as a moth eats an article of wearing apparel.

Mother, (*mūth'ēr*.) *n.* [*A.S. modor*, *moder*, *modur*; *D. moeder*; *Icel. móðir*; *Ger. mutter*; *Lat. mater*; *Gr. mētēr*; *Ir. máthair*; *Pers. mādār*; *Sansk. mātri*, the true form *mātar*—*mā*, with *nīs*, to make.] A female parent, particularly one of the human race; a woman who has borne a child;—correlative of *son* or *daughter*.

"A mother is a mother still, the holiest thing alive."—*Coleridge*.

—That which has produced anything; that which has preceded in time; generatrix; source of origin; the oldest or chief of anything.

"Necessity, the mother of invention."—*Farquhar*.

—A familiar term of address or appellation of an old woman or matron; also, applied to the superiress of a convent, and to a woman who exercises care and tenderness toward another, or gives parental advice.

—A thick, slimy substance, concreted in liquor, particularly in vinegar.

—*a.* Native; natural; received by birth; vernacular; received from parents or ancestors; as, *mother-tongue*, *mother-language*; also, acting the part of a mother; originating.

"The common growth of mother-earth suffices me."—*Wordsworth*.

Moth'er-church, *n.* The church to which one belongs; the oldest church; the Church of Rome, by way of eminence, so designated by its adherents.

Moth'er-country, *n.* The mother-land; the country giving origin.

Motherhood, *n.* The state of being a mother.

Moth'ering, *n.* A rural custom, in England, of paying a friendly visit to one's mother.

Moth'er-in-law, *n.* The mother of a husband or wife.

Moth'erkill Creek, in *Delaware*, enters Delaware Bay from Kent co.

Moth'er-land, *n.* The land of one's mother; country of birth or origin.

Moth'erless, *a.* Destitute of a mother; deprived of a mother.

Moth'erliness, *n.* The state of being motherly; matron-like quality.

Moth'er-liq'uor, **Moth'er-wa'ter**, *n.* (*Chem.*) A saline solution from which crystals have been deposited, and which, when poured off and re-evaporated, generally furnish a second crop.

Moth'erly, *a.* Pertaining to a mother; tender; maternal; affectionate.

—*adv.* In the manner of a mother; as, *motherly care*.

Moth'er-of-pearl, *n.* [*Ger. perlen-mutter*; *Fr. nacre de perles*.] (*Conch.*) The hard, silvery, brilliant internal layer of several kinds of shells, particularly oysters, which is often variegated with changing purple and azure colors. The large oysters of the Indian seas alone secrete this coat of sufficient thickness to render their shells available for the purposes of manufactures. The genus of shell-fish called *Pentadina* furnishes the finest pearls, as well as mother-of-pearl; it is found in great perfection round the coasts of Ceylon, near Ormuz in the Persian Gulf, at Cape Comorin, and among some of the Australian seas. The brilliant hues of mother-of-pearl do not depend upon the nature of the substance, but upon its structure. The microscopic wrinkles or furrows which run across the surface of every slice act upon the reflected light in such a way as to produce the chromatic effect; for Sir David Brewster has shown that if we take, with very fine black wax, or with the so-called fusible alloy, an impression of mother-of-pearl, it will possess the iridescent appearance. Mother-of-pearl is very delicate to work; but it may be fashioned by saws, files, and drills, with the aid sometimes of an acid, such as the dilute muriatic; it is polished by colcothar.

Moth'er-of-thyme, *n.* (*Bot.*) See THYMUS.

Moth'er-queen, *n.* The mother of the reigning king or queen. (More commonly written *QUEEN-MOTHER*, *q. v.*)

Mother's-marks, *n. pl.* [*Lat. navi materni*.] (*Physiol. and Med.*) These disagreeable and often very offensive-looking blotches, tumors, or blemishes, which the mother unconsciously entails on her child, are often as extraordinary in their appearance as they are diverse in their shape and situation. Physiologists have long disputed the popular belief that such formations have any relation with the mother whatever, and, rather than resign their opinion or prejudiced theory, are content to evade the subject, under the convenient but unscientific shelter of a *lusus nature*. Without disputing any opinion, or advancing any hypothesis, we shall content ourselves with adhering to the opinion of those who maintain that the quickened imagination and sensitive condition of the nervous system of a pregnant woman of a peculiar temperament is, at certain stages of her gestation, sufficient to impress on the unborn child those blemishes which are popularly known as mother's-marks. There is hardly any part of an infant's body on which these extraordinary marks have not been, and do not daily appear; though, unfortunately for the child, especially as it grows to maturity, they are most frequently met with where they are the most evident, and consequently objectionable,—the face, neck,

and bosom. Of these three situations, the face is generally the locality where the most severe, as respects size and character, are to be found. The forehead and eyebrows, the eyelid and part of the eye, the nose, the lips (and, when the mouth suffers, producing bare-lip), with the cheek, are the situations where these *navi* are most frequently seen. Some of these disfigurements are slight blotches or stains, quite superficial, and affecting only the skin, and may be mere discolored spots, or, as in what are called port-wine or claret stains, involve the whole of one side of the face and nose with irregular margins or strayspatters. Some, again, though not rising above the surface, involve the adjacent cellular tissue, while others protrude in the form of warts or moles, with a few bristly hairs, or else form irregular bladder-looking tumors, while some take an almost exact resemblance to the outline of a mouse, the surface being covered with a short brown fur. Another variety of the *navis* is what is called the *varicose*, or a collection of small veins, freely anastomosing or joining with each other, till they form a perfect *plexus* or network of interlacing and intermingling blood-vessels. Small patches of such *varicose navi*, about the size of small wafers, are found on a child, one often situated at the inner or outer corner of the eye; but more generally such marks are found on the arm or leg, and then they are of a very considerable size. The colors of mother's-marks are nearly as various in their hue as their shape or size. Some are bright scarlet, others of a deep red; some few are black; but the most general color is that of a purplish-red; some, indeed, are hardly to be distinguished from the natural complexion of the skin except by their elevation. Not the least remarkable circumstance connected with *navi* is the fact that all of these which are of a *deep red color* are singularly influenced by any violent emotion of the mind, becoming distended and much brighter in color during a fit of rage or any strong excitement, great heat of the weather, and during the paroxysm of a fever,—whatever, indeed, accelerates or disturbs the circulation. At such times, many of those *navi*, of a vesicular or bladder-like character, with a thin cuticle, burst, and not unfrequently discharge a very considerable amount of blood. Among the various shapes which mother's-marks assume, the likeness to fruit is a very common one: pears, apples, strawberries, mulberries, and currants are the most familiar; these are often traced as accurately on the arm, leg, body, or face, as if they had been photographed on the skin. Fruit, of whatever sort, while simply drawn, as it may be, on the cuticle, if out of sight, is harmless and innocent enough; but if, as is sometimes the case, the grapes, mulberries, or currants are defined in what may be called alto-relievo on the skin, and are prominent, it is another remarkable fact, that during the natural season of the fruit, the *navis* resembling it on the body will, during the last weeks of ripening, enlarge, and become excessively, sometimes intolerably, painful. In robust, masculine constitutions this fact is less evident, but in nervous and delicate habits it frequently amounts to extreme suffering.—The treatment is very uncertain in its results, and in many cases defies either medical or surgical aid. In all cases, if a cure is to be effected, the *navis* should be treated as soon as the child has strength to bear the treatment.

Moth'er-spots, *n. pl.* (*Med.*) Congenital spots on the skin; *navus*.

Moth'er-tongue, (*-tung*.) *n.* One's native language; lingual parent-stock.

Moth'er-wit, *n.* Native wit; common sense.

"It is extempore, from my mother-wit."—*Shaks*.

Moth'er-wort, *n.* (*Bot.*) See LEONURUS.

Moth'ery, *a.* Concreted; full of concretions; dreggy; feculent;—used of liquors.

Moth'y, *a.* Full of moths; as, "an old *moth'y* saddle." *Shak*.

Mot'if, *n.* [*Fr.*] That which suggests a hint or an idea to an artist; also, the hint itself.

Mot'ifie, *a.* [*From Lat. motum*, to move, and *facere*, to make.] Inducing motion.

Motility, *n.* [*Fr. motilité*; *Lat. motilitas*, from *motus*.] (*Med.*) Faculty of moving; moving power; contractility.

Motion, (*mo'shun*.) *n.* [*Fr.*; *Lat. motio*, *motionis*, from *moveo*, to move. *q. v.*] Act or process of moving or of changing place; change of local position; alteration of distance between bodies; the passing of a body from one place to another, whether by voluntary, organic, or mechanical action;—the converse of *rest*. (See below, *q. Motion*, *Laws of*.)—Manner of moving: port; gait; air; change of posture; action: military march or movement.

"By quick instinctive motion up I sprung."—*Milton*.

—Power of, or capacity for motion.

"All without breath or motion."—*Coleridge*.

—Agitation; internal action: excitation of the mind, will, desires, appetites, or passions; effect of impulse: activity proceeding from any cause, external or internal.

"The motion of a hidden fire."—*Montgomery*.

—Proposition offered; course of conduct or line of action advanced or instigated; particularly, a proposition made in a deliberative assembly; as, a *motion* for a committee, a *motion* to bring in a bill, a *motion* to adjourn, &c.

(*Mach.*) The cross-head, cross-head guides, and blocks, in a locomotive steam-engine, taken collectively.

(*Mus.*) The direction given to the movement of the parts in contrapuntal writing. Direct or similar motion is when two parts move in the same direction *i. e.* rise or fall together; contrary motion is when one rises and the other falls; and oblique motion is when one part moves in either direction while the other is stationary. Contrary motion is the best, and next oblique motion,

(*Fine Arts.*) The change of place or position which from certain attitudes a figure seems to be making in its representation in a picture or sculpture. It can be only implied from the attitude which prepares the animal for the given char., and differs from *action*, q. v. Upon motion, in art, depends that life which seems to pervade a picture when executed by a master.

Motion (*Laws of*). (*Physics.*) The laws which direct and control the continued and successive change of place of various bodies, — in other words, their motion. The laws of motion may be thus described: — 1. A body always remains in a state of rest, or of uniform motion, in a straight line, until it is made to change its state on account of the action upon it by some external force. 2. This change of motion is proportional in an exact ratio to the force impressed, and is produced in the same straight line in which the opposing force acts. 3. Action, and consequently reaction, are always to be estimated in the same right line, and are equal in opposite directions. According to Dr. Arnold, in his work entitled "The Elements of Physic," all motion is really considered, with regard to itself, absolute, or the change of absolute space; for motion once begun would be continued forever, were it not for the interruption of external causes, the power of gravitation, and many other circumstances which affect it. *Equable motion* may be briefly stated to be the effects of a single stroke or impetus given to a body; as the momentum imparted to a ball discharged from the mouth of a cannon by the charge of gunpowder. (See *GUNNERY*.) *Accelerated motion* is produced by a constant application of power or impulse to the body which had been in a state of rest. (See *GRAVITATION*.) To sum up our remarks, force is not required for the maintenance of motion, but only for its change; that is, for producing, in the first place, a change of state from rest to motion, or from motion to rest; secondly, a change in the velocity of motion, either by accelerating or retarding it; or, thirdly, a change in its direction, by deflecting it upwards or downwards, to the right or to the left. Not only such bodies as are at rest, but also such as are performing uniform rectilinear motion may thus be regarded as being in a state of equilibrium. (See *FORCES*.) For it is only while their velocity or direction is changing, that is, while they are being accelerated, retarded, or moving in a curve, that the forces acting on them can be unbalanced, or can produce a resultant pressure; and as long as this pressure remains unbalanced, the motion will continue changing in velocity, in direction, or in both; because, whenever it becomes straight and uniform, the resultant of all the forces acting on the body will be equivalent to *nil*; or, in other words, the body will not be subject to any unbalancing force. The dynamical effect of force being then a change of motion, a continued force must produce a continuous change, whether in velocity or direction. The simpler effect of a sudden change of velocity, or an angular deflection, can be only produced by an instantaneous exertion of force, or an impact, as it is termed. (See *IMPACT*.) Among the many absurdities which have arisen out of a misapprehension of the laws of motion, is the attempt to discover what is called a *perpetual motion*, or a machine which of itself would never stop. The earth and planets are such machines in their rotations on their axes, and we have seen that any particle of matter, unacted on by any other matter, and once in motion, is a perpetual motion. If a wheel attached to an axle could be deprived of friction at the pivots, and inclosed in a permanently air-tight and perfectly exhausted receiver, it would also, when once in motion, be a perpetual motion. But as long as any friction or resistance, however small, is perpetually retarding the motion, it is obvious that the velocity, if maintained, must be indebted to some external supply of moving power. To take the case of friction, which arises from the roughness of the supports, and which, independently of *adhesion*, may be considered as a rapid succession of very small jolts, by which the roughness of the one surface strikes upon that of the other, and communicate a portion of momentum to the frame, and finally to the earth, — to suppose that a wheel, as above described, could go on forever, with friction, would be to suppose that there could be action without reaction. In fact, a perpetual motion, such as intended to be made by the speculators on the subject, is nothing less than a machine which will work forever without new moving-power; it being not one bit less absurd to suppose that it would perpetually overcome friction and atmospheric resistance, than that it would continue to supply the impetus necessary to carry on the sawing of a plank or the weaving of lace. The ancient philosophers had many peculiar and erroneous impressions with regard to the laws of motion, but their original ideas seemed to be the guiding-points in the investigations of the moderns. Galileo modelled some of the first theories, but we are indebted to Sir Isaac Newton for the first real investigation of the laws of motion.

—*n. n.* To make a significant movement or gesture with the hand or head.

Motionist, *n.* One who brings forward or makes a motion.

Motionless, *a.* Wanting motion; being at rest.

Motive, *a.* [It. *motivo*; L. Lat. *motivus*.] Causing or producing motion; influencing action; having power to move; denoting a tendency to move; as, *motive power*.

—*n.* [Fr. *motif*; It. *motivo*, from Lat. *moveo*, *motus*, to move. See *MOVE*.] That which moves, actuates, or influences; that which incites to action; that which determines the choice or moves the will; an incentive or inducement; cause; reason; that which may or ought to incite to action.

"Wife and children, those precious motives." — *Shaks.*

(*Mus.*) (Also written *Motivo*.) Theme, subject, or leading passage in a musical composition.

—*v. a.* To move; to furnish a motive to or for; to incite or induce by a motive or motives.

Motiv'ity, *n.* [L. Lat. *motivitas*.] Power of motion; the power of producing movement or action; the quality of being prompted by motives.

Moti'vo, *n.* [It.] (*Mus.*) See *MOTIVE*.

Motley, (*mot'le*), *a.* [Sp. *motear*, to speckle, from *mota*, a mote.] Variegated in color; parti-colored; dappled; piebald. — Composed of different or various parts, characters, or kinds: diversified.

"Motley fruit of mongrel seed." — *Swift*.

Motley, JOHN LOTHROP, an American historian and diplomatist, b. in Mass., in 1814. After graduating at Harvard Coll., in 1831, he proceeded to Europe, where he entered himself at the universities of Göttingen and Berlin respectively. After his return to the U. S., he studied law, and was admitted to the bar in 1836-7. In 1840 he was appointed Secretary of the American Legation in Russia, which after a tenure of 8 months he resigned, returning to the U. States, and devoting himself to literature. After a course of preparatory study on the continent of Europe, Mr. M. published in London, in 1856, his first great work, *The Rise of the Dutch Republic*. This book at once achieved a grand success, its sale in England being 15,000 copies in the first year of its publication, while, on the other hand, the four years' demand (1856-60) in the U. States resulted in the sale of 7,590 copies only. This work was translated into Dutch, German, and French. In 1861 appeared, as a continuation, so to speak, of his first great work, his *History of the United Netherlands*, which has more than equalled the popularity of its predecessor. In the same year Mr. M. received the degree of D. C. L. from the university of Oxford, England, and was appointed U. S. minister to Austria, which post he resigned in 1867, in a spirited letter to Secretary Seward, who had charged him with speaking disrespectfully of President Johnson, a charge which he indignantly denied. In 1869 M., who was a corresponding member of the French Institute, and of the principal learned societies in Europe, was appointed American minister to the Court of St. James, in which position he was succeeded in the following year by Gen. Schenck. In 1873, he published *John of Barneveld, a Biography*. Died in England, May 29, 1877.

Motley-mind'ed, *a.* Possessing diversified or fluctuating views, ideas, or feelings.

Motmot, *n.* (*Zoöl.*) A curious and handsome bird of the genus *Motucotus* or *Trionides*, order *Insectores*, inhabiting many parts of S. America. Its back is of a dark rich green color, and it has a long wedge-shaped tail, two feathers of which extend some inches beyond the others. The shafts of these are stripped of their webs near the extremities, giving the bird a very singular appearance. One would suppose that these birds trimmed their feathers thus themselves, for many are found with quills perfect, and others partly denuded. The *M.* are generally in pairs in the deep woods, and are easily recognized by their note, *mot-mot*, slowly repeated. There are several species of *M.*; the edge of the beak in these birds is serrated, both in the upper and lower mandibles.

Mo'to, [It.] (*Mus.*) Movement with increased quickness.

Mo'ton, *n.* In ancient plate-armor, a small plate covering the armpits.

Mo'tor, *n.* [Lat., from *moveo*, *motus*, to move.] A mover; that which gives motion; moving-power; motive of mechanical action.

(*Anat.*) One of the nerves of motion.

—*a.* (*Anat.*) Motory; giving motion; as, the *motor nerves*.

Moto'rial, *a.* (*Anat.*) Motory; motor; having reference to organs of motion.

Motorpath'ic, *a.* Pertaining or having reference to motorpathy.

Motor'pathy, *n.* [Lat. *motor*, a mover, and Gr. *pathos*, suffering.] (*Med.*) A mode of treating disease by gymnastics or appropriate movements.

Motory, *a.* Giving motion; motorial; motor; inciting to action.

Mott Ha'ven, New York, formerly a post-village of Westchester co., now part of New York city.

Mott'ie, **Mott'y**, *a.* Abounding in, or consisting of, mottes; — (*a* Scottishism.)

Mottle, (*mott'le*), *v. a.* To mark or stain with spots of different colors; to maculate; to speckle.

Mott'led, *a.* Marked with spots of different colors, or shades of color, as if stained; maculated.

Motto, *n.*; *pl.* *MOTTOES*. [It.; Lat. *mythus*, from Gr. *mythos*, speech.] (*Her.*) A word or sentence added to a device, and commonly used, when put on a scroll, as an external ornament of coat-armor. The use of mottoes for this purpose is very ancient, and when appended to a coat-of-arms, a motto is frequently hereditary in a family. Strictly, the motto should bear an allusion to something in the achievement; but in modern times, the taking of it entirely depends upon the pleasure of the bearer, and it may be changed at will.

—A sentence or quotation prefixed to anything written or published.

Motto-kisses, *n. pl.* Sweetmeats with mottoes, etc., attached, and enclosed in fancy-colored papers rolled into pellets; — used for pastime at children's parties, etc.

Mott's Corners, in New York, a village of Tompkins co., about 165 m. W. by S. of Albany.

Mott'sville, in Nevada, a village of Douglas co., about 18 m. S. of Carson City.

Mott'ville, in Michigan, a post-village and township of St. Joseph county, about 165 miles S. by W. of Lansing.

Mott'ville, in New York, a post-village of Onondaga co., abt. 150 m. W. by N. of Albany.

Mott'y, *a.* Same as *MOTTIE*, q. v.

Moufflon, (*mouff'lon*), *n.* (*Zoöl.*) An animal of the sheep kind, *Ovis musmon*, inhabiting the mountainous parts of Corsica, Sardinia, Greece, &c. It is about the size of a small fallow-deer, covered with hair, and not with wool, except that hair of a somewhat woolly character appears in winter. The upper parts are brownish, the under parts whitish; the hair of the neck is long; the tail is very short. The horns of the male are very large, approaching to those of the Argali. The *M.* lives chiefly in the higher parts of mountainous regions, and is not easily approached by the hunter.

Fig. 1869. — MOUFFLON, (*Ovis musmon*.)

Mould, (sometimes written *MOLD*), *n.* [A. S. *molde*, *myl*; D. *mul*, dry sand; Ger. *mulm*, fine dust; Icel. *mold*, dust of the earth, from *molu*, akin to Lat. *mola*, to grind. See *MILL*.] (*Hort.*) Soil composed of decayed vegetable matter in a state of minute division, more or less mixed with garden-earth. The kinds of mould most in use in horticulture are, leaf mould, formed from the decayed leaves of trees; rich mould, formed of thoroughly decayed stable-dung; heath mould, found on the surface of heath-lands; and peat mould, formed of thoroughly decomposed peat. In general, mould is distinguished from soils by containing a much greater portion of organic than of earthy matters.

—Matter, or constituent substance or material, of which anything is formed.

(*Bot.*) The name popularly applied to the thread-like *Fungi* which prey upon our provisions, and attack such substances as gum, glue, ink, &c., living at their expense, and destroying their valuable properties. Many of the moulds, observes Mr. Berkeley, are capable of sustaining life when immersed in fluids, contrary to the habit of most *Fungales*; and from their capability of appropriating what is nutritious, and rejecting what is hurtful, they are often developed even in solutions of poisonous metallic salts, which would be fatal to *Fungales* in general. In a solution of sulphate of copper, for example, they become, as it were, electrolyzed by the copper, while they appropriate the other elements. As the spores are often able to sustain a considerable degree of heat without destruction, they occur in situations where they would otherwise not be expected, as in preserved fruits which have been subjected to heat, and when there could be no access of fresh spores. Where there is any possibility of communication, there are few kinds of vegetable tissues which they cannot penetrate; and in animals, they occur in situations where they must, like intestinal worms, have worked their way through the tissues to the cavities in which they grow. They are among the most powerful agents in the generation of disease, as is proved by the potato-murrain. In the human frame they are the fruitful source of cutaneous disorders. There are many genera, mostly belonging to the order *Hyphomycetes*, as *Aspergillus*, q. v., or to the order *Phycomycetes*, as the common *M., Mucor mucedo* (Fig. 1870), so plentifully found on fruit, paste, preserves, &c., in a state of incipient decay, the progress of which it hastens. It consists of cobweb-like masses of threads, from which rise many short stems, each bearing at the top a roundish membranous blackish spore-case.

Fig. 1870. COMMON MOULD, (*Mucor mucedo*.) (Highly magnified.)

Mould, (*möld*), *n.* [Fr. *moule*; Sp. *molde*; Lat. *modulus*, dim. of *modus*, a measure. See *MEASURE*.] The matrix in which anything is cast and receives its form. "Cast the mass again in a new and better mould." — *Burnet*. —The model or pattern which serves as a guide in working mouldings, ornaments, mechanical models, &c. —Cast; form; shape; design; character. "The vulgar writer is of vulgar mould." — *Waller*. (*Anat.*) The suture or contour of the skull.

Mould, *v. a.* To cause to contract mould or fungous concretions; to gather mould. —To cover with mould or soil.

—*v. n.* To contract mould; to become mouldy.

Mould, *v. a.* To model; to shape; to fashion; to form into a particular shape or model; as, to *mould metal*.

"He moulded it with female clay." — *Swift*.

"Moral lessons moulded into the form of fiction." — *Watts*.

—To knead; as, to *mould dough*.

Mould'able, *a.* That may be moulded or formed.

Mould-board, *n.* That part of a plough which cuts over the earth in ploughing.

Moulder, (*mold'ur*), *n.* The person who, or thing which

John Lothrop Motley

1814-1877

forms or moulds into shape; specifically, one who casts metal in a mould.

Moulder, *v. n.* [From *mould*, fine, soft earth.] To turn to mould or dust by a process of natural decay; to crumble; to perish.

"When statues moulder, and when arches fall."—*Prior*.

—To waste away gradually; to be deteriorated or diminished.

"The enemy's army would have moulder'd to nothing."—*Clarendon*.

—*v. a.* To turn to mould or dust; to crumble; to waste.

"The silent stroke of mould'ring age."—*Pope*.

Mould'ery, *a.* Resembling mould; partaking of the characteristics of mould.

Mould ing, *n.* Any thing cast in a mould.

(Arch.) A general term applied to all the varieties of outline or contour given to the angles of the various subordinate parts and features of buildings, whether projections or cavities, such as cornices, capitals, bases, door- and window-jams, and heads, &c. The regular *M.* of Classical architecture are the *Fillet*, or *list*; the *Astragal*, or *bead*; the *Cyma reversa*, or *ogee*; the *Cyma recta*, or *cyma*; the *Cavetto*; the *Ovolo*; the *Scotia*, or *trochilus*; and the *Torus* (see those names and *COLUMNS*);—each of these admits of some variety of form, and there is considerable difference in the manner of working them between the Greeks and Romans. The mouldings in Classical architecture are frequently enriched by being cut into leaves, eggs, and tongues, or other ornaments, and sometimes the larger members have running patterns of bonyon-like or other foliage carved on them in low relief. In mediæval architecture, the diversities in the proportions and arrangements of the *M.* are very great, and it is scarcely possible to do more than point out a few of the leading and most characteristic varieties. In the Norman style the plain *M.* consist almost entirely of rounds and hollows, variously combined, with an admixture of splays, and a few fillets. The rich *M.* however, are very various, one of the most marked being the constant recurrence of *M.* broken into zigzag lines, and forming what is called the *zigzag* or *Chevron* moulding, (Fig. 379.) A series of grotesque heads placed in a hollow *M.*, called *Beak-heads*, (Fig. 326,) with their tongues or beaks lapping over a large bead or torus, was also very common. The *Hatched M.* is also not uncommon, and is found early in the style, as it can be cut conveniently without the aid of a chisel, with the pick only. The other favorite mouldings of the Norman style are the *Billet* mouldings, both square and round, the *Lozenge*, the *Nail-head*, the *Pellet*, the *Chain*, the *Cable*, and the *Rose*, examples of which are given in Fig. 1871. There may also be mentioned the *Star*, the *Billeted Cable*, the *Nebule*, the *Studded*, the *Indented*, the *Scalloped*, the *Fir Cone*, the *Double Cone*, the *Doretail*, the *Enbattled*, the *Open Heart*, and the *Antique*. The plain *M.* in the *Decorated* style, though in larger sizes, rounds, and hollows, are often very deeply cut, but in many instances, especially toward the end of the style, they become shallower and broader; ovals are not very uncommon, and ogees are frequent; splays also

Fig. 1871. — NORMAN MOULDINGS.

1, Roman billet; 2, Square billet; 3, Lozenge; 4, Nail-head; 5, Pellet; 6, Chain; 7, Cable; 8, Rose.

either by themselves or with other mouldings; fillets placed upon larger members are abundant, especially in the early part of the style; and a round *M.*, called the *Roll-M.* from a roll of parchment, or the *Scroll M.*, with a sharp projecting edge on it, arising from one-half being formed from a smaller curve than the other, is frequently used, and is characteristic of decorated work. When used horizontally, the larger curve is placed uppermost. There is also another *M.*, convex in the middle and concave at each extremity, which, though sometimes found in the perpendicular style, may be considered as generally characteristic of the decorated. Fillets are very frequently used to separate other members, but the rounds and hollows often run together. The enrichments consist of leaves and flowers, either set separately or in running patterns, figures, heads, and animals, all of which are generally carved with greater truth than at any other period; but the *ball-flower*, which belongs especially to this style, and a variety of the *four-leaved flower*, are the commonest. In the perpendicular style, the *M.* are generally flatter and less effective than at any earlier period. One of the most striking characteristics is the prevalence of very large, and often shallow hollows; these sometimes occupied so large a space as to leave but little room for any other *M.* In Perpendicular work, small fillets are not placed upon larger members as in the Decorated; splays also are much less frequent. The ornaments used in the *M.* are running patterns of foliage and flowers; detached leaves, flowers, and bunches of foliage; heads, animals, and figures, usually grotesque; shields, and various heraldic and fanciful devices; the large hollow *M.*, which used in arches or the jambs of doors and windows, sometimes contain statues with canopies over them.

Mould'iness, *n.* State or quality of being mouldy;—a name applied to all minute fungi which appear in masses upon organic bodies.

Mould'ing-mill, *n.* A mill for moulding or shaping timber.

Mould'ing-plane, *n.* A plane used in making mouldings.

Mould'ing-sand, *n.* (*Metallurgy*.) A mixture of loam and sand, used in making moulds.

Mould'-turner, *n.* A maker of metal frames.

Mould'y, *a.* [From *mould*.] Overgrown with mould, as, mouldy bread.

Mouille, (*Le*), a town of Guadeloupe, W. Indies, on the N.E. coast of the island of Grand Terre: pop. 10,000.

Mouline, (*mô-leen'*), **Monlinet**, *n.* [Fr.] The drum of a crane or capstan; a turnstile.

Moulinette, a village of Stormont co., Upper Canada, abt. 7 m. N.W. of Cornwall.

Moulins, (*mool'la*), a town of France, dept. of Allier, on the Allier, 159 m. S.S.E. of Paris. The principal public edifices are the church of Notre Dame, the imperial college, the town-hall, and the hall of justice. It also contains a public library of 20,000 vols. *Manuf.* Cutlery, cotton, silk, and woollen fabrics, &c. It has a considerable trade in corn, wine, timber, and live-stock. *Pop.* 18,000.

Moul'mein, a seaport-town of India. See MAULMAIN.

Moult, (*molt*), *v. n.* [Fr. *muer*; Lat. *muto*, to change.] To change, shed, or cast the hair, feathers, skin, horns, &c., as an animal.

—*v. a.* To change or shed, as the feathers.

—*n.* The act or process of changing the feathers, &c.; moulting.

Moulting, *n.* The operation by which certain animals change, cast off, or lose their hair, feathers, &c.

Monlton, (*mol'ton*), in Alabama, a post-village, cap. of Lawrence co., abt. 110 m. N. by E. of Tuscaloosa.

Moul'ton, in Ohio, a post-township of Anglaize county.

Moul'ton, in Texas, a post-village of Lavacca co., abt. 25 m. S.W. of Lagrange.

Mon'tonborough, in New Hampshire, a post-township of Carroll co.

Moul'trie, WILLIAM, an American general and statesman, b. in S. Carolina, 1731. He was of Scottish descent, his parents emigrating to S. Carolina early in the 18th century. In 1761 he commenced his career as captain in a militia regiment of infantry, raised for the defence of the frontier against the Cherokees, rendering important service, and acquiring considerable military knowledge. Becoming a warm advocate of the rights of the colonies, he was elected to the provincial congress in 1775, and was at the same time appointed colonel of the 2d S. Carolina regiment. In 1776 he was designated to construct a fort on Sullivan's Island, at the mouth of Charleston harbor, which afterwards received his name. The British fleet attacked the fort before its completion, but were repulsed with great slaughter. He was soon after made brigadier of the continental forces, and distinguished himself by the repulse of the British in their advance on Charleston, in 1779. In the spring of 1780 Charleston was again attacked, and *M.* who was second in command, shared in the capitulation of the American forces. He remained a prisoner two years, being exchanged in 1782, and was promoted a major-general by Congress the same year. In 1785 he was elected governor of S. Carolina, and again in 1794, after which he retired to private life. He was the author of *Memoirs of the Revolution*. D. 1805.

Moul'trie, (*mol'tree*), in Georgia, a post-village, cap. of Colquitt co., abt. 14 m. S.S.E. of Albany.

Moul'trie, in Illinois, a S.E. central co.; area, abt. 320 sq. m. *Rivers*. Kaskaskia River, and several less important streams. *Surface*, level; *soil*, fertile. *Cap.* Sullivan.

Moul'trie, in Ohio, a post-village of Columbiana co., abt. 66 m. S.E. of Cleveland.

Mound, *n.* [A. S. *mund*, defence; from Lat. *munio*, *munire*, to fortify.] Something raised as a defence or fortification, usually a bank of earth or stone; a bulwark; a defence; a rampart or dike; an artificial elevation of earth; a knoll; an isolated hill.

(*Her.*) A globe encircled, and bearing a cross.

—*v. a.* To fortify with a mound.

Mound, in Illinois, a township of McDonough county.

Mound, in Indiana, a village and township of Warren co., abt. 4 m. N. of Covington.

Mound, in Kansas, a twp. of Miami co.

Mound'-bird, *n.* (*Zool.*) See MEGALOPIDÆ.

Mound City, in Arkansas, a village of Crittenden co., abt. 7 m. N. of Memphis, Tennessee.

Mound City, in Illinois, a post-village of Pulaski co., abt. 7 m. N.E. of Cairo.

Mound City, in Kansas, a post-village and township, cap. of Linn county, about 24 miles N.N.W. of Fort Scott.

Mound City, in Missouri, a village of Holt co., abt. 13 m. N.N.W. of Oregon.

Mound Prairie, in Iowa, a twp. of Jasper co.

Mound Prairie, in Minnesota, a township of Houston county.

Mound View, in Minnesota, a township of Ramsey county.

Mounds'ville, in Virginia. See GRAVE CREEK.

Mound'ville, in Wisconsin, a village of Dane co., abt. 24 m. W.S.W. of Madison.—A post-village and township of Marquette co., abt. 10 miles North of Portage City.

Moun't, *n.* [A. S. *munt*; Fr. *mont*; It. *monte*; Lat. *mons*, *montis*.] A mountain or hill; a mass of earth, or earth and rock, rising considerably above the surface of the surrounding land; a high hill; an isolated knoll or butte; as, *Mount Washington*.—A mound; an embankment; a bulwark for offensive or defensive operations.—Paper, card, or Bristol-board on which a drawing, miniature, or photograph is fixed.

(*Mil.*) A horse, and appliances for mounting; equipments requisite to a mounted horseman or trooper.

Mount of Piety. See MONT-DE-PIÉTÉ.

—*v. a.* To raise aloft; to lift on high; to elevate above.

"As high as we have mounted in delight,

In our dejection do we sink as low."—*Wordsworth*.

—To ascend; to climb; to scale; to get upon an elevated place.

"Shall we mount again the rural throne?"—*Dryden*.

—To place, as one's self on horseback.—To furnish with animals for riding; to supply with horses; as, to *mount* a troop of cavalry.—To prepare for use; to set off to advantage, or embellish; as, to *mount* a picture, to *mount* a jewel, to *mount* a gun on its carriage, &c.—To be furnished with; to carry; as, the ship, or fort, *mounted* twenty guns.

To mount guard. (*Mil.*) To take the post and perform the duty of a sentry or patrol.

—*v. n.* To ascend, as to the top of a mountain; to rise, or rise on high; to tower; to be raised or built to a great altitude.

"A mind . . . that mounts no higher than a bird can soar."—*Shaks.*

—To get on horseback; to leap or spring upon the back of an animal, or upon anything.

"And there was mounting in hot haste."—*Byron*.

—To amount; to count up; to rise in value.

"Make fair deductions, see to what they mount."—*Pope*.

Mount'able, *a.* Capable of being mounted; that may be mounted.

Mount A'braham, in Maine, a mountain in Franklin co., abt. 60 m. N.N.W. of Augusta.

Mount Adams, or WACHUSET MOUNTAIN, in Massachusetts, a mountain of Worcester co., abt. 45 m. N.W. of Boston; height, 2,018 ft.

Mount Adams, in New Hampshire, a summit of the White Mountains, in Coos co.; height, 5,759 ft.

Mountain, *n.* [Fr. *montagne*; Lat. *montanus*, from *mons*, *montis*, a mountain.] A large mass of earth and rock, rising above the common level of the earth or adjacent land, but of no definite altitude. Any *M.* of small dimensions is termed a *hill*, especially when it rises above the plain by almost insensible degrees. There are various parts in a *M.* which it is well to observe, for we have the *base*, the *sides* or *declivities*, and the *top* or *summit*. When the summit of a *M.* is detached, so to speak, from the general mass, by assuming all at once a very steep ascent, it is called a *peak*; such as the *Pic-du-Midi* in the Pyrenees, and the *Pic Blanc* in the Alps, near Mont Rosa, and the Peak of Teyda in the island of Teneriffe. Every flat summit is termed a *plateau*, while a rounded one is called a *drove* or *hummock*. The intervening space between two chains of *M.* is termed a *valley*; and this is said to be of the first class when it serves as the basin of a large river. The lateral subdivisions which *M.*-chains frequently exhibit, and which form smaller valleys leading into the principal one, bear the name of *branches*. An *offset* is a series of smaller *M.* which detach themselves from the principal chain, receding from it in a direction almost parallel. If this offset be of small extent, it is termed a *spur*, while the name of *crest* is applied to the upper ridge, whether of a branch, an offset, or a spur. The numerous attempts that have been made to generalize the distribution of *M.* on the globe have hitherto been almost unsuccessful. In America, the *M.* take a general direction more or less parallel to the meridian, and for a distance of 8,280 m. from Patagonia to the Arctic Ocean, form a vast and precipitous range of lofty *M.*, which follow the coast-line in S. America, and spread somewhat out in N. America, presenting everywhere throughout their

course a tendency to separate into two or more parallel ridges, and giving to the whole continent the character of a precipitous and lofty W. border, gradually lowering into an immense expanse of E. lowlands. In the Old World, on the other hand, there is no single well-defined continuous chain connected with the coast-line. The principal ranges are grouped together in a Y-shaped form, the general direction of which is at right angles to the New World chain. The centre of the system in the Himalayas is the highest land in the hemisphere. From this, one arm radiates in a N.E. direction, and terminates in the high land at Behring Straits; the other two take a W. course; the one a little to the N., through the Caucasus, Carpathians, and Alps, to the Pyrenees; the other more to S., through the immense chain of Central African M., and terminating at Sierra Leone. Most of the principal secondary ranges have generally a direction more or less at right angles to this great M. tract. The highest summits upon the globe are: in Asia, Mt. Deodhunga in the Himalayas, 29,002 feet above the level of the sea; in America, Aconcagua, in the Andes, 22,867 feet; in Europe, Mont Blanc, 14,748 French, or about 15,775 English feet; in Africa, Kilimanjaro, 19,680 feet.—*M.* chiefly owe their origin, the one to *denudation*, which is always abrading and carrying to a lower level the exposed surfaces; the other, to an internal force, which is raising or depressing the existing strata, or bringing unstratified rocks to the surface. The extent to which denudation has altered the surface of the globe can scarcely be imagined. All the stratified rocks are produced by its action; but these do not measure its full amount, for many of these beds have been deposited and denuded, not once or twice, but repeatedly, before they reached their present state. Masses of rock

Fig. 1872.

THE GREAT GLACIER CALLED THE MER DE GLACE,
("SEA OF ICE,") ON MONT BLANC.
(View taken from Montanvert.)

more indurated, or better defended from the wasting currents than those around, serve as indices of the extent of denudation. *M.* produced by internal force are of several kinds. 1. *M.* of ejection, in which the internal force is confined to a point, so to speak, having the means of exhausting itself through an opening in the surface. The lava, scoria, and stones ejected at this opening form a conical projection which, at least on the surface, is composed of strata sloping away from the crater. Many volcanic cones of this kind have been denuded after the volcano became extinct, so as to present the appearance of ordinary mountains, so that the features presented by mountains of this origin are often due to the work of denuding agents. 2. *M.* of elevation, formerly supposed to be due to an upthrust from below, are now ascribed to the folding and fracturing of strata resulting from lateral pressure. They indicate lines of weakness along which the rocks have yielded to severe lateral compression, perhaps due to the sinking down of the outer shell of the earth upon the contracting nucleus. Many such mountains have afterward lost much of their height through denudation, while the deposition of the denuded materials on the ocean floor may have lifted them again, by the thrust due to the increased weight. 3. *M.* of circumdenudation are results of erosion which has cut deeply into plateau regions, carrying away surrounding material and leaving mountain-like masses isolated. Excellent examples of this are to be seen in the flat-topped *mesas* or *buttes* of the Western U. S.—*Age of Mountains.* Mountains are of all geological ages, those of latest date being usually the youngest, from the brief time left to erode forces. Some of the very early mountains seem to have been denuded down to their bases, and reduced to low plains, which have subsequently been lifted as plateaus, and again largely denuded. Such seems to have been the case, in some measure, with the Alleghenies, which are far more remote in origin than the much higher and more imposing Rocky Mountain chain.

Monn'tain, a. Pertaining, or having reference to a mountain; formed on mountains; characteristic of mountains; growing on mountains; as, *mountain air*, *mountain pines*, &c.—Huge; vast; resembling a mountain in size.

"The high, the mountain majesty of worth."—Byron.

Monn'tain-ash, n. (*Bot.*) See PYRUS.

Monn'tain-blue, n. (*Min.*) A very beautiful carbonate of copper, found in Cumberland, England. It is not, however, durable; used in oil, it becomes green, and, as a pigment, is precisely of the character of verditer.

Monn'tain-cat, n. (*Zoöl.*) The catamount.

Mountain-cork, Mountain-leather, n. (*Min.*) A very light variety of asbestos, the fabrics of which are so interlaced that the fibrous structure is not apparent.

Mountain Cove, in W. Virginia, a post-village of Fayette co., abt. 150 m. S. of Wheeling.

Mountain Creek, in Virginia, enters the Rappahannock River from Culpeper co.

Monn'tain-dew, n. Pure Scotch whisky;—so called from being distilled in the Scottish Highlands

Mountaineer, n. An inhabitant of a mountain.

—A rustic; a freebooter; a savage.

"Savage, fierce bandit, or mountaineer."—Milton.

Monn'tain-flax, n. (*Min.*) Same as AMIANTHUS, *q. v.*

Monn'tain-green, n. (*Min.*) A native carbonate of copper, combined with a white earth, and often striated with veins of mountain-blue, to which it bears the same relation that green verditer does to blue verditer; nor does it differ from these and other copper-greens in any property essential to the painter.

Monn'tain-goat, n. (*Zoöl.*) A species of antelope, (*Fig. 1873.*) *Aplocerus montanus*, which inhabits the Rocky Mountains. Its jet-black, polished, slender, and conical horns are much like those of the chamois. It is covered with long and pendent hair, and the color is white.—Tenney.

Fig. 1873. — MOUNTAIN-GOAT.

Monn'tain-heath, n. (*Bot.*) See NEUZIESA.

Monn'tain-lan'tel, n. (*Bot.*) See KALMIA.

Monn'tain-leather, n. (*Min.*) See MOUNTAIN-CORK.

Monn'tain-lic'orice, n. (*Bot.*) See TRIFOLIUM.

Monn'tain-lime-stone, n. (*Geol.*) (Also called *carboniferous limestone*.) A calcareous rock, containing marine shells and corals, devoid of coal. It is situate immediately below the millstone-grit, and above the old red sandstone.

Monn'tain-mahog'any, n. (*Bot.*) See BETULA.

Monn'tain-milk, n. (*Min.*) A very soft, spougy variety of carbonate of lime.

Monn'tain-mint, n. (*Bot.*) See MONARDA.

Mountainous, a. Full of mountains; hilly; rugged; as, a *mountainous country*.—Large as a mountain; huge.

"Mountainous heaps of wonder."—Prior.

Mountainousness, n. State of being full of mountains; as, "the *mountainousness* of Armenia." Brerewood.

Monn'tain-pars'ley, n. (*Bot.*) See ATHAMANTA.

Monn'tain-pepp'per, n. Tho seeds of *Capparis* *sinica*.

Monn'tain-rice, n. (*Bot.*) See ORYZOPSIS.

Monn'tain-rose, n. (*Bot.*) The Alpine rose. See ROSA.

Monn'tain-soap, n. (*Min.*) A soft, brownish, unctuous shell.

Monn'tain-tea, n. (*Bot.*) See GAULTHERIA.

Monn'taintown Creek, in Georgia, enters the Coosawatee River in Gilmore co.

Monn'tain View, in California, a post-village of Santa Clara co., abt. 12 m. N.W. of San Jose.

Monn'tain View, in S. Carolina, a village of Abbeville dist.

Monn'tain Well, in California, a village of Nevada co., abt. 2 m. E. of Nevada.

Mount Airy, in Illinois, a village of Greene co.

Mount Airy, in Maryland, a post-village of Carroll co.

Mount Airy, in N. Carolina, a post-vill. of Surrey co.

Mount Airy, in New Jersey, a post-village of Hueterdon co., about 16 m. N.N.W. of Trenton.

Mount Airy, in Pennsylvania, a village of Berks co.—A village of Washington co.

Mount Airy, in Virginia, a post-village of Pittsylvania co., about 145 m. S.W. of Richmond.

Mount Ar'lington, in Oregon, a peak of the Coast Range, on the boundary line between Coos and Douglas counties.

Mount Aubry, (aw'bree,) in Pennsylvania, a village of Lehigh co., abt. 1 m. N.W. of Allentown.

Mount Au'burn, in Illinois, a post-village and township of Christian county, about 22 miles E. by S. of Springfield.

Mount Au'burn, in Indiana, a post-village of Shelby co., abt. 12 m. S.W. of Shelbyville.

Mount Ayr, in Iowa, a post-village and township,

cap. of Riuggold county, about 75 miles S.S.W. of Des Moines.

Mount Ba'ker, in Oregon, a peak of the Cascade Range, abt. 90 m. E. of the mouth of Frazer's River.

Mount Beth'el, in New Jersey, a village of Somerset co., abt. 7 m. N.E. of Somerville.

—A post-village of Warren co., abt. 11 m. E. of Belvidere.

Mount Beth'el, in Pennsylvania, a post-village of Northampton co., abt. 120 m. E.N.E. of Harrisburg.

Mount Big'elow, in Maine, a mountain on the boundary line between Franklin and Somerset counties, abt. 70 m. N.N.W. of Augusta.

Mount Blar'chard, in Ohio, a post-village of Hancock co., abt. 85 m. N.N.W. of Columbus.

Mount Briggs, in Iowa, a village of Pottawattomie co., abt. 12 m. E. by N. of Council Bluffs.

Mount Bull'ion, in California, a post-village of Mariposa co., abt. 5 m. E. of Mariposa.

Mount Car'mel, in Syria. See CARMEL (MOUNT)

Mount Car'mel, in Connecticut, a post-village of New Haven co., abt. 9 m. N. of New Haven.

Mount Car'mel, in Illinois a city, cap. of Wabash co., on the Wabash and 2 other R.Rs., 24 m. S.W. of Vincennes, Ind.; has abundant water-power and extensive manuf. Pop. (1897) 4,050.

Mount Car'mel, in Kentucky, a post-village of Fleming co., about 81 m. N.E. of Frankfort.

Mount Car'mel, in Mississippi, a post-village of Covington co., about 55 m. S.S.E. of Jackson.

Mount Carmel, in Ohio, a post-village of Clermont co., about 12 m. E. of Cincinnati.

Mount Car'mel, in Pennsylvania, a post-borough and township of Northumberland co., about 30 m. E.S.E. of Sunbury.

Mount Car'roll, in Illinois, a city, cap. of Carroll co., on C. M. & St. P. R.R., 34 m. S.E. of Galena. Pop. (1897) 2,150.

Mount Clem'ens, in Michigan, a city, cap. of Macomb co., 25 m. N.N.E. of Detroit. Pop. (1894) 5,647.

Mount Da'na, in California, a peak of the Sierra Nevada, abt. Lat. 37° 53' N.; height, abt. 13,500 feet.

Mount Da'vidson, in Nevada, a peak of the Sierra Nevada (Washoe Range), in Storey co. Virginia City is built upon its E. slope. It contains rich deposits of silver.

Mount Desert, (dez'ert,) in Maine, an island in Frenchman's Bay, off the coast of Hancock co., abt. 40 m. S.E. of Bangor; area, abt. 180 sq. m. It constitutes the post-township of Mount Desert, and has several very fine harbors.

Mount Desert Rock, in Maine, an island and light-house off the S.E. coast of Hancock co., about 20 m. S. of Mount Desert. It exhibits a fixed light 50 feet above the sea; Lat. 43° 58' 30" N., Lon. 68° 8' W.

Mount Diablo, (de-a'blo,) in California, a peak of the Coast Range, in Contra Costa co., about 30 m. E. of San Francisco; height, abt. 3,800 feet.

Mountebank, n. [*It. montabanco*, from *montare*, to mount, and *banco*, a bench.] A quack doctor; one who was formerly wont to mount a bench or stage in some public place, to boast his skill in curing diseases, and vend nostrums as pretended infallible remedies; a saltimbanque.

"It looks like a mountebank to boast infallible cures."—Baker.

—A charlatan; a quack; an empiric; a humbug; any boastful and false pretender.

"Disguised cheaters, prating mountebanks."—Shaks.

—*v. a.* To gull; to cheat; to cozen; to humbug by boasting and false pretences. (*R.*)

"I'll mountebank their loves."—Shaks.

Mountebankery, n. Quackery; charlatanry; empiricism; humbug.

Mountebankism, n. Practices of a mountebank; mountebankery.

Mount Eden, in California, a post-village of Alameda co., abt. 7 m. S.E. of San Leandro.

Mount Eden Fur'nace, in Pennsylvania, a village of Lancaster co.

Mount Edgecumbe, (ed'jkum,) a mountain of New Zealand, in Lat. 38° S., Lon. 177° E.; height, 10,000 feet.

Mount Em'mons, in New York, a spur of the Adirondacks, in Hamilton co.; height, 4,500 feet.

Mount E'non, in Georgia, a village of Richmond co., abt. 15 m. S. of Augusta.

Mount Ephraim, (ē'fra-im,) in New Jersey, a post-village of Camden co., abt. 6 m. S. by E. of Camden.

Mount Ephraim, in Ohio, a village of Guernsey county.

—A post-village of Noble co.

Monn'ter, n. One who mounts, rises, or ascends.

Monnt Et'na, in Indiana, a post-village of Huntingdon co., abt. 90 m. N.E. of Indianapolis.—A village of Rush co., abt. 6 m. N. of Rushville.

Monnt Flor'ence, in Kansas, a post-village of Jefferson co., abt. 13 m. N.E. of Topeka.

Mount Free'dom, in Kentucky, a post-village of Jessamine co.

Mount Gal'lagher, in S. Carolina, a post-village of Laurens dist.

Mount Gil'ead, in Kansas, a village of Anderson co.

Mount Gil'ead, in Kentucky, a post-village of Mason co., abt. 12 m. S.E. of Maysville.

Mount Gil'ead, in Ohio, a post-village and township, cap. of Morrow county, about 42 miles N. by E. of Columbus.

Mount Gil'ead, in Virginia, a post-village of Loudoun co., abt. 155 m. N. of Richmond.

Mount Grove, in N. Carolina, a village of Davis co.

Mount Ham'ilton, in California, a peak of the

Coast Range in Santa Clara co., abt. 22 m. E. of San Jose; height, 4,440 feet.

Mount Hawkings, in *Illinois*, a village of Perry co., abt. 10 m. E. of Pinckneyville.

Mount Hawley, in *Illinois*, a village of Peoria co., abt. 10 m. N. of Peoria.

Mount Health, in *Ohio*, a post-village of Hamilton co., abt. 110 m. S.W. by W. of Columbus.

Mount Hill Iron Works, in *Pennsylvania*, a village of Cumberland co.

Mount Holly, in *New Jersey*, a post-village, cap. of Burlington co., abt. 19 m. S. of Trenton.

Mount Holly, in *Ohio*, a post-village of Knox co., abt. 66 m. N.E. of Columbus.

Mount Holly, in *Vermont*, a post-township of Rutland co.

Mount Hood, in *Oregon*, a peak of the Cascade Range, abt. 70 m. E. of Oregon; height, 11,000 feet.

Mount Hope, in *Illinois*, a township of McLean county.

Mount Hope, in *Iowa*, a post-village of Delaware co., abt. 15 m. N.W. of Delhi.

Mount Hope, in *New York*, a post-village and township of Orange co., abt. 130 miles S.S.W. of the city of Albany.

Mount Hope, in *Pennsylvania*, a village of Franklin co., abt. 11 m. S.E. of Chambersburg.

—A post-village of Lancaster co.

Mount Hope, in *Rhode Island*, an eminence of Bristol co., on the W. shore of Mount Hope Bay. It is noted as having been the residence of the famous Indian chief King Philip.

Mount Hope Bay, in *Rhode Island*, an arm of Narragansett Bay, extending N.E. into Bristol co.

Mount Ida, in *Arkansas*, a post-village, cap. of Montgomery co., abt. 90 m. W. by S. of Little Rock.

Mount Idaho, in *Idaho*, a post-town, cap. of Idaho co., 60 m. S.E. of Lewiston.

Mount Independence, in *Vermont*, an eminence in Addison co., abt. 2 m. S.E. of Fort Ticonderoga. It was a strongly fortified military post during the early history of the colonies.

Mounting, *n.* Act of rising.

—Act of preparing for use, or embellishment; that by which anything is prepared for use, or set off to advantage.

—Equipment; embellishment; appointment; as, the mounting of a sword.

Mounting, *adv.* By ascending or rising.

Mount Jackson, in *Pennsylvania*, a post-village of Lawrence co., abt. 50 m. N.N.W. of Pittsburgh.

Mount Jackson, in *Virginia*, a post-village of Shenandoah co., abt. 13 m. S.W. of Woodstock.

Mount Jefferson, in *New Hampshire*, a summit of the White Mountains, in Coos co., between Mount Adams and Mount Washington. Height, 5,657 feet.

Mount Joy, in *Pennsylvania*, a township of Adams co.

—A post-borough and township of Lancaster co., about 12 m. N.W. of Lancaster.

Mount Kingston, in *Illinois*, a village of Montgomery co., abt. 72 m. S. of Springfield.

Mount La Fayette, in *New Hampshire*, a summit of the White Mountains, in Grafton co., abt. 75 m. N. by W. of Concord. Height, 5,500.

Mount Lebanon, in *Louisiana*, a post-village of Bienville parish, abt. 200 m. N.N.W. of Baton Rouge.

Mount Leinster, a mountain of Ireland, in Leinster, of Carlow, abt. 7 m. E.N.E. of Borris. Height, 2,610 feet.

Mount Liberty, in *Ohio*, a post-village of Knox co., abt. 40 m. N.E. of Columbus.

Mount Lincoln, one of the highest peaks of Colorado. Height, 14,296 ft. ab. sea-level (Hayden, 1876).

Mount Linn, in *California*, a peak of the Coast Range, abt. Lat. 40° N., Lon. 123° W.

Mount Lyell, in *California*, a peak of the Sierra Nevada, abt. Lat. 37° 45' N. Height, abt. 13,500 feet.

Mount MacIntire, in *New York*, a summit of the Adirondacks, N.E. of Mount Tahawus. Height, 5,180 ft.

Mount Madison, in *New Hampshire*, a peak of the White Mountains in Coos co., immediately south of Mount Washington. Height, 5,415 feet.

Mount Mansfield, in *Vermont*, the highest peak of the Green Mountains, abt. 20 m. N.W. of Montpelier. Height, 4,359 feet.

Mount Marcy, in *New York*. See MOUNT TAHAWUS.

Mount Meigs, in *Alabama*, a post-village of Montgomery co., abt. 15 m. E. of Montgomery.

Mount Melintoyu, a peak of the Andes, near the W. coast of Patagonia. Height, 7,400 feet.

Mount Mellick, a town of Ireland, in Leinster, Queen's co., abt. 6 m. N.W. of Maryborough.

Mount Meridian, in *Indiana*, a post-village of Putnam co., abt. 40 m. W.S.W. of Indianapolis.

Mount Meridian, in *Virginia*, a post-village of Augusta co., abt. 118 m. N.W. of Richmond.

Mount Misery, in *New Jersey*, a village of Burlington co., abt. 17 m. E.S.E. of Mount Holly.

Mount Mitchell, or MITCHELL'S PEAK, in *N. Carolina*, a peak of the Black Mountains, abt. 125 m. W.N.W. of Raleigh. It is the second highest summit E. of the Mississippi River. Height, 6,732 feet.

Mount Moriah, in *New Hampshire*, a peak of the White Mountains, in Coos co.

Mount Morris, in *Illinois*, a post-village and township of Ogle county, abt. 177 miles N. of the city of Springfield.

Mount Morris, in *Michigan*, a post-village and township of Genesee co., about 68 m. N.N.W. of the city of Detroit.

Mount Morris, in *New York*, a post-village and

township of Livingston co., abt. 36 m. S. by W. of Rochester.

Mount Morris, in *Pennsylvania*, a post-village of Green co., abt. 18 m. S.E. of Waynesburg.

Mount Morris, in *Wisconsin*, a post-township of Waushara co.

Mount Nebo, in *Pennsylvania*, a post-village of Lancaster co.

—A village of Lebanon co.

Mount Nebo, in *Vermont*, an eminence of Addison co., near Lake Champlain.

Mount Olive, in *Arkansas*, a post-village, the former cap. of Izard co., about 100 m. N. of Little Rock.

Mount Olive, in *Iowa*, a village of Mills co., abt. 5 m. S.E. of Glenwood.

Mount Olive, in *Ohio*, a post-village of Clermont co., abt. 30 m. S.E. of Cincinnati.

Mount Oliver, in *Pennsylvania*, a village of Allegheny co., abt. 2 m. S. of Pittsburgh.

Mount Ophir, in *California*, a post-village of Mariposa co., abt. 7 m. W. of Mariposa.

Mount Pacaraima, or SIERRA PACARAIMA, a mountain of Brazil, near the Parima; Lat. 5°38' N., Lon. 63°08' W.

Mount Palatine, in *Illinois*, a post-village of Putnam co., abt. 12 m. S.E. of Hennepin.

Mount Pelia, or MIDDLEBURG, in *Tennessee*, a village of Weakly co., abt. 135 m. W. of Nashville.

Mount Pisgah, in *Ohio*, a post-village of Clermont co., abt. 20 m. E. of Cincinnati.

Mount Pleasant, a village of Upper Canada, abt. 30 m. N. of Hamilton.

Mount Pleasant, in *Indiana*, a village and township of Delaware county, about 33 miles W.N.W. of Richmond.—A village of Martin county, about 35 m. E. of Vincennes.

Mount Pleasant, in *Iowa*, a city, cap. of Henry co., abt. 28 m. W.N.W. of Burlington. It contains a Wesleyan University, the Iowa Lunsane Hospital, and several other educational and benevolent institutions.

Mount Pleasant, in *Kansas*, a post-village and township of Atchison county, about 10 miles S. of Atchison.

Mount Pleasant, in *Kentucky*, a village of Harlan co., abt. 170 m. S.E. of Frankfort.

Mount Pleasant, in *Maryland*, a post-village of Frederick co.

Mount Pleasant, in *Michigan*, a post-village, cap. of Isabella co. Pop. (1894) 3,178.

—A village of Wayne co., about 22 m. S.W. of Detroit.

Mount Pleasant, in *Minnesota*, a former township of Green county.—A village of Scott county, about 27 miles S.W. of St. Paul.—A township of Wabasha county.

Mount Pleasant, in *Missouri*, a township of Lawrence co.—A village of Miller co., abt. 28 m. S.W. of Jefferson City.—A township of Scotland co.

Mount Pleasant, in *Nebraska*, a post-village of Cass co., abt. 32 m. S. of Omaha City.

Mount Pleasant, in *N. Carolina*, a post-village of Cabarras co., abt. 136 m. W. of Raleigh.

Mount Pleasant, in *New Jersey*, a post-village of Hunterdon co., abt. 11 m. W.N.W. of Flemington.—A village of Monmouth co., abt. 10 m. N. of Freehold.—A village of Morris co., abt. 13 m. N.N.W. of Morristown.

Mount Pleasant, in *New York*, a township of Westchester co.

Mount Pleasant, in *Ohio*, a village of Hamilton co., about 10 miles N. of Cincinnati.—A post-village and township of Jefferson county, about 130 miles E. of Columbus.

Mount Pleasant, in *Pennsylvania*, a township of Adams county.—A village and township of Columbia county, about 3 miles N. of Bloomsburg.—A village of Lancaster county.—A village and township of Washington county, about 20 miles S.W. of Pittsburgh.—A township of Wayne county.—A post-borough and township of Westmoreland county, about 40 miles S.E. of Pittsburgh.

Mount Pleasant, in *Tennessee*, a post-village of Maury county, about 52 miles S.S.W. of Nashville.—A village of Sullivan county.

Mount Pleasant, in *Texas*, a post-town, cap. of Titus county, about 320 m. N.E. of Austin. Pop. (1897) 1,100.

Mount Pleasant, in *Utah*, a city of San Pete co., about 22 m. N.N.E. of Manti.

Mount Pleasant, in *Virginia*, a post-office of Spottsylvania co., about 5 m. N. by W. of Richmond.

Mount Pleasant, in *Wisconsin*, a township of Green co.—A village and township of Racine co., about 4 m. W. of Racine.

Mount Pulas'ki, in *Illinois*, a post-village of Logan co., about 25 m. E.N.E. of Springfield.

Mount Rainier, in *Washington*, a lofty peak of the Cascade Range, about Lat. 46° 00' N., Lon. 121° 30' W.; height, about 12,000 ft.

Mount Rath, a town of Ireland, in Leinster, Queen's county, abt. 14 m. E.N.E. of Roscrea; pop. 3,000.

Mount Republic, in *Pennsylvania*, a village of Wayne co., abt. 170 m. N.E. of Harrisburg.

Mount Ripley, in *California*, a peak of the Coast Range, on the E. border of Lake co.; height, abt. 7,500 ft.

Mount Rock, in *Pennsylvania*, a post-village of Cumberland co.

Mount Saint Elias, a volcanic mountain of North America, on the boundary line between Alaska and the British possessions; Lat. 60° 18' N., Lon. 140° 30' W. Height, (estimated) 17,000 ft.

Mount's Bay, an inlet of the Atlantic Ocean, on the S.E. coast of England, county of Cornwall. In it is St. Michael's Mount.

Mount San Bernardi'uo, in *California*, a mountain peak in Bernardino co., about 75 m. E. of Los Angeles; height, 8,500 ft.

Mount Scott, in *Iowa*, a village of Cass co., abt. 206 m. W.N.W. of Iowa City.

Mount Scott, in *Oregon*, a precinct of Douglas county.

Mount Seward, in *New York*, a spur of the Adirondacks, in Franklin co., abt. 130 m. N. by W. of Albany; height, 4,800 feet.

Mount Shasta, in *California*, an isolated peak in Siskiyou co., abt. 30 m. S.E. of Yreka; height, estimated at 17,500 ft. It is an extinct volcano, and supposed to be the highest summit in California.

Mount Sidney, in *Indiana*, a village of Jackson co., abt. 80 m. S. of Indianapolis.

Mount Sidney, in *Virginia*, a post-village of Augusta co., abt. 10 m. N.E. of Staunton.

Mount Solon, in *Virginia*, a post-village of Augusta co., abt. 110 m. W.N.W. of Richmond.

Mount Sterling, in *Alabama*, a post-village of Choctaw co., abt. 125 m. W. by S. of Montgomery.—A village of Monroe co.

Mount Sterling, in *Illinois*, a post-village, cap. of Brown co., abt. 77 m. W. by N. of Springfield.

Mount Sterling, in *Indiana*, a post-village of Switzerland co.

Mount Sterling, in *Kentucky*, a city, cap. of Montgomery co., about 80 m. E. by S. of Frankfort. Pop. (1897) 3,760.

Mount Sterling, in *Ohio*, a post-village of Madison co., abt. 24 m. S.W. of Columbus.—A village of Muskingum co., abt. 46 m. E. of Columbus.

Mount Sterling, in *Wisconsin*, a post-village of Crawford co., abt. 25 m. N. by E. of Prairie du Chien.

Mount Summer, in *Illinois*, a post-village of Jo Daviess co., abt. 155 m. W.N.W. of Chicago.

Mounts'ville, in *Virginia*, a village of Loudoun co., abt. 150 m. N. of Richmond.

Mount Tabor, in *Indiana*, a village of Monroe co., abt. 11 m. N.W. of Bloomington.

Mount Tabor, in *S. Carolina*, a post-village of Union district.

Mount Tabor, in *Vermont*, a township of Rutland co.

Mount Tahawus, or **Mount Marcy**, in *New York*, a peak of the Adirondacks, in Essex co. Height, 5,417 feet, being the highest summit of the range.

Mount Tom, in *Massachusetts*, an eminence of Hampden co., on the Connecticut River. Height, 1,214 ft.

Mount Tyn'dall, in *California*, a peak of the Sierra Nevada, in Tulare co., abt. Lat. 36° 40' N. Height, abt. 14,200 ft.

Mount Union, in *Ohio*, a suburb of Alliance, in Stark co.

Mount Union, in *Pennsylvania*, a post-borough of Huntingdon co., abt. 80 m. W. of Harrisburg. Pop. 1,100.

Mount Up'ton, in *New York*, a post-village of Chenango co., about 100 m. W. by S. of Albany.

Mount Vernon, in *Alabama*, a post-village of Mobile co., about 150 m. S.W. of Montgomery.

Mount Vernon, in *Arkansas*, a village of St. Francis co., about 115 m. E.N.E. of Little Rock.

Mount Vernon, in *Colorado*, a village of Jefferson co., about 15 m. W.S.W. of Denver.

Mount Vernon, in *Georgia*, a post-village, cap. of Montgomery co., about 100 m. W. of Savannah.

Mount Vernon, in *Illinois*, a city, cap. of Jefferson co., 135 m. S.S.E. of Springfield. Pop. (1897) 3,500.

Mount Vernon, in *Indiana*, a city, cap. of Posey co., about 200 m. S.W. of Indianapolis; pop. (1897) 5,250.—A village of Wabash co., about 10 miles S. of Wabash.

Mount Vernon, in *Iowa*, a township of Black Hawk co.—A post-town of Linn co., about 16 m. E.S.E. of Cedar Rapids.—A village of Mahaska co.

Mount Vernon, in *Kentucky*, a post-village, cap. of Rockcastle co. Pop. (1897) 580.

Mount Vernon, in *Maine*, a post-township of Kennebec co.

Mount Vernon, in *Michigan*, a post-village of Macomb co.

Mount Vernon, in *Minnesota*, a post-township of Winona co., about 17 m. N. of Winona.

Mount Vernon, in *Missouri*, a city, cap. of Lawrence county, about 150 m. S.W. of Jefferson City.—A village of Moniteau county, about 20 m. S.E. of Booneville.

Mount Vernon, in *Nebraska*, a village of Nemaha co., about 9 m. N.W. of Brownsville.

Mount Vernon, in *New Hampshire*, a post-town of Hillsborough county, about 22 miles S. by W. of Concord.

Mount Vernon, in *New York*, a post-village of Westchester co., about 20 m. N. of New York city.

Mount Vernon, in *Ohio*, a city, cap. of Knox co., about 45 m. N.E. of Columbus. Pop. (1897) 6,450.

Mount Vernon, in *Pennsylvania*, a village of Chester co., about 72 m. E.S.E. of Harrisburg.

Mount Vernon, in *Tennessee*, a post-village of Monroe co., about 48 m. S.S.W. of Knoxville.

Mount Vernon, in *Texas*, a post-town, cap. of Franklin co., 35 m. S. of Clarksville. Pop. (1897) 650.

Mount Vernon, in *Virginia*, a locality of Fairfax co., on the Potomac river, about 8 m. below Alexandria. It was the residence, and contains the tomb of George Washington. The estate originally consisted of a handsome wooden mansion, with the usual farm buildings and 7,000 acres of land. The mansion was built by Lawrence Washington, George's elder brother, who settled here in 1743, and named the estate after Admiral Ver-

non, under whom he had served in the British navy. The mansion was greatly enlarged, and the whole estate much improved by the general, who made it his home until death, Dec. 14, 1799. In 1858 the mansion and tomb, with 200 acres of the farm, were purchased from John A. Washington, the nephew of George Washington, by the "Ladies' Mount Vernon Association," for \$200,000.

Fig. 1874. — MOUNT VERNON.

The design of this association is to keep the place in order, and hold it in perpetuity as a place of public resort and pilgrimage. Gen. Washington's library and bed-room remain as they were at the time of his death, and contain many articles of interest.

Mount Vernon, in Wisconsin, a post-village of Dane co., abt. 17 m. S.W. of Madison.

Mount Vernon, in W. Virginia, a village of Preston co., abt. 7 m. N.N.E. of Kingwood.

Mount View, in Missouri, a post-village of Benton co., abt. 80 m. S.W. by W. of Jefferson City.

Mountville, in Georgia, a post-village of Tronp co., abt. 9 m. E. of La Grange.

Mountville, in Pennsylvania, a post-village of Lancaster co., abt. 8 m. W. of Lancaster.

Mount Vernon, (vish'on,) in New York, a post-village of Otsego co., abt. 78 m. W. of Albany.

Mount Washington, formerly VERNON, in Kentucky, a post-village of Bullitt co., abt. 21 m. S.S.E. of Louisville.

Mount Washington, in Massachusetts, a township of Berkshire co.

Mount Washington, in New Hampshire, a peak of the White Mountains in Coos co., abt. 85 m.N. by E. of Concord. Height, 6,226 ft. above sea-level, being not only the culmination of the White Mountains, but the highest land in New England. It is a favorite resort for tourists in summer. The summit is now reached by a railroad.

Mount Washington, in Ohio, a p.-v. of Hamilton co., forming a suburb of Cincinnati.

Mount Washington, in Pa., a v. of Alleghany co.

Mount Willing, in Alabama, a village of Lowndes co., abt. 40 m. S.W. of Montgomery.

Mount Willing, in S. Carolina, a post-village of Edgefield district.

Mount Yo'nah, in Georgia, a village, former cap. of White co., about 15 m. W. of Clarksville.

Mount Zion, in Georgia, a village of Hancock co., abt. 30 m. N.N.E. of Milledgeville.

Mour'a, a town of Brazil, on the Rio Negro, abt. 47 m. W.N.W. of Ayrão.

Mour'rad Bey, chief of the Mamelukes, and companion-in-arms of Ibrahim Bey, was born in Circassia, 1750. On the invasion of Egypt by Bonaparte, he won the admiration of the French by his gallant resistance, but was forced to submit to Kleber, who left him the government of Upper Egypt, under French protectorate. D. 1801.

Mourn, v. n. [A. S. *murnan*; O. Ger. *mornen*; Goth. *murnan*, to mourn.] To sorrow; to lament; to express grief or sorrow; to be sorrowful; to bemoan.

—To wear the customary habit of sorrow.

"We mourn in black, why mourn we not in blood?" — Shaks.

—v. a. To grieve for; to deplore; to lament.

"He that lacks time to mourn, lacks time to mend." — H. Taylor.

—To utter in a sorrowful manner. (R.)

Mourne, (morn,) a river of Ireland, in Ulster, co. Donegal, enters the Foyle at Lifford.

Mourne Mountains, a range of Ireland, in Ulster, co. Down. They are abt. 11 m. in length, extending between Newcastle on the Irish Sea to Carlingford Bay. Highest summit, 3,000 feet.

Mourn'er, n. One who mourns or deplores any loss or misfortune. — One who follows a funeral in the habiliments of mourning.

Mourn'ful, a. Full of sorrow; expressing sorrow. — Causing grief or sorrow; sad; calamitous; distressing.

Mourn'fully, adv. With sorrow; in a manner expressive of sorrow.

Mourn'fulness, n. State of mourning; sorrow; grief. — Show, appearance, or expression of grief or sorrow.

Mourning, n. An outward manifestation of grief, more particularly on occasions of death. Every nation has some conventional form of mourning. The ancient Hebrews rent their garments, tore their hair, smote their breasts, threw ashes on the head, abstained from washing, sat on the ground, and went bare-headed and barefooted. The usual period of mourning was seven days; but for Moses and Aaron they mourned a month. The first reference to hired mourners occurs in Eccles. xii. 5: "The mourners go about the streets." Another reference to them occurs in 2 Chron. xxxv. 25. The greater number of the mourners in ancient Egypt were women,

as in the modern East. In Fig. 1875, mourners, all females, are shown casting dust upon their heads before the mummy of a man. Mourning for the dead was conducted in a tumultuous manner among the Hebrews,

Fig. 1875. — EGYPTIAN MOURNERS STREWING ASHES ON THEIR HEADS.

(Fig. 1876.) They also wept and wailed greatly, (Mark v. 38.) The Greeks withdrew into privacy, cut off their hair, put on black, — or in some parts, as in Argos, white garments, — rolled themselves on the ground, threw ashes on their heads, tore their clothes, and never appeared in public without a veil. The Roman forms of mourning did not differ greatly from the Grecian. Hired mourning-women were employed at funerals, both by Greeks and Romans. In Europe, the ordinary color for mourning is black; in China and Japan it is white; in Turkey, blue or violet; in Egypt, yellow; in Ethiopia, brown. The time varies in different countries, and according to the degree of relationship, from a week to a year. Hired mourners appear as attendants at funerals in England; but their office is one of mere dumb show, and they are commonly called *mutes*. But in some parts of Ireland, the hired mourners, generally old women, are famous for their extravagant lamentations. Court-mourning in Europe, for members of the reigning family, even in remote degrees, is prescribed by ceremonials, which give the minutest directions as to dress.

Fig. 1876. — JEWISH MOURNING.

(Wail with tabrets, etc.)

Mourn'ing-dove, n. (Zool.) A name given to a N. American dove (*Columba Carolinensis*), on account of its mournful note.

Mourn'ingly, adv. With the appearance of mourning; mournfully.

Mourystown, or **Mourytown**, n. Ohio, a village of Highland co., abt. 14 m. S.W. of Hillsborough.

Mouse, n.; pl. *Mice*. [Ger. *maus*; L. A. S., and Sw. *mus*.] (Zool.) The common name of *Mus*, a genus of rodent mammalia of the family *Muridae*, having three simple molar teeth in each jaw, with tuberculated summits, the upper incisors wedge-shaped, the lower compressed and pointed; the fore-feet with four toes and a rudimentary thumb; the hind-feet five-toed; the tail long, nearly destitute of hair, and scaly. This genus includes Rats (*q. v.*), and Mice, — the smaller species bearing the latter name. — The common *M. (Mus musculus)* is a general inhabitant of almost every country in the world; for though it is said to be not a native of America, but taken there by European settlers, it is now found in every part of this continent. There are several varieties, distinguished by their color; but the fur is usually of a brownish ash-color above, and light beneath; the tail not quite so long as the body; and the ears about half the length of the head. All its actions appear to be regulated by fear and necessity. It seldom leaves its hole but when impelled thereto by the want of food; and then, unlike the rat, who travels from one house to another, it seldom quits the spot where it has once taken up its residence. The *M.* makes a nest not unlike that of a bird, and brings forth several times in a year, generally having from six to ten at a litter. When first born, *M.* are naked and helpless; but in about 15 days they are able to shift for themselves. No animal has more enemies than the *M.*; and few are so incapable of resistance. Cats, snakes, hawks, owls, weasels, and

Fig. 1877. — NEST OF THE HARVEST-MOUSE.

rats are their incessant destroyers; and but for their amazing fecundity, the extirpation of the whole race would seem to be a natural consequence. The *M.* is capable of being tamed, and will sometimes show considerable attachment to its keeper. The *albino*, or white variety, which may be perpetuated by breeding, and is frequently kept as a pet, is particularly so. — The Harvest-mouse (*Mus messorius*) is the smallest, and one of the prettiest of all quadrupeds that exist in this country. It is a lively, active, playful little creature. Its eyes are dark; its color above a delicate reddish fawn — the under parts abruptly white; the ears are short and rounded; the tail is rather shorter than the body; length of head and body, 2 inches 6 lines. This animal lives entirely in the fields, resorting in the winter to burrows of its own construction, or to corn-ricks, into which it penetrates, and there finds food and shelter. The asylum in which it rears its young is an artful and beautiful nest, of a spherical form, consisting of the split leaves and panicles of grasses, artificially interwoven, and suspended among the stalks of standing corn or thistles, to which it is secured, and of which the leaves screen it from notice. The entrance to the nest is rather below the middle, and is scarcely observable. The parent closes it when she leaves it, and probably while she remains within. The inside is warm and neatly rounded.

(Naut.) A boss formed on a rope by parrelling.

Mouse-piece. The piece of beef cut from the buttock-end of the round.

Mouse, v. n. To watch for and catch mice; as, "a mousing owl." — Shaks.

—To watch for or pursue in a sly manner; to pry about stealthily.

"A whole assembly of mousing saints." — L'Estrange.

—v. a. To rend; to tear, as a cat devours a mouse.

To mouse a hook. (Naut.) To whip a small line across the upper part, as a preventive against unhooking.

Mouse-color, n. A color resembling that of the mouse.

Mouse-colored, a. Of the color of a mouse; dun.

Mouse-ear, n. (Bot.) See CYNOGLOSSUM.

Mouse-fish, n. (Zool.) See CHIROMETES.

Mouse-hole, n. A small hole; a hole by which a mouse only may run in and out.

"He can creep in at a mouse-hole." — Stillington.

Mouse-hunt, n. A hunt for mice.

—A mouser; one that hunts mice.

"You have been a mouse-hunt in your time." — Shaks.

Mouser, n. A cat which catches mice.

"Puss will be a mouser still." — L'Estrange.

Mouse-tail, n. (Bot.) See MYOSURUS.

Mouse-trap, n. A trap for catching mice.

Mousing, n. Act of lying in wait for and catching mice.

(Naut.) Same as MOUSE, *q. v.*

Mousseline-de-laine, (müs-lin-de-län') n. [Fr.] A woollen fabric, of flimsy texture, used for ladies' dresses.

Moustache, n. See MUSTACHE.

Moustachio, (müs-tash'yo,) n. Old spelling of MUSTACHE, *q. v.*

Mouth, n. [A. S. *muth*; D. *moud*; O. Sax., O. Fris., Ger., Belg., and Dan. *mund*; Icel. *mudr*, an orifice; W. *mau-tachu*, to open the jaws; Lat. *maudo*, to cut = Sansk. *maut*, to speak.] The opening in the head of an animal between the lips, in which food is received, and in which it is eaten, and by which the voice is uttered; also, the cavity between the lips, containing the jaw, teeth, and tongue. — The opening or orifice of a vessel, by which it is filled or emptied; as, the *mouth* of a pitcher. — The part or channel of a river by which its waters empty into the ocean, or into a lake, or into another river; as, the *mouths* of the Amazon. — The aperture of a piece of ordnance, by which the charge is issued; as, the *mouth* of a cannon. — The orifice of an organic vessel in animal bodies, by which fluids or other matter is received or discharged; as, the *mouth* of the lacteal vessels. — The opening or entrance of a cave, pit, well, or den; as, the *mouth* of a grotto. — A leading or chief speaker; a month-piece; a spokesman.

"Every coffee-house has some statesman belonging to it, who is the *mouth* of the street where he lives." — Addison.

—Cry; voice; articulation; utterance.

"With all the *mouths* of Rome to second thee." — Addison.

—A wry face; a distortion of the features; a mow; a grimace; a facial wake-up.

"Make *mouths* upon me when I turn my back." — Shaks.

Down in the *mouth*, downcast in look; chafallen; of dejected aspect; mortified; chagrined.

"Upon this disappointment they were down in the *mouth*." — L'Estrange.

To stop the *mouth*, to silence; to confound; to confuse; to abash; to confute; to put to shame; to snub.

—v. a. (imp. and pp. MOUTHED.) To take into the mouth; to seize with the jaws; to chew; to grind; to munch, as food.

"And now he feasts, *mouth*ing the flesh of men." — Shaks.

—To utter with a voice affectedly big and resonant; to speak in a strained, stilted, or artificially sonorous manner.

"He *mouths* a sentence, as curs mouth a bone." — Churchill.

—To sneer at; to insult; to jeer; to flout. (R.)

—v. n. To speak with an affectedly loud or sonorous voice; to rant; to utter with vociferation of tone.

"I'll *mouth* at Cæsar till I shake the senate." — Addison.

—To kiss; to buss; to osculate by joining mouth to mouth. (R.)

Mouthed, (mouth'd,) a. Supplied with a mouth; —

used chiefly in composition; as, foul-mouthed, mealy-mouthed, hard-mouthed.

Mouth'er, n. One who mouths or rolls his voice about; a ranter.

Mouth'-friend, n. A pretended friend; one who professes false friendship.

Mouthful, n.; pl. MOUTHFULS. As much as fills the mouth, or as much as the mouth contains at one time. —Any proverbially small quantity; a morsel; a morceau; a dribble; a tasting-bit; a modicum.

"To take a mouthful of sweet country air." — Dryden.

Mouth'-glass, n. A small hand-glass, used for inspecting the interior of the mouth.

Mouth-honor, n. Civility outwardly expressed, without sincerity. (r.)

"Curses not loud, but deep, mouth-honour, breath." — Shaks.

Mouthless, a. Having no mouth.

Mouth-made, a. Lip-labored; spoken without sincerity.

Mouth-piece, n. That orifice of a musical wind-instrument to which the mouth is applied; as, the mouth-piece of a bugle. — One who speaks on behalf of others; a spokesman.

Movable, (moov'-a-bl.) a. [From *move*; Fr. *mobile*, from Lat. *mobilis*.] That may be moved; susceptible of motion or movement; that can or may be lifted, carried, drawn, turned, or conveyed, or in any way capable of being changed in place or posture; portable; not fixed. — Changeable from one time to another; untable.

"The movable festivals of the Christian Church." — Holden.

—*pl.* Goods which are capable of being removed from one place to another. Movable goods or effects are ready money, merchandise, bonds, book-debts, cattle, and household furniture; not fastened with iron or nail, nor sealed in the plaster, but which may be transported without either fraction or deterioration.

Movableness, n. State or quality of being movable; mobility; susceptibility of motion.

Movably, adv. In a movable manner or condition.

Move, (moov, v. a. (imp. and pp. MOVED.) [Fr. *mouvoir*; It. *muovere*; Lat. *movere*, from *mo-veo*, *motum*, to move; Heb. *mad*.] To cause to change place, posture, or position; to set in motion; to impel; to carry, convey, or draw, as from one place to another; as, the horse moves a cart, wind moves a ship's sails, they are moving their furniture, &c.

"Push on — keep moving." — Morton.

—To excite into action by the force of motive; to rouse or urge by argument, inducement, or appeal; to effect or influence, as the mind, will, or passions; to agitate or disturb through the moral or emotional nature; to prevail on; to cause to act or determine.

"No female arts his mind could move." — Dryden.

—To awake the feelings or passions of; particularly, to excite tenderness, pity, or grief in the heart; to excite emotional feeling in; to touch pathetically; to arouse active sympathy.

"Would'st thou be mov'd to pity, or bestow an alms?" — Dryden.

—To bring forward for consideration and determination; to moot for deliberation; to propose; to urge; to recommend; to submit, as a resolution to be publicly adopted; as, it was moved that the house do adjourn.

Moving force, (Mech.) The cause of the change of velocity in the motion of a body.

Moving power, (Mech.) Natural agency, as steam, wind, water, &c.; motive power; motor.

—*v. n.* To change place, situation, or posture; to stir; to pass or go, in any manner, from one place or part of space to another, whether by natural or mechanical agency.

"Nor till her lay was ended could I move." — Dryden.

—To be aroused to action; to stir or operate mentally or spiritually. — To change habitation; to remove, as from one place of abode to another. — To submit a proposition in a deliberate assembly; to bring forward a measure for discussion and decision; to suggest legislatively; to recommend; to urge.

—*n.* The act of moving; a movement; especially, the act of moving one of the pieces employed in playing a game, as chess or draughts, from one position to another, in the course of the game.

"An unseen hand makes all their moves." — Cowley.

Moveless, a. Motionless; fixed; without action.

"The Grecian phalanx, moveless as a tow'r." — Pope.

Movement, (moov'-n.) n. [Fr. *mouvement*; It. *movimento*.] Motion; act of moving; any change of position in a material body; progression; a passing, shaking, turning, or flowing; natural or appropriate transference from one place to another; as, his movements were watched. — Agitation of the mind or sensibilities; emotion; moral action.

"Could he describe one movement of the mind?" — Pope.

—Manner of locomotion; style of moving; as, a slow or rapid movement. — That which moves or induces motion; as, the wheel-mechanism of a watch is termed its movement.

(*Pol.*) An expression adopted of late years into the political vocabulary of most European nations, signifying that party in a state which strives to obtain such concessions in favor of popular rights as will ultimately place the chief functions of government in the hands of the people. It is opposed to the Conservative party, or the *parti de résistance*.

(*Mus.*) Most compositions are divided into several parts, which generally differ from each other in time and key. Each of these divisions is called a movement. For instance, symphonies are, as a rule, divided into six

movements, viz.: *An introductory, slow movement; a quick movement; an andante; a minuet; a trio; and another quick movement.* In short, every piece of music consists of as many movements as it contains positive changes of time or measure.

(*Horology.*) The train of wheel-work.

Movement, n. Motive agent; impelling power. (r.)

Mover, (moov'-er, n.) The person or thing that moves or changes place or posture. — The person or thing that imparts motion or impels to action; a motor; a proposer; one who offers a proposition, or makes a suggestion; one who recommends anything for consideration or adoption; as, the mover of an address to the Crown.

Moving, (moov'-ing, n.) *p. a.* Exciting motion or action; occasioning change of place or posture; arousing the passions or affections; touching; pathetic; calculated to excite the feelings or sensibilities.

Mov'ingly, adv. In a manner to excite the passions or affect sensibility; pathetically.

"His looks speak mov'ingly in his behalf." — Shaks.

Mov'ingness, n. Power to affect the passions; quality of being pathetic.

Mow, (mo, n.) [A. S. *mowe*, or *muga*], the same in origin as *much*.] A heap, mass, or pile of hay, or sheaves of grain deposited in a barn. — A loft or chamber where hay or corn is laid up.

—*v. a.* To lay, as hay, or sheaves of grain, in a heap or mass in a barn, or to lay it in a suitable manner. — To cut down with a scythe, as grass or other plants. — To cut down with speed, or indiscriminately, or in great numbers or quantity.

"What valiant foemen have we mowed down." — Shaks.

—*v. n.* To cut grass; to use the scythe.

Mow'-burn, v. n. To ferment and heat in the mow, from not being dry.

Mowe, n. A wry or distorted face.

Mowee, or Moni, (mow'-e, n.) one of the Sandwich Islands, in the N. Pacific Ocean, 20 m. N. W. of Hawaii, Lat. 20° 44' N., Lon. 155° 55' W. It is divided into two peninsulas connected by a low isthmus. The first, or E. M., rises to a height of 10,000 ft., terminating in a crater 2,700 ft. deep, and falling almost perpendicularly towards the sea. W. M. rises to an elevation of 6,000 ft. above the sea. The soil is fertile in parts. *Prod.* Wheat, sugarcane, and fruits. The principal town is Lahaina. *Pop.* 25,000.

Mower, in Minnesota, a S.E. co., adjoining Iowa; area, about 675 sq. m. *Rivers.* Red Cedar, Upper Iowa, and Root rivers. *Surface,* nearly level; *soil,* fertile. *Cap.* Austin. *Pop.* (1895) 21,546.

—A village of Mower co., about 32 m. S.W. of Rochester.

Mow'er, n. One who mows; a mau dexterous in the use of the scythe.

Mow'ing, n. Act of cutting with a scythe. — Land from which grass is cut.

Mowing and Reap'ing Machines'. (Agric.)

The mechanical contrivances now in general use for cutting grass and grain, and which have superseded the former methods of the sickle and scythe. The first experiments in the use of such machines of which we have any distinct knowledge were made in England in the latter part of the 18th century, the first machine on record being produced in 1786. It was followed by many others, the inventions of Gladstone, Bell, Smith, Scott, Mann, and others, though up to 1835 only three had done practical work in the field. Machines of this kind were first introduced into the U. S. in 1826, where they gave an active stimulus to invention. A mowing machine was invented in 1830, and soon after a combined mower and reaper. Up to 1835 25 patents had been granted on machines for this purpose, and since that date inventions in this direction have been so active that more than 20,000 patents have been granted, in addition to the considerable number granted in Great Britain. Most important among these was the celebrated McCormick reaper, which introduced a new principle, and for the first time made machine-harvesting effective. The first machine had been constructed to imitate, as near as possible, the hand process, cutters similar to the ordinary scythe being used, and

Fig. 1878.—MOWER AND REAPER.

rotary motion communicated from the wheels supporting the machine. The cutters were afterward improved by substituting for the scythe a kind of shears, which cut the grass and grain by a scissor-like action. The McCormick machine, which was first produced and successfully operated in 1831, but which only gradually forced itself upon the attention of farmers, substituted for those devices a reciprocating knife moving through fixed fingers. This consisted of a long, saw-bladed strip of steel, the saw-teeth being sharpened on both edges,

and constituting a series of double-edged knives. These pressing the grain against the fixed fingers, through which they work back and forth, cut it by a shearing action. The McCormick machine first came into general notice after its exhibition at the London World's Fair of 1851, where it created astonishment and admiration by its remarkable performance, and completely revolutionized the existing ideas upon the subject. Since that period innumerable reapers and mowers have come into existence, all based on this principle, yet with such varied improvements as to render their use essential to every farmer. Their essential parts are the cutters, a divider to separate the swath to be cut from the other grain, carriers or rakes to lift and deposit the grain, &c. The mower is essentially the reaper without its platform and other special parts, and with a higher speed for the knives. The U. S. far exceeds all other countries in the construction of mowers and reapers, about 100,000 having been produced annually for home use since 1875, and still a larger number for exportation. These are distributed throughout almost every quarter of the globe.

Mox'a, n. (Med.) A cottony substance prepared by the Chinese and Japanese, by beating the dried leaves of the *Artemisia moxa*. It is used as a cauter by placing a small cone of it on the skin, and then setting fire to it. On burning down to the part on which it rests, it makes a sore, which is kept open, if requisite. It is principally used in cases of gout or rheumatism. — Any substance which, by gradual combustion near the skin, is employed as a counter-irritant.

(*Bot.*) *Artemisia chinensis*. See ARTEMISIA.

Moxibustion, n. (Med.) Mode of cauterization by means of moxa.

Moy, a river of Ireland, rising in the city of Sligo, and, after a course of 40 m., falling into Killala Bay, 2 m. from Killala.

Mo'ya, n. [Fr. and Sp.] A term used in S. America to denominate the mud thrown out in volcanic eruptions.

Moyamens'ing, in Pennsylvania, a former district of Philadelphia co., now included within the limits of the city of Philadelphia. It contains the county prison, abt. 1½ m. S.W. of the State-House.

Moyle, n. See MOIL.

Moyobamb'a, a town of Peru, abt. 40 m. E. of Chachapoyas; *pop.* 6,001.

Mozambique, (mo-zam-beek'), a territory on the E. coast of S. Africa, belonging to Portugal, extending from Cape Delgado, in Lat. 10° 41' S., to Delagoa Bay, 26° S. Area, estimated at 283,500 sq. m. The country along the coast is level and fertile. The shores are generally high and abrupt. The principal rivers are the Zambesi and Sofala. *Prod.* Wheat, maize, rice, sugar, coffee, indigo, &c. *Min.* Gold and copper. Pearl-fishing is a source of considerable profit. The principal exports are grain, gold-dust, honey, tortoise-shell, amber, &c. The principal settlements are Mozambique (the cap.), Ibo, Pomba, Conducia, Mokamba, and Quilimane. *Pop.* 300,000.

MOZAMBIQUE, the cap. of the Portuguese provinces in Africa, Lat. 14° 49' S., Lon. 40° 45' E. It stands on an island of coral, 1½ m. in length, near the entrance of a deep inlet of the sea, which forms its harbor. The harbor is commodious, but the trade, which was formerly very extensive, is very much reduced, being chiefly with India. *Pop.* 5,000.

MOZAMBIQUE CHANNEL, a portion of the Indian Ocean, between the Island of Madagascar and the S.E. coast of Africa. It is 1,000 m. long and 450 in average breadth. In its narrowest part, on the coast of Zanzibar, is the above territory, island, and town.

MOZAMBIQUE CURRENT, (Phys. Geog.) A S.W. current, which sets along the African coast toward the channel of Mozambique during the whole year, and is probably the result of a drift current produced in the South Indian Ocean by the monsoons; it varies much in different seasons and years. The set of the winds drives the water up among the islands, and forces it to recover its level by rushing through the Mozambique Channel. This current is a part of the chain conveying the waters of the Pacific to the Atlantic, and is connected with the current produced within a narrow belt of ocean on the south side of the equator. On the north side the causes act less regularly, and the results are not traceable.

Mozart, JOHANN CHRYSOSTOMUS WOLFGANG GOTTLIEB, a celebrated German musical composer, b. at Salzburg, on the 25th of January, 1756; was the son of Leopold M., a bookbinder of Augsburg, who studied music at Salzburg, and was, in 1762, admitted as one of the musicians of the prince-archbishop of that town. The young M., born amid music, soon evinced a most remarkable musical precocity. His father could not fail to observe his genius, and he gave him every advantage; so that, before the child was four years old, he could play on the harpsichord with correctness and taste. In his fifth year he wrote a concerto for the harpsichord. In his sixth year, his father took him and his sister Maria Anna, who was also a musical genius, to Munich and Vienna, where the little artists were introduced to the imperial court, and the unequalled execution of the boy excited universal surprise. In 1763, when young M. was seven years old, he was taken to Paris, where he remained six months, and was overwhelmed with attention and applause. Here he published his first sonatas. In 1764, the family proceeded to England, and performed at court, the son playing on the king's organ with great success. At a public concert, symphonies of his composition only were performed. Here, as well as in Paris, compositions of Bach, Handel, &c., were laid before him, all of which he executed with the greatest truth at first sight. After this, he returned to Holland, and assisted

at the installation of the stadtholder. The family next visited Paris, and after having been twice at Versailles, proceeded, by way of Lyons, through Switzerland to Munich. In 1766, they returned to Salzburg, where they remained till 1768, and then made a second journey to Vienna. In 1769, M., who had been made master of the concerts at the court at Salzburg, commenced a journey to Italy, in company with his father. In 1770 he composed, in his fourteenth year, his serious opera of *Mithridates*, which had a run of upwards of twenty nights in succession. When M. returned to Salzburg, in 1771, he found a letter, in which he was commissioned, in the name of the Empress Maria Theresa, to compose the grand theatrical serenata *Ascanio in Alba*, for the celebration of the nuptials of the Archduke Ferdinand. He undertook this commission, and in August returned to Milan for some months, where, during the festivities of the marriage, Mozart's serenata and an opera composed by Hasse were performed alternately. In 1775 he went again to Vienna, and, engaging in the service of the emperor, he satisfied the great expectations which were raised by his early genius. Among the works of his which will always be the delight of every musical nation, are the *Idomeneo*, by the composition of which he won the hand of Constance Weber, the lady he loved; the *Nozze di Figaro*; the *Zauberflöte*; the *Clemenza di Tito*; and, above all, the splendid *Don Giovanni*, which first appeared in 1787. The music of this opera is the triumph of dramatic composition; and though its great merits were not appreciated on its first performance, its composer lived to see justice done to it. When in his 36th year, and in a state of great physical debility, he undertook the composition of his sublime *Requiem*, but the decline of his bodily powers, and his great mental excitement, hastened his dissolution; he was seized with repeated fainting fits, brought on by his extreme assiduity in writing, in one of which he expired, Dec. 5, 1792. An English translation of his *Letters*, by Lady Wallace, from the collection of Ludwig Nohl, appeared in 1865. These letters, written in a frank, confidential mood, possess great interest, showing in the most striking manner how the great artist lived and labored, enjoyed and suffered.

and though its great merits were not appreciated on its first performance, its composer lived to see justice done to it. When in his 36th year, and in a state of great physical debility, he undertook the composition of his sublime *Requiem*, but the decline of his bodily powers, and his great mental excitement, hastened his dissolution; he was seized with repeated fainting fits, brought on by his extreme assiduity in writing, in one of which he expired, Dec. 5, 1792. An English translation of his *Letters*, by Lady Wallace, from the collection of Ludwig Nohl, appeared in 1865. These letters, written in a frank, confidential mood, possess great interest, showing in the most striking manner how the great artist lived and labored, enjoyed and suffered.

Mozdok', a town and fortress of S. Russia, gov't. of Caucasus, on the Terek, 55 m. E.S.E. of Georgievsk.; pop. 8,000.

Mozuffurunggur', a dist. of Brit. India, in the N.W. provinces; Lat. between 29° 10' and 29° 50' N., Lon. 77° 6' and 78° 10' E. Area, 1,620 sq. m. Pop. 540,000.

M. P. Abbreviation of *Member of Parliament*. (Eng.)

Mr. An abbreviation of *Master* or *Mister*; — the common title prefixed to the names of men of almost all classes.

M-roof, n. (Arch.) A roof formed by the junction of two common roofs with a vallum between them.

Mrs. An abbreviation of *Mistress*; — the common title prefixed to the name of every married lady; also, frequently, in England, to the names of elderly unmarried ladies.

MS. Abbreviation of *manuscript*.

MSS. Abbreviation for *manuscripts*.

Mucate, n. (Chem.) A salt formed by the combination of mucic acid with a base.

Much, a. [A.S. *micel*; O. Ger. *mihil*, much, great; Gr. *migas*, great; Sansk. *muhra*, to increase.] Great in quantity or amount; many in number; long in duration; copious; abundant; plenteous; as, to take much pains.

—**n.** A great quantity; a great deal; more than enough.

"More than a little is by much too much." — *Shaks.*

—**An uncommon thing; something odd or strange.**

"Ladies thought it much a man should die for love." — *Dryden.*

To make much of, to treat with peculiar regard or consideration; to pet; to pamper.

"When thou can'st first, . . . thou mad'st much of me." — *Shaks.*

—**adv.** In a great degree; by far; to a great degree or extent; — used as a qualification to adjectives and adverbs in the comparative degree; as, much more, much richer, much faster.

"Rejoice much more, that much more good shall spring." — *Milton.*

—**Often or long; to a great extent.**

"Think much, speak little." — *Dryden.*

—**Nearly; closely; almost.**

"All left the world much as they found it." — *Temple.*

—**v. a.** To make much of; to regard with favor. (Used as a provincial Anglicism.)

Muchness, n. Quantity; — principally used in the vulgarism "much of a muchness," that is, much of the same kind, value, or degree.

Mucic Acid, n. (Chem.) A crystalline acid formed by the oxidation of gum-arabic, sugar of milk, and other members of the saccharine group of substances. It is a dibasic acid.

Mucid, a. [From Lat. *mucus*, mucus.] Slimy; musty.

Mucidness, n. Mustiness; sliminess; mouldiness.

Mucific, (mu-sif'ik,) a. [Lat. *mucus*, and *facere*, to make.] (Med.) Making or generating mucus.

Muciform, a. [Lat. *mucus*, and *forma*, form.] (Med.) Resembling mucus; having the characteristic properties of mucus.

Mucilage, (mu'si-laj,) n. [Fr.; L. Lat. *mucilago*, from Lat. *mucus*.] (Chem.) A substance which water, heated to 160° or 180°, extracts from certain seeds or roots, when they are infused in it, and then subjected to pressure in a linen strainer; when the liquor is evaporated, the residue resembles gum. When bruised linseed is thus treated, it yields a mucilaginous solution, which is precipitated by acetate and sub-acetate of lead, by chloride of tin, and by alcohol. Quince-seed furnishes a similar solution. The mucilage appears to reside in the husk or outer coating of the quince-seed; it is used by ladies, under the name of *fixature*, to retain the hair in curl. — Also, a solution of gum, used for the cementing envelopes, documents, &c.

Mucilaginous, (mu-se-laj'e-nus,) a. Pertaining to, or secreting mucilage; slimy; ropy. — Moist, soft, and lubricous; partaking of the nature of mucilage. — Soluble in water, but not in alcohol.

M. drinks. (Med.) The *pisans*, consisting of decoctions of mallow, gum-water sweetened with sugar candy, gruel made with sago, tapioca, arrowroot or oatmeal, and such drinks as simple and compound barley-water, rice-water, or any demulcent infusion or decoction.

Mucilaginousness, n. The quality of being mucilaginous; sliminess; viscosity.

Mucine, n. (Med.) An albuminous substance found in mucus.

Muciparous, a. Producing mucus; as, *muciparous glands*.

Muck, n. [A.S. *meox*, *mior*; Swed. *mock*.] Liquefied dung. — Compost; decaying or putrefied vegetable matter.

"With fattening muck besnear the roots." — *Philips.*

—**Anything low, mean, or filthy.**

"Reward of worldly muck." — *Spenser.*

—**An old cant term for money.**

"The fatal muck we quarrelled for." — *Beau. and Fl.*

To run a muck. [Malay *amuk*, to slaughter.] To run madly about, attacking all one meets.

"Satire's my weapon, but I'm too discreet
To run a muck, and tilt at all I meet." — *Pope.*

Muck, v. a. To manure with muck; to dung; to apply compost to.

—**a.** Rank; damp; moist; resembling muck. (R.)

Muck-fork, n. A dung-fork.

Muck-heap, n. A dung-heap; a midden; a mass of manure.

Muck-hill, n. A dung-hill; a muck-heap; a midden.

Muck'ish, n. A mountain of Ireland, in Ulster, co. Donegal, abt. 5 m. S. of Dunfaughly; height, 2,190 feet.

Muck'iness, n. Nastiness; filth; squalor; noisomeness.

Muck-midden, n. A dung-heap; a place for the deposit of manure.

Muck-rake, n. A rake for gathering muck together.

Muck'ross, n. A peninsula of Ireland, in Munster, co. Kerry, between the middle and lower lakes of Killarney. On it are the ruins of an abbey, founded in 1440.

Muck-sweat, n. A profuse sweat or perspiration. (Vulgar.)

Muck-worm, n. A worm found in muck or liquid manure.

—**A miser; a curmudgeon; a hunk.**

"Misers are muck-worms." — *Swift.*

Muck'y, a. Filthy; nasty; disgusting.

Mucocoele, n. (Med.) An enlargement or protrusion of the mucous membrane of the lachrymal passages, giving occasion to fistula lachrymalis; dropsy of the lachrymal sac.

Muco-purulent, a. (Med.) Having the character and appearance of mucus and pus.

Mucor, n. [Lat.] Mouldiness; mustiness.

(Med.) Same as *Mucus*, q. v.

(Bot.) The typical genus of the order *Mucoraceae*.

The species form the various kinds of mould on bread, cheese, preserves, paper, &c.

Mucora'ceae, n. (Bot.) An order or division of the alliance *Fungales*. DIAG. Spores surrounded by a vesicular veil, or sporangium. Thallus floccose.

Mucos'ity, n. Sliminess. — A fluid containing mucus.

Muco-so-sac'charine, a. Combining the qualities of mucilage and sugar.

Mucous, (mū'kus,) a. Pertaining to mucus or resembling it; slimy, ropy, or lubricous.

—**Containing mucus or mucilage.**

M. membrane. (Anal.) The membranous substance which lines all those internal passages and cavities of the body which are exposed to contact with the air, or by which foreign substances are taken into the body or eliminated from it. These membranes are soft, velvety, and extremely vascular. They are distinguished as lining the digestive, respiratory, and genito-urinary passages. In each of these parts they present some slight modifications, adapted for the special functions.

Mucousness, n. State of being mucous; sliminess.

Muc'ro, n. [Lat.] A point.

Mucronate, Mucronated, a. (Bot. and Zoöl.)

Ending in abrupt spinous processes.

Mucronately, adv. In a mucronate manner.

Mucronulate, a. (Bot.) Tapering by degrees to an abrupt point.

Muculent, a. [From Lat. *mucus*.] Viscous; moist; sticky; slimy.

Mucuna, n. [Mukuna guaca is the Brazilian name of one species.] (Bot.) A gen. of Papilionaceous plants,

order *Tubaceae*. The hairs covering the legumes of the

species *M. pruriens* and *prurila* are used as a mechanical anthelmintic, under the name of *cunhage*, or *cow-itch*. The pods, being dipped into treacle or honey, have the hairs scraped off, until the mass has the consistency of an electuary.

Mucus, n. [Lat., from *mungo*, to blow the nose = Gr. *myssō*.] (Physiol.) A thick, glairy fluid, secreted in the cells of the mucous membrane, but differing very materially in its characters, according to the situation of the membrane and the function it has to perform. Mucus chemically consists of albumen, water, and some alkaloid salts. Though naturally thin and transparent, like water, disease produces remarkable differences in its character. Thus: inflammation either makes the secretion thin and acrid, excoriating the cuticle on which it falls; or thick, ropy, and viscid; or compact, granular, and lumpy. At other times it is discharged from the bowels in the form of a flaky deposit. The mucus discharged from the eyes, apart from the secretion of the lachrymal glands, is peculiar to that organ, and that from the ears is distinct in character; while the discharge from the nose, called the *pituitary secretion*, is still more distinct and peculiar.

Mucutiae, n. (Physiol.) The characteristic organic matter of animal mucus.

Mucuri, (moo-koo-ree,) a river in Brazil, enters the Atlantic Ocean abt. Lat. 18° 6' S.; length, abt. 150 m.

Mud, n. [Dn. *mudder*; Ger. *moder*.] Moist or soft earth of any kind, such as is found in marshes and swamps, at the bottom of rivers and ponds, or in highways after rain.

—**v. a.** To bury in mud or slime.

"Mudded in that oozy bed." — *Shaks.*

—**To make turbid or foul with dirt; to stir, as the sediment of liquors.**

Mud'ar Bark, and Mudariue'. See *CALOTROPIS*.

Mud'dily, adv. Turbidly; with foul mixture; cloudily; confusedly.

Mud'diness, n. The state or quality of being muddy; turbidness; foulness caused by mud, dirt, or sediment. — Intellectual cloudiness or dulness.

Muddle, (mud'dl,) v. a. To make muddy, foul, or turbid, as water.

"Drink fine champagne, or muddled port." — *Prior.*

—**To intoxicate partially; to cloud or stupefy, particularly with liquor; to fuddle.**

"I was for five years always muddled." — *Arbutnot.*

—**To squander; to waste; as, to muddle money away.**

—**v. n.** To become muddy; to contract filth; to be in a confused or dirty state.

—**n.** Intellectual torpor, confusion, or dulness; as, his brains are in a muddle.

Mud'dy, a. Foul with mud, dirt, or fine earthy particles; turbid, as water or other fluids; containing mud, as a street. — Dirty; dashed, soiled, or besmeared with mud; as, muddy shoes. — Consisting of mud or earth; gross; impure. — Dark; of the color of mud. — Dull; cloudy in mind; heavy; stupid; lethargic; incoherent.

"A dull and muddy rascal." — *Shaks.*

—**v. a.** To dirty; to render turbid. — To cloud; to make dull or heavy.

Mud'dy, in Illinois, a former township of Coles co.

Mud'dy (or Big Muddy) Creek, in Illinois, enters the Mississippi river from Union co.

Mud'dy, in Oregon, a post-village of Linn co.

Muddy Creek, in Kentucky, enters the Green River between Butler and Muhlenburg cos.

Muddy Creek, in Missouri, enters Crooked Fork of Grand River in Grundy co.

—**Enters Lamine River in Cooper co.**

Muddy Creek, in Ohio, enters Sandusky Bay of Lake Erie from Sandusky co.

Muddy Creek, in Pennsylvania, enters the Susquehanna River in York co.

—**A flourishing village and township of Butler county.**

Muddy Fork, in Ohio, enters the Wallhonding River in Holmes co.

Muddy Lane, in Illinois, a village of McDonough co.

Muddy-brained, (brānd,) a. Stupid; dull; lethargic; obtuse.

Muddy-head'ed, a. Having a dull understanding; thick-headed.

Mud'-eel, n. (Zoöl.) See *LEPIDOSIREN*.

Mud'-fish, n. (Zoöl.) Same as *LOACH*, q. v.

Mud'-hen, n. (Zoöl.) See *RALLUS*.

Mud'-hole, n. (Mach.) A covered opening in the bottom of a boiler, for discharging the dirt and sediment.

Mud'-plugs, n. pl. In locomotive steam-engines, tapered screw-plugs fitted into convenient parts of the boiler to admit of its being washed out occasionally.

Mud'-puppy, n. (Zoöl.) See *MENOBRAHEUS*.

Mud'-sill, n. The lowest sill of any building, usually imbedded in the soil.

Mud'-stone, n. A stone resembling indurated mud.

Mud'-sucker, n. (Zoöl.) An aquatic fowl seeking its food from mud.

Mud'-turtle, n. (Zoöl.) See *TERRAPIN*.

Mud'-wall, n. A wall built without mortar, by throwing up mud and suffering it to dry.

—**n. (Zoöl.)** See *MEROPS*.

Mud'-walled, a. Having a mud-wall.

Mud'-wort, n. (Bot.) See *LIMOSELLA*.

Mue, v. a. To moult; to change feathers; to mew. See *Mew*.

Muez'zin, n. [Ar.] A Moslem crier of the hour of prayer from the top of a minaret.

Muff, n. [Ger. and Sw. *muff*; Dan. *muffe*; Fr. *moufle*.]

A warm cover for receiving the hands, usually made of fur or dressed skins. — A mean-spirited, despicable

fellow; a stupid person; as, "a muf of a curate." *Thackeray*. (Used colloquially.)

Muffeteer, *n.* A small muff worn over the wrist to protect it from cold.

Muffin, *n.* A light, round, spongy cake, baked on a griddle and buttered, used for the less substantial meals, as breakfast, tea, &c.; a crumpet.

—An earthen table-plate.

Muffineer, *n.* A dish for keeping muffins hot at table.

Muffle, (*mūf'fl*), *v. a.* [Fr. *moufler*, from *moufle*, a muff.] To cover from the weather by cloth, fur, or any garment; to cover close, particularly the neck and face.

"You must be muffled up like ladies." — *Dryden*.

—Figuratively, to cloak; to cover; to conceal.—To deaden the sound of, as by wrapping or tying cloth, &c., around; as, muffled oars.

"Our hearts like muffled drums are beating." — *Longfellow*.

—*v. n.* To speak inwardly; to speak without clear and distinct articulation.

"Muffling, and laziness of speaking." — *Holden*.

Muffle, *n.* (*Chem. and Metall.*) An arched vessel with a flat bottom, in which substances may be exposed to a red heat without coming into contact with the fuel.—The naked extremity of the nose between the nostrils, when covered with a mucous membrane; — applied to ruminant animals.

Mufflon, *n.* (*Zoöl.*) See *MOUFFLON*.

Mufti, *n.*; *pl.* MUFTIS. [Ar.] In Turkey, the name given to the head doctors of the law of the Koran, of which there is one in every large town. He is of great authority in the empire, being, as interpreter of the law, consulted on judicial proceedings, particularly in criminal cases, and in general on all affairs of importance. The grand mufti at Constantinople, called "Sheikh-ul-Islam," chief of Islam, is the head of the Turkish Church, and takes rank immediately after the Grand Vizier. He is the chief interpreter of the law, and formerly no person could be put to death without his consent; but of late years, since the reorganization of the Turkish government, the powers and prerogatives of the grand mufti have been much curtailed.

Mufti, *n.* In England, a colloquialism for the civilian garb of a naval or military officer when off duty; also, a citizen's dress, as distinguished from naval, military, or court uniform.

Mug, *n.* [Fr. *muga*, a mug.] A small vessel of earthenware or metal for containing liquor.—A slang colloquialism for the human face or mouth.

Muggets, *n. pl.* The intestines of a calf.

Mugghish, *a.* Same as *MUGGY*, *q. v.*

Muggy, *Mugghish*, *a.* [W. *mug*, smoke; Icel. *mugga*, mist.] Moist; damp; mouldy; mucid; as, muggy straw.—Damp and close; oppressive not elastic or bracing; as, muggy weather.

Mugilidae, *n. pl.* (*Zoöl.*) The Mullet, a family of acanthopterygian fishes, of which the generic characters are as follows: — Body nearly cylindrical, covered with large scales; two dorsal fins, widely separated, the rays of the first fin being spinous, and those of the second flexible; ventral fins behind the pectorals; the middle of the under jaw with an elevated angular point, and a corresponding groove to receive it in the upper; the teeth small; the head depressed; and the branchiostegous rays six in number. The color of the back and top of the head is a dusky gray, tinged with blue; the sides and under-surface of the body silvery white, marked with longitudinal parallel dark lines; the membranes of the fins dull white, cheeks silvery white, and the irides reddish brown. *Mugil* is the typical genus of the family, and to it belong the following species: — The Gray Mullet is a common inhabitant of the Mediterranean, and of the northern seas; it seldom proceeds to any distance from land, as it delights in shallow water, and seldom proceeds to any distance up the mouths of rivers. That the gray mullet was well known to the ancients, the historian Pliny bears ample testimony, as he has celebrated the great fisheries of this one species which the Romans possessed at Languedoc. The mullets prey generally on food in a state of decomposition, and it is one of the few fishes that reject live prey. Besides the common mullet, there is the *thick-lipped gray mullet*, which differs only from the specimen last described by the lip being thicker, and the color of the head and back being more of a greenish hue; the *plain red mullet*, found in the Mediterranean and the seas and rivers of America, Africa, and even India; and the *striped red mullet* (*Mugil lineatus*), a small species, 8 to 9 in. long, of a silvery color, which is common on our coasts.

Fig. 1880. — STRIPED MULLET. (*Mugil lineatus*.)

Muhallitch, a town of European Turkey, 13 m. S. of the Sea of Marmora. Exp. silk, wool, fruits. Pop. 12,000.

Muhlbach, (*mūl'bak*) *LUISE*. The *nom de plume* of Clara Mundt (Müller), a distinguished German novelist, wife of Theodor Mundt, also an author of distinction; she has written many historical novels, those relating to Frederick the Great and Marie Antoinette are perhaps the best known in this country. B. 1814, d. 1873.

Muhlenbach, (*moo'len-bak*) a town of Austria, in Transylvania. Manuf. Woollen cloth. Pop. 4,500.

Muhlenberg, in Ohio, a township of Pickaway co.

Muhlenbergia, *n.* [After the late Henry Muhlenberg, D. D., an eminent botanist.] A genus of plants,

order *Graminaceæ*. *M. diffusa*, the Drop-seed Grass, is a perennial herb growing on the borders of woods along the Atlantic States and W. to Kentucky; stem decumbent, diffuse, branching, slender, compressed; spikelets pedicellate, often purple; awn abt. as long as the pale.

Muhlburg, in Pennsylvania, a twp. of Berks co. **Muhlhausen**, (*mūl-hou'zn*), a town of Prussia, prov. of Saxony, on the Unstrut, 29 m. N.W. of Erfurt. Manuf. Woollen and linen cloths, and carpets; also, dye-works, tanning and oil mills, tanneries, distilleries, &c. It has an active trade in corn and dyeing-drugs.

Mul'rea, or *MULREA*, a mountain range of Ireland, co. Mayo, on the N. side of Kinny harbor, Height, 2,688 ft. **Muk'den**, the capital of Manchuria, lies on a branch of the Liao River, 380 miles N. E. of Peking. Its port is Newchwang, 120 miles south. It is surrounded by a masonry wall, with a mud wall around the suburbs. Near by are the tombs of the reigning family of China. *M.* was the seat of a great victory of the Japanese, in the Russo-Japan war of 1904-5. *M.* was evacuated by the Russians and occupied by the Japanese March 10, 1905. Pop. about 200,000.

Mulat'to, *n.*; *pl.* MULATTOES. [Sp. *mulato*, from *mulo*, a mule, the produce of a horse and an ass. See *MULE*.] One who is the offspring of a negress by a white man, or of a white woman by a negro.

Mulatress, *n.* A female mulatto.

Mulberry, *n.* [Ger. *maulbeere*; Swed. *mulbar*; It. *mora*; Lat. *morus*; Gr. *moron*, the black mulberry.] (*Bot.*) See *MORACEÆ*.

Mulberry, in Arkansas, a township of Franklin co.—A township of Johnson co.

Mulberry Creek, in Alabama, forms the line between Autauga and Dallas cos., and enters the Alabama River 14 m. above Selma.

Mulberry Creek, in Georgia, flows into the Chattahoochee River in Harris co. The Indian name is *Catawba*.

Mulberry Creek, in N. Carolina, enters the Catawba near Morgantown, in Burke co.

Mulberry Gap, in Tennessee, a post-village of Hancock co., abt. 2-6 m. E. by N. of Nashville.

Mulberry River, in Alabama, one of the head forks of the Tuscaloosa.

Mulch, *n.* Half-rotten matting, straw, &c., strewn on the ground, as around the roots of a tree, plant, &c., to protect them from unfavorable weather.

—*v. a.* To furnish with mulch.

Mulet, *n.* [It. *multa*; Lat. *mulcta*, or *multa*; a Sabine word.] A fine; a penalty; amercement; a forfeiture; especially, a fine imposed on a person guilty of some offence or misdemeanor.

—*v. a.* [Fr. *mulcter*; Lat. *mulcto*, or *multo*.] To punish for an offence or misdemeanor by imposing a pecuniary fine.—To withhold or debar from by way of punishment or discipline.

Mulder, GERHARD JOHANNES, a Dutch chemist, B. at Utrecht, 1802, professor of chemistry in the University of his native town. He is chiefly known as the discoverer of *Rotein*, *q. v.*

Mule, *n.* [A. S. *mul*; D. *muilezel*; Ger. *maulesel*; Gael. *muilead*; Ir. *muille*, probably akin to Lat. *molo*.] (*Zoöl.*) A hybrid animal, between the horse and the ass, differing in size, strength, and beauty, according to the pre-eminence of its parental species; those between a male ass and a mare being far superior to the progeny of a she-ass with a horse. In mountainous countries mules are highly serviceable, no beast of burden being either so sure-footed, or so capable of enduring fatigue; but in beauty of form they fall very short of that noble quadruped, the horse; the mule having a large, clumsy head, long, erect ears, a short mane, and a thin tail. In Spain,

Fig. 1881. — SPANISH MULE.

Portugal, Italy, the East, and in South America, this animal is much valued for the saddle, and for drawing carriages. Savoy produces very large ones, but the finest are bred in Spain. They are sometimes fifteen or sixteen hands high, thick-set, and capable of travelling for months together, with six or eight hundred weight on their backs. It has been thought that they are altogether incapable of producing their kind; but some few instances have occurred in which female mules have had foals, and in which the male has impregnated females, both of the horse and ass species. Such instances are, however, very rare.

Mule, *Mule-jenny*, *n.* (*Mach.*) A machine used in the manufacture of cotton-thread. (Sometimes written *spinning-jenny*.)

Mule-spinner, *n.* One who spins thread on a mule.

Muleteer, *n.* [Fr. *muletier*.] A mule-driver.

Muley, *n.* A kind of saw.

Mulgrave, in Alaska, a cape and port on the N.W. coast, Lat. 59° 33' N., Lon. 139° 43' W.

Mulgrave Archipelago, in the Pacific Ocean, comprising various groups of islands, between Lat. 3° S., and 12° N., Lon. 160° and 177° E., including the Radack, Radick, Piscadores, Marshall, and Mulgrave islands.

Mulhausen or **Mulhouse**, (*mūl-hou'zn*), a town of Germany, p. of Alsace-Lorraine, on the Ill, 22 m. S. of Colmar, and 16 m. N.W. of Basle. It is divided into the old and new town. The latter, which extends as far as the canal which unites the Rhine and Rhone, contains numerous handsome edifices, the principal of which are the chamber of commerce, the exchange, and town-hall. Manuf. Woollen cloths, hosiery, straw hats, morocco, leather, and beer. It has also a brisk trade in iron, hardware, and agricultural produce. *M.* was made a free and imperial city in 1273, by Rudolph I. of Hapsburg, and became the chief town of a small republic, which entered into an alliance with the Swiss cantons in 1514. It declared in favor of annexation to France in 1793, and this was accomplished by treaty in 1798. Since 1870 it has reverted to Germany.

Mulheim, (*mool'hime*), a town of Rhenish Prussia, on the Rhine, 3 m. N.E. of Cologne. Manuf. Silks, cottons, cashmere, leather, &c. Pop. 6,000.

Mulheim, a town of Rhenish Prussia, on the Ruhr, 16 m. N.N.E. of Düsseldorf. Manuf. Woollen, cotton, and linen fabrics, leather, starch, and tobacco.

Mulierity, *n.* [Lat. *muliebritas*, from *mulier*, a woman.] Womanhood; puberty in woman.—corresponding with virility in man.—Effeminacy; weakness; softness.

Mulier, *n.* [Lat.] A woman.

Mul'lierty, *n.* (*Law*.) Position of one born in lawful wedlock.

Mul'ish, *a.* Like a mule; stubborn; sullen; refractory; obstinate.

Mul'ishly, *adv.* With stubbornness, as of a mule. **Mul'ishness**, *n.* Quality of being mulish; obstinacy or stubbornness, as of a mule.

Mull, *v. a.* [Lat. *mollio*, to soften, to moderate. See *MOLLIFY*.] To heat, sweeten, and enrich with spices; as, to mull claret.—To dispirit; to deaden; to render insensible.

—*n.* [W. *moel*, a mountain.] A headland; a promontory; a cape; as, the Mull of Galloway. (A Scotticism.)

—In Scotland, a stuff-box made of the curved or smaller end of a horn.

Mull, *n.* A thin, flimsy kind of muslin.

Mull, one of the Hebrides, off the W. coast of Scotland, co. of Argyre, separated from the mainland by the Sound of Mull: Lat. 56° 30' N., Lon. 6° W. Ext. 30 m. long, and 25 broad. The surface is mountainous; Mount

Fig. 1882. — BASALTIC ROCKS, IN THE ISLAND OF MULL.

Benmore reaching an elevation of 3,000 ft. The soil is adapted for grazing. The principal town is Tobermory. Pop. 16,000.

Mull, (*Sound of*), off the W. coast of Scotland, 18 m. in length and 2 m. in average breadth, separates the above island from the cos. of Argyre and Inverness.

Mulla, *Mul'lah*, *n.* Same as *MOLLAH*, *q. v.*

Mullenahone, a town of Ireland, about 26 m. E. of Tipperary; pop. 1,200.

Mullein, *Mullen*, *n.* [Fr. *molène*, from Lat. *mollis*.] (*Bot.*) See *VERBASCUM*.

Muller, *n.* The person who, or thing which, mills. — A vessel used for mulling wine over a fire.

—[Lat. *molaris*, a mill-stone.] A sort of pestle used for grinding or pulverizing pigments, &c.

Müller, CARL GOTTFRIED, an eminent German scholar and historian, was B. in 1797, at Brieg, in Silesia. He studied at Breslau and Berlin, and became, in 1819, professor of archæology in the University of Göttingen, and distinguished himself by his researches into Greek mythology and history. He visited France and England in 1822, but his life is marked by few incidents. While travelling in Greece, with a view to the commencement of an elaborate work on the history of that country, he was taken ill, and d. at Athens, Aug. 1, 1840. His most important works are, *Die Dorier*, which was translated into English by Sir G. C. Lewis; *Prolegomena to a Scientific Mythology*; *Die Etrusker*; *Handbuch der Archæologie der Kunst*; and a *History of Greek Literature*, which he did not live to complete.

Müller, FRIEDRICH MAX, one of the most eminent of living philologists, was B. at Dessau, in 1823. After receiving the early part of his education in his native town, *M.* proceeded to Leipzig, and Berlin, and in those cities devoted himself to the study of Sanskrit and other Oriental languages. In 1847, he was commissioned by the English East India Company to edit the *Rig-Veda* of the Hindoos. The first vol. of this great undertaking appeared in 1849, and the fourth in 1863. In 1853 *M.*

was appointed professor of Modern Languages at Oxford University, and elected a fellow of All Souls' College. While pursuing his labors on the *Rig-Veda* he published a number of treatises on philological subjects in a popular style, and with a felicity of illustration that brought them a wide audience and did much to arouse a taste for the science of language. His works include *Comparative Mythology*; *History of Sanskrit Literature*; lectures on *The Science of Language*; lectures on *The Science of Religion*; *Chips from a German Workshop*, and various others. He is also the editor of the important series of works entitled: *The Sacred Books of the East*. The first series of Gifford lectures, delivered by him in 1888, at Glasgow University, have been published as *Natural Religion*. He is a foreign member of the Institute of France and a knight of the Ordre pour le Mérite, and has the degree of LL.D. from Cambridge, Edinburgh, and Bologna.

Müller, JOHANN, an eminent German physiologist, born at Coblenz, 1801. After taking his degree of doctor in medicine at the University of Bonn, in 1823, he became professor of Physiology and Anatomy at the same place (1830), exchanging to Berlin three years afterward. In 1833 he published his great work, *The Physiology of Man*, which was soon afterward translated into French and English, and is still, perhaps, the best existing work on physiology. Müller founded the physico-chemical school of physiology, raising it from a speculative to a positive science, and reformed the theory of medicine. His 100 publications embrace nearly every subject in comparative anatomy and physiology. Died 1858.

Müller, OTTO FREDERICK, a Danish naturalist, and one of the most original observers of the 18th century, b. at Copenhagen, 1730. After travelling in various countries as tutor to a Danish nobleman, he returned to Copenhagen in 1767, and married a lady of considerable property; whereupon he devoted his life to scientific pursuits. He was appointed by Frederick V. of Denmark, to continue the publication of the "Flora" of his native country, and, in 1779, he commenced a corresponding work on the *Zoology of Denmark*, but only lived to complete two parts. Müller also made researches relative to the minute animals, and published several treatises thereon, which Cuvier declared entitled their author to a "place in the first rank of those naturalists who have enriched science with original observations." D. 1784.

Mul'let, n. [Fr. *mulet*; Lat. *mullus*, the red sur-mullet. Etymol. unknown.] (Zool.) See MULLIDÆ.

(Her.) The rowel of a spur. In English blazonry it is depicted of five points (Fig. 1883); in French, of six. It is used as the filial distinction of the third son. See DIFFERENCE.

Mul'let, a peninsula of Ireland, on the W. coast, co. Mayo.

Mul'lett River, in Wisconsin, flows into the Sheboygan, in Sheboygan co.

Mul'lett's Creek, in Michigan, enters Huron River near Ann Arbor.

Mulley, (*mool'y*), *n.* A child's term for a cow.

Mul'lica, in New Jersey, a township of Atlantic co.

Mul'lica Hill, in New Jersey, a post-village of Gloucester co., abt 7. m. S. by W. of Camden.

Mulligataw'uy, *n.* (Cookery.) An East India soup made with hot curry.

Mulligrubs, *n.* A slang term for colic, flatulence, or distention of the bowels. — Sullenness; ill-humor; spleen.

Mullingar, a town of Ireland, prov. of Leinster, cap. of the co. Westmeath, on the Brosna, 44 m. N.W. of Dublin. It is a large mart for corn, butter, cattle, and other agricultural produce. Pop. 5,359.

Mullin gong, *n.* (Zool.) See DUCK-BILL.

Mullion, (*mū'lyun*), MUNNION, MONTION, or MONIAL, *n.* [Fr. *moulure*, a moulding, from *moule*, a mould; Lat. *modulus*, dim. of *modus*, a standard.] The division between the lights of windows, screens, &c., in Gothic architecture; the styles, or upright divisions, in wainscoting are also sometimes called by the same name. In Norman work, windows are not unfrequently used in couplets, and sometimes in triplets, but they are almost invariably separated by small shafts, or by piers, too massive to be called *M.* In the Decorated and Perpendicular styles they are very common. The mouldings of *M.* are extremely various, but they always partake of the char-

acteristics of the prevailing style of architecture: in rich Early English and Decorated work they have frequently one or more small shafts attached to them, which terminate at the level of the springing of the arch, and the mouldings in the tracery (where tracery is used) over the capitals of the shafts are generally different from those below; but in very numerous instances, mullions, in both these styles, have plain splay only, and no mouldings, and many of the Decorated date

have shallow hollows instead of splays at the sides; in Perpendicular work a plain mullion of this last-mentioned kind is extremely common. After the introduction of the Perpendicular style, shafts are rarely found on mullions, though bases are sometimes worked at the bottoms of the principal mouldings, an arrangement which is also occasionally found in earlier work, and most abundantly in the Flamboyant style of France.

Mullion, *v. a.* To shape into divisions by mullions.

Mulse, *n.* [Lat. *mulsum*.] Wine boiled and mingled with honey.

Multangular, *a.* [Lat. *multus*, many, and *angulus*, an angle. See MULTIPLEX, and ANGLE.] Having many angles; polygonal.

Multangularly, *adv.* With many angles.

Multangularness, *n.* The state of being many-angled or polygonal.

Multarticulate, *a.* [Lat. *multus*, much, and *articulus*, a joint.] Possessing many articulations or joints.

Multicity, *n.* [From Lat. *multus*.] Multiplicity. (*n.*)

Multicap'sular, *a.* [Lat. *multus*, and *capsula*, a small box.] (Bot.) Having many capsules; divided into many cells.

Multicarin'ate, *a.* [Lat. *multus*, and *carina*, a keel.] (Conch.) Many-keeled, said of certain shells.

Multica'vous, *a.* [Lat. *multicavus*.] Full of holes; having many cavities.

Multicip'ital, *a.* [Lat. *multus*, and *caput*, head.] (Bot.) Many-headed.

Multicolor, *a.* Exhibiting many colors.

Multicus'pidate, *a.* [Lat. *multus*, many, and *cuspid*, point.] Possessing many cusps or points.

Multiden'tate, *a.* [Lat. *mullus*, and *dentis*, tooth.] Having many teeth.

Multifaced, *a.* Possessing many faces.

Multifarious, *a.* [Lat. *multifarius*—*multus*, and *probably varius*, diverse, varying. See VARIOUS.] Having great diversity or variety; various; manifold; having great multiplicity.

Multifariously, *adv.* With great multiplicity and diversity: with great variety of modes and relations.

Multifariousness, *n.* Multiplied diversity.

(Law.) In equity pleading, the demand in one bill of several matters of a distinct and independent nature against several defendants.

Multiferous, *a.* [Lat. *multus*, and *ferre*, to bear.] Bearing much or many.

Multifid, *a.* [Lat. *multifidus*—*multus*, and *findere*, to split, divide.] (Bot.) Having many parts or divisions; cleft into many branches; as, a *multifid* leaf.

Multifidous, *a.* Same as MULTIFID, *q. v.*

Multiflo'rous, *a.* [Lat. *multus*, and *flos*, *floris*, flower.] Many-flowered.

Multiflue, *a.* [Lat. *multus*, and Eng. *flue*.] Having many flues.

Multifoil, *n.* [Lat. *multus*, and *folium*, leaf.] (Arch.) A leaf ornament, consisting of more than five foils. See FOIL.

Multifold, *a.* [Lat. *multus*, and Eng. *fold*.] Many times doubled; manifold.

Multiform, *a.* [Lat. *multiformis*—*multus*, and *forma*, shape.] Presenting many forms, shapes, or appearances.

n. That which has many forms or aspects.

Multiformity, *n.* Diversity of forms or appearances in the same thing.

Multiformous, *a.* Exhibiting many forms.

Multigen'erous, *a.* [Lat. *multus*, many, and *genus*, *generis*, kind.] Having many kinds.

Multigran'ulate, *a.* [Lat. *multus*, and *granum*, grain.] Consisting of many grains.

Multijugous, *u.* [Lat. *multus*, and *jugum*, yoke.] Comprising many pairs.

Multilateral, *a.* [Lat. *multus*, and *latus*, *lateris*, a side. See LATERAL.] Many-sided.

Multiline'al, *a.* [Lat. *multus*, and *linea*, line.] Many-lined.

Multiloc'ular, *a.* [Lat. *multus*, and *loculus*, dim. of *locus*, a place.] Having many shells or departments; as, a *multilocular* shell.

Multiloquence, *n.* [Lat. *multus*, and *loqui*, to speak.] Garrulosity; verbiage; talkativeness.

Multiloquent, **Multiloquous**, *a.* Very talkative; garrulous; speaking much.

Multinod'ate, **Multinodous**, *a.* [Lat. *multus*, and *nodus*, knot.] Containing many knots.

Multinom'ial, *a.* Same as POLYNOMIAL, *q. v.*

Multinom'inal, **Multinom'inous**, *a.* [Lat. *multus*, and Gr. *monos*, *nominus*, name.] Having many names.

Multiparous, *a.* [Lat. *multus*, and *parere*, to yield.] Bringing many at a birth; as, "the *multiparous* generation of serpents." — Browne.

Multipartite, *a.* [Fr. from Lat. *multus*, and *partitus*—*pars*, part.] Having numerous parts.

Multiped, *n.* [Lat. *multus*, and *pēs*, *pedis*, a foot. See PEDAL.] An insect that has many feet.

a. Having many feet.

Multiple, *a.* [Lat. *multiplex*—*multus*, and *plico*, *plexus*, to fold. See PLY.] That has many parts; containing many times; manifold.

n. (Math.) A number or quantity which contains another an exact number of times without a remainder is a *multiple* of the latter, and the latter is a *sub-multiple* of parts of the former.

M. fruit. (Bot.) A mass of fruit resulting of several blossoms, and aggregated into one body, as the pine-apple.

M. point of a curve. (Math.) A point through which the curve passes several times. — *M. tangent of a curve.* (Math.) A line which touches the curve several times.

Multiplex, *a.* [Lat. *multus*, and *plicare*, to fold.] Manifold; multiple.

Mul'tipliable, *a.* [Fr.] That may be multiplied; multiplicabile.

Mul'tipli'ableness, *n.* Capacity of being multiplied.

Mul'tiplicable, *a.* Multipliable; susceptible of multiplication.

Mul'tiplicand, *n.* [Lat. *multiplicandus*, from *multiplico*, to multiply.] (Arith.) A number or quantity to be multiplied by another; — the latter is called the *multiplier*.

Mul'tiplicate, *a.* [Lat. *multiplicatus*.] Multiple; manifold; consisting of more than one.

Multiply flowers. (Bot.) Applied to a double flower, the petals of which arise from supernumerary developments of the parts of floral whorls.

Multiplication, *n.* [Lat. *multiplicatio*.] Act of multiplying or of increasing numbers; state of being multiplied.

(Math.) A rule or operation by which any given number may be repeated or added to itself any number of times proposed; — thus, the product of 100 multiplied by 10 is 1,000.

Multiplicative, *a.* Tending to multiply; having the power to multiply or increase numbers.

Multiplicator, *n.* [Fr. *multiplicateur*.] The number by which another number is multiplied; a multiplier.

Multiplicity, (*plis'i-ty*), *n.* [Fr. *multiplicité*, from Lat. *multiplex*, *multiplicis*, manifold.] State of being many or manifold; as, a *multiplicity* of thought. — Great number; many of the same kind; as, a *multiplicity* of gods.

Multiplier, *n.* One who, or that which, multiplies, or increases number.

"Quarrels . . . are the multipliers of injuries." — *Decay of Piety*.

Multiply, *v. a.* [Lat. *multiplico*—*multus*, great, much, *pl.* many (probably akin to Heb. *mala*, to fill, to make full), and *plico*, to fold. See PLY.] To increase in number; to make more by natural generation or production, or by addition.

"He multiplieth words without knowledge." — *Job* xxv. 16.

(Math.) To repeat or add to itself any given number as many times as there are units in any other given number; thus, 8 multiplied by 8 produces the number 64.

v. n. To become manifold; to grow or increase in number; to become numerous.

"The multiplying brood of the ungodly shall not thrive." — *Wisd.* iv. 3.

— To increase in extent; to extend; to spread; as, the "multiplying villanies of nature." — *Shaks.*

Multiplying-glass. (Optics.) A lens or glass by means of which objects appear to be increased in number. It is ground into several planes, that make angles with each other, and through which the rays of light, issuing from the same point, undergo different refractions, so as to enter the eye from every surface in a different direction, and thus appear as if they came from several points.

Multipotent, *a.* [Lat. *multus*, and *potens*, powerful.] Having manifold power; possessing the faculty of doing many different things.

Multipres'ence, *n.* [Lat. *multus*, and *presentia*, presence.] The power or act of being present in more places than one at the same time.

Multiradi'ate, *a.* [Lat. *multus*, and *radius*, ray.] Exhibiting or emitting many rays.

Multiramose, *a.* [Lat. *multus*, and *ramus*, branch.] Many-branched.

Multise'ct, *a.* [Lat. *multus*, many, and *secare*, *sectum*, to cut.] (Zool.) Divided into many segments, as an insect.

Multise'rial, *a.* [Lat. *multus*, and *series*, rank.] (Bot.) Arranged in many horizontal ranks.

Multisili'quous, *a.* [Fr. *multisiliquex*, from Lat. *multus*, and *siliqua*, a pod.] Having many pods.

Multis'onous, *a.* [Lat. *multus*, and *sonus*, sound.] Having many sounds, or sounding much.

Multispi'ral, *u.* [Lat. *multus*, and *spira*, coil.] (Conch.) Presenting numerous coils round a submedian centre; — said of the opercula of certain shells.

Multistri'ate, *a.* [Lat. *multus*, and *stria*, a channel.] Exhibiting many streaks.

Multisulcate, *a.* [Lat. *multus*, and *sulcus*, furrow.] Having many furrows.

Multisyl'lable, *n.* [Lat. *multus*, and Eng. *syllable*.] A polysyllable. (*n.*)

Multitubular, *a.* [Lat. *multus*, and *tuba*, tube.] Many-tubed; as, a *multitubular* boiler.

Multitude, *n.* [Fr.; Lat. *multitudo*, from *multus*, many.] State of being many; numerousness. — A number collectively; a great number, indefinitely; a crowd; a throng; a gathering.

The *multitude*, the populace; the lower classes of society; the rabble.

Multitudin'ary, *a.* Multitudinous; manifold; numerous.

Multitudin'ous, *a.* Consisting of a multitude or great number; having the appearance of a multitude; manifold.

"My hand will the multitudinous sea incarnadine." — *Milton*.

Multitudinously, *adv.* In a multitudinous manner.

Multitudinousness, *n.* State or quality of being multitudinous.

Multitular, *n.* [Lat. *multus*, and *titulus*, a title.] Many-titled.

Multivalve, *n.* [Lat. *multus*, and *valva*, the leaf of a door.] (Zool.) One of those shelly coverings of molluscs which are formed of more than two distinct pieces.

In systems of Conchology, the term is one of primary importance; but since the study of the living animals has led to arrangements very different from those founded on their mere shells, a very subordinate place has been assigned to it, as indicating a distinction much less important than was at first supposed. Thus, *Chitons*, which have multivalve shells, are now placed in

Fig. 1883.
ENGLISH MULLET.

Fig. 1884.

acteristics of the prevailing style of architecture: in rich Early English and Decorated work they have frequently one or more small shafts attached to them, which terminate at the level of the springing of the arch, and the mouldings in the tracery (where tracery is used) over the capitals of the shafts are generally different from those below; but in very numerous instances, mullions, in both these styles, have plain splay only, and no mouldings, and many of the Decorated date

the same order of gasteropods with Limpets, of which the shells are univalve; and *Pholas* and *Teredo*, which have two principal valves and some small accessory valves, the latter also a long shelly tube, are placed among lamellibranchiate molluscs, along with most of the bivalves of conchologists.

Multivalve, Multivalvular, a. Many-valved.

Multiversant, a. [Lat. *multus*, and *vertere*, to turn.] Assuming many shapes or forms; protean.

Multivious, a. A rare expression, signifying having many methods, ways, means, roads, &c.; as a man of multivious resources; a course having multivious routes, &c.

Multivocal, a. [Lat. *multus*, and *vox*, voice.] Implying various meanings; ambiguous, equivocal.

Multivoltine, a. Having several broods annually; an expression sometimes used in referring to certain varieties of the silkworm.

Multivorous, a. Having a ravenous appetite; disposed to eat (consume) a large variety of objects, gluttonous.

Multnomah, in Oregon, a N. by W. co., adjoining Washington; area, about 440 sq. m. *Rivers, Columbia and Willamette rivers. Surface, much diversified; soil, fertile. Products, wheat, oats, barley, rye, vegetables, fruits, &c. Lumber is largely shipped, and there are increasing manufacturing interests. Cap. Portland. Pop. (1897) 108,500.*

Multocæ, n. [From Ar. *multaka*, a junction.] The Turkish code of law.

Multocular, a. (Zool.) Having more eyes than two.

Multona Springs, in Mississippi, a village of Attala co.

Multum, n. An infusion of quassia, licorice, &c., fraudulently used by brewers to adulterate porter.

Multan'gulate, a. [Lat. *multus*, and *ungulatus*, hoofed.] (Zool.) With the hoof cloven in two or more parts.

Multure, n. [From Lat. *molitura*, grindstone.] (Scots Law.) The quantity of grain or meal assignable to a miller by way of compensation for grinding grain. — A grist; the quantity of grain ground.

Mum, a. [Formed from the sound, and allied to *mumble*, *mum*, and *mummary*.] Silent; not speaking.

"The citizens are *mum*; say not a word." — *Shaks.*

—*interj.* An exclamation denoting hush! be silent!

"Well said, master; *mum!* and gaze your fill." — *Shaks.*

—*n.* Silence.

"Intrust it under solemn vows of *mum*." — *Hudibras.*

Mum, n. (Ger. *mumme*.) A term formerly given to strong beer or double ale.

Mumble, v. n. [Ger. *mummeln*, from *mum*.] To make the sound *mum* in speaking; to mutter; to speak with the lips or other organs partly closed, so as to render the sounds inarticulate and imperfect; to utter words with a grumbling tone.

"Peace, you mumbling fool." — *Shaks.*

—*To bite gently; to eat with the lips close.*

—*v. a.* To utter with a low, inarticulate voice.

"He with mumbled prayers atones the deity." — *Shaks.*

—*To mouth gently or softly; to eat with a muttering sound.*

"Spaniels civilly delight
In mumbling of the game they dare not bite." — *Pope.*

—*To slobber over; to suppress; to utter imperfectly.*

Mumble-ews, n. A tale-bearer; a gossip.

Mumbler, n. One who mumbles; a mutterer.

Mumm, v. n. [D. *mommen*, to play the mummer; Dan. *formumme*, to mask; probably allied to Gr. *mōmos*, blame, ridicule; personified, the critic god.] To mask; to sport or make diversion in disguise; to frolic in an assumed character.

"With mumping and with masking all around." — *Hubbard.*

Mum'ma-chog, n. (Zool.) See CYPRINODONTIDÆ.

Mum'masburg, in Pennsylvania, a post-village of Adams co., abt. 5 m. N.W. of Gettysburg.

Mum'mer, n. Originally, one who made sport by gestures, without speaking; formerly, one who masked himself to frolic in disguise.

Mum'mery, n. [Dan. *mummeri*; Fr. *momerie*.] Masking; sport; frolic; diversion; buffoonery.

"Your fathers disdained the mummery of foreign strollers." — *Fenton.*

—*Hypocritical disguise and parade to delude vulgar minds.*

Mummification, n. [Fr. *mommification*.] The act of making into a mummy.

Mum'miform, a. [Eng. *mummy*, and Lat. *forma*, form.] Resembling a mummy; characteristic of a mummy.

Mum'mify, v. a. [Eng. *mummy*, and Lat. *facio*, to make.] To make into a mummy; to embalm and dry, as a mummy.

Mum'mius, Lucius, a Roman consul, who, after serving as prætor in Spain, distinguished himself, in B. C. 146, by the conquest of Greece. He took, burnt, and pillaged Corinth, and sent the finest works of art found there to Rome. To M. was then intrusted the task of organizing the new province of Achaia. He was honored with a triumph and the surname of Achaicus. He afterwards held the office of censor.

Mum'my, n. [Pers. and Ar. *mom*, wax.] A term applied to a body which had undergone the process of embalming. The operation by which the body was preserved from decay after death, will be found described in the article EMBALMING. During the space of two thousand years, the mode of preparing mummies differed at different periods. Recent writers on the subject have divided the art into four kinds: 1. Drying the bodies in sand, a method chiefly employed among the poorer classes. 2. Salting in natron, and then drying. 3. Boiling in resins and bitumen. 4. Preparing with fine

resins, and removing the brains and viscera. Great diversity of opinion exists with regard to the substances employed. Within or about the bodies of different mummies have been found sulphate of soda, saltpetre, common salt, soda, oil of cedar, turpentine, asphalt, myrrh, and cinnamon. The bandages of mummies are always of linen, the use of wool being prohibited. The greater portion of these bandages were made of old linen, either collected by the deceased during his lifetime, or else by the *taricheutes*. Shirts and darned portions of garments are often found, and sometimes the initials of the deceased embroidered on the cloth. The cloth is of various qualities, from that of canvas to that of fine muslin. The large mass of the bandages, however, consists of strips of about three or four inches wide, and from one to several yards in length, wound round the body with great skill and symmetry, and apparently laid on in a wet condition. All inequities are carefully padded, so as to bring the body to a symmetrical shape. The length of these bandages is very great, as much as 1,000 yards having been found wrapping a single mummy. On the inner bandage of some mummies are found, inscribed in a caustic ink, the name of the deceased, the years that he lived, and the name of the monarch in whose reign he died. Straps of scarlet leather have been found on some mummies, prepared with the greatest care. These straps are about one and a half inch wide, and are found crossing the shoulders and breast. On the ends are stamped, apparently by a heated metal punch, like that used by bookbinders, the names and titles of the reigning king, or the monarch, worshipping Amen-Ra. The earliest of these bears the name of *Rameses XIII.* of the 20th dynasty, and they continued to be used till B. C. 525. Mummies have frequently a case composed of as many as 20 or 40 layers of cotton cloth, closely pressed and glued together, and then covered with a thin layer of lime, on which have been painted, in distemper, the face and dress of the mummy, various deities connected with funeral rites, and texts of chapters from the ritual. In general, a scarab is painted on the head, a flying ram-headed hawk on the chest, the goddess Nn on the stomach, and at the feet, frequently made of a piece of board, the enemies of Egypt, sometimes painted under the sandals, or the bull Apis, bearing a mummy on its back. These *cartonages*, as they are called, are found on the mummies of the kings of the 19th dynasty, and continue till the time of the Ptolemies. Sometimes, instead of a cartouche, the outer bandages of the mummy are covered with copious extracts from the ritual for the dead, written in black carbonaceous ink. Papyri, generally rolled up, were often deposited with the mummies. In the hand of a Greek mummy exhumed at Thebes was found a papyrus containing the 17th book of the Iliad. The mummies, with or without their cartonages, were deposited in coffins or sarcophagi, generally of wood, either on cedar or sycamore, made in the shape of a mummy, placed upon pedestals. The Egyptian tombs are generally hollow rock-chambers, excavated in the Arabian chain of hills to the west of the principal cities. Mummies are principally found in the Bournah quarter of Thebes, and in the plains of Sakhara. Few mummies of children have been found. It has been calculated that 420,000,000 mummies were made from the commencement of the Egyptian monarchy to the cessation of the art in the 7th century. The bodies of sacred animals were also embalmed by the Egyptians from an early period of the monarchy; but they did not bestow so much care upon them as upon the human mummies. Mummies have been found of the ape, the emblem of the god Khons; and of the dog, the emblem of Anubis. A large number of cats, sacred to Bast, have also been found, some in bandages made up in the form of the animals, others of conical shape, with feet close to the body, and the head modelled in linen. The mummies of wolves have been found at Lycopolis. The larger animals were only partly embalmed. Mummies of rams and lambs, sacred to Ammon, have been found at Thebes. Mummies of the sacred vultures of the goddess Mut, and of different kinds of falcons, sacred to the sun, have also been found, together with mummies of the owl, sacred to Buto, and of the swallow. The bird, however, most commonly embalmed was the ibis, sacred to Thoth; and extensive catacombs of it mummified have been found at Sakhara. Many mummies of the crocodile, sacred to the god Sobak, have been found; and serpents embalmed in packets of bitumen, in the shape of an egg, with sometimes as many as six in a packet. Other nations besides the Egyptians endeavored to preserve the human form after death, but in no case can they be considered mummies. The Persians used wax, the Assyrians honey, and the Hebrews embalmed their kings with spices. The Guanches, or ancient inhabitants of the Canary Islands, seem to have been the only people who adopted a mode of preserving the body similar to that of the Egyptians.

—*The glutinous matter exuding from bodies prepared with tar, asphaltum, pitch, &c.*

(Gardening.) A sort of wax used in the planting and grafting of trees.

To beat to a mummy. To pound, thump, or bruise to an unrecognizable and senseless mass.

—*v. a.* To mummify; to embalm.

Mum'my-chog, n. (Zool.) Same as MUMMA-CHOG.

Mump, v. a. [D. *mompelen*; allied to *mumble*.] To nibble; to bite quickly; to chew continuously. — To utter or speak unintelligibly, imperfectly, feebly, or brokenly; as, to mump one's words.

—*v. n.* To move the lips with the mouth nearly closed; to mutter or mumble, as in sullenness.

—[D. *mompen*.] To implore with a beggar's accent and

motion of the mouth; to cheat; to trick; to cozen. — To be sulky, sullen, or stupid.

Mumper, n. A tramp; a beggar; a vagrant.

Mump'ish, a. Silent; dull; heavy; sulky; sullen; stupid.

Mump'ishly, adv. Sullenly; doggedly; heavily.

Mump'ishness, n. Sullenness; sulkiness; moodiness.

Mumps, n. pl. [See MUM and MUMBLE.] Silent displeasure; sullenness; sulks.

(Med.) An inflammation of the parotid and sub-maxillary glands, of a contagious or epidemic origin. It is generally preceded and accompanied by some degree of fever, and commences with a feeling of pain and tension beneath the ear. A swelling forms, and the motion of the jaw becomes painful. It usually attains its height in four days; and four days more are occupied by its decline. It ordinarily requires but little treatment beyond the administration of a laxative, and protection from cold, with the application of poultices or other warm substances to the part, or, in severe cases, of leeches.

Mun, v. aux. To be obliged, forced, or compelled; must. (Used as an English provincialism.)

Munch, (mush,) v. n. [Fr. *manger*; Lat. *manduco*, to chew; a lengthened form of *mando*.] To chew eagerly by great mouthfuls; — used colloquially.

—*v. n.* To masticate; to crunch with closed lips. (Colloq.)

Munchen. See MUNICH.

Mun'chengratz, a town of Austria, in Bohemia, on the Iser, 8 m. N.E. of Jungbunzlau. *Manuf.* Woollen, cotton, and linen fabrics. *Pop.* 4,000.

Munch'er, n. One who munches.

Munchausen, Hieronymus Karl Friedrich, Baron von, a German soldier, b. in Hanover, 1720. He served in his youth as an officer in the Russian cavalry, and passed the close of his life in his native country, delighting in narrating the most astounding stories of his warlike exploits in the campaign against the Turks in 1737-9, and thereby gaining the reputation of being the greatest liar of his time. D. 1797. A compilation of his prodigious *gascornades* was published in London in 1785, under the title of *Baron Munchausen's Narrative of his Marvellous Travels and Campaigns in Russia*. In the following year a 2d edition appeared at Oxford, described as *The Singular Travels, Campaigns, Voyages, and Sporting Adventures of Baron Munchausen, commonly pronounced Munchausen; as he relates them over a bottle when surrounded by his friends*. A 3d edition was also brought out in London, in the same year, entitled *Gulliver Revived*; the best English edition is that by Shore (1872) illustrated by Doré and additions by Theo. Gautier. RUDOLF ERICH RASPE, the author of this marvellous narrative, was b. in Hanover, in 1737, he was a professor and curator of the museum of Cassel, which position he lost. He fled to England and d. in Ireland, 1794.

Mun'cie, in Indiana, a city, cap. of Delaware co., on 3 R.R. lines, 54 m. N.E. of Indianapolis: in natural-gas belt; has important industries. *Pop.* (1897) 14,500.

Mun'cy, in Pennsylvania, a post-borough of Lycoming co., on Penna. and P. & R. R.s., 14 m. E. of Williamsport. *Pop.* (1897) 1,450.

Mun'cy Creek, in Indiana, enters White River in Delaware co.

Mun'cy Creek, in Pennsylvania, enters the West Branch of the Susquehanna River in Lycoming co.

—*A township of Lycoming co.*

Mundane, a. [Lat. *mundanus* — *mundus*, the world.]

Worldly; terrestrial; temporal; belonging to the world; as, the *mundane* sphere.

Mundane, adv. In a mundane manner; worldlyly.

Mund'en, a town of Prussia, prov. of Hanover, on the Weser, 15 m. S.W. of Göttingen. *Manuf.* Earthenware, and tobacco. *Pop.* 6,000.

Mundi, (mun-de'), a dist. of Hindostan, in the Punjab, in the Jullundur Doab; area, 760 sq. m. It is mountainous, but comprises several fertile valleys. *Mn.* Iron and salt. — The cap. is Mundi, on the river Beas, 120 m. E. of Umrutis. *Pop.* 115,000.

Mundie, n. (Min.) Iron or arsenical pyrites: an exceedingly ponderous mineral, whitish, beautiful and shining, but not brittle. It is found in abundance in Cornish and Irish mines.

Mundificent, a. [From Lat. *mundus*, clean, and *facere*, to make.] Tending to cleanse and heal.

—*n.* An ointment, &c., which serves to cleanse and heal.

Mundification, n. [Fr. *mondification*.] Act or operation of cleansing any body from dross or extraneous matter.

Mundificative, a. [Fr. *mondificatif*.] Having capacity to cleanse or heal.

—*n.* A medicine or unguent having power to cleanse.

Mun'dil, n. A turban embroidered with gold and silver threads.

Mundivagant, a. [Lat. *mundus*, the world, and *vagus*, a wandering about.] Wandering about the world. (R.)

Mundoo'gns, n. [Sp. *mondongo*, a black-pudding.] A cant word for tobacco.

Munds, n. pl. See MUNS.

Mun'dy, in Michigan, a post-township of Genesee co.

Mun'fordville, in Kentucky, a post-village, cap. of Hart co., abt. 100 m. S.W. of Frankfort. There is a remarkable orifice in the earth, in this vicinity, shaped like a funnel, and extending downwards to an unknown depth.

Mun'ger's Mills, in Missouri, a post-village of Rey-nolds co.

Mung'-corn, n. Same as MANG-CORN, *q. v.*

Mungo, n. (Manuf.) A term applied to woollen cloth manufactured from old wool obtained from the rugs of heavy fabrics, the rugs being torn into fibre by cylindric

cal machines armed with teeth. This cloth gives substance and warmth, and is capable of a fine finish, but from the shortness of the fibre is weak and tender. It is chiefly used for padding, linings, office-coats, druggets and blankets. Broadcloth is sometimes made with a large admixture of this cheap and inferior material.

Mungo Park. See PARK, (MUNGO.)

Munich. (*mū'nik*.) [Ger. *München*.] a city of S. Germany, cap. of Bavaria, on the Isar, 220 m. W. of Vienna, and 118 E.S.E. of Stuttgart; Lat. $48^{\circ} 8' 19''$ N., Lon. $11^{\circ} 35' 15''$ E. It stands in the midst of a plain, 1,600 feet above the sea. The more notable among the numerous public buildings are the cathedral, the new palace, (including the old royal residence,) the treasury, chapel, &c.; the post-office, theatre, the Königsbau or Royal Palace, designed after the Pitti Palace at Florence, and the Jesuit's Church. In the square called *Carolinien-Platz*, is an obelisk 100 feet high, formed partly of cannon taken by the Bavarians from Russia in the French campaign of 1812. The great glory of *M.* is its fine galleries of painting and sculpture, called respectively *Pincoteca*, and the *Glyptotheca*, comprising 9,000 drawings, besides 1,500 paintings, including several works from Raffaele, Fra Bartolomeo, Rembrandt, Albert Dürer, Vandyck, Velasquez; and some sculptures by Canova, Thorwaldsen, Schadow, &c. Also, the Leuchtenberg gallery, formed by Prince Eugene Beauharnais. The University of *M.*, originally founded at Ingolstadt in 1472, removed to Landshut in 1800, and to *M.* in 1826, is the principal school of learning in Bavaria. It contains a library of 200,000 vols. The public library formed by Albert III. between 1550 and 1579, contains 400,000 printed vols. and 22,000 MSS., besides extensive natural history and scientific collections. The most beautiful among the gates of *M.* are the Siegesthor ("Gate of Victory"), designed after Constantine's triumphal arch at Rome; and the Isar Thor, noted for its elaborate frescoes. *Manuf.* Important, consisting principally of furniture, tapestry, musical, mathematical, and surgical instruments, porcelain, &c. Its telescopes are celebrated. *M.* was founded by Henry, duke of Saxony and Bavaria, in 962. Otto IV. encircled it with walls in 1157, and it was made the imperial residence by Louis III., who restored and extended it in 1327. *M.* was made the cap. of Bavaria in the 15th century. It was taken by Gustavus II. of Sweden in 1632, by the Austrians in 1704, 1741, and 1743, and by the French in 1800, from which time until 1813 the country remained in alliance with France.

Municipal. (*-is-i-pal*.) *a.* [Fr.; Lat. *municipalis*, from *municipium*—*munia*, official duties or functions, and *capio*, to take. See MUNITION.] Pertaining or having reference to a corporation or city; as, a *municipal* charter, the *municipal* body.—Belonging to a state, or kingdom.

M. Law, in contradistinction to international law, is the system of law proper to any single nation or state. It is the rule or law by which a particular district, community, or nation is governed.

Municipalism. *n.* The municipal system or organization.

Municipality. *n.* [Fr. *municipalité*.] A town or city possessed of certain privileges of local self-government; the governing body in such a town.

Munificence. (*-nif-i-sens*.) *n.* [Fr.; Lat. *munificentia*—*munus*, and *facio*.] A giving or bestowing liberally; generosity; liberality; beneficence; bounty.

Munificent. *a.* [L. Lat. *munificens*—*munus*, and *facio*.] Manifesting liberality in giving or bestowing; bounteous; beneficent; liberal; generous; bountiful; as, a *munificent* benefactor.

"My Lord Dorset, the *munificent* patron of letters."—*Cheyne*.

Munificently. *adv.* In a munificent or open-handed manner.

Muniment. *n.* [Lat. *munimentum*, from *munio*, to fortify.] Act of defending or fortifying; support; defence.—A stronghold; a fortification; a place of defence; munition.

(*Law*.) A record; a deed; a charter; a writing by which claims and rights are defended or maintained.

Muniment-house, or room. a strong, or, more properly, fire-proof apartment in a public or private building, for the preservation of charters, deeds, seals, &c.

Munition. (*-nish'un*.) *n.* [Fr.; Lat. *munio*, from *munio*, to fortify; probably akin to Gr. *amunio*, to keep off, ward off, and Hind. *umun*, warden.] Ammunition; whatever materials are used in war for defence, or for attacking an enemy; provisions of a garrison or fortress, or for ships of war; military stores of all kinds.

Munition-ship. (*Nav.*) A store-ship; a vessel conveying munitions of war.

Munjeet. *n.* [Hind. *manjit*.] In Hindostan, a dye-stuff used in lieu of madder.

Munizacs. (*moon-katch*.) a town of Austria, in E. Hungary, on the Latorcza, 80 m. N.E. of Debreczin. *Manuf.* Hosiery and alum. In its vicinity are mines of crystal, called Hungarian diamonds. Pop. 5,300.

Munition. (*mū'n'yun*.) *n.* (Arch.) Same as MULLION, *q. v.*

Munitions. *n. pl.* (*Naut.*) Pieces that part the lights in a ship's stern and quarter-gallery.

Munusville. or MUNSVILLE, in New York, a post-village of Madison co., abt. 100 m. W. by N. of Albany.

Munstown. in Pennsylvania, a post-village of Washington co.

Muns. *Munds.* *n.* [Goth. *munths*.] A vulgarism for the month, jaws, &c.

Mun'son. in Illinois, a thriving township of Henry co.

Mun'son. in Ohio, a township of Geauga co.

Münster. a city of Prussia, cap. of the prov. of Westphalia, on the Aa, a tributary of the Ems, 65 m. N.E. of

Düsseldorf, and 80 m. N.N.E. of Cologne; Lat. $51^{\circ} 55'$ N., Lon. $7^{\circ} 40'$ E. The principal public buildings are the cathedral, the church of St. Lambert, the town-hall, and the palace. *Manuf.* Woollen fabrics, leather, thread, starch, &c.; it has also a considerable trade in linen, hams, and other produce. *M.* was founded about 700, under the name of *Mailand*, afterwards changed to *Münigardevorde*, or *Miningerode*. It became a principality in the 12th century, and joined the Hanseatic League in the 13th century. John Bocklesolm, called "John of Leyden," leader of the Anabaptists, with a number of followers, held the town from Feb. 27, 1534, till June 24, 1535, when it was taken by storm. The Congress at Münster, in July, 1643, signed the preliminaries of a treaty of peace in Jan., 1647, but the definitive treaty was not signed till Oct. 24, 1648. (See WESTPHALIA, TREATY OF.) It was evacuated by the French, and taken possession of by the Duke of Brunswick, in 1758. The French general d'Armentières captured it after a short siege, July 25, 1759, and it was retaken by Gen. Imhoff, Oct. 20. By a treaty concluded at Paris, it was ceded to Prussia, May 23, 1802; but was again given up July 9, 1807, and released from the French yoke by the Allies, in 1813. Its fortifications were destroyed in 1765. Pop. 27,332.

Munster. the S.W. and largest of the four provinces of Ireland, having N. Connaught, E. Leinster, S. and W. the Atlantic Ocean. It comprises the cos. of Clare, Cork, Kerry, Limerick, Tipperary, and Waterford. *M.* existed as a kingdom at an early period. It was subdued by Henry II., in 1172.

Munster. in Pennsylvania, a post-village of Cambria co., abt. 4 m. E. of Ebensburg.

Münsterthal. (*moon'ster-tal*.) two valleys of Switzerland, one in the cant. of Grisons, the other in the N.E. of Berne, where, in 1444, the battle of St. Jacob was fought between the French and the Swiss, when the latter were nearly destroyed.

Mun'tin, Mun'ting. *n.* (Arch.) An upright piece in a door-frame, separating the panels.

Muntjak. *n.* (*Zoöl.*) *Cervus muntjak*, an animal of the Deer tribe, about one-fifth larger than the Roebuck, being about two feet two inches high at the shoulders; head large; ears rather large; eyes large,

Fig. 1885. — MUNTJAK, (*Cervus muntjak*.)

with lachrymal sinuses; tail short and flattened; general color reddish-brown above; belly and front of the thighs pure white. The male has large canines in the upper jaw; the female has none, nor has she horns. The *Cervus Muntjak* is a native of Java, and is described by those who are fully acquainted with its character as possessing a great portion of craftiness, combined with much indolence. It has a strong scent, and is easily tracked by dogs.

Muntz's Metal. *n.* [From the name of the discoverer.] (*Chem.*) An alloy of copper and zinc, used for the sheathing of ships, composed of 60 per cent. of copper and 40 of zinc. It admits of hot rolling.

Münzer. THOMAS, (*moon'ser*.) a fanatic, who, in the early part of the 16th century, rendered himself for a while extremely formidable in Germany, where he preached equality and the community of property, and collected 40,000 followers, who committed many enormities. He was at length defeated by the Landgrave of Hesse, with the loss of 7,000 of his deluded followers, and being chased to Franchausen, was taken prisoner, and executed at Mulhausen, in 1525.

Muot'ta. a village of Switzerland, cant. of Schwytz, on the Muotta, 6 m. E.S.E. of Schwytz. Here, in 1799, the Russians, under Suwarrow, encountered the French, who, after a sanguinary battle, succeeded in effecting their retreat.

Murad. See AMURATH.

Mura'ua, n.; Mura'nidae, n. pl. (*Zoöl.*) See EEL.

Mural. *a.* [Fr.; Lat. *muralis*—*murus*, a wall; akin to W., Ir., and Gael. *már*, Sansk. *mār*, to surround.] Pertaining to a wall; as, *mural* fruit.

—Resembling a wall; perpendicular; vertical; steep; as, a *mural* cliff.

Mural Circle. *n.* (*Astron.*) This instrument, which superseded mural arcs and quadrants, was invented by Edward Troughton in 1812. It is generally of large

size, attached to a stern wall or pier of solid masonry, and fixed in the meridian, for the purpose of measuring the distance of stars from the pole or the zenith. One form of this instrument is represented in Fig. 1886. *A* is a stone pier which supports the axis of the instrument,

Fig. 1886. — MURAL CIRCLE.

and to which microscopes, *a, b, c, d, e,* and *f,* are attached. The face of the pier which carries the microscopes fronts either the E. or the W. The axis carries the circle *BC* and the telescope *FG*. The telescope is fastened to the circle, so that both must move together. This circle is graduated on its outside into degrees, minutes, and other subdivisions. The microscopes serve as pointers for observing the exact position of the circle, and by their aid the space between the divisions can be subdivided with great exactness. We wish to know in any observation how far the telescope points above the horizon. This can be easily ascertained, if we know what is the reading of the circle when the telescope points horizontally. For example, if the reading of the circle is $50^{\circ} 15'$ when the telescope points horizontally, and $27^{\circ} 16' 25''$ when the telescope is pointing to the star, the telescope must point $27^{\circ} 16' 25'' - 50^{\circ} 15' = 22^{\circ} 1' 25''$ above the horizon. The reading of the circle when the telescope points horizontally is ascertained as follows. It is well known that a star seen by reflection from the surface of water or quicksilver appears just as far below the horizon as it is above it. The trough *o* is filled with quicksilver, and the telescope first directed to a star, *S* (Fig. 1887), on the meridian, and on the reading of the circle observed; the telescope is then turned as to observe the star as reflected by the quicksilver, and the reading of the circle again observed. The horizontal

Fig. 1887.

reading of the circle is evidently midway between these two readings. The elevation of the N. celestial pole must next be ascertained. This is done by observing the pole star, which describes a small circle about the celestial pole as its centre. With the *M. C.* the angular elevation of this star above the horizon is observed at its highest and lowest points. These observations are corrected for refraction, and their mean gives the angular elevation of the pole above the horizon. The angular elevation of any body above the horizon is called its *altitude*, and its altitude when in the meridian is called its *meridian altitude*. By observing now the altitude of any star when under the meridian, we can easily ascertain its angular distance from the pole. This angular distance is called *polar distance*. If the star be N. of the zenith, its polar distance is equal to the difference between its meridian altitude and the altitude of the pole. If the star be S. of the zenith, its polar distance will be 180° less the sum of the altitude of the pole and of the meridian altitude of the star.

Mural Crown. *n.* See CROWN.

Mural monument, a monumental tablet affixed to a wall.

Mura'no, a town of N. Italy, on an island in the Lagoon, 1 m. N.E. of Venice, of which it is now a suburb. *Manuf.* Venetian glass and mirrors. *Pop.* 4,000.

Murashkino, or **Moorashkino**, (*moo-rash-ke'no*), a town of Russia, gov. of Nijni-Novgorod, 40 m. S.S.E. of Nijni-Novgorod; *pop.* 6,000.

Murat, *Юршич*, (*moo-rah'*), one of the most intrepid of the French marshals, and placed on the throne of Naples by Napoleon I., was the son of an innkeeper at Cahors, where he was b. in 1771. He was intended for the Church, but escaping from the college of Toulouse, he enlisted as a chasseur, but was shortly after dismissed for insubordination. On the formation of the constitutional guard, he entered it, and displaying an active zeal for revolutionary principles, he was soon advanced to the rank of lieutenant-colonel. The overthrow of the Terrorists checked his progress for a time, but the Directory made him chief of brigade, and in 1796 he accompanied Bonaparte to Italy as his aide-de-camp. Here he distinguished himself by his impetuous courage as a cavalry officer, and was employed as a diplomatist at Turin and at Genoa. He followed Napoleon to Egypt, where he decided the victory over the Turks at Aoukir, and returned as general of division. In 1800 he married Marie Caroline, the younger sister of his patron, who was then first consul; and in 1804, *M.* was made marshal, grand admiral, and prince of the French empire. His services in the campaign of 1805 against Austria, during which he entered Vienna at the head of the army, were rewarded with the grand-duchy of Berg. He continued to share the victories of his master with such distinction, that, in 1808, Napoleon placed him on the throne of Naples. After reigning peaceably four years, he was called to accompany Napoleon to Russia, as commander-in-chief of his cavalry; and, after the defeat of Smolensk, he left the army for Naples. He next took part with Napoleon in the fatal campaign of Germany; but, after the battle of Leipzig, he with drew, and finding that the throne of the emperor began to totter, concluded an alliance against him. In 1815, however, he again took up arms, and formed a plan to make himself master of Italy as far as the Po, at the very time that Austria and the allies, upon his repeated assurances that he would remain true to them, had determined to recognize him as king of Naples. It was too late. Austria, therefore, took the field against him, and he was soon driven as a fugitive into France. After the overthrow of Napoleon he escaped, in the midst of continual dangers, to Corsica, from which he sailed with a few adherents to recover his lost throne. A gale, off the coast of Calabria, dispersed his vessels, but *M.* determined to go on shore. He was seized, and carried in chains to Pizzo, brought before a court-martial, and condemned to be shot. This sentence was executed Oct. 13, 1815, when *M.* met his fate with undaunted courage. Napoleon, when at Elba, described him truly in these words:—"Murat is a good soldier—one of the most brilliant men I ever saw on the field of battle. Of no superior talents; without much moral courage; timid even in forming his plan of operations; but the moment he saw the enemy, all that vanished—his eye was the most sure, and the most rapid—his courage truly chivalrous. Moreover, he is a fine man, tall, and well-dressed, though at times rather fantastically. It was really a magnificent sight to see him in battle heading the cavalry."

Murat, CAROLINE, wife of the preceding. See BONAPARTE (CAROLINE).

Murat, in Ohio, a village of Paulding co.

Murat'ri, LUDOVICO ANTONIO, an eminent Italian historian and antiquary, was b. 1672 at Vignola, in the Modenese; was made keeper of the Ambrosian library at Milan, and, subsequently, librarian and archivist to the Duke of Modena. His literary productions are numerous and valuable, but his fame chiefly rests on his great historical collection, entitled *Rerum Italicarum Scriptores, ab anno Ævi Christianæ, 29 vols.* folio; in addition to which, his *Antiquitates Italice, Medii Ævi*, 6 vols. folio; *Anecdota Latina*, 4 vols. 4to; *Anecdota Græca*, 4 vols. 4to; *Annali d'Italia*, 18 vols. 8vo; with many other works, attest the magnitude of his literary labors. D. 1750.

Muravieff, *Монравиевъ*, (*moo-ra-veef'*), the name of an ancient, noble Russian family which, from the middle of the last century down to the present time, has furnished to Russia a number of distinguished military commanders and literateurs.

Murchison, SIR RICHARD IMPEY, F.R.S., a distinguished English geologist, Director-General of the Geological Survey of Great Britain, and director of the Metropolitan School of Science applied to Mining and the Arts, b. in Ross-shire, 1792. After receiving a portion of his education at the Durham grammar-school, he entered the military college at Marlow in 1805, and left it two years subsequently, upon receiving a commission in the 36th regiment. He served at the battle of Vinniera, and shared the dangers of the retreat made by Sir John Moore upon Corunna. In 1815 he married, quitted the military profession, and directed himself to the study of the science of geology. In 1828 he accompanied Sir Charles Lyell in a geological tour among the extinct volcanoes of Auvergne. After exploring the chain of the E. Alps, he published a memoir upon the subject, accompanied with a geological map, 1829. He subsequently succeeded in discovering the whole series of Silurian rocks in the sea-cliffs W. of Milford Haven. The term *Silurian System*, which is the name of his first great work, was first used by him, in consequence of the vast deposits of which it is constituted, being most fully displayed in those parts of England and Wales once inhabited by a tribe of

Britons to whom the Romans applied the name "Silures." In the years 1835 and 1839 he explored the Rhensish provinces; and, in 1840, in company with M. de Verneuil, a French geologist, he set out for Russia, with the intention of investigating the geological formations of that country, hitherto very little known. The result of his several expeditions was published in 1845, in a magnificent volume, entitled *Geology of Russia and the Ural Mountains*, in the production of which he was assisted by M. de Verneuil and the Count Von Keyserling. Shortly after the publication of this book *M.* was knighted. About the same time the Royal Society awarded him its Copley medal, for his efforts in establishing the "Silurian System." In 1854 he produced *Siluria: the History of the oldest known Rocks containing Organic Remains, with a Brief Sketch of the Distribution of Gold over the Earth*. *M.* likewise declared that gold ought to be found in the Australian Alps, and urged the government to organize an expedition to test the truth of his views. This appeal met with no official response; but his theories soon were rapidly confirmed through the discovery of the precious metal by private individuals. *M.* was a member of almost all the scientific bodies of Europe. Died 1873.

Murcia, (*moo'rshia*) [Sp. *Moorthea*]. An ancient kingdom, and afterwards province, in the S.E. of Spain, between Lat. 37° 20' and 39° 25' N., Lon. 0° 40' and 3° 5' W., having N. Castile, E. Valencia, S. the Mediterranean, and W. Andalusia, and part of Castile. Area, 7,577 sq. m. The surface is generally mountainous, and the soil sandy and unproductive, except in the valleys formed by the Segura and its tributaries. The climate is very oppressive in summer, except along the sea-coast, and among the mountains. The winters are so mild that frost is almost unknown. The principal river is the Segura. *Prod.* Wheat, rye, barley, rice, maize, vegetables, and fruits. Cattle, sheep, and goats are numerous. *Min.* Lead, copper, nitre, sulphur, alum, and marble. *Manuf.* Silk, linen, earthenware, and soap. *M.* was colonized by the Carthaginians abt. B. C. 200, and passing successively under the sway of the Romans and the Goths, it was subjugated by the Moorish invaders in 712. In 1230 it was erected into a kingdom tributary to Castile, and the Moors were finally dispossessed in 1266. In 1833 it was divided into the province of Murcia and Albacete. The actual *M.* comprises the southern parts of the ancient prov., bounded S.E. by the Mediterranean.

MUR'cia, a city, cap. of the above prov., on the Segura, 31 m. N.W. of Cartagena, and 250 m. S.E. of Madrid. The city is situated in a beautiful and fertile plain. The cathedral, a Gothic edifice, has a tower 260 feet high, ascended by a spiral walk or inclined plane, accessible even to horsemen. *Manuf.* Linens, woollens, and saltpetre.

Murder, *n.* [A. S. *murther*, *morthor*; Goth. *manthr*, slaughter; Icel. *myrdha*, to kill privately; akin to Lat. *moors*, death.] *M.*, according to the definition of Blackstone, is when a person of sound memory and discretion, unlawfully killeth any reasonable creature in being, and under the king's peace, with malice aforethought, either express or implied. It can only be committed by a person of sound mind and discretion, for lunatics and infants, unless where they show a consciousness of doing wrong, are incapable of committing any crime. The unlawfulness arises from killing without any lawful warrant or excuse; and the person killed must be a reasonable creature in being, and under the king's peace. Lastly, the *M.* must be with malice aforethought; and it is this which distinguishes *M.* from every other species of killing. Malice may be either express or implied in law; express, when one evidently and of set purpose designs the killing of another; implied, as when one kills another suddenly, without any or great provocation. The malice need not be against the individual killed; for if one shoots at a person intending to kill him, but misses him and kills another, this is *M.*; and in like manner, if one shoots into a crowd without knowing a person there, and kills one of them, this also is *M.*; for the malice is regarded as against the human race. As a general rule, all homicide is malicious, and amounts to *M.*, unless where justified by the command or permission of the law, excused on account of accident or self-preservation in sudden quarrel, or alleviated into manslaughter by being either voluntary upon a sudden heat, or involuntary, but in the commission of some unlawful act. In all such cases the prisoner has to make out the justification, excuse, or alleviation; for all homicide is supposed to be malicious until the contrary appeareth upon evidence. *Manslaughter*, which differs from *M.* as being without malice, either express or implied, is either the involuntary consequence of some act not strictly lawful, or, if voluntary, then occasioned by some sudden and sufficiently violent provocation. Even where a person does an act lawful in itself, but in an unlawful manner, or without due caution and circumspection, and kills another, this may amount to manslaughter, or even in some circumstances to *M.* Every person convicted of *M.* shall suffer death as a felon. Manslaughter is punishable at the discretion of the court, by penal servitude for life, or for a term of not less than three years, or by imprisonment, with or without hard labor, for any term not exceeding four years, or by payment of such fine as the court may award. Besides the punishment of manslaughter as a crime, it is attended with a liability to make pecuniary satisfaction to the relatives of the deceased. In some of the States, by legislative enactments, *M.* has been divided into degrees. So, in Pennsylvania, by Act of April 23, 1794, "all *M.* which shall be perpetrated by means of poison, or by lying in wait,

or by any other kind of wilful, deliberate, and premeditated killing, or which shall be committed in the perpetrating or attempt to perpetrate any arson, rape, robbery, or burglary, shall be deemed *M.* of the first degree; and all other kinds of *M.* shall be deemed *M.* of the second degree; and the jury before whom any person indicted for *M.* shall be tried, shall, if they find the person guilty thereof, ascertain in their verdict whether it be *M.* of the first or second degree." Similar enactments have been made in Virginia, Massachusetts, Tennessee, &c.

Mur'der, *v. a.* [A. S. *myrthan*; Dan. *myrde*; O. Ger. *murdrjan*.] To put to death unlawfully; to kill a human being with premeditated malice; to slay with design aforethought.—To put an end to; to destroy; to abuse or violate grossly; to mar by bad execution; as, to "murder the English language."

—*interj.* An exclamation of outcry, when life is in danger. "Where be these bloody thieves? Ho, murder! murder!"—Shaks.

Murder Creek, in Alabama, flows into Conecuh river in Conecuh co.

Mur'derer, *n.* One who murders, or is guilty of murder; an assassin; a man-slayer.

Mur'deress, *n.* A female who commits murder.

Mur'derkill, in Delaware, a former hundred in Kent county.

Mur'derous, *a.* Guilty of murder; as, "the murderous king."—Milton.

—Consisting in murder; done with murder.

"With murderous rapine and seditious strife."—Prior.

—Committing murder; bloody; sanguinary; cruel.

"Murderous tyranny sits in grim majesty to fright the world."—Shaks.

—Premeditating murder; as, with murderous intent.

Mur'derously, *adv.* In a murderous manner; blood-thirstily.

Mur'docksville, in Pennsylvania, a post-village of Washington co., abt. 230 m. W. of Harrisburg.

Mure, *v. a.* [Fr. *murer*.] Same as IMMURE, *q. v.*

Murex, *n.* [Lat., a shell-fish.] (*Zool.*) A genus of gastropodous molluscs, having a univalve spiral shell, with an oval aperture, ending in an entire, straight, or slightly ascending canal. The molluscs thus characterized form a family (*Muricide*, or rock-shells) in the order of Prosobranchiata. Gasteropods of the system of Woodward and include the following genera: *Murex*, *Pisanina*, *Ranella*, *Trilon*, *Fasciolaria*, *Turbinella*, *Cantharus*, *Trichotropis*, *Pyrula*, *Fusus*. The celebrated Tyrian purple dye was obtained from two little shell-fish, the *Buccinum* and *Murex*; the former being found on rocks near the shore, and the latter in deeper water on the Phœnician coast. The general character of the genus *Murex* may be seen in *M. tenuispina* of the Moluccas, Fig. 1888.

Fig. 1888.

MUREX TENUISPINA.

Murexide, *n.* (*Chem.*) If 4 grains of alloxantine and 7 grains of crystallized alloxan be dissolved in half an ounce of hot water, and 80 grains of a cold saturated solution of carbonate of ammonia added, the carbonic acid is disengaged with effervescence, and the liquid assumes a brilliant purple color, depositing, as it cools, *murexide* in splendid crystals, which have a red color by transmitted light, and reflect a play of green and gold, like the wing of the sun-beetle. The beautiful color of this magnificent substance has been applied in dyeing and calico-printing.

Murfreesborough, in Arkansas, a post-village, cap. of Pike co., abt. 125 m. W.S.W. of Little Rock.

Murfreesborough, in N. Carolina, a post-village of Hertford co., 110 m. N.E. by E. of Raleigh.

Murfreesborough, in Tennessee, a fine city, capital of Rutherford co., about 30 m. S.E. of Nashville. Here, on Dec. 31, 1862, and Jan. 2, 1863, were fought, between the army of Cumberland under Gen. Rosecrans, and the Confederates under Gen. Bragg, two sanguinary battles, which finally terminated in the victory of the National army. The National loss was 1,533 men killed, 7,445 wounded, and about 3,000 made prisoners. That of the Confederates was estimated at 24,000, though Gen. Bragg admitted only a loss of 10,000, of whom 9,000 were killed and wounded.

Muriah, (*moo-rr-a-ha'*), a river in Brazil, prov. of Rio de Janeiro, rising in the Sierra do Pico and flowing into the Parahiba.

Mu'riate, *n.* (*Chem.*) See HYDROCHLORATE.

Mu'riated, *a.* Combined or treated with muriatic acid.—Steeped in brine.

(*Photography.*) Prepared with chloride of silver through the agency of common salt.

Muriatic Acid, *n.* (*Chem.*) See HYDROCHLORIC ACID.

Muriale'ite, *n.* [Lat. *muria*, and *calx*, *calcis*, limestone.] (*Min.*) Rhomb-spar.

Mu'ricate, *a.* (*Zool.*) When a surface is armed with short, but not close-set cones, having a sharp apex.

Mu'ringer, *n.* An overseer of a wall.

(Bot.) Having the surface armed with prickles.

Muricite, *n.* (Pol.) A fossil shell of the genus *Murex*.

Muricide, *n. pl.* (Zool.) See MUREX.

Muridae, *n. pl.* (Zool.) The Rat family, order Rodentia, comprising Rats, Mice, and other immediate allies, the limits of which are very differently stated by different naturalists. The *M.* are of the section of rodents having distinct clavicles. They have three or four molars on each side in each jaw, the molars at first furnished with rounded tubercles, which wear down till they exhibit mere roughened crowns. This family contains many genera and a very large number of species, distributed over all parts of the world.

Muride, *n.* [From Lat. *muria*, brine.] (Chem.) The former name of BROMINE, *q. v.*

Muriform, *a.* [Lat. *murus*, a wall, and *forma*, form.] (Bot.) Resembling, in squares and regularity of arrangement, masonry or brick-work.

Murillo, BARTOLOMEO ESTEBAN, (*moo-reil'yo*), one of the greatest of the Spanish painters, was b. in 1618, near Seville. He acquired the rudiments of art from his uncle, Juan de Castillo; and being encouraged to visit Madrid, he acquired the countenance and patronage of the great painter Velasquez, then in the height of his reputation. He afterwards returned to Seville, and there founded an Academy of Painting, and earned by his labors an imperishable fame. While painting the admired picture of St. Catharine, in the church of the Capuchins at Cadiz, he fell from the scaffold, and d. 1682, in consequence of the injuries he received. The principal works of *M.* are—*The Return of the Prodigal Son*; *Abraham Visited by the Angels*; *Christ Healing the Sick of the Palsy*; *The Pool of Bethesda*;—but his *chef d'œuvre* is *Our Lady of the Immaculate Conception*, painted in 1678, and lately purchased by the French government for the enormous sum of \$118,000.

Murine, *a.* [Lat. *murinus*.] Mouse-like; mouse-colored; pertaining or having reference to mice.

Murk, *Mirk*, *a.* Murky; gloomy; dark; overcast; as, a *murk* night.

—*n.* The husks, skins, &c., of fruit after appropriation of the pulp.

Murkily, *adv.* Gloomily; darkly; cloudily.

Murky, *a.* [A. S. *mirc*.] Dark; obscure; gloomy; overcast; as, "a *murky* storm."—Addison.

Murmur, *n.* [Lat. See the verb.] A low sound continued or continually repeated, as that of a stream running in a stony channel, or that of flume.

"In hollow murmurs died away."—Collins.

—A complaint half-suppressed, or uttered in a low, muttering, mumbling voice.

—*v. n.* [Lat. *murmuro*; Gr. *mormurō*, formed by duplication of *murō*, to flow, to run, to trickle.] To make a low, continued noise, like a stream of water, the hum of bees, rolling waves, or like the wind agitating the trees of a forest.—To grumble; to complain; to repine; to speak in a tone of sullen discontent; to utter complaints in a low, half-articulated voice; with *at* or *against* before the causative agent; as, "*murmuring against* the government."—Swift.

Murmuration, *n.* Act of murmuring.

Murmurer, *n.* One who murmurs; a grumbler.

Murmuringly, *adv.* Complainingly; with a low, muttered sound.

Murmurous, *a.* Attending with murmurs; murmuring.

Murphy, in *N. Carolina*, a post-village, cap. of Cherokee co., abt. 373 m. W. by S. of Raleigh.

Murphy's, in *California*, a post-town of Calaveras co., about 15 m. N. of Suttera. Pop. (1897) 600.

Murphysborough, in *Illinois*, a city, cap. of Jackson co., on Big Muddy river and 3 R. Rs., 57 m. N. of Cairo. Pop. (1897) 4,350.

Murphysville, in *Kentucky*, a post-village of Mason co., abt. 9 m. S. of Maysville.

Murrain, (*mūr'rin*), *n.* [Sp. *morrina*, from Lat. *morior*, to die.] (Furriery.) A contagious disease among cattle, generally caused by a hot dry season, which occasions an inflammation of the blood and a swelling in the throat, which soon become fatal. The symptoms of the disease are a hanging down and swelling of the head, a short and hot breath, profusion of gum in the eyes, rattling in the throat, palpitation of the heart, staggering, and a slimy tongue. The early stage of murrain is one of fever, and the treatment should be regulated accordingly. It is of great importance that the infected animal should be immediately removed from the sound ones.

Murray, JAMES STUART, EARL OF, Regent of Scotland, was the natural son of James V. by Margaret, daughter of Lord Erskine, and was probably b. soon after 1530. At five years of age his father made him prior of St. Andrews, and he was long known by that title. He accompanied his sister, the Princess Mary, to France, was present at her marriage with the dauphin, and was frequently passing to and fro between the French and Scottish courts. He became a warm supporter of the Reformers, and was chosen a member of the council, and one of the lords of the articles. On the return of Mary to Scotland as queen, Murray became her chief adviser, and was created first, earl of Mar, and then earl of Murray. He was opposed to the queen's marriage with Darnley, and has been accused of implication in the murder of the latter; he appears to have been aware of the plot, and to have stood aloof from it. He remained out of Scotland for some months, in 1567, only returning on the accession of James VI. He saw his sister a captive in Lochleven Castle, and was soon after named regent. Mary having escaped and taken arms, he encountered and defeated her at Langside, in 1568, and was one of the witnesses against her on her trial. The regent *M.* fell by the shot of an assassin at Linlithgow, January 23, 1570.

Murray, LINDLEY, an American grammarian, b. 1745, at Swatara, Lancaster co., Penna., received his primary education in Philadelphia in the academy of the Society of Friends. He was originally destined for a mercantile life; but having been severely chastised for a breach of domestic discipline, he left his father, who was then residing in New York, and taking up his abode in a school at Burlington, New Jersey, he there contracted a love of books and study. He afterwards studied the law, and practised as a barrister; but in course of time he quitted the bar for the counting-house, and having realized a competency, he went, in 1784, to England, and settled at Holdgate, near York. His *English Grammar*, which so long held its ground, and has passed through an immense number of editions, appeared in 1795. He soon after published the *English Exercises and Key*. These were followed by many other school-books, and several moral treatises. His private life was as amiable as his labors in the cause of education and morals were successful. D. 1826.

Murray, a river of Australia, formed by the junction of numerous streams W. of the Australian Alps. After passing through Lake Victoria, it enters the S. Pacific Ocean in Lat. 25° 20' S., Lon. 139° E.

Murray, in *Georgia*, a N.W. co. adjoining Tennessee; area, abt. 600 sq. m. Rivers, Coosawattee and Conasauga rivers, besides many smaller streams. Surface, diversified, and in some parts mountainous; soil, fertile. Min. Gold, silver, lead, zinc, and hydraulic limestone. Cap. Spring Place.

Murray, in *Indiana*, a post-village of Wells co.

Murray, in *Kentucky*, a post-village, cap. of Callaway co., abt. 250 m. W.S.W. of Frankfort.

Murray, in *New York*, a township of Orleans county.

Murrayville, in *Georgia*, a village of Hall co., abt. 100 m. N.N.W. of Milledgeville.

Murrayville, in *Illinois*, a post-village and township of Morgan county, abt. 12 m. S. by W. of Jacksonville.

Murrayville, or MURRYSVILLE, in *Pennsylvania*, a post-vill. of Westmoreland co., abt. 21 m. E. of Pittsburg.

Murrey, *a.* [O. Fr. *more*; Lat. *murus*, mulberry.] Mulberry-colored; claret-colored; of a dark red color.

"A waistcoat of murrey-colored satin."—*Arbuthnot*.

Murphine, (*mūr'rin*), *n.* [Lat. *murrhinus*, from Gr. *morrhua*, a costly material of which were made vases, cups, &c., either agate, or Chinese porcelain, china. Of Eastern origin.] Among the ancients, a term having reference to a delicate kind of ware, made of flint-spar, brought from the East.

Murrinsville, in *Pennsylvania*, a post-village of Butler co., 21 m. N. of Butler.

Mur'ron, *n.* (Mil.) Another spelling of MORION, *q. v.*

Murth, *n.* An English provincialism, denoting plenty; abundance; as, a *murth* of grain.

Murviedro, (*moo'r'v-e-at-dro*), [Anc. *Saguntum*.] A town of Spain, prov. of Valencia, on the Canates, 3½ m. from the Mediterranean, and 15 m. N.N.E. of Valencia; pop. 7,500.

Mus, *n.* (Zool.) See MURIDE.

Musa, (*mū'za*), *n.* (Bot.) The typical genus of the order Musaceæ, *q. v.*

Mus'za, *n.* A Tartar hereditary noble.

Musaceæ, *n.* (Bot.) The Musad family, an order of plants, alliance Amomales.—DIA. More stamens than one. They are stemless or nearly stemless plants, with leaves sheathing at the base, and forming a kind of spurious stem, often very large, their limb separated from the taper petiole by a round tumor, and having five parallel veins diverging regularly from the midrib

Fig. 1889. — PLANTAIN.
(*Musa sapientum*.)

towards the margin. Flowers spathaceous.—The genus *Musa* is the type of the family, and is one of the most important of all found in tropical countries.

The Plantain, *Musa sapientum*, has a fruit which is used to an immense extent by the inhabitants of hot climates, and is, in reality, one of the necessary articles of their food. Throughout equinoctial Asia and America, in tropical Africa, and in the islands of the Atlantic and Pacific oceans, wherever the mean temperature of the year exceeds 75° F., the plantain is extensively cultivated. It is often the whole support of an Indian family, as an extent of ground which, in wheat, could only maintain two persons, will yield sustenance under the plantain to fifty. A great many varieties are produced by culture. Besides its utility as an article of food, a tough fibre, capable of being made into thread of great fineness, is obtained from its stem, and the leaves, from their breadth and hardness, form an excellent material for the thatch of cottages. An intoxicating liquor is also made from the fruits when fermented, and the young shoots are eaten as a delicate vegetable. The Banana, *Musa paradisiaca*, is only a variety of the plantain, the fruit being smaller and more delicate flavored. Botanists call it *paradisiaca*, from an allusion to an old notion of its being the "forbidden fruit of Scripture;" and fanciful writers have supposed it to be the "grapes" brought by the spies of Moses from the promised land, one bunch of which was borne upon a pole by two men. Several other species of the genus *Musa* are known, all natives of Asia, one of which affords a valuable textile fabric. This species, *Musa textilis*, is a native of the Philippine Islands; and from the delicate vegetable fibres is obtained a fine thread called *Manilla hemp*, from which the fine muslins known as *Manilla handkerchiefs* and *Manilla scarfs* are manufactured.

Musaceous, (*-mū'shus*), *a.* (Bot.) Pertaining or having reference to plants of the order Musaceæ.

Musæ, *n. pl.* [Lat., Muses.] (Myth.) Certain goddesses, who presided over poetry, music, dancing, and all the liberal arts. They were generally supposed to be the daughters of Jupiter and Mnemosyne, and were nine in number.—Clio, Euterpe, Thalia, Melpomene, Terpsichore, Erato, Polyhymnia, Calliope, and Urania. Apollo, their patron and conductor, had received the name *Musagetes*, or leader of the Muses. The palm-tree, the laurel, and all the fountains of Pindus, Helicon, Parnassus, &c., were sacred to the Muses. They were generally represented as young, beautiful, and modest virgins, and commonly appeared in different attire, according to the arts and sciences over which they presided. The worship of the Muses was universally established, particularly in the enlightened parts of Greece, Thessaly, and Italy. Sacrifices were never offered to them, though no poet ever began a poem without a solemn invocation to the goddess who presided over verse.

Mus'al, *a.* Belonging or having reference to the Muses, or to poetry. (R.)

Mus'ar, *n.* An itinerant player on the MCSETTE, *q. v.*

Mus'ca, *n.* [Lat., fly.] (Zool.) The typical genus of the family Muscidae, *q. v.*

(Astron.) A small constellation of the Southern hemisphere, lying between Aries and Medusa. It has 1 star of the 2d, 2 of the 4th, and 2 of the 5th magnitude.

Mus'ce volitantes, *n. pl.* [Lat., flying specks.] (Med.) A term used by physicians to express the moths, clouds, and other imaginary bodies supposed to be seen by a patient when laboring under some cerebral oppression, particularly when the optic nerve is affected.

Muscales, *n. pl.* (Bot.) The Mosses, an alliance of plants, class Acrogens. DIAG. Cellular or vascular, with the spore-cases either plunged in the substance of the frond, or enclosed in a cap-like hood. They constitute a class of small flowerless plants of considerable interest in botanical science and importance in the economy of nature. They occur most abundantly in damp regions of the temperate zones, but extend through all climates. Scientifically they form with the Liverworts the division *Muscineæ*, which is marked off from the Ferns and other vascular Cryptogams by the absence of vessels, while the lower members of the group, consisting of a mere flat thallus, are related to the Thallophytes. There are in all some 3,000 species, divided into 4 orders. Of these *Bryaceæ* includes the great bulk of the genera. In this the sporangium, or spore case, has a cap, the *calyptra*, which is blown off by the wind when ripe. Under it is a lid, the *operculum*, which splits off from the capsule and exposes the spores. The capsule has a long stalk. In *Phascaceæ*, a small order, the spores are set free by the rotting of the sporangium. *Andreaeaceæ*, represented by a single genus, has no operculum, and the sporangium opens by slits. The fourth order is *Sphagnaceæ*, the bog mosses. In these some of the leaf-cells expand and lose their contents. These open into one another, and are surrounded by smaller cells filled with chlorophyll. The stem tissue has a pith-like center, surrounded by a layer of long cells, outside which is an epidermal layer of large empty cells. The male and female organs are on separate branches or separate plants. The life of a moss plant, under favorable circumstances, seems to be practically endless. The bog mosses (*Sphagnum*) which we see growing to-day are the continuation of plants which may have begun to grow thousands of years ago, having formed beds of peat which may be 20 feet thick. The basic substance of the plant dies, but its tips live and grow. These deep beds of peat and the felted coverings of moss which appear in mountain regions perform important services in nature by soaking up the rain and preventing floods, while yielding water to the streams in times of drought. A moss plant consists of a stem with leaves and root, the latter growing out

from any part of the plant which is kept dark and damp. Even from a detached leaf roots will grow, from which new plants will arise. Their branching habit, and the growth of special buds separated from the parent plant, enable mosses to be so easily propagated, that in many species spores rarely appear. The sexual propagation is an interesting phenomenon.

Fig. 1890.—Moss.

(Funaria hygrometrica, order Bryaceae.)

1. Perfect plant: a, branches clothed with leaves; b, seta, or footstalk; c, capsule; d, operculum, or lid. 2. Branch producing stellate head, having masses of "male" flowers, and filaments in center. 3. Spore of moss, germinating. 4. Spore of moss in a more advanced state.

In mid-summer there appears on the apex of a plant what are usually called moss-flowers, consisting of a rosette of small leaves, forming a sort of bud. In the center of this male and female organs appear (though in some species these appear on separate plants). The male organs (antheridia) are club-shaped bodies, which burst when ripe, yielding a gelatinous mass of cells, each of which yields a motile *antherozoid*, which is able to swim away if the moss is thoroughly wet. The archegonia, or female organs, are flask-shaped, the large egg-cell lying at the bottom of the flask, with a row of "canal cells" in the neck, through which the antherozoid makes its way down to the egg-cell. The young now grows within the flask, but after a time forces its way down into the parent plant, which nourishes it. When fully grown it forms the spore capsule, which may be seen as a small sac at the end of a hair-like stalk, rising from the moss cushion. The spores are sown in various ways from the sporangium, and yield a thread-like plant, from a bud of which the moss-plant grows, the thread then dying. Thus there is an alternation of generations, the moss yielding an egg or seed, and this a plant which produces spores, from which new plants arise.

Muscardine, *n.* A disease among silk-worms, generated by a fungus; also, the fungus itself.

Muscariform, *a.* [Lat. *muscarium*, fly-brush, and *forma*, shape.] Exhibiting the form of a brush.

Muscat, **Muscatel**, *n.* A rich, sweet wine made of Muscatel grapes in the S. of France. These grapes are also dried on the vine, for fine table-raisins.

Muscat, a state and seaport-town of Arabia.—See **MASCAT**.

Muscatatuck, or **MUSKATUCK**, in *Indiana*, a river rising in Ripley co., and flowing S.W., joins the Driftwood Fork of White River in Jackson co. The Indian name is *Mush-ca-que-tuck*, i.e. "Pond River."

Muscatine, (*mus-ka-tine*), in *Iowa*, an E.S.E. co., adjoining Illinois; area, about 450 sq. m. Rivers, Mississippi, Iowa, and Red Cedar rivers. Surface, undulating; soil, remarkably fertile. Min. Coal, limestone, and freestone. Cap. Muscatine.

—A city, river-port, and the cap. of the above co., on the Mississippi River, about 26 m. below Davenport. The town is well built, has an active trade, extensive manufacturing, and is growing rapidly. It was formerly called **BRIMINGTON**. Pop. 1890, 12,257.

Muschelkalk, (*mooshel-kalk*), *n.* [Ger. *muschel*, muscle, and *kalk*, limestone.] (*Geol.*) The name given to the shelly limestone occupying the middle of the Triassic series of rocks on the continent of Europe.

Musci, *n. pl.* [Lat. *mosses*] (*Bot.*) In certain classifications, a division of plants corresponding to the alga *MUSCULAE*, *q. v.*

Muscidae, *n. pl.* (*Zool.*) A fam. of dipterous insects, distinguished by short antennae that end with an oval joint and a lateral bristle; a short, soft proboscis, ending with large fleshy lips, enclosing a sucker composed of only two bristles, and capable of being entirely retracted into the oval cavity. The larvae are fleshy, whitish maggots, and never cast their skins; but when they pass to the pupa state, they shorten, become oblong-oval, dry, hard and brown on the outside. This family includes about one-third of all the Diptera, and its members are known under the names of Horse-flies, Cheese flies, Flesh-flies,

&c. The common House-fly, *Musca domestica*, is described under **FLY**, *q. v.* The most important of the other species will be found under their proper names.

Muscle, (*mūs'cl*), *n.* [Fr.: Lat. *musculus*, a little mouse, also, a muscle of the body; Gr. *mys*, from *myō*, to be shut. See **MUSSE**.] (*Anat.*) The name given to the fibrous contractile tissue forming the flesh of men and animals, by means of which the many highly complicated voluntary and involuntary motions of the body are performed. Muscular tissue is of two kinds, distinguished by structural peculiarities and mode of action, the one including the muscles of organic life (with the exception of the fibres of the heart), consisting of simple smooth filaments; the other comprising the muscles of animal life and the heart, and consisting of compound and apparently striated fibres, or tubes inclosing fibrils. The muscles of organic life, or unstriated muscles, consist of fibres, or, rather, elongated spindle-shaped fibre-cells, which, in their most perfect form, are from 1-270th to 1-3100th of an inch broad, very clear, granular, and brittle, many of them being marked along the middle or one of the edges, either by a fine, continuous dark streak, or by short isolated dark points. These fibres are collected in divers numbers in fasciculi, and form the proper contractile coats of the digestive canal, urinary bladder, gall-bladder, arteries, &c. The muscles of animal life, or striped muscles (Fig. 1891), are composed of fleshy bundles inclosed in coverings of fibro-cellular tissue, by which each is at once connected with, and isolated from, those adjacent to it. Each bundle is again divided into smaller ones similarly ensheathed, and similarly divisible through an uncertain number of gradations, till just beyond the reach of the naked eye one arrives at the primitive fasciculi, or the muscular fibres, properly so called. These consist of tubes of delicate structureless membrane—the *sarcolemma* of Bowman, varying in breadth from 1-200th to 1-500th in., and including a number of filaments. They are of a pale-yellow color, and marked by striae, which pass transversely round them. The primitive fibrils, of which each fasciculus contains several hundreds, are the proper contractile tissue of the muscle, cylindrical but

Fig. 1891.

A FASCICULUS OF STRIPED MUSCULAR FIBRES, SHOWING LONGITUDINAL CLEAVAGE.

(Magnified 300 diameters.)

somewhat flattened in form, and about 1-500ths of an inch in greatest thickness. The peculiar property of muscular tissue, its contractility, although commonly brought into action by the nervous system, appears to be inherent in the muscular tissue, and not derived by it from the nerves, for it may be manifested in a muscle after being isolated from the influence of the nervous system by division of the nerves supplying it. Muscular contraction is generally believed to be effected by an approximation of the constituent parts of the fibrils, which, without any alteration in their general direction, become closer, flatter, and wider. It is a uniform, simultaneous, and steady shortening of each fibre and its contents. Muscles are usually styled *voluntary* or *involuntary*, according as they are, or are not, subject to the influence of the will; but this division is not strictly accurate, and is of little value in a scientific point of view. Many muscles, especially such as are under the immediate dominance of reflex nervous action (as the respiratory and sphincter muscles), partake of both characters, since volition can interfere only temporarily with their contraction; and all muscles, even the most confessedly voluntary, are subject to emotional and instinctive influences, in which the will has no share. Muscles are either elongated and fixed at their two extremities, or hollow and inclosing a cavity. They are so disposed as to give beauty as well as strength to the human body, and for the most part are arranged in pairs; as flexors and extensors, abductors and adductors, supinators and pronators, &c. Muscles are attached

Fig. 1892.

ATTACHMENT OF TENDON TO MUSCULAR FIBRE IN THE SEATE.

to bones by means of tendons, white and shining, rounded or flattened, fibrous cords, and very resisting. (Fig. 1892.) The fixed point of a muscle is called its origin, the movable one its insertion. Muscular fibres, especially those of animal life, are constantly in a state of slight contraction, as is evident from the fact that

when the action of certain muscles of a part are injured the antagonistic muscles always draw it towards them. Thus, when the muscles of one lateral half of the face are paralyzed, those of the other half draw the features towards their side. There are in the human body no fewer than 527 distinct muscles, of which 261 are in pairs, and 5 single on the median line. Of these there are 83 in the head and face, the *orbicularis oris* being single; 49 in the neck, the arytenoid of the larynx being single; 78 in the thorax, the *triangularis sterni* and the diaphragm being single; 33 in the abdomen, the *sphincter ani* being single; 78 in the back, 98 in the upper extremities, and 108 in the lower. Yet with all this complicated machinery, everything is in perfect order and harmony.

(Zool.) See **MUSSEL**.**Muscled**, *a.* Supplied with muscles.

Muscle Shoals, in *Alabama*, an expansion and series of rapids of the Tennessee River extending from Decatur to Morgan co., to Florence in Lauderdale co. They vary from one to two m. in width, and have a fall of 100 feet in the course of 20 m.

Muscling, (*mūs'ling*), *n.* (*Fine Arts.*) An anatomical diagram of the muscles. (*R.*)

Musco da, in *Wisconsin*, a post-village and township of Grant co., on the Wisconsin River, 50 m. N.N.E. of Lancaster, and 54 of Madison.

Muscogee, in *Georgia*, a W. co., adjoining Alabama; area, about 244 sq. m. Rivers, Chattahoochee river, and Nocheechee, Randall's, and Upatoi creeks. Surface, generally level; soil, in some parts remarkably fertile, and in others sterile. Min. Granite, hornblende, iron, agate, jasper, and chalcedony. Cap. Columbus. Pop. 1890, 27,561.

Muscoid, *a.* [Lat. *muscus*, moss, and Gr. *eidōs*, form.] (*Bot.*) Moss-like; partaking of the qualities of moss.

—*n.* (*Bot.*) A moss-like plant.

Muscology, *n.* [Lat. *muscus*, and Gr. *logos*, doctrine.] (*Bot.*) That branch of botanical science which has reference to the mosses.

Musconetcong, in *New Jersey*, a river issuing from Hocking Pond, between Morris and Essex cos., and flowing S., empties into the Delaware River, 10 m. below Easton; length, nearly 50 m.

Muscovity, *n.* From Lat. *muscus*.] Mossiness.

Muscotah, in *Kansas*, a post-village of Atchison co., abt. 21 m. W. of Atchison.

Muscotink, or **MUSKOTINK**, in *Minnesota*, a former post-village of Chisago co.

Muscovado, *a.* [From Sp. *menoscato*, determination.] Pertaining or having reference to raw or unrefined sugar.

—*n.* The commercial term for raw or unrefined sugar.

Muscovite, *n.* (*Geog.*) A native or inhabitant of Muscovy, or ancient Russia; also occasionally applied to the modern Russian or Russ.

—*Min.* A name sometimes applied to Mica, from its having been formerly used in Russia as a substitute for window-glass. See **MICA**.

Muscovy-duck, *n.* A corruption of *musk-duck*, *q. v.***Muscovy-glass**, *n.* Muscovite. See **MICA**.

Muscular, *a.* [Fr. *musculaire*.] Pertaining or having reference to a muscle or muscles; as, muscular strength or power. — Performed by, or having connection with a muscle or muscles: as, muscular motion. — Consisting of a muscle or muscles; as, muscular fibre. — Having well-developed muscles: strong; brawny; powerful; vigorous; as, a muscular man.

Muscularity, *n.* State, condition, or quality of being muscular.

Musculite, *n.* [Lat. *musculus*, and Gr. *lithos*, stone.] (*Pal.*) A petrified mussel.

Musculous, *a.* Muscular; brawny.**Mus. D.** Abbreviation of Doctor of Music.

Muse, (*mūz*), *v. n.* [Fr., from Lat. *Musa* = Gr. *Mousa*, a Muse, wit, task, genius; probably from obs. Gr. *mōō*, to search out, and so invent.] To ponder; to think closely; to study or ruminate in silence; to meditate; to contemplate. — To be absent in mind; to be so occupied in study or contemplation as not to observe passing scenes or things present; to be absorbed in a brown study.

"Thick-eyed musing and curs'd melancholy."—*Shaks.*—*v. a.* To think on; to cogitate or meditate on."And muse on Nature with a poet's eye."—*Campbell.*

Muse, *n.* Deep thought; rapt contemplation; close or profound attention attracting the mind from present objects and passing events; also, sometimes, absence of mind; brown study.

(Myth.) One of the Muses or **MUSÆ**, *q. v.***Muse**, *n.* See **MUSER**.**Museful**, *a.* Attracted; silently thoughtful."Full of museful moping."—*Dryden.*

Musefully, *adv.* Abstractedly; thoughtfully; meditatively.

Museness, *a.* Eschewing the Muses; indifferent to poetry.

Museographist, *n.* [Gr. *mousoion*, mn-em, and *graphein*, to write.] One who catalogues or classifies the contents of a museum.

Muser, *n.* One who muses or meditates; an absent minded person.

Muset, **Muse**, *n.* [O. Fr. *musette*.] A gap or break in a fence or hedge sufficiently large to allow a hare to pass through.

Musette, (*mu-zet*), *n.* [O. Fr.] A small French bagpipe or viol-de-gamba, formerly in vogue. — A rustic air adapted to such instrument; also, a dance of a similar character.

Museum, (*mu-zé-um*), *n.* [Lat. = Gr. *mousoion*, from

mousa, a Muse; Fr. *musée*.] A repository of curious objects i. e. nature and art; but, in most instances, the former; as, the *Museum of Natural History* in Philad'a.

Mush, *n.* [N. H. Ger. *muss*, pap.] Maize-meal boiled in water.

Mushan'on Creek, in Pennsylvania, enters the W. branch of the Susquehanna River, between Centre and Clearfield cos.

Mush-kee River, in Wisconsin. See MAUVAISE RIVER.

Mush room, *n.* [Fr. *mousseron*; Gr. *mukis*, from *mukos*; Lat. *mucus*, slimy matter from the nose.]

(*Hort.*) The Common Mushroom, *Agaricus campestris*, is a native of most of the temperate regions, both of the Old and New World. It is found during summer and autumn in old pastures. Its *pileus* is regularly convex, becoming almost flat when old; fleshy, dry, white, with a tinge of yellow or brown; of a silky smoothness on the upper surface, or somewhat scaly, but never warty; thickly set on the under side with very unequal gills, which in a young state are pink, and afterwards become dark brown. The *pili* are attached by its centre to the top of the stem. The stem is of a firm, fleshy texture, and towards the top is surrounded by a more or less distinct white membranous ring, the remains of the curtain or veil *indusium*, which in a young state extends to the *pili*, and covers the gills. This *M.* is gathered for the table when young, being preferred when the veil is still unbroken, and the expanded *pili* has the form of a ball or button; but both in this state and afterwards, while it shows no symptoms of decay, it is used for making catchup. It has a very pleasant smell and taste, and the flesh, when bruised, assumes a reddish-brown color. Care must be taken not to confound the Common *M.* with the white variety of *Agaricus phalloides*, a species quite common chiefly in the woods, and on the borders of woods, which is very poisonous. *Agaricus phalloides* is, however, easily distinguished by the ring at the bottom of the stem, the white color of the gills, the warts on the upper surface of the *pili*, and the powerful smell, which becomes extremely disagreeable as the *M.* grows old. The Common *M.* is frequently cultivated both in the open garden and in houses or sheds. To grow it in the open garden, beds are prepared, generally of earth mixed with horse-dung, partly fresh and partly from old hot-beds, and are raised into ridges almost as high as broad. To grow it in houses, boxes are filled with alternate layers of half-rotten horse-dung and of straw, with a surface layer of fine mould. But of each of these methods there are many different modifications, none of which can here be detailed. In both, the production of mushrooms is sometimes left to the chance—often almost a certainty—of spawny *mycelium* or spores existing in the dung or earth; sometimes, to increase the probability of a speedy and abundant crop, earth is introduced into the bed or box from a pasture known to be rich in mushrooms, and *M.* spawn is also frequently planted, which is either collected where mushrooms grow, or produced by artificial means, often appearing and being propagated extensively without the development of the *M.* itself. There are many other species which, in Europe, are much esteemed for the table, but the Common *M.* is the only one of any importance in this country. For the betwixt character of *M.* and the poisonous properties of a number of them, see *AGARICUS*.

—An upstart; a parvenu; one who springs suddenly from obscurity into a good social position.

"Such as are upstarts in state, ne'er call, in reproach, mushrooms."—Bacon.

Mushroom spawn, the generative seed of the mushroom.

—*a.* Pertaining, resembling, or having reference or relation to mushrooms; of sudden growth and decay.

Mush'room-headed, *a.* (*Bot.*) Having a head resembling that of a mushroom.

Mus'ic, *n.* [Fr. *musique*; It., from Lat. *musica*; Gr. *mousikē*, from *Mousa*, a Muse.] Melody; harmony; any succession or repetition of sounds so arranged and modulated as to please the ear, or any combination of simultaneous sounds in accordance or harmony.

"Music arose with its voluptuous swell."—Byron.

—The science of harmonical sounds, which treats of the principles of harmony or the co-relations of sounds.

"Music's golden tongue."—Keats.

—The art of combining sounds in a manner grateful and pleasing to the ear.

(*NOTE.* *Music* is frequently used in the formation of words having especial relation to music, and which are all more or less self-explaining, as, *music-master*, *music-hall*, *music-stool*, *music-seller*, &c.)

Music. (*Games.*) A parlor game in which a person engages to find some article hidden by his or her companions, assisted by the pianoforte or other instrument, which is played fast when the seeker approaches the right place, and slower by degrees, when receding from it.

Music of the spheres, the harmony considered by the ancients to be evolved by the harmonious and accordant action of the celestial orbs.

(*Fine Arts.*) *M.* teaches the properties, dependencies, and relations of melodious sounds, or the art of producing harmony and melody by the combination and arrangement of those sounds. Rousseau defines it as the art of combining tunable sounds in a manner agreeable to the ear. *M.*, in common with all other arts, is chiefly derived from the ancients. Of its origin no certain knowledge can be obtained, nor is it easy to determine what it was in its primitive state. There are, of course, many fabulous stories attributing its invention to gods and

goddesses. It was in all probability coeval with man, and it may almost be assumed that vocal *M.* preceded that of instruments. The simple elevation or depression of the voice in expressing the passions or emotions of the mind, would most likely have led to its discovery, and the idea of regulating it might naturally have been obtained from the modulated songs of birds. A portion of the song of the blackbird is well known to consist of true diatonic intervals. With the ancients the term *M.* possessed a far wider meaning than it does at present. With them it comprehended not only dancing and acting, but even poetry, and, indeed, everything that was practically considered to emanate from the influence of the nine Muses. Hesychius tells us that the Athenians understood the term in this latter sense. The first traces of *M.* were discovered in Egypt, where the art was undoubtedly carried to a high degree of perfection, although Diodorus Siculus asserts that it was prohibited, as not only useless but even noxious, from its tendency to make man effeminate; on the other hand, however, we are assured by Plato and Herodotus, both of whom were travellers in Egypt, that the art was greatly encouraged and the youth instructed in it at an early age; and Diodorus contradicts himself by telling us in another place that *M.* and musical instruments were the inventions of the Egyptian deities Osiris, Isis, Orus, and Hermes. They are also proved to have possessed instruments capable of much variety and expression, by representations of them that have been found. One was discovered drawn on an obelisk erected by Sesostris, at Heliopolis: it represented an instrument which, by means of its neck, was capable, with only 2 strings, of furnishing, when tuned by fourths, that series of sounds called by the ancients a *heptachord*, and if tuned by fifths, of producing an octave. Many other drawings of musical instruments have also been found which prove the art to have been in a very flourishing condition. Even after the subjugation of the empire by Cambyses it was not lost, but continued, though in a much less prosperous state, to

Fig. 1893. — WIND-INSTRUMENTS OF ANTIQUITY.

1. Trumpet (Heb. *Shophar*); 2. Horn (Heb. *Keren*); 3. Flutes (Heb. *Chatil*); 4. Double Pipe or Flute (Heb. *Mishrokitha*); 5. Shepherd's Pipe; and, 6. Bagpipe (Heb. *Ugab*—dubious); 7. Straight Trumpet (Heb. *Chatzozerah*).

the time of Cleopatra's misfortunes,—an event which terminates the history of the Egyptian empire. Of Hebrew *M.* little is known, except what may be gathered from Holy Writ. Jubal, 7th only in descent from Adam, is spoken of as "the father of all such as handle the harp and the organ." The instrument here meant by the organ was, most probably, a number of pipes joined together, resembling the common Pan's pipe, which is known to be of the remotest antiquity. No mention is again made of *M.* until 600 years after the Deluge, when Laban says to Jacob, "Wherefore didst thou flee away secretly and steal away from me, and didst not tell me, that I might have sent thee away with mirth and with songs, with tabret and with harp?" It is seldom again alluded to until the time of David, when we find music and musical instruments continually spoken of. Under Solomon, music received little encouragement; for, unlike his father, he was not a performer, but ranked "men singers and women singers, and the delights of the sons of men, such as musical instruments," among the vanities of the world. The Babylonish captivity, lasting sixty-three years, proved a mortal blow to the Jewish music, and, indeed, all their other arts; and in the stormy time which followed, during which they were conquered successively by the Egyptians, Persians, and Romans, it was entirely lost. Since the destruction of the Temple, both instrumental and vocal music have been excluded from all Jewish synagogues, excepting those of the German Jews, as they consider it improper to sing or rejoice before the coming of the Messiah. *M.* being held in greater estimation by the Greeks than by most other nations, we might naturally expect that our knowledge of it would be considerable. It is, however, quite the reverse; neither the ancient writings nor the researches of modern inquiries give us any idea what the Greek *M.* really was; neither is this

very surprising when we consider that the music of a country can be handed down to a remote posterity only by the preservation of actual compositions expressed by a notation capable only of expressing the sounds with distinctness at the time, but which will continue to be intelligible in later ages. Now, therefore, as all we possess of Greek *M.* are a few fragments written in a notation which is very far from being understood, we cannot wonder at the small knowledge we have of it as a science, while of its origin and primitive history we can give little else than conjectures, having no more satisfactory accounts than mythological traditions, from which it would seem that the Greeks received their music, or at least great improvements in the execution of it, from Lydia, where Amphion is said to have learned this art, and from Arcadia, where the shepherds practised on the pipe, flute, and cithara. Their different modes, viz., the Phrygian, Dorian, Lydian, Æolian, and Ionian, were derived from various provinces in Asia Minor; hence their names. Most of the ancient philosophers wrote on music, more especially the disciples of Pythagoras, Plato, and Aristotle; from whom we find that music was considered an almost indispensable portion of the education of the higher classes, and that it was employed in their religious ceremonies. They ascribe the invention of various instruments to their gods and goddesses; thus they say Mercury invented the lyre, Pan the syrinx, or Pan's pipes, and Minerva the flute: this latter instrument was held in high estimation. The musical scale of the Greeks consisted, at its greatest extent, of only two octaves, the lowest note of which was A, the first space in the bass of modern music, and resembled that of the present day exactly in the disposition of its intervals; but instead of being arranged in octaves, as with us, it was divided into tetrachords. The Greeks are supposed to have possessed no musical rhythm, except in their poetry. Their musical notation was very complicated. Its basis was formed upon the letters of the alphabet, which were multiplied by distorting and mutilating their forms, and by the use of accents, and of arbitrary signs, producing in all about sixteen hundred characters. The question which has been so long contested, as to whether the Greeks possessed any knowledge of counterpoint, or part-music, seems now to be determined in the negative; for although they must, if only by mere accident, have known the effect of simultaneous sounds, it is extremely improbable that what we call harmony formed any part of their music. Prizes were awarded for music and poetry at the Olympic, Nemean, and Isthmian games, the poets reciting their own verses to the strains of music. At the Pythian games, which were of more recent date, prizes were given for instrumental music only. No professors seem to have been more highly honored than those of the musical profession. Their pay was enormous. Athenæus tells us that a flute-player named Amœbius received a talent, equal to \$974, for a single performance at the theatre, while Xenophon asserts that flute-players lived in a most magnificent manner. The practice of this instrument extended to the fair sex: speaking of whom, we cannot omit to mention Lania, the daughter of Cleanora, mistress to Demetrius Poliorcetes, whose proficiency on the flute, added to her wit and beauty, caused her to be considered almost a prodigy. Inasmuch as the Greeks received their music from the Egyptians, so did the Romans, though in a much greater extent, receive theirs from the Greeks; and although the art was very highly estimated by this warlike people, they made little or no progress in it; indeed, none of the arts seem to have received much attention from them. Dr. Burney says that, even during the Augustan age, they possessed no sculptor, painter, or musician; those, he continues, "who have been celebrated in the arts at Rome, having been Asiatics or Europeans, who came to exercise such arts among the Latins as the Latins had not among themselves." In the reign of Tiberius, comedians and musicians were banished from Rome; and although recalled by Caligula, and encouraged by Claudius, the musical art languished until the reign of Nero, by whom it was restored to its former splendor. He studied the art himself, and spent the greatest part of his time in receiving lessons from Torpius, the most skillful harpist and lyrist of his time. The successors of Nero encouraged public games and musical and dramatic performances to a considerable extent; thus the art continued to flourish until the fall of the Empire, when, in common with all other arts, it disappeared until the period of its revival in modern Italy. Music has been employed in the religious ceremonies of the Christian Church from the earliest ages. Of what it consisted during the first three or four centuries is purely a matter of conjecture, although we may naturally suppose it to have somewhat resembled that employed in the countries in which the early Christians dwelt. There is much controversy among musical historians, as to whether they derived their music from the Greeks and Romans, or from the Hebrews. Father Martini says they received it from the latter people, and Dr. Burney agrees with him so far as to be of opinion that the Greek and Roman secular music was discarded by the Christians, and that we have no remains of it in the traditional melodies which have, through the Church, reached even to these times. It is, however, impossible ever to decide the question, as we possess no written remains of either the chants or airs for single voices of the early Christians. About the year 386, St. Ambrose, bishop of Milan, finding the whole system of church-music in great confusion, determined upon reforming it, and composed what has been called, after him, the *Cantus Ambrosianus*, or Ambrosian Chant, in which he adopted the Greek

Nomenclature hence it has been supposed, without sufficient grounds, that he adapted their entire system. However this may be, it is quite certain that he greatly improved music and the manner of performing it, and that his system formed the foundation of that introduced two centuries afterwards by Pope Gregory, and which has formed in its turn the basis of all that is grand and valuable in modern music. What the distinctive qualities between the two systems were cannot now be ascertained, as we possess no vestiges of the Ambrosian Chant sufficient to ascertain its peculiar character. It is to the fact that the Chant of Gregory has been retained in its simplicity in the Church of Italy, that the Italians owe their pre-eminence in singing. The modern chant, introduced in Protestant cathedrals at the Reformation, is but a poor substitute for that which, confined to nine varieties, has been heard, without satiating the ear, in the Roman Church from the time of Gregory to the present day. Many attempts seem to have been made, after the death of Gregory, to improve musical notation. The practice then in use of placing letters or syllables to indicate sounds, could not have been very intelligible or easy to read. About the end of the 10th century, 7 parallel lines were employed, upon which the notes were expressed by dots or points; but it was not until 1022 that the great reformation of the musical scale took place. About this time, Guido, a Benedictine monk, born at Arezzo, a small town in Tuscany, reduced the number of lines to four, and placed the points not only on the lines, but between them. He also added to the ancient system a bass note, answering to the *G* or *sol* in our *fa* or bass-clef. This note he designated by the *gamma* (Γ) of the Greeks; hence, this series of sounds in the scale is called the *gamma*. He also invented the method of counting by hexachords, instead of by tetrachords, and of designating the major hexachord by the syllables *ut, re, me, fa, sol, la*. The invention of counterpoint has also been attributed to him by some authors; but this is unjust to his predecessors; for although he was the first to write upon it, and it had made but little progress before his time, he is not entitled to the honor of its invention. See **COUNTERPOINT**. Up to this period, the plain chant consisted of notes of equal value in respect to time. A rhythm was unknown. Now, however, musicians began to feel its importance. The first treatise on this branch of the art was written by Franco of Cologne, or, as some say, of Paris, in a work still extant, entitled *Franconius Musica et Canticus Mensuralis*. He considers measured music to be much superior to plain chant. He distinguishes three different notes, viz., the long, the breve, and the semibreve, each of different duration. These may be again subdivided. He divides rhythm into five modes. Descant he defines as the union of several melodies concordant with each other, but composed of different figures, and divides it into four kinds, viz., simple, prolute (*prolatus*, *truncatus*), and copulate. Franco's system, although much improved and extended, is employed to this day. We may therefore consider Guido and Franco as the authors of musical notation, all subsequent changes being merely modifications of their inventions, rendered necessary by the improvements in music. To the introduction of the organ, which took place in France about 757, and which came into general use in England, Germany, and Italy about the 10th century, we owe the invention of harmony. This noble instrument being played with keys, the production of simultaneous sounds became easy, and the beautiful effects of the union of concordant sounds must soon have been felt, and once discovered, was diligently cultivated by a succession of eminent men, among whom we may mention Franco before spoken of, Marchetto of Padua, John de Muris, John Okenheim, Joaquin des Prés, and Claudio Monteverde. The science of harmony continued gradually to progress until the beginning of the 15th century, when it may be said to have reached its greatest refinement. We know scarcely anything of the state of music between the 11th and 15th centuries. Many efforts seem to have been made to improve it. Melody was treated with contempt, harmony being the great point of attraction. Rhythmical feet, as determined by Franco, began to be abandoned toward the close of the 14th cent., and as many sounds were introduced into the metre or measure as the subdivisions of the different orders of notes would at that time permit, and new forms or figures were found necessary to represent new values of time. The laws of harmony were first fixed and regulated about the middle of the following century, as we find from the writings of several authors of that time, and more particularly in those of John Tinctor, who was first chapel-master to Ferdinand, king of Naples, and afterwards canon and doctor at Nivelle, in Brabant. He wrote the first musical dictionary, and also the first treatise on this art ever printed in Italy. This was followed, a few years after 1496, by that of Franchino Gaffurio, in which the doctrines we find in John Tinctor are much better developed. In the compositions of the 15th century, there was a great want of melody, for which all the display of science and curious combinations which they contain does not atone. In the next century, however, melody and harmony were united by the brilliant genius of Palestrina and some of his contemporaries, while at the same time the art was enriched by the writings of Peter Aaron, Zarliuo, Artusi of Bologna, Zaccoui of Venice, and others. According to M. Bombet, the oratorio was invented about A. D. 1540, by St. Philip Neri, who established at Rome the Congregation of the Priests of the Oratory, and held performances of music at the Chiesa Nuova, or New Chapel, consisting of sacred interludes, written by first-rate poets, for the purpose of turning to pious account the theatrical

enthusiasm which then prevailed at Rome. The experiment was successful; and these concerts, or oratorios, as they are now called, although at first only short, simple poems, gradually progressed, until at the present day they differ very little from dramatic performances. (See **ORATORIO**.) Although sacred dramas and pastoral and secular plays, with choruses and hymns interspersed, were common to all countries, and music was often introduced into tragedies, comedies, and pastorals, before the 16th century, it was not until 1544, or 1597, that the first indication of the modern opera made its appearance. About this time, however, the first one, named "Daphne," was produced in Italy, composed by Giacomo Peri and Count Corsi, and written by Ottavio Rinuccini, a Florentine poet, who soon afterwards wrote two others, called "Eurydice" and "Ariadne,"—the music of the first of these being composed by Peri and Giulio Caccini, and that of the other by Claudio Monteverde. In 1606, the first opera performed at Rome was produced. In the following year the last-mentioned composer wrote his "Orpheo" for the court of Mantua. In 1637 the lyric drama was introduced at Venice, and at Naples in 1645. Venice, however, took the lead of all other places, no less than 350 operas being performed there between 1637 and 1700. A number of these were composed by Cavalli, chapel-master at Venice, who added all to the recitative. According to M. Choron, until the time of Alessandro Scavlati, the overture to an opera had consisted of meagre obligato symphony produced by certain routine, and frequently with bad taste. This he now reformed, and established it less upon the foundation of the opera than upon the work itself, making it a species of musical prologue or programme of the action. He perfected the obligato or accompanied recitative, and was the first to introduce the *da capo*, or ritornel of the symphonies, into the recitatives. For the great reformation of the lyric drama we are indebted to Gluck, whose opera of "Orpheo" was the first ever printed in Italy. At the end of the 18th century, the advancement of instrumental music produced a sensible change in that for the drama; several composers endeavored to introduce the richness of the symphonies into the operatic accompaniments. This brilliant system, upon which Haydn, Mozart, Cherubini, and all their school worked, although possessing many advantages, had one drawback; viz., that of being liable to eclipse the chief or vocal part, and sometimes even to make it appear less important than the accessory part. About 1809, Italian music, which had begun to decline toward the end of the 18th century, received a fresh impulse from the compositions of Giacomo Rossini, the most popular composer of modern times. He composed his first opera, "Demetrio e Polibio," in 1809, and since that time he has written thirty-four others, the last and best of which was "Guillemine Tell." Contemporary with Rossini were Bellini, who, had he lived, promised to rival the greatest of his predecessors,—his "Sonnambula" and "Puritani" are extremely beautiful, while his "Norma" is one of the finest operas we possess; Weber, who, although often wanting fluency in his vocal writings, is unrivalled in a certain class of passionate expressions; Meyerbeer, whose operas of "Les Huguenots," "Le Prophete," and "Etoile du Nord," stamp him as a first-rate composer; Donizetti, a wonderfully prolific composer, whose operas of "Lucrezia Borgia," "Lucia di Lammermoor," "La Figlia del Regimento," &c., are great works, and universally admired; and Auber, who, although somewhat resembling Rossini in his earlier compositions, has produced some very fine works. His "Fra Diavolo," and his most celebrated piece, "La Muette de Portici," or "Masaniello," are well known and deservedly popular. Verdi is the latest accession to the Italian school. His music, although extremely sweet and pretty, is, as a rule, very sensuous; as, for example, that of "La Traviata" and "Il Trovatore." Although the Italians stand pre-eminent in vocal, the Germans have far surpassed them in instrumental music. Their oratorios possess the greatest beauties; those of Handel are to this day unequalled; while the "Ascension," and the "Israelites," by Bach, and the "Death of Jesus" by Graun, are magnificent compositions; as are also Haydn's two cantatas of the "Creation," and the "Seasons." The masses, the splendid requiem, and, above all, the secular instrumental music of Mozart, have never been surpassed. To Germany we owe Beethoven, who, like Mozart, devoted himself chiefly to the instrumental branch of secular music. His power and genius are best displayed in his symphonies; that in *C minor* stands alone unrivalled, while his "Sinfonia Pastorale" is, perhaps, the most exquisitely beautiful piece of descriptive music in existence. Mendelssohn also was a German. His overture to the "Midsummer Night's Dream," the concert in *G minor*, his octet, and his magnificent world-wide reputation as works of the highest genius. The latest and at present the most admired of eminent German composers is Richard Wagner, whose works, after a long struggle for recognition, have now won very high rank in the estimation of music-lovers. He sought to make the "Art Work of the Future," as he called it, equally dependent for effect on music, drama, and scenic art, all combined into one grand unity, and his success in this ideal is attested by the supremacy of his operas.

Musical, *a.* Belonging or relating to music or agreeable sounds; as, a musical instrument.—Producing or containing music; as, a musical voice.—Melodious; harmonious; sweet-sounding; pleasing to the ear.

"As sweet, and musical, as is Apollo's lute."—Shaks.

Musical glasses. (*Mus.*) See **HARMONICA**.

Musically, *adv.* In a melodious or harmonious manner; with sweet or pleasing sounds.

Musician, (*-ish'ian*.) *n.* [*Fr. musicien.*] One skilled in music, or a teacher of music; one who sings or performs on instruments of music according to the rules of the art.

Musicomania, *n.* [*Lat. musica, music, and mania, madness.*] *Med.* A kind of monomania, caused by an absorbing passion for music.

Musingly, *adv.* In a musing or abstractedly thoughtful manner.

Musk, *n.* [*Lat. muscus*; *Pers. mashk*; *Ar. musk*; *Ilind. mooshk, misk*; *late Gr. moschos.*] A strong-scented substance, the produce of the *Moschus moschiferus*, or musk-deer, an animal which inhabits the mountains of Eastern Asia. Behind the navel is a bag, which in the adult animal is filled with musk. These bags are imported from China, Bengal, and Russia. Musk is originally a viscid fluid, but dries into a brown pulverulent substance, of a strong, peculiar, and highly diffusible odor. Its chief use is as a perfume; it has been employed in medicine as a stimulant antispasmodic, but much difference of opinion exists as to its efficacy; and its high price and extreme liability to adulteration are against its use.

(*Zoöl.*) The MUSK-DEER, *q. v.*

(*Bot.*) A name popularly applied, from their strong musky scent to some plants of the genus *Muscari*, ord. *Liliaceæ*, and of the genus *Erodium*, order *Geraniaceæ*.

v. a. To perfume, or impregnate with the odor of musk.

Musk-deer, *n.* (*Zoöl.*) A deer of the genus *Moschus*, *q. v.*

Musk-duck, *n.* (*Zoöl.*) The Muscovy-duck, *Anas moschata*.

Muskegon, or **MUSKEGON**, in Michigan, a river rising in Houghton lake, in Roscommon co., and flowing a general S. W. course, enters Lake Michigan from Muskegon co.; length, 240 m., of which 25 are navigable.

—A W. co. of the lower peninsula bordering on Lake Michigan: area, about 520 sq. m. Rivers, Muskegon and White, and Cedar and Crocker creeks. Surface, nearly level; soil, fertile. Cap. Muskegon. Pop. (1894) 37,323.

—A city, cap. of above co., on Muskegon river, near Lake Michigan, 38 m. N. W. of Grand Rapids, has 3 R. R. lines, a splendid harbor, and fine trade with the rich country adjoining. Pop. (1894) 20,022.

Musket, *n.* [*Fr. mousquet.*] A description of fire-arm used in war, originally discharged by a match, and afterwards by a spring-lock and a flint. The rifle has entirely superseded it as a military weapon, while the percussion-lock has taken the place of the flint-lock for sporting and other purposes.

Musketeer, *n.* [*Fr. mousquetaire.*] A soldier who carries a musket;—a term now in disuse.

Musketoons, *n.* [*Fr. mousqueton.*] (*Mil.*) A short musket; a blunderbuss; also, the person who carries a musketoon.

Musketry, *n.* [*Fr. mousqueterie.*] Muskets in general, or their fire; as, a volley of musketry.

Muskiness, *n.* [*From musk.*] State or quality of being musky; the scent of musk.

Muskingum, in Ohio, a river, which, rising in Licking co., flows S. E., and enters the Ohio River at Marietta; length, abt. 110 m.

—A S. E. central co.; area, about 651 sq. m. Rivers, Muskingum and Licking rivers, besides several smaller streams. Surface, diversified; soil, fertile. Min. coal and iron in abundance. Cap. Zanesville. Pop. 53,490.

—A township of the above co.

Musk-melon, *n.* See **MELON**.

Musko'gees, or **Creeks**, the principal tribal group of the Appalachian Indians. Long seated in Georgia, Florida, and Alabama, they rose against the whites in 1813, but were subdued, after a hard struggle, by General Jackson. Later outbreaks led in 1833 to their forcible removal to the Indian Territory, in which region they have become civilized and prosperous. Their population now numbers about 16,000.

Musk-ox, *n.* (*Zoöl.*) The *Oribos moschatus*, a ruminating animal which by some naturalists has been considered as intermediate between the sheep and ox, inhabits the more northern parts of America, where the country is mostly rocky and barren, except on the banks of the larger rivers. When they are fat, the flesh is well flavored, but smells strongly of musk. They herd together in flocks of twenty or thirty. The Musk-ox is about the height of a deer, but of much stouter

Fig. 1894.—MUSK-OX.

proportions. The horns are very broad at the base, covering the forehead and crown of the head; and curving downwards between the eye and ear, until about the level of the mouth, when they turn upwards. The head is large and broad, and the nose very obtuse; the ears are short, and not very conspicuous. The hair of

the body is in general brown; on the neck and between the shoulders it is long, matted, and somewhat curled; and this bushy state of the hair on those parts causes the animal to appear humped. On the back and hips the hair is also long, but lies even and smooth; and on the shoulders, thighs, and sides, it is so long as to hang down below the middle of the leg. The tail is so short as to be concealed in the fur. Beneath the long hair, on all parts of the animal, is a fine kind of soft ash-colored wool, which, if it could be procured in sufficient quantity, would be highly useful to the manufacturer. The legs of the Musk-ox are short and thick, and furnished with narrow hoofs, resembling those of the Moose. The female is smaller than the male, and has also smaller horns, whose bases do not meet. Her general color is black, except that the legs are whitish, and between the horns there is a tuft of white hair intermixed with rust-color; an elevated ridge or mane of dusky hair runs along the back, and on the middle of the back is an oblong patch or bed of white hair, shorter than the rest, and which has been termed the *saddle*. The Musk-ox runs nimbly, and climbs hills and rocks with great ease. When pursued by the hunter, they seek for safety by instant flight; but the bulls are sometimes dangerously irascible when closely pressed.

Musk'-pear, *n.* A fragrant sort of pear.

Musk'-rat, *n.* (Zool.) See FIBER.

Musk'-rose, *n.* (Bot.) A variety of very fragrant rose, *Rosa moschata*.

Musk'-thistle, (-thist'l, *n.* (Bot.) A species of thistle, *Carduus nutans*, which emits a strong odor of musk.

Musk'y, *a.* Yielding the odor of musk; fragrant.

Muslin, (muz'lin, *n.* [Fr. *mousseline*, said to be derived from *Moussul*, a city of Turkish Asia, where it was first manufactured; It. *mussolina*, *mussolo*.] A sort of fine, thin, flimsy cotton cloth, which bears a downy nap on its surface. It is principally used for ladies' dresses. See MOUSSELINE-DE-LAINE.

—*a.* Made of muslin; as, a muslin dress.

Muslinet, *n.* [Fr. *mousselinet*.] A kind of coarse cotton cloth.

Mus'mou, *n.* (Zool.) Same as MOUFFLON, *q. v.*

Mus'nud, *n.* [Pers.] In Persia, a throne or chair of state.

Musomania, *n.* (Med.) Same as MUSICOMANIA, *q. v.*

Musophraga, *n.*; *MUSOPHAGIDÆ*, *n. pl.* (Zool.) A gen.

and fam. of Scansorial birds, evidently allied to the In-

sectorial or Perchers. The base of the bill is enor-

mously dilated, so as to

spread like a casque

or helmet over the

fore part of the head

as far as the crown,

where its thickened

sides form a semicir-

cle. Nostrils oval,

open, placed nearer

to the tip than to the

eyes, and pierced in

the substance of the

bill. The species *Mu-*

sophaga violacea here

figured is a very mag-

nificent bird. Bill

rich yellow, passing

into crimson; orbits

naked, and, like the compact velvety feathers of the

crown, glossy crimson; a white stripe beginning below

the eye and extending above the ear; secondary and

part of the primary quills carmine, margined and tipped

with blackish violet, which is the general color of the

plumage, changing into a very deep green on the

under parts, which is very rich on the tail; legs strong

and black; gape wide. The Gold Coast and Senegal, in

Africa, are its localities.

Musquash, *n.* (Zool.) The Musk-rat. See FIBER.

Musquet, (mus'ket, *n.* An old spelling of MUSKET, *q. v.*

Musqueteer, *n.* (Mil.) The former orthography of

MUSKETEER, *q. v.*

Musquite, (-keel', *n.* (Bot.) See MEZQUITE.

Musquito, (-ke'to, *n.* (Zool.) Same as MOSQUITO, *q. v.*

Musquito, in California, a post-village of Calaveras

co., abt. 11 m. E. of Moquelumne Hill.

Mus'rol, **Mus'role**, *n.* [Fr. *muserolle*.] The nose-

band of a horse's bridle.

Muss, *n.* [From Lat. *musca*, a fly.] A scramble; a

wrangle; a contention; a pother; a confused struggle.

(Obsol. in England, but largely used in the U. States.)

"When I oried hoas I like hoys into a muss."—Shaks.

—*v. a.* To tumble; to engage in a wrangle or quarrel;

to throw into confusion. (Used in the U. States.)

Mussel, *n.* (Zool.) The common name of the genus

Mytilus, including molluscous animals, the characters of

which are, that the shell is bivalve, of an oblong trian-

gular form, terminating in a point, and having its two

extremities equal. The head of the animal is in the

acute angle. The common salt-water *M. Mytilus bore-*

alis of New England, by some considered the same as

the *Mytilus edulis* of Europe, is distinguished by a strong

shell, slightly incurved on one side, and angulated on

the other; the end near the hinge being pointed, and

the other rounded. From the circumstance of their

being always found attached to rocks, stones, or to the

shells of each other, they have been supposed by many

to be incapable of progressive motion; but although

they have no tendency to change of place, they seem

possessed of a certain degree of locomotive power; and

their manner of exerting it has been examined and well

explained by Reaumur. He discovered that their mode

of progression consisted in trusting their tongue-like

foot out of the shell, curving it, hooking it to some ad-

jacent body, and thus drawing themselves forward to

the point of attachment. *M.* are not unpleasant to the

taste, and are with many an object of great consumption.

Musselburgh, (mus'sel-bro,) a seaport-town of

Scotland, co. of Edinburgh, at the mouth of the Esk, in

the Frith of Forth, 5 m. E. of Edinburgh. *Manuf.*

Leather, sail-cloth, and hats. *Pop.* 7,500.

Musset, ALFRED DE. (moos'sai,) one of the best modern

French poets, playwrights, and novelists. After com-

pleting his education at the College of Henry IV., where

his fellow-pupil and intimate friend was the duke d'

Orleans, son of Louis Philippe, he essayed the most di-

verse studies. The law, medicine, finance, painting,

were in turn engaged in, in turn abandoned. In 1830,

he put forth a small volume of poetry, entitled *Les*

Contes d'Espagne et d'Italie, which was received with

great favor. A celebrity at 23, the young poet made a

journey to Italy with George Sand, under the name of

confidential secretary. At the revolution of 1848, he

lost his post as librarian to the ministry of the Interior,

but regained it after the establishment of the empire,

with the additional appointment of reader to the em-

press. During his last years, he gave himself up to play,

and even grosser pleasures. His last volume of verse

was published in 1850, and showed a premature decay

of the author's powers. He was nevertheless elected a

member of the French Academy, in 1852. D. 1857.—

His best works are his poems, — *Le Spectacle dans un*

Fauteuil; *La Coupe et les Lèvres*; *A quoi Rêvent les*

Jeunes Filles? Namouna; *Rolla*; — and his two ex-

quisite dramatic pieces — *Un Caprice*, and *Il faut qu'une*

porte soit ouverte ou fermée. During the political com-

plications in 1840, he answered Becker's war-song in re-

gard to the Rhine ("Sies sollen ihn nicht haben, den freien

deutschen Rhein.") with a poem, entitled *Nous l'avons*

eu, votre Rhin Allemand. See biography by his brother,

Paul de M. (Paris and Boston, 1877.)

Mus'site, *n.* (Min.) A grayish-green variety of diop-

sate, from the Mussa Alp, in Piedmont.

Mus'sulman, *n.*; *pl.* MUSSULMANS. [Ar. *Muslim*, *pl.*

Muslimin.] A Mohammedan; a Moslem; a believer in

Islam.

Mus'sulmanic, *a.* Having reference to Mussulmans.

Mus'sulmanish, *a.* Moslem; Mohammedan.

Mus'sulmanism, *n.* Islamism; Mohammedanism.

Mus'sulmanly, *adv.* After the manner of Mussul-

mans.

Mus'sy, in Michigan, a twp. of St. Clair co.

Must, *v. n.* or *auxil.* [A. S. *mōt*, must, ought, *pl.* *mōston*;

Ger. *müssen*, to be compelled or obliged; Dan. *maate*,

must.] To be obliged; to be necessitated; as, man

must die.

—A verb which expresses moral fitness or propriety as

necessary or essential to the character or end proposed.

"Likewise must the deacons be grave."—1 Tim. iii. 8.

(*Must* is of all persons and tenses, and used of persons

and things.)

Must, *n.* [A. S., Ger., and Dan. *most*; It. and Sp. *mosto*;

Lat. *mustum*.] The expressed juice of the grape before

its conversion into wine by the process of fermentation.

According to Berard, the juice of ripe grapes contains

sugar, gum, gluten, malic acid, and malate of lime, bi-

tartrate of potash, and bitartrate of lime. The acidity

of the juice of ripe grapes is principally due to the tar-

tar which it contains, and which is precipitated by the

alcohol formed during fermentation.

—New wine expressed from the grape, but not fermented

"The wine itself was suiting to the rest,

Still working in the must, and lately press'd."—Dryden.

Must, *n.* Mouldiness; fustiness; rancidity, sourness.

—*v. a.* To make mouldy or fusty; to make sour.

—*v. n.* To become rancid or fetid.

Mus'tac, *n.* (Zool.) A species of small, tufted monkey.

Mustache, **Moustache**, (mus-tash',) (formerly

written MUSTACHIO, *n.*; *pl.* MUSTACHES, (formerly MU-

TACHIOS.) [Fr. *moustache*; Gr. *mustax*, Doric for *mustax*,

the upper lip, from *masāma*, to shoot out the lip.]

Long hair left to grow above the upper lip; that part

of the beard which grows above the mouth.

Mustachio, (mus-tash'yo,) *n.* See MUSTACHE.

Mustach'ioed, *a.* Wearing or having mustaches.

Musta'ba, **Musta'hiba**, *n.* (Bot.) A Brazilian

wood, inferior to rosewood, but harder. It is exten-

sively used for the handles of glaziers' and other knives.

Mus'tang, *n.* The term given to the small, hardy

wild horses of the Texan prairies, Mexico, California, &c.

Mustapha I. (mus'ta-fa,) sultan of Turkey, succeeded

his brother, Ahmed I., in 1617. In the same year he

was, however, deposed by the Janissaries, and thrown

into prison. He was afterwards released, and placed

upon the throne, but again deposed by the Janissaries,

and strangled in 1623.

MUSTAPHA II., son of Mohammed IV., succeeded Ahmed II.,

his uncle, in 1695. He defeated the Austrians at Temes-

war, and made war, with success, against the Venetians,

Poles, and the Russians. Fortune at length turning

against him, he was forced to make peace. He was de-

posed by his subjects, and died in 1703.

MUSTAPHA III., the son of Ahmed III., ascended the

throne in 1757. He was a weak prince, and by trusting

to his favorites greatly exhausted the public treasury.

His brother Abdul Ahmed succeeded him. D. 1774.

MUSTAPHA IV. ascended the throne in 1807, after the

deposition of Selim III. Mustapha Bairaktar, pasha of

Rudshuk, collected an army and marched upon Con-

stantinople, demanding that the deposed Selim should

be given up to him. But Selim had been already strangled,

and his dead body was brought to Bairaktar, who

thereupon deposed Mustapha IV., and placed his brother

Mahmoud upon the throne. (See MAHMOUD II.) Mus-

tapha IV. was put to death by his brother Mahmoud II.,

in 1808.

Mustard, (mus'terd, *n.* [It. *mostarda*; Fr. *mustarde*;

Lat. *mustum ardens*, burning must.] (Bot.) See SINAPIS

Mustee, *n.* Same as MESTEE, *q. v.*

Mustela, *n.* (Zool.) The Martens, a genus of carnivora

of the family *Mustelidae*. There are two important va-

rieties of this species, viz., the Beech-marten and the

Pine-marten (Fig. 1895), the former being possessed of a

white throat, and the latter of a yellow one. The Beech-

marten (*Mustela martes*) differs but little from the

weasel in form, with the exception of the body being

slightly more elongated, the head a little more pointed,

and the fur generally longer. The Martens besides have

an additional molar tooth in both jaws; and also the

larger grinder of the lower jaw has a small internal

tubercle which does not exist in that of the weasels.

The tail is about as long as the body; the upper parts

grayish or yellowish brown; and the feet and tail of a

chocolate hue. The throat has already been described.

The limbs are of moderate length. On the fore-foot the

first toe is very short, the second and fifth equal in

length, and the fourth the longest. On the hind-foot

the proportions are similar. The soles of all are cover-

ed with hair; and the claws are large, compressed,

tapering, and arcuate — that is to say linear, and bent

like a bow. The fur is dense, rather soft and long, be-

ing longer on the hind parts, especially on the tail.

The under fur is thick and woolly. When young, the

Marten is of a darker color; and in summer the fur is

always of a lighter hue than in winter. The Marten is

generally distributed throughout Europe. In its habits

it partakes of the qualities of the fox, as it is a destruc-

tive depredator at night-time of farm-yards, although it

shuns men as much as possible. Its general length,

from nose to tail, is about a foot and a half. The female

has two litters, at least, in the year, and produces two

or three cubs at a time. The pine-marten is

To muster troops into service. (*Mil.*) To inspect and enter soldiers on the muster-roll of the army.—**To muster troops out of service.** To inspect and pay off troops previous to dismissal from active service.—**To muster up.** To gather up; to contrive to procure, obtain, or amass.

Mus'ter, v. n. To assemble; to rendezvous; to meet in one place; to be gathered together for parade, exercise, &c.

—*n.* An assembling of troops for review, or a review of troops under arms.—A register or roll of troops mustered; a muster-roll.—A collection, or the act of collecting; an assemblage, display, or gathering.

"Of the temporal grandees of the realm, . . . the muster was great and splendid."—*Macaulay*.

To pass muster. To pass through an inspection without cavil or censure.

Mus'ter-book, n. (*Mil.*) A book containing the registry of military forces.

Mus'ter-file, n. (*Mil.*) Same as **MUSTER-ROLL, q. v.**

Mus'ter-master, n. (*Mil.*) One who keeps the register of troops and their equipments.

Mus'ter-roll, n. (*Mil.*) A roll or register of the men in each company, troop, regiment, or battalion.

Must'ly, adv. [From *musty*.] Mouldily; rancidly; sourly.

Must'iness, n. Quality of being musty or sour; mouldiness; damp foulness; sourness.

Must'y, a. [Fr. *moisir*, to grow mouldy, from Lat. *mu- cere*, to be mouldy, musty, from *mu- cere*, matter running from the nose. See **MUCUS**.] Mouldy; sour; rancid; foul and fetid; as, a *musty* cask, a *musty* book.

—Stale; spoiled with age.

"The proverb is somewhat *musty*."—*Shaks.*

—Dull; heavy; spiritless; wanting life and vigor.

—Vapid; wanting spirit and effervescence: as, *musty* ale.

Mutability, n. [Fr. *mutabilité*; Lat. *mutabilitas*, from *mut-*, *mutatus*, to change. See **MUTATON**.] State or quality of being mutable; susceptibility of change; state of habitually or frequently changing; variation, as of mind, disposition, or will; inconstancy; instability.

Mu'table, a. [It. *mutabile*, from Lat. *mutabilis*—*muto*, *mutatus*, to change.] Subject to change; changeable; that may be altered in form, qualities, or nature.—Susceptible of change; variable; apt to waver; unstable; inconstant; fickle; unsettled.

"Most *mutable* in wishes."—*Byron*.

Mu'tableness, n. Mutability; instability; changeableness.

Mu'tably, adv. In a mutable manner; changeably.

Mu'tage, n. A process for arresting fermentation in the must of grapes.

Mutan'dum, n.; pl. MUTANDA. [Lat. *mutare*, to change.] Something necessary to be changed;—employed usually in the plural.

Mutation, n. [Lat. *mutatio*, from *muto*, *mutatus*, to change; W. *mud*, a change of residence; Gael. *muth*.] Act or process of changing.—Change; alteration; variation, either in form or qualities.

"His honour was nothing but *mutation*."—*Shaks.*

Mute, a. [Fr. *mu- t*; It. *muto*; Lat. *mutus*, dumb; akin to Gr. *mũ-*, to close, to be shut; Sansk. *muk*, mute.] Having the organs of speech stopped or closed; not having the power of utterance; dumb; silent.—Figuratively, uttering no sound, as silent grief; restrained from speech.

"*Mute*, solemn sorrow, free from female noise."—*Dryden*

(*Gram.*) A vowel (or consonant) is said to be mute when written, but not pronounced; as the vowel *e* at the end of many English words, in some of which it effects a change in the pronunciation of the preceding vowel, as in *wife*, *life*, *place*, &c., rendering it long.

(*Law.*) A person that stands dumb or speechless when he ought to answer or plead. A prisoner is said to stand mute when he either makes no answer at all, or answers foreign to the purpose, and will not answer otherwise. In such cases, the ancient English law was that a jury be empanelled to inquire whether the prisoner stood obstinately mute, or was mute by the act of God, (*ex visitatione Dei*). If the latter appeared to be the case, then the judges were to proceed with the trial, and examine all the points as if he had pleaded not guilty; but, if found to be obstinately mute, then, in treason and in all misdemeanors, it was held as equivalent to conviction. By Act of Congress of March 3, 1825, it is provided that if any person being arraigned upon, or charged with, any indictment or information for any offence *not capital*, shall stand mute of malice, or will not answer directly to the indictment or information, then it shall be lawful for the court, if it shall so think fit, to order the proper officer to enter a plea of "not guilty," which shall have the same force and effect as if such person had actually pleaded the same.

—*n.* A person who cannot speak, or who remains silent; one who stands speechless when he ought to answer or plead:—specifically, one who is unable, through congenital causes, to articulate speech; a deaf mute; a dummy.—A person employed by undertakers to stand before the door of a house in which a corpse is lying; also, one who precedes a bier to the place of burial.

—In Turkey, and other countries of the East, a dumb attendant in a seraglio or harem, who is frequently used as the instrument of private vengeance.

(*Mus.*) A small piece of brass, box, or ivory, somewhat resembling in shape a very short comb. When in use, it is placed in an erect position on the bridge of a violin to deaden or soften the tone, which it does to such an extent as to render it almost inaudible in an adjoining room.

(*Gram.*) A letter that represents no sound, as *p*, *t*, *k*; a silent letter; also, a close articulation which intercepts the voice.

Mute, v. n. [O. Fr. *mutir*.] To eject ordure or excrement, as birds.

"The sparrows *muted* warm dung in mine eyes."—*Job* 41. 10.

—*v. a.* To moult, as feathers.

—*n.* The excrement of birds.

Mute-hill, n. Same as **MOOT-HILL, q. v.**

Mute'ly, adv. Silently; without uttering sounds; not vocally.

Mute'ness, n. Silence; dumbness; restraint from speaking.

Mut'icous, a. [Lat. *muticus*, for *mutilus*.] (*Bot.*) Having no beard or barb.

Mu'tilate, v. a. [Lat. *mutilo*, *mutilatus*, to cut or lop off, from *mutilus*, maimed; Gr. *mutilos*, curtailed.] To maim; to cut off, as a limb, or essential part or member of an animal body; to hack; to cripple; as, to *mutilate* the person.—To cut or break off, or otherwise separate any essential part; to retrench, remove, or destroy any material or important part, so as to render the thing imperfect; as, to *mutilate* a speech.

Mu'tilate, a. (*Bot.*) Losing an essential part; mutilated.

—*n.* (*Zool.*) Said of an insect when its base-covers appear unreasonably short or curtailed, as if mutilated.

Mutilation, n. [Lat. *mutilatio*.] Act of mutilating; deprivation of some essential part, as of writings, buildings, limbs, and, especially, castration.

Mu'tilator, n. [Fr. *mutilateur*.] One who performs the act of mutilation.

Mutineer, n. A person guilty of mutiny; specifically, a soldier or sailor guilty of insubordination against the authority vested in his superior officers.

Mu'ting, n. Ordure of birds.

Mu'tinous, a. Exciting or promoting mutiny; turbulent; disposed to insubordination, or to resist the authority of laws and regulations in an army or navy, or openly resisting such authority.—Seditious; rebellious.

Mu'tinously, adv. In a mutinous or turbulent manner; seditiously.

Mu'tinousness, n. State of being mutinous; opposition to lawful authority in the naval and military services; seditiousness; turbulence.

Mu'tiny, n. [Fr. *mutinerie*. See the verb.] (*Law.*) An insurrection of soldiers or seamen against the authority of their commanders; open resistance to officers, or opposition to their authority.

—Turbulent commotion; strife; contention; uproar.

"There is a *mutiny* in 's mind."—*Shaks.*

—*v. n.* [Fr. *se mutiner*, to mutiny; *mutin*, riotous, turbulent; Sp. *amotinar*, to excite to rebellion; Fr. *émouvoir*, to stir, an uprising, from Lat. *moveo*, *motus*, to move.] To rise against lawful authority in the naval and military services; to excite to revolt; to be guilty of open insubordination.

Mu'tism, n. The state or condition of being mute or without speech.

Mu'tins, CELIUS, (mu'shi-us), first named Codrus, and afterwards Scævola, an illustrious Roman, who distinguished himself when Porsenna besieged Rome 507 B. C. Mutius entered the camp of Porsenna to assassinate him, and, by mistake, stabbed one of his attendants. Being seized and brought before Porsenna, he said that he was one of 300 who had engaged, by oath, to slay him; and added, "This hand, which has missed its purpose, ought to suffer." On saying this, he thrust it into the coals which were burning on the altar, and suffered it to be consumed. Porsenna, struck with his intrepidity, made peace with the Romans. The name of Scævola or left-hand, was given as a mark of distinction to Mutius and his family.

Mu'tter, v. n. [Lat. *muttire*, from *mu*, a sound produced by closing the lips.] To mumble; to utter words with a low, subdued voice and compressed lips, with silliness or anger; to murmur; to grumble.—To sound with a low, rumbling noise.

"Thick lightnings flash, the *muttering* thunder rolls."—*Pope*.

—*v. a.* To utter with imperfect articulation, or with a low, murmuring voice.

—*n.* Murmur; inarticulate or obscure utterance.

Mu'tterer, n. One who mutters, murmurs, or grumbles.

Mu'tteringly, adv. With a low voice; without distinct articulation.

Mutton, (mũ'tn), n. [Fr. *mouton*, a wether-sheep.]

The flesh of sheep, raw or dressed for food.—A sheep;—now rarely used.

(*NOTE.* *Mutton* is often employed in the construction of certain self-interpreting compounds, as, *mutton-cutlet*; *mutton-fat*; *mutton-ham*, *mutton-pie*, &c.)

Mu'tton-chop, n. A collop or rib of mutton for broiling, having the bone at the thin end chopped off.

Mutton-chop whisker, a man's side-whisker, growing half-way down the cheek, and resembling in shape a mutton-chop.—whence the name.

Mu'tton-fist, n. A large, red, brawny fist.

Mu'ttra, or Mathura, a town of Hindostan, presidency of Bengal, on the Jumna, 30 m. N.W. of Agra. It is a place of pilgrimage, and venerated as the birthplace of Krishna, and contains numerous temples and mosques. Pop. 60,000.

Mutual, (mũ'tyu-al), a. [Fr. *mutuel*; Lat. *mutuus*, from *muto*, to change. See **MUTATION**.] Reciprocal; interchanged; each acting in return or correspondence to the other; given and received; as, *mutual* love or confidence, *mutual* aversion or indifference.

Mutuality, n. [Fr. *mutualité*.] State or quality of correlation; reciprocation; interaction; mutual dependence.

Mu'tually, adv. In a mutual manner; reciprocally; in the manner of giving and receiving.

"The tongue and the pen *mutually* assist one another."—*Holder*.

Mu'tuary, n. (*Law.*) A person who borrows personal chattels to be consumed by him and returned to the lender in kind.

Mu'tule, n. [Fr.; Lat. *mutulus*.] (*Arch.*) A projecting block worked under the cornice of the Doric cornice, in the same situation as the modillions in the Corinthian and Composite orders; it is often made to slope downward toward the most prominent part, and has usually a number of small guttæ or drops, worked on the under side.

Fig. 1597. — **MUTULE.**

Mux, n. [From *muck*.] An English provincialism for muck; manure, refuse.

Mux'y, a. An English localism for rimy; dirty; gloomy.

Muzziness, n. State or condition of being muzzy.

Muzzle, (mũ'z'l), a. [Fr. *museau*; Low Lat. *musellum*, dimin. of *musum*, a beak, snout, mouth.] The projecting month and nose of an animal, as of a horse: also, the human month, spoken in contempt.—The extreme end for entrance or discharge; the month or orifice; as, the *muzzle* of a gun, the *muzzle* of a bellows.—A fastening or curb for the month which hinders from biting; as, a dog's *muzzle*.

Muzzle-lashing, (Gun.) The lashing that secures the muzzle of a gun to the upper part of a ship's port.—**Muzzle-ring,** the metallic circle that goes round the muzzle of a piece of ordnance. In the smooth-bored cast guns, the thickness of metal is increased at the muzzle, forming what is called the *tulip* or swell of the muzzle.

Muzzle, v. a. To bind, fasten, or secure the month of, so as to prevent biting or eating.—To fondle with the month. (*R.*)—To restrain from doing hurt or injury.

"My dagger *muzzled* lest it should bite its master."—*Shaks.*

—*v. n.* To bring the month near; as, "the bear *muzzles* and smells to him."—*L'Estrange*.

Muzzy, a. [From Eng. *muse*.] Confused; abstracted or perturbed in mind; bewildered;—also, boozy; inebriated with liquor; as, a *muzzy* look.

My, pronom. conj. [Contracted from A. S. *min* = O. Ger. *min*, mine. See **MINE**.] Belonging to me;—invariably employed attributively; as, this is *my* house.—*Mine* is used predicatively; as, the house is *mine*.

Mycale, (Anc. Hist.) A promontory of Ionia, in Asia Minor, opposite the island of Samos, where the Persian army under Tigranes was defeated at this Ionian city of Asia Minor, by the Greeks, under Leotychnes, king of Sparta, and Xanthippos, in Sept., B. C. 479. But few of the vanquished survived the contest; and the Greeks, after burning the Persian fleet and camp, retired with their booty to Samos. The battles of Mycale and Plataea were both gained by the Greeks on the same day.

Mycelium, n. [Gr. *mykēs*, mushroom, from *mykos*, mushrooms. A development of vegetable life peculiar to the Fungales, but apparently common to all the species of that order. The spawn of mushrooms is the mycelium. The *M.* appears to be a provision for the propagation of the plant where its spores may not reach, its extension in the soil, or matrix in which it exists, and its preservation when circumstances are unfavorable to its further development. It consists of elongated filaments simple or jointed, situated either within the matrix or upon its surface. It is often membranous or fuzzy.

Myce lotd, a. [Gr. *mykēs*, and *lotos*, form.] (*Bot.*) Resembling a mushroom or fungus.

Mycenæ, or MYCENE, mī-sē-ne, an ancient city of Greece, nomarchy of Argolis, near the village Krabata, 22 m. S.W. at Corinth, and 5 m. N.E. of Argos. It is said to have been founded by Perseus, B. C. 1457. It was the cap. of the kingdom of Agamemnon, and was at that time the principal city of Greece. About 468, it was destroyed by the inhabitants of Argos, and never after regained its former prosperity. Its ruins are still to be seen in the neighborhood of Kharvati, and are specimens of Cyclopean architecture. Fig. 751. The most celebrated is the "Gate of Lions," the chief entrance to the ancient Acropolis, and receiving its name from two immense lions sculptured upon a block of bluish limestone above the gate.

Mycetes, (mī-tēz), n. [Gr., from *mykasthai*, to bellow.] (*Zool.*) The Howlers, a genus of Sapajous, belonging to the family *Cebidæ*, and comprising a number of species, the largest of the American monkeys. They are remarkable for the great development of the organ of voice, which consists of a peculiar kind of bony drum, formed by the convexity of the os hyoides, and communicating with the larynx (Fig. 1598). The noise produced by these howlers in the dead of night, is described as being perfectly appalling, and lasts from about 11 o'clock at night till daybreak. An ear-witness says, a person might suppose that half the wild beasts of the forest were collected for the work of carnage—now it is the tremendous roar of the jaguar as he springs on his prey—now it changes to his deep-toned growlings as he is pressed on all sides by superior force—and now you hear his last dying moan beneath a mortal wound. They

Fig. 1598. — **SKULL OF MYCETES URSINUS.**

Showing the structure of lower jaw and organ from whence the howling noise proceeds.

are social animals, and live in troops in the deep forests of tropical America. The Araguato, or Brown Howler, *M. ursinus* (Fig. 1899), is one of the most abundant, liv-

Fig. 1899. — BROWN HOWLER,
(*Mycetes ursinus*.)

ing in Guiana and Brazil. They are gregarious, and forty individuals may be seen on one tree.

Mycologic, Mycological, a. Having reference to mycology; pertaining to the fungi.

Mycologist, n. One versed in mycology.

Mycology, n. [Gr. *mikēs*, fungus, and *logos*, treatise.] That department of natural science which has reference to the mushrooms or fungi.

Mycone, or Myconus, (mik'o-ne), an island of the Grecian Archipelago, govt. of Syra, among the N. Cyclades, 5 m. S.E. of Timos; area, 45 sq. m. It is of granite formation, and the soil is unproductive. There are several good ports, the principal being Mycone, Onos, Port Palermo, and St. Anne. Pop. 6,000.

Myelitis, n. (Med.) Inflammation of the spinal marrow or its membranes.

Myersburg, in Pennsylvania, a post-village of Bradford co., abt. 5 m. N.E. of Towanda.

Myer's Mill, in Iowa, a village of Pottawattomie co., abt. 40 m. N.E. by E. of Council Bluffs.

Myerstown, in Pennsylvania. See MEYERSTOWN.

My'gale, n. (Zool.) The Bird-catching Spider, a genus of spiders, having four pulmonary sacs and spiracles, four spinnerets, eight eyes, and hairy legs. They make silken nests in clefts of trees, rocks, &c., or in the ground,

Fig. 1900. — NEST OF THE MYGALE.

sometimes burrowing to a great depth, and very tortuously. To this genus belongs the Bird-catching Spider of Surinam, which, as several other of the larger species, natives of the warm parts of America, East Indies, and Africa, frequently prey on the small vertebrate animals. They do not take their prey by means of webs, but hunt for it and pounce upon it by surprise. They construct a silken dwelling for themselves in some sheltered retreat. Some of them make a curious lid to their nest or burrow. They envelop their eggs, which are numerous, in a kind of cocoon.

—A genus of Insectivora, comprising the Desmons. See DESMON.

My'le. (Anc. Hist.) A town situated on a tongue of land S.W. of Pelorum, on the N. coast of Sicily. — The Roman fleet, commanded by C. Duilius, defeated the Carthaginians near this place, B. C. 260. — Near the same place, Agrippa, with the fleet of Octavius, defeated Sextus Pompey's squadron, B. C. 36.

Myli'ta, n. (Bot.) A genus of fungi, order *Ascomycetes*. *M. Australis*, called the "native bread of Australia," is an edible species, weighing from one to three pounds. It is commonly eaten by the natives. Other species are used in China for food and medicine.

Mylo'don, n. [Gr. *mylos*, mill-stone, and *odon*, tooth.] (Pal.) A gigantic fossil quadruped included under the family of extinct *Eleutata*, by Owen, called the *Megatheriidae*. The *M.* is closely allied to the *Megatherium*, and among existing *Edentata* it holds a place between the *Ai* and the great armadillo. Its food is said to have chiefly consisted of the leaves and tender shoots of forest-trees, which the animal's gigantic strength enabled it to tear up by the roots. There have been three distinct species described—*M. robustus*, *M. Darwini*, *M. Hurlani*. The last one has been found in Kentucky, Mississippi, Missouri, S. Carolina, and Oregon. In 1841, an almost complete skeleton of *M. robustus* was discovered about 20 m. N. of Buenos Ayres.

My'lo-hy'oid, a. [Gr. *mylos*, molar tooth, and *yoeidēs*,

shaped like the Greek letter γ .] (*Anat.*) Having reference, or pertaining to the jaw-bone and the hyoid bone; as, the *mylo-hyoid* nerve.

Mymensing, (mi-men-sing'), a dist. of Hindostan, presidency of Bengal, lat. between $24^{\circ} 4'$ and $25^{\circ} 40' N.$, lon. between $89^{\circ} 28'$ and $91^{\circ} 13' E.$; area, 5,000 sq. m. The surface is diversified, and the soil fertile. There are numerous shallow lakes. *Prod.* Wheat, barley, sugar, hemp, rice, flax, and tobacco. The chief town is Mymensing, or Nussurabad. Pop. 1,490,000.

Myne'ry, n. An old Saxon term for a nunnery:—still locally used in England.

Myn'heer, n. [D., my lord, my master.] Mr.; Sir;—the customary compellation among the Dutch; hence, a Dutchman; as, *Mynheer* Vandauck.

Myodynam'ies, n. sing. [Gr. *myos*, a muscle, and *dynamis*, force.] Act or operation of muscular force or contraction.

Myodynamiom'eter, Myodynamom'eter, n. [Gr. *myos*, muscle, *dynamis*, force, and *metron*, measure.] An instrument for admeasurement of muscular power in man and other animals.

Myographic, Myographical, a. Belonging or having reference to myography.

Myographist, n. One who describes the muscles of animals.

Myog'raphy, n. [Fr. *myographie*, from Gr. *myos*, and *graphō*, to describe.] (*Anat.*) A treatise on, or description of, the muscles of the body.

Myoken'ma, n. [Gr. *myos*, muscle, and *lemma*.] (*Anat.*) The delicate sheath that envelops the fibre of a muscle.

Myoline, n. [Gr. *mys*, mouse.] The essential substance of muscle.

Myologic, Myological, a. Having reference, or pertaining to the description and system of the muscles.

Myologist, n. One versed in myology.

Myology, n. [Gr. *myos*, and *logos*, speech.] (*Anat.*) The doctrine of the muscular system of the human body.

Myopath'ic, a. [Gr. *myōs*, muscle, and *pathos*, suffering.] Belonging or relating to a diseased condition of muscles.

Myope, n. [Fr.; Gr. *myops*, from *ōpos*, the eye.] A short-sighted or purblind person; a myop.

Myop'ic, a. Having reference to myopy; short-sighted.

Myopora'ceæ, n. (Bot.) The Myoporad family, an order of plants, alliance *Echtales*. — *DIAG.* Irregular, unsymmetrical flowers, confluent nuts, pendulous ovules and 2-celled anthers. — The species are natives of the S. hemisphere. The bark of *Avicunia tomentosa*, the white mangrove, and other species, is much used in Brazil for tanning. The order includes but few useful plants. It is divided into 9 genera, and 42 species.

My'ops, n. A myope; a purblind or near-sighted person.

Myop'sis, n. [Gr. *myia*, fly, and *ōpsis*, vision.] (*Med.*) A disease of the eyes inducing an imaginary perception of black spots moving after the manner of flies.

My'opy, n. [Fr. *myopie*; Gr. *myōpia*.] Short-sightedness. It is an affection of the eye characterized by the diminution of the distance of the far point, and the consequent inability of the eye to see distant objects distinctly without the aid of concave glasses.

Myosis, n. [Gr. *myein*, to close the eyes.] (*Med.*) Permanent contraction of the pupil of the eye.

Myosit'ic, a. (Med.) Producing contraction of the pupil of the eye.

Myos'otis, n. [Gr. *mys*, mouse, *otis*, the ear, its leaves being hairy, and growing like the ear of a mouse.] (*Bot.*) A gen. of plants, order *Boraginaceæ*. They are annual and perennial herbs, slightly villous; the calyx is 5-parted; corolla salver-shaped; convolute in the bud; throat closed with scales; limb 5-fid, blunt; stamens included; filaments very short; style simple; nuts smooth, convex externally keeled within, attached by a minute lateral spot near the base. Distinguished from all the other genera by a convolute corolla. Nearly 50 species have been described, and are to be found in every quarter of the globe. *M. palustris*, the Great water-scorpion grass, or Forget-me-not, has the fruit-calyx open, teeth short triangular, the pubescence of the stem usually spreading. It is a beautiful plant, with a large bright-blue corolla, having a yellow eye, and, probably on account of its striking appearance, has received its name of Forget-me-not. None of the species are used in the arts, or in medicine.

Myox'us, n. (Zool.) The Dormouse (Fig. 1901), a gen. of Rodentia, family *Sciuridae*. They appear to be intermediate between the squirrels and mice; inhabit temperate and warm countries, and subsist entirely on vegetable food. They have two cutting teeth in each jaw;

Fig. 1901. — COMMON DORMOUSE,
(*Myoxus avellanarius*.)

4 toes before and 5 behind, and naked ears. These mice inhabit woods and thick hedges, building their nests, which are lined with moss and dead leaves, either in the hollows of trees, or near the roots of close shrubs. Towards the approach of winter they form little magazines of nuts, beans, acorns, &c., on which to subsist during the inclement season; when they retire to their retreats, roll themselves up, and fall into a torpid or lethargic state, which lasts, with little interruption, till the winter is over. It was

formerly believed that their hibernation was a state of continual sleep from the period that they sought their winter-quarters until they emerged from them in a more genial season. Buffon, however, very properly exposed the absurdity of the ancient notion; and has observed that these animals occasionally wake, and make use of their stock of provision. They bring forth three or four at a time, which are usually born blind, and remain so for a few days. There are several species.

Myos'urus, n. [Gr. *mys*, mouse, *oura*, tail; alluding to the long spike of carpels.] (*Bot.*) A gen. of plants, order *Ranunculaceæ*. They are annual herbs; leaves linear, entire, radicle, scapes 1-flowered. *M. minimus*, the Mouse-tail, is a diminutive plant, remarkable for its little terete spikelet of fruit, which is often an inch long. It has a single, minute, pale-yellow flower at top.

Myotility, n. [Fr. *myotilité*, from Gr. *myos*, unscle.] Muscular contractility.

Myotomy, n. [Gr. *myos*, muscle, and *tomē*, a cutting.] (*Anat.*) A dissection of the muscles of the body.

Myriad, (mī'rī-ad), n. [Gr. *myrias*, myriads, from *myrios*, countless; W. *myrdd*, infinity, a myriad.] A countless or indefinitely large number; an immense number, proverbially. — The number of ten thousand. — *a.* Vast; having innumerable aspects.

"Our myriad-minded Shakspeare." — Coleridge.

Myriagramme, n. [Fr., from Gr. *myrioi*, 10,000, and *gramme*, the 24th part of an ounce.] A French weight, equivalent to 10 kilogrammes = 220.465 lbs. avoirdupois, or 26.795 lbs. Troy.

Myrialitre, (mī'rī-a-lē'tr), n. [Fr., from Gr. *myrioi*, 10,000, and *litra*, a certain weight. See LITRE.] A French measure of capacity, containing 10,000 litres = 264.14 American gallons.

Myriametre, (mī'rī-a-mā'tr), n. [Fr., from Gr. *myrioi*, and *metron*, measure.] A French measure of length, containing 10,000 metres = 6.2134 American miles, or 6.21382 English miles.

Myriap'oda, n. pl. [Gr. *myrioi*, and *pous*, *podous*, foot.] (*Zool.*) An order of insects, the first in the classification of Cuvier, and often designated by the term *Centipedes*. They are the only animals of the class which possess more than 6 feet in their perfect state, and which have their abdomen not distinct from their trunk. Their body, destitute of wings, is composed of a number of

Fig. 1902. — AMERICAN MYRIAPOD.
(The Galley-worm, or *Iulus*.)

rings, generally equal in size; each of which — a few of the first excepted — bears two pairs of feet, mostly terminated by a single hook; these annuli, or rings, are either entire or divided into two demi-segments, each bearing a pair of these organs, and one of these only exhibiting two stigmata. In general, the *M.* resemble little serpents or nereides, their feet being closely approximated to each other throughout the whole extent of the body. The form of these organs even extends to the parts of the mouth. The mandibles are bi-articulated, and immediately followed by a quadruple piece in the form of a lip, with articulated divisions resembling little feet, which, from its position, corresponds to the ligula of the crustacea. Next come two pairs of little feet, the second of which, in several, resemble large hooks, that appear to replace the two jaws as well as the lower lip of insects. The antennae are two in number, and are short, somewhat thicker towards the extremity, or nearly filiform, and composed of 7 joints in some; in others they are numerous and setaceous. Their visual organs are usually composed of a union of ocelli. The stigmata are very small, and their number, owing to that of the annuli, is usually greater than in the latter, where it never exceeds 18 or 20. The *M.* are divided into two families by Cuvier; namely, the *Chilognatha* and the *Chilopoda*; the first of which move very slowly, that is, slide along, and roll themselves into a ball; while the latter possess speedier faculties of locomotion. The *Chilognatha* are divided by Linnaeus into 4 classes; viz., *Glomeris*, *Iulus*, *Polydesmus*, and *Polyxenus*. The *Chilopoda* are divided into 3 classes; comprising *Scutigera*, *Lithobius*, and *Scolipendra* (or Centipedes).

Myriarch, (mī'rī-ark), n. [Gr. *myrioi*, 10,000, and *archos*, chief.] A commander of ten thousand men.

Myri'are, n. [Fr., from Gr. *myrioi*, and Fr. *are*. See ARE.] A French superficial measure, being 10,000 *ares* = 1,000,000 square metres; equivalent to 248.085 American, or 247.1143 English, acres.

Myr'ica, n. [Gr. *myro*, to flow; because some of the species are native of river-banks and inundated places.] (*Bot.*) The typical genus of the order *Myricaceæ*, q. v.

Myr'icin, n. (Chem.) That portion of wax which is insoluble in alcohol. It melts at 147° Fahr. The wax of the *Myrica cerifera* affords it.

Myricyl'ic Alcohol, n. (Chem.) The hydrated oxide of myricyl. The oxide of myricyl exists in beeswax in combination with palmitic acid, and is liberated in the hydrated form by the action of caustic potash. Myricyl alcohol is a colorless solid, of a silky lustre, melting at 185° Fahr.

Myriolog'ic, a. Pertaining or having reference to a myriologue.

Myriologue, n. The female performer of a myriologue. **Myr'iologue, n.** [Fr., from Gr. *Moria*, the goddess of death, and *logos*, discourse.] In modern Greece, a funeral dirge or requiem sung by a female. — *extemporaneously.*

Myrica'ceæ, *n.* (Bot.) The Gale-wort family, an ord. of plants, alliance *Amentales*.—DIAG. A 1-celled ovary, and a single erect seed, with superior radicle.—They are shrubs or small trees, aromatic, covered with resinous glands or dots, and having simple alternate leaves. Flowers monœcious, or dicecious, amœtaceous, each axillary to a bract. The species *Myrica cerifera* is known by the names Wax-berry, Caudle-berry, Wax-myrtle, and Bay-berry; its fruits, when boiled, yield the kind of wax known to commerce as *Myrtle-wax*. This useful and interesting shrub is found in dry woods or in open fields, from Nova Scotia to Florida, and W. to Lake Erie. *M. gaili*, the Sweet Gale, or Dutch Myrtle, is found in marshy places, and on the borders of mountain lakes, generally throughout the N. States and Canadas. The order includes 3 genera and 30 species.

Fig. 1903.—DUTCH MYRTLE, (*Myrica gaili*.)

Myriophyllons, *a.* [Gr. *myrioi*, and *phyllon*, leaf.] (Bot.) Having an indefinitely great number of leaves.

Myriophyllum, *n.* [Gr. *myrios*, a myriad, *phyllon*, a leaf; from the numerous divisions of the leaf.] (Bot.) A gen. of plants, order *Haloragaceæ*. They are perennial aquatic herbs, with submerged leaves parted into capillary segments. Upper flowers usually staminate, middle ones perfect, and lower ones pistillate. *M. spicatum*, the Spiked Water-milfoil, is found from New England to Arkansas. Stems slender, branched, very long; leaves composed of innumerable hair-like segments, always submerged; flowers greenish, sessile. Another species, *M. verticillatum*, the Water-milfoil, is common in stagnant water from Canada to Florida, and W. to Oregon.

Myriora'na, *n.* [Gr. *myrias*, a myriad, and *opao*, I view.] (Paint.) A picture made up of fragments of buildings, landscapes, &c., so as to admit of an infinity of combinations.

Myristic Acid, *n.* [Gr. *muron*, unguent.] (Chem.) One of the fatty acids contained in the expressed oil of nutmeg.

Myristica, (*mī-ris'ti-kā*), *n.* (Bot.) The typical gen. of the nat. ord. *Myristicaceæ*. The most important species is *M. moschata* or *officinalis*, the Nutmeg-tree. It is a native of the Molucca Islands, but is now cultivated in many tropical regions. The well-known spices *nutmegs* and *mace* are derived from this species. The fruit is fleshy and pear-shaped, and commonly about the size of an ordinary peach; it contains a single seed, surrounded by a lacerated envelope, called an *arillode*, which is scarlet when fresh, and yellow when dried. Beneath the arillode, which forms the spice called *mace*, we find a hard shell, and within this the nucleus of the seed. This nucleus, or the seed divested of its shell and arillode, is our commercial *nutmeg*. The fleshy pericarp is commonly used as a preserve. Nutmegs and mace are largely employed as condiments. They are both used in medicine as stimulants, carminatives, and flavoring agents. Nutmegs, when distilled with water, yield a volatile oil called *volatile* or *essential oil* of nutmegs. Mace treated in the same way yields a volatile oil of nearly similar properties. The substance called *expressed oil of mace*, *butter of nutmegs*, or *expressed or concrete oil of nutmegs*, imported from the Moluccas, is prepared by heating nutmegs, and then submitting them to pressure. It consists of a small quantity of volatile oil mixed with two fatty substances. The nutmegs from *M. moschata* are frequently termed the *true* or *round nutmegs*, to distinguish them from those of an inferior quality obtained from other species. The *long* or *wild nutmegs* of commerce are said to be derived from *M. latua* or *tomentosa*, and *M. mala barica*.

Myristica'ceæ, *n. pl.* (Bot.) The Nutmeg family, an order of plants, alliance *Menispermæles*.—DIAG. Ruminate albumen, and a valvate cup-shaped calyx. They are tropical trees, often yielding a red juice, with alternate, entire, exstipulate, stalked, and leathery leaves. Flowers declivous. Calyx leathery, 3-4-cleft, in the female flower, deciduous; aestivation valvate. Male flowers with 3-12 stamens, or rarely more than 12; filaments distinct or monadelphous; anthers 2-celled, extrorse, distinct, or united, with longitudinal dehiscence. Female flower of 1 carpel, or many carpels, each with 1 erect ovule. Fruit non-esculent, seed arillate, with copious oily fleshy albumen; embryo small, with an inferior radicle. There are 5 genera and 35 species.

Myrmecophaga, *n. pl.* [Gr. *myrmen*, and *phago*, to eat.] (Zool.) The Ant-eaters, a genus of the family *Armadillo*, order *Edentata*. The Ant-eaters have no grinders, have the body covered with rather long hair, an elongated slender head, with very long exsertile tongue, and walk on the sides of their feet with the claws incurved. The great ant-eater, *M. jubata*, is a native of Brazil and Guiana, and is with the largest of all the ant-eaters. It is covered with long, coarse, shaggy hair, and has a remarkably large tail, with which, when at repose, it can wrap itself up so as to be effectually protected from heat or rain. It is a powerful animal, and specimens often occur which measure more than 8 feet in length from the extremity of the nose to the end

of the tail. The second and third toes of the fore-feet are provided with long, sharp-pointed, and trenchant claws, so strong that nothing upon which it has an up-

Fig. 1904.—MYRMECOPHAGA JUBATA. (Great Ant-eater.)

portunity of fastening can escape, and it is even asserted that it has killed a tiger by plunging these formidable weapons into its side and tearing it open. It lives, however, exclusively on ants, and it procures these insects in abundance by tearing open their hills with its hooked claws, and then drawing its long tongue, which is covered with glutinous saliva, over the swarms which flock from all quarters to defend their dwelling.

Myrme'leon, *n.* [Gr. *myrmos*, ant; *leo*, lion.] (Zool.) The Ant-lion, a genus of neuropterous insects, one of the species of which has long been known for the remarkable habit its larva has of forming a pitfall to catch its prey. This insect, *M. formicario*, in its perfect state, resembles a small dragon-fly. It deposits its eggs in dry sandy places, and as soon as the larvæ are hatched, they begin to prepare their traps for securing food for themselves. For this purpose they insinuate themselves into and beneath the sand, and scoop out a conical pit, at the bottom of which they take up their abode. Should an unfortunate insect tumble into this pit, it is immediately seized, the fluids of the body sucked out, and the carcass jerked out of the hole. Should the insect escape the first attack, and attempt with all haste to clamber up the sides of the pitfall, the ant-lion immediately throws up a shower of sand and brings its victim down again. The larva continues in this state for about two years, when, being full-grown, it spins a cocoon and assumes the chrysalis form, and at the end of three weeks comes out a perfect insect.

Myrmidon, *n.* [Gr. *myrmidones*.] (Myth.) One of the followers whom Achilles led from Phthia to the Trojan war. The name (like that of Achilles, Helen, Paris, and many others) cannot be explained by any Greek words. According to one version of the myth, Zeus deceived Eurymedusa, daughter of Cleitus, in the form of an ant, *murmer*, and became the father of Myrmidon, the eponym of the Myrmidones. The Homeric poems exhibit the Myrmidons as warriors who cannot act except at the bidding of Achilles. When he appears, they rush forth like wolves, (*lukoi ôs*; II. xvi. 156.) The simile which follows lays special stress on the fiery color of their cheeks, and the blood-red hue of their tongues and jaws. These images are in strict accordance with the solar character of Achilles, and the expression *lukoi* thus at once suggests a comparison with the myths of Lycaon, Calisto, and Arcas, and with the epithet *Lycius* (*Lukios*) applied to Phœbus (*Æschylus*, *Theb.* 145). The Myrmidons would thus be the streaming rays which break forth when the sun reappears after being veiled by clouds.

—A desperado; a rough soldier; a bully; a ruffian under some unscrupulous leader.

“Clodius and Curio, at the head of their myrmidons.”—Swift.

Myrmido'nian, *a.* Belonging, or having reference to myrmidons.

Myrobolan, *n.* [Fr.; Lat. *myrobolanum*.] (Bot.) See *COMBRETACEÆ*.

My'ron, a very celebrated Greek sculptor, b. at Eleutheræ, in Boeotia, about B. C. 450. He was a pupil of Ageladas, and the rival of Polyclethus. He worked in marble, wood, and metal, and especially distinguished himself by his skillful representations of animals. His most admired work was the bronze figure of a *Cow lowing*, which was still extant at Athens in the time of Cicero.

Myrosper'mum, *n.* [Gr. *myron*, myrrh; *sperma*, seed.] (Bot.) A gen. of balsamiferous trees, belonging to the nat. ord. *Leguminosæ*. The species are natives of South America and the West Indies. *M. touliferum* is the source of balsam of Tolu, and *M. periera* that of balsam of Peru. The former product is chiefly imported from Carthageana in gourds and other vessels, usually in the solid state; the latter, which is of a viscid syrupy consistence, is imported from Sonsonate, in the State of St. Salvador, Guatemala. Both are obtained by making incisions in the bark of the trees. They are largely used in medicine for their stimulant and expectorant properties. Two other medicinal products are also derived from *M. periera*, namely, white balsam, which is obtained from the interior of the fruit and seed by cold pressure; and *balsamito*, or tincture of Virgin Balsam, which is made by digesting the fruit (deprived of its winged appendages) in rum.

Myrrh, (*mīr*), *n.* [Ar. *murr*; Lat. *myrrha*.] A fragrant, bitter, aromatic gum-resin, which occurs in tears of different sizes; they are reddish-brown, semi-transparent,

brittle, of a shining fracture, and have a greasy appearance under the pestle. Notwithstanding the early knowledge of myrrh, there was no accurate account of the tree which yielded it until the return of Ehrenberg from his travels, during 1820-25, in various parts of Africa and Asia. The tree, of which he brought a specimen, is described, under the name of *Balsamodendron myrrha*, by Nes von Esenbeck. This plant was noticed and described by Humboldt in 1826. Myrrh flows from incisions made in the tree. It consists of resin and gum in proportions, stated by Pelletier as 31 of the former and 66 of the latter.

Myrrhic Acid, *n.* (Chem.) A substance obtained by heating the resin of myrrh.

Myrrhine, *a.* [Lat. *myrrhinus*.] Made of the myrrhine stone, or fluor-spar.

Myrrhine, *n.* Same as *MURRHINE*, *q. v.*

Myrsina'ceæ, *n. pl.* (Bot.) AN order of plants, alliance *Cortusales*.—DIAG. Stamens opposite the petals, indehiscent drupaceous fruit, and woody stem.—They consist of trees or shrubby plants, with smooth, coriaceous, exstipulate leaves and small flowers. They are chiefly natives of the islands of the southern hemisphere. The greater number are unimportant in an economic sense. The fruit of *Myrsine Africana* is used by the Abyssinians to mix with the barley given to their mules and asses. The seeds of *Theophrasta Jussieri* are used in St. Domingo for making a kind of bread. The order has 320 species in 30 genera.

Myrta'ceæ, *n. pl.* (Bot.) The Myrtle family, an order of plants, alliance *Myrtales*. DIAG. Plurilocular ovary, polypetalous or apetalous flowers, an imbricated calyx, oblong anthers, and usually dotted leaves.—They consist of about 1,300 species of trees and shrubs, natives of the tropics and of the warmer regions of the temperate zones. They are generally remarkable for pungent and aromatic properties, due to the presence of a volatile oil. The fruits of some are edible, as the *pomegranate* and the *guava*. Among the useful products of the order are the well-known spices *cloves* and *allspice*; and the medicinal agents *cajuput oil*, and *Botany Bay kino*.

Myrtaceous, (*mūr'tā'shus*), *a.* [Lat. *myrtaceus*.] Pertaining or relating to the myrtles.

Myrtales, *n. pl.* (Bot.) An alliance of plants, subclass *Ergynous Exogens*. DIAG. Polypetalous dichlamydeous flowers, axile placentæ, and embryo with little or no albumen. The alliance is divided into 10 orders, viz.: *COMBRETACEÆ*, *ALANGIACEÆ*, *CHAMÆLACIACEÆ*, *HALORAGACEÆ*, *ONAGRACEÆ*, *RHIZOPHORACEÆ*, *BELVISIACEÆ*, *MELASTOMACEÆ*, *MYRTACEÆ*, and *LECYTHIDACEÆ*, *q. v.*

Myrtiform, (*mēr'ti-fōrm*), *a.* [Lat. *myrtus*, myrtle, and *forma*, shape.] Resembling myrtle or myrtle-berries.

Myrtle, (*mēr'tl*), *n.* [Lat. *myrtus*; Gr. *myrtos*.] (Bot.) See *MYRTUS*.

Myrtle Creek, in Oregon, a post-village and precinct of Douglas co., abt. 16 m. S. of Roseturg; pop. of precinct, abt. 400.

Myrtle-wax, *n.* (Bot.) See *METRICACEÆ*.

Myrtus, *n.* [Gr. *myrtos*.] (Bot.) The typical genus of the order *Myrtaceæ*. *M. communis*, the common Myrtle, is a native of South Europe. Its dried flower-buds and unripe fruits were used as spices by the ancients, and are still so employed in Tuscany. The agreeable

Fig. 1905.—MYRTLE, (*Myrtus communis*.)

1, Flower of the myrtle, cut vertically; 2, Myrtle in flower.

perfume known as *eau d'ange* is prepared by distilling myrtle-flowers with water. Among the ancients this plant was a great favorite for its elegance of form, and its fragrant, evergreen leaves. It was dedicated to Venus. The brows of bloodless victors were adorned with myrtle wreaths, and at Athens it was an emblem of civic authority.

Myself, *pron.* [*My* and *self*.] I, or me, in person:—a compound pronoun used after *I*, to express emphasis marking emphatically the distinction between the speaker and another person; as, *I myself* will do it; used, also, as the reciprocal of *I*, in the objective case, as, *I will protect myself*; again, *I* is sometimes omitted to give greater force to the sentence.

“*Myself* shall mount the rostrum in his favor.”—Addison.

My'sol Isle, an island of the Eastern Archipelago, between Ceram and Papua; Lat. 2° S., Lon. 130° E. Ext. 50 m. long, and 15 broad.

Mysore, (*mī-sor'*), a prov. of S. Hindostan, presidency of Madras, between Lat. 11° 30' and 15° N., Lon. 74° 45' and 78° 40' E.; area, 30,886 sq. m. It consists of a high table-land, inclosed on the E., W., and S. by the Ghauts; and varying in height from 1,900 to 4,600 feet above the sea, with a gentle slope towards the N. The climate is one of the most salubrious within the tropics. The soil is very fertile. The principal rivers are, the Zoongabuddra, Penaar, Colair, and Coleroon. *Prod.* Rice, sesamum, sugar, coffee, betel-leaf, castor-oil, cocoa-nuts, &c. *Pop.* Mysore. *Pop.* 3,500,000.

Mysore, a town, cap. of the above prov., 9 miles S.W. of Seringapatam, Lat. 12° 19' N., Lon. 76° 42' E. It was suffered to decay by Hyder Ali, the last independent sovereign previous to the occupation of the British, but it has since been rebuilt, and contains, besides the rajah's palace, several fine public buildings and temples. *Pop.* 50,000.

Mysorine, *n.* (*Min.*) An anhydrous carbonate of copper found at Mysore in India.

Mystagogic, **Mystagogical**, *a.* Relating to the interpretation of mysteries.

Mystagogue, (*mīst'agōg*), *n.* [Fr., from Gr. *mystagōgos*.] One who interprets mysteries.—One who is the custodian of church relics, and exhibits them to strangers.

Mystagogy, *n.* Interpretation of mysteries. (*R.*)

Mysterious, *a.* [Fr. *mystérieux*.] Containing mystery; secret; obscure; hid from the understanding; not clearly understood; not revealed or explained; beyond human comprehension; partaking of the nature or character of mystery; occult; enigmatical; unintelligible.

Mysteriously, *adv.* In a mysterious manner; obscurely; enigmatically; unintelligibly.

Mysteriousness, *n.* Quality of being mysterious, or being concealed from the understanding, and, hence, causative of curiosity, awe, or wonder; obscurity; artful perplexity.—That which is occult, mysterious, or unintelligible; a mystery; an enigma.

Mystérize, *v. a.* To express enigmas.

Mystery, *n.* [Fr. *mystère*; Lat. *mysterium* = Gr. *mysterion*, the secret worship of the Deity, a secret thing, from *mēuō*, to initiate into the mysteries, from *mūō*, to close, to be shut; Sansk. *mū*, to bind, to close.] That which is closed, shut up, or concealed, so that nothing can reach or penetrate it; something above human intelligence; something awfully or occultly obscure; a profound secret; something wholly unknown; something not revealed to man; that which is above human comprehension until explained.—An enigma; anything artfully made complex or difficult.—A trade; a calling; a handicraft; any manual or mechanical occupation which implies peculiar skill or knowledge on the part of its professors, and therefore a secret to outsiders.

"Instruction, manners, mysteries, and trades."—*Shaks.*

—A kind of dramatic spectacle of a religious character, performed in mediæval times;—so called from its representing the early miracles of Christianity. See **MORALITIES**.

—*pl.* A kind of secret religious festivals, into which none were admitted except those who had undergone initiation by certain preparatory rites. The Pagan mysteries originated in Egypt, where Isis and Osiris were worshipped with secret rites at a very early period. The earliest mysteries practised by the Greeks were those of the *Cabiri*, which were celebrated at Samothrace. The mysteries of the *Curetes*, who existed as early as B. C. 1534, and of the *Corybantes*, rank next in point of antiquity. The most celebrated were the Eleusinian Mysteries (*q. v.*), which were introduced at Eleusis, in Attica, by Eumolpus the Hierophant, B. C. 1356. This festival was sacred to Ceres, and was observed with such strict secrecy that death was the penalty for intruding during the ceremonies without initiation. It was introduced at Rome in the reign of Hadrian (117–138), and ceased in 396.

Mystic, (*mīst'ik*), *n.* One who holds the doctrines of mysticism, or of the Mystics, *q. v.*

Mystic, **Mystical**, *a.* [Lat. *mysticus*; Gr. *mystikos*.] Relating to, or containing mystery or mysticism; obscure; hid; secret; occult; sacredly obscure or secret; remote from human comprehension.—Involving mysticism, or some secret meaning; implying mystery; allegorical; emblematical.

Mystic, in Connecticut, a small river flowing into Long Island Sound from New London co.

—A post-village of New London co., abt. 8 m. E. by S. of New London. *Pop.* (1897) 4,000.—A village of New London co., about 10 m. E.N.E. of New London. It is sometimes called **HEAD OF MYSTIC**.

Mystic Bridge, in Connecticut, a former post-village of New London co., on the E. side of Mystic river, about 63 m. E. of New Haven. Now part of Mystic.

Mystically, *adv.* In a manner or by an act implying a secret meaning.

Mysticalness, *n.* Quality of being mystical; involvement of some secret meaning.

Mystics, *n. pl.* (*Eccles. Hist.*) A sect of Christians which arose in the 2d century. The system of the *M.* proceeded upon the known doctrine of the Platonic school, which was also adopted by Origen and his disciples, that the divine nature was diffused through the human soul, or that the faculty of reason was an emanation from God into the human soul, and comprehended in it the principles and elements of all truth, human and divine. They denied that men could excite this celestial flame by labor or study; but they maintained that silence, tranquillity, repose, and solitude, accompanied by such acts as might tend to exhaust and attenuate the body, were the means by which the hidden and internal

word was excited to produce its latent virtues, and to instruct men in the knowledge of divine things. The *M.* increased in number in the 4th century, under the influence of a Greek fanatic, who gave himself out to be Dionysius the Areopagite, one of St. Paul's converts (*Acts* xvii. 34). A copy of the pretended works of Dionysius was sent by Balbus to Louis the Meek, A. D. 824, which kindled the flame of Mysticism in the western provinces, and filled the Latins with the most enthusiastic admiration of this new system. In the 12th cent. the *M.* took the lead in their method of expounding the Scriptures; in the 13th they were the most formidable antagonists of the Schoolmen; and toward the close of the 14th many of them resided and propagated their tenets in almost every part of Europe. In the 15th and 16th centuries they had many persons of distinguished merit in their number. In the 17th century, the radical principle of Mysticism was adopted by many descriptions of religionists without being confined to any particular denomination of Christians. Among the number of *M.* may be mentioned many singular characters, especially Behmen, a shoemaker at Görlitz, in Germany; Molinos, a Spanish priest, in the 17th century; Madame Guyon, a French lady, who made a great noise in the religious world; and the celebrated Madame Bourignon, who wrote a mystic work entitled *The Light of the World*. Fenelon also harbored similar sentiments, for which he was reprimanded by the Pope. The *M.* were called *Quietists* in the 17th century.

Mysticism, *n.* [Fr. *mysticisme*.] The tenets of the Mystics, *q. v.*

Mystification, *n.* [Fr.] Act of rendering anything mysterious; also, something intended to mystify.

Mysticator, *n.* One who mystifies.

Mystify, *v. a.* [Eng. *mystery*, and Lat. *facio*, to make.] To make or render mystical or mysterious; to involve in mystery so as to mislead; to render obscure or difficult; to perplex designedly; to play upon the credulity of.

Myth, *n.* [Gr. *mūthos*.] A fable or fabulous story; a fictitious or fanciful narrative having an analogy more or less remote to some real event; an allegory, religious or historical, involving some preternatural power or condition.

Myth-history, *n.* Mythical history; history abounding in mythic passages.

Mythic, **Mythical**, *a.* [Gr. *mūthikos*, legendary, from Gr. *mūthos*, fable.] Pertaining to or having relation to, or resembling a myth; of the nature of a myth; fabulous; imaginary.

Mythically, *adv.* After the manner of a myth; fabulously.

Mythographer, *n.* [From Gr. *mūthos*, fable, and *graphein*, to write.] A writer of myths; a fabulist.

Mythologic, **Mythological**, *a.* [Gr. *mūthologikos*.] Relating or pertaining to mythology; fabulous.

Mythologically, *adv.* In a way or manner applicable to the system of fables.

Mythologist, *n.* [Fr. *mythologiste*.] One versed in mythology; a writer on mythology; a relator or expositor of heathen fables.

Mythologize, *v. a.* To relate or elucidate heathen fables.

Mythology, (*mī-thol'ogē*), *n.* [Fr. *mythologie*; Lat. *mythologia*; from Gr. *mythologia*—*mythos*, a fable, and *logos*, a discourse.] A term which originally signified any fabulous doctrine. In a more general sense, it now means the whole body of the traditions of a nation respecting its gods and fabulous heroes. *M.* is not confined to the stories of the gods which constitute the myths of a nation, but also to the scientific study of these deific tales and conceptions. Much attention has been given to this study, with very varied results, due to the different points of view from which the subject has been regarded. To the ancient Greeks, the first people who ventured to subject the stories of the gods to study, an intricate series of extraordinary tales presented themselves, descriptive of the lives and actions of a large number of imaginary beings, some constituting the great gods and goddesses, each ruling over some department of nature, others the minor deities, dwelling on the earth or in the waters, and having individual duties of lesser scope. The Greek philosophers came to look upon these stories as of human invention, but made the mistake of supposing that they had been invented by men with intellects like their own, and had originally an allegorical significance. Others considered mythology to be modified history, and the gods to have been originally men. In India also one school of philosophy looked upon the Vedic mythology as history in the garb of the supernatural. The Stoics of Rome adopted the other view, and sought to explain myths as allegorical explanations of the facts of physical nature. For many centuries this allegorical theory held its own in Europe, the latest and most learned work on the subject being the *Symbolik und Mythologie der alten Völker* of Creuzer (1810–12), whose effect was to overthrow the theory which it was designed to illustrate and prove. Its statements induced scholars to examine critically the assumption on which they had been based, namely, the prehistoric existence of a philosophic priesthood, learned in the laws of nature and teaching them by means of parables. No evidence could be found that such a class had ever existed in any of the Aryan nations, and the *Aglaophamus* of Lobeck (1829) gave a death-blow to the allegorical theory. The overthrow of this left the way clear to the growth of a new doctrine of mythology, in which men recognized the uselessness of attempting to explain these religious fables from the standpoint of enlightened men, and the necessity, in the words of Grote, of seeing them "in the light in which they presented

themselves to the Homeric or Hesiodic audiences." This course of study rendered it evident that primitive man, among whom these myths arose, was incapable of any philosophical interpretation of facts. He was intellectually a child, living in a world of fears and fancies, which to him were facts, his active imagination weaving a multitude of conceptions about the phenomena of nature, turning all things into stories, and investing all nature with life and thought similar to his own. It is this view which rules in the modern study of mythology, and to which a vitally different method of explanation from that named has arisen. The brothers Grimm, in their study of folk-tales, found evidence that myths were not the product of the thought of the leaders of the people, as had been held, but arose among the common people, and as they grew in consistency and gave origin to a definite religion, priests came to perform the rites and philosophers to study the origin of these myths. In the endeavor to explain the extraordinary and often contradictory stories told about the gods a new science arose, that of Comparative Mythology, originated by two scholars, Adelbert Kuhn and Max Müller, in which the various myths of the Aryan peoples were studied and compared, and an endeavor made to trace them back to a primitive Aryan people. In the Vedas, they claimed that we may see myths in the making. In their belief, the primitive Aryan looked upon all objects as living things, and spoke of them as of beings possessed of life and thought, the myth being at first a simile in essence, but when the meaning of the simile in time was forgotten, it was looked upon as an actual fact. This philological theory, while possessing elements of truth, was much overworked by its originators, and the belief is growing that mythology is not a matter of simple, but one of highly composite origin. That metaphorical descriptions of the sun, the dawn, the clouds, the wind, &c., in time grew into stories that held little hint of their origin, cannot well be doubted, in view of the many evidences in its favor, but later consideration has shown that this theory has been over-expanded, and a natural revulsion from the extreme views of its supporters took place. Gruppe, the greatest of these revolvers, rejects the comparative method altogether, and believes that myths have been borrowed by one people from another, and not handed down from a common ancestor. *M.*, as formerly studied, was mainly confined to the myths of the Aryan peoples, but later study has shown that it is world-wide, nearly every people, even those of savage habits, having some mythological beliefs. The application of the comparative method to these various myths shows a striking degree of consonance of ideas, and goes far to sustain the most recent theory, viz., that myths are survivals from a primitive stage of culture through which all races pass, and in which conceptions of great similarity arise among widely-removed peoples. Primitive man thought in much the same way about the same things, gave the same vital interpretation to the phenomena, and everywhere spoke of objects as living, breathing, and thinking beings. The same problems presented themselves to all peoples, and were solved in much the same way: Why does the wind blow? Why does the sun rise and set? What is the origin of clouds, &c. The answers to these and similar questions, the primitive theory of nature, as we may call it, constitutes the basis of mythological conceptions, yielding stories instead of scientific explanations, which stories eventually drifted so far away from their origin that the latter was lost to sight, leaving them standing alone in men's minds as the history of a celestial hierarchy under whose dominion lay the heavens, the earth, and the seas, with all that they contained. No attempt has been made here to describe the various national mythologies, the Zeus and his court of the Greeks, the similar Jupiter and his followers of the Romans, the related conceptions of the Germans, Scandinavians and Hindus, the analogous myths of the Egyptians, Babylonians, and Assyrians, and the multitudinous mythical conceptions of other tribes and peoples, the whole forming an extensive series of deific names and stories far beyond our power to consider in our necessarily brief space. The subject has been treated in numerous works, general or special in treatment, of which we may refer to the chapters on *Mythology* and *Animism* in Taylor's *Primitive Culture*, one of the best treatments of the subject; Andrew Lang's *Custom and Myth*, and *Myth, Ritual, and Religion*; Meyer's *Indogermanische Mythen*; Spencer's *Principles of Sociology*; Saussure's *Lehrbuch der Religionsgeschichte*; Breal's *Mélanges de Mythologie et de Linguistique*; Max Müller's *Oxford Essays*; Kuhn's *Die Herabkunft des Feuers*, &c.; and Gruppe's *Die Griechischen Götter und Mythen*, &c.

Myxoplasm, *n.* [Gr. *mūthos*, fable, and *plasma*, figure of speech.] A mere fabulous narration.

Mythopœic, (*-pē'ik*), *a.* [From Gr. *mūthos*, and *poiein*, to make.] Creating myths; inceptive to mythical stories.

Mythopœtic, *a.* [Gr. *mūthos*, and *poietikos*, producing.] Making myths, or fabulous histories.

Mytilene, (*Anc. Geog.*) See **MITYLENE**.

Mytilite, *n.* (*Pal.*) A petrified shell of the genus *Mitylene*.

Myxine, *n.* [Gr. *myxa*, mucus.] (*Zool.*) A genus of Cyclostomot fishes, of the *Petromyzonide* or Lamprey family, remarkable for their mucous, slippery integument. *M. limosa*, common in the waters about Grand Menan, is from 6 to 8 inches long.

Mzensk, or **Mizensk**, (*m-zensk'*), a town of European Russia, govt. of Orel, on the Mzena, 30 m. N.E. of Orel. It has a large trade in corn and hemp, and was formerly a strong military post. *Pop.* 9,500.

CLASSICAL MYTHOLOGY.

1. Rhea. 2. Saturn. 3. Cybele. 4. Jupiter. 5. Juno. 6. Neptune. 7. Vesta. 8. Pluto. 9. Ceres. 10. Bacchus. 11. Minerva. 12. Apollo. 13. Diana. 14. Mars. 15. Venus. 16. Cupid. 17. Mercury. 18. Vulcan. 19. Æsculapius. 20. Hygeia. 21. Vertumnus. 22. Melpomene. 23. Erato. 24. Thalia. 25. Ganymede. 26. Bacchante. 27. Silenus. 28. Bacchanal procession. 29. Tritons and nereids.

M.—SECTION II.

MACD

Maar'tens, MAARTIN, pen-name of J. M. W. VAN DER POORTEN-SCHWARTZ, was born in Holland, and educated in Germany and at Utrecht University. He is a barrister by profession, but devoted to literary work. As a writer of powerful novels he holds conspicuous place among the authors of the present day. Among his books, originally written in English, are: *The Sin of Joost Avelingh*, *An Old Maid's Love*, *A Question of Taste*, *God's Fool*, *The Greater Glory*, and *My Lady Nobody*.

Maca-co-worm, *n.* (*Zool.*) The maggot of a Mexican bot-fly (*Dermatobia noxialis*), which burrows under the skin of men and domestic animals.

Macaque, *n.* Any of several large Asiatic monkeys of the family *Cercopithecidae*, especially those of the genus *Macacus*, characterized by stoutness of build, prolonged snouts, naked callosities on the buttocks, and short tails; all inhabit southeastern Asia, except one—the magot of Barbary and Gibraltar. Well known species are the bonnet-monkey (*Macacus sinicus*) of southern India, the lion-tailed monkey (*M. silenus*) of western India, and the Bengal monkey (*M. rhesus*), numerous all over India and common in menageries everywhere. Fossil remains of extinct macaques are found in pleistocene deposits in Europe, as well as in India, especially in the bone-caves of Madras.

Macartney Cock, (*Ornith.*) The fire-backed pheasant (*Euplocamus ignitis*), a splendid bird of the Indian archipelago. The sides of the head are covered with a bluish-purple skin. The crown has an upright crest of feathers with naked shaft, and a number of slender spreading barbs at the tip. The tail, when depressed,

Fig. 2976.—MACARTNEY COCK.

is forked; when erect, it is slightly folded, as in the common fowl. The general color is a deep black, with blue metallic reflections; the middle of the back, brilliant orange; the tail, bluish green, orange, and white. The female is smaller, and almost entirely of a rich brown color. The head is not crested, as in the male, but the hind feathers are lengthened.

MacComb, in Mississippi, a post-town of Pike co., 8 m. N. of Magnolia, on Ill. Cen. R.R. Pop. (1897) 2,540.

Macdon'ald, SIR JOHN ALEXANDER, Canadian statesman, was born on Jan. 11, 1815. He was educated at the Royal Grammar School of Kingston, and admitted to the bar in 1835. He entered the parliament of Upper Canada in 1844 as Conservative member from Kingston, representing this constituency for many years. When the Liberals came into power, in 1850, he left the cabinet. From 1854 to 1862 he was attorney-general, acting as Premier during part of that time. Upon the organization of the Dominion government, he became a member of the new privy council, and was appointed minister of justice and attorney-general. In the same year (1867) he was made a K. C. B. His executive ability and power in debate made him prominent and influential. The adoption of the Canadian protective tariff was largely due to his efforts. In 1878, he became Premier of the Dominion government, remaining, in this capacity as always, the

firm supporter of the Conservative party principles. Died in 1891.

MacDon'ald, in Pennsylvania, a post-borough of Washington co., 18 m. W.S.W. of Pittsburg on P., C. C. & St. L. R.R.; has oil and coal interests and some manufacturing. Pop. (1897) 1,890.

Maceo (mä-sä'ō), ANTONIO, Cuban patriot, was born in Santiago de Cuba, on July 14, 1848. His parents were highly respected mulattoes, who came from Central America when its independence of the Spanish crown was declared, and when the Cuban insurrection of 1868 broke out the father advised his sons to remain neutral; but the murder of one of them by a Spanish officer so exasperated him that he burned the buildings on his plantation, and went over to the patriot ranks with his family, all of whom fought bravely in the earlier war for independence, in which Antonio reached the rank of general, and José that of colonel. Antonio was wounded twenty-three times by the Spanish troops, and his chest was pierced through. He was a farm hand when the war broke out, and joined the ranks as a private soldier, but his intrepid daring, his natural leadership among the colored people, and his strategic ability brought him to the front. After Gomez, he was the most important leader of the ten-years' war. At Demajagua, and at La Galleta, he defeated General Martinez Campos. His campaign at Baracoa was brilliant; and at San Ulpiano, in 1878, he routed the column of San Quintin, commanded by Fidel Santocildes, who met Maceo again in 1895, and was killed at Paralejo. When the peace of Zanjón was arranged in 1878, Maceo was the only general who refused to lay down his arms. He issued a protest, and continued fighting for two months. He did not sign the peace, but went to Jamaica, and then to the U. S., remaining there for some time; then went to South America, and finally to Costa Rica, always preaching the cause of Cuban independence, and conspiring against Spain. In 1890 he tried in vain to start a fresh revolution in Cuba. In 1894, as he was leaving a theater in Costa Rica, he was set upon by a party of Spaniards, one of whom he killed, after receiving a severe wound himself. He was active in preparing the rebellion of 1895, and in March of that year he landed again in Cuba, followed a few days later by Martí and Gomez. Delegates appointed by the revolutionary party held a meeting in August, 1895, and proclaimed a Cuban Republic, consisting of five states, and elected the Marquis Santa Lucia as President. Maceo was appointed general of the forces in Santiago. The blacks of this section, many of whom had fought under his lead in the former war, now flocked to his standard. His two invasions of Pinar del Rio, his campaigns in that province against picked troops led by the ablest of Spanish generals, and his actions at Paralejo, Jobito, Mal Tiempo, Sao del Indio, and Candelaria are the most brilliant feats of arms in the Cuban war. He crossed the trocha between Mariel and Majana once again to join Gomez, and pilot him in a new invasion of the western provinces. Having only his staff with him, he was surprised and surrounded by a large Spanish force, and fell fighting, on December 6, 1896, betrayed to his death—it is believed—through the venal treachery of Dr. Zertucha, his chief medical officer. General Weyler returned to Havana to celebrate with public rejoicing the death of this brilliant and magnetic Cuban general.

Maceo, José, Cuban patriot, was born in Santiago de Cuba, in 1846. Like his brother Antonio, he won distinction in the war for independence, though in a different part of the field. He signed his brother's protest of Baragua, in which he refused to join in the surrender of the patriot force. He planned to surprise and capture General Martinez Campos, but gave up the project when he learned that Antonio had opened negotiations with the Captain-General. José did not follow Antonio into exile, but remained in Santiago, and was one of the leading spirits of the new insurrection in 1879. He was taken prisoner and deported to Spain; he attempted to escape to Gibraltar, but was recaptured by the police and sent to the fortress of La Mola, at Mahon, in the Balearic Islands; he finally made his escape from there on a passing schooner, which took him to Algiers. In 1885 he went to Costa Rica, where he lived till the rebellion broke out afresh in Cuba. He immediately set out for Cuba, arriving on March 31, 1895. In a very short time he raised a large force, with which he defeated the Spaniards at Jobito in May; and in Sept. he won a signal victory over

Colonel Cañellas at Sao del Indio. He was killed at La Lama del Gato, on July 5, 1896, in a fierce engagement in which the Spaniards were finally compelled to retreat.

Macfar'ren, SIR GEORGE ALEXANDER, an English composer, was born in London in 1813. His principal operas are *Robin Hood* and *The Deed's Opera*, the first of which is highly esteemed. He also composed the cantatas *Leuora*, *May-Day*, and *Christmas*, and was an indefatigable writer on musical matters until his eyesight gradually failed and he became in 1860 totally blind. Died in 1887.

Macgreg'or, J. H., author, was born at Gravesend, England, in 1825, graduated at Cambridge in 1847. In 1866 he published *A Thousand Miles in the Rob Roy Canoe on Rivers and Lakes of Europe*. He next voyaged in a skiff, 71 lbs. in weight, through Schleswig-Holstein, Denmark, Sweden, and the Baltic, an account of which appears in his *The Rob Roy on the Baltic*. In 1869 he gave the story of his Eastern canoe-voyaging in *The Rob Roy on the Jordan*. His works have been republished in the United States. Died in 1892.

Mache'rodus, *n.* (*Paleont.*) A extinct genus of large cats (*Felidae*) found fossil in pleistocene deposits of South America, southern Europe, and Asia. Many species are distinguished, some as large as modern lions in size, and characterized by their enormous, curved upper canine teeth, or fangs, with peculiarities giving the name *mache'rodont* to this style of dentition. The best known is the great "sabre-toothed tiger" (*Mache'rodus naeogens*) of the cave-deposits of Brazil and the Argentine; and *M. latidens* of British caverns. It was one of the most powerful carnivores of the close of the Tertiary age.

Machine' Tools, (*Mech.*) Under this title may be classed all machines used in the making of other machines and tools. The lathe, drill, and planer are the primary machine tools, but the number and variety of others is so great that it is impossible to do more than summarize the most important forms.—*Boring-machines*, or boring-mills, are made both vertical and horizontal.

Fig. 2977.—A BORING MILL.

They have usually a large circular table in front, with housing or upright members behind, on which are mounted the slide-rests that carry the boring tools. Boring is distinguished from drilling in being properly the enlarging and accurate turning of a hole already formed, while drilling is the forming of a hole out of the solid metal by a drill or bit. Boring-mills are used to turn out and shape the interior of cylinders, and for similar work. The articles to be bored are mounted on the great circular table, which rotates them, while the cutting-tool is held to its work and fed along by the slide-rest. For the purpose of bolting the work solidly to the table large slots are provided. For very heavy castings, which cannot readily be mounted on a rotating table, horizontal boring-mills are made, which to some extent accommodate themselves to the work

handled. The mill shown in the illustration is designed for heavy work, such as steel tires, gun-rings, &c.—*Shearing machines* are built for cutting up bars and sheets of metal, up to a thickness of 2 inches, or a plate 60 inches long and an inch thick may be severed at one stroke by the larger sizes. The most common form is that shown, having a frame of exceeding solidity and strength, to brace the cutting blade, which operates scissor-fashion. They are often made in combination with punching machines, the framework and driving mechanism required being similar. When arranged entirely for punching, a punch and die, or several

Fig. 2978.—A SHEARING MACHINE.

punches and dies, are inserted in the place of the shearing blades. Other machines are made with jaws on opposing sides, one jaw having punches, the other shears. Multiple punching machines are made with very wide jaws, taking in a whole row of punches, as for making holes in railway fish-plates, &c. The steel girders and beams used in modern steel buildings and bridges are usually fitted with holes entirely by punching. The process has been developed so that large, fairly smooth holes can be punched in the thickest beams with a single stroke. The material is slightly weaker after punching than if the holes were drilled, but the operation is so much cheaper and quicker as to more than offset the loss in strength.—*Dircting machines*, for large boilers and similar heavy work, are made in sizes up to 16½ feet overreach—that is, of a size capable of fixing a rivet in a plate 16½ feet from the edge. Both steam and hydraulic power are used to operate the compression of the rivet. The steam riveting machines make use of a principle somewhat similar to

Fig. 2979.—A HYDRAULIC RIVETING MACHINE.

that of the steam hammer, a piston actuated by live steam being used to force the rivet into place, and a by-pass allowing the steam to flow in front of the piston again so that it may be withdrawn for the next stroke. The hydraulic riveters are very similar, and are sometimes made with a plate-closing cylinder, which is an advantage in heavy boiler work. Either of these machines, operating as they do by pressure, do much more satisfactory riveting than can be done by hammers, since they tend to upset or spread the rivet through its entire length, so that it may completely fill its hole.—*Straightening machines*, for shafts, beams, &c., are very useful mechanisms, since the steel or iron from the mill is apt to be more or less bent or warped. The machines have clamps for holding the beams, while powerful plungers are worked against the bulging parts that require depressing. Smaller machines for straightening wire are made with a large number of

rolls, placed horizontally and perpendicularly, so that when the wire is run through the bends are all taken out.—*Bending rolls* are made for giving the proper curve to boiler-plates, ship-plates, and the like. These consist of several stout steel rollers mounted in a frame, and arranged to rotate by means of gears and pulleys. By crowding three rollers together and passing a plate between them it may be curved.—*Planing, shaping,*

Fig. 2980.—BENDING ROLLS FOR ARMOR PLATES.

and slotting machines are often made in combination, some of these being of enormous size, as the one shown in the illustration. The work, which is usually some casting of great size, is laid on the floor, and the machine run up to it on the track below the floor surface. The operating tools are on a platform where the attendant stands, and may be hoisted or lowered until brought to the proper point for cutting. By such means a variety of planing and slotting operations can be performed on a heavy piece of mechanism with little actual labor. *Plate planing machines* are built with a long open frame, and a cutting-tool that travels back and forth along the whole length of the opening.—*Large lathes*, for special work, are made in many peculiar forms. One of these is the wheel-turning lathe shown, for turning the driving wheels of locomotives. The boring is done from between the wheels toward the large face-plates. Wheel-quartering attachments are provided. Turret or monitor lathes are made with a circular turret, having drills or other tools fixed on the several sides of the turret, so that any of

Fig. 2981.—PLANING, SHAPING, AND SLOTTING MACHINE.

the set may be brought quickly into position for use. Bolt and nut-screwing machines are made with rotating dies that do the cutting at a single operation, and allow the bolt or nut to remain stationary, so that it may be shifted and another fed in by a workman without stopping the machine. An index or pointer is provided, which, being set according to certain directions, brings to place the dies required for cutting any of the standard threads on the bolt or nut. The dies are also adjustable, so as to compensate for wear. An automatic device supplies the oil, and wipes out the chips as they are cut.—Other important machine-tools are: axle-centering and sizing machines, gear-cutting and dividing machines, drill-presses, forcing-machines (as for crowding car-wheels on their axles), milling and key-seating machines, rifling machines, slabbing machines, testing machines, drop-presses, and stamping machines.

Mack'ay, CHARLES, author, was born in Perth, Scotland, in 1812. He was a journalist, and a most industrious writer of miscellany, best known by his spirited songs, of which *Cleon and I* and *Clear the Way!* are examples. Died in December, 1889, in London.—His son ERIC is the author of *The Love-letters of a Violinist*, &c. A sister of Charles M., under the pseudonym of MARIE CORELLI, has written *A Romance of Two Worlds*, and other novels of extremely imaginative nature.

Mack'aye, JAMES STEELE, actor and critic, was born in Buffalo, N. Y., in 1842. In 1868 he went to Paris, with the intention of studying painting; but becoming acquainted with Francois Delsarte, and impressed with his theories of dramatic expression, he abandoned his

original project, and studied with Delsarte, until the opening of the Franco-Prussian War, when he returned to the U. S., and lectured on the science of dramatic art and expression, and produced two plays in New York. From that date onward he led an active life as actor, playwright, lecturer, and expert critic of dramatic technique, until the date of his death, at Tempas, California, February 25, 1894.

Mackenz'ie, SIR ALEXANDER CAMPBELL, musical composer, was born in Edinburgh, August 22, 1847. He studied music at Sondershausen, Germany, and at the Royal Academy in London. After several years spent in London as music teacher and violinist, he removed to Italy, and thenceforth devoted himself chiefly to composition. His works include almost every form of composition, cantatas, orchestral works, organ studies, songs, &c., and show a thorough mastery of the branches of his art. He received the degree of Mus. Doc. from St. Andrew's University in 1886, and was appointed principal of the Royal Academy of Music, in London, in 1888. His opera *Columba* was produced at Drury Lane in 1883; then followed *The Troubadour*, *The Rose of Sharon*, and *The Lord of Life*. He was made a Knight Bachelor in 1895.

Mackenzie, SIR MORELL, M. D., laryngologist, was born at Leytonstone, England, July 7, 1837. He was the son of a physician, and was educated at London University, graduating M. D. in 1862. He studied in Paris in 1858, and in Budapest in 1859, where he learned the use of the newly introduced laryngoscope. He filled various responsible posts in the London Hospital until 1874. During 1863 he founded the Throat Hospital. He established his reputation as the leading expert in his specialty; and became popularly known all over the world by his attendance on the Crown Prince, afterwards Frederick III., of Germany. His distinguished services to the prince were rewarded by a knighthood, conferred by the Queen of England, and the Grand Cross and Star of the Hohenzollern Order of Germany. He was president of the laryngological section of the International Medical Congress at Copenhagen in 1884, and was the first president of the British Laryngological Society. His various published treatises on the subject are considered of the highest value. Died in London, February 13, 1892.

Mackenzie, in Tennessee, a post-town of Carroll co., 117 m. W. of Nashville, on L. & N. and N. C. & St. L. R. Rs.; has mills and cotton gins. Here are Bethel College (Cumberland Presbyterian) and McTyeire Institute (Meth.) Pop. (1890) 1,166.

Mack'inaw-boat, n. A wherry-like, double-ended boat, with flat bottom and sides; named from Mackinaw, in Michigan, and formerly much used by traders and explorers on the Great Lakes and the Missouri river, on account of its great cargo capacity.

Maclar'en, IAN (pen-name of REV. JOHN WATSON, M.A., D.D.), was born in 1850, of Scottish parents, in Essex, England, the family removing to Perthshire four years later. He graduated at Edinburgh University in 1870, and studied theology in Edinburgh and at Tübingen. He was ordained a minister of the Free Church in Logiealmond, Perthshire, in 1875; was called to Free St. Matthew's, Glasgow, in 1878; was transferred to Sefton Park Church, Liverpool, in 1880. He received the degree of Doctor of Divinity from St. Andrew's University in 1895. In 1893 he acquired distinction by his sketches of Scottish character. These, collected in the volume *Beside the Bonnie Briar Bush*, became known all over the world. Another series, *The Days of Auld Lang Syne*, appeared in 1895. Other books of later date are: *The Mind of the Master*, *Kate Carnegie*, and *Graham of Claverhouse*. During 1896 and 1907 Dr. Watson lectured in the U. S., and everywhere received an ovation. Died at Mount Pleasant, Iowa, May 6, 1907.

Maclean (māk-lān'), LETITIA ELIZABETH LONDON, poet, was born at Brompton, England, Aug. 14, 1802; died Oct. 15, 1838. She was a voluminous writer of reviews, essays, and poems, over the signature of "L. E. L." She contributed to the leading magazines and news-

Fig. 2982.—A WHEEL-TURNING LATHE.

papers of her day, and many of her poems rank with the best poetry of the heart in recent literature.

Maclure', WILLIAM, geologist, was born at Ayr, Scotland, in 1763; early became a citizen of the U. S., and in 1806 made an elaborate survey of the country, the results of which are embodied in his *Observations on the Geology of the United States*, published in 1817. From the latter to 1839 he filled the position of president of

the Academy of Natural Sciences, Philadelphia. Died in 1840.

Mac-Nab', SIR ALLAN NAPIER, a Canadian officer and statesman, was born in 1798; commanded the troops that suppressed the outbreak of 1837, and later became prime minister under Lord Elgin's viceroyalty. Died in 1862.

Macomb', ALEXANDER, soldier, was born at Detroit in 1782; brigadier-general in command at the victory gained over the British troops at Plattsburg in 1814, and in 1835 became commander-in-chief of the American army. Died in 1841.

Macramé (*mā-k-rā-mā'*), *n.* An Italian lace made from twine, used as a fringe or trimming, and extensively employed in church decorations. The *M. cord* is used for crocheting borders, &c.

Macrea'dy', WILLIAM CHARLES, tragedian, was born in London in 1793. He entered upon a stage career of more than 40 years in 1810, and became, excepting the elder Kean and G. P. Cooke, the best tragic actor of his time and country. *Coriolanus*, *Virginia*, and *Richard III.* were, perhaps, his best three parts. In 1848-49 he performed in the U. S. with great applause, incurring much professional jealousy, which led to a serious riot in the city of New York in the latter year. He took leave of the stage in 1851. Died in 1873.

Macro-, a prefix [derived from the Greek *makros*, long or large] which gives the idea of increased size; as *macropetalous*, having large petals; *macrophonus*, loud-voiced.

Madeira, *n.* An ornamental climbing plant (*Boussingaultia basseloides*) from the Andes, having long, fleshy, green leaves, clusters of small whitish flowers, and a tuberous root. It is a perennial. (Sometimes called *Mexican vine*.)

Madera, in California, a post-town, cap. of Fresno co., 22 m. N.W. of Fresno; has sash and door factory, planing mill. Pop. (1897) 1,125.

Madison, in Minnesota, a post-village of Lac-qui-Parle co., 170 m. W. of St. Paul. Pop. (1895) 915.

Madison, in Montana, a S.W. co.; area, 4,250 sq. m. Rivers, Madison and Beaver Head. Surface, mountainous with extensive pine forests. Mining, gold, silver, lead and coal. Cap. Virginia City. Pop. (1890) 4,692.

Madison, in Nebraska, a N.E. central co.; area, 576 sq. m., intersected by Elkhorn River. Surface, undulating; soil, fertile. Cap. Madison. Pop. (1890) 13,669. —A post-village, cap. of above co., 35 m. N. of Columbus. Pop. (1897) 1,095.

Madison, in South Dakota, a city, cap. of Lake co., 60 m. E. of Woonsocket; here is a State Normal School. Pop. (1895) 2,006.

Madler, JOHANN HEINRICH, astronomer, was born at Berlin, Germany, on May 26, 1794, and became a teacher in the Berlin Normal School. In 1834 his map of the moon was published; and soon after he was appointed director of the Berlin observatory. In 1840 the Russian government gave him charge of the observatory at Dorpat, where he remained until 1865, when a disease of the eyes compelled him to return to Germany. His observations on Jupiter and Mars, and on double stars and variable stars, are valuable. In his work, *Die Centralsonne*, he presents the hypothesis of a central sun for the entire stellar universe. He also published other astronomical works.

Madrid, in Iowa, a post-town of Boone co., 36 m. N.W. of Des Moines; fire and potter's clay and coal in vicinity. Pop. (1895) 804.

Madroña, or **Madroñe**, *n.* (Bot.) A handsome evergreen tree of eastern North America (*Arbutus menziesii*), which toward the south becomes a shrub. It has white flowers and dry, yellow berries, which are eaten by the Indians. The bark is used for tanning, and the wood, which is very hard, in the manufacture of gunpowder.

Madstone, *n.* A stone about the size and shape of an egg, preserved by superstitious people in some parts of the U. S. under the impression that it absorbs venom and will cure hydrophobia.

Menad (*mē'nād*), *n.* In Greek mythology, a priestess of Bacchus, whose festivals were celebrated with mad songs and dances.—Any woman under the influence of great frenzy or unnatural excitement.

Ma'fia, or **Maf'fia**, *n.* A Sicilian society, of the nature of which different accounts are given. Some represent it as a vast association, having for its aim the substitution of its own authority for that of the law, regularly organized under chiefs whom the members pledge themselves by a solemn oath to obey, under pain of assassination in case of disobedience. This seems quite an erroneous idea. The most recent and reliable information seems to indicate that the society originated at a time when the lower classes of Sicily, more or less oppressed by those above them, cast about for some means to protect themselves, and banded together in a loose sort of way to exert such influence as they could in social and political affairs, and to mitigate the harshness of the laws. The members of the society, in protecting themselves and each other, had sometimes to resort to violent methods. As the influence of the society increased, it undertook to get work for its members by forcing landlords to employ none but members. To effect this the usual weapon resorted to has been boycotting. It is said that Italian emigrants have founded branches of the society in New York, New Orleans, and other cities of the U. S., though there is no sufficient proof of this. In New Orleans, however, there is so strong a suspicion against the Mafia that, when the chief of police was murdered in 1890, it was charged that the murder was committed by members of the Mafia. Some of the alleged murderers were

tried and acquitted. Whereupon a mob, enraged at the acquittal, broke into the jail and murdered eleven of the prisoners, including those who had been acquitted. As there was much delay in bringing to justice those who had been arrested for murdering the Italians, the government of Italy protested, and the U. S. paid a sum of money to indemnify the relatives of the victims. Much light is thrown on the nature of the society by Alongia, *La Mafia* (Turin, 1887), and Le Faure, *La Mafia* (Paris, 1892).

Mag'azine Guns. (*Ordu.*) This name is generally restricted to that class of rifled small arms carrying from five to twelve extra cartridges. These have come into very general use within the past fifteen years, and the armies of the world are now generally supplied with them. They may be divided into three classes: (1) Those in which the cartridges are carried side by side or one above the other in a magazine just below

Fig. 2983.—KRAG-JORGENSEN RIFLE.

the rear of the barrel. (2) Those in which there is a tube below the barrel in which the cartridges are carried lengthwise. (3) Those in which there is a tube through the stock, in which the cartridges are pushed forward as used. The first class have proven the most popular, the tubular magazines requiring too much time for recharging, as the cartridges had to be inserted endwise, one by one. The box form of magazine, however, admits of the insertion of a whole handful of cartridges at one operation, in only a few seconds of time. Some of the French troops and those of Portugal are the only ones among the military powers which now regularly use the tubular magazine. The United States army and the soldiers of Denmark and Norway use the Krag-Jorgensen; Great Britain, the Lee-Metford; France, the Berthier; Germany, the Mauser-Mannlicher; Russia, the Mouzin; Belgium, Spain, Sweden, and Turkey, the Mauser; Austria, Mexico, Chile, and Holland, the Mannlicher; Italy, the Mann-Cannero; and Switzerland, the Schmidt. Many of the tubular magazine guns are still in use in the armies of the nations named, as the process of re-arranging proceeds slowly. Familiarly known among these tube magazines are the Spencer, Meigs, Evans, Hotchkiss, Henry, Winchester, Colt, Lebel, Kropatschek, Martini, and Rees. A description of the American Winchester will serve to give some idea of the type: It has a tube below the barrel, in which is inserted a number of cartridges. A spring presses against the

Fig. 2984.—MAUSER-MANNLICHER RIFLE.

foremost cartridge, so that, whether there is one or more in the magazine-tube, one will always be found at the rear, ready to be thrust into the barrel when the cartridge shell last exploded is ejected. A finger lever is used to throw the fresh cartridges up into the gun-barrel. The Lee and the Livermore-Russell were among the first of the box-type of magazine guns, and the others which have been named all partake more or less of their characteristics. The Lee is the weapon of the United States navy. Its magazine is detachable, and is placed on the under side, the cartridges, five in number, being laid directly on top of each other. Each magazine has a follower for pushing the cartridges to the top, so that one may always be ready for insertion in the barrel. The magazines are made detachable, so that a number of them can be carried in a cartridge-belt, and shifted to the gun as fast as the contents are exhausted. In the Livermore-Russell the magazine is fixed, and being placed on the side, at the rear of the barrel, may be filled very quickly. Cartridges may be inserted one at a time with the fingers, or a special case, called a magazine filler, can be used to supply the whole at once. In the Mauser magazine gun, the magazine is under the barrel, but it is filled from above. In the Krag-Jorgensen rifle, the cartridges, five in number, lie side by side in the

magazine, with the exception of the one that is to be used first, which is pushed up toward the barrel, as shown in Fig. 2983. The Mannlicher magazine gun holds the cartridges in a clip, which is inserted into the magazine. When the cartridges are used up, the clip is dropped out.

Other well-known magazine rifles are the Freddi, in which the barrel is slipped back by each discharge, and actuates the mechanism for ejecting the cartridge shell, pushing a new cartridge into place, thus enabling the user to keep up a continuous fire as fast as he can operate the trigger; the Schulhof, in which nine cartridges are placed circularly in a drum-like magazine; the Helder, in partial use in the Prussian army; the Lee-Barton, Elliott, &c. The weight of the magazine guns is from 6½ to 11 pounds. The bullets weigh from 155 to 246 grains, and are of .256 to .315 caliber. The initial velocity attained is from 1,908 to 2,205 feet per second, the latter figure being attained by the lightest bullet, that of the Mannlicher.

Magnesium Light. A light made by the burning of the metal magnesium in the form of a ribbon, wire, or powder. An intensely bright flame results, but so much oxide is given off that it is objected to for indoor use. Thurston's lamp has a clockwork arrangement, driving small rollers that feed a ribbon to the flame. Cutters are used to get rid of the ashes periodically. The Larkins lamp uses a powder, which is fed to the light somewhat as the sand flows from an hour-glass. Sand is mixed with the magnesium for dilution, and to assist its flow. The powder is vaporized (*i. e.*, turns into a gas), and is lighted in a metallic tube, from which the flame ascends.

Magnolia, in South Carolina, a post-town of Sumter co. Pop. (1897) 520.

Mahaffey, in Pennsylvania, a post-borough of Clearfield co. Pop. (1897) 840.

Mahaffy, JOHN PENTLAND, was born at Chafonshire, Switzerland, Feb. 26, 1839. He was educated in Germany and at Trinity College, Dublin, graduating in 1859. He won a fellowship there, and was tutor and lecturer, and, in 1869, professor of Ancient History; in 1873-74 he was Donnellan lecturer on Theology. He is a disciple of Kant, and has published *Kant's Critical Philosophy for English Readers*. He has published several works on classic subjects, besides contributing articles on various subjects to current magazines.

Mahan', ALFRED THAYER, U. S. N., was born at West Point, N. Y., Sept. 27, 1840, son of Dennis H. M., who was at that time professor of Civil Engineering at the U. S. Military Academy; graduated at Annapolis (1859); served in the South Atlantic and Gulf squadrons during the Civil War; head of the department of gunnery in the U. S. Naval Academy (1877-80); chief of the U. S. Naval War College at Newport, R. I. (1886-89 and 1890-93); afterward commanded the cruiser *Chicago*, this vessel being assigned to the European station on May 11, 1893. Capt. M. is the author of several notable works, chief of which are *The Influence of Sea Power upon History, 1660-1783* (1890), and *The Influence of Sea Power upon the French Revolution and Empire* (1894), which gave him an international reputation and won for him many honors, including the degrees of LL. D. from Cambridge and D. C. L. from Oxford, his reference to British prowess on the sea being particularly appreciated by the English and their admirers. His *Life of Admiral Farragut* appeared in 1892, and his *Life of Nelson* (2 vols.) in 1897. Retired, at his own request, Nov. 17, 1896.

Mahat'ma, *n.* In Brahmanism, the religion of the Hindus, Brahmanical pantheism is not to be understood by every one. It is the special property of the spiritually enlightened, who are called adepts. Among the adepts there are various degrees, some possessing more spiritual enlightenment than others. An adept of the highest order, one who has reached or is supposed to have reached the highest possible point of spiritual enlightenment, is called a mahatma, meaning "the great-souled one," used as a title of respect.

Mahdi (*mā'-dee*) and **His Kingdom.** The Shiites, or heterodox Persian sect of Mohammedans, had a long succession of leaders, each of whom bore the title of Imaum (high priest). This title is also borne by the Sultan of Turkey. The twelfth and last Imaum of the Shiites, Mohammed by name, after being in captivity, entered a cave at the age of 12 and was never seen again. The founder of Mohammedanism is said to have promised, though not in the Koran, that, to complete his work in filling the world as full of righteousness as it is of iniquity, there should appear on earth a restorer of all things, a Mahdi, "the well directed one." The idea is similar to that of the Jewish and Christian Messiah. Popular superstition seized on this idea in connection with the Imaum who disappeared in the cave, and maintained that he would return as Mahdi to destroy or convert to Islam all mankind and to put all things right. Then will follow the resurrection and the final judgment. Many pretenders have come forward from time to time and claimed to be the expected Mahdi. The last one was Mohammed Ahmed who was born in Dongola, Egypt, toward 1843. He was for a time in the Egyptian civil service, but, disagreeing with the governor, became a trader and slave-dealer. About the age of 40 he set up in business as the Mahdi, and found so many devoted followers that the Eastern Sudan, at his summons, revolted. He defeated four expeditions sent against him by the Egyptians, captured El Obeid, the chief city of Kordofan, and made it his capital in 1883. On Nov. 5 in that year he annihilated the Anglo-Indian army commanded by Hicks Pasha, composed of 10,000 soldiers, with 40 European

officers. Only two persons escaped death. In 1885 he took Khartoum by treachery, and Gen. Gordon, whom the British government had sent to pacify the Sudan, was killed. This was the last of the Mahdi's exploits. He was attacked by the smallpox, of which disease he died at Omdurman on June 22, 1885. The Khalifa Abdulla succeeded him, but never wielded his power.

Mah'mal, *n.* [Arab.] The richly furnished litter sent annually on camel-back to Mecca, as a symbol of Turkish royalty; a vicarious means of making the royal pilgrimage.

Mah'moud Pasha', an eminent Turkish statesman, was born in the early part of the present century. After holding the high positions of governor-general of Syria, and of Tripoli and Barbary, he became minister of foreign affairs in 1857, and, two years later, minister of marine, where he introduced most important reforms. In Sept., 1861, he succeeded Ali Pasha as Grand Vizier of the empire, a post that he held until 1872, showing high intelligence and great administrative ability.

Mahone', WILLIAM, soldier and politician, was born in Virginia, Dec. 1, 1826. He was a civil engineer; joined the Confederate army in 1861, and rose to the rank of major-general. After the war, resumed his business, and became president of the Norfolk & Tennessee R. R.; was defeated as candidate for governor of Virginia (1878); then led a "Readjuster party," which, in 1880, elected him to the U. S. Senate, where he joined the leaders of the Republican party on the issue of protection. Died Oct. 8, 1895.

Mahoney, FRANCIS (pseudonym, FATHER PROUT), was born in Cork, Ireland, in 1805. He was educated at a Jesuit college in Paris, and in Rome, where he was ordained to the priesthood; but he soon took up the profession of journalism, as editor and newspaper correspondent, contributing also to current magazines. Collections of his articles have been published under the titles, *Reliques of Father Prout*, and *Facts and Figures from Italy*. His poems, *The Bells of Shandon* and *The Lady of Lee*, are known the world over. He retired to a monastery in 1846, where he remained until his death, on May 19, 1866.

Mahrattas, *n. pl.* [E. Ind.] When the Europeans appeared in force in India, they found their most formidable opponents in the Mahrattas (*Maráthas* or *Marhats*). These people were low-caste Hindus, with an hereditary Brahmin chief, having the title of *Peshwa*. They had, in fact, absorbed the Mohammedan Mogul empire, the great Mogul being then too. After his fall, four new Mohammedan kingdoms arose and became prominent in the 18th century. These were the kingdom of the Nawab Wazir of Oudh, that of the Nizam of Hyderabad in the Deccan, that of the Nawab of the Carnatic, and that of Hyder Ali and Tippoo at Seringapatam in Mysore. Although the Mahrattas never overcame these four Mohammedan states, they were the principal power in India in the middle of the 18th century. The battle of Plassy, won by Clive in 1757, giving to England the dominion of Bengal and Behar, the most populous provinces in the whole country, was the first severe blow the Mahrattas received. This was followed by a frightful defeat at the hands of Ahmed Shah Duráni, the ruler of Afghanistan, on the field of Panipat, in January, 1761, when the Mahrattas lost 50,000 men and all their chiefs except Holkar. Still, they showed wonderful vitality. It required long and bloody contests before they were subdued by the British. In one of these contests General Wellesley, afterward the Duke of Wellington, fought the most brilliant battle in his military career. He engaged the Mahrattas at Assaye, an Indian village in the extreme northeast of the Nizam's dominions. His opponents had from 40,000 to 50,000 men, with 100 guns. Wellesley had but little more than 7,000 men. Of these his loss was 2,500 men, yet he gained a complete victory, capturing all the Mahratta guns. The Mahratta power was completely broken. The origin, geographical and ethnological, of the Mahrattas and their early history are quite unknown. Their physical appearance, however, customs, religion, and language, seem to indicate that they were part of one or several Turanian races who made irruptions into India in the 7th century, A. D., before the rise of Mohammedanism. The dignity of *Peshwa* lasted until 1818, when it was abolished and his territories occupied by the British. Gwalior, Indore, and Baroda are still called Mahratta states, but in them only the prince and his relatives are Mahrattas, the people being of the other stock.

Mah'sir, or **Mah'snr**, *n.* [*Ichth.*] The principal game-fish of India, a barbel (*Barbus mosal*), characterized by its great scales, and often exceeding 100 pounds in weight. It lives in the hill streams of northern India, and is highly valued for its gamey qualities and delicate flesh.

Mai'gre or **Mea'gre**, *n.* [*Ichth.*] A large sciaenoid food fish (*Sciaena aquila*) of the eastern Atlantic and Indian Oceans, noted for its peculiar grunting noises. It is the object of a regular net-fishery in the Mediterranean, where it has been a favorite delicacy since classical times. The Romans not only esteemed it highly for the table, but connected it with many curious superstitions.

Mailing-machine', *n.* A mechanism for placing addresses on newspapers or periodicals, for mailing. The most common form is the Dick, in which a strip of paper is provided, on which names and addresses are printed at intervals of about half an inch. This strip is fed over a paste-roller which covers the back with moist paste. Each address is then cut off with a broad, hinged blade, which presses down the piece of

paper containing the address by the same movement with which it is cut off. A direct-printing machine is also used, which carries the type on galleys. Recent patents have been obtained for other quite complicated machines to be attached to web printing-presses, by which newspapers may be folded, wrapped and addressed.

Maize, *n.* See INDIAN CORN.

Makarov, STEPHAN OSIPORRICH, a Russian admiral, born in 1848; commanded a gunboat in the 1877 war with Turkey and made gallant attacks on Turkish ships. Subsequently he commanded the Mediterranean, the Black Sea and the Oriental squadrons, and was made commander of the Baltic fleet in 1896. The powerful ice-breaker, *Yermak*, was designed by him. In 1904 he took command of the Port Arthur fleet, and met a tragic end when his flag-ship, the *Petropavlovsk*, struck a Japanese mine and sank with nearly all on board. His death occurred April 13, 1904.

Makart', HANS, an Austrian painter, was born in Salzburg, in 1840; his pictures were noted for their brilliant and harmonious coloring. Among his many paintings may be named *Catharine Cornaro*, *The Chase of Diana*, *Entry of Charles V. into Antwerp*, *The Plague in Florence*, *Modern Amorettes*, *Abundance*, *Cleopatra*, and *Judith*, his last work. In flesh painting, in the treatment of stuffs, in chiaroscuro and brilliant effect of color he produced remarkable results. Died at Vienna Oct. 3, 1884.

Malayan Races and Languages. The races comprehended under the term Malays live on the islands of the Malay Archipelago—the largest island group of the inhabited earth—from Further India to the west coast of New Guinea. We meet with them over on the Nicobar Islands under Further Indian, especially Burmese, influences, while a branch of them peopled Madagascar. The Malayan and Polynesian races belong to one stock. Among the more important bodily characteristics of both races may be mentioned the predominance of short skulls, often exaggerated by artificial deformation; low but generally well-shaped foreheads, often causing the facial angle to be equal to that of Europeans; noses oftener snub than curved; eyes small, lively, usually placed horizontally, with remarkably wide openings and eloquent expression; cheek bones projecting forward rather than sideways; and, lastly, mouths well shaped, in spite of thick lips. The family of languages spoken by the Malayan or Malaysian races extends throughout the island-area from Madagascar to Easter Island and from Hawaii to New Zealand. All of these languages are characterized by great phonetic and grammatical simplicity. They have been divided by ethnographers into various classes: (1) The Malay or Malayan, or Malaysian proper, spoken in Malacca and the adjacent islands, called Malaysia. (2) Sub-Malayan West, including Java and other islands. (3) Sub-Malayan East, comprising Celebes, Borneo, and other islands. (4) Northeast branch, covering the Philippines, Formosa, and other places. (5) Southwest branch, including Madagascar, Hora, and others. (6) The Malayo-Polynesian, spoken by the brown peoples of the Indian and Pacific Oceans, excluding Australians and Melanesians. (7) The Malayo-Papuan, confined principally to New Guinea.

Mal'den, in *Missouri*, a post-village of Dunklin co., 27 m. W. of New Madrid. Pop. (1897) 1,122.

Mal'heur, in *Oregon*, a S. E. co.; area, 9,936 sq. m.; intersected by the Owyhee and the Malheur rivers. Surface, rolling; soil, black, sandy loam; timber scarce. Cap. Vale. Pop. (1897) 3,000.

Mal'ikite, *n.* A follower of that one of the four great sects of Sunni Moslems which was named from its founder—MALIK, the Imam.

Mal'lock, WILLIAM HURRELL, writer, was born in Devonshire, England, in 1849; was educated at Oxford, and gained the Newdegate prize for an English poem, in 1871. He is the author of *Every Man His Own Poet*, and established his reputation as a satirist by his *New Republic*, following which came *The New Paul and Virginia*, or *Positivism on an Island*, and *Is Life Worth Living?*—the latter a work that has attracted wide attention.

Mal'ta Bend, in *Missouri*, a post-town in Saline co., 30 m. E. of Lexington. Pop. (1897) 494.

Maltine (*mäl-tên'*), *n.* The fermentative principle of malt; also the name of several medicinal preparations from malt.

Mal'vern, *Arkansas*, a post-town, cap. of Hot Springs co., 43 m. W. S. W. of Little Rock; has mills and cotton gins. Pop. (1897) 1,624.

Malvern, in *Iowa*, a post-village of Mills co., 27 m. S. E. of Omaha, Neb. Pop. (1895) 1,091.

Malvern, in *Pennsylvania*, a post-borough of Chester co., 21 m. W. of Philadelphia, on Penua. R. R. Pop. (1897) 765.

Manasquan', in *New Jersey*, a post-town of Monmouth co., 12½ m. S. of Long Branch, ½ m. from the Atlantic Ocean; a summer resort. Pop. (1895) 1,427.

Manas'sa, in *Colorado*, a post-village of Conejos co. Pop. (1890) 642.

Manatee', in *Florida*, a S. W. co.; area, 1,240 sq. m. Surface, low and level; soil, adapted to pasturage; vegetables raised for northern markets; cattle raised in large quantities. Cap. Braidenton. Pop. (1897) 3,875.

Mancelo'na, in *Michigan*, a post-village of Antrim co., 13 m. S. E. of Bellaire; has a blast furnace and various factories. Pop. (1894) 1,230.

Man'chester, in *Oklahoma*, a village of Grant co. Its P. O. is CAMERON, KANSAS. Pop. (1897) 105.

Manchu'ria, *n.* [*Geog.*] The northeasternmost division of the Chinese Empire, which consists of China proper and *M.* All China proper is, in fact, a subject ter-

ritory of *M.* and has been so since 1644, when a Manchu chief conquered China. From him is descended the present or Ch'ing dynasty. The province of *M.* has an area of 280,000 sq. m., with a population of about 21,000,000, of whom the Manchus do not amount to more than a million, the remainder being Chinese. Yet the Manchus are the aristocracy of the country, furnishing its magistrates and soldiers, its police and its hunters. The Manchu language is a branch of the Mongol system, but is practically dead, Chinese being the only language now taught in the schools. Manchuria was the scene of some severe fighting in the war between China and Japan (1894). At the extremity of its southern province, Shin-King, is the naval station of Port Arthur, which the Japanese took on Nov. 22, 1894. Through the intervention of Russia, France and Germany, Port Arthur was restored to China on the conclusion of peace, though she had to pay an increased war indemnity of \$80,000,000, guaranteed by Russia. The lease of Port Arthur to Russia by China, and the apparent intention of Russia to take possession of *M.* after the Boxer outbreak, aroused the indignation of Japan, and the war of 1904-05 followed, of which *M.* was at once the cause and the seat. It ended in the complete defeat of Russia and the restoration of *M.* to China, but with Japanese control of Port Arthur and of the Manchurian Railway built by Russia and extending from Harbin to Port Arthur, and a hold upon the country which threatened to make Japan eventually the dominant power in that province of the Chinese Empire.

Man'dalay, *n.* [*Geog.*] This city, which stands 2 miles from the left bank of the Irrawaddy, and 410 miles by rail from Rangoon, has been the capital of Upper Burma since the English came into possession of the country in 1886. In the center of the city, which forms a square, each side a mile long, and is surrounded by a brick wall 26 feet high and a moat, are the royal palaces, constructed principally of teak-wood. These buildings possess little interest or beauty. A more famous structure is the Aracan Pagoda, containing a brazen image of Buddha, 12 feet high, which is an object of veneration to thousands of pilgrims. Outside the walls of the city was, until the British conquest, a dirty, crowded native town, which has been cleared away to make room for a British cantonment. The native population now lives outside the fortified city. The town has suffered much from fire and inundation in 1878, in 1886, and again in March, 1892. The population in 1897 was estimated at 201,200.

Man'dan, in *North Dakota*, a city, cap. of Morton co., on Nor. Pac. R. R., 5 m. from Bismarck; has car repair shops, sash and wood-working factory, and mills. Pop. 1,618.

Man'gabey, *n.* [*Zoöl.*] A cercopithecoid monkey of the genus *Cercocebus*. The mangabeys, or white-eyed monkeys, are closely allied to the macaques and guenons, and inhabit West Africa. There are four species, of which the best known is the black *Cercocebus fuliginosus*.

Man'gle, *n.* See LAUNDRY MACHINERY.

Man'gum, a city of Asia Minor, in the vilayet of Aidin, on the S. bank of the Hermus, about 20 m. N. E. of Smyrna. Its commerce is very active, the principal export being cotton. Pop. estimated (1897) 30,000 to 60,000, chiefly Turks.

Man'hole, *n.* A opening into a cesspool, drain, boiler, tank, or a recess in an electric subway, or a chamber or compartment of an iron ship, designed to allow the entrance of a man for examination, cleansing, and repairs. In boilers and tanks it is commonly secured by a bridge and bolt, so as to render it water, steam or air-tight, as the case may be. In drains, the cover is a lid with a stink-trap joint.

Man'icure, *n.* [*Lat. manus*, hand; *cura*, care.] The professional care or treatment of the hands, especially the nails.—One who makes a business of caring for or treating the hands and nails.

—*v.* To attend to the hands and nails, treating the blemishes of the hands and trimming and polishing the nails.

Manil'la, in *Iowa*, a post-town of Crawford co., 60 m. N. N. E. of Council Bluffs. Pop. (1895) 636.

Manistique', in *Michigan*, a post-village, cap. of Schoolcraft co., on Lake Michigan, 75 m. E. of Escanaba; has extensive lumber manufactures, and is a summer and sportsmen's resort. Pop. (1894) 2,083.

Manito'ba, *n.* [*Geog.*] The central province of the Dominion of Canada, formerly known as the Red River Country (*q. v.*). It has an area of 73,732 sq. m. (nearly 50,000,000 acres), almost two-thirds that of the United Kingdom. It had in 1901 a population, varied in origin, of 255,211, the larger portion being from Great Britain and other portions of Canada. A large part of its area consists in an alluvial plain drained by the Red River of the North and its large western tributaries, the Assiniboine and Souris. The soil is a rich, deep, argillaceous mould, especially adapted to wheat growing, and yields the best quality of that grain, Manitoba "No. 1 hard" wheat taking the first place in the markets of the world. In 1908 the wheat crop was over 60,000,000 bushels, besides nearly 40,000,000 bushels of coarser grains, raised by about 25,000 farmers. All sorts of root crops do extremely well there, but Indian corn is too uncertain to repay large investment. An extensive business is also done in raising horses and beef cattle, of which some are exported to eastern Canada and England. Dairying is advancing, about 1,500,000 lbs. of dairy butter and 1,000,000 lbs. of cheese being now sold annually. Forests skirt the eastern edge of the province and all the northern part about the

Henry Edward Manning

1808-1892

shores of the three great lakes, Winnipeg, Manitoba, and Winnipegosis, which lie mainly within the borders of the province, and yield great quantities of fish, the catching and marketing of which is already an important industry, great quantities of frozen white-fish being sent to St. Paul and other distant points each winter. In this rocky and inclement northern part of M. have been settled several colonies of northern Scandinavians and Icelanders. Mining is also a source of income along the eastern border of the province, where gold and silver occur in the rocks bordering the Lake of the Woods. The capital of M., which has a full provincial government, is Winnipeg, a city of 40,000 inhabitants that has grown up on the site of the old Red river settlements or Fort Garry—a post of the Hudson's Bay Company until 1870, when that company relinquished its charter control of the Red River valley to the Dominion of Canada. This new possession was at once explored and advertised, and attracted adventurers and pioneer agriculturists. A route by steamboat and stage was opened to St. Paul, and Winnipeg was born and grew rapidly. Meanwhile efforts were making to construct railroads eastward and southward, and by 1880 the young city was connected with the steamship lines on Lake Superior and with St. Paul, Minn., by railways. It then became the headquarters for the construction of the Canadian Pacific Railway Company's transcontinental line and the distributing point for the rapidly developing province. It thus easily became the emporium and center of the whole Canadian Northwest, and is likely to remain so. Winnipeg is a well-built, handsome prairie city, having all the appurtenances of a modern town and social advantages of a very high order. It has numerous churches and higher schools of learning of all denominations, outside of the admirable public school system with which the whole province is furnished. In this direction lay a local question of such serious import as nearly, at one time, threatened political disruption. The Roman Catholics of Manitoba had, until 1890, separate schools, but in that year denominational schools were abolished by the legislative authority of the province. The Canadian Government interfered to protect the privileges of the Roman Catholic minority, and ultimately, in 1896, a compromise was arrived at. No less than ten railways radiate from Winnipeg to all the fertile southern half of the province, and one has progressed northward some distance, with the ultimate intention of reaching Hudson Bay and establishing thence a line of steamship communication with Europe. Other flourishing towns in Manitoba are Portage la Prairie (pop. 3,500), Brandon (pop. 6,000), Minnedosa, Virden, Elkhorn, and Moosomin, in the western part; Estevan, Oxbow, Lander, and Deloraine, in the southwest; Glenboro, Pilot Mound, Rosenfeld, and Gretna, in the south; and Selkirk and Stono Wall, northward.

Man'ito Spring, in *Colorado*, a post-town of El Paso co., 5 m. N.W. of Colorado Springs. Here are soda and iron springs, with beautiful mountain scenery; a summer and health resort. Pop. (1897) 2,150.

Manka'to, in *Kansas*, a post-village, cap. of Jewell co., about 100 m. N.W. of Junction City. Pop. (1897) 865.

Man'ning, HENRY EDWARD, an eminent English Roman Catholic prelate and theologian, was born in Herts in 1808; graduated at Oxford, and took orders in the Anglican Church, from which he withdrew in 1851. In 1865 he was appointed by the Pope Archbishop of Westminster in succession to Cardinal Wiseman. He was author of numerous works, the principal of them being: *The Temporal Sovereignty of the Popes* (1860); *The Temporal Mission of the Holy Ghost, or Reason and Revelation* (1865); *The Reunion of Christendom* (1867); *The Vatican Council and Its Definitions* (1870); and *The Fourfold Sovereignty of God* (1871). Died June 14, 1892.

Man'ning, in *Iowa*, a post-town of Carroll co., 17 m. S.W. of Carroll; trade center of a grain and live stock district. Pop. (1895) 1,144.

Man'or, in *Texas*, a post-town of Travis co., 12 m. N.E. of Austin. Pop. (1897) 510.

Manor Station, in *Pennsylvania*, a post-village of Westmoreland co., 7 m. W. of Greensburg, on Penna. R.R. Immense quantities of gas-coal of fine quality are shipped from this point, from the extensive mines that exist in the vicinity. Pop. (1897) 650.

Mansfield, RICHARD, actor, was born on the island of Heligoland, May 24, 1857; spent his early youth in the United States. He is the son of Mme. Mansfield-Rudersdorff, the singer; he studied for the East Indian civil service, but abandoned that idea, and went into business, and later attempted literary and artistic work, without notable success. During 1877 he travelled through the English provinces, playing small parts in the Gilbert and Sullivan comic operas; and also appeared in London in comic opera, comedy, and tragedy. He made his first appearance in the United States at the Standard Theater in New York, as *Dromez* in the opera *Les Montagne Noires*, and was favorably received. His first decided success was in *A Parisian Romance* (1883). In 1886 he began his career as a star, and has enjoyed uninterrupted success. His interpretation of *Dr. Jekyll and Mr. Hyde* was the first ever given on the stage, and remains the best, in the estimation of the public. Other plays that have become associated with his name are *Beau Brummell* and *The Scarlet Letter*. Several other strong plays are included in his repertoire. His career was mainly in the United States. He died August 30, 1907.

Mansfield, in *Illinois*, a post-village of Piatt co., 32 m. S.E. of Bloomington. Pop. (1897) 640.

Mansfield, in *Texas*, a post-town of Tarrant co., 19 m. S.E. of Fort Worth. Pop. (1897) 600.

Man'son, in *Iowa*, a post-town of Calhoun co., 18 m. W. of Fort Dodge, on C. M. & St. P. and C. & N. W. R. R. Pop. (1895) 1,214.

Manteuffel (*mân'toi-fel*), BARON KARL ROCHUS EDWIN VON, an eminent German general, was born in Dresden, 1809. He entered the Prussian army in 1827, and in 1861 became adjutant-general, with the rank of lieutenant-general. In Jan., 1864, he was sent by his government to Vienna, there to concert measures for the combined military action of Austria and Prussia against Denmark. He was afterward made governor of Schleswig, and given the command of the Prussian troops in Holstein. The Austro-Prussian war of 1866 brought him again into active service. He occupied Altona and Hanover, and, taking command of the Army of the Main, fought a series of successful battles. He was nominated general-in-chief of the first army corps, which, in the war with France (1870), came under fire first at Courcelles and Noisseville, defeated the French Army of the North organized under Gen. Bourbaki at Amiens; was transferred with a corps to the South in 1871, and commanded the army of occupation in France, 1871-73; and was appointed governor of Alsace-Lorraine in 1879. Died in 1885.

Mantis'ia, n. (Bot.) A genus of plants, order Zingiberaceæ. One species (Fig. 2985) has long been grown in hot-houses in this country, under the name *dancing-girl*, from the singularity and beauty of its flowers, which present some resemblance to a ballet-dancer.

Man'ton, in *Michigan*, a post-village of Wexford co., 12 m. N. of Cadillac; has several saw mills, and a wood-turning and last factory. Pop. (1894) 809.

Manu (*mah'nu*), n. [From the Sanskrit *man*, to think; literally, *the thinking being*.] The reputed author of the most renowned law-book of the ancient Hindoos; and likewise of an ancient Kalpa work on Vedic rites. Hindoo mythology knows, however, a succession of Manus, each of whom created, in his own period, the world anew after it had perished at the end of a mundaue age. The word *M*—kindred with our "*man*"—belongs therefore, properly speaking, to ancient Hindoo mythology, and it was connected with the renowned law-book in order to impart to the latter the sanctity on which its authority rests. This work is not merely a law-book in the European sense of the word—it is likewise a system of cosmogony; it propounds metaphysical doctrines, teaches the art of government, and, among other things, treats of the state of the soul after death.

Man'ual Train'ing. (*Educ.*) The practical education of the hands in the use of implements, considered as a part of general culture. It does not include the work of scientific laboratories, or the teaching of trades. Before 1876 nearly all training of the hand had been special, leading to professions or craftsmanship, instead of being general and simply educative, although there were schools in Russia and Finland where the idea was beginning to develop. Victor Della Vos, the director of the Imperial Technical School for Government Engineers, at St. Petersburg, had thought out a plan for the systematic teaching of the elements of manual work, and in 1876 the Russian exhibit at the American Centennial attracted the attention of many educators, and was the beginning of a general movement for educative manual training in the schools. In 1877 the work was begun in the Massachusetts Institute of Technology, and at Washington University, St. Louis. Special and secondary schools were soon asked for, and the St. Louis Manual Training School was opened in 1880. This school met with such success that others similar to it were very soon organized in Chicago, Baltimore, Toledo, and Philadelphia. Since 1885, manual training has become a part of the courses of study in all agricultural and mechanical colleges, and in most high schools. The special manual training schools have increased, also; and among the most important of the newer institutions are those of Louisville, Providence, Denver, the Drexel Institute of Philadelphia, the Armour Institute of Chicago, and the Teachers' College of New York. The Swedish *loyd*, or dexterity system, was introduced into the United States after manual training was already firmly established, and its later and broader developments are due to outside rather than to Swedish thought.

Man'ward, (*adv*) Toward man; in the interest of man.—Also used adjectively.

Manzanita, n. (Bot.) One of the many shrubs or small trees of the Western United States (*Arctostaphylos*): (1) The great-berried manzanita, whose fruit is three-fourths of an inch in diameter; (2) the California manzanita, which is only a small shrub on the mountains, but grows to a height of 20 or 30 feet on the lowlands.

Ma'ple Rapids, in *Michigan*, a post-village of Clinton co.; 17 m. N.W. of St. Johns; has flour and lumber mills. Pop. (1894) 548.

Ma'pleson, LAURA SCHIRMER, singer, was born in Boston, March 4, 1862. She was educated in music in the United States, and at Leipsic, Berlin, and Vienna; made her first professional appearance in 1879, and afterward had an active and successful career in America and Europe. She was married on March 17, 1891, to Col. Henry Mapleson, under whose management she sang in opera in the United States and in Vienna. Died January 24, 1894.

Mar'bles of the United States. The principal sources of marbles in the Eastern U. S. are beds of Palaeozoic limestone and dolomite bordering the Appalachian Mountain system. Belts of these marbles extend throughout Connecticut, Massachusetts, and western Vermont, generally in a north and south direction. The finest grades, mostly white or deep blue-gray in color, occur in Vermont; that State alone now produces 60 per cent. of the entire output in the U. S., principally in and about the towns of West Rutland and Proctor, in Rutland co. A coarse, snow-white Archæan dolomite, quarried in Westchester co., N. Y., has been extensively used for building purposes under the name of *snowflake marble*. Building marbles of various qualities are quarried in northern Georgia. A calcareous conglomeration, or breccia, occurring in Frederick co., Md., has been used as a marble in the columns of the old Hall of Representatives at Washington. Throughout the valley of East Tennessee beds of limestone furnish the highest grade of decorative marble at present known in the eastern U. S. The colors are gray, pink, chocolate-red, and brown, the latter variety being variegated with white, and very fossiliferous. In the Rocky Mountain region are many important sources of marble which are beginning to attract attention. What are called onyx marbles are, in reality, not marbles at all—that is, they result not from the metamorphosis of calcareous organisms, but are chemical deposits from the waters of springs and streams. These are among the most beautiful of what are popularly called marbles. The only source in the U. S. of this stone is in Yavapai co., Arizona. The prevailing color of the Arizona stone is green, with shades of yellow, brown, and opaque red. The so-called verd-antique marbles, which are only serpentine rocks, have been operated upon at Deer Isle, Me.; Roxbury, Vt.; Lynnfield, Mass.; Milford, Conn.; Essex co., N. Y.; Harford co., Md.; on the Gila river in New Mexico, and near the town of Victor in San Bernardino co., Cal. In all these places, however, the stone is of an inferior quality, and of a kind which can be used for interior work alone. The value of all the marbles produced in the U. S. exceeds \$4,000,000 annually.

Mar'celine, in *Missouri*, a post-village of Linn co., on A., T. & S. F. R. R. Coal, limestone, granite, and fire and brick clay in immense quantities are found in the vicinity. Pop. (1897) 2,160.

March, FRANCIS ANDREW, philologist, was born at Millbury, Mass., Oct. 25, 1825; graduated from Amherst College (1845), and was tutor there from 1847 to 1849; was admitted to the bar in 1850, though still engaged in teaching; was appointed tutor in Lafayette College (1855); adjunct professor (1856), and professor of the English Language and Comparative Philology (1858). As an Anglo-Saxon scholar he has taken high rank; was elected president of the American Philological Association in 1873. He has published *A Method of Philological Study of the English Language*; *An Anglo-Saxon Grammar*, &c.; has also contributed articles to the *Princeton Review*, and presented papers before the learned societies.

Marconi, (*mar-kó-nē*) GUGLIELMO, an electrical engineer, born at Marzobotto, Italy, September 23, 1875. Educated at Leghorn, Bologna and Padua, he began experiments in telegraphing without wires in 1890, and in a few years devised the most promising apparatus of all the experimenters in that field. After much success in England he came to America in 1899. The distance to which wireless messages could be sent rapidly increased and communication is now possible by this method across the Atlantic.

Marcon', JULES, geologist, was born at Salins, Jura, France, April 20, 1824; educated at the College St. Louis, Paris, and afterward studied with Louis Agassiz; was employed in the Palæontological Department of the Sorbonne (1847), for which he made extensive geological investigations in Europe; and (with Agassiz) in Canada and the United States (1848-50). He was employed by the U. S. government to make an exploration of the Rocky Mountains in 1853-54, and again in 1860, being in the interim professor of Palæontology at Zurich. He has published a geological map of the U. S., with English explanatory text; also *Geology of North America*. Other works of a general scope were written in French and published in Europe.

Mar'cy, WILLIAM LEARNED, statesman and diplomat, was born in Southbridge, Mass., Dec. 12, 1786; was educated at Brown University, and became a teacher at Newport, R. I., but subsequently practiced law in Troy, N. Y. He was a soldier in the War of 1812, and at St. Regis he captured the first prisoners and the first flag taken on land. He edited the *Troy Budget* (1818); became adjutant-general of New York (1821); comptroller (1823); judge of the State Supreme Court (1829); was elected to the U. S. Senate in 1831, but resigned the following year on being elected governor of New York, an office to which he was twice reelected; was appointed by President Van Buren, to decide on the Mexican claims (1839-42); was Secretary of War in 1845, under President Polk, and was retained in the Cabinet as Secretary of State when President Pierce

came into office. Retired from public life in March, 1857, and died July 4, of the same year.

Mardi Gras (*mär-di-grü*), *n.* Shrove Tuesday, the last day before Lent. In many places, among which New Orleans is notable in the U. S., it is celebrated with brilliant processions, masquerade balls, and, to some extent, masking and revelry upon the street.

Mare Island, in *California*, in San Pablo Bay, 28 m. N. of San Francisco, was purchased by the U. S. government in 1854, for the purpose of making on it a naval dockyard and arsenal. These include wet and dry docks, marine barracks, ordnance yards, a hospital, and extensive repair-shops.

Marengo, in *Indiana*, a post-town of Crawford co., 13 m. N. of Leavenworth. Pop. (1897) 750.

Marey (*mär-rä*'), ÉTIENNE JULES, physiologist, was born on March 5, 1830, at Beaune, France; studied medicine in Paris, receiving his degree in 1859. He founded a laboratory for the purpose of physiological research and experiments; was appointed professor of Natural History in the Collège de France (1869), and succeeded Claude Bernard in the Academy of Sciences (1878). He is the inventor of many instruments for recording the movements of the heart, lungs, arteries, muscles, &c., and the flight of birds and insects. Has published several volumes which embody the results of his studies and experiments.

Marian'na, in *Arkansas*, a post-village, cap. of Lee co., 25 m. N.W. of Helena, on St. L., I. Mt. & S. R.R.; has mills and cotton gins, and ships cotton. Pop. (1897) 1,440.

Marice' City, or **CONTINENTAL**, in *Ohio*, a post-village of Putnam co., 45 m. E. of Fort Wayne, Ind. Its post-office is **CONTINENTAL**. Pop. (1897) 1,050.

Maricopa, in *Arizona*, a S.W. central co.; area, 9,892 sq. m. Rivers. Gila, Salt, and smaller streams. Surface, partly mountainous; soil, fertile in places. County-seat and Territorial capital, Phoenix. Pop. (1897) 23,650.

Mariette (*mär-re-it'*), AUGUSTE EDOUARD, archaeologist, was born at Boulogne-sur-Mer, in 1821; became early so accomplished in the study of Egyptian antiquities that in 1850, at the recommendation of the Institute, he was sent by the French government on a scientific mission to Egypt. There his attention was chiefly directed to the remains of Memphis, the ancient capital, and he began a series of excavations, which, carried on with skill and energy, led to the most important discoveries. In particular, he brought to light the Temple of Serapis and the colossal figure of the Sphinx. He was appointed, by the Khedive of Egypt, inspector-general and keeper of the national monuments of that country. Died 1891. His works include: *Le Sérapéum de Memphis* (1857-60); *Karnak, &c.* (1875); *Monuments divers* (1876); *Itinéraire de la haute Egypte*; and *Mastabas*.

Marine Corps. See **NAVY OF THE UNITED STATES**.

Marine' Engine, (*Meck.*) The development of the steam-engine for propelling steamships has been along somewhat different lines from those on which stationary and locomotive engines have been developed. The necessity for saving space and the impracticability of using mechanical stokers have assisted in evolving a type of engine quite distinctive in appearance. The cylinders are usually set upright, and in a row fore and aft, so as to be directly over the crank-shaft. In case they are of the triple-expansion type, which now meets with most favor, the arrangement is really that of three combined engines, the first being

If the vessel is twin-screw, there are commonly twin engines, of the sort described, each operating a separate crank-shaft, which turns its appropriate thrust-shaft and screw-propeller. The enormous size to which marine engines have attained may be understood by the following figures regarding the 30,000 horse-power twin engines of the *Campania*: Height, 47 feet; cylinders, 98 inches diameter; number of cylinders in both engines, 10; cylinder-stroke, 69 inches—being $2\frac{1}{2}$ times that of the largest locomotives; diameter of low-pressure cylinders, 98 inches; total weight of the two crank-shafts and thrust-shafts, 220 tons. The improvements in engine-design within 50 years are so great that 16 to 20 times as much power is now developed with the same weight of machinery. In other words, marine engines are now made that weigh but 50 pounds per horse-power, whereas in 1847 they weighed 800 to 1,000 pounds per horse-power.—The engines of torpedo-boats are built with reference to sustaining great speed for a short time. The latest development in them is the Thorneycroft turbine-engine placed in the new English torpedo-boat *Turbinia*, which has broken all speed records. This engine dispenses entirely with cylinders, and delivers the steam directly against deflecting plates, mounted in cylindrical cases on the shafts. By introducing the steam so that it tends to push the shaft aft, the thrust of the propeller-screw on the shaft is counterbalanced, and the enormous friction on the thrust-blocks, common in other steamships, is so entirely avoided that the thrust-blocks themselves are dispensed with. The engines of war-ships and of the best class of river steamboats resemble those of the Atlantic liners. The tendency in construction is toward higher steam pressures, as showing more economy. It is thought that 300 or 400 pounds of pressure may in time be available for the engines of steamships, as the mechanical difficulties in the way are being rapidly overcome.

Marinette', in *Wisconsin*, a N. E. co.; area, 1,118 sq. m. Rivers. Peshtigo, Pike, and Menominee. Lumber is the chief article of export. Cap. Marinette. Pop. (1895) 27,271.

Ma'rion, in *Wisconsin*, a post-village of Waupaca co., 28 m. N. E. of Waupaca. Pop. (1895) 500.

Ma'rionville, in *Missouri*, a post-town of Lawrence co., 24 m. S.W. of Springfield; has flour mills, saw mills, and fruit evaporators. Pop. (1897) 1,250.

Marionville, in *Pennsylvania*, a post-village of Forest co., 28 m. E. by S. of Tionesta. Pop. (1897) 550.

Mark Twain. See **CLEMENS, SAMUEL L.**

Mark'ham, CLEMENTS ROBERT, geographer and writer, was born at Stillingfleet near York, England, on July 20, 1830; was educated at Westminster; entered the navy (1844); took part in the Arctic expedition of 1851 in search of Sir John Franklin; passed as lieutenant in 1851, and resigned the same year. He travelled in Peru (1852-54), and in 1860 visited Peru and India as commissioner to introduce cinchona plants into India. He was secretary of the Royal Geographical Society (1863-88), and was attached to the Abyssinian expedition of 1867-68. His works include: *Travels in Peru and India* (1862); *History of the Abyssinian Expedition* (1869); *The War Between Peru and Chile* (1882); *History of Peru* (1892); works on Arctic exploration, &c. He has edited various reprints of works on South America for the Hakluyt Society.

Markhoor', *n.* (*Zoöl.*) A large wild goat of the high Himalaya (*Caprus falconeri*), having enormous, spirally-twisted horns, and an object of sport.

Mar'le, in *Indiana*, a post-town of Huntington co., 10 m. S.E. of Huntington, on Ch. & Erie R. R. Pop. (1897) 780.

Mar'lett, EUGENIE (the pen name of E. JOHN), was born at Arnstadt, in Thuringia, on Dec. 5, 1825. Her beautiful voice gained her the favor of the Princess Schwarzburg, who sent her to Vienna for a three-years' course of study, with a view to a stage career. Compelled by illness to abandon this object, she acted as reader to her patroness until 1863, when she retired to private life, and devoted herself to the writing of romances, which have been very popular, the English translations passing through many editions. Among the titles are: *The Old Maid's Secret*; *Gold Elsie*; *Countess Gesela*; *The Second Wife*, &c. Died at Arnstadt June 22, 1887.

Marls in the United States. (*Geol.*) Marls, in the strict sense of the term, are not numerous in the U. S. Clay or sand that can be used as a fertilizer is often called marl. Of these the best known is greensand, which owes its peculiarities to a green silicate of iron and potash which forms the bulk of it, and sometimes even 90 per cent., the rest being ordinary sand. There is a trace of phosphate of lime, evidently derived from animal remains—as animal membranes and shells contain a small percentage of phosphates. Its value in agriculture is due to the potash and phosphates. This greensand is found mainly in New Jersey.

Mar'riotsville, in *Maryland*, a post-village of Howard co., about 27 m. W. of Baltimore.

Mar'ron', in *Pennsylvania*, a post-village of Clearfield co., about 30 m. N.W. of Altoona.

Marroon (*ma-roon'*), *n.* [See **MAROON**.] Chestnut-color.

Marroon, *n.* and *a.* Same as **MAROON** (*q. v.*).

Marrow, *n.* [*A. S.* *meaþ mearg*; *D. merg*; *Ger. mark*.] (*Anat.*) A light, fatty substance lodged in the interior of the bones. Like ordinary adipose tissue, it consists of vesicles containing fat, with blood-vessels distributed through them. It is usually yellow in color, with 96 parts of fat, 3 of water, and 1 of areolar tissue, in 100 parts. In some parts it is of a reddish color. In birds, for the sake of lightness, the larger bones, instead of being

filled with marrow, contain air, which passes into them from the lungs. In the foetus the bones do not contain marrow, but a transparent, reddish fluid like bloody serum, only more consistent.—The marrow of sheep and oxen is highly esteemed by perfumers for the manufacture of pomatums, and other applications for the human hair, but it is doubtful if any grease or oil surpasses castor-oil for that purpose.

—The essence; the choicest part.

"The pith and marrow o' an attribute."—*Shaks.*

—[From *Fr. mari*, husband.] A Scotticism for a comrade; a boon-companion; an intimate associate; as "a thief and his marrow." (*Tusser*).—It also implies an equal match; as, he met with his marrow.

—*v. a.* To fill with fat or marrow.

Mar'row-bone, *n.* A bone containing marrow; a bone boiled for the sake of the marrow.—(*pl.*) The knees; the joints of the knees;—used in a burlesque or ludicrous sense.

"Down on your marrow-bones, . . . and make acknowledgment of your offences."—*Dryden*.

Mar'row-fat, *n.* A rich variety of pea, appearing late in season.

Mar'rowish, *a.* Fat; unctuous; possessing the nature of marrow.

Mar'rowless, *a.* Void of marrow; lacking fatty matter.

"Avant! thy bones are marrowless."—*Shaks.*

Mar'row-pud'ding, *n.* A pudding made with the marrow of beef-bones, or of the cucurbitaceous plant called *vegetable-marrow*.

Marrow-squash, *n.* (Called also *vegetable-marrow*.) (*Bot.*) See **CUCURBITA**.

Mar'rowy, *a.* Full of marrow; fatty; pithy.

Marrs, or **Mars**, in *Indiana*, a township of Posey co. Pop. about 1,740.

Mar'rubium, *n.* [*Lat.*] (*Bot.*) A genus of plants, order *Lamiaceæ*, including the Horehound, an erect branching grayish-looking herb, with roundish wrinkled leaves, and whitish flowers crowded in the axils. It is found wild throughout Northern Asia and Europe, and has bitter tonic properties. It is a favorite domestic remedy in chest complaints.

Mar'ry, *v. a.* (*Imp.* and *pp.* **MARRIED**) [*Fr. marier*, from *mari*, husband; *Lat. maritus*, *maritare*, to marry.] To unite in wedlock, marriage, or matrimony; to join, as a man or woman, for life; to perform the connubial rite.

"Tell him, that he shall marry the couple himself."—*Gay*.

—To dispose of in marriage; to bestow as wife.—To take for husband or wife; as, a man may not marry his aunt.—To unite in immediate or most intimate connection;—used in a figurative sense.

—*v. n.* To enter into the conjugal state; to participate as one of the principals in the rite of matrimony; to take a husband or a wife; to be united as husband and wife by the connubial band.

"Choose not alone a proper mate, but proper time to marry."—*Cowper*.

Mar'ry, *interj.* [*i. e.*, by the Virgin Mary!] Indeed! in truth! is it possible! verily!—an old form of exclamation, indicative of surprise or incredulity.

Mar'ryat, FREDERIC, a British naval officer and well-known novelist, was born in London, 1792, and at the usual age for the sea-service entered the navy as midshipman in the *Impéreuse*, a 44-gun frigate, sharing during the first three years of his new profession, from 1806 to 1809, in not less than 50 actions. During this term he obtained a reputation for courage and daring that his after career fully bore out and confirmed. In 1815 he was made a commander, and in 1823, when in command of the *Sabine*, 18-gun sloop, he took part in the attack on Rangoon, receiving the thanks of the governor-general, and the honor on his return home of C. B. From 1828 to 1831 he served with the Channel fleet, and in 1837 wrote a book on *Naval Signals for the Commercial Marine*; for this valuable work the king of the French bestowed on him the order of the Legion of Honor. The system or code of signals there suggested is now generally adopted by the merchant-service of Europe. Two years after quitting the Channel fleet he adopted literature as a profession, and produced a series of nautical stories that for vigor of dialogue and graphic description have not been surpassed by the most gifted author of the present time. Of these works the most celebrated were *Peter Simple*, *The King's Own*, *Jacob Faithful*, *Newton Foster*, *Japhet in Search of a Father*, *Midshipman Easy*, and *Ratlin the Reefer*. For his courage in saving the lives of several seamen, the Royal Society conferred on him its gold medal. Died in 1848.

Marsa'la (anc. *Lilybæum*), a seaport-town of Italy, in the W. extremity of the island of Sicily, 16 m. S.S.W. of Trapani. It exports wine, oil, wheat, and barilla. The *M.* wine is one of the best among the Sicilian wines. *M.* was the ancient cap. of the Carthaginian dominions in Sicily. Its present name of *M.* was derived from the Saracens, who esteemed its harbor so highly that they called it Marsa Alla, *i. e.*, the port of God. In the 16th cent. the harbor was blocked up with a mound of sunken rocks, by order of Charles V., to protect it from the Barbary corsairs. Garibaldi selected it as a landing place on his invasion of Sicily, in 1860. Pop. 25,000.

Marseillan (*mar'sa-yon*), a town of France, dept. Hérault, on the lagoon of Than, 15 m. E. of Béziers. Pop. (1897) about 4,100.

Marseillais, **Marseillaise** (*mär-säl-yäz'*), *n. m.* and *f.* (*Geog.*) A native or inhabitant of Marseilles, France.

Fig. 2986.—ENGINES OF THE KAISER WILHELM GROSSE. Owned by the North German Lloyds Steamship Co. 28,000 horse-power; built in 1897.

a high-pressure engine, receiving the steam directly from the boilers, at a pressure of perhaps 150 to 200 pounds, and having a comparatively small cylinder; the second is an intermediate engine, receiving the steam exhausted from the cylinder of the first engine, at a much lower pressure, through very large pipes. This cylinder is necessarily much larger than the first, and sometimes it is divided into two cylinders. The third or low-pressure engine receives its steam from the exhaust of the intermediate cylinder or cylinders, and resembles the intermediate in construction, except that the cylinder or cylinders are still larger, being designed to expand the steam to the last useful degree.

Marseillaise (*mar-sal-yei-sé'*), or MARSEILLAISE Hymn, *n.* A celebrated national song of France. It was composed by Rouget de l'Isle, an officer in the engineer corps at Strasbourg, early in the French revolution. It was first called *L'Offrande à la Liberté*, and soon became very popular throughout the country, contributing in no small degree to the success of the revolutionary arms. It received its present name from being sung for the first time in Paris, by a band of men who were brought from Marseilles by Barbaroux, to aid in the revolution of Aug. 10, 1792. It has since continued to be the favorite song in all popular movements in France.

Marsh, GEORGE PERKINS, author and diplomatist, was born at Woodstock, Vt., in 1801. He graduated at Dartmouth College, N. H., in 1820, and, after being called to the bar and elected a member of the Supreme Executive Council of his State, was elected to Congress 1842-49. From 1849 till 1853 he held the post of American Minister at Constantinople, during which period he was charged with a special mission to Greece, in 1852. A great part of this time he passed in extensive travel over the North of Europe, where he had already attained a high reputation as a Scandinavian scholar. In 1861 he was appointed U. S. Minister to Italy, which position he held at his death in 1882.

Marshall, HUMPHREY, soldier and politician, was born at Frankfort, Ky., Jan. 13, 1812. Graduating from West Point in 1832, he served one year with the Mountain Rangers, resigning in 1833. He then studied law, and was admitted to the bar. He was colonel of the First Kentucky Cavalry in the Mexican War; was elected to Congress in 1849; was appointed by President Fillmore U. S. Commissioner to China in 1852; was reelected to Congress in 1855, serving two terms. Though personally opposed to secession, he went with his State, entering the Confederate service as a brigadier-general; he became a member of the Confederate Congress, and practiced law in Richmond, Va. Died April 17, 1871.

Marshall, THOMAS FRANCIS, lawyer, was born at Frankfort, Ky., June 7, 1801; settled in Louisville (1831), and became prominent as a pleader and political speaker. He served several terms in the legislature; was judge of the Louisville Circuit Court; was elected to Congress as a Whig, in 1841, but subsequently joined the Democratic party. His *Writings and Speeches* were edited by W. L. Barre. Died Sept. 22, 1864.

Marshall, WILLIAM CALDER, sculptor, was born at Edinburgh in 1813, studied his art under Chantrey and Baily, and in 1852 became a Royal Academician. Among his finest works are *The Dancing Girl Reposing*; *Sabrina*; and the statues of *Lords Clarendon and Somers* in the Houses of Parliament, London, and that for the national monument erected to the *Duke of Wellington* in St. Paul's Cathedral. Died in 1894.

Marshall, in *Minnesota*, a N.W. co.; area, 1,810 sq. m.; watered by Middle, Snake, Thief, and Tamarac rivers, and bounded on the W. by the Red River of the North. *Surface*, level, sloping partially to the Red river; *soil*, very fertile, producing excellent wheat. *Cap.* Warren. *Pop.* (1895) 12,072.

—A post-village, *cap.* of Lyon co., 108 m. W. of St. Peter. *Pop.* (1895) 1,744.

Marshall, in *Oklahoma*, a post-village of Logan co. *Pop.* (1897), 265.

Marshall, in *South Dakota*, a N.E. co.; area, 900 sq. m.; watered by small streams and numerous lakes. *Surface*, rolling; black soil, with clay subsoil. *Cap.* Britton. *Pop.* (1895) 4,503.

Marshall Islands. (*Geog.*) A group in the North Pacific, which has been under German protection since 1885. It consists of two chains of islands lying nearly parallel to each other, and running N.W. and S.E. from Lat. 11° 50' to 4° 30' N., and from Lon. 167° to 173° E., covering an area of over 350 to 400 m. in extent. The eastern chain is known as the Radack, and the western as the Rakick, each numbering from 15 to 18 groups of low coralline islands. This archipelago was discovered by Saavedra in 1529, and explored by Marshall and Gilbert in 1788. A mission was established on one of these islands in 1857, which continues to be successful. The inhabitants number about 15,000. They are Micronesians, dark in color, with straight hair, are intelligent and hospitable, and are remarkably expert as navigators.

Marshfield, in *Oregon*, a post-village of Coos co., on Coos Bay, 6 m. from Empire City; has saw mills, box and barrel factory, and tannery; coal and lumber are shipped. *Pop.* (1897) 1,950.

Marshfield, in *Wisconsin*, a city of Wood co., 26 m. N.W. of Grand Rapids; has furniture, stove, wood veneer, and other factories. *Pop.* (1895) 4,586.

Marston, PHILIP BURKE, poet, was born in London in 1850, the son of John Westland M., playwright and novelist. He was blind from early childhood; was the subject of Dinah Mulock Craik's poem, *Philip, My King*; and also of Blake's poem, *The Blind Boy*. His published books are entitled: *Long Tide* (1871); *All in All* (1874); *Wind Voices* (1884); *For a Song's Sake* (1887); *Garden Secrets* (1887). Died Feb. 14, 1887.

Martello Tower. (*Fortif.*) The name of a kind of fort, small, circular, with very thick walls and a shell-proof roof. The cellar and first floor are used for ammunition and supplies, the second and third for living rooms and armory for the garrison, and the roof is provided with a parapet, and mounts one or more heavy guns. The name is derived either from the Italian word for hammer, on account of the heavy mammers used to strike the alarm bells with which these forts were often provided, from the name of the inventor of the structure, or from the town of Mortello, in Corsica. Tower Dnpre, in Louisiana, and the tower

on Tybee Island, Georgia, belong to this class, and others stand at Kingston, Ontario, and in New Brunswick.

Martin, in *Kentucky*, an E. co.; area, 235 sq. m.; bounded on the E. by the Tug Fork of Big Sandy River. *Surface*, hilly; *soil*, fertile. *Min.* coal, iron, and salt; has oil and natural gas. *Cap.* Inez. *Pop.* (1890) 4,209.

Martin, in *South Dakota*, a N.W. co.; area, 755 sq. m. Unorganized.

Martin, in *Texas*, a W. co.; area, 900 sq. m. *Surface*, rolling, and table-lands; *soil*, very fertile and well watered. Stock and sheep raising is largely carried on. *Cap.* Stanton. *Pop.* (1890) 264.

Martin's Ferry, in *Ohio*, a city of Belmont co., on Ohio river, 2 m. above Wheeling, W. Va.; has blast furnace and stove foundry, several glass works, machine and engine works, &c. *Pop.* (1897) 6,850.

Martineau (*mār'tin-ē*), JAMES, an English divine and theologian, born in 1805; became professor of Mental and Moral Philosophy of Manchester New College, in 1857, and its principal in 1868; retired in 1886. His leading works were: *The Rationale of Religious Inquiry* (1845); *Studies of Christianity* (1858); and *Essays, Philosophical and Theological* (1866-9); *Study of Religion* (1888); *The Seat of Authority in Religion* (1890). He was a brother of the celebrated Harriet Martineau (*q. v.*). Died Jan. 12, 1900.

Marx, KARL, Socialistic leader and writer, was born at Cologne in 1818; was educated at the universities of Bonn and Berlin. He edited a newspaper in Cologne, which was suppressed (1843) for its radical utterances. He then removed to France, and studied political economy and sociology; contributed satirical articles to German newspapers until, at the request of Prussia, he was expelled from France, and found refuge in Belgium. He took part in the Workingmen's Congress at London (1847), and returning to Cologne, established a paper in which he advocated socialism and refusal to pay taxes. He founded the famous society known as The International (*q. v.*), which at first was very radical. His leadership was rejected by British workmen, and Marx was compelled to resign his office in 1872. With other extreme socialists he established a central council in New York, though he himself resided in London. His tactless radicalism in speech and action constantly defeated the best arguments of his theory; but his published work on *Capital* is of the highest logical merit, and has strongly influenced recent economic thought. Died May 14, 1883.

Masai Land, and the Masai. (*Geog. and Anthropol.*) The Masai country of East Africa comprises the area between 1° N. Lat. and 5° S. Lat. In breadth it is very irregular, with an average of 90 miles. The country is quite markedly divided into two distinct regions, the southerly one being a desert area and the northerly a high plateau region. The southerly part, comparatively low in altitude, owes its desert appearance and extreme unproductiveness to the scantiness of the rainfall, which for three months in the year barely gives sufficient sustenance to scattered tufts of grass. Still, to this part of the country belongs the colossal mass of Kilima-njaro, and there are other huge metamorphic and volcanic masses. The northerly, or high plateau part, rises from an elevation of nearly 5,000 feet on either side to little short of 9,000 feet in the center. It is a charming region, characterized by everything that makes a pleasing landscape, with dense patches of flowering shrubs and noble forests. Here and there you find a park-like country, enlivened by groups of game. There is a network of babbling brooks and streams, and a rainfall of from 30 to 40 inches a year, while the desert region has but 15 inches. On the eastern half of the plateau rises the snow-clad peak of Mt. Kenia. The Masai who inhabit this beautiful country are eminently a pastoral people. They cling devotedly to their own customs, and have maintained the purity of their race, not intermarrying with other tribes. There is nothing of the negro type in their appearance. With clear chocolate-brown skins, their hair is frizzy, but thinner and much finer than that of the negro. Their limbs are beautifully formed and developed, their feet and hands being remarkably small. The boys, on approaching the age of 14, are circumcised by a method cognate with that of certain other Central African tribes, and not like that practiced by the Jews. Shortly after undergoing that rite, the youth is sent to live in the warriors' kraal. Here he is not allowed to eat vegetables, but is obliged to confine his diet to milk and meat. He cannot, however, mix these, and before changing from one to the other he has to take a powerful purgative. Both sexes are very dissolute before marriage, the young warriors and unmarried girls living together in free love. A man rarely marries before the age of 25, or a woman before she is 20. Once married, the husband, from a lusty, blood-thirsty fiend, becomes a staid, courteous, and reasonable man, looking closely after his flocks and herds, and living on whatever diet may suit his fancy. For information about this interesting country and people, should be consulted *Through Masai Land*, by Joseph Thomson, 1885; *The Kilima-njaro Expedition*, by H. H. Johnston, 1886; and Ludwig von Höhnel's *Discovery of Lakes Rudolf and Stephanie*.

Mascagni (*mäs-cäni*), PIETRO, musician, was born in Leghorn, Italy, Dec. 7, 1863; studied for a brief period at the Milan Conservatory; conducted various travelling opera companies, and settled (1886) at Carignola, where he taught music and composed his *Cavalleria Rusticana*, a one-act opera. Later works are: *L'Amico Fritz*, 1 *Antean*, and *Ratcliffe*.

Mas'cot, *n.* Some object which brings good fortune to its owner, or a person whose interest or companionship assures good luck to his associates; opposed to *lloodoo*.

Mash, *v.* (*Slang.*) To flirt indiscriminately, or impudently seek acquaintance with one of the opposite sex.—*To make a mash*: to win the acquaintance or attention sought.—*To be mashed*: to be infatuated with.

Mash'er, *n.* One who flirts indiscriminately, or impudently addresses one of the opposite sex; generally applied, in contempt, to one who erroneously believes himself to be attractive, if not irresistible.

Mash'ic, or **Mash'y**, *n.* A club used in golf.

Mashonaland, *n.* (*Geog.*) This territory, since August, 1890, has been part of the possessions of the British South Africa Company. Lying to the north-east of Matabeleland, to the ruler of which Mashonaland was subject before it was acquired from him by the British Company, it embraces a plateau (4,000 to 4,000 feet high) reported to be the healthiest part of South Africa, with rich soil, grass all the year round, and an abundance of running streams. Immense quantities of gold, as well as iron and copper, exist in the country, although for mining the gold expensive machinery is required. The native Mashonas are a peaceful and industrious people of Bantu race, who, before the British protectorate was established in the country, lived in perpetual fear of the Matabeles. A considerable number of very ancient stone structures and walls, large, solidly built, and considerably ornamented, are found in Mashonaland. What race built these structures and for what purpose are quite unknown. See *The Ruined Cities of Mashonaland*, by J. Theodore Pent (1892).

Mason, GEORGE, statesman, was born in Virginia, 1725; was author of the Declaration of Rights and Constitution of that State, and a member of its legislature. In 1777 he entered the Continental Congress, and sat in the National Convention which framed the Constitution of the U. S., a document which he refused to sign on the ground that it opened a door to monarchy, and with Patrick Henry led the opposition in the Virginia Convention of 1788. Died in 1792.

Mason, JAMES MURRAY, diplomatist, was born in Virginia, 1798. He held a seat in the U. S. Senate from 1847 till 1861, during which period he brought forward the Fugitive Slave law of 1850. After the breaking out of the Civil War in 1861, he was nominated by the Confederate Government Mr. Sidel's colleague, as commissioner to England. On their way thither, in Nov., they were seized on board the British mail-steamers *Trent*, by Com. Wilkes, U. S. N. This act nearly led to a war with England, and on the demand of the latter, both commissioners were liberated in January, 1862, and allowed to pursue their mission.

Mason, SIR JOSIAH, manufacturer and philanthropist, was born at Kidderminster, England, February 23, 1795. In youth he was poor, and, after trying various employments, he began to make pens for Perry & Co. This business increased until he became the largest manufacturer of pens in the world. In 1842 he became a partner with Elkington in the electro-plating trade. He used his wealth to build and endow almshouses and orphanages, at a cost of £260,000; and also founded the Josiah Mason College at Birmingham. Died June 16, 1881.

Mason, LOWELL, musician, was born in Medfield, Mass., January 8, 1792; began his career as instructor and leader of choirs in Savannah, Ga., in 1812; in 1821 published the *Handel and Haydn Collection of Church Music*; removed to Boston in 1827, and devoted his entire time to teaching classes in vocal music and encouraging popular musical taste. The range of his influence extended throughout New England and the Middle States. He issued over 40 collections of sacred and secular music for church choirs, glee-clubs, schools, and Sunday-schools, with several text-books for singing-classes, &c. The amount of work done in this field by Dr. M. exceeds that accomplished by any other musician. In 1855 the University of New York conferred on him the degree of Doctor of Music. Died August 11, 1872.

Mason, WILLIAM, son of Dr. Lowell M., was born in Boston, January 24, 1829. At 20 years of age he went to Europe, and spent 5 years in study at Leipzig, Prague, and Weimar, under the instruction of Moscheles, Moritz Hauptmann, and E. F. Richter, and finally with Franz Liszt. During 1853, his last year in Europe, he made a concert tour as a pianist, and in 1854 returned to America as a professional pianist. In 1855 he established the Mason and Thomas societies of chamber music, in association with Theodore Thomas, George Matzka, Joseph Mosenthal, and Carl Bergmann; these were continued until 1868. He was the first artist to give "piano recitals" exclusively. His life has been devoted mainly to teaching, his studio being in New York city. Besides numerous compositions for the piano, he has published, in collaboration with Eli L. Hoadley, *A Method for the Piano-forte*, and *System for Beginners in the Art of Playing Upon the Piano-forte*. His latest work, embodying his ripe experience as a pianist and teacher, is *Touch and Technique*, in four parts; in the preparation of this he has been ably assisted by his pupil, W. S. B. Matthews. Dr. M. received the degree of Doctor of Music from Yale College in 1872.

Mason, in *Washington*, a W. co.; area, 996 sq. m. *Surface*, hilly, with broad and fertile valleys; Olympic Mountains traverse the northwest corner. Lumbering, milling, and oystering are the chief industries. *Cap.* Shelton. *Pop.* (1897) 3,500.

Mason, in *West Virginia*, a post-village of Mason co. Pop. (1897) 1,085.

Mason and Dixon's Line. The S. boundary of Pennsylvania, separating it from Virginia and Delaware. So called from the commissioners (Charles Mason and Jeremiah Dixon) who surveyed the line as a Colonial boundary in 1763. As this line, extended, separated the slave-holding Southern from the free Northern States, it became synonymous with the distinction between Unionism and Disunionism preceding and during the Civil War.

Mason Valley, in *Nevada*, a post-village of Lyon co. Its P. O. is YERINGTON. Pop. (1897) 670.

Maspe'ro, GASTON CAMILLE CHARLES, Egyptologist, was born of Italian parents, at Paris, on June 24, 1846. In 1869 he began lecturing on Egyptology at the School of Higher Studies in Paris; was appointed professor of Egyptology in the College of France (1873); was chosen to succeed Mariette as director of explorations and custodian of the Boulak Museum (1881); and became professor at the Institute of Paris (1886). In his explorations he has opened the pyramids of the kings belonging to the fifth and sixth dynasties, discovered new sepulchral sites at Deir-el-Bahiri, and at other places. He has published several volumes, which record the results of his researches, with critical comments; his *Manual of Egyptian Archaeology* appeared in 1895. See EGYPT, &c.

Mass, *n.* (*Physics*.) The quantity of matter in a body, or the measure or expression of the amount of force necessary to produce a given amount of motion in the body within a specified time. In order to measure mass, we assume that the attraction of the earth on all particles of matter is the same, and is not dependent on the nature of the matter attracted. This assumption seems to be justified by the fact that bodies of all kinds fall with equal velocity in the exhausted receiver of an air-pump. Hence we measure the mass of a body by its weight, but we must not confound weight and mass, since the mass always remains the same, while the weight may vary with location. If at the same spot on the earth's surface one body is twice as heavy as another, the mass of the first is twice that of the second. Suppose, however, that a body be weighed by a spring-balance at a certain place, and weighed again by the same instrument at another place nearer the equator, it will be found that the body is lighter at the latter place, although the mass has not been altered.

Massage (*mās-sāzh'*), *n.* A mechanical form of medical treatment, consisting of an intelligent fingering of the muscles, intended to reproduce as nearly as possible natural exercise. The word, which is from the Greek, means to knead, and the system is undoubtedly of very ancient origin, though it was not developed as now practiced until about 1860. There are many different processes, the principal ones being rubbing, stroking, tapping, and kneading, each process being subject to many changes, according to the patient or the nature of the disease which is being treated. It is now largely used as a treatment for nervous diseases especially, and is administered by trained persons called *masseurs* (masenline) or *masseuses* (feminine).

—*v. a.* To treat by massage.

Masse (*mās-sā'*), FELIX MARIE VICTOR, a popular French composer, was born at Lorient, 1822; became, in 1866, professor of Composition at the Conservatory of Music, Paris. Among his admired comic operas are *Les Noces de Jeannette* (1853), and *Galathée* (1854). He was elected a member of the Académie des Beaux Arts in the place of Auber, in 1872. Died 1884.

Masse, *n.* [*Fr.*] (*Billiards*.) A stroke with a cue held perpendicularly for the purpose of causing the ball to return in a straight line, or to make a curve around another ball.

Massenet (*mās-sin-nā'*). JULES ÉMILE FÉDÉRIC, musical composer, was born at Montaud, France, May 12, 1842; entered the Conservatory at Paris when 9 years of age; was forced through poverty to give up his studies, but afterward was aided by a relative and returned to the Conservatory, where he secured a first prize in 1859. His compositions are numerous and include the operas *Le Cid*, *Don César de Bazan*, &c.

Massey, GERALD, an English poet, was born at Tring, 1828, became an errand-boy in London, and an entirely self-educated man. He has since raised himself to a high position in the world of poetry by his *Poems and Chansons* (1846); *Voices of Freedom and Lyrics of Love* (1849); *The Ballad of Babe Christabel* (1855); *Havelock's March* (1861); and *A Tale of Eternity, and other Poems* (1869).

Massif (*mas-sēf'*), *n.* [*Fr.*] (*Geol.*) Any isolated, central, independent mass.—The central mass of a mountain range, more or less defined by longitudinal or transverse valleys.

Matt, or **Matt**, *n.* [*Ger. matt*, dull, dim, said of metals.] A dull or lusterless surface of a metal, produced by a matting-tool, or the tool which is used to produce it.

—*v. a.* To produce a dull or dead surface (on metal).

Matabeleland, *n.* (*Geog.*) An inland country, north of the Transvaal, and extending as far north as Mashonaland. The Matabeles are a tribe of the Zulus, who were the predominant native element and an important factor in South Africa until their war with Great Britain in 1879. About 1830, the Matabeles emigrated north of the present limits of the Transvaal and lived chiefly by raids on adjoining tribes, especially the Mashonas, for women and cattle. In 1890, Matabeleland was handed over to the British South Africa Company. As the raids were still continued, the Company organized an expedition against the Matabeles, who, led by their king, Lobengula, were defeated in

several engagements, and their military organization broken up. Lobengula died in hiding in February, 1894. The Matabeles, not satisfied with the chastisement they had received, rose again at the beginning of 1896, but by the latter part of the year, after much hard fighting and the aid of British troops, the country was pacified.

Mat'grass, *n.* A kind of grass that by its net-work of roots is adapted to bind together sandy soils; as beech-grass, lyme-grass, &c.

Math, *n.* [*A. S., mǣth.*] A mowing, or the crop gathered therefrom; nearly obsolete, except in *after-math* and *latter-math*.

Mathurin, *n.* (*Eccles.*) A member of a monastic order named from the church of St. Mathurin in Paris. The order, which was a branch of the Trinitarians, was founded in the 12th century, and devoted a large part of its revenue to the liberation of Christians held in Turkish captivity.

Matoaca, in *Virginia*, a post-village of Chesterfield co. Pop. (1897) 550.

Matronymic, *n.* [*Lat. mater*, mother, and *Gr. onyma*, name.] A name derived from a mother or a maternal ancestor.

Mat'su, *n.* (*Bot.*) A pine tree of China and Japan (*Pinus Massoniana*) which grows to great age and size. It is the most common tree in Japan. Its wood, which is very tough and durable, is used for furniture and house carpentry.

Mattawamkeag, in *Maine*, a post-town of Penobscot co. Pop. (1897) 660.

Mat'thews, JAMES BRANDER, dramatic writer and critic, was born in New Orleans, La., February 21, 1852; graduated at Columbia College, and entered upon the profession of literature. He has written many plays, and is regarded as one of the leading dramatic critics of the day. In 1892 he was appointed lecturer on Literature at Columbia College.

Mat'toid, *n.* [*L. Lat. mattus*, dull.] A kind of monomaniac characterized by stupidity.

Mau'li, *n.* [*E. Ind.*] One of a Mohammedan sect in the East Indies that allow wine-drinking.

Maul-in-goal, *n.* (*Foot-ball*.) Contest for the ball carried over the goal-line but not yet touched down.

Mau'na Ke'a, *n.* (*Geog.*) "The White Mountain," as the words mean, is one of the volcanoes of the island of Hawaii, and a colossus among the volcanoes of the world, being 13,900 feet high, a trifle higher than its neighbor, Mauna Loa (*q. v.*) Mauna Kea is not an active volcano and has every appearance of having been in repose for thousands of years. The summit platform of the mountain has an altitude varying somewhat with its inequalities, but averaging probably 12,500 feet. Upon this platform, about five miles in length and two miles in width, stand about a dozen large cinder-cones, from 700 to 1,000 feet in height. Vegetation is not left behind until there is attained an altitude of nearly 11,000 feet. No signs of any recent volcanic activity are to be seen. All the lava-beds look old and greatly weather-worn. In some of them the decay and disintegration are so great that they are reduced to mere heaps of weather-beaten fragments. See HAWAII.

Manna Lo'a, *n.* (*Geog.*) These words mean "The Great Mountain," which is one of the active volcanoes on the island of Hawaii. It soars to the height of 13,700 feet, and Capt. Clarence Dutton, in a report to the director of the U. S. Geological Survey, calls Manna Lo'a "the king of modern volcanoes. No other in the world approaches it in the vastness of its mass or in the magnitude of its eruptive activity." The eruption of 1880-81 poured forth for nine months a river of lava which ran fifty miles, varying from a few hundred yards to three miles in width. Deep-sea soundings in the vicinity of the island of Hawaii have recently disclosed the fact that Mauna Loa, as well as all the other volcanic piles on the Hawaiian Islands, are only the summits of gigantic mountain-masses rising suddenly from the bottom of the Pacific; so that Mauna Loa, as well as Mauna Kea, referred to its true base, is not far from 30,000 feet in height. The pit, or caldera, of Manna Lo'a is a little more than 600 feet in depth, and the encircling walls are precipitous and continuous. The length of the caldera is a little less than three miles and its width about a mile and three-quarters. See HAWAII.

Maupassant (*mō-pās-sānt'*), GUY DE, novelist, was born in Normandy, Aug. 5, 1850; served in the Franco-German war. As an author he was one of the younger branch of the naturalistic school. His writings include a volume of poems, *Des Vers*, and the novels, *La Maison Tellier*; *Contes Du Jour*; *Monsieur Parent*; *Bel-Ami*; *La Petite Roque*; *Pierre et Jean*; &c. Died July 6, 1893.

Maverick, *n.* [*Western U. S.*] An unbranded animal which the finder brands for himself or his employer;—hence, something dishonestly appropriated. The name is peculiar to the great United States cattle ranges, where the cattle of many owners herd together and must therefore be branded to prove ownership. The calves, before they are branded, are known by their mothers; but if one strays away, it may be illegally branded and thus become a *maverick*. The name is also applied to the unbranded animals driven in at the general round-up and equitably divided among the owners. The use of the word is said to have originated in the fact that Samuel Maverick, a Texan cattleman, chose to distinguish his cattle by giving them no brand, and consequently, when they became mixed with other herds, he claimed all the unbranded animals as "Maverick's."

Max'imial, *a.* Of the greatest or highest possible value.

Max'ton, in *North Carolina*, a post-town of Robeson co., 36 m. S.W. of Fayetteville. Pop. (1897) 725.

Max'well, JAMES CLERK, physicist, was born at Edinburgh, Scotland, June 13, 1831; graduated at Cambridge (1854); was professor of Natural Philosophy at Aberdeen (1856-60), and at King's College, London (1860-65); became professor of Experimental Physics at Cambridge in 1871. His *Treatise on Electricity and Magnetism*, published (1873) in 2 volumes, is the crowning work of his life, and is regarded as a classic in that branch of physics. (See ELECTRICITY.) Died Nov. 5, 1879.

Maxwell, in *California*, a post-town of Calusa co. Pop. (1897) 620.

Maxwell, in *Iowa*, a post-town of Story co., 28 m. N. of Des Moines. Pop. (1895) 690.

May'er, ALFRED MARSHALL, physicist, was born at Baltimore, Md., Nov. 13, 1836; educated at St. Mary's College; appointed professor of Physics in the University of Maryland (1856); held a similar position in Westminster College, Missouri (1859); in Pennsylvania College, at Gettysburg (1865); in Lehigh University (1867), and in Stevens Institute (1871). His researches in astronomy, acoustics, and general physics made him eminent in the scientific world. Died July 13, 1897.

Mayesville, in *S. Carolina*, a post-village of Sumter co. Pop. (1897) 762.

Mayhaw', *n.* The apple-haw, a hawthorn of the S. United States, growing on the edges of streams, and bearing a red juicy fruit that ripens in May and is used for jellies.

May'hew, HENRY, journalist and miscellaneous writer, was born in London, England, Nov. 25, 1812. He ran away from Westminster School, and for discipline was sent on a voyage to Calcutta. On his return he was apprenticed to his father, who was a solicitor. With Gilbert à Becket he started *The Cerberus*, which was stopped by Beckett's father. The two boys then went to Edinburgh, hoping to make their fortunes as actors and authors, at the theater of which Mayhew's brother (Edward) was lessee—an attempt that failed, as they were promptly sent home again. These irrepressible youths started *Figaro*, in London, in 1831, and the following year, *The Thief*. Mayhew produced *The Wandering Minstrel*, in 1841, and soon after joined his brother Augustus in a successful literary partnership. As the Brothers Mayhew, they published: *The Good Genius that Turned Everything to Gold*; *The Greatest Plague of Life*; *The Image of His Father*, &c. M. was one of the originators and the first editor of *Punch*, and was also a prolific writer on many subjects. His great work is *London Labor and the London Poor*. Died July 25, 1887.

May'hew, HORACE, brother of Henry M., was born in 1816; was at one time sub-editor of *Punch*, to which he contributed; also made some mark as a current writer in other lines. Died in 1872.

May'nard, HORACE, statesman, was born at Westborough, Mass., Aug. 30, 1814; graduated at Amherst College (1838); was tutor and professor in East Tennessee University; admitted to the bar (1844); represented Tennessee in Congress (1857-63); was a Union man during the Civil War, and suffered heavy losses of property in 1861-65; was in Congress again, 1866-75. He received the degree of doctor of laws from Amherst, in 1862. In 1875 was U. S. Minister to Constantinople, and in 1880 became U. S. Postmaster-General. Died May 3, 1883.

Maynard, in *Massachusetts*, a post-town of Middlesex co., 25 m. W. of Boston, on Fitchburg R. R.; has large woollen factories. Pop. (1895) 3,090.

Mayonnaise (*mī-o-nāz'*), *n.* [*Fr.*] A sauce or salad-dressing made with yolk of eggs, olive oil, vinegar, &c.; or the dish of which this sauce forms the dressing.

Mayville, in *Michigan*, a post-village of Tuscola co., 32 m. E. of Saginaw; has planing, saw and flour mills, and other manufactures. Pop. (1894) 769.

Mayville, in *North Dakota*, a post-village of Traill co., 40 m. N.W. of Fargo. Pop. (1897) 820.

Mazama. See ROCKY MOUNTAIN GOAT-ANTELOPE.

Mazarine' Bible. An edition of the Latin Vulgate, discovered in the library of Cardinal Mazarin. It was from this that John Gutenberg (1450-55) printed the first book in the production of which cut metal types were used.

Maz'da, *n.* [*Zend.*] In the Zend-Avesta, the Creator of the world.—*Mazdaism*, the same as Zoroastrianism. See ZOROASTER.

Mazoma'nie, in *Wisconsin*, a post-village of Dane co., 23 m. N.W. of Madison; has various manufactures. Pop. (1895) 1,015.

Mboundou Poi'son. The extract of an African plant; used for ordeals on the Gaboon; described by African travellers and analyzed by French chemists. It acts rapidly, producing violent tetanic convulsions, followed by death if the dose is sufficient. Artificial respiration is an antidote.

McCall, GEORGE ARCHIBALD, soldier, was born in Philadelphia, March 16, 1802. He graduated from West Point, and served with distinction in the Florida and the Mexican Wars. In 1853 he resigned; but in 1861, he organized the Pennsylvania Reserve Corps of 15,000 men, and reentered the service as a brigadier-general of volunteers. He was the projector of the brilliant movement culminating at Dranesville, Va., Dec. 30, 1861; and he won distinction during the "Seven Days' Fight" before Richmond, in June, 1862. On July 30, 1862, he was captured by the enemy, and confined for several months in a Southern prison. In 1863, he resigned his commission on account of impaired health. He died on Feb. 25, 1868, at West Chester, Pa. General M. published *Letters from the Frontier*.

William McKinley.

1843-1901

McCarthy (măk-kär'te), DENIS FLORENCE, an Irish poet, was born in 1820. He is author of *Ballads, Poems, and Lyrics*, mostly founded on Irish traditions, and written in a patriotic spirit, published in 1850. This volume embraces translations from nearly all modern European languages. He also produced (1857) *Under-Glimpses and Other Poems*, and *The Bell-Founder*, &c. He was appointed professor of Poetry in the Catholic University of Dublin, and in 1871 was conferred a literary pension of £100 per annum. Died in 1882.

McCarthy, JESSE, political leader and author, was born in Cork, Ireland, Nov. 22, 1830. He received a liberal education, and devoted himself to journalism in Liverpool and in London. During 1868-70 he travelled and lectured in the U. S., continuing to write for current magazines, and becoming editorially connected with the *New York Independent*. He returned to England; was elected to Parliament in 1880, and identified himself with the Irish Home-Rule party. He revisited the U. S. in 1886. On the disruption of the Irish Parliamentary party (1890), he was elected chairman of that section which repudiated the leadership of Mr. Parnell. At the election of 1892 he was unsuccessful at Derry, but was returned for North Longford, and again in 1895. In 1896 he resigned the chairmanship of the party in the House of Commons. He has published many books of a political and historical character, besides several novels—*A Fair Saxon*, *Dear Lady Disdain*, &c. His later books are *The Dictator* (1892) and *Red Diamond* (1893).

McClintock, JOHN, divine and editor, was born in Philadelphia in 1814, was professor of the Classics in Dickinson College (1836-48), and editor of the *Methodist Quarterly Review* (1848-56). In 1860 he entered upon the pastoral charge of the American Chapel in Paris, and in 1867 became the first president of Drew Theological Seminary. He was engaged for many years in the preparation of McClintock and Strong's *Cyclopedia of Biblical, Theological, and Ecclesiastical Literature*. Died in 1870.

McCloskey, JOHN, ecclesiastic, was born in Brooklyn, N. Y., 1810; was president of St. John's College, Fordham, N. Y. (1841-42); bishop of Albany (1847-64); in 1864 he became archbishop of New York. He was raised to the dignity of a Cardinal Priest by Pope Pius IX., March 15, 1875. The "title" assigned to him was Santa Maria Sopra Minerva. Pope Leo XIII. conferred the Red Hat on him in the Consistory held on March 28, 1878. Died in 1885.

McClure, SIR ROBERT JOHN LE MESURIER, a British explorer, was born in 1807, at Wexford, Ireland. Accompanied Sir James Ross in search of Sir John Franklin in 1848, and in 1850 set out in command of an expedition to the Arctic Sea. In the winter of the same year he claimed to have discovered the Northwest Passage, and in 1851 a second passage to the N. side of Baring Island. Died in 1873.

McCook, ALEXANDER McDOWELL, U. S. A., was born in Columbiana co., Ohio, April 22, 1831; graduated from the Military Academy (1852), and served in Mexico against Indians (1852-57); commanded the 1st Ohio Regiment of Volunteers at Bull Run, and was brevetted major; became brigadier-general of volunteers in Sept., 1861, and major-general in 1862; fought at Shiloh, Murfreesboro, Chickamauga, and elsewhere; was brevetted brigadier-general in the regular U. S. A. in 1865. In 1880 he became colonel of the 6th Infantry, and later was appointed head of the military school at Fort Leavenworth; reached the full rank of major-general, U. S. A., in 1894, and was retired April 22, 1895.

McCook, DAN, soldier, was born in Carrollton, Ohio, July 22, 1834; was colonel of the 52d Ohio Regiment of Volunteers, and afterward commanded a brigade. Killed at Kennesaw Mountain, July 17, 1864.

McCook, EDWARD M., soldier, was born in Stenbenville, Ohio, in June, 1834; served in the Civil War for the Union; became a brigadier-general in April, 1864, and brevet major-general in 1865; U. S. Minister to the Sandwich Islands (1866-69); and governor of Colorado (1869-73).

McCook, EDWIN STANTON, soldier, was born at New Lisbon, Ohio, in 1810; served in the Federal volunteer army during the Civil War, attaining the rank of brevet brigadier-general; was afterward secretary and acting governor of Dakota. Assassinated at Yankton, Dakota, September, 1873.

McCook, GEORGE WILLIAM, was born in Carrollton, Ohio, in 1822. He was educated at the Ohio University, and practiced law in partnership with E. M. Stanton. For the Mexican War he organized the 1st and for the Civil War the 157th Regiments of Ohio Volunteers. In the interim, and also after the close of the Civil War, he was active as a lawyer, and in Ohio politics. Retiring in 1870, he lived in Europe several years. Died Dec. 28, 1877.

McCook, HENRY CHRISTOPHER, clergyman and naturalist, was born at New Lisbon, Ohio, on July 3, 1837. He is a cousin of the "fighting McCooks"; was educated at Jefferson College, Canonsburg, Pa., and at the Western Theological Seminary, at Allegheny, Pa. In 1869 he was called to the pastorate of the Tabernacle Presbyterian Church in Phila., which position he filled till 1902, when he retired. Dr. McC. is an able pulpit orator and a writer on various subjects. He has for years found recreation in scientific study and research, and especially in investigating the habits of ants and spiders, on which he has written several works of inestimable value, including, *Mound-making Ants*, *Agricultural Ants of Texas*, *Honey and Occident Ants*, and an elaborate systematic work on the spiders which has the highest scientific standing.

His *Tenants of an Old Farm* is an interesting work of popular entomology.

McCook, ROBERT LATIMER, soldier, was born in Cumberland co., Ohio, December 28, 1827. He studied law at Columbus, and practiced successfully in Cincinnati. In 1861 he raised a regiment of Germans (the 9th Ohio Vols.); commanded a brigade in West Virginia under General Rosecrans; distinguished himself at Rich Mountain, Carnifex Ferry, and Mill Spring, where he was wounded; was appointed brigadier-general of volunteers, on March 21, 1862, and was in command of a division in Thomas' corps of Buell's army, when he was shot by guerrillas while lying sick near Salem, Alabama—dying the next day, August 6, 1862.

McCook, RODERICK S., U. S. N., was born in Ohio, March 10, 1839; graduated from the Naval Academy (1859); became a lieutenant (1861), lieutenant-commander (1865), and commander (1873); was in various engagements on the James river and in the sounds of North Carolina, and in both the Fort Fisher fights; commanded a battery of naval bowitzers at the battle of New Berne, March 14, 1862, where he displayed coolness, sound judgment, and gallantry.

McCook, in Nebraska, a city of Red Willow co., 53 m. W. of Oxford, on the B. M. R. R.; has a large lumber yard, creamery, flour mills, and brick yards. Pop. (1890) 2,346.

McCook, in South Dakota, a S.E. co.; area, 580 sq. m.; intersected by the East and West Forks of Vermilion river. Surface, undulating prairie; soil, fertile. Products, wheat, corn, oats, rye, barley, potatoes, and other vegetables. Sheep and stock raising is carried on extensively. Cap. Salem. Pop. (1890) 7,206.

McCosh, JAMES (-kôsh), divine and metaphysician, was born in Ayrshire, Scotland, in 1811; entered holy orders, and in 1851 became professor of Logic in Belfast University, where he remained until he was appointed president of Princeton College, N. J., in 1868. Among his works are: *The Method of the Divine Government*, *Physical and Moral* (1850); *Typical Forms and Special Ends in Creation* (1869); *The Supernatural in Relation to the Natural* (1862); *Examination of Mills' Philosophy*, &c. (1866); *Laws of Discursive Thought* (1869); *Christianity and Positivism* (1871); *Psychology*, &c. (1887); *Religious Aspects of Evolution* (1888). Died 1894.

McCullagh, JOSEPH BURBRIDGE, journalist, was born in Dublin, Ireland, in Nov., 1842; came to America (1853) and became a printers' apprentice, then a reporter, until 1861; was a lieutenant in the Federal army; resigned, but remained in the field as war correspondent of the Cincinnati *Commercial*. After the war he edited several dailies successively, until he became editor-in-chief of the consolidated *Times-Globe-Democrat* of St. Louis. Died Dec. 31, 1896.

McCulloch, HUGH, financier, was born in Kennebunk, Me., Dec. 7, 1808; educated at Bowdoin College; studied law, removed to Ft. Wayne, Ind., and began practice there in 1833. In 1835, he went into the banking business, first as manager and director of the State Bank of Indiana, president of the New State Bank, &c., until 1873, when he was made Comptroller of the Currency under the National Banking Law; was appointed Secretary of the Treasury by President Lincoln, in 1865. Within six months after his appointment the government had paid off and discharged over 500,000 soldiers and sailors of the Civil War; and, under Secretary McCulloch's management, had converted about 1,000,000,000 of short-time obligations into a funded debt; and within two years had placed the whole National debt in orderly shape, and begun upon its systematic payment. He held this office until 1869. From 1871 to 1878 he conducted a banking business in London. During 1884-85 he was again Secretary of the Treasury under President Arthur. He published *Men and Measures of Half a Century* (1888). He was the last survivor of Lincoln's Cabinet officers. Died May 24, 1895.

McCulloch, in Texas, a W. central co.; area, 1,000 sq. m. Rivers, Colorado, San Sala, and Brady's Creek. Surface, hilly and rugged; soil, fit for cultivation along the river. Stock raising is the chief industry. Cap. Brady. Pop. (1897) 3,350.

McCune, in Kansas, a post-village of Crawford co., 15 m. E. of Parsons, on K. C., Ft. S. & M. R. R. Coal in the vicinity. Pop. (1895) 700.

McDonaid, GEORGE, author, was born at Huntley, Aberdeenshire, Scotland, in 1824; graduated at King's College, Aberdeen; studied theology in the Independent College at Highbury, near London, and became a Congregational minister. He afterward joined the Church of England, and settled to a literary career in London. His earlier publications were short stories, poems, and books for children. He has written many novels, in most of which the north-country Scotch dialect figures conspicuously. His works include: *At the Back of the North Wind*; *Annals of a Quiet Neighborhood*; *Robert Falconer*; *Wilfred Cumberland*; *The Marquis of Lossie*; *David Elginbrod*, &c.

McDonough, THOMAS, naval officer, was born in New Castle co., Delaware, in 1783. In 1814 he commanded a squadron on Lake Champlain, and on September 3 of that year gained a very important victory over a British squadron commanded by Commodore George Downie. For this service he was promoted to the rank of captain and received a gold medal from Congress. Died at sea, 1825.

McDowell, IRWIN, soldier, was born at Columbus, O., Oct. 15, 1818; was educated at the Collège de Troyes, France, and at the U. S. Military Academy, graduating July 1, 1838; served in the Mexican war; was ordered to Washington, February, 1861, as inspector of troops;

engaged in mustering and organizing volunteers; appointed brigadier-general, May 14, 1861; commanded the Army of the Potomac at the battle of Bull Run. He was a department commander at different stations in the army throughout the Civil War; became major-general U. S. A., in November, 1872; was in command of the division of the South (1872-76), and then of the division of the Pacific till his retirement, Oct. 15, 1882. Died May 4, 1885.

McDuffie, in Georgia, a N. E. cen. co.; area, 235 sq. m.; bounded on the N. by Little river, and also drained by Upton creek. Surface, rolling, well wooded; soil, productive. Products, cotton, corn, oats, pork.

McHenry, in North Dakota, a N. cen. co.; area, 1,908 sq. m.; drained by Mouse river and its tributaries. Surface, undulating; soil, sandy loam with clay subsoil, well watered; has extensive hay meadows on river bottoms. Cap. Towner. Pop. (1897) 1,840.

McIlvaine, CHARLES PETTIT, divine and theologian, was born at Burlington, N. J., in 1799, became professor of Ethics and chaplain at West Point in 1825, and five years later was inducted into the Episcopate of Ohio. His *Evidences of Christianity* (1832) have passed through many editions both in the United States and Great Britain. Died March 13, 1873.

McIntosh, in North Dakota, a S. co.; area, 1,008 sq. m.; watered by numerous small streams and lakes. Surface, undulating; soil, very fertile. Grazing is a leading industry. Products, wheat, rye, barley, hay, &c. Cap. Ashley. Pop. (1890) 3,248.

McKean, THOMAS, an American patriot, was born in Chester co., Penna., in 1734. In 1774 he became a member of the Continental Congress, and as such signed the Declaration of Independence. Three years afterward he was elected executive of the State of Delaware, and in 1799 governor of Pennsylvania. Died in 1817.

McKee's Rocks, in Pennsylvania, a post-village of Allegheny co., 5 m. S. W. of Pittsburgh, on P., C. & Y. and P. & L. E. R.Rs. Steel and iron manufacture is the leading industry; has railroad car shops; natural gas fuel; coal and lumber are shipped. Pop. (1897) 2,150.

McKenzie, in North Dakota, a W. co.; area, 1,080 sq. m.; intersected by the Little Missouri river. Unorganized.

McKinley, WILLIAM, twenty-fifth President of the United States, was born at Niles, Ohio, January 29, 1843. His father, William McKinley, was one of the pioneers of the Western Reserve. In May, 1861, young McKinley enlisted in the 23rd Ohio Volunteer Infantry, mustered in by General Fremont; he served with the same regiment throughout the Civil War, and was mustered out a captain and brevet-major, in 1865. He settled at Canton, Ohio, where he has since resided. Entering the legal profession, he filled his first political office as prosecuting attorney of Stark county (1869-71). He was elected to the House of Representatives consecutively from the 45th to the 51st Congresses, though in the 48th Congress his election was contested, and his opponent was seated, late in the season. From the first, the tariff was Mr. McKinley's objective point, and he became a leader of the protective tariff party in the House, and a recognized authority on import duties. In the 51st Congress he was made chairman of the Committee on Ways and Means, and in that capacity prepared the tariff bill since identified with his name. This bill passed the House May 21, 1890; passed the Senate September 10; was then sent to the conference committee, whose report was adopted by the House September 27, and by the Senate September 30, and was signed by the President October 1. In the following congressional elections Major McK. was defeated; but in November, 1891, he was elected governor of Ohio by a majority of about 21,000, in a contest chiefly turning on the tariff issue. At the Republican national convention at Minneapolis, in 1892, McK. was made permanent chairman, and received 182 votes for nomination for President. In November, 1893, he was re-elected governor of Ohio, by a majority of over 81,000. In June, 1896, the Republican national convention nominated him for President; he was elected in November, and inaugurated March 4, 1897. His term of office was made notable by the Spanish-American war and the acquisition of island territory by the United States. He was elected to a second term in 1900, inaugurated March 4, 1901, and was shot by Leon Czolgosz, an Anarchist assassin, at Buffalo, N. Y., September 6, 1901, dying of his wound on the 14th.

McLane, LOUIS, statesman, was born at Smyrna, Del., in 1786. He sat in Congress for Delaware from 1817 to 1827, in which latter year he entered the U. S. Senate. From 1829-31 he was minister to England. He afterward held in succession the posts of Secretary of the Treasury and Secretary of State, and in 1845 proceeded again as Minister to England, where he settled the Oregon question. Died in 1857.

McLean, JOHN, jurist and statesman, was born in Morris co., N. J., in 1785. In 1807 he became a member of the bar in Ohio, and in 1812 was elected as a Democrat to Congress. After filling the office of governor of Ohio from 1816 to 1822, he became Postmaster-general of the U. S., a position he held with high credit for six years (1823-29). In the last-named year a judge of the U. S. Supreme Court, and the unsuccessful Republican candidate for the Presidency in 1856 and 1860. Died in 1861.

McLennan, JOHN FERGUSON, was born at Inverness, Scotland, Oct. 14, 1827; educated at King's College, Aberdeen, and at Trinity College, Cambridge, and was admitted to the bar, but devoted his life to the study of the usages of early civilization. As a writer he is

chiefly known by his *Studies in Ancient History*. Died June 16, 1881.

McLoud, in *Oklahoma*, a post-village of Pottawatomie co., about 35 m. E. of Oklahoma.

McMullen, in *Texas*, a S. co.; area, 1,200 sq. m.; watered by the Erie and Nueces rivers and their tributaries. Surface, undulating; soil, best suited to stock raising, which is the chief occupation. Cap. Tilden. Pop. (1890) 1,038.

McPherson, EDWARD, journalist, was born at Gettysburg, Pa., on July 31, 1830; educated in the law, but adopted journalism; was elected to Congress from Pennsylvania in 1858 and 1860. In 1863 he was deputy Commissioner of Internal Revenue, but resigned on being elected clerk of the national House of Representatives, which office he held until 1873, and again, 1881-83, and 1889-91. He was for several years American editor of the *Almanack de Gotha*, and from 1877 editor of *The Tribune Almanac*. From 1878-1880, he was editor of the *Philadelphia Press*, and, after 1880, editor and proprietor of a paper at Gettysburg. He wrote a *Political History of the U. S. during the Great Rebellion* (1865), and also a similar chronicle of the Reconstruction period (1870). Died Dec. 14, 1895.

McPherson, in *Kansas*, a central co.; area, 900 sq. m.; intersected by Smoky Hill and Little Arkansas rivers. Surface, rolling prairie; soil, fertile; scarcely any timber. Products, wheat, corn, broom-corn; oats, &c. Cap. McPherson. Pop. (1895) 20,317.

A city, cap. of above co., 36 m. S. of Salina, on A., T. & S. F., C., R. I. & P., and 2 other R. Rs.; has carriage and machine works and other manufactures. Pop. (1895) 2,666.

McPherson, in *Nebraska*, a W. co.; area, 1,340 sq. m.; Surface, undulating prairie; soil, a very productive black sand; no timber. Stock raising and grazing. Cap. Tryon. Pop. (1890) 492.

McPherson, in *South Dakota*, a N. co.; area, 975 sq. m.; watered by numerous small streams. Surface, eastern part level, western undulating; soil, productive. Products, wheat, oats, flax, barley, corn, potatoes, hay. Stock raising is a leading industry. Cap. Leola. Pop. (1895) 6,238.

McVeagh, WAYNE, lawyer and diplomat, was born at Phoenixville, Pa., April 19, 1833; educated at Yale College; was admitted to the bar (1856), and became district attorney of Chester co., Pa.; was captain in the cavalry force raised in 1862 to repel the Confederate invasion of Pennsylvania; chairman of Republican central committee of Pennsylvania (1863); appointed by President Grant minister to Constantinople (1870); was a leading member of the U. S. "McVeagh commission" to Louisiana, in 1877, to investigate political affairs; appointed U. S. attorney-general by President Garfield, in 1881, but resigned the same year; ambassador to Italy by appointment of President Cleveland 1893-97.

McVicker, JOHN, clergyman, was born at New York, Aug. 10, 1787; he was educated at Columbia College and at Cambridge, England; ordained to the Episcopal ministry in 1811, and became rector of a church in Hyde Park. In 1817 he was called to fill the chair of Moral Philosophy, Rhetoric and Belles-Lettres in Columbia College, a position which he held until 1864, when he was made professor emeritus. From 1844 to 1862 he was chaplain at Fort Columbus, Governor's Island. He was influential in securing the adoption of the free banking system. He wrote *Outlines of Political Economy*, and several biographical works. He died Oct. 29, 1868.

Mead, LARKIN GOLDSMITH, sculptor, was born at Chesterfield, N. H., Jan. 3, 1835; became a pupil of Henry Kirke Brown in 1852. In 1855 he produced in marble his first work, *The Recording Angel*; went to Florence, Italy (1862), and has since resided there. His later works include the statue of Lincoln, at Springfield, Ill., and the statue of Ethan Allen, in the Capitol at Washington; also four colossal groups representing different branches of the army and navy service.

Meade, RICHARD WORSAM, U. S. N., was born in New York city, October 3, 1837; was appointed midshipman in the U. S. N., from California, October 2, 1850. He served on the *St. Louis*, and was with Commodore Ingraham (*q. v.*) during the celebrated Koszta affair at Smyrna in 1853; became lieutenant-commander in 1862, and was given command of the *Louisville*, of the Mississippi flotilla; commanded the naval battalion during the New York riots in July, 1863; for "gallant conduct" while in command of the *Marblehead*, at Stone River, S. C., was publicly thanked by Admiral Dahlgren, and recommended for promotion; commanded the *Chocoma*, of the West Gulf Squadron, in 1864, and captured 7 blockade-runners in quick succession; commanded the American yacht *America* in her famous race with the British *Cambria* (1870). From 1871 to 1873 *M.* commanded the *Narragansett*, in which he cruised 60,000 miles in the Pacific, visiting every important island and negotiating the famous Samson treaty. He became captain in 1880, and upon relinquishing his command of the *Vandalia*, his admiral reported to the department that "as a commanding officer he has no superior." After some years of shore duty, during which he had command of the Washington Navy Yard (1887), which he transformed into the great naval ordnance bureau it is to-day, *M.* was commissioned commodore (1892) and rear-admiral (1894). He was retired at his own request on May 7, 1895, after having been in command of the North Atlantic Squadron for a short period, during which there was some unpleasant friction between *M.* and President Cleveland, due to the former's alleged sharp criticism of the latter's foreign policy. Died May 4, 1897.

Meade, in *Kansas*, a S. W. co.; area, 975 sq. m.; intersected by Crooked creek. Surface, gently undulating; scarcely any timber; soil, fertile. Cap. Meade. Pop. (1895) 1,741.

A post-village, cap. of Meade co., 32 m. S. W. of Dodge City. Pop. (1895) 266.

Meade, in *South Dakota*, a S. W. co.; area, 1,405 sq. m.; partly bounded by the North and the South Forks of Cheyenne river, and intersected by Elk creek. Surface, rolling; soil, black, deep, and very fertile. Abundant pine forests and fine building stone. Cap. Sturgis. Pop. (1895) 3,553.

Meadville, in *Missouri*, a post-town of Linn co., 90 m. E. of St. Joseph; has extensive poultry houses and refrigerators, and ships poultry to Eastern cities. Pop. (1897) 761.

Meagher, THOMAS FRANCIS, agitator and soldier, was born at Waterford, Ireland, August 3, 1823; educated at Stonyhurst College; was admitted to the bar, and became noted for his oratorical gift. For his part in the "Young Ireland" movement he was seized (1848) and tried for high treason; a sentence of death was commuted to transportation for life to Tasmania, from which place he escaped to New York in 1852. He lectured in the chief cities of the U. S. on Irish independence, and established the *Irish News*; organized the "Irish Brigade" in New York early in the Civil War; was appointed brigadier-general of volunteers, February 3, 1862, and was engaged in the most important battles of the Army of the Potomac; resigned in 1863, but was recalled (1864) to the command of the district of Etowah. He was made secretary of Montana (1865), and later became acting-governor (1866); was the author of a volume of *Speeches*, and a narrative of his regimental experiences. His death was accidental; while travelling, he fell from the deck of a steamboat, and was drowned, on July 1, 1867.

Meagher, in *Montana*, a central co.; area, 17,000 sq. m.; bounded on the N. by the Missouri river and intersected by the North Fork of Musselshell river. Surface, mountainous, large treeless plains and fertile valleys. Min. gold and silver. Cap. White Sulphur Springs. Pop. (1890) 4,749.

Meat, *n.* (*Agric. and Com.*) The lean portions of meat, made up of the muscular tissues, constitute a stimulating food, which is 70 to 80 per cent. water, the balance being proteids, extractives, fats, salts, and a few indigestible substances. The extractives of meat are valuable as stimulants of digestion. The proteids are tissue-formers and heat-producers. Contrary to existing practices, meat is better if cooked directly after killing, being both tenderer and more palatable. When kept a few hours and drained of the blood, it becomes stiff and tough, and is not so easily digested. Further keeping for a considerable period, and pounding with steak-hammers, is often resorted to with the object of making the meat again tender. Nearly all the States have legislated against the exposure for sale of tainted meat, providing severe penalties.

Most of the beef raised in the United States comes from the Western cattle ranches, and a great deal is slaughtered at Chicago, where there are extensive packing-houses. Cincinnati is headquarters for the pork trade. Meat is transported all over the United States in refrigerator cars, and the East receives nearly its whole supply from the West. The British United Kingdom depends very largely on the United States for its supply of meat, receiving about nine-tenths of the export. The slaughtering and meat-packing industries of the United States are very large, the value of these products in Illinois, mainly in Chicago, in the last census year being \$287,922,277. Of the other States yielding a large product may be named Kansas, with a yield of \$77,411,833, Kansas City being the centre of the industry; Nebraska, \$71,280,366; New York, \$57,431,293; Indiana, \$43,862,273; Massachusetts, \$31,633,483; Iowa, \$25,695,044; and Pennsylvania, \$25,238,772, the total for all the States being nearly \$800,000,000. The total value of domestic animals raised in the United States amounted in 1900 to \$3,193,856,459. The number of these is steadily increasing, there being in this country in 1908 of milch cows and other cattle 71,867,000, together with 20,000,000 horses and nearly 4,000,000 mules. In the census year the sheep numbered 61,735,014, the hogs 64,686,155, the goats 1,948,952. The exports of live animals were valued in 1900 at \$43,585,031; in 1908 at \$34,101,289, nearly the whole of this going to Great Britain, which depends largely for its meat supply on the United States. Of beef products in various forms, there were exported in 1908 a value of \$31,526,421; of hog products, \$124,806,125; of other meat products, \$9,852,847. Adding to this the exports of live animals a total of about \$200,000,000 is reached. This leaves nearly \$600,000,000 for the value of meat products consumed in this country.

Mecosta, in *Michigan*, a post-village of Macosta co., 15 m. S.E. of Big Rapids. Pop. (1894) 562.

Medes, *n. pl.* The people of the ancient kingdom of Media.

Medford, in *Oklahoma*, a post-village of Grant co., 17 m. from Caldwell, Kansas, on C., R. I. & P. and H. & S. R. Rs. Pop. (1897) 424.

Medford, in *Oregon*, a post-village of Jackson co., 5 m. E. of Jacksonville; center of a fine fruit and mining belt. Pop. (1897) 1,102.

Mediapolis, in *Iowa*, a post-town of Des Moines co., 5 m. N. of Burlington. Pop. (1895) 665.

Medicago, *n.* (*Bot.*) See LUCERNE.

Medical Lake, in *Washington*, a post-town of Spokane co., 16 m. S. W. of Spokane Falls, on Medical Lake, which is much visited by invalids; medicinal

salts are manufactured from its waters and exported. Pop. (1897) 825.

Medicine Lodge, in *Kansas*, a city, cap. of Barber co., 45 m. S. W. of Kingman. Pop. (1895) 659.

Medico-chirurgical, *a.* (*Med.*) Pertaining to both medicine and surgery; as, *medico-chirurgical college*.

Medill, JOSEPH, journalist, was born in New Brunswick, Canada, April 6, 1823. His life has been devoted to newspaper publication and politics. He was (1854) one of the organizers of the Republican party in Ohio; soon after went to Chicago, and with two partners bought *The Tribune*, in May, 1855; was active in State politics, and in 1871 was appointed a member of the Civil Service Commission, and elected Mayor of Chicago. He spent a year in Europe; and on his return purchased a controlling interest in *The Tribune*, of which he became editor-in-chief. Died March 16, 1899.

Medjidie (*med'je-de*), *n.* A Turkish order instituted in 1852 by the Sultan Abdul-Medjid, and conferred on many of the foreign officers who fought with Turkey in the Crimean war. It has five classes; and the decoration, which differs in size for the different classes, is a silver sun of seven triple rays, with the device of the crescent and star alternating with the rays. On a circle of red enamel, in the center of the decoration, is "Zeal, honor, and loyalty," and the date 1268, the Mohammedan year corresponding to 1852; the Sultan's name is inscribed on a gold field within this circle. The first three classes suspend the badge around the neck from a red ribbon having green borders, and the fourth and fifth classes wear it attached to a similar ribbon on the left breast. A star, in design closely resembling the badge, is worn on the left breast by the first class, and on the right breast by the second.—A Turkish coin of silver worth about 85 cents, and coined by the Sultan Abdul-Medjid in 1844.

Medo-Persian, *a.* Belonging or pertaining to the Medes and Persians.

Medo'ra, in *Illinois*, a post-village of Macoupin co., 22 m. S. W. of Carlinville. Pop. (1897) 545.

Medway, in *Maine*, a post-town of Penobscot co. Pop. (1897) 690.

Meeting-post, *n.* (*Hydraul. Engin.*) That style of canal-lock gate which meets the corresponding style of the other gate at the mid-width of the bay.

Meeting-seed, *n.* (*New Eng.*) Aromatic seed, green or dry, such as caraway, dill, or fennel, taken to a religious service and eaten to prevent drowsiness.

Megalithic Monuments, (*Archæo.*) Large, unhewn, or partly hewn stones, or structures of such stones, erected in prehistoric times as burial monuments, or in memory of important events. They are a feature of the remote part of nearly all countries, but are found most abundantly from the north of Africa, through Europe, to Scandinavia, in Great Britain and Ireland, and in India; they also exist in South America, but not in North America. These monuments are divided into four classes: (1) *Menhirs*: tall, massive pillars, or monoliths, standing upright on the ground, or with their bases imbedded. (2) *Alignments*: monoliths arranged in lines. (3) *Dolmens*: groups of close-standing monoliths, roofed over by one or more cap-stones, so as to form a megalithic chamber or vault, often imbedded in earth or stones, forming a tumulus or cairn. (4) *Cromlechs*: in France and other countries on the Continent, circular, oval, or irregular enclosures formed by monoliths standing at greater or less distance apart; in Great Britain, however, the name has been applied to free-standing dolmens—i. e., dolmens not surrounded by mounds of earth or stones. The present tendency is to discontinue this confusing British use, and apply the term *cromlech* only to stone circles, leaving *dolmen* for all varieties of tombs with rude stone chambers, whether they stand free or are enclosed in tumuli or caverns. *Menhirs*, being the first and simplest form of monument, are found in all megalithic countries, and seem to have had a variety of commemorative and religious purposes. The "Tanist Stones" in Scotland were monoliths ceremonially used on the accession of kings and chiefs. The most celebrated of them is the Lia Fail, on which the Scotch kings used to be crowned. It is now at Westminster Abbey. *Menhirs* were also used as records of events and landmarks, a usage common in Bible times, as shown by such instances as where a boundary stone was set up by Bohan, the son of Reuben, and Laban and Jacob erected "a pillar of witness" at Galeed. Where monoliths are grouped together their number seems often to have had a meaning, and where they have been artificially perforated superstition has added many strange significations to those originally planned. In Great Britain they are sometimes found rudely inscribed, but most of the sculptured stones are more recent, belonging to early Christian times. *Menhirs* are numerous in the British Isles, but still more numerous in France, where the most remarkable specimens are found within the confines of old Brittany. The largest *menhir* in the world was found at Lochmariagher (Morbihan); it is broken into four pieces, which together measure about 67 feet. The most remarkable *alignments* are near Carnac, Brittany, in the center of a region which contains the most wonderful megalithic remains in the world. They are situated in groups within a few miles of one another; the groups at Menec, Kermario, and Kerlesant are thought by some students to be parts of one original series of alignments nearly 2 miles long. Among the best examples of *dolmens* are the so-called "giant's graves" and "fairy grottoes" (see Figs. 1, 2, and 3) which are constructed of numerous supports and cap-stones, but are a direct development from the

GRAVE-MOUNDS AND ANCIENT TOMBS. 1. Giant's Tomb, Lower Saxony. 2, 3. Fairy Grotto, Saumur, France. 4. Cromlech at Stenness. 5. Giant's Bed, Mecklenburg, Germany. 6. Giant's grave-mound, Orkney Islands. 7. Cross-section of Chamber, West Gothland. 8. Cross-section of tomb of master and slaves, Mecklenburg. 9, 10. Exterior of typical grave-mounds. 11-14. Cross-sections showing cinerary urns. 15. Terraced mound, Prussia. 16. Cross-section showing subterranean interments in cinerary urns. 17, 18. Wooden coffins showing uncremated dead and burial gifts. 19. A "tree of the dead" from graveyard near Oberflacht, Suabia. [See TUMULUS.]

simpler forms. Dolmens of such complicated structure are very rare in Great Britain and Ireland, the only approach to it being shown in one called Calliagh Birra's House, in Ireland. Many of these larger dolmens, as well as of the more simple, show no evidence of having been enclosed in a mound or cairn, although some archaeologists claim that such must have been the original condition of all. When a large dolmen was covered over with a tumulus it necessitated the building of a covered stone approach, made by a series of side stones and cap-stones. No dolmens exist to the east of Saxony, in Europe, but they reappear again on the border of Asia and may be traced across the continent to India. In Saxony and to the west in Germany there are many such monuments, and some idea of their various shapes and construction may be gained from the accompanying illustrations. In Holland, where they are called *hunebedden*, they are found in some numbers; only one has been discovered in Belgium, but in France they are very frequent, particularly in Brittany; they are more sparsely scattered again through Spain, only to be found in large groups on the north African coast. In some cases human skeletons are found enclosed in wooden coffins within the stone vaults, sometimes the bodies had been entombed without coffins, and sometimes they had been burned before entombment and the ashes interred in cinerary urns. *Cromlechs*, or "stone circles," are not necessarily circular in form, but may be oval, irregular or square, and sometimes consist of concentric rows of monoliths; two cromlechs are often connected by an avenue or alignment; the remains of a large circle may be traced at the head of the great Carnac alignments. Sometimes, too, cromlechs surround dolmens, and outside the cromlech may be found a circular ditch or vallum. Stonehenge is the most remarkable monument of this class. It has the vallum and the concentric circles of monoliths, but those of the inner row are partially hewn and attached by transverse lintels, making the structure far too complicated to be typical, like the simple stone circle shown in Fig. 4. All these megalithic monuments, particularly those in Britain and Brittany, have been called *Druids' Stones*, *Druids' Circles*, &c., from an erroneous idea that they were the temples and altars of the Druids, but careful investigation shows that they were in no way suited to the uses of the Druid priests, and the early writers who mention the Druids do not connect them with these monuments.

Megaphone, *n.* An invention of T. A. Edison which consists of two large funnels, with tubes applied to the ears of the hearer. These collect and concentrate vocal sounds from a speaking-trumpet, and enable a conversation to be carried on for a distance of about two miles. Also a large, cone-shaped trumpet by whose aid the sound of the voice can be augmented and made audible for a considerable distance.

Megascop, *n.* [Gr. *megas*, great, and *skopeo*, to see.] (*Opt.*) An instrument for taking magnified drawings of objects. It is the same in principle as the *solar microscope* and *magic lantern*.—An enlarging camera.

Megatherm, *n.* A plant that can flourish in such heat and moisture as are found within the tropics or in valleys near the equator, with a temperature not less than 68° F.

Megohm, *n.* (*Elec.*) A million of ohms—a measure of electric resistance.

Meiggs, HENRY, contractor, was born in Catskill, N. Y., July 7, 1811. In 1848 he took a cargo of lumber to San Francisco, and established himself there in the lumber business on a large scale; but failing in 1854, he went to South America and engaged in bridge building and railroad construction in Chile, and (after 1867) in Peru, where he carried out expensive public works, the greatest being the Oronya Railroad over the Andes. With the return of his financial prosperity, he discharged in full all of the debts which he had contracted in California. Died in Peru, Sept. 29, 1877.

Meigs, MONTGOMERY CUNNINGHAM, U. S. A., was born at Atlanta, Ga., May 3, 1816; graduated at West Point (1836), and was transferred to the corps of engineers in 1837. From 1836 to 1852 he was engaged upon the construction of forts, &c. From 1852 to 1860 he was constructing the Washington aqueduct and the Capitol extension, and other public works. In 1861 he was appointed, through successive rapid promotions, to be quartermaster-general of the army, with rank of brigadier-general. He was an active and responsible officer during the war, not only in his own department, but on the field at Lookout Mountain and Missionary Ridge, and in the emergency defence of Washington. He was brevetted major-general, July 5, 1864. After the war, he visited Europe, and later for several years was occupied in the inspection of his department in the Western territories, and also the Northern Pacific Railway route to the Red River of the North. In 1875 he was sent to Europe to inspect the organization of departments in European armies. Retired in 1882, and died Jan. 2, 1892.

Meister-singers, *n. pl.* [Ger.] A society of Germans formed in the 13th century for the cultivation of poetry—the successors of the Minne singers (*q. v.*). It was incorporated by Charles IV., in 1378. Their poems were often satiric.

Meizo-seismal, *a.* [Gr. *meizōn*, greater; *seismos*, earthquake.] Pertaining to the greatest destructive force of an earthquake. A curved line connecting the points of maximum destructive energy of the shock around its epicenter is called the *meizo-seismal*, or *meizo-seismic curve*.

Melanesia and the Melanesians. (*Geog. and Anthropol.*) The name Melanesia is now given to

those islands in the Pacific Ocean, near New Guinea, inhabited by the Papuans. These islands were formerly included in the term Polynesia. The Melanesian archipelagoes comprise, among others, the Solomon Islands, the Santa Cruz Islands, the New Hebrides, New Caledonia, and the Fiji Islands, where, however, the population is so mixed with Polynesian that it may be indifferently attributed to Melanesia or Polynesia. The population of New Guinea or Papua is, on the whole, closely allied to the Melanesians. If New Guinea be included, the total area of the Melanesian islands is 358,300 square miles, and the population is estimated at 1,150,000 in 1897. Melanesia is so called from the Greek word signifying black, because the Papuan race is blacker in color than the natives of Micronesia and Polynesia. The Melanesians are closely allied to the Negritos, though there are great differences in language. They appear to be the indigenous element in the Pacific, where they formerly occupied a much wider domain than at present, for traces of black blood are found in Samoa and New Zealand. They are also at a lower stage of culture, being undoubted cannibals, in many places head-hunters, extremely savage, blood-thirsty, and treacherous, scarcely recognizing any hereditary chiefs, and often forming hostile groups at perpetual feud with their neighbors. The Melanesians are broad-nosed, prognathous, of a sooty black color. They have black frizzly hair, and are of low stature, their mean height being five feet five inches. They are an ugly race, especially the women.

Melanism, *n.* The condition of abnormal blackness, or a tendency to blackness, in the hair or plumage of animals; the opposite of *albinism*. Black squirrels, leopards, &c., are common examples of *melanism*, which, in some animals, is highly persistent as a variety.

Melba, NELLIE, operatic vocalist, was born in Australia, on May 19, 1865; received a musical education in Europe, studying under Madame Marchesi, in Paris. On Oct. 15, 1887, she made her stage *début*, in *Rigoletto*, at Théâtre de la Monnaie, Brussels. The next year she appeared as *Lucia*, at Covent Garden, London. In 1889, she played *Ophelia* at Paris Grand Opera, and *Juliet* in London. It was for her that Bemberg specially wrote *Elaine*, produced in London in 1892. She sang in *Pagliacci*, at Covent Garden, in 1893, and in the Handel Festival in 1894; and took prominent part in the American and European opera seasons of 1895-96-97.

Melchizedek, *n.* (*Script.*) Mention is made of him in Genesis xiv. 18-20, where he is called king of Salem and priest of the most high God. The story reads that he met Abraham on his return from the rescue of Lot, and offered bread and wine to Abraham and the king of Sodom in the valley of Shaveh, in the neighborhood of Jerusalem. After this he blessed Abraham and received from him tithes of the spoil. Psalm 110 declares "The Lord said unto my Lord: 'Thou art a priest forever after the order of Melchizedek,'" and in Hebrews vi. 20, and vii. 1-21, Melchizedek is mentioned as a type of the kingly priesthood of Christ. These various references to Melchizedek have caused much controversy. Wellhausen considers the chapters in Genesis in which he appears as the latest addition to that book; Ewald and others think it the earliest portion of ancient secular history, while still others regard it as wholly unhistorical. The Targum, as well as many cabalistic and rabbinical writings, identifies Melchizedek with the patriarch Shem, and that view was adopted by Luther and Melancthon, and by Selden and Lightfoot among English writers. A sect, called Melchizedekians, revered him as an incarnation of the "great power of God," superior even to Christ.

Melilot, *n.* (*Bot.*) The sweet clover, a plant of the genus *Melilotus*, belonging to the pulse family, natural order *Leguminosæ*. It is an herbaceous plant, having pinnately tri-foliate leaves with adnate stipules. Its flowers are small and fragrant, either white or yellow, and grow in loose racemes. The whole plant when dried has a sweet peculiar odor like that of the Tonka bean. Its chief economic value is as a honey plant, for it furnishes poor forage and is sometimes counted as a weed. In the north temperate and sub-tropical zones, there are about ten different species, of which *M. officinalis*, the yellow melilot, or true sweet clover, and *M. alba*, the white melilot, are best known.

Méline (*mā-lîn'*), FELIX JULES, statesman, was born at Reniremont, in the Vosges, France, in 1838. Completing his studies, he studied law, and entered the Chamber in 1872, being appointed Under-Secretary of State for Justice in 1876. He took office under M. Jules Ferry in 1883 as Minister of Agriculture, and became president of the Chamber in 1888. After that he was chosen chairman of the Tariff Commission, on which his strong protective opinions had great weight. He is a member of the moderate Republican party, and after the fall of M. Bourgeois, successfully undertook the task of forming a "conciliation" Cabinet on April 28, 1896.

Meliorism, *n.* [Lat. *melior*, better.] (*Philos.*) A term used by George Eliot to denote a mean between optimism and pessimism. The doctrine that everything in nature tends to produce a progressive improvement.—The betterment of society by means that improve man's physical condition without reference to ethical or religious considerations.

Melisma, *n.* [Gr.] A melody; a song or tune, as opposed to *recitative*, or musical declamation.

Meligo, *n.* (*Bot.*) Honey-dew; an unnatural secretion of sweet matter on the surface of plants or trees, appearing in warm, dry weather. It is often caused by the presence of aphides, cocci, and other insects which puncture the covering of the stems and leaves in order

to feed upon the sap, but the breaking of the tissues from any other cause will produce it; a dry, warm air seems to be required to cause in the plant the superabundance of sugar which characterizes this exudation. Honey-dew is sometimes secreted in such quantities that it drips from the leaves, or even falls to the ground in showers when the tree is stirred, and the manna of the Scriptures has been identified by students with the dried honey-dew of a shrub (*Tamarisk mannifera*). As a rule, however, the honey-dew merely coats the leaves and twigs with a sticky film, which collects dust and upon which molds and fungi thrive, to the injury of the plant.

Melodicon, *n.* A musical instrument made of steel bars, in different lengths, tuned to the diatonic scale, struck with hammers held in the hand.

Melodion, *n.* A musical instrument, invented in 1806 by J. C. Dietz, having graduated metal bars to be sounded by contact with a rotating cylinder.

Melograph, *n.* [Gr. *melos*, song; *graphō*, to write.] An electrical instrument to be attached to a piano for marking on paper the notes played. The paper may then be perforated and used in a melotrope to reproduce the music.

Melomania, *n.* [Gr. *melos*, song; *mania*, madness.] A mania for music, inordinate love of music, or uncontrollable desire for it.

Melomaniac, *n.* One who is afflicted with melomania.

Melrose, in Ohio, a post-village of Paulding co. Pop. (1897) 485.

Melvern, in Kansas, a post-village of Osage co., 48 m. S. of Topeka. Pop. (1895) 413.

Melville, GEORGE WALLACE, U. S. M., was born in New York city, Jan. 10, 1841; was educated at the Brooklyn Polytechnic School, and entered the navy (1861) as third assistant engineer. During the Civil War he frequently volunteered for desperate service. In 1881 he became chief engineer, and in 1887 engineer-in-chief of the navy, a position which he creditably held until 1903. In 1879 he joined the *Jeanette* Arctic expedition. His heroic conduct in this enterprise was recognized by Congress, in a special act, advancing him one grade, in 1890. M. has contributed much to the building up of the new U. S. navy, one of his most remarkable designs being that of the triple-screw machinery for the swift cruisers *Columbia* and *Minneapolis*. See CRUISER.

Melvin, in Illinois, a post-village of Ford co., 16 m. N.W. of Paxton. Pop. (1897) 550.

Memorial Day. In the United States a day (May 30) set apart for decorating the graves of Union soldiers; commonly called Decoration Day.

Menard, in Texas, a W. central co.; area, 880 sq. m.; intersected by the San Saba river. Surface, hilly; soil, fertile in river bottoms. Stock raising is the chief industry. Cap. Menardville. Pop. (1897) 1,460.

Men'deleef, DMITRI IVANOVITCH, chemist, was born at Tobolsk, Russia, Feb. 7, 1834; was appointed professor of Chemistry in the University of St. Petersburg, in 1866. By his contributions to physical chemistry and chemical philosophy he has enriched every section of chemical science; is especially famous for his "periodic system" of the chemical elements, which is viewed as the greatest discovery in the science in recent times. The accuracy of this theory has been established by the discovery of new elements in accordance therewith.

Mendicity Society. The name by which the Society for the Suppression of Mendicity is commonly designated. Such a society in London and elsewhere has for its object the reduction of the nuisance of street begging. The plan is to issue printed tickets to be given to beggars instead of money, which tickets refer them to offices of the society where their cases are investigated, and those worthy of assistance are relieved, and impostors and vagrants are punished or put to work. Begging-letters are also referred to the society and their authors investigated.

Men'don, in Ohio, a post-village of Mercer co., 10 m. from Celina. Pop. (1897) 465.

Mendo'ta, in Missouri, a post-town of Putnam co. Pop. (1897) 920.

Men'elek, the present king or Negus of Abyssinia. His name is not an uncommon one in his kingdom, and is said to have been first borne by a mythical Menelek, the alleged son of King Solomon and the Queen of Sheba. He was unknown outside of his own country until, on the death of John II., in 1889, he became Negus. One of his first acts was to make with the Italian government, which had occupied Massowah, a treaty whereby he agreed that Italy should represent Abyssinia in all foreign relations. He soon repented, however, of having made his country a vassal. Italy undertook to chastise him for violations of the treaty, and sent against him an expedition. All the troops of the expedition were killed or taken prisoners by M., who refused to release his captives until Italy, by a treaty made Nov. 15, 1896, recognized the independence of Abyssinia.

Men'folk, *n.* (*Colloq.*) The male members of a family taken together.

Men'hir, *n.* See MEGALITHIC MONUMENTS.

Men'ifec, in Kentucky, an E. co.; area, 150 sq. m.; drained by the Licking and Red rivers. Surface, broken and hilly; soil, partly fertile. Cap. Frenchburg. Pop. (1890) 4,666.

Men'no, in South Dakota, a post-town of Hutchinson co. Pop. (1895) 511.

Menom'once Falls, in Wisconsin, a post-village of Waukesha co., 16 m. N.W. of Milwaukee. Pop. (1895) 604.

Men'opome, *n.* (Zool.) The *Protonopsis horrida*, a large batrachian belonging to the fam. *Amphiumidae*. In form, it resembles the newt and salamander; the head is flat and broad; the teeth in two concentric rows in the upper jaw, and one row in the lower, are numerous and small. Notwithstanding its small teeth,

Fig. 2987.—MENOPOME.

it is fierce and voracious, feeding chiefly on fish and batrachians. It is found in the Ohio and other rivers of the same region, and known on their banks by many names, such as *hellbender*, *mud devil*, *ground puppy*, *young alligator*, and *weege*.

Men'thol, *n.* [Lat. *mentha*, mint.] (Chem.) A white waxy crystalline substance ($C_{10}H_{20}O$) deposited from oil of peppermint which has been kept a long time. It is soluble in alcohol, ether, and oils, and slightly soluble in water. It is used as a local anæsthetic for neuralgia and similar pains.

Mentiferous, *a.* [Lat. *mens* (gen. *mentis*): *fero*, to bear] Mind-bearing, thought-transforming, telepathic.

Men'tone, in *Indiana*, a post-town of Kosciusko co., 50 m. W. of Fort Wayne. Pop. (1897) 910.

Mephistophe'les, *n.* A name known since the Middle Ages as a personification of the principle of evil. "He is frequently referred to as the Devil, but it was well understood that he was only a devil," says Bayard Taylor, in a note to *Faust*. It may almost be said that Mephistopheles was created by Goethe, who has made the fiend a permanent figure in literature. Authorities differ greatly as to the origin of the word, Taylor endorsing the opinion of Düntzen—that it was imperfectly formed by some one who knew little Greek and was intended to signify "not loving the light"—while others derive it from a Hebrew root, which signifies "one who loves lies."

Mer'cantile A'gency. (Com.) Nearly all commercial lines of business are required to give or receive more or less credit, and a proper knowledge of the financial standing of merchants is essential in the highest degree to business success. To meet this want commercial agencies have been established. The Bradstreet and R. G. Dun & Co. concerns issue quarterly commercial ratings of all houses of any standing in any line throughout the U. S. and Canada. They have headquarters in New York, and sub-agencies in all principal cities. About 1,250,000 business concerns and individuals are regularly rated and classified by them, and the sources of information of the agencies have been sufficiently accurate to attach much value to their ratings. Subscribers to their services are entitled to additional information by letter, or to special inquiries concerning parties not rated. This system enables the solvent merchant to purchase goods anywhere with reasonable certainty that such will be delivered promptly without undue delay consequent to investigating his credit. The agency thus serves as a sort of clearing-house for credit, and good ratings are much sought after in the business world. Credit books are also issued, furnishing the same sort of information to those selling to particular trades. Agencies also exist in Europe, and importing and exporting houses on opposite sides of the globe are thus kept informed as to each other's commercial standing.

Mer'ced, or **Mercede** (*mer-sád'*), in *California*, a central co.; area, about 2,270 sq. m. Rivers, San Joaquin, Merced, and Mariposa rivers, besides many smaller streams. Surface, very much diversified, the Coast Range forming the S.W. border; soil, along the rivers fertile. Products, wheat and other cereals, fruit, &c. Cap. Merced. Pop. (1890) 8,085.

—A post-village, cap. of above co., 67 m. S.E. of Stockton; has some manuf., and a large shipping trade in wheat and other products. Pop. (1897) 2,270.

Merced River, in *California*, rises on the S.W. slope of the Sierra Nevada, in Tuolumne co., and flowing S.W. enters the San Joaquin river from Merced co.

Mer'cenarily, *adv.* In a sordid or mercenary manner.

Mer'cenariness, *n.* State or quality of being mercenary or venal.

Mer'cenary, *a.* [Lat. *mercenarius*, from *merces*, hire, wages, salary, reward, from *moreo*, to deserve, to merit, to earn.] That works or acts for the sake of payment, reward, or gain; hired; purchased for money; hireling; venal.—Hence, in a bad sense, actuated by the hope of reward; moved by the love of money; greedy of gain; mean; sordid; selfish; contracted from motives of gain.

—*n.* One who works or acts for the sake of reward or gain; hence, specifically, a soldier that is hired into foreign service; a hireling.

Mercer (*mer'sér*), *n.* [Fr. *mercier*, from Lat. *merx*, *mercis*, goods, wares, merchandise. See MARKET.] A dealer in silks and woollen cloths.

Mer'cer, in *Illinois*, a N.W. co., adjoining Iowa; area, about 555 sq. m. Rivers, Mississippi river, Edward's and Pope's creeks. Surface, mostly level; soil, fertile. Cap. Aledo. Pop. (1890) 18,545.

Mercer, in *Iowa*, a township of Adams co.

Mercer, in *Kentucky*, an E. central co.; area, about 250 sq. m. Rivers, Kentucky, Dick's and Salt rivers. Surface, undulating; soil, fertile. Cap. Harrodsburg. Pop. (1890) 15,034.

Mercer, in *Maine*, a post-township of Somerset co.

Mercer, in *Missouri*, a N. co., adjoining Iowa; area, about 484 sq. m. Rivers, Weldon river, and Crooked and East Forks of Grand river, besides some less important streams. Surface, generally level; soil, fertile. Cap. Princeton. Pop. (1890) 4,581.

—A post-vill. of Mercer co., abt. 100 m. N.E. of St. Joseph.

Mercer, in *New Jersey*, a central co., adjoining Pennsylvania; area, about 225 sq. m. Rivers, Delaware and Millstone rivers, and Stony and Assumpsink creeks. Surface, generally level; soil, very fertile; Cap. Trenton (also the State Capital). Pop. (1895) 85,538.

Mercer, in *North Dakota*, a W. central co.; area, 1,035 sq. m.; bounded on the N. and E. by the Missouri river, and intersected by Knife river. Surface, rolling prairie; soil, rich black loam, underlaid with a good quality of lignite coal. Grazing and wheat growing are the leading industries. Cap. Stanton. Pop. (1897) 1,000.

Mercer, in *Ohio*, a W. co., adjoining Indiana; area, about 460 sq. m. Rivers, Wabash and St. Mary's rivers, besides several smaller streams. Surface, mostly level; soil, fertile. Cap. Celina. Pop. (1890) 27,220.

—A post-village of Mercer co., about 9 m. N. of Celina.

Mercer, in *Pennsylvania*, a W. by N. co., adjoining Ohio; area, about 660 sq. m. Rivers, Shenango river, and French, Neshannock, Sandy, and Pymatuning creeks. Surface, undulating or hilly; soil, very fertile. Min. Limestone and iron. Cap. Mercer. Pop. (1890) 55,744.

—A township of Butler co., about 20 m. N. by W. of Butler.

—A post-borough, cap. of the above co., about 60 m. N. by W. of Pittsburgh. Pop. (1897) 2,300.

Mercer, in *West Virginia*, a S.W. co., adjoining Virginia; area, about 420 sq. m. Rivers, Kanawha and Blue Stone rivers, besides several smaller streams. Surface, much diversified, and in the S.E. and N.W. mountainous; soil, moderately fertile. Cap. Princeton. Pop. (1890) 16,002.

Mercersburg, in *Pennsylvania*, a post-borough of Franklin co., about 62 m. S.W. of Harrisburg. Pop. 1,000.

Mer'cur, JAMES, military engineer and scientist, was born at Towanda, Pa., Nov. 25, 1842; graduated at West Point; by successive promotions became captain of engineers, Dec. 9, 1875; served as assistant engineer on the survey of the Northern and Northwestern lakes (1866-67); at the Military Academy as acting assistant and assistant professor of Natural and Experimental Philosophy (1867-72); with the engineer battalion as adjutant and commanding company (1872-76); as assistant engineer to General Newton in removing the obstructions at Hell Gate, and upon other river and harbor works (1876-81); was charged with various works of river and harbor improvements and surveys in the Southern States, and in New York harbor and vicinity (1881-84); was professor of Civil and Military Engineering at the Military Academy from 1884 until his death; revised and enlarged Mahan's *Permanent Fortification* (1887), and is the author of *Elements of the Art of War* (1888), and *Military Mines, Blasting, and Demolitions* (1892). Died at West Point, April 22, 1896.

Mercuria'lis, *n.* (Bot.) A genus of herbaceous plants, order *Euphorbiaceæ*, distinguished by having the barren and fertile flowers separate, the former containing 9 to 12 stamens, the latter two simple styles, and a two-celled

Fig. 2988.—DOG'S MERCURY (*Mercurialis perennis*).

two-seeded capsule. *M. perennis*, the Dog's Mercury, is a common woodland plant in England, often forming dense patches of dark green in places where most other herbage has been consumed, owing to the fact that it is poisonous and avoided by cattle. It turns dull bluish-green in drying, and may be made to furnish a deep blue dye.

Mérimée' (*mā-rī-mā'*), PROSPER, author, was born in Paris, on Sept. 28, 1803. After spending some time in the study of law, he entered public life, and rose to the dignity of senator under the empire (1853). His most brilliant achievements were in literature, his works

embracing history, fiction, travels, critiques, &c., many of the papers having been originally contributed to leading French magazines. He was also distinguished as an editor, and a translator of popular Russian authors. His novel *Columba* is regarded as his masterpiece in romance writing. A curious collection of *Letters to One Unknown* was published after his death. M. was elected a member of the French Academy in 1844. Died Sept. 23, 1870.

Meringue (*mā-rāng'*), *n.* [Fr.] (Cookery.) A delicate compound for pastry, or as a garnish for pastry, made of sugar, beaten white of eggs, &c., and baked.

Mer'ril, in *Wisconsin*, a city, cap. of Lincoln co., on Wisconsin river, 18 m. N. of Wausau; here is a lumber boom with a capacity for 100,000,000 feet of logs. Lumber, lath and shingles are manufactured and shipped. Pop. (1895) 8,607.

Mer'rillon, or **MER'RILLAN**, in *Wisconsin*, a post-village of Jackson co., 53 m. N. of Grand Rapids. Lumber the principal article of manufacture and export. Pop. (1895) 749.

Mer'ritt, WESLEY, U. S. A.; born in New York city, June 16, 1836; graduated at West Point, and entered the army as a brevet second lieutenant of dragoons, 1860; was appointed captain in 2d Cavalry in 1862. Was a staff officer early in the Civil War; commanded the reserve cavalry brigade at Gettysburg; in 1864, commanded a division under Sheridan, participating gallantly in all the battles of the Richmond campaign, and was brevetted lieutenant-colonel and colonel; commanded a division in the Shenandoah campaign, and won the brevet of major-general; for further distinguished service was promoted to be major-general from date of the battle of Five Forks; and was brevetted brigadier and major-general, U. S. A., in March, 1865. After the war he served as chief of cavalry in various departments till February, 1866, when he was mustered out of the volunteer service; became lieutenant-colonel of the 9th Cavalry of the regular army (July, 1866), colonel of 5th Cavalry (July, 1876), brigadier-general (April, 1887), and superintendent of U. S. Military Academy at West Point, Sept. 1, 1882, to July 1, 1887; commanded the Department of the Missouri (1887-91), and afterward the Department of Dakota; attained the full rank of major-general on April 24, 1895.

Mer'ry-go-round', *n.* A revolving circle of hobby-horses and little carriages, on or in which people ride for amusement. Called also carousel, flying-horses. Flying Dutchman, and roundabout.

Mer'u, *n.* [Sansk.] In Hindu mythology, the name of a fabulous mountain in the center of the earth, containing the cities of the gods and the abodes of the celestial spirits. It is the *Olympus* of the Hindus. The planets were supposed to revolve around it.

Mes, or **Meso**. A prefix, derived from the Greek *mesos*, middle, denoting position in the middle.

Mesa (*mā'sa*), *n.* [Sp.] A high plain or table-land; especially a table-land of small extent rising abruptly from a surrounding plain; a flat-topped hill; a terrace.

Me'sa, in *Colorado*, a W. co.; area, 3,000 sq. m.; watered by Grand river and its tributaries. Surface, one great valley, with small tributary valleys surrounded by extensive cattle ranges; soil, in valleys very fertile when irrigated; a great fruit region. Min. coal oil, silver, and copper. Cap. Grand Junction. Pop. (1897) 8,500.

Mésalliance (*mā-za-le-ünce'*), *n.* [Fr.] A marriage with one of inferior condition or position.

Met, or **Meta**. A prefix from the Greek *meta*, meaning, in words of Greek origin, between, with, after, behind, over, about, reversely, and, frequently, change or transposition.—(Chem.) As applied to *inorganic* substances, it refers to bodies having a similar composition to the ortho-compounds, but in which an obscure change has taken place affecting their chemical properties. In *organic* chemistry, it applies to compounds of identical percentage, composition and molecular weight, in which the carbon nuclei are united to one another by an atom of a polyvalent element.

Metabolism, *n.* From a Greek word, signifying changeable. In theology, it is used to express the view held by some of the early fathers in regard to the change of the bread and wine in the eucharist—a view which stands midway between transubstantiation and the symbolical view. In biology, the term sums up the changes which take place within the body, or in a single cell, by which, on the one hand, food is changed into living matter, and, on the other hand, food is disorganized and prepared to be expelled from the body—that is to say, it is the sum of the assimilative and destructive processes. In poetry, metabolism means a change from one meter to another.

Metcalf, VICTOR HOWARD, cabinet official; born in Utica, N. Y., Oct. 10, 1853. He removed to California in 1881, was elected to Congress in 1899, was appointed Secretary of Commerce and Labor in 1904 and Secretary of the Navy Dec. 1906.

Meteor'ic Stones. About 153 tons of meteoric stones have been gathered in the Western Continent. Most of them are composed largely of iron, and it is thought that this is because the stony parts are more readily broken up and dissipated in their flight through the earth's atmosphere, so that what we see of them is usually the metallic part, which may have been set in a stony matrix. The so-called iron meteorites contain usually from 80 to 95 per cent. of iron, nickel being usually next in quantity, while traces of cobalt, copper, silicon, phosphorus, sulphur, argon, helium, &c., are also found. Among famous meteoric stones are the Cranborne stone in the British Museum, the Texas stone in the Yale University Museum, the Bendego

stone owned by the Geographical Society of Rio Janeiro, weighing 1.175 pounds, and the Bacubirito, Mexico, stone, which was over 11 feet long and weighed 25 tons. The North American Indians made ornaments from meteoric stones, shaping them by hammering and cutting. Very many figures formed from the stones are found in the mounds. See MOUND-BUILDERS. They were also much used by more recent tribes as charms, &c., being regarded with a certain amount of superstitious reverence.

Meteorology, *n.* [Gr. *meteora*, things in the air, and *logos*, discourse.] The scientific study of the weather has come to be known by this name, which originally included astronomical phenomena. It is not an exact science, but deals with probabilities and investigations into the atmospheric and magnetic conditions that cause changes in the weather. The history of *M.* is difficult to trace, since little information is cast upon it by the records of antiquity. The observations of the ancients were chiefly directed to changes in the weather; and by personal assiduity they were enabled to prognosticate often with considerable certainty. The philosophers of old were willing to explain the phenomena by the most vague hypotheses, referring them to stellar and planetary influences. In modern times, the study of the weather has been undertaken in a more practical manner. The temperature, atmospheric pressure, humidity, the winds, rainfall, &c., have all been studied exhaustively, each being made to yield up some information of value. It is a matter of common information that the records of temperature show that it rises and falls with the seasons, and with the hour of the day, and that hot and cold waves are carried along by the prevailing directions of the wind, so that on seacoasts a more even temperature is maintained because of the alternating land-breeze and sea-breeze. Barometric records at different points show the pressures of the atmosphere, and that these are also subject to periodic variations. When the pressure is high in a certain area this means that there is a surplus of air there, and because of its gravitation it is sure to disperse more or less in all directions, usually with more or less circular motion, rather than in straight lines, from the point of highest pressure. The gaseous envelope that surrounds the earth consists mainly of two things—dry air, that is oxygen and hydrogen mixed in a fixed gas, and aqueous vapor, which moves irregularly and forms mist, dew, frost, snow, rain, and hail. The extent to which the aqueous vapor mixes with the air determines the humidity, and when the saturation is complete it is registered at 100, at which point the water begins to condense and rain results. The amount of rain which falls upon the earth is greatest in the tropics, and decreases as we approach the poles. The quantity of rain falling at a certain place, however, is considerably influenced by the physical features of the locality. On account of this fact, together with the action of prevailing winds and seasonal peculiarities, the surface of the globe has been divided by meteorologists into *hydrographic* regions. Thus between the tropics of Cancer and Capricorn there is a zone of *periodic rains*, and external on either side zones of *constant precipitations*. The records of rain show that, like temperature and wind, it has a diurnal period, falling in much greater quantities from 11 to 6 o'clock daytime than at other hours. The study of the wind has brought the knowledge that there are prevailing winds more or less all over the globe. The trade winds of the tropics are nearly certain in their movements. In the U. S. the winds prevail from the west to the east, a fact which is of immense value to the Weather Bureau. The magnetic state of the earth has great influence on storms, and the earth's magnetic condition often reflects that of the sun, affording a wide and little understood field for investigation. Meteorology may be divided into four branches: (1) Theoretical meteorology, having to do with the physics and mechanics of the atmosphere, and the effect of solar magnetism, lunar gravity, &c., on the earth's atmosphere. (2) Agricultural meteorology, treating of climatic conditions and weather changes as affecting vegetation. (3) Medical meteorology, showing the effects of weather and climate on the human constitution. (4) Forecasting of the weather, as carried out systematically by the United States, Great Britain, and France. (See WEATHER SERVICE.) This department attracts the greatest popular interest, and involves the first. The observation of the conditions of the sky at sunset by students of the weather enables them to guess correctly the weather of the coming day about three-fourths of the time, but the meteorological information of the Weather Bureau is so perfected that the predictions 24 hours in advance are correct 90 per cent. of the time. The instruments used in taking weather observations are the thermometer, barometer or barograph, anemometer, pluviograph, nephoscope, sunshine-recorder, &c. There is also a combined instrument, which has been termed the meteorograph, which has a clockwork mechanism connected with several instruments, and making a quarter-hourly record of the temperature, atmospheric pressure, direction and mean force of the wind, and degree of humidity, the whole being operated by a small electric motor. Developments in kite-flying have recently increased the ability of observers to secure information of the conditions prevalent in the upper air, and kites are becoming a regular means of elevating meteorographs for observations. The increased interest in the study of the atmosphere has also given us Prof. S. P. Langley's anemometer, the most delicate wind-gauge ever designed, which has been used to demonstrate many new facts about the internal action

of the wind, which is proven to be far from constant in its movements. For further information along these lines see CYCLONE, WEATHER SERVICE, ATMOSPHERE, KITE, and the various instruments referred to in this article.

Methodization, *n.* Act or operation of methodizing; state or condition of being methodized.

Methodize, *v. a.* To reduce to method; to arrange or dispose in just and natural order; to transact in a formal, methodical, or convenient manner.

Methodizer, *n.* One who methodizes; one who disposes or arranges in systematic form or order.

Methodology, *n.* [Gr. *methodos* and *logos*.] A discourse concerning method; the science of method or classification.

(*Logic*.) The division of pure logic which treats of the methods of directing the means of thinking to the end of thinking well; embracing *definition*, *division*, and *proof*; the methods respectively of *clear*, *distinct*, and *connected* thinking.

Methought (*thout'*), *imp.* of METHINKS (*v. r.*).

Methuen, in Massachusetts, a post-town of Essex co., about 30 m. N. by W. of Boston. Pop. (1890) 5,090.

Methuselah, (*Script.*) Son of Enoch, and father of Lamech. He is said to have lived 969 years, a longer term of life than is ascribed to any other of the antediluvian patriarchs. (*Gen. v. 21, 22*)

Methye (*meth-i'*), the name of two lakes in British North America, one about 180 S. of Lake Athabasca, and the other 350 m. further S.W. The first has Fort Methye on its S. shore.

Methyl, **Methyle**, **Methyle**, *n.* [Gr. *meti*, with, and *yle*, wood.] (*Chem.*) The first of the hydrocarbon radicals of the alcohols. It is a gaseous body, slightly heavier than air, and burning with a bluish flame. It is not liquefied by a cold of 0° Fahr. It is obtained by acting on iodide of methyl with zinc. Its most important compound is methylic alcohol, or wood-spirit. It also enters into the composition of the essential of *Gaultheria procumbens*, which is a salicylate of the oxide of methyl, and may be prepared artificially by distilling wood-spirit with sulphuric and salicylic acids. *Form.* CH₃.

Methylamine, *n.* (*Chem.*) Ammonia in which one atom of hydrogen is replaced by methyl. It is an inflammable gas greatly resembling ammonia in its chemical character. It may be formed by the action of iodide of methyl upon ammonia, and subsequent distillation with potash. *Form.* NH₄Me.

Methylated Alcohol or Spirit, *n.* (*Chem.*) Spirits of wine to which have been added certain proportions of shellac and methylic alcohol, or wood-spirit, for rendering the mixture unpalatable. The mixture is allowed by the government to be sold without excise duty, for the purpose of manufacture only. Numerous instances have, however, lately occurred in which the methylated spirit has been "doctored," and sold for the purpose of dram-drinking. Methylated spirit is extensively employed as a solvent of resins and gums for varnishes, aniline colors, and for nearly every use to which ordinary alcohol was formerly applied.

Methylene, *n.* (*Chem.*) A bivalent hydrocarbon radical, known only in combination. It is also called *methene*.

Mestizo, *n.* [Fr.; Sp. *mestizo*.] The offspring of a white and quadroon. See MESTIZO.

Metocle (*met'o-ke*), *n.* [Fr., from Gr. *meti*, and *chein*, to have.] (*Arch.*) The interval between two denticuli in the Ionic entablature.

Metternich, PRINCE RICHARD, diplomatist, was born in Vienna, Jan. 7, 1829; the eldest son of the great Austrian chancellor of that name. At the age of 22 he entered the diplomatic service, as an *attaché*, in Paris, and in 1859 was appointed Austrian ambassador there. At the imperial court he and his wife, Princess Pauline Metternich, who was an intimate friend of the Empress Eugénie, were prominent figures. He arranged the meeting between Napoleon III. and Franz Josef, at Salzburg. After Sedan, he aided in the escape of the empress. He was recalled to Austria after the fall of the empire, and thenceforth took no part in public affairs, except to vote with the Moderate Conservatives in the Austrian Chamber of Peers. He was a musician and a composer of some ability. Died March 1, 1895.

Mexia, in Texas, a post-town of Limestone co., 150 m. N.E. of Austin; has mills, gins, and a cotton factory. Pop. (1900) 2,393.

Meyer, GEORGE VON LEMBERG, diplomatist, was born at Boston, Mass., June 24, 1878. He became a merchant, and rose to be president or director in a number of manufacturing and banking corporations. Active in Republican politics, he was in the Massachusetts legislature 1892-96, being three years Speaker of the House. He was U. S. Ambassador to Italy 1900-05, and to Russia 1905-07, and succeeded George B. Cortelyou as Postmaster-General March 4, 1907.

Meyer, in South Dakota, a S. co.; area, 1,440 sq. m. Rivers, Reya Paha, and South Fork of the White River. Unorganized.

Michigan University of, (*Educ.*) A State institution, co-educational, and non-sectarian, its general control being placed in the hands of eight regents, elected by popular suffrage at the biennial spring elections, two regents being chosen at each election. Every graduate of a high school is admitted upon diploma from such a school, under certain restrictions by the university itself. There are no tuition fees, but each student pays a registration fee—\$10 if he or she be a resident of the State, \$25 if a non-resident. Besides these fees, the university receives a tax of one-sixth of a mill from the State, and each year \$5,000 by special

act. It has also a U. S. endowment fund, upon which the State pays the university 7 per cent. interest. From all these sources the income of the institution in 1896 was \$403,097. The university, located at Ann Arbor, was organized in 1837, the year in which Michigan was admitted as a State. It contains collegiate, medical, and law departments, an observatory, dental college, school of pharmacy, scientific museums, and a library which had on its shelves, at the end of 1896, about 195,000 volumes. At the same time it had 170 instructors and 3,014 students.

Micro, **Micro**, *n.* A prefix from the Greek *mikros*, small, and giving the idea of littleness to all words with which it is combined. In electrical terms it sometimes denotes one-millionth; as, *micro-farad*, one-millionth of a farad.

Microbe, *n.* See BACTERIOLOGY.

Micrograph, *n.* An instrument invented by Mr. Webb, of London, for executing extremely minute writing and engraving; its general principle is that of the pantograph.

Micrographophone, *n.* An instrument for recording and reproducing sounds of exceeding faintness, being a form of graphophone, with specially delicate diaphragms. The sound-delivering funnel is provided with four diaphragms, each being adapted to delivering sounds of a different quality. The talking-tube is arranged on a swivel with the funnel, so that either may be brought to bear on the recording-cylinder. A miniature electric motor is provided to rotate the cylinder.

Micromicroscope, *n.* A kinetoscope arranged with pictures taken by the aid of a microscope, so that the motions of a rotifer or the like in a drop of water can be reproduced in series on the photograph films. The movement of the blood corpuscles has also been reproduced. In arrangement, the apparatus consists of a microscope having an electric light placed near one end, so as to concentrate the light on the object under observation. The kinetoscopic film is run in front of a tiny window located in the proper focus on a line with the lens and light, and photographs are taken at the speed of 1,000 a minute.

Micron, *n.* [Gr. neuter of *mikros*, small.] One-millionth of a meter, or one-thousandth of a millimeter.

Micronesia, *n.* (*Geog.*) Formerly, all the inter-tropical islands of the Pacific Ocean eastward of the Philippine Islands to the north and the New Hebrides to the south of the equator were grouped together under the name Polynesia. Increasing study, however, of the various races inhabiting these islands has led to a subdivision of them. So now, to the Marianas, Carline, Marshall, and Gilbert groups of islands, and those lying to the north and northeast of the Marianas, is given the name Micronesia, from the Greek, signifying small islands. The Micronesians are closely allied to the Polynesians, the brown or savanori races inhabiting the central and eastern islands, but are quite distinct from the Melanesians, who are closely allied to the Negrites.

Microphone, *n.* An apparatus for magnifying very faint sounds, forming the basic principle involved in the carbon telephone transmitter. It produces a variation in electrical resistance by the variation of pressure on a loose contact. By introducing a loose piece of carbon so as to touch another piece in a telephone circuit, the jarring of the loose carbon by a sound causes a rapid variation of pressure and electric current, producing a magnification of the original sound in the telephone. The principle of the *M.* is also taken advantage of for use as a relay in receiving-telephones. When the *M.* was first introduced, about 1878, much astonishment was created by some experiments, in one of which the sounds of a fly's feet in walking were magnified so that they sounded as loud as the tramp of a horse.

Microtasimeter, *n.* An instrument devised by Thomas A. Edison for discovering and measuring minute differences in pressure. He made use of a rigid iron frame holding a carbon button, the latter being placed between a movable and a stationary platinum surface. This was so adjusted to the object to be tested that any expansion increased the pressure on the carbon button, and the latter being placed in the circuit of a delicate galvanometer, the changes in electric current afforded a magnified record of pressures too minute to be noted in any other known way.

Microtelephone, *n.* A telephone arranged to render audible very faint sounds.

Middle C, *n.* (*Music*.) The note standing on the first ledger line above the bass staff and the first ledger line below the treble staff.

Middle Kingdom, (*Geog.*) This designation grew up in the feudal period of China as a name for the royal domain in the midst of the other states, or for those states as a whole in the midst of the uncivilized states around them. The term was never intended to convey the idea that China was "in the middle of the earth."

Middle-class, *n.* In England, the class of society which occupies a middle position between the working-classes and the aristocracy, including professional men, merchants, bankers, large farmers, &c. In the U. S., the large body of intelligent people who hold an intermediate social position between the ignorant and degraded, and the so-called, or self-styled, "upper" classes, who claim a superior position in society on account of wealth, ancestry, or some other fortuitous circumstance.

Middlefield, in Connecticut, a post-town of Middlesex co. Pop. (1897) 1,084.

Middlepoint, in Ohio, a post-village of Van Wert co. Pop. (1897) 350.

Mid/dlesborough, in *Kentucky*, a post-town of Bell co. Pop. (1897) 3,360.

Mid/dleton, *JOHN HENRY*, art critic, was born in England, in 1847; educated at Cheltenham School, Exeter College, Oxford, Kings College, Cambridge, and at the University of Bologna; was fellow of Kings College, Slade professor of Art at Cambridge, director of the Fitzwilliam Museum, at Cambridge, art director at South Kensington, in 1893. He was the author of *Ancient Rome* (1885-92), *Engraved Gems* (1891), &c. Died May 10, 1896.

Mid/dletown Springs, in *Vermont*, a post-village of Rutland co. Pop. (1897) 810.

Mid'dy, *n.* A colloquial or familiar contraction of *midshipman*.

Mid/gard, *n.* The earth, in Scandinavian mythology, as distinguished from *Asgard*, the home of the gods, and *Ulgard*, the dwelling-place of giants. The earth was supposed to have been made out of an eyebrow of the giant Ymer, and to be joined to heaven by the rainbow as a bridge. The MIDGARD SERPENT is the great world.

Mid/hat, *PASHA'*, Turkish politician, was born in Bulgaria, in 1822. He was grand vizier in 1872 and 1876-77. Died May 8, 1881.

Mid/land, in *Texas*, a W. co.; area, 900 sq. m. Surface, slightly undulating; rich soil, fine climate, pure water. Well adapted to stock farming and fruit growing. Cap. Midland. Pop. (1890) 1,033.

—A post-town, cap. of above co., 310 m. W. of Fort Worth. Cattle and wool are very largely shipped. Pop. (1897) 840.

Mid/shipmite, *n.* (*Humorous*.) A very small midshipman.

Mid/way, in *Alabama*, a post-village of Bullock co. Pop. (1897) 680.

Mid/week, *a.* Occurring about the middle of the week; as, a mid-week meeting.

—*a.* The middle of the week.

Migration of Animals, (*Nat. History*.) The migrations of animals are of two sorts—occasional and periodical. The first may happen in the ranks of any sort of animal capable of moving freely about, and usually results from a surplus of population, due to a succession of fortunate years, to failure of the ordinary food supply in a certain region, or to some external pressure. Such are the vast flights of locusts, the marching of army worms, and sudden multiplication here and there of insect pests so frequently noticed. The same phenomena is presented at long intervals by mice, which have frequently multiplied prodigiously over wide districts, and become for a year or two a highly destructive plague to farmers. In the early years of settlement in the Mississippi Valley herds of squirrels were observed at intervals of a decade or so, moving eastward and southward from the northwestern forests in countless numbers, often devastating the grain-fields over a wide region; and the famous westward migrations of the lemmings of Lapland furnish a similar example of these occasional and enforced migrations.

The regular and periodic annual, or, rather, seasonal, migrations of many groups of animals are, however, of greater interest. They seem to form a part of the habits of many invertebrates, as crabs and hutterflies, but begin to be most marked when we rise to the level of the fishes. It is probable that all fishes living in the sea or large lakes regularly move from deep water in winter to the shallows where they deposit their eggs in summer; and it is this annual shoreward approach from unknown pelagic wanderings that opens the fishing season for each kind that is worth catching, and makes possible the commercial industry of sea-fishing. A certain class, known as anadromous fishes, do more than this, migrating in spring into and up the rivers to lay their eggs in the headwaters, and then endeavoring to return to the sea again. Such are the shad, salmon, sturgeon, and other well-known fishes. Many fishes also make a northward and southward migration with the advancing and receding summer. Sea-turtles come to the shores and river-banks at the egg-laying season, and afterward disappear; but otherwise there is little, if any, migration among the chelonians, amphibians, or reptiles. Most of the larger mammals regularly migrate, however, to a greater or less distance twice a year, moving northward on open plains in the spring, keeping pace with opening grass, or ascending mountain ranges in summer and returning to the lowlands in winter, or otherwise regularly changing their abode. The seals swim away to unknown regions of mid-ocean in the fall, but in the spring return to the chosen coasts or islands where their young are born, and remain there until the pups are able to go away.

The migration of birds, however, presents the most extraordinary aspect of this subject and one of the greatest mysteries of natural history. It may be said, in a general way, that all birds migrate spring and fall, though in some it is scarcely noticeable. The great majority altogether leave their summer breeding haunts and go to a more or less distant winter home. The manner of this seasonal migration varies greatly. Some birds collect in the autumn in flocks often of large size, which together pursue their southward flight; but as a rule they do not return in the spring in large bands. Others steal southward one by one, or in small family groups. Some seem to wait until the last moment, and then make the journey with headlong haste; others start early and move leisurely. As a rule, the females and young precede the adult males on the southward flight in the fall, while the adult males appear a week or two ahead of the females in the spring migrations. The night is a favorite time for migrational journeys, espe-

cially when clear, or moonlit, and great distances are covered during the hours of darkness, while the days are devoted to rest and feeding. Although the general direction is back and forth between colder and warmer latitudes, the courses taken are not always, nor, perhaps usually, directly north and south; on the other hand, the courses followed by many birds are east and west for a large part of the flight, or the spring course varies from that in the fall. Each species seems to cling consistently to its traditional path, and most birds follow coast lines, great water-courses or mountain ranges and similar natural guiding lines. Some, however, discard all these, cutting athwart the migration lines of other species. The distances to which migrating birds travel vary from a scarcely perceptible swinging of the species northward and southward, to an annual change of residence from equatorial to polar latitudes; and these sometimes include a flight straight across the sea for many hundreds of miles, as is shown by the fact that remote islands, such as Hawaii, are regularly visited by migrating birds. What motives induce or compel the birds to undertake these long and arduous journeys; how they are able to sustain them; the height and speed at which they fly, and, above all, the means by which they find their way, are all matters of the greatest interest, in respect to which volumes of facts have been recorded and volumes of speculation have been written; but none of these questions have yet been thoroughly answered.

Migration of Mankind, (*Anthrop.*) That men have had, from the earliest times, an impulse to leave the place of their birth and settle in some other place is certain. This impulse has been due to various causes, among which may be mentioned insufficient food; to difficulties, either natural or governmental, in the way of getting a living; religious persecution and religious fanaticism; the discovery of gold and silver mines; love of change and adventure. All or most of these reasons at the present day impel great numbers of people to seek new homes all over the world. This change, however, is now the work of individuals, each of whom decides to make the change for reasons personal to himself or herself. That such migration in our time has great influence, both over the country which the emigrants leave and that to which they go, is clearly apparent in these days of constant international communication by railway, telegraph, and ocean steamers. Yet this influence is slow and slight, compared with that exercised by the migration of mankind at former periods. Pastoral nations, especially, inasmuch as they can carry with them the flocks and herds from which they derive subsistence, formerly emigrated in very large bodies, and before the invention of gunpowder and other improvements in warfare were very dangerous neighbors. At the dawn of history occurred the great migration of the Aryans, who were a pastoral people, occupying the passes and mountains along the Oxus. This people spread across southwestern Asia and southern Europe, supplying their language to the greater part of Europe and the temperate zone of Asia from the Mediterranean to India. The Greeks sent forth colonies, after solemn religious observances, to establish themselves in countries with a scanty population or where the inhabitants were in a decidedly lower state of civilization. The refinement, ingenuity and industry of the Greek colonists caused the localities to which they went to make rapid progress, so that these places became, in no very long period, populous and powerful states. The irruptions of the northern barbarians, who finally made an end of the Roman empire, were simply migrations on a vast scale. It is estimated that a million Visigoths, including women and children, became Roman subjects on the south side of the Danube. In the case of the northern barbarians, they attacked countries that were densely peopled, and, having subdued the inhabitants, seized upon the whole or upon the greater or less proportion of their lands. It was the migration of great masses of Moors which destroyed the Christian kingdoms of Spain, and caused the Peninsula to be essentially Mohammedan and Arabic for more than three centuries, during which Spain flourished as she has never flourished since. Cordova, the capital, was a center of learning in Europe—not for Arabs only, but for Christians as well. Not in Europe and Asia alone have been witnessed the migration of vast masses of human beings. The Aztecs, who were the rulers and occupiers of Mexico in the 16th century, had migrated centuries before, as their traditions attest, from some place to the northwest of Mexico, the precise locality of which is not known. The traditions are strong and unbroken that it was emigrants who brought to Peru the civilization which Pizarro found there. The Polynesian races have been dispersed over the islands of the Pacific by voluntary emigration. In the world of Polynesian mythology and legend we constantly come across stories of migrations undertaken from the most various motives. Everything important or peculiar has been brought over sea. Lastly should be mentioned what may be called the involuntary migration of the enormous numbers of Africans taken by force from their native country and sold as slaves. This cursory glance at the more important of the innumerable wanderings of human beings to and fro on the face of the earth shows what an important factor the migration of mankind has been in the history of the world, and the far-reaching consequences of such migration.

Milrab', *n.* [Arab.] A decorated niche or siab in the wall of a mosque; it points in the direction of Mecca, the holy city of the Mohammedans, toward which they must turn when they pray.

Milac'a, in *Minnesota*, a post-village of Mille Lacs co., 18 m. N.W. of Princeton. Pop. (1895) 482.

Mil/lan, in *Tennessee*, a city of Gibson co., 23 m. N. of Jackson; has carriage and wagon works, flour, saw, and planing mills, factories, and gins. Pop. (1897) 1,885.

Mil/bank, in *South Dakota*, a city, cap. of Grant co., 100 m. E. of Aberdeen; has railroad machine shop and round houses, mills and elevators. Pop. (1895) 914.

Mil/burn, *WILLIAM HENRY*, lecturer and preacher, was born in Philadelphia, Pa., September 26, 1823; removed in childhood to Illinois; became a Methodist preacher, travelling through the Southern States; settled for short periods at Montgomery and Mobile, Ala.; became widely known as a popular lecturer. Notwithstanding his affliction in the loss of his eyesight, he led an active life, and annually filled many lecture engagements. He has been six times chaplain to Congress, and in 1893 was chosen as chaplain to the U. S. Senate. He has published several books, chiefly relative to his experience in the South.

Mil'com, *n.* A deity of ancient mythology, sometimes confounded with Molech. He was the god of the Ammonites, whose worship Solomon established in Jerusalem.

Miles, *NELSON APPLETON*, U. S. A., born at Wachusettville, Mass., August 8, 1839; entered the volunteer service as captain in the 22d Massachusetts Volunteers, September, 1861; made a distinguished record throughout the war, becoming major-general of volunteers in 1865. On July 28, 1866, he was commissioned colonel of the 40th Infantry, U. S. A.; transferred to the 5th Infantry March 15, 1869, and commissioned brevet major-general, U. S. A., March 2, 1867; brigadier-general, U. S. A., December, 1880, and major-general April 5, 1890. He commanded several military departments, and is especially distinguished for his success in suppressing Indian outbreaks. On October 5, 1895, he assumed command of the army, and in the summer of 1897 went to Europe to observe the progress of the Turko-Grecian war. He commanded in Porto Rico in 1898, was made lieutenant-general June 6, 1900, and retired on age limit, August 8, 1903.

Mil/ford, in *Nebraska*, a post-village of Seward co., 22 m. W. by S. of Lincoln. A summer and health resort. Has large water-power flour mills and creamery. Pop. (1897) 750.

Mil/itarism, *n.* That system or policy which causes nations to keep up great armies and to pay excessive attention to military affairs; military or warlike spirit.

Milk-shake, *n.* An iced beverage made chiefly of sweetened and flavored milk, subjected to violent shaking by means of a small apparatus specially designed for the purpose.

Milk/weed, *n.* A plant of the genus *Asclepias*, of the family *Asclepiadaceae* (*q. v.*).

Mill, *JOHN STUART*, philosopher, logician, and political economist, was born in London, England, May 20, 1806. His father was James M., the philosopher, whose remarkable work, *An Analysis of the Phenomena of the Human Mind*, was an exposition of the "associational psychology" which has been more fully expounded since by Herbert Spencer and others. This learned father superintended the education of his son, and, it is said, began to teach him Greek when the child was three years old. At eight years of age, John Stuart Mill was reading Herodotus, Xenophon, and Plato, and before he was twelve he had read the greater part of the Greek and Latin classics, at the same time grappling with the higher mathematics. At fourteen he had gone through a complete course in political economy with the best available text-books, and oral instruction from his father. As a boy he had no playmates, no share in childish sports; his recreations had been the reading of history and books of experimental science, and the long walks with his father, during which they engaged in earnest conversation. The father, originally an adherent of the Scottish National Church, had become a skeptic, and the son was reared in unbelief. He says of himself: "I am one of the very few examples in this country of one who has not thrown off religious belief, but never had it. I looked upon the modern exactly as I did upon the ancient religion, as something which in no way concerned me." When about fourteen he went to the Continent for a year, spent chiefly in the south of France. During this year he continued his studies in the higher mathematics and sciences; but he also, apparently for the first time in his life, recognized the need of physical as well as mental training, for he took lessons in fencing, and other athletic exercises. On his return from France he assisted his father in preparing a work on political economy. Later he studied law with John Austin, a disciple of Jeremy Bentham. The elder Mill had been closely associated with Bentham; and thus John Stuart Mill had been thoroughly imbued with the utilitarian ideas that distinguished Bentham's school of philosophy. In 1823 Mill entered the employ of the East India Company, and remained with that office for thirty-five years, until its dissolution in 1856, beginning at the lowest round, an inferior clerkship, and reaching the highest post in his department, as examiner of the India correspondence. During these years of business routine, his hours of personal leisure were systematically given to his favorite themes, not only as a student, but as a writer of vigorous and original opinions. His *System of Logic* was issued in 1843, and commanded the attention of all scholars. In this he presents the inductive or empirical logic of which he is the founder, and which, harmonizing with the spirit of the times, made him welcome as a leader of

John Stuart Mill

1806-1873

advanced thought. He published works at short intervals throughout his life, aggregating almost a complete library of authoritative books within his special field, and including valuable expositions and criticisms of Bentham, Comte, Sir William Hamilton, and other prominent writers on metaphysical subjects, among the latter class of his writings being: *Auguste Comte and Positivism*, *Examination of Sir William Hamilton's Philosophy*, and his notes and supplemental chapters to Bentham's *On Evidence*. His original works include, besides *System of Logic: Principles of Political Economy, &c.* (1848), *On Liberty* (1859), *Considerations on Representative Government* (1861), *Utilitarianism* (1862), *England and Ireland* (1868), *The Subjection of Women* (1869), *Chapters and Speeches on the Irish Land Question* (1870); his *Autobiography* appeared in 1873, shortly after his death; and *Three Essays—Nature, The Utility of Religion, and Theism*—in 1874. In addition to these, Mr. Mill wrote many critical articles for *The Westminster* and the *Edinburgh Reviews*, which were collected and published in a volume in 1859. In 1865 he was returned to Parliament, but his career was not successful or popular. His chief prominence was in advocating the measure to admit women to the suffrage, which failed. In the next election he was rejected, and retired from public life. Soon after he took up his residence in the south of Europe, near Avignon, where his remaining years were spent, except for a brief visit in London twice a year. In 1851 Mr. Mill married Mrs. Taylor, to whom he had been most devotedly attached for more than twenty years, and who seems to have been his valued counsellor and the inspiration of his best work. He refers to his companionship with her as the "most valued friendship of his life." His idealizing worship of his wife seemed to be the outlet of pent-up reverence that had been denied the usual channels of expression through religious emotion. Mrs. Mill died in 1859, at Avignon, and from that time Mr. Mill remained there with her eldest daughter until his death, on May 8, 1873.

Mill, in *Indiana*, a township of Grant co.

Mill, in *Ohio*, a township of Tuscarawas co.

Millais (*mil-lá'*), SIR J. EVERETT, was born at Southampton, Eng., in 1829. At 11 he was a student at the Royal Academy, gaining the principal prizes for drawing. His first picture, *Pizarro Seizing the Inca of Peru*, was exhibited at the Academy in 1846. In conjunction with Dante Rossetti and Holman Hunt, he set up a school of painting from nature which obtained the title of "pre-Raphaelite;" and, in support of this school, published (1850) a periodical entitled *The Germ, or Art and Poetry*. He was elected an A.R.A. in 1853, and became R.A. in 1863. A large and representative collection of his paintings, embracing from his earliest to his latest styles, and illustrating his emancipation from the trammels of pre-Raphaelitism, was exhibited at the Grosvenor Gallery, in 1887. A baronetcy was conferred on him in 1885. In 1896 he was chosen president of the Royal Academy. Died on Aug. 13, of the same year.

Millard, HARRISON, composer, was born in Boston, Mass., on Nov. 27, 1829; studied music in Italy, and appeared as a tenor singer in grand opera, at Florence, in 1852; returned to Boston (1858), and joined the Handel and Haydn (Oratorio) Society; removed to New York in 1859, and in the same year composed his song *Vive l'America*. In 1861 he enlisted as a private soldier in the 71st New York Regiment, and, while in Washington, he created a sensation by singing *Vive l'America* at a social gathering composed chiefly of Southerners. President Lincoln, hearing of the incident, sent for the composer, and, congratulating him on his patriotism, presented him with a commission as first lieutenant in the 19th Infantry. He served at various times as aide-de-camp and staff officer; was wounded at Chickamauga, Sept. 19, 1863, and resigned from the army soon after. He returned to New York, and was appointed to a place in the Custom House until 1885. During this period he composed most of his popular songs, and also the opera *Leah*. His song, *Waiting*, is the test song of the Paris Conservatory of Music. During 1894, he travelled with his daughter, Marie M., the prima donna of the Sphinx Opera Company. Died Sept. 10, 1895.

Millard, in *Kansas*, a village of Riley co., about 5 m. S.W. of Fort Riley.

Millard, in *Utah*, a W. co., adjoining Nevada; area, about 6,762 sq. m. *Rivers*, Sevier river, and several smaller streams, with Lake Sevier in the S. part. *Surface*, mostly mountains; soil, sterile. *Cap.* Fillmore City. *Pop.* (1895) 5,375.

Millbrook, in *New York*, a post-village of Dutchess co., 10 m. from Auremia. *Pop.* (1897) 720.

Millbury, in *Ohio*, a post-village of Wood co. *Pop.* (1897) 665.

Milldale, in *Kentucky*, a post-village of Keaton co. *Pop.* (1897) 1,110.

Miller, JAMES RUSSELL, clergyman and editor, was born at Frankfort Springs, Pa., March 8, 1849; educated at Westminster College, Pennsylvania; pastor of the United Presbyterian Church, at New Wilmington, Pa. (1867-69); of the Bethany Presbyterian church, Philadelphia (1869-78); of the Broadway Presbyterian church, Rock Island, Ill. (1878-80); of the Holland Memorial Mission, Philadelphia (1881). Since 1881 he has been editor for the Presbyterian Board of Publication, and has also published *Week-day Religion* (1880); *Home Making* (1882); *In His Steps* (1884); *Silent Time* (1886); *Come Ye Apart* (1887); *The Marriage Altar* (1887); *Practical Religion* (1888); *Bits of Pasture* (1890); *Making the Most of Life* (1891); *Mary of Bethany* (1891); *Dew of thy Youth* (1891); *The Everyday of Life* (1892); and numerous smaller books, pamphlets and leaflets.

Miller, JOAQUIN (*Cincinnatus Heine Miller*), poet, was born in Indiana, November 10, 1841; removed with his parents to Oregon (1854), and afterward was a miner in California. In 1860, after studying law, he was admitted to the bar in Oregon. In 1863 he edited a paper, which was suppressed for disloyalty. He was elected judge of Grant county, Oregon (1866-70). After making a visit to Europe he settled in New York in 1874; later, became a journalist in Washington; and in 1887 he returned to Oakland, California, where he has since resided, engaging in literary pursuits. He is the author of *Songs of the Sierras* (1871); *Songs of the Sun Lands* (1872); *The Ship in the Desert* (1875), &c.; among his latest books is *Building of the City Beautiful* (1893). In the summer and autumn of 1897 he made a trip to the Klondike region of Alaska, as special correspondent of a newspaper syndicate.

Miller, WARNER, politician, was born in Oswego co., N. Y., Aug. 12, 1838; graduated at Union College (1860); became a teacher in the Fort Edward Collegiate Institute; at the outbreak of the Civil War he enlisted in the 5th New York Cavalry; fought under Gen. Sheridan, and attained the rank of lieutenant; was a delegate to the national Republican conventions of 1872 and 1888; elected to the New York Assembly in 1874 and 1875, and to Congress in 1878 and 1880. On July 16, 1881, he was made U. S. Senator from New York for the unexpired term of Thomas C. Platt, resigned; this term expired in 1887. He was Republican nominee for governor of New York in 1888, but was defeated.

Miller, WILLIAM, founder of the sect of Millerites, was born at Pittsfield, Mass., Feb. 15, 1782; settled at Pontney, Vt. (1804); removed to Low Hampton, N. Y. (1815); in 1831 began to announce the speedy coming of Christ, which, by his interpretation of Biblical prophecy, he fixed for the year 1843, at which time the world would be destroyed. In a few years he had won many adherents, who were popularly known as "Millerites." The representatives of the sect, that are to-day known as Second Adventists, are scattered throughout the United States, having their headquarters at Battle Creek, Mich.

Miller, in *Arkansas*, a S.W. co.; area, 648 sq. m.; bounded on the E. by the Red river and intersected by Sulphur Fork of Red river. *Surface*, diversified; soil, fertile. *Cap.* Texarkana. *Pop.* (1890) 14,714.

Miller, in *South Dakota*, a city, cap. of Hand co., 60 m. E. of Pierre; has flour mills and lumber yards. *Pop.* (1897) 565.

Millerton, in *New York*, a post-village of Dutchess co., 28 m. N.E. of Poughkeepsie; has some manufactures. *Pop.* (1897) 660.

Millet (*mí-lá'*), JEAN FRANÇOIS, geure and landscape painter, was born at Gréville, Manche, France, October 4, 1814; he was a pupil of Mouchel and of Langlois at Cherbourg, and of Paul Delaroche in Paris; was awarded second-class medals at the salons of 1853 and 1864; first-class at the Paris Exposition of 1867; decoration of the Legion of Honor (1868). He was well trained in academic work, but chose to live in the country in order to study his subjects in their true relations and surroundings. He was poor, and for many years his pictures brought him little pecuniary return; but in his later years the critics recognized his merits, and collectors began to buy his canvases. After his death many of his pictures sold at high figures, notably *The Angelus*, which was sold at auction in Paris (1889) for \$100,000. It was exhibited in the U. S., and was purchased by a French amateur, M. Chanchard, and taken back to Paris. *The Gleaners*, painted in 1857, and now in the Louvre, is by many regarded as Millet's masterpiece. Many of his best works are owned in the U. S. Died Jan. 20, 1875.

Millet, n. (*Bot.*) See PANICUM.

Mill'ing, n. See FLOUR, MANUFACTURE OF.

Millis, in *Massachusetts*, a post-town of Norfolk co., 19 m. S.W. of Boston. *Pop.* (1895) 1,096.

Mills, CHARLES KARSNER, M.D., alienist and neurologist, was born in Philadelphia, Dec. 4, 1845; graduated M.D. at the University of Pennsylvania (1871); was professor of Physics in the Wagner Institute, Philadelphia (1870-73); lecturer on Physics in Franklin Institute (1872-73); was lecturer on Electro-therapeutics and Nervous Diseases in the Philadelphia School of Anatomy and Surgery in 1876; lecturer on these subjects in the University of Pennsylvania in 1877, and in 1887 was made lecturer on Nervous and Mental Diseases in that institution. He is the editor of a *System of Nervous Diseases*, and is a well-known contributor to medical journals.

Mills, CLARK, sculptor, was born in Onondaga co., N. Y., Dec. 1, 1815. He executed a marble bust of John C. Calhoun (1846); then received a commission from Congress for an equestrian statue of Jackson, to be made from cannon which the latter had captured. A special foundry was built for the purpose of casting the metal; the statue was completed, and unveiled in Washington, Jan. 8, 1853. He also prepared a colossal equestrian statue of Washington, and cast in bronze Crawford's statue of Liberty, now on the dome of the capitol at Washington. Died Jan. 12, 1883.

Mills, in *Texas*, a central co.; area, 640 sq. m.; drained by the Colorado river and its tributaries. *Surface*, mountainous, with many small, rich valleys. Wool-growing, stock-raising, and agriculture are the chief industries. *Cap.* Goldthwaite. *Pop.* (1890) 5,480.

Milnes, RICHARD MONCTON (first LORD HOUGHTON), poet and critic, was born in London, June 19, 1809, the only son of ROBERT PEMBERTON M., M.P. He was a graduate of Trinity College, Cambridge, where he was intimately associated with Teunyson, Hallam, and

Thackeray; entered Parliament (1837), and assisted in passing the Copyright Act; was created Baron Houghton in 1863. He visited America in 1875; published several volumes of poems, and is especially known as the biographer and critic of John Keats. Died Aug. 11, 1885.

Milnesville, in *Pennsylvania*, a post-village of Luzerne co.

Milton, in *Illinois*, a post-village of Pike co., 30 m. W. S. W. of Jacksonville. *Pop.* (1897) 520.

Milton, in *West Virginia*, a post-town of Cabell co. *Pop.* (1897) 650.

Milton Junction, in *Wisconsin*, a post-village of Rock co., 8 m. N.E. of Janesville. Seat of Milton College (Seventh Day Baptist). *Pop.* (1895) 750.

Miltonvale, in *Kansas*, a post-village of Cloud co., 28 m. S. E. of Concordia. *Pop.* (1895) 412.

Mimograph, n. An apparatus by which copies of written or typewritten manuscripts may be obtained in large quantities in a short time. A thin, fibrous paper, covered with paraffin, is used, through which a porous spot is made by the impression of the pen or type, the ink passing through these porous spots to form the characters or letters.

Mimography, n. The art of writing gesture-language, or the writing itself; as, the sign-language of the North American Indians, or that used by the deaf and dumb.

Mimusops, n. (*Bot.*) A genus of plants, order Sapotaceæ, containing 30 or more species of tropical trees. These are generally of great height and solidity of wood, furnishing valuable timber, such as that of the bully-tree (or bullet-tree) of British Guiana. The fruits of many are edible, the seeds yield an oil, and the flowers are employed as material for perfumes; finally, the whole group is characterized by the milky sap, which in some cases is edible and in others has properties similar to gutta-serena.

Mind-cure, n. A system of treatment based upon the idea that all ailments of the body are due to an unnatural state of the mind, and that this state may be remedied without medicine by the influence of the healer's mind upon the mind which is diseased. Similar to *Christian science* and to *Faith-cure*.

Minden, in *Nebraska*, a city, cap. of Kearney co., 229 m. W. of Lincoln; has creamery, mills, and brick yards. *Pop.* (1897) 1,875.

Mindoro Sea, &c. (*Geog.*) The water enclosed by Borneo and the Sulu Archipelago on the south, the Palawan Islands on the west, and the Philippines on the north and east. Named from *Mindoro Island*, one of the Philippines, and entered from the north through *Mindoro Strait*.

Mineola, in *Texas*, a post-town of Wood co., 260 m. N. E. of Austin. Cotton, lumber, fruit, and live stock are produced and shipped. *Pop.* (1897) 1,500.

Miner, in *South Dakota*, an E. co.; area, 580 sq. m.; intersected by Vermilion river and Red Stone creek. Undulating prairie; soil, fertile. *Cap.* Howard. *Pop.* (1895) 5,015.

Miner's Mills, in *Pennsylvania*, a post-borough of Luzerne co. *Pop.* (1897) 2,230.

Mineral, in *West Virginia*, a N.E. co.; area, 370 sq. m.; bounded on the N.W. and N.E. by the North Branch of the Potomac river, and intersected by Patterson's creek. *Cap.* Keyser. *Pop.* (1890) 12,085.

Mineral Kingdom, (*Nat. Hist.*) The inorganic portion of nature. To the *M. K.* belong liquid and gaseous, as well as solid, substances; water, atmospheric air, &c., are included in it. All the chemical elements are found in the *M. K.*, from which vegetable and animal organisms derive them.

Mineral Ridge, in *Ohio*, a post-village of Trumbull co. *Pop.* (1897) 1,060.

Mineral Wells, in *Texas*, a post-town of Palo Pinto co., 251 m. N. E. of Austin; a health resort, for its medicinal springs. Deposits of coal, silver, nitre, and alum in vicinity. *Pop.* (1897) 670.

Mineral Wool, (*Metal.*) A vitreous substance formed from the slag of the blast furnace by melting, and blowing it into fine, glassy threads as it flows from a small orifice. The blowing is done by a jet of steam, and the fleecy appearance of the thread-like product is variously called mineral cotton, silicate cotton, and mineral wool, the last name being the most common. It is valued principally because it can be woven up into a fabric which will withstand a great deal of heat, and may be exposed to fire without danger of ignition. It is much used as an insulator, to wrap about boilers, steam-pipes, protect woodwork from the heat of furnaces and stoves, &c. It is equally valuable for retaining cold, since it is a non-conductor, and its use is increasing in the construction of cold-storage buildings, refrigerators, and coolers of all kinds. For the jacketing of steam-cylinders, protection of water-tanks from freezing, and similar uses it is being further introduced, as well as for lining walls in dwellings, filling in spaces in the roofs, &c. Its unusual non-conductivity is attributed to the amount of imprisoned air which the fibers contain, amounting to 94 per cent. of its bulk. It does not decay, and is almost indestructible, and mice and vermin do not readily harbor in it.

Mineville, in *New York*, a post-village of Essex co. *Pop.* (1897) 1,910.

Minghetti, MARCO, statesman, was born at Bologna, Italy, Sept. 8, 1818; became minister of the interior under Cavour (1860), and retained the position after Cavour's death, under Ricasoli; was minister of finance under Farini (1862), and Premier (1863-64 and 1873-76). His most notable work is a book on political economy published in 1859. Died Dec. 10, 1886.

Minier, in *Illinois*, a post-village of Tazewell co., 27 m. S. E. of Peoria. Pop. (1897) 770.

Ministerium, *n.* [*Luth. Ch.*] A body of ministers and lay representatives who meet to consider the general interests of the churches of a district.

Minneapolis, in *Kansas*, a city, cap. of Ottawa co., 23 m. N.W. of Solomon City; has carriage works, flour mill, and creamery. Pop. (1895) 1,559.

Minne-drinking. In old Teutonic nations, a solemn toast to the gods, or in honor of the absent or the dead. The Christian Church permitted the custom with the substitution of saints for gods, and traces of it survive in certain customs and places.

Mi'not, in *North Dakota*, a post-village, cap. of Ward co., 60 m. W. of Rugby Junction. Pop. (1897) 660.

Mins'ter, in *Ohio*, a post-village of Auglaize co., 20 m. from Wapakoneta. Pop. (1897) 1,220.

Min'to, in *North Dakota*, a post-village of Walsh co., 30 m. N. of Grand Forks. Pop. (1897) 540.

Mi'ophone, *n.* A form of microphone devised by Boudet for making a pathological examination of the muscles.

Mir, *n.* The primary unit of state organization in Russia is the village community, or *mir*. The bonds which unite the peasants in one of these village communities have caused the fact that the dwellings of the peasantry are not scattered over the face of the country, but aggregated in villages, where they are built in a street or streets. A number of these village communities are united into *volosts*, of which the peasant inhabitants elect an elder and a peasants' tribunal. There are also elective districts and provincial assemblies. All this has an appearance of local self-government, but these various institutions are so completely under the control of state officials that they form simply a part of the machinery which directs the absolute and strongly centralized monarchy.

Mi'ra, *n.* [*Lat. fem. of mirus*, wonderful.] A fixed star in the constellation Cetus, situated in the neck. It is variable, or periodic, being usually of the 12th magnitude, but once in about 11 months increases to the 4th or 3d, occupying 100 days in its rise and fall. For about two months it is invisible to the naked eye. Its variability was discovered by Fabricius in 1596.

Mir'amou, MIGUEL, a Mexican general and revolutionist, was born in 1832; became in 1858 the chief of the Clerical party opposed to the presidency of Juarez. After being defeated in a decisive battle fought in Dec., 1860, he left Mexico, to return in 1864 and take an active part in the struggle for the empire under Maximilian, and was captured and shot with him in June, 1867.

Misanthro'pia, *n.* [*Pathol.*] Aversion to man and society; commonly a symptom of melancholy.

Misericorde, *n.* [*Lat.*] The small dagger by which, in the Middle Ages, a wounded knight received his final blow through a joint in his armor, or was forced to ask quarter.—[*Archaic.*] Pity; tender forgiveness.

(*Arch.*) Same as MISERERE.

Missau'kee, in *Michigan*, a N. central co.; area, 580 sq. m.; watered by the Muskegon, Clam, and Manistee rivers. Surface, undulating; soil, moderately fertile. Extensive lumbering interests. Cap. Lake City. Pop. (1894) 6,956.

Mississippi, in *Arkansas*, a N.E. co.; area, 803 sq. m.; bounded on the E. by the Mississippi river and intersected by the Little river. Surface, level, with numerous lakes and cypress swamps; soil, of drier section, very fertile. Cap. Osceola. Pop. (1890) 11,635.

Mississippi, in *Missouri*, a S.E. co.; area, 430 sq. m.; bounded on the N. and E. by the Mississippi river. Surface, level; soil, fertile. Cap. Charleston. Pop. (1897) 10,650.

Mississippi University of. (*Educ.*) A co-educational, non-sectarian institution, situated at the town of University. It had 15 instructors and 285 students, with about 13,000 volumes in its library, at the close of 1896. During that year its income from all sources amounted to about \$37,000.

Missou'la, in *Montana*, a N.W. co.; area, 18,550 sq. m.; intersected by the Missoula river. Surface, mountainous; soil, of the valleys and prairies, fertile. Min., gold, silver, and copper. Cap. Missoula. Pop. (1897) 15,000. —A thriving city, cap. of above co., on the Nor. Pac. R.R., about 100 m. N.W. of Helena; in a lumbering, mining, and agricultural region. Pop. (1897) 4,500.

Missou'ri University of. Situated at Columbia, and organized in 1839, this co-educational, non-sectarian institution had, at the beginning of 1897, 52 instructors and 681 students, with about 20,000 volumes in its library. During 1896, its total income from all sources was about \$175,000.

Missouri Valley, in *Iowa*, a post-town of Harrison co., 21 m. N. of Council Bluffs; has railroad shops and stock-yards. Pop. (1895) 3,350.

Mis'tral, FREDERIC, poet, was born in Maillane, Bouches-du-Rhône, France, Sept. 8, 1830. He belongs to the brotherhood of modern Provencal poets known as "*Les Felibriges*." His first notable work was the narrative poem *Mirèio*, for which the French Academy awarded him the chief poetic prize in 1861. This poem has been rendered into English and several other languages. Besides many other poems and romances, he has published (1878-86) a dictionary of the dialects of Provence, a work of great philological value.

Mitch'ell, DONALD G., well known as "Ik Marvel," was born in Connecticut in 1822; graduated at Yale in 1841; appointed U. S. Consul at Venice in 1853. His best known works are: *The Lorgnette*; *Reveries of a Bachelor*; *Dream Life*; *Eudge Dohigs*.

Mitchell, MARIA, an American astronomer, was born at Nantucket, Mass., 1818. She early evinced a strong predilection for astronomy and its cognate branches of science, and on Oct. 1, 1847, she discovered a telescopic comet, subsequently discovered by Father da Vico at Rome, and by other astronomers. For this discovery she received a gold medal from the king of Denmark. She calculated the elements of this comet, and communicated them to the Smithsonian Institute; and was subsequently employed in observations connected with the Coast Survey, and in the compilation of the *U. S. Nautical Almanac*. Received the degree of LL.D. from Dartmouth in 1852; from Columbia in 1887, and was the first woman to be elected to the American Academy of Arts and Sciences. In 1865 she was appointed professor of Astronomy in Vassar College, N. Y., which she held until near her death, in 1889.

Mitchell, S. WEIR, alienist, neurologist, and author, was born in Philadelphia, Pa., February 15, 1829; graduated at Jefferson Medical College (1850), and gave his attention chiefly to researches in toxicology, the nervous system, &c. On these subjects he has written many papers of value to the medical world. As a physician he has been a conspicuous advocate of the "rest-cure," the value of which he has demonstrated in his practice. Since 1880 he has become prominent as a writer in the purely literary fields of poetry and fiction, publishing several volumes of poems and a number of novels, among which *Hugh Wynne, Free Quaker*, attained high popularity. Others are *In War Time*, *The Adventures of François*, etc.

Mitch'ell, in *Kansas*, a N. cen. co.; area, 720 sq. m.; drained by the Solomon river and its tributaries. Surface, nearly all prairie; soil, fertile. Cap. Beloit. Pop. (1895) 13,327.

Mitchell, in *North Carolina*, a W. co.; area, 324 sq. m.; drained by the Nolachucky river. Surface, mountainous; iron ore, mica, and asbestos abundant. Cap. Bakersville. Pop. (1860) 12,807.

Mitchell, in *South Dakota*, a city, cap. of Davidson co., 70 m. N. W. of Yankton; has railroad repair shops, mills, and factories. Here is the Dakota University (Meth.). Pop. (1895) 2,579.

Mitchell, in *Texas*, a N. W. co.; area, 900 sq. m.; drained by Colorado river and Giraud creek. Surface, rolling prairie; soil, good for agriculture by irrigating; chiefly devoted to sheep and cattle raising. The river valley at Colorado is underlaid with a bed of pure rock-salt 69 ft. thick, from which large quantities of salt are exported. Cap. Colorado. Pop. (1890) 2,059.

Mitch'ellville, in *Iowa*, a post-town of Polk co., 17 m. E. N. E. of Des Moines; seat of the State Industrial School for Girls. Pop. (1895) 667.

Mi'ter-box, *n.* (*Carp.*) A trough with vertical kerfs, which intersect the sides at angles of 45°, 90°, &c., to form guides for a saw in sawing the ends of pieces to make miter-joints.

(*Print.*) A box in which rules are placed while the ends are cut obliquely, so as to make a miter-joint with another rule.

Mi'ter-joint, *n.* A joint made by pieces matched and united on a line bisecting the angle of junction, as by the beveled ends of two pieces of molding or brass rule. Said especially of pieces that form a right angle.

Mit'ford, MARY RUSSELL, author, was born at Arlesford, Hampshire, Eng., Dec. 16, 1787. She was a writer of miscellaneous poems, but chiefly distinguished for her successful plays, *Julian*, a tragedy, accepted by Macready, and *The Foscari*, produced by Charles Kemble. Her best play is *Rienzi*, which was produced at Drury Lane Theater in 1828, and which has held place among the standard plays of the century. Miss M. also wrote simple sketches of village life and several novels, juvenile stories, etc. Died at Swallowfield, Jan. 10, 1855.

Mitrailleuse, *n.* [*Fr.*] See GUNS, MACHINE AND RAPID-FIRE.

Mitre (*mītrā'*), BARTOLOMEO, ex-President of the Argentine Republic, was born in 1821. He early entered into official life, and distinguished himself as an orator in the Assembly of Representatives. In 1859, being then Minister of War, he took command of the army sent against the Federal forces under General Urquiza, and lost the battle of Copeda, Oct. 23. In May, 1860, he was appointed governor of Buenos Ayres, and on Sept. 17, defeated Urquiza at Pavon, and after invading the province of Santa Fé, received the adhesion of that of Cordova, and entered Rosario in triumph. In 1861 he made peace with Urquiza, leaving the latter in possession of the government of the province of Entre-Rios, and in Oct., 1862, was elected President of the Republic, which office he held with signal ability till succeeded in Oct., 1868, by General Sarmiento. He published two historical works: *The Historia del Belgrano* (1857), and *The Historia de San Martín* (1884).

Mi'vart, ST. GEORGE, naturalist, was born in London, Nov. 30, 1827; was educated in the law, but preferred scientific studies; became professor of Biology in University College, Kensington (1874). He is a familiar magazine writer on scientific topics, and has been one of the ablest opponents of the Darwinian theory of the origin of species, which he has combatted from a strictly scientific point of view. He has published: *Genesis of Species*; *Contemporary Evolution*; *Man and Apes*; *Lessons from Nature*, &c.

Mop, *n.* See DINORNIS.

Moabite Stone. (*Archæol.*) A slab of black basalt, now in the Museum of the Louvre, bearing an inscription of 34 lines. It was found in 1868 on the site of ancient Dibon, the capital of the kingdom of

Moab, which was on the east of the Jordan. Before the stone could be removed, it was broken in pieces through the silly jealousy of Arab tribes, and is now badly damaged. Luckily, however, a squeeze of the inscription had been taken before it was broken. The inscription records the defeat of Mesha, king of Moab, by the combined forces of Joram, king of Israel, and Jehoshaphat, king of Judah, as narrated in the third chapter of the second Book of Kings, and is believed to have been written about 850 B. C. It is thus the oldest Semitic monument known. It is the only non-Israelite source from which any knowledge of ancient Hebrew can be obtained. Before the stone was found, it was thought probable that some of the peoples who were neighbors to the Israelites spoke Hebrew, but nothing whatever was known on the subject. The discovery proved that one of these peoples, the Moabites, spoke the same language as the writers of the Old Testament. These writers and the inscription scarcely differ at all.

Mo'berly, in *Missouri*, a city of Randolph co., 23 m. S. of Macon City; has large shipments of farm produce, live stock, wool, hides, and hardwood lumber. Pop. (1897) 9,450.

Mo'easin, *n.* (*Zoöl.*) A venomous snake of the S. United States, of the genus *Aneides*. The water-moccasin *A. piscivorus* (fish-eating), usually found in or near water, is olive-brown, barred with black above, while beneath it is brownish yellow, mottled with darker. The upland *M.* is *A. atrofusca*, sometimes called cotton mouth. They resemble rattlesnakes, but neither has a rattle. The name *M.* is sometimes improperly given to the copperhead, *A. contortrix*.

Mock'ernut, *n.* (*Bot.*) The common hickory-tree, *Carya tomentosa*, or its fruit. The bark is rough, but not scaly, and the nut is thick-shelled and inferior to that of the shellbark.

Mock-orange, *n.* (*Bot.*) The sweet syringa (*Philadelphus coronarius*); a shrub whose creamy white flowers somewhat resemble orange blossoms in appearance and odor. Also other species of the genus *Philadelphus*. The osage orange (*Machra aurantiaca*), whose ornamental yellow fruit is called mock-orange in the Southern U. S. See MACLURA.

Mod'ena, *n.* [From *Modena*, in Italy.] A color resembling crimson.

Modes'to, in *California*, a post-town, cap. of Stanislaus co., 30 m. S. of Stockton, on So. Pac. R.R.; has mills and a foundry. Pop. (1897) 2,640.

Modiste (*mô-dēs't'*), *n.* [*Fr.*] A woman who makes or deals in fashionable articles of ladies' dress; a dress-maker or milliner.

Mo'dius, *n.* A Roman cylindrical dry measure holding one-third of the amphora, or about 2 gallons.—A classical headdress resembling the *M.*, characteristic of the images of certain divinities.

Modjes'ka, HELENA, Polish actress, was born in Cracow, October 12, 1844. After several years of experimental acting with a travelling company, she achieved a decided success at Cracow (1865), and was ranked first in her profession in Warsaw from 1868 to 1876. She then retired, and, going to California, purchased a farm at Los Angeles. Not succeeding with her farming project, she returned to the stage, and gained a complete triumph at San Francisco, in the rôle of *Adrienne Lecourneur*, winning the reputation of being one of the best of modern emotional actresses. She was popular in *Juliet*, *Rosalind* and *Beatrice*, and in the characters of *Camille* and *Odette*. She died at her California home, April 8, 1909.

Mo'doc, in *California*, ex. N.E. co.; area, 4,198 sq. m.; drained by Pitt river, and contains several lakes. Surface is generally mountainous or hilly and in part occupied by the lava beds. Agricultural products small. Cap. Alturas. Pop. (1890) 4,986.

Mo'does, *n.* (*Anthrop.*) A tribe of North American Indians, formerly belonging to the Klamath nation, originally seated about Klamath Lake, Cal. From 1847, they commenced a predatory and treacherous warfare against the whites; continued until 1864, when the *M.* ceded their lands to the U. S. government, and agreed to settle on a reservation. This treaty, however, was not ratified till Feb., 1870, or the reservation allotted them till March, 1871. In the interim, the *M.* had been consigned to the Klamath reservation, but there found it impossible to live, and were, besides, defrauded and harassed by their enemies, the Klamaths. Ultimately, the band of Captain Jack (Krentpoos), who had constituted himself a rival to Schonchin, the legitimate chief, returned, in Feb., 1868, to their old grounds on Lost river—the other and peaceable band remaining on Hot creek. Captain Jack soon proceeded to depredations on the whites, and desultory warfare followed until the almost impregnable "lava-beds" of that region. The government appointed a commission to investigate the causes of the *M.* dissatisfaction; and, at a conference held on April 11, 1873, the commissioners were attacked by Captain Jack and his band, with the loss of Gen. Canby and others. After this, active measures were taken, and the *M.*, after a long and determined resistance, at length surrendered to Gen. Davis, on the 1st of June. Captain Jack and others of the leading Indians were tried and executed at Fort Klamath, Oct. 3, while the rest of the prisoners, numbering 148, were deported to the Indian Territory.

Mo'dus viven'di. [*Lat.*] This phrase, meaning literally "mode of living," has become a recognized term in diplomacy to signify a temporary arrangement between two sovereignties providing for the conduct of certain affairs pending negotiations for a treaty on the same subject-matter.

Moesogoths. (*Anc. Geog.*) The territory immediately south of the Danube, corresponding in the main to the present Servia and Bulgaria, was known in ancient geography as Moesia. It became a Roman province about 16 B. C. In 250 A. D. the Goths invaded Moesia, and at last, in 395, a number of them, afterward known as Moesogoths, obtained permission to settle in the province.

Mofus'il. *n.* The country, in India, as distinguished from the town or the residence district of the officials around a station.

Mogigraph'ia (*Path.*). [From Gr. *mogis*, with difficulty, and *grapho*, I write.] Writers' cramp; spasmodic rigidity of some of the muscles of the fingers and arms, in consequence of close application with the pen or pen-til.

Molesworth. SIR WILLIAM, was born in London, May 23, 1810; entered Parliament in 1832; was associated with Grote and J. S. Mill, and was unpopular because of his infidel views. In April, 1835, he started the *London Review*. During 1839-45 he was engaged in editing and publishing an edition of Hobbes' works, which was issued in ten volumes, at a great expense, copies being presented to all of the leading libraries. In July, 1855, he was appointed colonial secretary, and died Oct. 22 in the same year.

Moline (*mol-in'*), in *Kansas*, a post-village of Elk co., 8 m. S. of Howard; ships live stock, wool and grain. *Pop.* (1895) 618.

Molly Maguires' *n. pl.* In Ireland, a secret society formed in 1843 to intimidate bailiffs or process-servers distraining for rent, or others impounding the cattle of non-rent payers. They were mostly young men dressed in female attire (whence their name), and had their faces blackened or otherwise disguised.—In the United States, a similar secret society that terrorized the coal regions of eastern Pennsylvania (1867-77), whose threatening letters were signed "Molly Maguires." Many murders and other outrages were committed, and the band was only broken up by the execution of several of the ring-leaders.

Mombasa. *n.* (*Geog.*) An important town now, but which bids fair to be far more important in the future. It is a seaport with a harbor which is the largest, safest, and healthiest on the east coast of Africa. It is built on a coral island, 3 miles long by $2\frac{1}{2}$ broad, close to the coast, in $4^{\circ}4'$ S. Lat. Founded by the Arabs after they began their occupation of the coast in the 8th century, Mombasa was a large and prosperous town when visited by Vasco da Gama in 1497. After long possession by the Portuguese, it was seized by the Sultan of Zanzibar, which is 150 miles from M. The Sultan ceded it in 1890 to the British East Africa Company. It is now connected with Zanzibar by telegraph, and in 1890 the company began the construction of a railway to Lake Victoria Nyanza, distant 400 miles. The population in 1897 is 25,000, mostly Africans, with some Arabs and Banyans.

Momm'sen. THEODOR, historian, was born at Garding, in Schleswig, on Nov. 30, 1817; educated at Kiel, and travelled for three years in France and Italy studying Roman inscriptions for the Berlin Academy; appointed to the chair of Jurisprudence at Leipzig, a position of which he was deprived for political reasons; accepted the chair of Roman Law at Zurich in 1852, at Breslau in 1854, and the chair of Ancient History at Berlin in 1857. He has written many books on Roman history and law. As secretary (after 1873) of the Berlin Academy, he was the editor of the great *Corpus inscriptionum latinarum*, published by that body. At various times he has taken an active part in politics, and has been a member of the Prussian House of Delegates, where his political views were those of the National Liberal party. Died Nov. 1, 1903.

Monos. or **Mono-**. A prefix derived from the Greek *monos*, one, and signifying unity or singleness. (*Chem.*) It indicates the presence of a single atom of the element specified.

Mo'nazite. *n.* (*Chem.*) This resinous-appearing substance was so named from its supposed rarity, and attracted much attention in 1893 and 1894 because it contained so many of the rare earths of chemistry, which were coming into demand just then for use in manufacturing mantles for incandescent gas-lamps. It is a phosphate of cerium, lanthanum, praseodymium, and neodymium, and contains also both silicon and thorium. These salts are among the most refractory substances known, and are hence specially suitable for making gas-mantles, which are required to withstand great heat for a long period. Monazite was first found in Norway, and was supposed to be confined to that section. About 1893 it was found in North Carolina, and since then in a great many other places. When discovered in North Carolina, a great sensation followed, often referred to as the monazite boom, and its value was so exaggerated that the price of monazite sand was temporarily inflated to over \$200 a ton. It was found, however, that there was not so much money in it as at first supposed, as the sand did not yield very largely the desired earths, and the price has since fallen materially.

Moncrieff. LORD JAMES WELLWOOD, Scottish jurist, was born in Edinburgh, in 1811; educated at the University there, and began a brilliant career in the law in 1833. He became Solicitor-General (1850), Lord Advocate (1857), holding the latter post in all the Liberal Ministries, sitting for Leith, Edinburgh, and the Universities of Aberdeen and Glasgow in the House of Commons until raised to the bench (1869) as Lord Justice Clerk. In Parliament he labored for a national system of education in Scotland, with measur-

able success. He was elected rector of Edinburgh University in 1868; was made a baronet in 1871, and in 1874 was raised to the peerage as BARON MONCRIEFF. He was a frequent contributor to the *Edinburgh Review*, and other magazines. He retired in 1888, and died April 27, 1895.

Mond. LUDWIG, technical chemist and inventor, was born at Cassel, Germany, on March 7, 1839. In his scientific training he was a pupil of Kolbe and Bunsen; has made important additions to chemical industrial processes and products, especially with reference to the alkali industry, having improved the mode of manufacture of carbonate of soda, caustic soda, hydrochloric acid, chlorine, &c. In 1863 he developed the Mond process of sulphur recovery from alkali waste; and in 1873 founded the ammonia-soda works of Messrs. Brunner, Mond & Co., at Winnington, Cheshire, of which he is still managing director. His discovery of a very interesting compound of nickel with carbonic oxide has furnished means for extracting nickel from its ores and applying it to various useful purposes. In 1894 he made a munificent offer to the Royal Institution, namely, the establishment and endowment of a physical and chemical laboratory, to be called the "Davy-Faraday Research Laboratory," involving an expense of nearly £100,000.

Mon'ergism. *n.* (*Eccles.*) A theological term, signifying that regeneration is entirely the work of the Holy Spirit, the unregenerate will having no power of cooperation. It is opposed to *synergism*, a doctrine held by Erasmus and Melancthon and the Council of Trent, and which holds that human effort cooperates with divine grace in the salvation of the soul, teaching that "God does not deal with man as a block, but draws him so that his will cooperates."

Mone'sia Bark. (*Bot.*) The bark *Chrysophyllum glycyphorum*, a tree native of the south of Brazil. The bark is lactescent; but when dried it is thick, flat, compact, heavy, brown and hard, with a taste at first sweet, afterward astringent and bitter. A substance called *Monesia* is extracted from it, which is almost black, at first sweet, then astringent, and finally acrid, and contains a principle called *Monesin*.

Mon'etary Stand'ards. (*Finance.*) "Monetary standard" is a better name for that which is so frequently termed a "standard of value." It is created by an act of legislation which decrees that a fixed quantity of a certain metal, when duly refined and stamped, shall constitute the unit of the currency. Thus, under the present laws of the U. S., a quantity of 25.8 grains of gold, 900 fine, is the one legal "unit of value" and the monetary standard of our currency. This constitutes monometallism (*q. v.*). Prior to 1873 the U. S. had two monetary units of equal legal value, one being the silver dollar of 412½ grains of standard fineness, the other the gold dollar of 25.8 grains. This was true bimetalism (*q. v.*), notwithstanding the fact that practically no silver had been in circulation in this country after 1834, and neither silver nor gold after 1861 up to the date of the law which constituted gold the sole standard.

The professed purpose of maintaining a monetary standard is to secure a stable unit of valuation, so that money acquired and unexpended shall neither lose nor gain by keeping for a time, but shall have equal purchasing power when eventually exchanged for goods; also to prevent either gain or loss through fluctuations in the purchasing power of the monetary unit, to the end that contracts involving the future payment of money may be entered upon with no danger of inequity in the settlement as the result of a depreciation or an appreciation of the currency.

Since all commodities—there is not a single exception—are subject to the law of supply and demand, no intelligent man now claims that either gold or silver, or a combination of the two, provides an absolutely stable monetary unit; on the other hand, it is freely admitted all around that perfection in this respect is not only unattained but unattainable. The advocates of gold assert that that metal is the most nearly perfect standard that has yet been discovered, while the adherents of bimetalism, with at least equal force, maintain that the alternative (misnamed "double") standard will better provide this first requirement of safe, honest money—i. e., an invariable unit. The best that can be said, then, is that we have been striving for generations to secure that which has no existence, and confessedly cannot have.

Still more difficult is it to conceive of a "double" monetary standard. To attain this it would be requisite to find two substances—silver and gold, if you choose—that will permanently maintain with each other a given value relation. To accomplish this the immutable laws of supply and demand would have to be abolished, unless, indeed, two substances could be found which were no longer either supplied or demanded—produced or consumed. Such a solution of the monetary problem is, of course, not expected; yet it is undoubtedly the only one which could establish a permanently equitable metallic monetary unit.

It may be profitable to examine the process by which a monetary standard is first selected and made legal. In establishing a monetary system of its own, a new nation must first of all decide upon its money of account. What shall we call our money? Say dollars, cents, mills; the unit shall be the dollar. Next, the standard; what shall that be? It is decided that a piece of gold 900 fine, weighing 25.8 grains, shall be the dollar and the unit of value, when officially stamped in the manner provided; the cent shall be one-hundredth of that amount, &c. Although it is true that thenceforth,

while that law stands and is enforced, each dollar of that nation will be equivalent in exchange valuation to 25.8 grains of gold, there is no assurance of even a close approximation to a stable monetary unit. The purchasing power of each dollar (and of its paper representatives, if not discredited) will follow and conform to the varying valuation of that much gold, be the same more or less. Since that metal may, and does, fluctuate in common with all other commodities, as now admitted by economists of every school, it follows that by such procedure we not only do not acquire a stable monetary unit, or standard, but actually secure ourselves against the slightest hope of so doing.

In this respect the bimetallic plan is an improvement only in degree; but the employment of two metals for the manufacture of coins or as a basis for a paper circulation would assuredly provide for the use of much less purely "credit" money. If for every dollar of paper currency in circulation there should be at all times reserved in the Treasury or bank vaults a legal equivalent in coin or bullion, there would be an end to inflation properly so called—i. e., the issue of promises to redeem in excess of the actual supply (in hand) of the metal of redemption. No one wants to handle either gold or silver in large quantities; paper is the money of the present and of future civilization, the only question being the conditions of its issue. Who could doubt the integrity of the notes of a bank or of the national Treasury, if it were positively known that for every dollar of its paper extant there was a metallic dollar held waiting for its redemption? If, therefore, the bimetallic system would provide for the retirement of all purely credit paper, and furnish an ample supply of convenient paper currency whose metallic basis had a known, constant existence, would not that be far more desirable than the continuance of a vast body of currency either inconvertible or subject to doubt as to possibility of its redemption? Uncovered bank notes and Treasury notes are simply evidences of debt, protected by a fractional reserve. Their existence provides the means for financial panic; in the case of the Treasury notes it furnishes a convenient way to build up the national debt and create commercial disorder. Until it can be shown that debt is a desirable condition, it cannot be proved that credit money is a blessing, when issued on a metallic margin so narrow as to constantly invite a disastrous overturn.

In the article BIMETALLISM we have discussed the merits of that system at some length, and while it is not within the province of this work to go beyond the mere statement of facts and obvious conclusions, we wish to note here that the considerable fall in the (gold) price of silver during the summer of 1897 was entirely consistent with the course of events. The action of Japan and other nations in the direction of silver demonetization would naturally have the effect of depressing the price of that metal, even in the face of a diminished output and an increased production of gold. That it has done so proves the truth of two claims made by the more intelligent bimetalists: (1) That the relative production of gold and silver has little to do with their relative value where one (or both) is an established money metal, and (2) that the coinage laws of nations can and do very seriously affect the relative values of the money metals without regard to their relative production. And if the abolition of silver coinage by one or two comparatively minor nations will reduce the purchasing power of silver, how can it be doubted that its resumption by leading nations would greatly increase that power—perhaps even restore its former ratio of 16 to 1 as compared with gold?

But for the wide employment of credits—and this is only another term for the enormous extension of debt—there would be little occasion to bother with the question of a monetary standard. The man who spends on Saturday all that he has earned through the week cares nothing for ratios; but the man who saves and lends to his neighbor and he who borrows are interested in the stability of their currency. Economists can as yet offer them nothing but partial security. No monetary standard has yet been discovered that can be truly pronounced safe, sound and honest. In the absence of a practical plan for a thoroughly scientific credit currency, based upon the whole resources of the issuing nations, in which the dangers due to the unstable "standards" have been eliminated by the substitution of the only possible scientific unit of value—the integer 1—there seems to be only one means by which to escape the inevitable inequities of prevailing methods, viz.: an abolition of the credit system. This is doubtless a visionary proposition under existing conditions, and would certainly be impossible, at least in the U. S., without a considerable increase in the volume of the currency, such as might follow the demonetization of silver and the resulting "flood" of bullion. It is difficult to believe that Jones, the country merchant, would prefer to give four months' notes for his goods, if Smith, the carpenter, could pay cash for his muslins; and this Smith could do, if Brown, the butcher, would pay cash for the repairs to his shop; while Brown would gladly settle his carpenter's bills on sight, if Jenkins, the carpet-weaver, could pay for his steaks and chops on delivery; and so on, *ad infinitum*. Each owes the other and must eventually pay, while no one is actually enriched by the operation except the man who discounts the resulting notes. Under a cash system of trade, the perils and perplexities due to an unstable monetary unit would largely vanish.

It would seem, without going further into the relative merits of monometallism or bimetalism in respect to the monetary standard, that the systems now exist-

ing are by no means safe or sound; and this knowledge should stimulate our people to a closer study of the economic principles that underlie this momentous question rather than spend their energies in useless debate upon the more prominent though minor considerations that lie near the surface. See MONEY; MONOMETALLISM; FIAT MONEY; GRESHAM'S LAW; BIMETALLISM; VALUE; &c.

Mon'ey of account. (*Fin.*) A monetary denomination used in keeping accounts for which there may or may not be an equivalent coin. The mill of the U. S. is a money of account, but not a coin.

Monier-Williams. SIR MONIÈR, Sanskrit scholar and Indologist, was born at Bombay, India, in 1819; has had a brilliant record as student and professor of Sanskrit; and was chosen Boden professor of Sanskrit

board, resemble the battleships in general outward appearance. Though more seaworthy than the original vessel designed by Ericsson, they are best adapted for harbor duty and coast defence. The new monitors, above enumerated, are furnished with modern guns, while the older ones would be of comparatively little practical value in case of war until refitted with ordnance of late design, and even then could be employed with safety only in smooth waters. See MONITOR in SECTION I.

Monk'ey-puzzle. *n.* (*Bot.*) The Chilean pine, so called because difficult for monkeys to climb. See ARAUCARIA.

Mon'ocle. *n.* An eyeglass for one eye.—A monaculo.

Mon'ocycle. *n.* [*Gr. monokyklos*, one-wheeled.] A one-wheeled vehicle.

Monomet'allism. *n.* (*Fin. and Polit. Econ.*) The use of a single metal as a monetary standard, or so-called "standard of value;" distinguished from bimetallism, which provides for the use of an alternative (improperly termed "double") standard. In this country, as in France and Germany, money of full legal tender is coined in both gold and silver, but the one monetary standard is gold; hence, the full legal tender silver coins are actually "token" money, owing their equivalence to gold (in purchasing power) chiefly to the expressed

Fig. 2990.—U. S. MONITOR "AMPHITRITE."

at Oxford in Dec., 1860. He is the author of numerous text-books of the Sanskrit language, and is a voluminous writer on Indian subjects. He was raised to the knighthood in 1886.

Mon'ism. *n.* [*Gr. monos*, one.] (*Philos.*) The doctrine that holds to the theory of one ultimate principle of being, in opposition to *dualism*, which refers phenomena to two principles—mind and matter. *M.* may be *idealistic*, explaining matter and its phenomena as a modification of mind; or *materialistic*, holding that all phenomena are from matter; or *pantheistic*, referring both mind and matter to one original substance.

(*Biol.*) Same as MONOGENESIS (*q. v.*).

Fig. 2991.—THE PNEUMATIC AMMUNITION HOIST—U. S. MONITOR "AMPHITRITE."

Mon'itor. *n.* [Name of the first vessel of the type.] (*Navy.*) In addition to the old monitors of the Civil War period, the U. S. now possesses six formidable warships of the monitor type, viz., *Amphitrite*, *Mantowich*, *Monadnock*, *Monterey*, *Puritan*, and *Terror*. Of these the *Puritan* is the largest and most speedy; for their respective dimensions, armament, &c., see NAVY OF THE UNITED STATES. Monitors of to-day are provided with military masts, and, but for their low free

determination of government to maintain them upon an equality with gold. This is accomplished by making silver currency virtually convertible into gold; not by direct legislation, but by custom. In fact, by no other means could such parity be maintained. See MONEY; MONETARY STANDARDS; FIAT MONEY; BIMETALLISM, &c.

Mon'opia. *e. n.* An aeroplane or flying machine consisting of a single gliding board adapted to carry the motor and other apparatus and sustain the operator. It is of simpler mechanism than the biplane, or double plane machine, like that of the Wright brothers, and was successfully employed by Louis Bleriot in crossing the English Channel from Calais to Dover, July 25, 1909. See AEROPLANE and BIPLANE.

Monroe City. in Indiana, a post-town of Knox co. Pop. (1897) 670.

Monroe City. in Missouri, a post-town of Monroe co., 22 m. W. by S. of Hannibal; has several factories, flour and saw mills. Pop. (1897) 2,120.

Monroe' Doctrine. (*Am. Pol.*) The principle that the extension of the power of any European State over any of the free governments of America must be regarded by the U. S. as threatening their peace and safety; named from its enunciation by President Monroe, in his annual message, Dec. 2, 1823.

The message was suggested by the following circumstances: The Emperors of Austria and Russia and the King of Prussia formed in 1815 the treaty known as the Holy Alliance, at first to defend their governments against revolutionary overthrow. They induced the King of France to assist in the overthrow of the liberal government of Spain, and proposed to suppress the revolutionary spirit in Central and South America, and to restore the Spanish-American colonies to Spain. The British Minister of Foreign Affairs (Canning) opposed the Alliance. He said to the French Ambassador that England would remain neutral in the war between Spain and her colonies, but would regard the junction of any foreign power with Spain for their subduing as constituting "an entirely new question;" and to Richard Rusk, Minister from the U. S., he said that he "conceived the recovery of the colonies of Spain as hopeless." John Quincy Adams, American Secretary of State, in 1820 had written that, "with the exception of the British establishment north of the U. S., the remainder of both the American continents must henceforth be left to the management of American hands;" and now he consulted with Thomas Jefferson, who said: "Our first and fundamental maxim should be never to entangle ourselves in the broils of Europe; our second, never to suffer Europe to intermeddle with cis-Atlantic affairs."

As a result of this consultation Mr. Monroe issued his message. The most essential parts, with reference to the "Monroe Doctrine," were as follows: "We should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. . . . With the governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power, in any other light than as the manifestation of an unfriendly disposition towards the United States."

This famous doctrine, not originating in President Monroe's message, has been endorsed and expounded by the most distinguished statesmen in many later utterances. Henry Clay, Jan. 20, 1824, offered a joint resolution in the House of Representatives, that "the people of the United States would not see without serious inquietude any forcible intervention by the allied powers of Europe in behalf of Spain to reduce her colonies to subjection." In 1825, President John Quincy Adams reaffirmed the doctrine; as did Daniel Webster, in 1826. In accordance with this principle, William H. Seward, in 1865, gave the French peremptory notice to withdraw from Mexico. In 1870, President Grant declared that existing dependencies were no longer a subject of transfer from one European power to another. In 1895, Richard Olney applied the doctrine to the request by the U. S. that the boundary dispute between England and Venezuela be submitted to arbitration. Lord Salisbury, in resisting this request, held that the Monroe Doctrine was not a part of international law; but President Cleveland, in his message of Dec. 17, 1895, held that while it might not have been admitted in so many words to the code of international law, "it finds its recognition in the principles of international law which are based upon the theory that every nation shall have its rights protected and its just claims enforced."

There was some difference of opinion as to the application of the doctrine to the Venezuelan dispute, and the President was thought by some to have used a tone needlessly unfriendly in his message; but the substance of the Monroe Doctrine was approved both in England and in America; and the request of the U. S. that the Venezuelan question be arbitrated was practically conceded by a satisfactory settlement without external assistance.

The doctrine does not establish a protectorate of the U. S. over the smaller American republics, nor prevent the enforcement of foreign claims upon them, even by war; but it opposes any permanent occupation of their territory or the extension over them of any European power or control.

Monroeville. in Indiana, a post-town of Allen co., 16 m. E. S. E. of Fort Wayne. Pop. (1897) 750.

Mou'ro'via. in California, a post-town of Los Angeles co., 17 m. N. E. of Los Angeles. Pop. (1897) 1,200.

Monsignor (*mon-sē'-nyor*), *n.* [*It.*, my lord.] The title of a Roman Catholic prelate; an ecclesiastical dignity conferred by the Pope; abbreviated Mgr.

Mon'son. SIR EDMUND, English ambassador to Paris (appointed in 1896), was born in 1834; was educated at Eton, and Balliol, Oxford; entered the diplomatic service in 1856, since which date he has been constantly in diplomatic life, as consul, attaché, minister, and ambassador, to numerous courts of Europe and countries of South America.

Mon'stera. *n.* (*Bot.*) See ARACEÆ.

Mont Al'to. in Pennsylvania, a post-village of Franklin co. Pop. (1897) 710.

Mont Ce'nis. (*Geog.*) This is the French name for the Italian mountain which the Italians call Monte Ceniso. The height of its peak is 11,451 feet, but there is a pass over the mountain between Savoy and Piedmont at an elevation of 6,773 feet. A fine carriage road was constructed over the pass by orders of Napoleon I., in 1803-10. A railway, running for the most part by the side of the carriage road, was built in 1867. It never paid, however, and was discontinued in 1871. The mountain was therefore pierced by a tunnel, which, begun in Aug., 1857, on the Italian side, and in 1863 on the French side, was completed on Christmas Day, 1870, at a cost of about \$15,000,000. The tunnel, which is nearly 8 miles long, does not run directly under the pass, but 13 miles west of it. Its north end is 3,912 feet above the sea, its south end 4,380, and the middle is about 15 feet higher than the south end. The work of drilling the headings of the tunnel was performed by machine-drills operated by compressed air, and invented by the famous engineer, Germain Sommeiller, who died just one week before its opening. A railway traverses the tunnel from Turin, Italy, to Fournieux, France, and trains take about 20 minutes in passing from the one place to the other.

Mont Clare. in Pennsylvania, a post-village of Montgomery co. Pop. (1897) 720.

Montague. in Michigan, a post-village of Muskegon co., 17 m. N. of Muskegon; has important lumber and wooden-ware manufactures. Pop. (1894) 1,410.

Montague. in New York, a post-town of Lewis co. Pop. (1897) 964.

Monte Vis'ta. in Colorado, a post-town of Rio Grande, 18 m. W. of Alamosa. Pop. (1897) 880.

Montefi'ore. SIR MOSES HARRN, English-Jewish philanthropist, was born at Leghorn, Italy, Oct. 24, 1784. He was the son of a London merchant, amassed a fortune as a stock-broker in that city, retiring in 1824, and devoting his life to improving the condi-

COPYRIGHT PACH BROS., 1902.

1837-

tion of the Jews, especially in the Russian and Ottoman empires. He secured important concessions from the Turkish government in 1840, and from the Czar in 1846. He was a generous giver to hospitals and other charities. The Jews throughout the world celebrated the one-hundredth anniversary of his birth. Died on July 28, 1885.

Montevallo, in Alabama, a post-village of Shelby co., 18 m. W. of Columbiana, on Southern R. R. Pop. (1897) 680.

Montevideo, in Minnesota, a post-village, cap. of Chippewa co., on Minnesota river, 83 m. W. of Glencoe. Pop. (1895) 1,800.

Montezuma, in Colorado, a S. W. co.; area, 2,640 sq. m.; drained by the Rio Dolores and numerous smaller streams. Surface, part mountainous, part level or undulating; soil, a fertile, sandy loam. Min., gold, silver, copper, lead, iron, coal; has gray and red sandstone, and white and yellow pine. Cap. Cortez. Pop. (1897) 2,200.

Montgomery, in Indiana, a post-town of Daviess co. Pop. (1897) 520.

Montgomery, in Kansas, a S. E. co.; area, 648 sq. m.; intersected by the Verdigris river, and also drained by Elk and Fall rivers. Surface, chiefly rolling prairie; soil, fertile. Products, corn, wheat, and oats. Cap. Independence. Pop. (1895) 23,948.

Montgomery, in Mississippi, a N. central co.; area, 395 sq. m.; intersected by the Big Black river. Surface, nearly level; soil, fertile. Products, cotton, corn, wheat, pork; live stock. Cap. Winona. Pop. (1890) 14,459.

Montmorency, in Michigan, a N. E. co.; area, 580 sq. m.; drained by Thunder Bay river and its branches. Surface, rolling; soil, sandy loam; very fertile and well watered. Lumbering is the chief industry. Cap. Atlanta. Pop. (1894) 2,435.

Montour, in Iowa, a post-town of Tama co. Pop. (1895) 449.

Montpelier, in Idaho, a post-village of Bear Lake co., 10 m. N. E. of Paris; has gold, silver, and copper in the vicinity. Pop. (1897) 1,250.

Montpelier, in Ohio, a post-village of Williams co., 60 m. W. of Toledo. Pop. (1897) 1,365.

Montrose, in Colorado, a W. co.; area, 2,300 sq. m.; intersected by Rio Dolores and the Uncompahgre river; soil, fertile when irrigated. Min., gold, gypsum, and stone. Cap. Montrose. Pop. (1890) 3,980.

Montrose, in Colorado, a post-village, cap. of Montrose co., 63 m. W. of Gunnison. Pop. (1897) 1,250.

Montrose, in Missouri, a post-town of Henry co., 53 m. S. W. of Sedalia. Pop. (1897) 750.

Moody, DWIGHT LYMAN, evangelist, was born at Northfield, Mass., Feb. 5, 1837; went to Chicago in 1856 and engaged in Sunday-school missionary work, and during the Civil War was an active member of the Christian Commission. He subsequently became city missionary of the Y. M. C. A. of Chicago. His conspicuous evangelical work began after 1871, when he made religious addresses in various parts of the United States, accompanied by Ira D. Sankey, of Newcastle, Pa., who sang evangelical hymns. They went to Great Britain in 1873, meeting with large success in the principal towns; returned to the United States in 1875, where Mr. Moody has continued uninterruptedly his evangelical work. The profits from the sale of *Gospel Hymns* have been devoted to the education of Christian workers. Mr. Moody has established four schools—three at Northfield, Mass., and one at Chicago; two of the Northfield schools are academies fitting pupils for college, and the third is a woman's training-school; the Chicago school is for Biblical instruction. Besides several collections of sermons Mr. Moody has published *Arrows and Anecdotes*, *Bible Characters*, &c. D. 1899.

Moody, in South Dakota, an E. co.; area, 500 sq. m.; intersected by the Big Sioux river. Surface, undulating prairie; soil, fertile; dairying is especially profitable.

Moody, WILLIAM HENRY, attorney general, was born at Newburg, Mass., Dec. 23, 1853. He studied law; was city solicitor of Haverhill (1888-89); district attorney of Eastern Massachusetts (1890-95), and was elected to Congress in 1895. He succeeded John D. Long as secretary of the navy in 1902, and Philander C. Knox, as attorney general of the United States July 1, 1904.

Moon-flower, (*Bot.*) A tropical night-blooming morning-glory (*Ipomoea bonariensis*), cultivated as a summer plant northward; also, *I. grandiflora*.—The ox-eye daisy (*Chrysanthemum leucanthemum*).

Moon'shee, *n.* [Hind. and Ar. *manshi*.] In Hindostan, a teacher of languages; an interpreter; a dragoman.

Moon'shiner, *n.* In the Southern United States, an illicit distiller; more broadly, any one, like a smuggler, who carries on an unlawful business at night.

Moonstone, *n.* (*Min.*) A transparent or translucent variety of Adularia, which, by reflected light, presents a pearly or silvery play of color, not unlike that of the moon. It is held in considerable estimation as an ornamental stone, and is sometimes cut into ring- and brooch-stones. The finest specimens are brought from Ceylon.

Moon-struck, *a.* Lunatic; affected with dementia by the influence of the moon.

Moon-wort, *n.* A fern of the genus *Botrychium*, *B. rutaceum*.

Moore, SIR JOHN, a British military commander, was born in Glasgow, Nov. 13, 1761; entered the army in 1776; served in Minorca and North America; distinguished himself in Corsica, 1794; became major-general in 1795, and the year following captured the island of St. Lucia, of which he became governor. He next served in Ireland, on the Walcheren expedition, and in

Egypt, Sicily, and Sweden, which latter country he aided to defend against Napoleon I. Early in 1808, he was appointed commander-in-chief of the English troops sent to act in conjunction with the Portuguese and Spaniards against the French invaders. His allies being defeated, Sir John was forced to retreat in December, reaching Comma, Jan. 11, 1809. Here, on the 16th, he gave battle to the French under Soult, and defeated them, but he fell in the action and was buried on the field. His adversary, Soult, there erected a monument to his memory; besides which his countrymen at home raised another to him near to that of Nelson, in St. Paul's Cathedral. Wolfe's famous *Elegy on the Death of Sir John Moore*, however, will probably outlast them both.

Moore, in Oklahoma, a post-village of Cleveland co., 9 m. from Oklahoma City. Pop. (1897) 150.

Moore, in Tennessee, a S. co.; area, 170 sq. m.; bounded on the S. by Elk river. Surface, diversified; soil, fertile. Products, cotton, corn, wheat, oats, white and sweet potatoes, butter, wool, and pork; live stock. Whisky is extensively manufactured. Cap. Lynchburg. Pop. (1890) 5,975.

Moore, in Texas, a N. co.; area, 900 sq. m.; traversed by the Canadian river. Unorganized.

Moorehead, in Minnesota, a city, cap. of Clay co., 1 m. E. of Fargo, North Dakota. A trade center. Pop. (1895) 3,290.

Moorkuk, *n.* The cassowary (*Casuarus bennettii*) peculiar to New Britain. It is about 5 feet in full height,

Fig. 2092.—MOORKUK.

of a reddish color, mixed with black, and has a horny plate instead of a helmet-like protuberance on the top of the head. It becomes extremely tame and familiar in captivity.

Moquette (*mō-kēl'*), *n.* [Fr.] A carpet having a long, loose velvety pile, differing from Brussels or Wilton in the weaving, and in having the back covered with a heavy jute or cotton cloth.

Mo'qui, *n.* (*Anthrop.*) A tribe of Indians living in fixed villages (pueblos) of stone and adobe houses upon certain table-lands in northern New Mexico. (See PUEBLOS.) They are agriculturists and fruit raisers, and own large herds of sheep and goats and a considerable number of cattle, horses, and donkeys. They are nominally Roman Catholics, and all speak Spanish, but retain many pagan customs, and are divided into secret societies, partly social and political, but largely religious in character. They make blankets, poorer than those of the Navajos, and excellent pottery. The latest and most complete information in regard to them is contained in the annual reports of the Bureau of Ethnology. Compare J. N. I.

Mo'ra, in New Mexico, a N. E. co.; area, 4,000 sq. m.; intersected by the Red or Canadian river. Surface, partly mountainous; contains also arid plains and fertile valleys. Cattle raising is the chief industry. Cap. Mora. Pop. (1890) 10,618.

Moran, EDWARD, was born at Bolton, England, Aug. 19, 1829; an English-American marine and figure painter, who came to America in 1844. He has exhibited in Paris and London.

Moran, LEON, was born in Philadelphia, Pa., in 1863; a marine and figure painter, son of Thomas M., and pupil of Edward M.

Moran, PERCY, was born in Philadelphia in 1862; a genre painter, son of Thomas, and pupil of Edward M.

Moran, PETER, was born at Bolton, England, March 4, 1842; an English-American painter of landscape and animals; a brother and pupil of Thomas and Edward M.

Moran, THOMAS, was born at Bolton, England, Jan. 12, 1837; an English-American landscape painter; a brother and pupil of Edward M. He came to America in 1844; went to the Yellowstone Park in 1871, and many of his best subjects are from that region, and from Mexico.

Morgan, GEORGE WASHINGTON, soldier, was born in Washington co., Pa., Sept. 20, 1824. He fought in the Texan army, spent two years at West Point, served as colonel in the Mexican War and as brigadier-general in the Civil War. He was consul at Marseilles (1855-58), and afterward U. S. minister to Portugal. Was elected to Congress in 1866 and 1870. Died July 27, 1893.

Morgan, JOHN HUNT, soldier, was born at Huntsville, Ala., June 1, 1826. He entered the Confederate service in the Civil War as a captain, and in 1862 was made major-general. He made a cavalry raid north of the Ohio in 1863; was captured and imprisoned. Escaping, he made a raid into Tennessee, in which he was killed.

Sept. 4, 1864.

Morgan, JOHN PIERPONT, financier, was born at Hartford, Conn., April 17, 1837. Graduating at the University of Göttingen, he engaged in the banking business, formed the firm of Dabney, Morgan & Co. in 1864, and became a member of the firm of Drexel, Morgan & Co. in 1871. He became head of this firm on the death of A. J. Drexel in 1893, giving it in 1895 the title of J. P. Morgan & Co. He also became head of J. S. Morgan & Co. of London, Morgan, Harjes & Co. of Paris, and Drexel & Co. of Philadelphia. To his banking business he added a large control of railroad interests, placing many bankrupt roads on a firm basis. He took part in financial undertakings of great extent, including the U. S. Steel Corporation, and in 1902 formed a great combination of the Atlantic steamship lines. His control of financial interests is of unprecedented magnitude.

Morgan, LEWIS HENRY, ethnologist and archaeologist, was born near Aurora, N. Y., Nov. 21, 1818. He held high rank in his special department of research, and wrote several works—*The League of the Iroquois*; *Ancient Society*, &c. His studies of the North American Indian race are especially valuable. Died Dec. 17, 1881.

Morgan, in Colorado, a N. I. co.; area, 1,290 sq. m.; intersected by the South Platte river. Surface, undulating; soil, dark, sandy loam. Coal in small quantities. Timber only along streams. Cap. Fort Morgan.

Morgan City, in Louisiana, a post-village to St. Mary parish, 80 m. W. of New Orleans. Pop. (1897) 2,400.

Morgan Park, in Illinois, a suburban town of Cook co., 13 m. S. of Chicago. Pop. (1897), about 2,000.

Me'ron, *n.* An iron hat, or plain, vizorless helmet, used in England in the early part of the 16th century.

Morley, HENRY, author, was born at London, September 15, 1822; practiced medicine (1844-48), but afterward was devoted to letters as a magazine writer and editor, and as professor of the English Language and Literature, holding the latter post at University College from 1865 to 1889, and at Queen's College, London, from 1878; became principal of University Hall in 1882. He wrote constantly on his special theme; his work on *English Writers*, which was begun in 1887, had reached the tenth volume at the time of his death, on May 14, 1894.

Morley, JOHN, statesman and author, was born at Blackburn, Lancashire, England, December 24, 1838. Graduating from Lincoln College, Oxford, he was admitted to the bar in 1859. From 1867 to 1882 he edited the *Fortnightly Review*; from 1880 to 1883, the *Pall Mall Gazette*; and from 1883 to 1885, *Macmillan's Magazine*. Since 1883 he has been a member of Parliament for Newcastle-on-Tyne. He has been a supporter of Gladstone's Irish and general policy; was chief secretary for Ireland in 1886, and was re-appointed in 1892. He has written critical biographies of Edmund Burke, Voltaire, Rousseau, Cobden, and Ralph Waldo Emerson; and other works on popular political themes.

Morley, in Michigan, a post-village of Mecosta co., 14 m. S. of Big Rapids; has some manufactures. Pop. (1894) 391.

Mor'rilton, in Arkansas, a city, cap. of Conway co., 50 m. W. of Little Rock. Pop. (1897) 1,820.

Morris, WILLIAM, artist and poet, was born at Walthamstow, Eng., in 1834; educated at Marlborough and Exeter College, Oxford; turned his attention for some time to the study of architecture, and in 1861, together with his friends Dante G. Rossetti, Ford Madox Brown, and Edward Burne-Jones, he endeavored to elevate the artistic taste of the public by means of a business of "art fabrics"—wall-papers and stained glass. He also carried on the Kelmscott Press, which has issued some extremely beautiful reprints of old works. He published, in 1867, his poem, *The Life and Death of Jason*, which was followed, in 1868-70, by *The Earthly Paradise*, a series of 24 romantic tales; *Love is Enough*, *The Story of Sigurd the Volsung*, and *Hopes and Fears for Art*. He translated Homer and Virgil; and in conjunction with Mr. Eirikr Magnussen rendered into English prose and verse a number of Icelandic stories. He published *The Story of the Glittering Plain*, *News from Nowhere* (1891), *Poems by the Way* (1892), *The Wood beyond the World* (1894), a translation of *Beowulf* (1895), *The Well at the World's End* (1896), *The Water of the Wondrous Isles* (1897). In his later years he was one of the leaders of the Socialistic movement in England, and, in conjunction with Mr. Belfort Bax, published *Socialism, its Growth and Outcome* (1893). Died Oct. 3, 1896.

Morris, in Connecticut, a post-town of Litchfield co. Pop. (1897) 610.

Morris, in Minnesota, a post-village, cap. of Stevens co., 25 m. N. N. W. of Benson. Pop. (1895) 1,417.

Morris, in Texas, a N. E. co.; area, 260 sq. m.; bounded N. by the Sulphur Fork of Red river, and is also drained by Big Cypress and White Oak Bayous. Surface, undulating; soil, mostly sandy, but productive; considerable cotton grown. Cap. Daingerfield. Pop. (1890) 6,580.

Mor'risonville, in Illinois, a post-village of Christian co., 40 m. S. W. of Decatur; has a nursery, and a brick and tile factory. Pop. (1897) 1,000.

Mor'row, in Oregon, a N. E. central co.; area, 2,020 sq. m.; bounded N. by the Columbia river, and drained by its tributaries. Surface, undulating; soil, very fertile. Min. Coal, gold, and traces of silver. Fir and pine timber. Stock raising is a prominent industry. Cap. Heppner. Pop. (1897) 4,500.

Morse, EDWARD SYLVESTER, zoölogist, was born at Portland, Me., June 18, 1838. Under the advice of Louis Agassiz, he studied at Lawrence Scientific School, Harvard, where he was assistant until 1862. With

others he established the *American Naturalist* at Salem, Mass., about 1866; and also founded the Peabody Academy of Sciences there, of which he was curator and president in 1881. He was professor of Comparative Anatomy and Zoölogy at Bowdoin College, 1871-74; visited Japan in 1877, and became professor of Zoölogy in the Imperial University of Tokio; returned later to the U. S. In 1885 he was president of the American Association for the Advancement of Science. Among his works are: *First Book in Zoölogy* (1875); *Japanese Homes* (1885), &c., besides numerous scientific and popular papers.

Mortising Machine. (*Mech.*) Two types of machines are manufactured for mortising wood, as for doors, window sashes, and cabinet work. The chisel mortiser is the older type, having a table on which the work is placed, and a reciprocating mechanism, usually upright, in which chisels of various forms are fixed. The reciprocation of the chisel is accomplished by a wheel crank, and the table is brought within its range by means of a foot lever; boring mechanism is often added. The chain mortiser, which is a recent type, has an endless chain, on each link of which is a sharp tooth or cutter. When the chain is run rapidly, and worked up against the wood, it cuts a mortise by taking off minute bits, much as a milling machine works in iron. It works very fast, and cuts closer to the edge than any other style of mortising machine.

Morton. HENRY, scientist, was born in New York, Dec. 11, 1836; educated at the University of Pennsylvania, and studied law, but subsequently gave his attention to physical and chemical science; was professor of Chemistry in the Philadelphia Dental College (1863); secretary of the Franklin Institute (1864). His course of lectures on *Light*, delivered in 1864, attracted much attention. He was appointed professor of Chemistry in the University of Pennsylvania (1869); and was made president of the Stevens Institute of Technology, Hoboken, N. J., in 1870, a position which he held until his death. He was a frequent contributor to scientific journals. Died May 9, 1902.

Morton. LEVI PARSONS, financier and statesman, was born at Shoreham, Vt., May 16, 1824; was clerk in a country store, then partner in the firm of Beebe, Morgan & Cory, of Boston; afterward senior partner in the firm of Morton & Grinnell, New York dry-goods merchants (1854). In 1863 he founded the banking firm of Morton, Bliss & Co., in New York, their London branch being Morton, Rose & Co., which firms acted as fiscal agents of the U. S. government from 1873 to 1884, and as such handled the funds pertaining to the Geneva and Halifax awards. M. was elected to Congress in 1878 and 1880; was U. S. minister to France (1881-85); Vice-President of the U. S. (1889-93), and governor of New York (1894-97).

Morton. PAUL, Secretary of the navy; was born in Detroit, Mich., May 22, 1857. He engaged in railroading as freight and passenger agent, and became in 1898 second vice-president of the Atchison, Topeka and Santa Fé R. R. Co. On July 1, 1904, he succeeded William H. Moody as Secretary of the Navy of the United States.

Morton. in *North Dakota*, a S.W. co.; area, 3,168 sq. m.; bounded E. by the Missouri river, and drained by numerous tributaries; has several fine lakes. *Surface*, rolling prairie; *soil*, fertile, a deep, dark vegetable mould on a clay subsoil. Extensive coal mines. Sheep and cattle raising. *Cap. Mandan.* *Pop.* (1890) 4,728.

Morton. in *Pennsylvania*, a post-village of Delaware co., 9 m. W.S.W. of Philadelphia. *Pop.* (1897) about 1,500.

Moss-back. *n.* An old fish with a growth of algae or the like on its back.

(*Slang.*) A person of antiquated notions, especially in politics; one so conservative as to resemble an old moss-covered tree.—In the U. S., South, during the Civil War, one who attempted to avoid conscription by concealment.

Note. [*A. S. môt.* See *Moot.*] A term employed in composition, and signifying a meeting or assembly; as, folk-note.

Note. *n.* [*A. S. mot.; W. ysmot.*] A speck; a spot; a small patch; a particle; anything proverbially small. "The gay notes that people the sunbeams."—Milton.

Motet. *n.* [*Fr. from It. motetto.*] (*Sacred Mus.*) The Latin psalms and hymns sung in the Romish church are so called. The term was formerly applied to certain elaborate vocal compositions in several parts, generally on sacred subjects; in fact, any sacred composition which does not come under the denomination of mass or anthem, may be called a motet.

Mother Hubbard. The subject of a well-known nursery rhyme.—A loose-flowing gown for a woman or child, ungirded at the waist.

Moth-mullein. *n.* (*Bot.*) *Verbascum blattaria*; a plant of the same genus as the common mullein, but smooth and much slenderer, bearing longer flowers, which grow in a loose raceme and are white, tinged with purple. Common throughout the Eastern United States.

Motley. in *Minnesota*, a post-village of Morrison co. *Pop.* (1895) 458.

Motley. in *Texas*, a N. W. co.; area, 1,080 sq. m.; drained by Pease river, its South Fork, and smaller streams. *Surface*, rolling; *soil*, a fertile sandy loam; some timber. *Cap. Matador.* *Pop.* 139.

Motograph. *n.* One of Thos. A. Edison's inventions (called also *electromograph*), involving the basic principle of a loud-sounding telephone, which is sometimes known by the same name. The mechanism may also be used in place of an electrical magnet, though weaker and more complicated in its action. It

consists of a universally hinged lever bearing a platinum point that is allowed to bear upon the surface of a moist paper, which is carried on a chalk drum. The drum rotates in one direction, and a spring tends to draw the lever in the other. When the two are placed in an electric circuit the friction is reduced, so that the platinum point has a motion varying with the strength of the current.

Mo'tophone. *n.* A form of sound-engine invented by Thos. A. Edison. It has a diaphragm which vibrates with the waves of sound that strike it, and these vibrations are transformed into rotary motion by means of a pawl-and-ratchet mechanism.

Mo'tor Carriages. See CARRIAGES, MOTOR.

Mott. HENRY AUGUSTUS, chemist, was born Oct. 22, 1852; a grandson of Valentine Mott, Sr.; graduated from the Columbia School of Mines (1873), receiving the degree of Ph.D. in 1875; gave especial attention to the analyses of food preparations, and the exposure of adulterations in these products, and was also frequently called as an expert witness in court proceedings. He was official chemist of the Medico-Legal Society, and contributed articles to scientific journals. Died Nov. 8, 1896.

Mott. LUCRETIA, social reformer, was born at Nantucket, Mass., Jan. 3, 1793. She was a preacher in the Society of Friends, and was active in behalf of abolition, woman suffrage, and universal peace. Died Nov. 11, 1880.

Mott. VALENTINE, surgeon, was born on Long Island, N. Y., in 1785. After graduating at Columbia College, and completing his professional studies in Edinburgh and London, he became professor of Surgery in Columbia College in 1809; was one of the founders of the Rutgers Medical College, and, later, professor of Surgery and Relative Anatomy in the College of Physicians and Surgeons, New York. His fame as a surgeon and operator was world-wide, and his *Cliniques*, a work published in 1860, more than sustains his reputation. Died in 1865.

Moulin (*moo-lang'*), *n.* [*Fr. a mill.*] (*Geol.*) A hollow or vertical shaft in a glacier, worn by a waterfall, which sometimes breaks through it, carrying with the current fragments of rock, gravel, &c., to lower levels.

Moulton. ELLEN LOUISE CHANDLER, poet and story-writer, was born in Pomfret, Conn., April, 1835. In 1855 she was married to William U. Moulton, a Boston publisher. She has furnished many contributions of prose and verse to periodical literature, several collections of which have been published in book form.

Moulton. in *Iowa*, a post-town of Appanoose co., 100 m. W. by S. of Burlington. *Pop.* (1895) 1,123.

Mound Builders. (*Anthrop.*) The title here given is specifically applied to the native inhabitants of the U. S. at a period preceding occupation by the whites, but its significance might be extended to cover nearly the whole race of primitive man, since mounds of earth of prehistoric and early historic construction are very widespread, and may be found in all the continents. The throwing up of the soil into rounded heaps, great or small, seems to have been one of the earliest architectural efforts of mankind, the mounds produced being most generally intended for purposes of burial, but to some extent for other purposes. Some of them, for instance, served as bases for altars, others as foundations for temples, and still others, of an elongated shape, were apparently intended as works of defence. Stone work often accompanied this earth work, many of the funeral mounds covering tombs made of great slabs of stone, forming a stone burial chamber, over which the

Fig. 2993.—DOUBLE ENCLOSURE ON WISCONSIN RIVER.

earth was heaped in rounded masses. The earth work was finally replaced entirely by stone work, and the age of the mound builder gradually passed away as civilization advanced and man learned the art of quarrying, shaping, and moving large masses of stone.

The title of "Mound Builders," however, is restricted to the vanished race of North American natives to whose labors is due the remarkable multiplicity of earth mounds found in the United States, which greatly exceed in number, and in some instances in dimensions, those found elsewhere upon the earth. These erections exist in extraordinary abundance throughout the valley of the Mississippi and its tributaries, extending from the Rocky Mountains to the Alleghenies, and being found sparsely east of the latter range. They exist most abundantly in the States of Ohio, Indiana, Illinois, and Missouri, are found in large numbers in all the Gulf States, and extend northward to and beyond the Great Lakes. Ohio is particularly rich in these

curious relics of a vanished people, more than 10,000 of them occurring within the borders of that State, while they are found profusely westward to the Mississippi. The great majority of these erections are simply conical burial mounds, of comparatively small size, their usual height varying from 6 to 30 feet, and being mostly between 15 and 25 feet long, with a diameter at base of from 40 to 100 feet. But these dimensions are occasionally exceeded, and one in West Virginia is said to be 70 feet in height and over 300 feet in diameter. —*Altars.* A second class of mounds are known by the name of altars, though their purpose is problematical. These are low mounds of small dimensions, occasionally reaching the size of 50 by 15 feet, but often being very small. —*Temples.* Those known, and with good

Fig. 2994.—ANCIENT GRAVE MOUND NEAR AZTALAN.

reason, as temple mounds, are numerous, and some of them are very large. One in Illinois reaches the great height of 90 feet, and measures 700 by 500 feet at the base. The amount of labor indicated by such a structure, very probably built in the primitive method of carrying earth in baskets from the river bottoms, must have been enormous, though it is possible that a natural hill may have formed the basis of this great heap of earth. Temple mounds occur in considerable abundance in the Southern States, and occasionally of great size, there being one in Mississippi said to be 80 feet high and 600 by 400 feet at base. Their purpose is well known, since temples existed on some of them at the time of the early settlement of the South by the whites, and the temple service was carried on with a somewhat elaborate ceremonial and by the aid of a considerable priestly establishment. Others of these large mounds seem to have borne villages on their summits, whether

Fig. 2995.—SECTION OF A MOUND NEAR MILWAUKEE.

or not they were formed originally for that purpose. —*Defensive Works.* Again, many of these earthworks were evidently made for defensive purposes, and show no small skill in construction. These consist of walls, trenches, watch-towers, &c., and are usually constructed on heights near some stream, and built too elaborately to have been intended as temporary works of defence. In the opinion of many archaeologists, there existed a connected line of defences extending from New York to Ohio. These fortifications cease to appear in the more immediate valley of the Mississippi, the locality of the largest mounds. This seems to indicate that the Mound Builders were exposed to persistent assaults from an enemy dwelling in the east, perhaps in the Allegheny region, whose attacks kept the dwellers on the frontier engaged, while further west the population were more at peace and capable of indulging in more extensive labors. Some of the earthworks in Ohio

Fig. 2996.—ANCIENT ARTIFICIAL MOUND, CROSS SHAPE, WITH SO-CALLED "GARDEN-BEDS."

possess walls of earth winding in and out over a length of several miles, embracing within them an area of 100 acres or more. —*Sacred Enclosures.* In the alluvial valleys of Ohio works of a different character are found, evidently having no defensive intention. These have been given the name of "sacred enclosures," though their real purpose remains unknown. They are of large dimensions and of geometrically regular shape, usually forming circles or squares, with openings for entrance or exit, and small mounds within the enclosure or at the entrances. One of these on the Little Miami river, called Fort Ancient, has four miles of embankment. Many hundreds of them have been found, and their purpose has given rise to much speculation on the part of archaeologists. —*Animal Mounds.* Among the

most curious forms of mounds are a series of animal figures, of gigantic dimensions, sometimes extending to a length of 400 feet. One of the most interesting of these is the figure of a serpent, near Bush creek, Ohio, which winds through a length of several hundred feet on the summit of a low hill, its open jaws holding a rounded figure. The animal mounds are the most numerous in the northern region, particularly in Wisconsin, and form rude representations of several of the animals of the country, such as the wolf, bear, great birds, &c. The most remarkable of these is a form with a trunk like that of the elephant. It suggests the possibility that the American mastodon might have survived until a late period, and have been seen

Fig. 2997.—ANCIENT EARTHWORKS, NEAR MILWAUKEE, WIS.

and figured by the old earth sculptors.—*Contents of the Mounds.* Many of the mounds have been excavated and their contents examined, with excellent results. In addition to the remains of human beings found in them, large numbers of implements and ornaments have been exhumed, which serve to give us some fair idea of the degree of civilization possessed by their builders. There are stone weapons and tools; pipes, often skilfully carved in animal or other forms; articles of earthenware, plates of mica, sea-shells, some of them evidently brought from the Florida coast, and articles of native copper. The latter was seemingly made from the copper veins near Lake Superior, where evidences of ancient mining operations still exist, and was shaped by hammering with stones, the art of smelting being evidently unknown. The arts and manufactures of the Mound Builders were thus very primitive and indicated a low level of development, though their great mounds are evidence of a somewhat dense population and of power in the rulers to set their

Fig. 2998.—ANIMAL-SHAPED MOUND AND CORN-HILLS.

people at severe and long-continued labor. The pyramidal form of their temple mounds is generally similar to the *teocalli* of Mexico, and indicates some connection between the peoples of the north and the south. There are also certain evidences in the sepulchral mounds of cruel funeral rites, which may bear a relation to the sacrificial customs of the Aztecs.

WHO WERE THE MOUND BUILDERS?—This question has been abundantly asked, and is not yet fully answered. The theory long entertained was that they were a race different from those of the modern Indians, and possessed of a much superior civilization. Extended inquiry, however, has served to throw much doubt upon this theory, and archaeologists now generally hold the view that they were the direct ancestors of the present Indians. Their arts are not superior to those found among modern Indians; their mound-building propensity was still possessed by the Indians at the period

of white settlement, and many of the larger mounds were still in use, perhaps for their original purposes. And among the Indian nations or organizations of the Gulf States religious and political conditions existed at that period probably in no sense different from those possessed by the Mound Builders. If we may venture upon theoretical considerations, founded on the facts given by the degree of civilization found by DeSoto and his followers in the districts traversed by them, it would be to advance the following opinions: At a period perhaps not remotely beyond the date of the coming of the whites, though reaching back,

it may be, for many centuries earlier, the Gulf States and the valleys of the Mississippi and its tributaries, northward to the Great Lakes and extending beyond them into Canada, were occupied by an agricultural people, of some density of population and somewhat advanced religious and governmental organization. Beyond these, on the north and east, were warlike tribes of the same race, but much inferior culture, between whom and the Mound Builders hostile relations long existed, the incursions of these hunting tribes forcing the nations of Mound Builders to throw up an extensive series of defensive works. In the end, after a protracted resistance, the savage assailants seem to have prevailed, overrunning the domain of the Mound Builders, and either driving them southward or in a measure annihilating them. The result was the occupation of the valley of the Ohio and the region west and north by the hunting tribes, while Indian nations akin to the Mound Builders continued to exist in the Gulf States, where they were found by the early Spanish and French explorers possessed of a culture and organization differing little, if at all, from that of the preceding mound-building people. Instead of the simple religious ideas possessed by the northern tribes, these people had an intricate and well-defined worship of the sun, with their temples, their high priest and lower priestly and other temple attendants, their conjurers—resembling the medicine men of the North—their ceremonial, and their sacred fire, the extinguishment of which would have been considered disastrous, yet which they themselves extinguished at certain periodical intervals, replacing it with "new fire" obtained by friction, and which was sent to replace the hearth fires throughout the tribe or nation. Such a religious organization must have given great authority to the high priest, and have enabled him to order works of severe labor for religious purposes. The governmental organization was as strong. The "Mico," as the ruler was called, had absolute authority, his power having a religious basis, since he was at the head of the sacerdotal establishment and the superior of the high priest. He governed by the aid of a council, and an interesting feature of the government was a public store-house, in which a fixed proportion of all food, whether that of the farmer or the hunter, had to be placed, as public stores for the general good of the community and under the control of the Mico. A similar institution existed in Mexico. Of these southern nations of Indians one of the most interesting was that known as the Natchez, who dwelt on the Mississippi above New Orleans, and were destroyed by the early French settlers in that region. Their destruction was a serious loss to archaeological science, as enough is known about their habits and customs to show that they possessed a very interesting organization, religious and political, which may have closely approximated to that of the Mound Builders. They possessed temples, with idols and an elaborate sacerdotal organization, with numbers of priests, interesting ceremonies, and human sacrifices, which in a lesser degree resembled those of the Aztecs. The worship was that of the sun, and at its head was the ruler, who bore the title of the Sun, and whose original

ancestor was believed to have come down to earth from the solar orb, being a direct offspring of the deity of the race. All his family were known as suns, and constituted a superior order of nobility, under whom was a class of nobles of inferior rank, and below these again the common people, who were virtually slaves to their rulers. The Sun was an irresponsible despot, from whose edicts there was no appeal. It would certainly

Fig. 2999.—PARALLEL MOUNDS, NEAR PIKETON, OHIO.

seem probable, from what we know of the vast labors performed by the Mound Builders—which certainly could not have been obtained from the modern Indians under any authority possessed by their chiefs or any influence of their medicine men—that a despotic power resembling that of the Great Sun of the Natchez must have been possessed by their rulers, based on the influence of an equally intricate religious system. This renders it easy to accept the prevailing theory that the Mound Builders were the immediate ancestors of the modern Indians, or at least those of the south, and the suggestion above given that their religion, government, arts and customs differed in no essential features from those possessed by the Southern nations at the time of the coming of the whites. See Squier and Davis's *Ancient Monuments of the Mississippi Valley* (1848); Thruston's *Antiquities of Tennessee* (1890); and Shepherd's *Antiquities of Ohio* (1890); also for the conditions of the Indians of the South, see Jones's *Antiquities of the Southern Indians*.

Mound'ridge, in Kansas, a post-village of McPherson co., 19 m. S.E. of McPherson. Pop. (1895) 404.

Mounds'ville, in West Virginia, a city, cap. of Marshall co., on Ohio river, 12 m. below Wheeling. Pop. (1897) 3,100. See GRAVE CREEK.

Mount Holy Springs, in Pennsylvania, a post-borough of Cumberland co. Pop. (1897) 1,320.

Mount Holyoke Sem'inary. SEE WOMEN'S COLLEGES.

Mount Kisco, in New York, a post-village of Westchester co., 37 m. N. of New York. Pop. (1897) 1,150.

Mount Olive, in Illinois, a post-village of Macoupin

Fig. 3000.—EARTHWORKS, NEAR HOPETON, OHIO.

co., 68 m. S.W. of Decatur; coal mines in the vicinity. Pop. (1897) 2,120.

Mount Pleasant, in South Carolina, a post-town, cap. of Berkeley co., $3\frac{1}{2}$ m. E. of Charleston. Pop. (1897) 1,250.

Mount Vernon, in Washington, a post-town, cap. of Skagit co., 68 m. N. of Seattle. Pop. (1897) 1,000.

Mount Victory, in Ohio, a post-village of Hardin co., 19 m. N.E. of Bellefontaine; has some manufactures. Pop. (1897) 750.

Mount Wi'naus, in *Maryland*, a suburb of Baltimore.

Moun'tain Grove, in *Missouri*, a post-village of Wright co., 68 m. S. E. of Springfield. Pop. (1897) 960.

Moun'tain Rail'ways. See INCLINED PLANES.

Moun'taintop, in *Pennsylvania*, a post-village of Luzerne co. Pop. (1897) 1,020.

Moun'tainville, in *Pennsylvania*, a post-village of Lehigh co. Pop. (1897) 815.

Mousquetaire (müs-kë-lär'), *n.* A musketeer.—A cloth cloak worn by women about 1855, and trimmed with ribbons and fastened with big buttons.—A turnover collar of linen worn by women about 1850.—A long loose glove of soft kid, so named from its resemblance to a military glove.

Mowea'qua, in *Illinois*, a post-village of Shelby co., 36 m. E.S.E. of Springfield. Pop. (1897) 1,050.

Muc'kers, *n. pl.* (*Ecol. Hist.*) An extraordinary sect, which sprang up at Königsberg, in Germany, in 1805. The movement seems to have originated in the dualistic and Gnostic views of John Henry Schönherr (who died at Königsberg in 1826) concerning the origination of the universe by the combination of two spiritual and sensual principles. His followers carried out his system much more completely than himself. The most notable of them were two clergymen, Ebel and Diestel, the former an archdeacon. By their sexual connection would seem to have been elevated into an act of worship, and the chief means of the sanctification of the flesh, by which the paradisiac state was to be restored. Ere long, public feeling was excited against the M., who were said to be guilty, under forms of piety, of the most odious licentiousness in their meetings. The subject was brought before the courts (1839-1842), and the result was that certain leaders were punished by imprisonment. It is, however, believed that the evidence gives no support to the charge of licentiousness.

Mud-bath, *n.* (*Therap.*) Immersion of the body of a patient in mud for the cure of rheumatism, &c.; a treatment at some mineral springs, the mud containing various mineral salts and being artificially heated.

Muer'uo, *n.* (*Bot.*) A Chilean tree (*Eucryphia cordifolia*), the wood of which is highly valued in Chile for oars and rudders; according to Bentham it belongs to the saxifrage family, but Hooker places it in the rose family. It grows 100 feet tall, and is evergreen. Also called *ubno*.

Mug'gins, *n.* The name of a children's game of cards, also of a game in which, when two players expose cards that match, the one that first says "Mug-gins" is privileged to give his card to the other.—A game of dominoes, in which the players count by five or multiples of five.

Muggletonians (müg-gl-to'-ne-äns), *n. pl.* (*Ecol. Hist.*) A sect founded in England about 1651 by John Reeve and Ludovic Muggleton (born 1607, died 1698), obscure men, who claimed to have the spirit of prophecy. Muggleton was a journeyman tailor. He professed to be the "mouth" of Reeve, as Aaron was of Moses. They affirmed themselves to be the two witnesses of Rev. xi. 3-6. They declared that there is no distinction between the persons of the Trinity, that God has a human body, and that Elijah represented Him in Heaven when He was on earth in the person of Christ. The last member of the sect is supposed to have died in 1868.

Mug'wump, *n.* [*N. A. Ind.*, a chief.] (*U. S. Polit.*) In 1884, when James G. Blaine was nominated for the Presidency by the Republican Convention, certain Independent members of the Republican party refused to support the nominee, and were given in derision the name of Mugwumps, a title accepted by the Independents as an honorable one. The name has ever since been used in political slang and generally to designate an independent, in politics or otherwise. This was, however, by no means the first appearance of the word, which had been long applied as a satirical term to a person who thinks himself of great consequence. As a serious name for a chief or leader it is said to have been in use among the Indians and whites in Massachusetts and Connecticut in the seventeenth and eighteenth centuries. It is an Algonquin word, *mug-guomp*, and appears in Eliot's Bible (1661) as a version of the words captain, centurion, duke, and the like.

Muhar'ram, *n.* [*Arab.*] The first month of the Mohammedan year, and a religious festival celebrated during its first ten days. The ceremonies are a lamentation over the martyrdom of Husain, the grandson of Mohammed. (Also spelled MOHARRAM, and MOHARRAN.)

Muhl'bach, LOUISE (pseudonym of Madame KLARA MULLER MUNDT, wife of Theodor Mundt, novelist and critic), novelist, was born at Neubrandenburg, Germany, Jan. 2, 1814. She wrote *Frederick the Great and His Court* (1853), and other romances on Prussian, French, Austrian, &c., history. Died Sept. 26, 1873.

Muhl'enberg, HENRY MELCHIOR, an eminent Lutheran clergyman, was born in Hanover, Germany, in 1711; came to America in 1742, and labored among the German Lutherans, chiefly in Pennsylvania, and is regarded as the father of that Church in this country. Died in 1787.

Muhlenberg, JOHN, a Lutheran minister; became major-general in the Revolutionary Army, and U. S. senator in 1801; was born in Pennsylvania in 1746, and died in 1807.

Muhlenberg, WILLIAM AUGUSTUS, D. D., was born in Philadelphia, Pa., Sept. 16, 1796; a great-grandson of HENRY MELCHIOR M. He was the first superintendent and pastor of St. Luke's Hospital, in New York, with which his name is inseparably associated. He was

also prominent as a hymn-writer and hymnologist. One of his best-known hymns begins with the line, "I would not live away." Died April 8, 1877.

Muhl'enberg, in *Kentucky*, a W. co.; area, 484 sq. m.; bounded N. E. by Green river, E. by Muddy river, and also drained by Pond river. Surface, hilly; soil, generally fertile; rich coal and mineral deposits. Cap. Greenville. Pop. (1890) 17,955.

Muir, JOHN, naturalist and explorer, was born at Dunbar, Scotland, in 1836. For a number of years he made the Yosemite region his especial study, demonstrating the theory of its glacial formation, and making a careful analysis of the geological and botanical features of the Sierra Nevada. In 1879 he explored the region north of Fort Wrangel, in Alaska, Glacier Bay and the great Muir Glacier being among his discoveries. He was also a member of one of the expeditions which, in 1881, went to the Arctic regions in search of the *Jeannette*. His book, the *Mountains of California*, was published in 1894.

Muir, JOHN, a learned English Orientalist; born in 1810. He has published *Mythical and Legendary Accounts of Caste* (2d ed., 1868); *Trans-Himalayan Origin of the Hindoos* (2d ed., 1872); *The Vedus: Opinions of Indian Authors on their Origin, Inspiration, and Authority* (2d ed., 1868); and *Cosmogony and Mythology of the Indians in the Vedic Age* (1870). Died 1882.

Muk'ti, *n.* [*Sansk.*] A Hindu name for the final state of blessedness; the restful freedom from the bonds of existence; *Nirvana*.

Mulberry, in *Indiana*, a post-town of Clinton co., 15 m. E. S. E. of Lafayette. Pop. (1897) 670.

Mule-deer, *n.* (*Zoöl.*) The common large deer (*Cervus cariacus*) of the Great Plains and Rocky Mountain region of the U. S. It is of the usual tawny hue, changing to gray in winter, with the buttocks and the slender cylindrical tail white—the latter largely tipped with black; hence the common name *black-tail*, in distinction from the smaller Virginia deer (see DEER), which in the West is usually called *white-tailed* or *willow* deer. The most striking characteristic of this numerous and widely-distributed species is, however, the very long ears, suggesting those of a mule. The antlers are similar in shape to those of the Virginia deer, but proportionately larger. The flesh is highly esteemed as venison.

Mul'hall, in *Oklahoma*, a post-village of Logan co. Pop. (1897) 1,000.

Mu'lock, DINAH MARIA, an English writer of fiction, was born in 1826. Her first novel, *The Ogilvies*, appeared in 1849, followed by many others, the most successful of which was *John Halifax, Gentleman* (1857). Died in 1887. She married, in 1865, GEORGE LILLIE CRAIK, a British writer (born, 1799; died, 1866). He wrote several works, the last one, *A Compendium of English Literature and Language* (1861).

Mult-, multi-. A prefix derived from the Lat. *multus*, many.

Mul'vane, in *Kansas*, a post-village of Sumner co., 15 m. S. of Wichita. Pop. (1895) 379.

Municipal Leagues. (*Am. Pol.*) Associations for the reform or improving of city government. Temporary committees of citizens have often been formed to meet particular exigencies, where the ordinary administration of government or the action of political parties seemed inadequate; as Sept. 6, 1894, a public meeting of citizens in New York, called together in view of the revelation of police corruption by the investigation of a legislative committee, directed its chairman, Mr. Joseph Larocque, to appoint a committee of seventy citizens. This Committee of Seventy was appointed Sept. 15, from the best known citizens of New York, without regard to party, and formally organizing Sept. 19, took a conspicuous part in the ensuing election, advising the different political organizations, and securing among them union in the choice of a mayor and other city officers. After the election the committee continued its organization for some months, and made important non-partisan recommendations. A similar committee, called the Committee of Safety, was formed in Chicago, Feb. 14, 1896, and did there a somewhat similar work. Besides such temporary committees, a number of societies and clubs have been organized in cities for permanent work to like ends. One of the oldest of such societies is the Citizens' Association, of Chicago, organized July 24, 1874. These organizations applied themselves to various problems of city government, in different parts of the country, but they were few, and there was a common feeling that city government was the unsolved American problem. The legislative investigations in New York, in 1894, excited intense interest, and Good-Government Clubs and citizens' associations began to multiply. Six such organizations were formed in 1892, and ten in 1893, but about fifty were organized in 1894, of which half were in New York city. In January, 1894, a conference as to municipal reform was held in Philadelphia, on the invitation of the Municipal League of that city, with the co-operation of the City Club of New York. This conference continued two days, and was attended by prominent citizens of New York, Baltimore, Brooklyn, Milwaukee, Minneapolis, Boston, Indianapolis, and other cities, and its discussions awakened such interest that arrangements were made for the holding of other similar conferences, and a committee was directed to prepare a plan of organization of a National Municipal League, to be composed of societies for the improvement of municipal government in different cities. During this year twenty-one Good Government Clubs in New York city united in forming the Council of Confederated Good-Government

Clubs of New York, by which they secured harmonious action, and gave the force of their united recommendation to important measures. The National Municipal League, organized by the committee of the Philadelphia conference of 1894, has held regular sessions each year, meeting in Cleveland, O., May 29-30, 1895; in Baltimore, Md., May 6-7, 1896; and in Louisville, Ky., May 6-7, 1897. These delegated meetings have reported that there were 44 local societies associated with them in 1894, 176 in 1895, and 267 in 1896. The leagues have been a means of education in respect to municipal government, and the reports of their sessions furnish an important discussion of the subject by the ablest men. The points of doctrine almost unanimously urged by them are the separation of municipal elections from elections of State or national officers, and the choice of municipal officers without regard to national party lines; the concentration of power in the hands of the mayor, giving him alone the power to appoint and dismiss the heads of city departments; and the establishing of the merit system in all municipal appointments.

Munkacsy, or **Muncaczsy**, MIHALY (real name, MICHAEL LIEB), historical and genre painter, was born at Munkacs, Hungary, Oct. 10, 1846; studied under a portrait-painter, at Gyula, at the Vienna Academy, at Munich with Franz Adam (where he won three prizes), and at Düsseldorf, where he devoted himself to genre painting. In 1869 his *Last Day of a Condemned Man* made him famous. He went to Paris in 1872, and a few years later began to paint Parisian scenes. Here he took the medal of honor in 1878; and he won the Vienna medal in 1882. He was elected to the Munich Academy in 1881, and came to New York in 1886. Among his works are: *Milton Dictating Paradise Lost* (1878); *Christ before Pilate* (1881); *Christ on Calvary* (1884); *Last Moments of Mozart* (1885), &c. D. May 1, 1900.

Mur'doch, JAMES EDWARD, actor and teacher of elocution, was born in Philadelphia, June 25, 1811; made his first stage appearance in that city in 1829. He was versatile, and played many leading parts; after devoting five years to study, he appeared as *Hamlet* (1845), and was thenceforth recognized as a leading actor. During the Civil War he devoted himself to the care of the sick and wounded, while his two sons were in the Federal army, and he also gave readings for the benefit of the Sanitary Commission. One of the now historic incidents is that of M.'s magnetic rendering of *Sheridan's Ride*, written by T. Buchanan Read just after the event, and read by M. within twenty-four hours after the writing. He was the author of several text-books on elocution. Retired from the stage in 1882, and gave a series of farewell readings during the next five years. Died May 19, 1893.

Mur'dock, JAMES, a divine and litterateur, was born at Westbrook, Conn., in 1776; was a graduate of Yale College, professor of Ancient Languages in the University of Vermont, and afterward of Sacred Rhetoric and Ecclesiastical History in Andover Theological Seminary. He published translations from the German of Mosheim's *Institutes of Ecclesiastical History*, and Munscher's *Elements of Dogmatic History*, and translated the New Testament from the Peshito Version. Died in 1856.

Mur'free, MARY NOAILLES (pseudonym, CHARLES EGBERT CRADDOCK), was born at Murfreesboro, Tenn., about 1850. She is a writer of novels, mainly contributed as serials to the leading magazines. Her plots and scenes are chiefly laid in the Tennessee mountains.

Mur'ger, HENRI, novelist and poet, was born in Paris, March 24, 1822; was a notary's clerk, and for a time acted as secretary to Count Tolstoi. He afterward turned his attention to literature, and for some years led a life of privation and adventure, which he has described in his *Scenes de la Vie de Bohème*. His genius was finally recognized by Arsène Houssaye, editor of *L'Artiste*, and from that time all journals were open to him. Several of his poems have been translated by Andrew Lang, in his *Lays of Old France*.

Mur'ray, DAVID CHRISTIE, novelist, was born April 13, 1847, at West Brunswick, in Staffordshire, England. From 1877 to 1878 he served as reporter and war correspondent for several newspapers. He published *A Life's Atonement in Chambers' Journal* (1879), and has since written and published many other stories of similar character.

Murray, JAMES AUGUSTUS HENRY, philologist and lexicographer, was born at Denholm, Roxboroughshire, England, in 1837; graduate of London University, and twice president of the Philological Society. He is one of the recognized authorities on the history and derivation of words. In 1879 he entered upon the editorship of the Philological Society's *New English Dictionary*, succeeding Herbert Coleridge and Dr. Furnivall. Since 1890, Henry Bradley has been joint editor. Part I. of this work was issued in 1884.

Murray, in *Minnesota*, a S.W. co.; area, 720 sq. m.; watered by the Des Moines river and smaller streams, and contains numerous lakes. Surface, rolling prairie; little timber; soil, fertile. Cap. Slayton. Pop. (1895) 9,322.

Muscle-reading, *n.* The ability to understand and explain involuntary muscular contortions.

Muse'ums of the United States. The modern museum is the latest of the great agencies which have been developed for the increase and diffusion of knowledge, and is quite as much in touch with the masses as the public library. Within a recent period the development in the U. S. of museums devoted to particular objects has been enormous. The collections in the interest of art, anthropology, natural history, and tech-

nology are large and valuable, and are constantly increasing. In the department of art, the most important museums are the Metropolitan Museum of Art in New York, the Museum of Fine Arts in Boston, the Museum of Fine Arts in Cincinnati, the Corcoran Art Gallery in Washington, the Academy of Fine Arts in Philadelphia, the Art Institute of Chicago, and the Museum of Fine Arts in St. Louis. All of these, however, are deficient in materials illustrating the earlier periods in the history of painting and sculpture. Worthy of mention are the collections of the Wadsworth Athenaeum, Hartford, Conn.; the Art Museum, Springfield, Mass.; and the private Walters collection, Baltimore. Museums of anthropology and ethnology include such objects as illustrate the natural history of man; his classification into races and tribes; his geographical distribution, past and present; the origin, history, and methods of his arts, industries, customs, and languages, particularly among primitive and semi-civilized peoples. Museums of anthropology and history meet on common ground in the field of archaeology. The principal museums arranged on the ethnographic plan are the Peabody Museum of American Archaeology and Ethnology of Harvard University, and the collections in the Peabody Academy of Sciences at Salem, Mass., and the American Museum of Natural History at New York. Besides these there are the vast ethnological collection in the National Museum at Washington. In this and the Peabody Museum of Harvard, and the Museum of Natural History at New York, are immense collections of the remains of man in America in the pre-Columbian period—collections which are yearly growing in significance, as they are made the subject of investigation. Museums of natural history contain those objects which illustrate the phenomena of nature in animals, minerals, and plants, and whatever illustrates their origin, growth, functions, structure, and geographical distribution, in the present and in the past. In the National Museum at Washington are enormous collections, anthropological, zoological, botanical, mineralogical, and geological. The Peabody Museum of Natural History of Yale University contains fine geological and mineralogical cabinets, and a very large collection of specimens illustrative of zoology, paleontology, and American archaeology. The American Museum of Natural History is especially rich in its ornithological collections. Among specialized natural history collections, the most noteworthy are those devoted to zoology, and chief among them is the Museum of Comparative Zoology at Harvard, founded by Agassiz "to illustrate the history of creation as far as the present state of knowledge reveals that history." The English naturalist Alfred Russell Wallace, in 1887, pronounced this museum to be "far in advance of similar institutions in Europe, whether as regards the general public, the private student, or the specialist." Besides those just named, important are the collections of the Museum of the Academy of Natural Sciences in Philadelphia, of the Boston Society of Natural History, of the California Academy of Sciences, of the Museum of Geology and Archaeology at Princeton University, of the Museum of Archaeology and Paleontology of the University of Pennsylvania, and of the Milwaukee Public Museum. The department of economic geology in the Field Columbian Museum in Chicago, an outgrowth of the department of mines in the exhibition of 1893, is one of the most striking features. Museums of technology, or industrial mu-

seums, are devoted to the industrial arts and to manufactures. An admirable type of such is the Pennsylvania Museum and School of Industrial Art at Philadelphia. Among such must be reckoned the exhibits of the U. S. Department of Agriculture in Washington and the fisheries section of the National Museum in the same city. The Field Columbian Museum in Chicago has a railway museum and important collections in other technical fields. To the various kinds of museums mentioned may be added commercial museums, exhibiting salable articles of all kinds, with illustrations of markets, means of commercial distribution, prices, and commercial demand and supply. The finest type of this sort of museum in the U. S. is the Philadelphia Commercial Museum, established by order of the City Councils of Philadelphia in 1894, and formally opened by President McKinley in the summer of 1897. The purpose of this vast establishment is to familiarize Americans with the products of other countries, and to stimulate the favorable interchange of native commodities and manufactured specialties.

Mu'sic, Ton'ic Sol-Fa' Sys'tem. An important modern method of teaching the facts of music. The idea upon which it is based is said to have occurred to an English music teacher, Miss Sarah A. Glover, about 1812, but her experimental efforts were improved and developed into a scientific system, about 35 years later, by the Rev. John Curwen (b. Yorkshire, England, 1816; d. 1880). The notational difference between this and the staff consists in the use of the initial letters of the solmization syllables (*do, re, mi, fa, sol, &c.*) instead of notes placed on the lines and spaces. Superscript and subscript numerals added to the letters indicate the higher and lower octaves, and time values are shown pictorially by spacing the letters on a line. The pulse, or heavy beat, at the beginning of a measure, is marked by a vertical bar, while a pulse-mark like a colon indicates the other pulses, thus:—(*Key A.*) | d : d : r | t :—, d : r | m : God save our gracious Queen. One of the chief characteristics of this system is that it holds the voice as the principal instrument of all performances, doing away as far as possible with the complexities of the old system of notation, and with helpless reliance upon the keyboards. It has become very popular in England. In June, 1875, the *Tonic Sol-Fa* College of London was incorporated, and it is now the center of authority of this movement in all parts of the world.

Mu'sical-box, or mu'sic-box, n. A portable instrument, the notes of which are produced by the vibrations of steel comb-teeth, which are struck by pegs in a metal cylinder revolved by clockwork. A set of reeds is sometimes inserted.

Musicale (*mu-zî-cûl'*), *n.* [Fr.] A musical party, or concert, informal and social.

Mus'keg, n. [N. A. Ind.] A bog, more or less overgrown with vegetation, such as is frequently met with in the rocky forests of Northwestern Canada.

Muskhoge'an, n. A North American language-stock spoken by the Indians of the Creek Confederacy, which at the time of the settlement of this country occupied the district from the Savannah river west to the Mississippi, and from the Gulf of Mexico north to the Tennessee river. The principal tribes in this stock were the Creeks or Maskoki proper, Choctaws, Chicasawa, Alabama, and Seminoles. Most of these are gathered in the Indian Territory, where some 25,000 still survive.

Mutsuhi'to, present Emperor (or Mikado) of Japan was born in 1852. He became Emperor by succession in 1867; and in 1869 married the Princess Haruko. His children are Prince Yoshihito, born in 1879, and proclaimed Crown Prince in 1889, and four princesses. His reign has been marked by great reforms, and the feudal system which has impeded the general progress of the country has been abolished. Under his rule Japan has entered upon an unprecedented era of prosperity. Civilization has made rapid progress, and the introduction of Western arts and ideas has secured for Japan a foremost place amongst the Asiatic nations. He has given the Japanese a parliamentary Constitution, based on European principles.

My-, myo-, A prefix, from the Greek *mys*, muscle.

Myel-, myelo-, A prefix derived from the Greek *myelos*, marrow.

My'er, ALBERT JAMES, meteorologist, was born at Newburg, N. Y., September 20, 1827; became chief signal-officer in the United States Army in 1860, and was in charge of the Weather Bureau in 1870. He published *Manual of Signals* (1868). Died August 24, 1880.

My'ograph, n. An instrument for making a record of the contractions and relaxations of a muscle. In the form devised by M. Helmholtz, the muscle was positively fixed at one end, while a tendon of the other was tied to a lever, whose movements were electrically conveyed to a recording cylinder. M. Marey made a somewhat similar instrument, and M. F. Lanlaue another, the latter being styled a *myoscope* (*q. v.*).

My'oscope, n. An instrument for making observations of muscular movements. See MYOGRAPH.

My'osin, n. A proteid formed after the death of a muscle by the separation of the muscle-plasma, which is the chief ingredient, the remainder being muscle-serum. As it separates into clots a stiffening of the muscle results, known as *rigor mortis*. Myosin is insoluble in water, but may be readily converted into acid albumen by a weak hydrochloric acid. The source of myosin in the living muscle is called *myosinogen*.

Myri-, myria-, myrio-, A prefix derived from the Greek *myrios*, countless.

Myrioram'a, n. A picture made up of many separate parts, which may be recombined into different views; used as to toy.

My'rioscope, n. A kind of kaleidoscope; in particular, an instrument by which samples of carpet are exhibited, a small piece seeming, by multiplied reflection, to cover the whole floor.

Mys'tic, in Iowa, a post-town of Appanoose co., 5½ m. from Centerville; has coal mines. Pop. (1895) 2,300.

Myth'o-, A prefix derived from the Greek *mythos*, fable, legend, myth.

Mytho'nomy, n. [Gr., *mythos*, *nomos*, law.] The last stage in the investigation of myths, in which certain truths regarding a people may be deduced or predicted by familiarity with their myths.

Mythope'ic, a. [Gr., *mythopoios*.] Myth-making; suggesting or giving rise to myths.

Myx-, myxo-, A prefix derived from the Greek *myxa*, mucous.

Myxomyce'tæ (or -tes), n. pl. [Gr., *myxa*, mucus, and *mykēs*, fungus.] (*Bot.*) A doubtful order of fungals. Alone among plants they have three cells, without a cell-wall, in their vegetative period, and not combine into a tissue. They live on decaying animal and vegetable substances. By some they are regarded as animals and called *Mycetozoa*.

N the fourteenth letter of the English alphabet, is a nasal consonant of the liquid series. It is common to all known languages, and is interchangeable, more particularly with the Latin, Greek, and other cognate dialects, with a variety of letters. Its principal sound is that heard in *can, fun, noon, &c.*; but when immediately preceding *g* or *k*, or their equivalents, it bears a sound closely approaching that of *ng*, as in *finger, think, &c.* This is sometimes exemplified by *ng*, as in *linger*. As a terminal letter of the *m*, it is mute, as in *damn* and *limn*. As an abbreviation, *N* is used for *north, numero, &c.*; *N. B.*, for *nota bene* (note well); *N. L.* for *non liquet* (*i. e.*, the case is not clear enough to decide upon); *N. P.* for *notarius publicus* (public notary), &c. Among the ancients, *N*, as a numeral, denoted 900, and with a dash over it, thus *N̄*, 9,000.

Naa'man's Creek, in *Delaware*, a village of New Castle co.

Naas, a town and parish of Ireland, in Leinster, co. Kildare, abt. 9 m. S.W. of Dublin; *pop.* 2,971.

Naau'say, in *Illinois*, a township of Kendall county.

Nab, n. [*A. S. cnæp*.] The summit of a headland, mountain, or promontory.

Nab, v. a. [*D. and Ger. knappen*.] To snatch suddenly; to catch unexpectedly; to seize without warning. (Colloquial and vulgar.)

Nab, or Naab, a navigable river of Bavaria, which, after a S. course of 90 m., joins the Danube 3 m. W. of Ratisbon.

Nabajoa, (*na-va-ho'a*), in *Arizona Territory*, a river rising among the Pinaleno Mountains, and flowing N. W. into the Colorado River. Length, about 25 m. It received its name from the Navajo Indians who inhabited the region through which it passes.

Na'bal. (*Script.*) A rich and influential Israelite of the tribe of Judah. David, having afforded protection to *N.*, and saved his flocks and herds, his property, and even his life when in danger, some time after sent to him to supply his troops with provisions, his forces being in want of immediate provender. This *N.* refused; upon which David, stung with the ingratitude of the man to whom he had shown so much favor, and to whom he had been of such signal use, vowed to take summary justice on the ungrateful Jew, and exterminate his family; and taking with him 400 men, set out for the residence of the mercenary Hebrew. Abigail, *N.*'s wife, hearing of her husband's conduct, and David's resolve, collected such provisions as the army required, and, attended by a train of servants, set out to meet the approaching king. Her beautiful person, combined with the excuses she made for her husband's conduct, so softened the heart of David, that he accepted her gifts, averted his wrath, and *N.*, having been "smitten by the Lord" a few days after, David married his widow.

Nabis, (*na'bis*), Tyrant of Sparta, whom Philip, king of Macedon, appointed governor of Argos. He was guilty of the greatest cruelties, and had a statue carved to resemble his wife, which, by springs, would embrace any one that touched it, and then pierce the victim through the body with spikes. This machine Nabis devised as a means of extorting money from his people; and when any one refused, he threatened to introduce him to his wife. He was slain B. C. 192.

Na'bit, n. Powdered sugar-candy.

Nab'lum, Ne'bel, n. [*Heb.*] (*Mus.*) One of the most famous musical instruments among the Jews. Its form and nature are so little known that Calmet thinks it was a harp; Kircher, a psalter; or stringed instrument of percussion played on by sticks; and Harmer, again, hints at its being a bagpipe. Bythner says that it was like a leather bottle, explaining his meaning to be that it bore a resemblance to the ancient Greek and Roman lyre, the body of which was made of the shell of the tortoise.

Nab'lus, or Nab'ulus, (derived from *Neapolis*, or New City, so named by Vespasian, the ancient SICHEM, or SHECHEM, of the Old, and LYCHAR of the New Testament,) a city of Palestine, cap. of Samaria, 32 m. from Jerusalem. It lies in the valley between Mount Ebal and Mount Gerizim, and contains several mosques and bazaars. *Manuf.* Soap and cotton; and has a trade in oil, cotton, and other agricultural produce. *Pop.* 8,000.

Na'bob, n. [*A* corruption of Hind. *nawab, nawaub* — *nail*, a deputy or vicegerent.] Formerly, the title of the governor of a province, or commander of an army, in India, under the rule of the Mongols. The *N.* was, properly speaking, a subordinate provincial governor under the *subahdar*; *i. e.*, governor of a *subah*, or larger province. After the decay of the Mogul empire, many of the *N.* became virtually independent, until their dominions were reduced by the English; as, the *Nabob* of Arcot. — A term vulgarly applied to Europeans who, having amassed a large fortune in the E. Indies, after their return home live in Eastern splendor.

Nabonas'sur, (*Era of*). (*Astron.*) An era followed by Hipparchus and Ptolemy, and adopted from the Chaldean astronomers, who had been in the habit of referring the observations of eclipses to the beginning of the reign of Nabonassar, or NEBUCHADNEZZAR, *q. v.*, the alleged founder of the Babylonish empire. This era Niebuhr (*Lectures on Ancient History*, i. 29) regards as "firmly established in history," while he looks on Nabonassar as a prince who shook off the Assyrian yoke, and re-established the independence of Babylon. But while Niebuhr regards this fact as placed beyond all doubt, Sir G. C.

Lewis (*Astronomy of the Ancients*) regards the astronomical canon for the period before Cyrus as "a complete historical puzzle," and remarks that "the name of Nabonassar is unknown to us from any other source." His conclusion is that the canon is referred to an arbitrary date, altogether beyond the evidence of history. Mr. Grote (*History of Greece*, part ii. ch. xix.) states that "the earliest Chaldean astronomical observation, known to the astronomer Ptolemy, both precise and of ascertained date to a degree sufficient for scientific use, was a lunar eclipse of the 19th of March, 721 B. C., the 27th year of the era of Nabonassar, which begins with February 26, 747 B. C."

Naboth, (*na'both*). (*Script.*) An Israelite of the city of Jezreel, who had a vineyard near the palace of Ahab. Ahab coveted the inheritance of his subject, and, to gain possession of it, caused Naboth to be stoned to death.

Nac'arat, n. [*Fr.*, from Sp. *nacar*, mother-of-pearl.] A term applied to a pale-red color with an orange cast. — A fine erape or linen fabric fugitively dyed of such color. The brightest red crapes of this kind are manufactured at Constantinople.

Nach, n. Same as NATCH, *q. v.*

Nach'er, n. See KNACKER.

Nachu'sa, in *Illinois*, a post-village of Lee co., abt. 5 m. E. of Dickson.

Nack'er, Ne'cre, n. [*Fr. and Sp. nacur*.] Same as MOTHER-OF-PEARL, *q. v.*

Nacogdoches, (*nak-o-do'chiz*), in *Texas*, an E. co.; area, abt. 930 sq. m. *Rivers*. Angelina and Atoyac rivers, with some smaller streams. *Surface*, undulating; *soil*, fertile. *Cup.* Nacogdoches.

— A post-village, cap. of the above co., abt. 250 m. N.E. of Austin.

Nacoo'chee, in *Georgia*, a post-village of White co., abt. 145 m. N. of Milledgeville.

Nicre'ous, a. Consisting of, or resembling, mother-of-pearl.

Na'cite, n. [*Fr. nacre*, mother-of-pearl.] A talcose silicate of alumina, consisting of minute scales, with a glimmering pearly lustre.

Nadab, (*na'dab*). (*Script.*) A king of Israel, and son of Jeroboam, whom he succeeded B. C. 954. In the second year of his reign, he led "all Israel" against Gibeon, but was slain during his siege of that city, by Baasha, son of Ahijah, who mounted the throne, and reigned 23 years, during which he "smote all the house of Jeroboam; he left not to Jeroboam any that breathed," as was prophesied by Ahijah the Shilonite.

Na'dab, n. A Persian high-priest, corresponding to the Turkish *mufiti*.

Na'dir, n. [*Ar. nazir*, alike, resembling, equal to.] (*Astron. and Geog.*) That point of the lower hemisphere of the heavens corresponding to the point in the upper hemisphere occupied by the zenith; the point of the heavens diametrically opposite to the zenith.

— Hence, the place or time of greatest depression of anything: — opposed to *zenith*.

"The seventh century is the nadir of the human mind in Europe." *Hallam.*

Nadir Shah, (*na'dir-shā*), a Persian prince, a celebrated Asiatic conqueror, and one of those human scourges who seem permitted at times to desolate the earth. This extraordinary man (see Fig. 336) was B. in the province of Khorassan, 1688, and at an early age obtained great notoriety as the chief of a band of robbers, gradually rising to power and distinction by his ambitious daring, and through the blind tools who flocked to his victorious banners. In 1720, assuming a mask of patriotism, he raised a body of 5,000 men, and, after several dashing achievements, succeeded in driving the Afghans from Persia, and ultimately in conquering the whole of their country, which he added to his own possessions; and having taken the capital city of Candahar, because the inhabitants fled to Delhi, and claimed, and ultimately obtained, protection from the sovereign, he waged war upon the Great Mogul; then, after besieging the imperial city, in 1738, entering Delhi, he put the inhabitants to the sword, and carried off a vast accumulation of treasure, the collection of ages, and the most moderate description of which reads more like a fable than a reality. After slaughtering thousands of the people, destroying their city, and inflicting frightful suffering, he returned to Persia, where he consolidated his power, and established absolute sway over an empire reaching from the Oxus in the north to the ocean in the south, and from Bagdad in the west to the Indus in the east. For the first years of his reign justice and moderation were the principles of his power; but as he advanced in years, and felt his power, he gradually threw off all consideration, and ruled by his selfish, arbitrary, and unbridled will; while in regard to his captives the most inhuman and barbarous conduct marked his career. He put out the eyes of his own son, simply because he was beloved by the people; and exercised such malignant cruelty on all, that his officers, discovering he meant to destroy them all, formed a league to save their lives and rid the world of an intolerable monster, entered his tent by night, murdered him as he slept, and placed his nephew Ali on the musnud in June, 1747.

Na'del-stein, (*-stün*), *n.* [*Ger. nadel*, needle, and *stein*, stone.] (*Min.*) The needle-stone.

Na'vius, CNEIUS, a celebrated early Roman poet, B. probably in Campania, but resident at Rome for the greater part of his life. He wrote a poem on the first

Punic War, in which he had personally served, and from this poem Virgil adopted some passages in the *Æneid*. Nævius wrote also several comedies, and by the freedom of his attacks on leading men subjected himself to imprisonment, and afterwards to exile. D. at Utica, abt. B. C. 202. Some fragments of his writings are extant.

Nævus, n.; pl. NÆVI. [*Lat.*] (*Med.*) A birth-mark found on children; a congenital spot or rash.

Nafe, Naif, n. A kind of tufted sea-bird.

Nag, n. [*Scot. naig*, from *A. S. hnægan*; *Icel. hneggja*; *Swed., Goth. gnuggja*, to neigh.] A small horse; a pony; hence, a horse in general, or rather a sprightly horse.

— A paramour; — used in a contemptuous sense; as, "your ribald nag of Egypt." — *Shaks.*

Nag, v. a. To torment; to scold; to worry with petulant complaint or solicitation. (Used colloquially.)

Nagasa'ki, a town of Japan. See NAGASAKI.

Nag'gy, a. Peevish; irritable; quick-tempered; petulant; tonehy. (An English colloquialism.)

Nagore', a town of Hindostan, presidency of Bengal, dist. of Birbhoom, 117 m. N.W. of Calcutta; Lat. 23° 56' N., Lon. 87° 20' E.

Nagore, (*na-gor'*), a town of Hindostan, presidency of Madras, district of Tanjore, on the Velloor or Nagore River, at its mouth in the Indian Ocean, 48 m. E. of Tanjore; Lat. 10° 49' N., Lon. 79° 55' E. The principal public buildings are several fine mosques, and a square tower 150 feet high. *Pop.* Unknown.

Nagore', a town of Hindostan, in Rajpootana, 70 m. N.E. of Joodpoor. *Manuf.* Brass and iron wares. *Pop.* 40,000.

Nagowick'a, in *Wisconsin*, a lake of Waukesha co. It covers an area of abt. 2 sq. m.

Nagpoor', a dist. of Hindostan, in the Gurdwara region, bet. Lat. 17° 50' and 23° 5' N., Lon. 78° 3' and 83° 10' E.; area, 76,340 sq. m. *Prod.* Wheat, maize, cotton, sugar, rice, and tobacco. *Min.* Iron, marble, and limestone. *Manuf.* Brass and copper utensils, woollen and cotton stuffs, and turbans. The cap. is Nagpoor. *Pop.* 4,650,000.

Nagpoor', ("town of serpents") a city of Hindostan, cap. of the above dist. and site of government of the Central Provinces; Lat. 21° 9' N., Lon. 79° 11' E. It is meanly built, though extensive. *Manuf.* Silk and cotton goods, arms, and cutlery. *Pop.* 115,000.

Nagy Banja, or **Nagy Banyá**, (*no'je ban'ya*), a town of Austria, in E. Hungary, 32 m. E.S.E. of Szathenar. The inhabitants are principally engaged in the gold, silver, and copper mines in the vicinity. *Pop.* 5,500.

Nahant', in *Massachusetts*, a post-village and township of Essex county, about 10 miles North-east of the city of Boston.

Na'hash. (*Script.*) The father of Zeruiah and Abigail, David's half-sister.

Na'hor. (*Script.*) Son of Serag, and father of Terah. — 2. Son of Terah, and brother of Abraham and Haran. He married Milcah, his niece, and had twelve sons, among them Bethuel, the father of Rebekah.

Nahr-el-Ke'beer, or **Nahr-el-Ke'bir**, a river of Asiatic Turkey, in Syria, which after a W. course of 40 m., falls into the Mediterranean, 20 m. N. of Tripoli.

Nah'shon, or **Naas'son**, one of Christ's ancestors, was chief of the tribe of Judah in the desert, and brother-in-law of Aaron.

Na'huni, (*Book of*). (*Script.*) One of the minor prophetic books of the Old Testament, the author of which is believed to have flourished towards the close of Hezekiah's reign, about 705 B. C. The subject of the book is "the burden of Nineveh," *i. e.*, the destruction of Nineveh and the Assyrian empire, as the punishment of its wickedness and oppression. It commences with a sublime description of the justice and power of God, showing how terrible he is to his enemies; then follows an account of the sufferings of Nineveh, until it is utterly destroyed. In freshness and graphic power this author is not behind any of the other minor prophets. He gives evidence of a rich and lively imagination, and his figures are abundant and appropriate; the language is classical throughout. "His prophecy," says Bishop Lowth, "forms a regular and perfect poem; the exordium is not merely magnificent, it is truly majestic: the preparation for the destruction of Nineveh, and the description of its downfall and desolation, are expressed in the most vivid colors, and are bold and luminous in the highest degree."

Nahm'ta, in *N. Carolina*, a post-village of Wayne co., abt. 61 m. S.E. of Raleigh.

Naiad, (*na'yad*), *n.* [*Gr. naias, naiādos*, from *naō*, to flow.] (*Myth.*) In the Greek and Roman mythology, the Naiads, or Naiades, were certain inferior deities, who presided over rivers, wells, springs, and fountains, and are represented as young, graceful, and extremely beautiful nymphs, to whom great veneration was paid and sacrifices offered. The oblations usually presented on the altars of the Naiads consisted of milk, fruits, and flowers, and libations of wine, honey, and oil. They are usually represented leaning on an urn, from which flows a stream of water, and when draped, which is seldom, their vesture is of a thin greenish hue, sufficiently light to show the contour of the limbs beneath. On gems they are sometimes represented with large flowing veils, their only general vestment.

— *pl.* (*Zoöl.*) See UNIONIDÆ.

— *pl.* (*Bot.*) The order *Naiadaceæ*, *q. v.*

Naiada'ceæ, *n. pl.* (*Bot.*) The Fluviales or Naiad family, an order of plants, alliance *Hydrates*. **DIA-**

Hypogynous stamens, a free ovary, a complete embryo, and globose pollen. They are aquatic plants, with cellular leaves and inconspicuous perfect or monocious flowers; calyx 2- to 4-lobed, or altogether wanting. Stamens definite; stigma simple, often sessile; fruit dry, indehiscent, 1-celled, 1-seeded; seed pendulous, without albumen. The plants of this order inhabit both the ocean and fresh water in nearly all countries. They have no known uses. The order includes 9 genera and 16 species.

Naïant, *a.* (*Her.*) Represented as swimming, as a fish in an escutcheon.

Naïf, *a.* [*Fr.*] Presenting a natural appearance;—a term applied by lapidaries to a stone of true natural lustre.

Nail, (*nāl*), *n.* [*A. S.* *nægel*; *D.* and *Ger.* *nagel*; akin to *Lat.* *unguis*, *Gr.* *onūchus*, a claw.] (*Physiol.*) The terminal horny appendage of the finger and toe when they are in the form of flattened or depressed plates, serving to support a broad tactile surface, as in the human fingers. When these appendages are compressed, curved, pointed, and extended beyond the digit, they are called *talons* or *claws*, and the animal bearing them is said to be *unguiculate*; when they encase the extremity of a digit like a box, they are called *hoofs*, and the animal is *ungulate*.—The nails are an altered form of the epidermis or outward layer of the skin. Under the microscope, a portion of newly-formed nail is found to consist almost entirely of nucleated cells, which are of exactly the same character as those found in the new layers of epidermal tissue. No distinct structure can be observed as the nail grows older, but when immersed in a weak solution of caustic potash or soda, the cells become visible. The nails of a human being are produced from a fold in the true skin, which has a highly vascular surface, furnished with longitudinal elevated ridges, to which blood-vessels are copiously distributed, and between which the soft inner layer of the nail drops down. The growth of the nail is caused by additions to its base; but as it moves, it also receives additional matter from the skin on which it rests. According to M. Beau, the condition of the nails may be made subservient to the diagnosis of disease. When a nail is injured, it is speedily reproduced, except when the skin beneath has been destroyed.

(*Manuf.*) A small pointed piece of metal, generally with a head, to be driven into a board or other piece of timber, and serving to fasten it to other timber. Until a comparatively recent date, nails were made only by hand, but now are largely manufactured by machinery. The making of hand-made, or *wrought nails*, usually retains the character of a domestic manufacture, and forms the employment of a class of blacksmiths, called nailers, who, in England, are frequently assisted by the female members of their families. The iron is received by the nailer in the shape of narrow square rods, varying in size according to the kind of nail to be forged from them. The ends of several of these rods are put into the fire at once. When properly heated, one is withdrawn and forged on a steel anvil to a fine tapering point. The pointed end is then cut off at the proper length. In making some kinds of nails, this operation completes the nail, as in horse-shoe nails; but in most cases, a subsequent process is necessary in order to form the head. In order to effect this, the red-hot nail is dropped, point downwards, into a hole, in an instrument called a *bone*. The hole fits the upper or thicker part of the nail, so that when dropped into it, a few well-directed blows of the hammer upon the thick projecting end of the spike or nail, converts it into a head of the required shape. Some nailers acquire great dexterity in their craft. One man has been known to make 34,000 flooring-nails in a fortnight, which would require on an average 1,939,556 strokes of the hammer. *Cast-nails* have long been used for the same purposes as wrought nails. Although they are much cheaper, they are so clumsy and brittle that they can only be used for a few coarse purposes, as in plasterer's work and the nailing up of fruit-trees. For certain kinds of wood-work, however, a very valuable kind of cast-nail, made from a pure material, called malleable cast-iron, is now employed. They are, however, as soft as copper, and therefore not suitable for use in hard wood. On account of the comparatively high price of wrought nails, and the insufficiency of cast-nails as a substitute for them, many ingenious machines have been invented for forming nails by cutting or stamping out of plates or rods of wrought iron. "About 1790 the first machine for dispensing with hand-labor in nail-making was invented in England. It was, however, only proposed to use water, or other mechanical power, to move hammers and other appliances for making nails similar to those made by hand. The next step in advance was the machine of Thomas Clifford, of the city of Bristol, patented in 1790. He used two iron rollers, faced with steel, in which were sunk impressions, or forms of the nails, half of the form being in each roller, and arranged circumferentially, so that a bar of iron, being passed between the rollers, came through a string of nails, the head of one nail being slightly joined to the point of the next; these were then separated by shears or nippers. Sometimes several rows of indentations were made in the surface of the rollers, and instead of bars, a slip of sheet-iron was passed through, and being forced into the dies was formed into nails. Still another method was to form nails by casting, but these were too brittle to be of much service.—Nails made by either of the processes already mentioned were very expensive; and in the U. States, where so many wooden structures had to be erected by the settlers, the obtaining of cheap nails was of the utmost importance. It was under the stimulus of this pressing necessity that about the year

1790 ingenious men set to work to invent nail-machines. It is difficult at the present day to ascertain who it was that first conceived the idea of cutting nails from slips or rolled plates of iron. At first the nails were cut from a slip or hoop, and headed by a few blows of a hammer while grasping them in a vise worked by the foot. But very soon the machines were made to cut and head the nail at one operation. Between 1794, the date of the first patent, and 1817, more than 100 patents had been issued for nail-machines and improvements. The first patent was for a machine for cutting nails, March 23, 1794, to Josiah G. Person, or Pearson, of New York. The first patent for a cutting and heading-machine (Nov. 11, 1795) was granted to Isaac Garrettson of Pennsylvania; and on Dec. 12, 1796, a patent for a similar machine to George Chandler of Maryland. The manufacture of cut nails was soon established in Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, and Maryland. In 1810 Joseph C. Dyer of Boston, but then a merchant in London, took out patents in England for the nail-machinery invented in Massachusetts, and large manufacturing establishments were soon put in operation. Some in the neighborhood of Birmingham are able to make over 400,000 nails per week. Many of the first inventors spent large sums of money on their machines. It has been estimated that it cost more than \$1,000,000 to bring them to the perfection arrived at in 1810, when a machine made about 100 nails per minute. It was at this time that the full value of this American invention was brought prominently before the world in the well-known report of Albert Gallatin, then secretary of the treasury. Large nail-factories were early established in different parts of Massachusetts, and at Ellicott's Mills, near Baltimore. At the present day, the business is carried on very extensively in the Schuylkill iron region of Pennsylvania. There the pigs from the furnace go immediately to the bloomery, thence to the rolling-mill, and so on through the slitting and nail-cutting machines, so that all the operations, from the crude ore to the finished nail, are carried on at the same place. Horse-shoe nails, which are made of the best charcoal iron, long proved very difficult to make by machines, but the difficulty has been overcome and nails of this kind are now made abundantly by machinery. Cut nails and other kinds are produced largely from Bessemer and Siemens-Martin steel, their quality being superior to that of most of the old wrought-iron nails. The old-style nail has been largely superseded within the recent period by wire nails, an article of French origin, the wire being cut from a reel, headed, and pointed in one operation. Since 1889 tin-plate scrap has been successfully used in the U. S. for nail-making. This substance is sheet-iron of good quality, the abundant waste scrap of which is made into nails by flattening edgewise in the manner in which a fan is folded. The machine for this purpose, invented by G. H. Perkins, of Philadelphia, performs the operations of entering, crushing or folding, gripping, and heading, doing the work perfectly.

—A stud; a boss; as, "the desk with silver *nails*." *Swift*.
—A measure of length, being $2\frac{1}{4}$ inches, or 1-16th of a yard.

On the nail, in hand; forthwith; at the moment; immediately; without credit or delay.

"We want our money on the nail." — *Swift*.

To hit the nail on the head, to hit the exact mark; to guess or conclude precisely to the point; as, he hit the nail on the head when he called you a fool.

—*v. a.* To fasten, unite, close, or make compact with nails; to spike; to stud with nails.

"Nail to the mast her holy flag." — *Holmes*.

—To secure, bind, or hold, as to a bargain or concurrence in an argument or agreement; to catch; to trap; as, I nailed him with his own words.

Nail-ball, *n.* (*Mil.*) A circular ball with an iron bar protruding through its centre, to prevent its revolving in the bore of a cannon.

Nail-brush, *n.* A brush for cleaning the nails.

Nailer, *n.* A nail-maker.

Naileress, *n.* A female nail-maker. (*R.*)

Nailery, *n.* A forge or smithy where nails are made.

Nail-headed, *a.* Having a head resembling that of a nail; constructed so as to appear like the head of a nail.

Nainsook, *n.* A kind of jacquet muslin, formerly made in India.

Nairn, a maritime co. of Scotland, E. of Moray Frith, having N. the Sea, E. the co. of Moray, S. and W. Inverness; area, 215 sq. m. Desc. Mountainous and barren, except along the coast and in the valleys. Rivers, Nairn and Findhorn. Prod. The usual cereals. Manuf. Unimportant. The cap. is Nairn. Pop. 10,000.

NAIRN, a seaport-town of Scotland, cap. of the above co., at the mouth of the River Nairn, 15 m. N.E. of Inverness, and 72 m. N.E. of Aberdeen. The harbor is accessible only for small vessels. Exp. Grain, cattle, timber, salmon, herring, and other fish. Pop. 4,000.

Naïssant, *a.* [*Fr.* from *Lat.* *nasci*, *natus*.] (*Her.*) Said of an animal depicted as coming forth out of the middle (Fig. 1906)—not like *issuant*, out of the boundary line—of an ordinary.

Naïve, (*nā-ēv'*), *a.* [*Fr.* from *Lat.* *naivus*, natural, native.] Artless; ingenuous; having a native or unaffected simplicity; as, a naïve question, a naïve remark.

Naïvely, *adv.* [*Fr.* *naïvement*.] Ingenuously; with native or unaffected simplicity.

Naïvete, (*nā-ēv'tā*), *n.* [*Fr.* from *Lat.* *naivitas*.] Native simplicity; unaffected plainness or openness; undisguised artlessness or ingenuousness.

Naja Haje, *n.* (*Zool.*) See *ASP*.

Najas, *n.* [*Gr.* *nan*, to flow; hence, *Nais* or *Naidēs*, nymph of the waters; from the habitat.] (*Bot.*) A genus of plants, order *Navadaceæ*. They are aquatic plants, with axillary flowers. *N. Canadensis*, the Water-nymph, is a slender, flexible, rather erect, submerged water-plant, found from Canada to New Jersey and the Western States.

Na'ked, *a.* [*A. S.* *nacod*; *Ger.* *nackt*; *Icel.* *nakt*; *Ir.* *nochd*.] Not covered; bare; nude; having no clothes on; as, a naked body.

—Unarmed; defenceless; open; exposed; having no means of protection.

"He would not . . . have left me naked to mine enemies." — *Shaks*.

—Open to view; not hidden or concealed; without disguise, ornament, or exaggeration; plain; evident; manifest.

"The truth appears so naked on my side,
That any purblind eye may find it out." — *Shaks*.

—Without adjunct, addition, or accessory; devoid of needful advantages or appendages; destitute; unaided; bare; as, his means are naked. — Mere; simple; abstract; as, a naked belief.

(*Bot.*) Destitute of the usual covering or appendage.

Naked flooring, (*Carp.*) The whole assemblage or configuration of timber-work for supporting the boarding of a floor on which to walk. Naked flooring consists of a row of parallel joists, called *floor-joists*.

—*n.* (*Arch.*) The surface of the shaft of a column or pilastro, where the moldings are supposed to project; also, the remote face of a wall whence the projectures take their rise. It is generally a plane surface; and when the plan is circular, the naked is the surface of a cylinder with its axis perpendicular to the horizon.

Nakedly, *adv.* In a naked manner; without covering; barely; simply; merely; in the abstract; evidently; manifestly.

Nakedness, *n.* State of being naked; want of covering or clothing; nudity; bareness; exposure; want of means of protection or defence; plainness; openness to view.

"Thy only armor is thy nakedness." — *Prior*.

(*Script.*) The genital organs.

"Ham . . . saw the nakedness of his father." — *Gen. ix. 23*.

Naker, *n.* Same as *NACRE*, *q. v.*

—A kind of kettle-drum.

Nakhichevan, (*nak-i-che'van*), a town of Asiatic Russia, in Trans-Caucasia, on the Aras, 80 m. S.E. of Erivan. It claims to be the oldest city in the world, tradition implying that here Noah landed from the ark. It is now almost a ruin.

Nakhichevan, (*nak-itch-e'van*), a town of European Russia, gov't. of Ekaterinoslav, on the Don, 25 m. from its mouth in the Sea of Azov. N., with the neighboring town of Rostov, are the entrepôts of the Don. Manuf. Woollen goods. Pop. 14,500.

Na'kir, *n.* [*Ar.* *nakara*.] A fugitive pain, shooting from one limb to another.

Na'm'able, *a.* Susceptible of nomenclature.

Namaquas, a tribe of the HOTTENTOTS, *q. v.*

Nam'ation, *n.* (*Old Eng. Law.*) A levying distress on property.

Nam'by-pam'by, *n.* That which is maudlin, or weakly and silly sentimental or gushing; that which is affectedly or finically pretty; far-fetched naïvete.

—*a.* Affectedly sentimental; wishy-watery; sickly timid; contemptible for diluted or put-on prettiness; finical; as, a namby-pamby manner of speaking.

Name, *n.* [*A. S.* *nama*; *Ger.* *name*; *Goth.* *namo*; *Pers.* *nam*; *Hind.* *nom*; *Lat.* *nomen*; *Gr.* *onōma*; *Sansk.* *nāman*.] That by which a person or thing is spoken of and known; an appellation or title attached to a thing by customary use; epithet. — When names denote individual objects, such as countries, rivers, towns, men, &c., they are called *proper* or *appropriate* names. More usually, however, the term *proper name* is applied to those of men. Among the Greeks, with the exception of a few families at Athens and Sparta, there were no family names. Among the Romans, each person had three names: first, the *prænomen*, or distinction of the individual; second, the *nomen*, or name of the clan; and third, the *cognomen*, or family name. A surname was sometimes added, which was borrowed from some exploit or remarkable event; as in the case of Scipio Africanus. The *prænomen* was always placed first, and usually written with one or two letters; as M. Marcus, C. Cælius, P. Publius, &c. The *nomen* was second; as Julius Fabius, for the Julian and Fabian clan. The *cognomen* came last; as Cæsar, Cicero. Thus in the name of M. Tullius Cicero, M. is the *prænomen*, distinguishing him from his brother Quintus; Tullius the *nomen*, distinguishing the clan; and the *cognomen* Cicero, which shows the family. Among the Celtic and German nations, each person was denoted by one word. This was also the case in the early and primitive states of society. Among the ancient Hebrews, the names of Abraham, Aaron, David, Solomon, were employed individually and singly. In the other nations which preceded European civilization, the same feature is to be observed. One word denoted one person in Egypt, Syria and Persia. Among the Saxons this primitive system was prevalent not only when they were first established, but during the whole period when they held dominion in Britain. The names of Alfred, Harold, Edwin, &c., each signified a single individual. At the present day, the system of personal nomenclature is to have one name for the individual prefixed to another name which

Fig. 1906.
NAISSANT.

distinguishes the family to which he belongs. Probably one of the oldest methods of distinguishing different individuals of the same name was by adding their father's name to their own. Hence originated many English, German, and Danish names which end in *son*, *sohn*, and *sen*; for example, Williamson, Andersohn, Thorwaldsen. With feudalism new names were introduced, derived from the districts conferred on the nobles, or from the feudal relations. Another class of names are those of locality, which are either derived from places of generic names, as Hill, Dale, Cliff, &c., or from some specific place. Everywhere the nobility had family names before the commoners. But among the latter is a class of names derived from their occupation and trades; such as Smith, Miller, Fisher, Barber, &c. The number of this class is very great, and includes the names of several lost trades, or trades which have changed their names: thus we have Furbisher, Foster, Fletcher, Pargetter, Taverner, Webster, Page, Reeve, &c. Sometimes striking external peculiarities or mental qualities have given origin to names, which have descended to the posterity of those on whom they were bestowed: such are Swift, Brown, Long, White, Black, Good, Wise, and others. There are only 53 names of men which can be used without some appearance of singularity. Of these there are 25 of Hebrew origin, 19 derived from the dialects of W. Europe, 5 from the Greek, and 4 from the Latin. Out of the whole there are 12 more in use than any others: these are Charles, Edward, Francis, George, Henry, James, John, Richard, Robert, Samuel, Thomas, and William.

—Reputation; character; credit; that which is said of a person; — used with an adjective, as *good* or *bad*.

"He that fishes from me my good name . . . makes me poor indeed." — *Shaks.*

—Fame; honor; celebrity; eminence; praise; distinction.

"One of the few, the immortal names
That were not born to die." — *Halleck.*

—Remembrance; memory; extended reputation.

"My name and memory I leave to men's charitable speeches."
Lord Bacon.

—Persons bearing a certain name: stock; race; family; lineage.

"A warrior of the Douglas' name." — *Scott.*

—An individual; a person.

"They list with women each degen'rate name." — *Dryden.*

Christian name, the appellation received by a person at baptism, as distinguished from *surname*. — *In name*, in profession or title only; apparently; assumedly; without reality or substance.

"There is a friend which is only a friend in name." — *Eccles.*

In the name of, in behalf of; by power or authority delegated; on the part of; in the assumed character of.

"Now, in the name of all the gods at once." — *Shaks.*

Proper name. See *PROPER*. — *To call names*, to apply opprobrious or invidious epithets to; to nickname.

"The husband calls her ten thousand names." — *Granville.*

To take a name in vain, to make idle or profane use of a name; to swear by an appellation.

—*v. a.* [*A.S. naman*.] *To give a name or appellation to*; to designate by name; to set or give a sound or combination of sounds to, by which a person or thing is known or distinguished; to call; to denominate; to style.

"She named the child Ichabod." — *1 Sam. iv. 21.*

—*To speak of by name*; to mention by name; to refer to by distinctive appellation.

"None named him but to praise." — *Halleck.*

—*To nominate*; to point out for any purpose by name; to specify; as, he is named as prime minister.

To name the name of Christ, to make profession of Christian faith.

Name, n. (*O. Eng. Law.*) A distraint; an impounding; also, the thing or chattel distrained.

Nameka'gon, in *Wisconsin*, a river flowing into St. Croix River in Burnett co.

Nameless, a. Without a name; not distinguished by an appellation; noting a thing or person whose nomenclature is not known or mentioned.

"A headless carcass, and a nameless thing." — *Dryden.*

—Not noted or celebrated; undistinguished; without repute.

"Nameless, unremembered acts of kindness and of love."
Wordsworth.

Namelessly, adv. In a nameless manner.

Name'ly, adv. By name; particularly; that is to say; to wit; videlicet; as, there were three of them, *namely*, Tom, Dick, and Harry.

Name-plate, n. A plate of metal, &c., inscribed with a person's name.

Nam'er, n. One who names or calls by name.

Namesake, n. One whose name has been given to him for the sake of another; one who bears the same name as another.

Namingly, adv. By name.

Namozine Creek, in *Virginia*, enters the Appomattox River between Amelia and Dinwiddie cos.

Namur, a prov. of Belgium, having N. Brabant, E. Luxembourg and Liege. S. the French dept. of Ardennes. W., Hainault; area, 1,400 sq. m. *Desc.* Diversified and very fertile. *Rivers*, Meuse, Sambre, and Lesse. *Prod.* Wheat, oats, hops, hemp, and flax. Cattle are also extensively reared. *Min.* Iron, copper, lead, coal, and marble. *Manuf.* Articles of iron, copper, and brass. The cap. is Namur.

NAMUR, a town of Belgium, cap. of the above prov., at the junction of the Meuse and Sambre, 33½ m. S.W. of Liege, and 33 m. S.E. of Brussels. It is beautifully situated in the midst of a level and fertile country, 67 m.

S.E. of Brussels, is strongly fortified, entered by eleven gates, and further strengthened by a commanding citadel, built on a rock that gives it an imposing appearance, and renders it very formidable as a military post. The

Fig. 1907. — NAMUR.

streets are wide, the houses well built and generally of stone; and two bridges spanning each river, add greatly to the beauty and advantages of the city. It has six churches, all remarkably rich in architecture and internal fittings. *N.* is a place of considerable trade, especially in metallic work; its cutlery is in great demand in Belgium. Fire-arms, swords, tin and brass ware, copper vessels, tools of all kinds, agricultural implements, and iron-mongery goods of every description, with glass and leather, constitute its chief commercial items. *N.* has sustained numerous sieges, and in the 16th and 17th centuries suffered some of the worst horrors of war. The French took it, after a long investment, in 1692, and 3 years later the English and Dutch made themselves masters of it; but 6 years after, 1701, it again changed hands, the French carrying the place, and though expelled some time afterward, again stormed and carried it in 1746. After the French revolution, it was made the capital of the dept. of the Meuse and Sambre, and was only restored to its former independence by the peace of 1815.

Nan, interj. A localism used both in England and the U. States, and equivalent to what! how! hey!

Nanafa'lia, in *Alabama*, a village of Marcugo co., abt. 100 m. S. of Tuscaloosa.

Nancy, a town of France, cap. of the dept. of Meurthe, on the river Meurthe, 30 m. S. of Metz, and 175 m. S.E. of Paris. It is divided into the Old and New Town, and was formerly surrounded by walls. Several of the gates still remain, and are very fine, resembling triumphal arches. The principal public buildings are the cathedral of Corinthian architecture, the town-hall, the *Palais de Justice*, and the exchange. Prominent among its public squares is the *Place Stanislaus*, surrounded by fine edifices, and having in its centre a bronze statue of Stanislaus, King of Poland, and Duke of Lorraine. *Manuf.* Woollen cloth, hosiery, lace, muslins, cotton yarn, liquors, and chemical products.

Nan'du, n. [*Braz. yandu*.] (*Zoöl.*) The American ostrich. See *OSTRICH*.

Nangasa'ti, or NAGASAKI, a large seaport-town of Japan, S.W. of the island of Kiou-Shiu, 600 m. S.W. of Yeddo; Lat. 32° 43' 4" N., Lon. 130° 11' 47" E. It is situated on the slope of a hill, and, like every other Japanese town, is regularly built, with wide and clean streets. The houses, however, are low, none containing more than one good story, to which is added in some a sort of cock-loft; in others, a low cellar; — all are constructed of wood and a mixture of clay and chopped straw; but the walls are coated with a cement that gives them the appearance of stone. The height of the street front, and even the number of the windows, are determined by sumptuary laws. Oiled paper supplies the place of glass, and the windows are further protected from the weather by external wooden shutters and Venetian blinds. A veranda, into which the different rooms open, runs round the outside of the houses, to which are invariably attached curiously laid-out gardens. Large detached fire-proof store-rooms belong to each dwelling, and are so constructed as fully to answer their purpose of preserving the valuables of the inhabitants from the conflagrations so common here and elsewhere in Japan. The chief public buildings are the palaces of the governor and grandees of the empire, some of which cover a considerable extent of ground; there are also in the town and neighborhood 61 temples, or *yashiros*, usually on commanding eminences, and inclosed in large gardens, the habitual resort of pleasure parties. These buildings are as plain and little ornamented as the private dwellings, and comprise, also, apartments, which are let out to travellers, or used for banqueting rooms and other purposes. The tea-houses, or *bagnios*, are another favorite resort of the natives. The historic island of Deshima, ("Outside Island,") in which the Dutch traders formerly lived, is outside the town, but a few yards from the shore, connected by a stone bridge. Nagasaki was opened to foreign commerce in 1859, as one of the five open ports. The foreign settlement is on the flat land at the E. side of the harbor, and contains many neat and substantially built dwellings, hotels, club-houses, consulates, &c. The harbor is land-locked, extending about 7 m. N.E. and S.W., being in most places less than a mile in width. Ships of the largest tonnage can lie in five or six fathoms of water within gunshot of the hills on which the town is

situated, and which shelter it and the shipping from the wind.

Nanjemoy', in *Maryland*, a post-village of Charles co., abt. 55 m. S.W. of Annapolis.

Nankeen', Nankin', n. A species of cotton cloth of a firm texture and yellowish color, originally manufactured in Nankin, China. — An imitation of this cloth by artificial dyeing.

Nankin', a city of China, prov. of Kiang-soo, dist. of Kiang-ning-foo, on the Yang-tse-kiang; Lat. 22° 4' N., Lon. 118° 24' E. The walls, which are of limestone, cemented with sun-baked clay, inclose a very irregular triangular area of about 30 sq. m., and this circuit, as measured by the Jesuits, amounts to 57 lis. or nearly 20 m., — a fact fully proving the absurdity of the Chinese statement that, "if two horsemen should go out in the morning at the same gate and ride round in opposite directions, they would not meet before night." This inclosure, moreover, comprises groves, fields, and even hills, of considerable extent; less than three-fourths of it being covered by the city, which is situated at the S. extremity, and about 6 m. from the river-bank. The city has declined much both in size and splendor since the end of the 13th century, when Kublai-Khan removed the imperial residence to Pekin. It now consists of 4 rather wide and parallel avenues, intersected by 6 or 8 others of less width. The streets are not so broad as those of Pekin, but are, on the whole, handsome, clean, well paved, and bordered with well-furnished shops. *N.* possesses no public edifices corresponding to its rank as the second city of the empire, except its famous porcelain tower, belonging to one of the pagodas, several temples, and its gates, some of which are of extreme beauty. The Porcelain tower (called *Pouou-gan-sze*), "pagoda of gratitude," which is unquestionably finer than any similar structure throughout China, is an octagonal building, each side 15 ft. wide. It consists of 9 equal stories, communicating by a spiral staircase running up the centre of the building, and each comprising one saloon finely painted, gilt, and adorned with idols. The outside wall is white, made of the white bricks commonly used in China; a kind of carved gallery or veranda, ornamented with lightly-tinkling bells, runs round each story, and the whole is surmounted by a gilt conical roof, the height of which from the base somewhat exceeds 200 ft. It was completed in 1431, at a cost of 400,000 taels. An observatory stands about a league northward of the pagoda, but though formerly well provided with instruments, it is now almost in ruins. *N.* has extensive manufactures of satin and crape, the quality of the former, both plain and figured, not being equalled by that of any other city in China. The cotton fabric called Nankeen receives its name from this city; but in fact it is made in every part of the prov., and scarcely a cottage can be found where the thrifty housewife has not a loom for weaving nankeen. The paper of *N.* is highly esteemed; and Indian-ink (as it is called in Europe) is manufactured in large quantities both in the town and neighborhood, forming an important article of commerce. *N.* is celebrated also for its manufacture of artificial flowers from the pith of a shrub, and so extensive is this branch of industry as to give rise to a large trade. The commerce of this city is very considerable, owing to its position in the centre of the empire, and on the Yang-tse-kiang, which is navigable for small boats to the ports of Soo-chee-foo and Shanghai, its great entrepôts for coin, manufactured goods, and other articles. Its communication with Pekin is effected by the imperial canal, which leaves the river about 40 miles below *N.*; the principal traffic with the capital is during April and May, when fast boats, which accomplish the distance in about 9 days, are constantly employed in exporting to the imperial court the produce of the *N.* fishery packed in ice. *N.* is not less celebrated for literature than commerce; the arts and sciences are studied there with great diligence, and it furnishes more doctors and mandarins than many towns together. Its libraries are also extensive and valuable. *Pop.* (1897) 160,000.

Naukin', in *Michigan*, a post-township of Wayne county.

Nankin', in *Ohio*, a post-village of Ashland co., abt. 58 m. N.N.E. of Columbus.

Nans'emond, in *Virginia*, a river flowing into Hampton Roads from Nansemon co.

—A S.E. co., adjoining N. Carolina; area, abt. 400 sq. m. *Rivers*, Nansemon River, and some smaller streams, while Hampton Roads wash its N. border, and Lake Drummond and the Dismal Swamp occupy its S.E. angle. *Surface*, generally level; *soil*, not very fertile. *Cap.* Suffolk.

Nantas'ket, in *Massachusetts*, a peninsula of Plymouth co., extending N.N.W. into Massachusetts Bay.

Nantas'ket Road, in *Massachusetts*, a name given to one of the principal entrances to Boston Harbor.

Nantes, (nants,) a large commercial city of France, cap. of the dept. of Loire-Inférieure, and formerly of the prov. of Brittany, on the Loire, at its junction with the Erdre and Sevre-Nantaise, 210 m. S.W. of Paris. *N.* is situated on the slopes and summit of a gentle hill on the right bank of the Loire, where the river is studded with numerous islands. It is a remarkably clean, well-built, and judiciously-arranged town; especially all the new parts of it, which are distinguished by extreme elegance and good taste. This is particularly evident in its squares and public buildings. The city, with its magnificent quays, its splendid river, dotted with islands, its handsome bridges spanning its surface and uniting its different parts, the harbor of Lafose, its lofty edifices, its crowd of shipping of all rig and nations, and its miles of lawn-like meadows stretching far away on

either bank of the Loire and Erdre, produces a *coup d'œil* of beauty, magnificence, and prosperity, not to be surpassed by any other city in France. *N.* has 450 streets, 33 squares, and 16 bridges; one, the Pont de Permil, 227 yards in length, and having 16 arches, is especially worthy of observation. The manufactures and trades of *N.* consist chiefly of ship-building, copper foundries, tanneries, dye and bleaching works, brandy distilleries, woollen goods—such as blankets, serges, flannels—printed cottons, and cotton twist, cordage, glue, refined sugar, and ship-bakeries; while salt, manufactured in the neighborhood, forms an important item among the general list. *N.* is a place of great antiquity, having been a station of consequence under the Romans, and resisted an attack made on it by Attila; but is most memorable as the place from whence Henry IV. issued the celebrated edict granting perfect toleration to his Protestant subjects, and equal rights and privileges with the Catholic party. This important document, the *Edict of Nantes*, was published in the year 1598, and was revoked by Louis XIV., Oct. 22, 1685. Nantes was also the scene of some of the most frightful murders and inhuman excesses that disgraced the first French Revolution, perpetrated by that execrable monster Carrier, *q. v.* Pop. (1897) 114,220.

Nantes, Nantz (*nānts*), *n.* The name given to a kind of French brandy, exported from the city of Nantes, France.

"They broached a hoghead of genuine Nantz."—*Sir W. Scott.*

Nan'ticoke, in *Delaware*, a hundred of Sussex co.

Nan'ticoke, in *New York*, a township of Broome co.

Nan'ticoke, in *Pennsylvania*, a post-borough of Luzerne co., 8 m. W.S.W. of Wilkesbarre. Pop. (1897) 12,100.

Nan'ticoke Mountain, in *Pennsylvania*, a ridge extending along the N.W. bank of the Susquehanna River in Luzerne co. It averages 800 ft. in height. The N.E. portion is called Shawnee Mountain. Total length, abt. 25 m.

Nan'ticoke River, rises in Sussex co., Delaware, and flowing S.S.W. into Maryland, enters Fishing Bay of Chesapeake Bay, between Dorchester and Somerset cos.

Nan'ticoke Springs, in *New York*, a village of Broome co., abt. 140 m. W.S.W. of Albany.

Nantmeal, in *Pennsylvania*, a former township of Chester co., now divided into East and West Nantmeal.

Nan tua, a town of France, dept. of Ain, 17 m. E. of Bourg. *Manuf.* Cotton and woollen fabrics, leather, and paper. Pop. 4,000.

Nantucket, in *Massachusetts*, an extreme S.E. co., consisting of Nantucket, Tucanuck, Muskejet, and the Gravel Islands, lying in the Atlantic Ocean, abt. 20 m. off the S. coast of Barnstable co.; *area*, abt. 60 sq. m., of which Nantucket Island has 50 sq. m. *Surface*, diversified, being hilly in the N., and sloping down more level to the S.; *soil*, not very fertile, the inhabitants subsisting by fishing and navigation. *Cap.* Nantucket. Pop. (1895) 3,017.

—A town, port of entry, and cap. of above co., at the entrance of a deep bay of the same name, abt. 105 m. S.E. by S. of Boston; Lat. 41° 16' 56" N., Lon. 70° 6' 12" W. The harbor is one of the best on the coast, and affords facilities for an extensive trade. Several large manufactories have been established, but the inhabitants are mostly engaged in fishing and commerce.

Nantuxet, in *New Jersey*. See NEWPORT.

Nantwich, a town of England, co. of Chester, on the Weaver, 17½ m. S.W. of Chester, and 145 m. W.N.W. of London. *Manuf.* Cotton goods, gloves, and shoes. Pop. 6,500.

Nan'ni. (*Script.*) The wife of Ebimelech, and mother-in-law of Ruth.

Nap, *n.* [*A. S. ñæppian*, to sleep, to rest; *W. heppian*, a nod, a slumber. *Fr. napp*, a nod.] A short sleep or slumber; a siesta; a doze; and, ludicrously, forty winks. (*Colloq.*)

"The sun had long since in the lap Of Thetis taken out his nap."—*Hudibras.*

—In Scotland, strong ale, (*Cant.*)

—*v. n.* To have a short sleep; to be drowsy; to doze; to take forty winks.

"They took him napping in his bed."—*Hudibras.*

—To be in a supine or careless state.

Nap, *n.* [*A. S. hnappa*, the nap of cloth; *D. nop*; *Dan. nuppe*, frizzed nap of cloth; *It. nappa*, a puff, tassel; *Gr. knapto*, to full cloth.] The woolly or villous substance on the surface of cloth; the downy or soft hairy substance on plants; the silky integument of hats, &c.

"His only coat where dust confused with rain Roughens the nap, and leaves a mingled stain"—*Swift.*

Nap, *n.* Same as *KNOP*, *q. v.*

Napa, in *California*, a river flowing into San Pablo Bay from Napa co.

—A N.W. co.; *area*, about 850 sq. m. *Rivers*, Napa and Las Putas rivers. *Surface*, much diversified; *soil*, in some parts very fertile. *Min.* Gold and quicksilver, with hot and cold mineral springs. *Cap.* Napa City.

—A city, cap. of above co., on the Napa river and the So. Pac. R.R., 39 m. N. by E. of San Francisco; has tanneries and various other industries, including wine-making. Pop. (1897) 5,100.

Napance, a town of Lennox co., prov. of Ontario, cap. of Lennox co.

Nap'noek, or **Nap'onoek**, in *New York*, a post-village of Ulster co., about 80 m. S.S.W. of Albany.

Nape, *n.* [*A. S. cnæp*; *Dan. knæp*, a button; *W. cnæp*, a knob or boss. See *KNOB*.] The prominent joint of the neck behind.

—A neap. See *NEAP*.

Naper'ville, Napier'ville, in *Illinois*, a post-vil-

lage and township, former cap. of Du Page co., about 30 m. W.S.W. of Chicago.

Nap'ery, *n.* [*L. Lat. naperia*.] Table-linen in general.

"The gudewife's hault store o' nap'ery."—*Grant.*

Naphew, *n.* (*Bot.*) See *NAVEW*.

Naphtha (*nāf'tha*), *n.* (*Min.*) See SECTION II.

Naphthalate, *n.* (*Chem.*) A salt resulting from the combination of naphthalic acid and a base.

Naph'thali. (*Script.*) The sixth son of Jacob, by Leah, Rachel's handmaid. Little is known of him.

Naphthalic Acid, *PHTHALIC ACID*, *n.* (*Chem.*) A crystalline product obtained by the action of nitric acid on naphthalin. It has also been similarly obtained from alizarin.

Naphthalin, *n.* (*Chem.*) One of the innumerable constituents of coal-tar, more especially if obtained from the London gas-works. It forms thin flaky crystals consisting of rhombic plates, and has an unctuous feel and pearly lustre. It has a peculiar odor and a biting taste. It gradually sublimes at ordinary temperatures, fuses at 174° Fahr., and boils at 428° Fahr. It is insoluble in water, but readily so in alcohol, ether, turpentine, and the fixed oils. The study of its different compounds by Laurent and others has thrown very great light upon the substitution theory. Being in some measure related to aniline, or rather to benzoic, great efforts have been made by various chemists to obtain colors from it, but hitherto with but little success. The researches of Ronsin and others appear, however, to point out a singular relation between naphthalin and alizarin, the coloring-matter of madder. The new red coloring material, extracted from *N.*, which is more permanent than fuchsine, and exceeds it in freshness and purity of color, is obtained by changing *N.* to nitro-*N.* by nitric acid of 1.33 sp. gr., and this is reduced by iron and nitric acid, or by zinc and hydro-chloric acid.

Naph'thalize, *v. a.* To mix or impregnate with naphtha.

Napier, the name of a noble Scottish family, eminent in the historical annals of Great Britain, and of which the following were the more noteworthy members:

N., JOHN, B. at Merchistoun Castle near Edinburgh, in 1550, was a man of distinguished scientific acquirements, and famous as the inventor of logarithms. D. 1617. His eldest son, Archibald, was raised to the peerage as *Lord Napier*, in 1627.

N., SIR CHARLES JAMES, G.C.B., an English military commander, known in history as "The Conqueror of Scinde," was grandson of Francis, 5th Lord Napier, and B. in London, 1782. Sprung from a fighting stock, young *N.* received a commission in the British army when 12 years of age, and served with distinguished gallantry in the Peninsular War, in which he was wounded at Corunna, and, also, at Busaco. After taking part in the war with the U. States, in 1812, he was present at the storming of Cambray. In 1815 he was appointed governor of Cephalonia, and in 1841 was sent out to India as commander-in-chief. At Meenue, with a force of 1,600 English troops, he defeated nearly 30,000 Beloochees, strongly posted, with the loss of 6,000 men. At Hyderabad, in the same year, with 5,000 men, he encountered the Ameer of Scinde's army of 25,000 men, which he utterly routed. Sir Charles was then appointed governor of Scinde. D. 1853.—His three brothers, SIR GEORGE, SIR FRANCIS, and SIR WILLIAM, all attained the rank of general in the British service. The last-named, B. in 1755, was also the author of the *History of the Peninsular War*, one of the greatest military records ever penned.

N., SIR CHARLES, G.C.B., an English admiral, and cousin of the preceding, B. 1786, entered the naval service at 18, and in 1808 was present at the storming of Martinique, taking a fort with five men only. After attaining post-rank, and lacking active service for the time being, "Black Charley," as he was called, joined the army in Spain as a volunteer, and was wounded at Busaco. In 1811, he took command of the *Thames*, 32 guns, and inflicted an incredible amount of damage upon the enemy in the Mediterranean. In 1814, he served in the operations against Baltimore. After the peace of 1815, Sir Charles settled in Paris, where he established the first steamboats on the Seine. In 1820, he accepted the command of a Portuguese fleet, and destroyed the Miguelite squadron, thus ending the civil war, and placing Donna Maria on the throne. In 1840, he was sent out to the East, where he stormed St. Jean d'Acre, blockaded Alexandria, and finally concluded a treaty with Mehemet Ali. In 1847, he received command of the Channel fleet, and, in 1854, was appointed commander-in-chief of the English fleet sent to the Baltic. After bombarding Bomarsund, Sir Charles gave up the command in disgust at the restrictions placed upon him by the Admiralty at home. In 1855, he entered Parliament as member for Southwark, and did much in bringing about important naval reforms. Sir Charles, who had received the principal European orders of knighthood, d. in 1860.

Napier, ROBERT, LORD, (OF MAGDALA,) an English general, B. 1810, entered the Indian army in 1826, and served with distinction in the campaigns of the Sutlej and the Punjab. In 1854, he was appointed Chief Engineer of Bengal, and planned the operations at the siege of Lucknow in 1857. He also served with high credit as second in command in the war with China, receiving general rank, the Grand Cross of the Bath, and a military membership of the Indian Council therefor. In 1895, Sir Robert was made commander-in-chief of the British army sent out to Abyssinia for the rescue of the English captives, held there by its semi-barbarous ruler, King Theodore. After successfully accomplishing his mission, Sir Robert was raised to the peerage as *LORD NAPIER, OF MAGDALA*, and

also made a Knight Grand Cross of the Star of India. In 1869, he was appointed commander-in-chief of the British Indian army; and governor of Gibraltar in 1876. **Napier**, in *Pennsylvania*, a township of Bedford co.; pop. abt. 1,680.

Napier's-rods, *n. pl.* (*Arith.*) A set of rods, contrived by John Napier, *q. v.*, the inventor of the logarithmic table, for the purpose of facilitating the operations of multiplication and division in arithmetic. They consist of pieces of bone or ivory, in the shape of a parallelepipedon, about 5 inches long and 3-10ths of an inch in width, the faces of each being divided into squares, which are again subdivided, on ten of the rods, into triangles, by means of diagonals, except the squares at the upper ends of the rods; and these spaces are marked like the top horizontal line and left-hand perpendicular line of a multiplication-table. When a number is wanted to be multiplied, the rods must be so disposed that the top line represents the multiplicand, and the left hand the rod of units. By selecting, then, the sum of numbers in the different parallelograms on a line with the figures of the multiplier, and setting them down as in ordinary multiplication, the product will be obtained with but little difficulty; only it must be remembered that we take the figures from the right-hand side, and not, as usually, from the left. For instance, if we wanted to multiply 5978 by 937, we would dispose the rods in such a manner that the top lines would consist of the figures 5978; while perpendicularly, on the left-hand side, would be the numbers 1, 2, 3, &c., up to 9. Then selecting first the sum of figures which do not exceed two in the different parallelograms formed by the rods for the figure 7 (the multiplier), taking them, as before stated, from right to left, we put them down in the top line: they amount to 41846. Next we take the parallelograms on the line of the figure 3, the middle figure of the multiplier; these, we find, amount to 17934. Lastly, we take the parallelograms on a line with the figure 9, the first in the multipliers, and these make the numbers 53803. Now, adding all these together, thus:

	41846
	17934
	53802

we obtain the result 5601386 as the products of the two numbers 5978—937. Although curious, this contrivance is, however, tedious to work, and consequently the results can as easily be obtained by a ready reckoner from the simple rules of multiplication.

Napier'ville, a S.W. co., prov. of Quebec; *area*, about 180 sq. m.—A post-village of same co.

Napiform, *a.* [*Lat. napus*, turnip, and *forma*, form.] Turnip-shaped.

Napkin, *n.* [*Eng. dimin. of O. Fr. nappe*, a cloth, from *Lat. mappa*, a table-napkin. See *NAP*.] A small cloth; a towel; a cloth used for wiping the mouth or hands; as, a dinner napkin.

Napkin-ring, a ring used to encircle a napkin.

Naples. [*It. Napoli*.] (*nā'pls*.) or KINGDOM OF THE TWO SICILIES, a former kingdom of S. Italy, between Lat. 37° 5' and 42° 55' N., Lon. 12° 54' and 15° 35' E., having N.W. the States of the Church, N.E. the Adriatic, S. and W. the Mediterranean. It was divided into *Stati di qua del Faro*, or the Italian or Continental portion, and *Stati di là del Faro*, or the island of Sicily proper. It is now comprised in the Italian States of Abruzzo and Molise, Campagna, Apulia, Basilicata, Calabria, and Sicily.—*Hist.* On the breaking up of the Roman Empire, the country was overrun by hordes of barbarians, and possessed in turn by the Goths, Lombards, Arabs, and Normans, down to the 10th century; and for the next 500 years was the theatre of contention between Germany, France, and Spain; and became the theatre of perpetual vicissitudes. About the beginning of the 16th century it fell into the hands of the Spanish monarchy, who, for nearly two centuries, governed it by means of viceroys. For the more accurate history of both Naples and Sicily during the Middle and Later Ages, the reader is referred to the special reigns, especially those of William, Robert, and Tancred, *q. v.* (See also *SICILY*.) In 1647, Philip IV. of Spain having imposed a most oppressive tax on all the provisions brought into the city of Naples, the populace, under Masaniello, rose in revolt, and peace was only at length restored by the death of the ringleader. (See *MASANIELLO*.) During the war of the Spanish succession, the Duke of Anjou, who had seized on Naples in the French interest, was expelled, and the Archduke Charles of Austria, one of the claimants of the Spanish crown, was for a time all-powerful; but, being eventually attacked and defeated, he was driven out of Naples by Don Carlos, afterwards proclaimed king; the Two Sicilies being erected, by a legal session from the Spanish monarchy, into an independent kingdom, 1706. On the death of the king of Spain, in 1758, Charles VII. of Naples ascended his brother's vacant throne, while Charles's son, Ferdinand VII., mounted that of Naples and Sicily in 1759. After the French revolution, and when the Italian peninsula was invaded by the armies of the republic, the Neapolitan monarch was compelled to seek safety on board the English fleet; while the French, entering Naples, established a republic in the states of Naples and Sicily. Napoleon subsequently restored the monarchical form of govt., and first placed his brother Joseph on the throne; and, in 1808, removing him to the vacant chair of Spain, placed the dædalon on the brows of his staunch friend and dashing cavalry officer, Murat, who held the sceptre with justice and moderation till the fall of the French empire. On the restoration of the expelled monarch in 1815

Ferdinand resumed his authority in Naples, and in due course was succeeded by another monarch of the same name, whose injustice and inhumanity won for him from Europe the unenviable nickname of *Bomba*. This prince was followed, on the death of Ferdinand in 1859, by his son Francis II., who, in the short period of his reign, earned from his subjects — groaning under his tyranny and despotism — the still more contemptuous epithet of *Little Bomba*. The revolution that, under the guidance of Garibaldi, broke out in 1860, and which, backed by the auspices of France and Sardinia, spread over the whole peninsula, instead of teaching Francis wisdom, only made him more blind to consequences; and not till Sicily was lost, and Garibaldi at the gates of his capital, could he believe that his authority was menaced, and his rule at an end. Collecting the remnant of his forces, he shut himself up in the fortress of Gaëta, whence, after suffering a siege of some weeks, he finally fled, retiring with his household to Rome, where they afterward resided as guests of the Pope. In the succeeding year (1861) N. was incorporated with the new kingdom of Italy.

NAPLES, a city of S. Italy, cap. of the former kingdom, and of the present prov. of Naples, in Campagna, on the N. side of the Bay of Naples, 118 m. S.E. of Rome, near the foot of Mount Vesuvius (see Fig. 152). The situation of Naples is one of the most delightful that can be imagined. In the form of an amphitheatre, it is built partly on the declivity of a hill, partly on the margin of a spacious bay, spreading its population along the shore, and covering the shelving coasts and adjacent eminences with its villas and gardens. The bay is extensive, and presents an almost unrivalled assemblage of picturesque and beautiful scenery. The streets, though in general narrow, are straight and tolerably regular, and are handsomely paved with large flags of lava. They are tolerably clean, the filth being carried off by large subterranean sewers; but many of them are dark and gloomy, from their narrowness, and the height of the buildings. The Strada di Roma extending half the length of the city, and having at the one end the Piazza di Mercato, on the other the royal palace, is the finest street in Naples, and equal to any in Italy. The number of squares is considerable; several are spacious, but few handsome. The principal are the Largo di Castello, Largo di Palazzo, and Piazza di Mercato; several of them are decorated with obelisks and fountains. The buildings of Naples are rather remarkable for their size than for their taste or elegance. The quays and buildings along the water-side extend in the form of a crescent, along the bay for the space of nearly five miles. The Royal Garden in this suburb is a favorite promenade. The harbor, properly so called, is small, and entirely artificial, being formed by a large mole projecting into the sea, and inclosing a basin nearly square, which is little more than a quarter of a mile across. The fortifications of Naples are not adapted to resist an army, though the city is surrounded by walls, and defended by a number of towers, as well as by several forts and castles. The arsenal adjoins the sea, and is defended by bastions. In the province of N. are some celebrated Roman temples. See PESTUM (Fig. 1908). Among the public edifices, the churches are

Fig. 1908. — TEMPLE OF NETTUNO PESTO.

the most conspicuous; but their splendor consists less in the elegance of architecture than in the richness of their paintings, marbles, and other decorations. The Cathedral, built on or near the substructure of a temple of Apollo, is a handsome Gothic edifice; it is supported by more than a hundred columns of granite. The Santi Apostoli, or church of the Holy Apostles, erected on the ruins of a temple of Mercury, is, perhaps, the most ancient in Naples. That of St. Paul is said to occupy the site of a temple of Castor and Pollux; its interior is spacious, well-proportioned, and finely incrustured with marble. The church of St. Filippo Neri is remarkable for the number of ancient pillars that support its triple row of aisles on both sides of the nave. The Spirito Santo is of a more pure and simple architecture than the other churches of Naples. The palaces and the mansions of the nobility have little pretensions to purity of architecture, and are, in general, too much loaded with ornaments. The Royal Palace, at the southern extremity of the Strada di Toledo, has an air of grandeur. The palace of Capo di Monte is situated outside of the town, and has its best apartments appropriated to a collection of paintings. The old palace of the sovereigns of Naples is now occupied by the courts of justice. There are ten theatres, great and small; the one called San Carlo, contiguous to the royal palace, is one of the largest in Italy. Of the literary institutions, the university was founded in 1224, and in 1841 had upwards of 1,500 stu-

dents. Its interior contains a collection of statues belonging formerly to the Palazzo Farnese at Rome. It has a large library, besides ancient MSS., a museum of paintings, sculpture, bronzes, &c. The schools and academies are numerous; but there is much ignorance in the city. The charitable establishments are numerous and well endowed. *Manuf.* Silk fabrics, and, on a small scale, stockings, carpets, flannels, gloves, lawn, lace, cotton stuffs, and diaper. Those of fire-arms, china, and glass are of some importance; but those of soap, leather, and wax are of little account. A good deal of ingenuity is displayed in making violins and other musical instruments; also in mahogany furniture and carriages, and even in the petty manufacture of snuff-boxes from lava and tortoise-shell; macaroni is, also, extensively made. There are, besides, royal type-foundries and iron-works. *Inhab.* The higher ranks are frequently ignorant, frivolous, and dissipated; while, in the lower orders (see Fig. 1421), the most striking characteristics are indolence and superstition. The lazzaroni are a part of the populace having neither dwellings nor regular occupation. They pass their lives in the streets, lying in the shade, or sauntering about during the day, and sleeping at night under a public portico, on the pavement, or on the steps of a church; their number is said to have been formerly between 30,000 and 40,000; but they are still considerable, and there is, perhaps, no city in Europe where so small a proportion of the inhabitants contribute to the wealth of the community by productive labor. The city literally swarms with nobility without fortunes, priests without benefices, and beggars of all descriptions. The environs of Naples are picturesque, and highly interesting to the antiquary and classical scholar. The origin of the city is lost in the fables of antiquity; it is said, however, to have been founded by the Greeks, and called by them *Parthenope*. It has suffered, at different periods, from war, earthquakes, and the eruptions of Vesuvius. In 1799 it was taken by the French, who, in June following, evacuated it; but again occupied it in 1806. Joseph Bonaparte was soon after proclaimed king; and in 1808, on his removal to Spain, the crown was conferred on Murat. In 1815, King Ferdinand, after an absence of nine years, made his entrance into his capital. In 1848 it was plundered by the lazzaroni, of whom 1,500 lost their lives. In August, 1860, Francis II. was forced to retire to Gaëta, on the approach of Garibaldi, the Italian liberator, from Salerno. In September, that chief entered the city without bloodshed, and was hailed as the deliverer of his country. Among the numerous objects of interest in the vicinity are the island of Capri, in the bay, Vesuvius, Herculaneum, and Pompeii. It is the centre of several railways. *Pop.* (1901) 563,541.

Nap'les, in Illinois, a post-town of Scott co., about 25 m. W. of Springfield.

Naples, in Maine, a post-town and township of Cumberland co.

Naples, in Michigan, a village of Allegan co., about 38 m. S. of Grand Rapids.

Naples, in New York, a post-village and township of Ontario co., about 40 miles South by East of the city of Rochester.

Naples, in Wisconsin, a township of Buffalo county.

Nap'less, *a.* Wanting nap; threadbare; seedy; as, a *napless* coat or hat.

"The *napless* vesture of humility." — *Shaks.*

Nap'les-yellow, *n.* (*Paint.*) A pigment compounded of the oxides of lead and antimony, anciently prepared at Naples, under the name of *grallotina*; it is supposed also to have been a native production of Vesuvius, and is a pigment of deservedly considerable reputation. It is not so vivid a color as patent yellow and turbith mineral, but is variously of a pleasing, light, warm, golden-yellow tint. Like most other yellows, it is opaque, and in this sense is of good body. It is not changed by the light of the sun, and may be used safely in oil or varnish, under the same management as the white of lead; but like these latter pigments also, it is likely to change, even to blackness, by damp and impure air, when used as a water-color, or unprotected by oil or varnish.

Nap'o, a river of Ecuador, S. America, rises on the E. slope of the Andes, and flowing a general E.S.E. course of abt. 500 m., enters the Amazon abt. Lat. 3° 40' S., Lon. 73° 20' W.

NAPO, or **NAPOTOU**, a town of Ecuador, on the above river, abt. 140 m. S.E. of Quito.

Napoléon I. (**NAPOLÉON BONAPARTE**.) called *The Great*, Emperor of the French, b. at Ajaccio, Aug. 1769, was the son of Charles Bonaparte, a noble Corsican of little fortune, and his wife, Letizia Ramolino, a woman of great beauty, courage, and ability. Having early evinced a decided taste for military life, he was, at the age of 11, sent to the military school of Brienne, in Champagne, and in 1784, to the military school of Paris. In 1785 he was nominated sub-lieutenant of artillery, and sent on duty in his native country. In 1792 he was driven out of the island by Paoli, the ally of the English, and retired to Marseilles, where he lived in poverty with his mother and sisters. He was made a captain in 1793, and soon after he was employed to subdue Marseilles, a mission in which he was successful. The same year he was sent to join the besieging army before Toulon, with the rank of lieutenant-colonel. It was here that N. first exhibited proofs of the great genius that was within him. He found the army in a state of wretched disorder, and the artillery department in a condition of absolute inefficiency. After much argument and considerable trouble, his views were at length listened to, and his proposition of first attacking the outer works ultimately adopted, upon the carrying of which, the allies, as he

had foreseen they would be, were compelled to surrender the town and harbor. For his services at Toulon, N. was appointed brigadier-general of artillery, with the chief artillery command in the S. of France; but having been suspected on account of a mission to Genoa, his name was erased from the active-service list. In consequence, he remained about five months at Paris without any occupation, and in a state of extreme poverty. So low indeed were the fortunes of the future emperor fallen at this period, that, as he himself said, he never got his boots blackened, and never wore gloves, for they were a useless expense. His imagination, however, abated nothing of its vigor by the decline of his fortunes, and despairing of effecting anything in Europe, he dreamed of the East, and entertained serious thoughts of offering his services to the Grand Seignior, with a view to pushing his fortunes in Asia. "Asia," said he, "contains 600,000,000 of men; it is there alone that anything is to be done! Europe is worn out; there is nothing practicable here." He was ere long, however, called to active and important duties in his own country. Though suspected and therefore unemployed by the government of the Directory, his abilities were well known; and when the directors were reduced to extremities by the insurrection of the sections, in October, 1795, they gave him the command of their forces, which were only 5,000, shut up in the quarters of the Carronsel and Louvre. N. immediately adopted his plan of action, and planted cannon in all the streets round the assembly; and when the National Guard, to the number of 30,000, approached to drive out and arrest the Convention, he played upon their dense ranks with grape-shot, and with such effect, that, after a vain struggle of many hours, the National Guards broke and fled, and were ultimately during the night surrounded in their different retreats, attacked, disarmed, and sent to their homes. For this important service, the Convention appointed him second in command of the army of the interior, and subsequently, by the retirement of Barras, to the post of General of the Interior. It was soon after this

Fig. 1909. — NAPOLÉON I.

event that N. was united to a lady with whom he had for some time been acquainted, Madame Josephine Beauharnais, a West Indian, and the widow of the Viscount Alexandre de Beauharnais, a lady of elegant manners, amiable, virtuous, and accomplished. Through the influence he acquired by this marriage, N. was, in Feb., 1796, given the command of the army of Italy, which for the last four years had lain inoperative at the base of the Alps between Savoy and the sea. A few days after his marriage he set out for his command. He found the troops in a most miserable condition, perched on the shining summits of the maritime Alps, whither they had been driven by the united arms of the Austrians and the Piedmontese, in the preceding campaign, and in want of everything. From their long sufferings he predicted a speedy change of their fortunes. "Famine, cold, and misery," said he, in his first proclamation, "are the school of good soldiers. Here on the plains of Italy you will conquer them, and then you will find comfort, and riches, and glory." He was as good as his word. Descending like a torrent from the summit of the Alps, he soon carried everything before him. In a year and a half, the "Little Corporal," as he came to be called by his admiring soldiery, had either routed or destroyed five armies, each stronger than his own, — that of the Piedmontese, at Mondovì; that of Beaulieu, at Cairo, Montenotte, Millesimo, Dego, and the bridge of Lodi; that of Würmser, at Castiglione, Rovereto, and Bassano; that of Alvinzi, at Arcola, Rivoli, and Mantua; and that of Prince Charles, whom he pursued into Germany as far as Leoben, upon the road to Vienna. The result of this unexampled career of victory was the treaty of Campo-Formio, which secured to France a vast accession of territory. The young general was now the most popular man in France, and the Directory, eager to get rid of their dangerous rival, accepted a proposal made by him for the invasion of Egypt, and appointed him commander-in-chief of a finely equipped expedition, which sailed for the East in 1798. He took Alexandria, gained over Mourad Bey the battle of the Pyramids, and, although the fleet had been destroyed by Nelson at Aboukir, the French were soon masters of Egypt. Wishing then to join Syria to his conquests, N. crossed the desert which separates Asia and Africa, stormed Jaffa, and laid siege to Acre; but after a siege

of 37 days, the murmurings of his army, decimated with hunger and pestilence, compelled him to raise the siege. He retreated to Egypt after having, with 2,000 men, defeated 20,000 Ottomans with great slaughter, at Mount Thelair. N. next engaged 20,000 Janissaries, whom the English landed in the bay of Aboukir, and nearly annihilated them. The state of parties in France, and the increasing unpopularity of the Directory, induced N. to resolve upon at once throwing up the command in Egypt, and return to Paris to take advantage of the crisis his penetration told him was approaching. To carry out this purpose, he secretly, and by night, went on board a ship hurriedly prepared for him, with a few of his most devoted followers; and delivering a letter for his second in command, Kleber, intrusting the army to his discretion and generalship, set sail for France, and, after narrowly missing capture by the English cruisers, appeared unexpectedly at Paris, at the end of the year 1799, at a time when the administration of the Directory had grown irksome to the nation. Bonaparte at once became the head of a very powerful party, and, aided by Siyès, his brother Lucien, and General Leclerc, he overthrew the Directory on the famous 18th Brumaire, year 8 of the Republic (9th Nov., 1799), caused himself to be named First Consul, having for his colleagues Cambacères, and Lebrun, each also dignified by the title of consul, but mere tools to his ambition. In 1800 he placed himself at the head of the army of Italy, crossed the Alps, and gained the battle of Marengo. General Moreau having about the same time beaten the Austrians at Hohenlinden, the peace of Lunéville was signed with Austria in 1801, and in the following year the treaty of Amiens with England concluded the second war of the French Revolution. In the same year he was proclaimed consul for life. The peace, however, proved only an armed truce. Both parties were only gaining breath for a renewal of the fight. N. did great things during its continuance. He reformed the whole civil administration of the country, pacified Vendée, recalled the emigrés, reopened the churches, concluded a new Concordat with the Pope, created the order of the *Légion d'Honneur*, instituted the Bank of France, and urged the Code Napoleon to an end. In 1804 he became Emperor of the French. Pope Pius VII. went to Paris to assist at the ceremony, but N. placed the crown upon his own head, and also crowned his consort Josephine. Six months later he erected the Cis-Alpine Republic into a kingdom, and crowned himself king of Italy at Milan. In the meantime, England, after having refused to execute the treaty of Amiens, had again commenced hostilities in 1803, as also, did Austria, Russia, and the 2 Sicilies in 1807. N., who was meditating an invasion of England, had the mortification of seeing the combined fleets of France and Spain destroyed by Nelson at Trafalgar; but on the continent of Europe he compensated this loss by a succession of triumphs. Russia had joined Austria, and the army of the latter, 80,000 strong, had advanced to Ulm, in Würtemberg. Crossing France and the S. of Germany with incredible rapidity, N. defeated the Austrians in several actions, and at length shut up 30,000 in Ulm, where they were forced to capitulate the very day before the battle of Trafalgar. Advancing then at the head of 180,000 men down the valley of the Danube, he captured Vienna, and totally defeated the combined Austrian and Russian armies, under the Emperor Alexander in person, on Dec. 2. This catastrophe drove Austria to a separate peace, which she only purchased by great cessions of territory; and the Russians, weakened by the loss of 30,000 men, wended their way back in mourning to their own dominions. Next year the Prussians with infuriated hardness rushed into the field. N. encountered them at Jena and Auerstadt, and defeated them with such loss that in a few weeks 100,000 men had disappeared out of 120,000, with which they had commenced the conflict. Prussia was speedily overrun, Berlin taken, and the remnant of their armies driven back to the Vistula, where they were supported by the Russians, who now came up in great strength. The victories of Eylau (Feb. 9, 1807), and Friedland (July 14), led to the treaty of Tilsit, which, virtually destroying all lesser powers, in effect divided the whole continent of Europe between N. and Alexander. Insatiable in ambition, N. turned his eyes to the Spanish Peninsula, seized on Portugal without a good pretext, and deposed the king, queen, and heir-apparent of Spain to Bayonne, where he succeeded in extracting from them all a renunciation to the throne of Spain, upon which he immediately placed his brother Joseph, and at the same time gave the throne of Naples to his brother-in-law, Murat. But Spain resisted the French invaders, and the defeat and capitulation of Dupont at Baylen, and Junot at Cintra, were the commencement of the declining fortunes of the emperor. Notwithstanding the great efforts of Soult, Masséna, and Suchet, Spain sustained by the English, repulsed the French. This struggle cost France, in five years (1808-1813), more than 400,000 men. Meanwhile, Josephine, having given no heir to the empire, was divorced by N. in 1809, and Maria Louisa, daughter of his old enemy the Emperor of Austria, became Empress of the French. The fruit of this union was a son, who, at his birth, was styled King of Rome. About this time, Fouché, Bernadotte, and several others, began to withdraw from him; Pope Pius VII., who had been stripped of his temporal dominions, excommunicated him; finally, the prohibitive system of continental commerce, which he had organized with the view of ruining England, began, instead, universal poverty and misery throughout France. Having drained France of her treasure, he next conceived a formidable invasion of Russia, which was to rot France of the flower of her youth and manhood. In

1812 he assembled the largest army that was ever led by a European general, and, at the head of 500,000 men passed into Russia, whose army he defeated in several engagements. In September he entered Moscow, which had been previously evacuated, and almost totally consumed. After spending a month there, in expectation of overtures of peace from St. Petersburg, the frost and snow of a Russian winter compelled him to commence a precipitate retreat. Harassed by innumerable foes, the French army, deprived of everything, perished in the snow, or found a grave in the icy waters of the Berezina. Hastily returning to France, the Emperor succeeded in creating another army, and opened the campaign in Germany with the victories of Lützen, Bautzen, and Dresden; but Russia, Prussia, Austria, and Sweden were now in arms against him; and at Leipzig, where, in three days, the French lost upwards of 50,000 men, his power received a death-stroke. The allies entered France, and N., finding his army disorganized, and most of his ministers and generals disaffected towards him, abdicated the throne of France, at Fontainebleau, on the 4th of April, 1814. The Bourbons were re-established in France, N. accepting the island of Elba for his retreat. In less than a year he again appeared in France, and, by the time he had reached the capital, the whole army had declared for him. Immediately the coalition that had deposed him was renewed; but N., at the head of his brave and enthusiastic troops, took the initiative, and defeated the Prussians at Ligny, on the 16th of June; but, betrayed by Bernadotte, and deprived of a fatal misunderstanding of the division and artillery under Grouchy, he was beaten by Wellington and Blücher at Waterloo, on the 18th. This defeat was decisive. N. returned to Paris, and abdicated in favor of his son, June 22, 1815, one hundred days after his landing from Elba. N. went then to Rochefort, and embarked voluntarily on the English vessel *Bellerophon*, believing that England would grant him a generous hospitality. But the English ministers, abusing his confidence, declared him a prisoner, and obtained from the Allies the authority to transport him to St. Helena. For nearly six years did this extraordinary man pine in bondage, the bitterness of which was augmented by the petty tyranny of Sir Hudson Lowe, *q. v.* In his modest retreat of Longwood he tried to alleviate his sufferings by writing his *Mémoires* and his *Campaignes*, but at last he sunk under the weight of misfortune, and, on 5th May, 1821, during a terrible storm of wind and rain, which recited to his mind the roar of battle. He was interred in Hain's Valley, in the island of St. Helena (Fig. 1910), from whence his remains were, in Dec., 1841, translated to Paris, and now repose under the Dome of the Invalides (Figs. 1911, 1934), beside the bones of his comrades, N. ranks, with Alexander, Cæsar, and Charlemagne, among the greatest men the world has ever seen. He possessed in the highest degree the genius of the warrior and of the administrator; he put an end to anarchy, reconstituted society, re-established the Church, promulgated the Code, placed France at the head of the nations,

Fig. 1910.

TOMB OF NAPOLEON AT ST. HELENA.

Fig. 1911. — TOMB OF NAPOLEON AT THE INVALIDES.

and founded an empire at least equal to that of Charlemagne. Nevertheless, he must be reproached with overwhelming ambition, and too great a love for war, which plunged his country into the deepest misfortunes. Moreover, he stifled public liberty, governed despotically, and did not scruple, in more than one circumstance, to recur to arbitrary and even violent measures for the promotion of his schemes. The seizing and the execution of the Duc d'Enghien; the detention and the spoliation of the princes of the royal house of Spain; his foul dealing with the Pope Pius VII., — are so many stains on his memory. His *Proclamations* and *Bulletins*,

generally written or dictated by himself, are, for their style as well as for their object, among the most remarkable documents in French history. His *Correspondence inédite, officielle et confidentielle*, was published 1818-20, in 7 vols. This publication, which was very incomplete, has been republished, with considerable augmentation, by order of Napoleon III., under the title of *Correspondance de Napoléon I.* (1808-60). The *Mémoires de N. Hélène*, written by Las Cases, was partly dictated by N., but it has been often interpolated. The *Mémoires* published by Montholon, Gourgaud, Bertrand, and by his faithful servant Marchand, were really dictated by the Emperor and may be relied upon. Many histories of N. have been published; but the most complete, authentic, and important, though written by a French author, is the "History of the Consulate and of the Empire," by M. Thiers, which was issued in 3 vols., 1845-52.

NAPOLEON II. NAPOLEON FRANÇOIS BONAPARTE, son of the Emperor Napoleon I. and of Maria Louisa of Austria, was b. at Paris, March 20, 1811. From his birth he was styled "King of Rome." After his father's first abdication in 1814 he went with his mother to Vienna, where he was brought up at the court of his grandfather, the Emperor Francis, who created him Duke of Reichstadt. His education was carefully attended to, and he was early trained up to the military profession. After passing through the various subordinate grades he was made a lieutenant-colonel in June, 1831, and he took the command of a battalion of Hungarian infantry, then in garrison at Vienna. He was extremely assiduous to his military duties, but his constitution was weak; he had grown very tall and slender, and symptoms of a consumptive habit had early shown themselves. His physician advised a removal to a climate, which had at first a beneficial effect, but a relapse soon followed, and he lingered for several months. Young N. died, 1832, in the palace of Schonbrunn, attended by his mother, who had come from Parma to visit him. He seems to have been generally regretted at the Austrian court, especially by his grandfather, the Emperor, who had always behaved to him with paternal kindness. There is an interesting account of this young man's short career by M. de Montiel, *Le Duc de Reichstadt*, Paris, 1832. — Although Napoleon I. abdicated in favor of his son, the title of N. II. was not admitted by the allies or by the French nation. Nor was it put forward by any party in France during the life of N. Francis, nor did he himself ever assume the title. But when the question of conferring the title of emperor upon the Prince-President, Louis Napoleon, was put to the popular vote, in 1852, it was as *Nap. III.*; the right of N. Francis to the title of N. II. being thus assumed. No objection was raised in France, or in the governments of Europe, by recognizing Napoleon III. without protest, of course acknowledged Napoleon II. also.

NAPOLEON III. CHARLES LOUIS NAPOLEON BONAPARTE, the third son of Louis Bonaparte, ex-king of Holland, his mother being Hortense, the daughter of the Empress Josephine by her first marriage. His birth, which took place at the Tuilleries, April 20, 1808, was announced through the empire, and in Holland, by the roar of artillery, and he was baptized by Cardinal Fesch, Nov. 4, 1810, the Emperor and the Empress Marie-Louise being his sponsors. After Napoleon's return from Elba, his young nephew accompanied him to the Champ de Mai, and was there presented to the deputies of the people and the army. The splendor of this scene left a deep impression on the mind of the boy, then only seven years old. When Napoleon embarked him for the last time, at Malmaison, he was much agitated; the child wished to follow his uncle, and was with difficulty pacified by his mother. Then commenced the banishment of the family. L. N. and his mother lived first at Augsburg, and afterwards in Switzerland. The latter state admitted the young exile to the rights of citizenship,

Fig. 1912. — NAPOLEON III.

and permitted his service in its small army. For a time he studied gunnery at the military academy on the shores of Lake Thun; and during his stay among the Alps made frequent pedestrian excursions over the passes. While engaged on a trip of this kind, the news of the revolution in Paris of July, 1830, reached him; and when it was known that Louis-Philippe had become king, he and his family applied for permission to return to France, but were refused. He then wrote to the new King of the French, and begged to be allowed to serve as a private soldier in the French army. The French

pursuit of Gomez, the Carlist general, in his romantic march through Spain, in 1836, gained him a great reputation. At the close of the war in 1840, he quarrelled with Espartero, who was then opposed by the party of the Queen Mother, Christina; joined those who, in 1841, attempted to overthrow that minister by raising an insurrection, which attempt miscarried, and he was obliged to take refuge in Paris. The success of the movement against Espartero, in 1843, which led to his expulsion, was owing in a great measure to Narvaez, who was rewarded for his services with the title of *Duke of Valencia*, in May, 1844. After the return of the Queen-mother, Christina, he became her prime adviser, and kept down the Liberals until his ministry was overthrown in Feb., 1846. In May, 1847, he was sent as ambassador to Paris, where he became a leader in the plots formed against Queen Isabella by her mother. In Oct., 1847, he was chosen President of the Council, and head of the ministry; which post, with the exception of a short interval, he retained till Jan., 1851, when his ministry broke up on account of financial embarrassments. He resigned a seat which he had accepted in the cabinet of Armero-Mon, in Nov., 1857; succeeded the Marquis of Miraflores as President of the Council, and the head of a new ministry, in Sept., 1864, and signalized his return to power by putting a stop to the invasion of St. Domingo, in Jan., 1865. The Duke of Valencia, who made way for Marshal O'Donnell in June, 1865, returned to power in 1866. Despite of O'Donnell and Prim, he retained his place, and in the rising at Madrid, 1868, shortly before his death, he headed the royal troops and was severely wounded. D. April 23, 1868.

Nar'whal, *n.* (Zool.) The *Monodon monoceros*, an extraordinary marine animal of the family *Delphinidae*, also known as the Sea Unicorn, much resembling the Beluga, but differing from him as from any other kind of *Cetacea* by having no teeth, properly so called, and being armed with a formidable horn, projecting directly forward from the upper jaw, in a straight line with the body. This horn is from six to ten feet long, spirally striated throughout its whole length, and tapering to a point; it is harder and whiter than ivory, for which article it was at one time not only substituted, but was also in high repute for its supposed medicinal powers. The Narwhal is generally from twenty to thirty feet in length from the mouth to the tail,—sometimes much more,—and it is occasionally, though not very often, found with two of these horns, or tusks, sometimes of equal length, and sometimes very unequal. The head of this animal is short, and convex above; the mouth small; the spiracle or breathing-hole duplicated within; the tongue long; the pectoral fins small; the back finless, convex, and rather wide; becoming gradually acuminate towards the tail, which, as in other whales, is horizontal. The skin is darkly marbled on the back, lighter on the sides, and nearly white on the belly: it is quite smooth, and there is a considerable depth of oil or blubber beneath. The Narwhal chiefly inhabits the arctic seas; and its food is said to consist of the smaller kinds of flat-fish, medusæ, and other marine animals. It is taken by means of the harpoon; and its flesh is eaten by the Greenlanders. Although both swift and strong, as well as being armed with such a prodigious weapon, the Narwhal is one of the most peaceable inhabitants of the ocean.

Nasal, *a.* [Fr., from Lat. *nasus*, nose. See NOSE.] Pertaining or relating to the nose; as, the nasal duct. —Formed or affected by the nose; as, a nasal sound. *Nasal vowel.* (Gram.) A vowel uttered through the nose in conjunction with the mouth. The only sound approaching to nasal in English is that of the double consonant *ng*; as in *thing*, *ring*, &c.

-n. A letter whose sound is affected by the nose.—In ancient armor, a covering for the nose.

(Med.) An errhine. See ERRHINE.

Nasality, *n.* State or quality, or condition of being nasal.

Nasalization, *n.* Act of uttering with a nasal sound.

Nasalize, *v. a.* To make nasal, as sound.

-v. n. To speak through the nose.

Nasally, *adv.* By the nose; in a nasal manner.

Nasatis. See PROBOSCIS MONKEY.

Naseency, (*nās'sens-se*), *n.* The commencement of production.

Nascent, *a.* [Lat. *nascens*, from *nascor*, to be born. See NATURE.] Beginning to exist or to grow; as, nascent affection.

Nascent State. (Chem.) Chemists generally apply this term to gaseous bodies at the moment of their evolution, as it were, from liquids or solids, and before they have assumed the æriform state. There are numerous cases in which bodies, having no tendency to combine under ordinary circumstances, readily unite when presented to each other in their nascent states. Hydrogen and nitrogen gases, for instance, when mixed together, show no disposition to combine; but when certain organic bodies containing those elements are heated, they are evolved in their nascent states, and combine so as to form ammonia; it is in this way that ammonia is abundantly produced during the destructive distillation of many kinds of animal matter, and of pit-coal. Hydrogen gas has no action, under ordinary circumstances, on sulphur or on arsenic; but when sulphide of iron or arsenide of zinc are acted on by dilute sulphuric acid, the hydrogen, at the moment of its evolution, combines with the sulphur and arsenic to form sulphuretted and arsenuretted hydrogen. The destructive distillation of organic substances in general furnishes abundant and important instances of these nascent combinations.

Naseby, a village of England, in Northumberland, celebrated as the locality where, in June, 1645, was fought

the battle between the King and Parliament, so fatal to the Royal cause, and in which both king and kingdom were lost, according to Lord Clarendon's history of those times. In this battle, above 5,000 of the Royalists were either killed or made prisoners.

Nash, *a.* Stiff; hard; firm; also, chilly; — used as provincial English.

Nash, in *Maine*, an island and light-house in Pleasant River Bay. It exhibits a fixed light 47 ft. above the sea; Lat. 44° 25' N., Lon. 67° 37' W.

Nash, in *Massachusetts*, an island and light-house in Pleasant River Bay.

Nash, in *N. Carolina*, a N.E. central co.; area, abt. 600 sq. m. Rivers. Tar and Fishing rivers, and Contenting and Sandy creeks. Surface, uneven; soil, not very fertile. Cap. Nashville.

Nashoba, in *Mississippi*. See NESHOBA.

Nashport, in *Ohio*, a post-village of Muskingum co., abt. 54 m. E. of Columbus.

Nash's Stream, in *New Hampshire*, enters the Upper Ammonoosuck river in Coos co.

Nashua, in *Illinois*, a township of Ogle co.

Nashua, in *Indiana*, a village of Vanderburg co., abt. 16 m. N. of Evansville.

Nashua, in *Iowa*, a post-town of Chickasaw co., about 30 m. N. of Cedar Falls.

Nashua, formerly DUNSTABLE, in *New Hampshire*, a city of Hillsborough co., about 40 m. N.N.E. of Boston. It is conveniently located at the confluence of the Nashua and Merrimac rivers (the former of which has here a fall of 65 feet in 2 m.), and contains some very fine edifices. Manuf. Cotton and woollen cloth, steam-engines and other machinery, edged tools, locks, farming implements, &c. Pop. (1897) 21,250.

Nashua River rises in Worcester co., Massachusetts, and flowing N.E. into New Hampshire, enters the Merrimac at Nashua.

Nashville, in *Georgia*, a post-village, cap. of Berrien co., about 155 m. W.S.W. of Savannah.

Nashville, in *Illinois*, a city, cap. of Washington co., 18 m. S.W. of Centralia. Pop. (1897) 2,340.

Nashville, in *Indiana*, a post-town, cap. of Brown co., abt. 40 m. S. of Indianapolis. — A village of Hancock co., abt. 33 m. N.E. of Indianapolis.

Nashville, in *Iowa*, a village of Lee co., abt. 10 m. N. of Keokuk.

Nashville, in *Kansas*, a village of Coffee co., abt. 6 m. E. of Hampden.

Nashville, in *Mississippi*, a village of Lowndes co., abt. 140 m. N.E. of Jackson.

Nashville, in *Missouri*, a post-village of Barton co., abt. 20 m. N.W. of Carthage. — A village of Boone co., abt. 26 m. N.W. of Jefferson City.

Nashville, in *N. Carolina*, a post-village, cap. of Nash co., abt. 15 m. E.N.E. of Raleigh.

Nashville, in *New Hampshire*, a village and township of Hillsborough co., on the Nashua River, opposite Nashua.

Nashville, in *Ohio*, a post-village of Holmes co., abt. 82 m. N.E. of Columbus.

Nashville, in *Tennessee*, an important city, cap. of the State and seat of justice of Davidson co., on the Cumberland River, abt. 230 m. E.N.E. of Memphis, and 684 m. S.W. of Washington; Lat. 36° 9' N., Lon. 86° 49' W. The city is beautifully located on an eminence overlooking the river and the surrounding country, a conspicuous feature being the massive dome of the State capitol, a splendid edifice erected at a cost of about \$1,000,000. There are two principal railroads, the Louisville & Nashville and the Nashville, Chattanooga & St. Louis. N. is an important manufacturing city, embracing almost every department of industry. There are several prosperous cotton and woollen mills, boot and shoe factories, flour and lumber mills, &c. N. is also noted for the high character and intelligence of its population, and is the seat of Vanderbilt University, Fisk University (for colored teachers), a State Normal School, and various other excellent educational institutions; an Insane Hospital, a School for the Blind, the State Penitentiary (which is largely an industrial establishment), &c. A grand exposition was held in N. in 1897 to celebrate the hundredth anniversary of the admission of State of Tennessee into the Union. The inaugural ceremonies were held on June 1, 1896, and the exposition was formally opened on May 1, 1897, continuing throughout the summer. It was largely attended, and was entirely successful throughout. Among the buildings constructed were a reproduction of the Parthenon for the fine arts, the Commerce building (560x315 ft.), the Transportation building (400x120 ft.), the Agricultural building (525x175 ft.), the Minerals and Forestry building (400x125 ft.), the Woman's building (160x85 ft.), and an Auditorium seating 6,000. All the buildings were white, and the effect was beautiful in the extreme. N. is the largest hardwood market in the U. S., and among the first in importance in the general lumber business. Pop. (1897) about 100,000. —During the Civil War a great battle was fought here (Dec. 15-16, 1864), between Gen. Thomas' army and the Confederates under Gen. Hood, resulting, on the second day's fight, in a victory for the Federal arms. The loss on both sides was heavy—between 3,000 and 4,000 each.

Nashville, in *Texas*, a post-village of Milam co., abt. 75 m. N.E. of Austin.

Nasiform, *a.* [Lat. *nasus*, nose, and *forma*, form.] Nose-shaped.

Naska, or CABLAOS, a seaport-town of Peru, on the Pacific Ocean, abt. 30 m. S.E. of Paipa.

Nasouville, in *Rhode Island*, a village of Providence co., abt. 25 m. N.W. of Providence.

Naso-palatal, **Naso-palatine**, *a.* [Lat. *nasus*, nose, and Eng. *palatal*, *palatine*.] Having connection with both the uose and the palate; as, the *nasopalatine* nerve.

Nas'sa, *n.* (Zool.) A genus of Mollusca, of which the species *N. reticulata*, the Dog Whelk, is the best known. They inhabit a small, globular, or oval shell, according to the spire, which in some is short, and in others long; month oblong, notched; inner lip thickened, and spread out. By some authors this genus is united to *Buccinum*, on account of the little tooth-like projections terminating the columella.

Nas'san, (**Duchy of**), a former state of W. Germany, between Lat. 50° and 51° N., Lon. 7° 32' and 8° 45' E., having N. and W. Rhenish Prussia, S. Hesse-Darmstadt, and E. Hesse-Darmstadt and Hesse-Cassel; area, 1,802 sq. m. The surface is hilly; the soil is poor except along the banks of the rivers, but affords excellent pasturage. Rivers. The Rhine, Maine, Lahn, Ems, and Aar. The climate is cold, but healthy. N. contains numerous spas, the most important of which are Ems, Wiesbaden, and Schlangenbad; its wines, however, are its chief source of wealth, of which the Hocks produced from Hochheim and Johannisberg are the most celebrated. Linens, woollens, paper, leather, tobacco, and potash, are among its chief manufactures. N. derives its name from the Castle of Nassau, built in the 12th century. In 1255, Walram I. and Otto, the sons of Henry the Rich, shared the territory between them, the former becoming the founder of the present family of N., and the latter the founder of the house of Orange-Nassau, of which William III. of England was a member. In 1605, Louis II. became possessed of all the lands belonging to the elder branch of the family. At his death, in 1626, the family was divided into three branches, which, however, were reunited into one when Napoleon I. founded the Confederation of the Rhine in 1806, and bestowed the title of Duke upon Frederick William. It was annexed to Prussia in 1866, and in 1868 joined to part of Hesse-Darmstadt, to form the prov. of Hesse-Nassau, q. v.

Nas'san, a town, cap. of the British island of New Providence, Bahama group, W. Indies. It is situated on the N. coast, is regularly and strongly built, and defended by two forts. Lat. 25° 5' 6" N., Lon. 77° 21' 2" W. Pop. 7,500.

Nassau, (*nas'saw*), in *Florida*, an extreme N.E. co., adjoining Georgia on the N., and washed by the Atlantic Ocean on the E.; area, about 640 sq. m. Rivers. St. Mary's and Nassau rivers, and some smaller streams. Surface, level; soil, sandy, and not very fertile. Cap. Fernandina. Pop. (1890) 8,843.

Nassau, in *Iowa*, a village of Lee co., abt. 100 m. S. by E. of Iowa City.

Nassau, in *New York*, a post-village and township of Rensselaer county, about 14 miles south-east of Albany.

Nassau, (**Fort**), a town of British Guiana, former cap. of the colony under the Dutch, on the Berbice River, abt. 45 m. above the sea.

Nassau River, in *Florida*, enters the Atlantic Ocean between Duval and Nassau cos.

Nassau, or **Poggy Islands**, two contiguous islands of the Eastern Archipelago, 60 m. S.W. of Sumatra; Lat. 2° 32' S., Lon. 99° 37' E.

Nassawa'pu, or **Nasewapee**, in *Wisconsin*, a township of Door co.

Nassauk, a town and place of pilgrimage of Hindostan, presidency of Bombay, 95 m. N.E. of Bombay; Lat. 19° 56' N., Lon. 73° 56' E.; pop. 30,000.

Nastily, *adv.* In a nasty manner; filthily; dirtily; obscenely.

Nastiness, *n.* State or quality of being nasty; extreme dirtiness; filthiness; obscenity.

Nasturtium, **Nasturtion**. (*tūr'shū-um* — *tūr'shon*), *n.* [From Lat. *nasus*, and *torquere*, to torture.] (Bot.) A genus of plants, order *Brassicaceæ*. *N. officinale* is the common Water-cress, one of the most wholesome of the salad vegetables. It has remarkable antiscorbutic properties, and is interesting, in a chemical point of view, from containing iodine. The name *Nasturtium* is commonly given to *Tropæolum majus*, the Indian cress, a showy and useful garden-plant. See TROPEOLUM.

Nasty, *a.* [Sp. *njasti*, dirt, filth; N. Fris. *nūt*, urine; Ger. *netzen*, to wet.] Disgustingly filthy or unclean; very foul; exceedingly dirty or defiled; offensive; nauseous; as, a nasty smell.

—Indecent; indelicate; coarse; gross; filthy; partaking of the character of obscenity.

"A nice man is a man of nasty ideas." — Swift.

Nasua, *n.* (Zool.) See COATI.

Nasute, *a.* [Lat. *nasutus*, from *nasus*, nose.] Having a fine sense of smell; quick to take perception of odors; hence, finically nice; precise; hypercritical.

Nata, a town of the Republic of Colombia, on the Isthmus of Panama, about 64 m. S.W. of Panama.

Natal, *a.* [Fr.; Lat. *natalis*, from *natus*, a birth, from *nascor*, to be born. See NATURE.] Pertaining or having reference to one's birth; dating from, or concurrent with, one's birth; relating to nativity; as, a natal place, a natal hour.

—*n. pl.* Circumstances attaching to one's birth, as time or place. (R.)

Natal, an English possession on the S.E. of Africa, bordering on the Indian Ocean, between Lat. 27° 40' and 30° 40' S., Lon. 29° and 31° 10' E., having N. Zululand, S. Caffraria, and W. the Free State, from which it is separated by the Drakenberg Mountains; area, 18,060 sq. m. The surface is mountainous, some of the peaks attaining an elevation of 10,000 ft. The soil is very

fertile, and the climate, though almost tropical, is healthy. *Rivers*. Tugela, or Buffalo, the Umcomanzi, Ungau, and Umzinculu. *Products*. Sugar, coffee, indigo, arrow-root, ginger, tobacco, tea, and cotton. *Min.* Coal, copper, iron, and granite. *Esp.* Chiefly wool, sugar, ivory, and hides. *Cap.* Pietermaritzburg; *pop.* (1897) 16,200.—The Portuguese discovered this country in 1498, and gave it the name of Natal, because they landed on Christmas-Day. The native races were swept away by the Zulu Caffres in 1810, and the English formed a settlement in 1824. It was annexed to Cape Colony in 1844, made a separate government in 1845, and erected into a separate colony in 1856. There were wars with the Zulus in 1873 and at later periods, and with the Boers of the Transvaal in 1881. (See TRANSVAAL and ZULUS.) *Pop.* (1897) 362,500.

Natant, *a.* [Lat. *natans*, from *nature*, to swim.] (*Bot.*) Floating on water; swimming.

Natantly, *adv.* In the manner of flotation; swimmingly.

Natation, *v. n.* [Fr., from Lat. *natatio*—*nature*, to swim.] Swimming; act of floating on the water; flotation.

Natatorial, *a.* Disposed to swim; adapted to swim; as, *natatorial birds*.

Natares, *n. pl.* (*Zool.*) An order of birds, corresponding to the *Palmipeds* of Cuvier, embracing such birds as are web-footed, and otherwise adapted to lead an aquatic life. Birds of this class vary greatly both in the size of their wings and powers of flight, and they are easily distinguishable from the rest of the feathered tribes on account of the peculiar structure of their feet, which are invariably webbed. A thick coat of down also covers the bodies of *natares* beneath their plumage, and an oily secretion covers the feathers, and saves them from getting wet. The order is divided into the families *Anatida*, or Ducks; *Sulida*, or Gannets; *Tachypodida*, or Man-of-war birds; *Phalaropodida*, or Cormorants; *Platida*, or Darters; *Procellariida*, or Petrels; *Larida*, or Gulls; *Colymbida*, or Divers; *Alcida*, or Auks.

Natatory, *a.* [Fr. *natatoire*; Lat. *natatorius*.] Natatorial; swimming.

(*Zool.*) A term used to denote that a locomotive extremity, or other part, is provided with a membrane, or with close-set hairs, by which it is adapted for displacing water.

Natch, *n.* [From Lat. *natio*, the buttocks.] That part of an ox lying between the loins, near the rump.—A feat; an exploit. (Prov. Eng.)—(*pl.*) The embrasures of a battlement. (Prov. Eng.)—*Natch-bone*, the aitch-bone in beef.

Natchaug River, in Connecticut, joins the Fenton River in Windham co., to form the Shetucket River.

Natchez, a tribe of Indians, which owed its celebrity chiefly to Chateaubriand's *Les Natchez*. They resided in the W. part of Mississippi, near the banks of the Mississippi River. Irritated against the French, who in that region were incessantly encroaching upon them, they rose, on Nov. 28, 1729, and murdered every Frenchman in the colony. On Jan. 28, 1730, they were attacked by the Choctaws under Le Sueur, and a few days after, Soubois, at the head of the French troops, completed the work of destruction. Part of the tribe escaped across the Mississippi River to the vicinity of Natchitoches, but their fortress could not long withstand the force sent against it. The chief and over 400 of the tribe were taken prisoners, and sold as slaves, while some were incorporated with the Chickasaws and Muskogees, and others fled further west, of whom nothing has since been heard.

Natchez, in Indiana, a post-village of Martin co., abt. 56 m. W.N.W. of New Albany.

Natchez, in Mississippi, a city, cap. of Adams co., on the Mississippi River, about 100 miles S.W. of Jackson; Lat. 31° 34' N. Lon. 91° 25' W. The city proper occupies a commanding bluff; the streets are regularly laid out, and the houses are generally well built. It contains a fine court-house, numerous churches, an orphan asylum, and several eminent educational institutions. The lower part of the city, or Natchez-under-the-Hill, consists principally of warehouses and stores. It has an active trade, largely in cotton.

Natchez, in Ohio, a village of Monroe co., about 23 m. S. of Wheeling, West Virginia.

Natchitoches (*natch-i-toch'iz*), in Louisiana, a N.W. parish; area, about 1,285 sq. m. *Rivers*. Red river, and some less important streams, with numerous small lakes. *Surface*, diversified; *soil*, near the rivers and lakes, very fertile. *Cap.* Natchitoches. *Pop.* (1890) 25,836.

—A post-town, cap. of the above co., about 500 m. W.N.W. of New Orleans. *Pop.* (1897) 2,050.

Nates, *n. pl.* [Lat.] (*Anat.*) The name used for the gluteal regions, or buttocks;—also, for two small eminences near the optic nerve in the brain.

Nathan, *nai'than*. (*Script.*) A prophet who lived in the reign of David. At the Divine command, he reproached that monarch for his guilt in the murder of Uriah and adultery with Bathsheba, and predicted that the glory of erecting the temple would be reserved for Solomon. On that occasion he brought the monarch to repentance, by relating the beautiful parable of the poor man's lamb.

Nathan'ael. (*Script.*) A disciple of Christ, probably the same as BARTHOLOMEW, (*q. v.*) He was a native of Cana in Galilee (*John* xxi. 2), and was one of the first to recognize the Messiah, who, at their first interview, manifested his perfect acquaintance with N's secret heart and life, (*John* i. 45-51.) He was introduced by Philip to Jesus, who, on seeing him, pronounced that remarkable eulogy which has rendered his name almost another word for sincerity: "Behold an Israelite indeed,

in whom is no guile." He was one of the disciples to whom Christ appeared at the sea of Tiberias, after his resurrection (*John* xxi. 2); and after witnessing the Ascension, returned with the other apostles to Jerusalem, (*Acts* i. 4, 12, 13.)

Nathless, *adv.* [A. S. *nathles*.] Nevertheless; notwithstanding. (*R.*)

Nathpore, a town of Hindostan, pres. of Bengal, on the Kosee; Lat. 26° 18' N., Lon. 87° 10' E. *Pop.* 8,000.

Natica, *n.* (*Zool.*) A genus of mollusca, the shell of which is globose, thick, and generally smooth; spine short, pointed, and with few volutions. The head of the animal is very large, having two tentacula with eyes at the base; foot large and thin. The straight, callous, smooth edge of the columella serves to distinguish this gen. from Nerita, Helix, &c. There are very many recent marine species, and not a few fossil.

Fig. 1915.

Natick, in Massachusetts, a post-NATICA PLUMBAGE town and township of Middlesex co., about 17 m. W.S.W. of Boston. *Pop.* (1895) 8,814.

Natick, in Rhode Island, a post-village of Kent co., about 10 m. S.W. of Providence.

Nation (*na'shun*), *n.* [Lat. *natio*, from *nascor*, to be born.] A body of people inhabiting the same country, or united under the same sovereign or government. Race; breed; stock; kind; species.

"A nation is the unity of a people."—Coleridge.

—Emphatically, a great number.

"A nation crush'd a nation of the brave!"—Young.

National (*na'shun-al*), *a.* [Fr.] Pertaining or having reference to a nation; public; general; common to an entire race or people; as, *national glory*, a *national debt*, a *national language*.—Strongly imbued with patriotic spirit; firmly attached to one's own country; bigoted; as, he is *national*, not cosmopolite, in his sentiments.

National, in Michigan, a village of Ontonagon co., about 14 m. S. by E. of Ontonagon.

National Assembly, *n.* (*French Hist.*) This title was assumed June 17, 1789, by the States-general of France, which had assembled at Versailles, May 5. The hall of the Assembly was closed by order of Louis XVI., June 20, upon which the members adjourned to the Tennis-court hall, and took an oath not to dissolve until they had prepared and voted a constitution. Admission to the Tennis-court having been afterwards refused to them, the members met at the church of St. Louis, June 22. Louis XVI. reopened the Assembly, June 23. The mob broke in, Oct. 5, and compelled the king to remove to Paris, Oct. 6. The Assembly held its first meeting after the removal to Paris in the hall of the archbishop's palace, Oct. 9, 1789, from which place it was transferred to the Riding-school hall, October 19, 1790. Mirabeau, one of the most celebrated leaders of the Assembly, was made president, Feb. 1, 1791. It declared its sittings permanent, July 17, 1791; but having entered into an agreement with Louis XVI., was dissolved, Sept. 29, 1791. As it had framed the constitution, it is sometimes called the Constituent Assembly. A new chamber, under the name of the National Legislative Assembly, met Oct. 1, 1791, and was dissolved in Aug., 1792. After the expulsion of Louis Philippe, the provisional government issued a decree, summoning a N. A. for April 20, 1848. By a subsequent decree, the elections were fixed for April 23, and the meeting was postponed till May 4. The government decided in favor of a presidency, and a single chamber consisting of 750 members, both to be elected by universal suffrage. A motion for its dissolution, May 19, 1849, was carried Feb. 14, 1850, and the new elections were fixed for May 4. The new Assembly met May 28, and was dissolved Dec. 2, 1851, by Louis Napoleon, who introduced a new constitution. In 1870, the N. A. was again restored.

National Cemeteries, *n. pl.* (*Amer. Hist.*) The name given to establishments, instituted by Act of Congress, for the interment of U. S. soldiers who have fallen in battle, and whose graves become, accordingly, a sacred national charge. These graves, 316,236 in number, are distributed in 72 special, or "National," cemeteries, and in 320 of the local cemeteries of the country. The names of 175,764 (more than one-half) of the dead have been preserved and attached to the graves. Of the rest it is only known that they died fighting in the Union armies; their graves marked with the sad inscription—"Unknown United States Soldier." Of the whole number, less than one-fifth now repose in their original graves. 257,520, or more than four-fifths, have been removed from the rude trenches of the battle-fields, or from their roadside graves, to the orderly enclosures where the national flag floats over their long rows.

National Debt, *n.* See UNITED STATES, § *Finances*.

National Guard, *n.* (*French Hist.*) A kind of citizen militia, which was first formed in Paris by the Committee of Public Safety, in July, 1793. This force became so popular that, in 1790, it was established throughout the kingdom, and was reorganized in 1795. The command was offered, in 1796, to Napoleon Bonaparte, and refused by him. It was reorganized in 1805, 1813, and 1814; was disbanded by Charles X., April 13, 1827, and was reestablished by the constitution of 1830. The defection of the N. G. from Louis Philippe, in 1848, was one of the principal causes of his overthrow. The N. G. throughout France was reconstructed by a decree dated Jan. 11, 1851, but subsequently abolished in 1871.

Nationalism, *n.* The state of being national; nationality.—National trait or characteristic.

Nationality, (*na'shun-ai'ty*), *n.* [Fr. *nationalité*.] Quality of being national, or strongly attached to one's own nation.—National character; aggregate of the distinguishing qualities of a nation.—A nation; a race or people, as exemplified by identicalness of language and character; as, the *nationalities* of Europe.—Individual existence as a nation; unification as a people.

Nationalization, *n.* Act of nationalizing; state or condition of being nationalized.

Nationalize, (*na'shun-ai*), *v. a.* To make national; to give to one the character and habits of a nation; to endow with the peculiar attachments which pertain to citizens of the same nation.

Nationally, (*na'shun-ai*), *adv.* In a national manner; with regard to the nation; unitedly, as a nation.

Nationalness, (*na'shun-ai*), *n.* Nationality; state of being national.

Native, *a.* [Fr. *natif*; Lat. *nativus*, from *natus*, a birth, from *nascor*, to be born.] Pertaining to one's birth, or place of birth; natal.

"My native land—good night."—Byron.

—Inborn; produced by nature; natural; not factitious or artificial.—Born with the being; not acquired; conferred by birth; indigenous; as, *native simplicity*.

—*n.* One born in any place; an original inhabitant; a denizen by birth; that which grows or is produced in the country; that which is domestic;—opposed to *exotic*.

"The lowly native of a country-town."—Dryden.

Natively, *adv.* By birth; naturally; originally.

Nativeness, *n.* State or condition of being native, or of being produced by nature.

Natividad, an island of Mexico, in the Pacific Ocean, off the promontory of Morro Hermoso.

Natividad, a village of Mexico, near Tezcuco.

Natividad, in California, a post-village of Monterey co., abt. 25 m. E.N.E. of Monterey.

Natividade, a town of Brazil, abt. 75 m. N.N.W. of Arrajas; *pop.* 2,500.

Nativism, *n.* The disposition to favor men and measures that make for the native or home-born residents of the country, in distinction from immigrants from foreign countries.

Nativity, *n.* [Lat. *nativitas*, from *nativus*.] Birth; the coming into life or the world.

"They say there is divinity in odd numbers, either in nativity, chance, or death."—Shaks.

—Specifically, the birthplace of our Saviour.—Time, place, or manner of birth.

"These, in their dark nativity, the deep shall yield us."—Milton.

(*Astrol.*) A horoscope; as, to cast one's nativity.

(*Ecol.*) There are three ecclesiastical festivals so called. The first is to commemorate the birth of the Saviour (see CHRISTMAS); the second is the nativity of St. John the Baptist, which is celebrated June 24; and the third is the nativity of the Virgin Mary, which is observed by the Roman Catholic Church Sept. 8.

To calculate, or cast, one's nativity. (*Astrol.*) To discover and represent the position of the heavens at the period of one's birth.

Natolia, *Anatolia*, [a corruption of Gr. *Anatolē*, the East, or Levant,] a peninsula of Western Asia, anciently called *Asia Minor*, and now constituting a pashalic of Asiatic Turkey; it extends between Lat. 36° and 42° N., and between Lon. 26° and 42° E.; being bounded N. by the Black Sea, E. by Armenia and the Euphrates, S. by Syria and the Mediterranean, and W. by the Archipelago. Length, from C. Kara-brun to the Euphrates, 670 m.; breadth, from 300 to 400 m.; estimated area, 250,000 sq. m. The coast-line is irregular, especially on its W. and S. sides, where it is deeply indented by the Gulfs of Adramyti, Smyrna, Cos, Makri, Adalia, and Scanderoun. The surface may be generally described as a high table-land, dotted with salt lakes, and enclosed by two ranges, detached from the plateau of Armenia, and running nearly parallel to the N. and S. coasts. The latter of these chains, the *Mons Taurus* of the ancients, and Sultan-dagh of the Turks, runs close to the shore in some parts of Carmania, forming a bluff precipitous coast, intersected here and there by narrow gorges, through which numerous torrents run into the sea. One of the heights, close to the Gulf of Adalia, was ascertained by Beaufort to be 7,800 feet high; but there are several summits in the interior, the snow on which descending one-fourth the way down their sides, indicates a height of 10,000 feet, or nearly equal to that of Mount Etna. The N. range is much less clearly defined, the only snow-covered peak being Mount Olympus, about 25 m. S. of the Sea of Marmora. Connected with Olympus westward is the celebrated Mount Ida, overlooking the plain of Troy; and the highest summit of which, called *Gargarus* by Homer, and Kaz-dagh by the Turks, rises about 5,000 feet above the sea. About 100 m. S. of Ida runs another range, the *Taolus* of antiquity, mentioned by Ovid, Virgil, and Seneca as being celebrated for its excellent wines and rich metallic veins. The central table-land is partly drained by the rivers flowing into the Black Sea; but a large portion, lying N. and N.W. of the range of Taurus, about 240 m. in length by 150 m. in breadth, is covered with numerous salt lakes, marshes, and rivers, having no visible outlet. In rainy seasons these lakes overflow, and, but for the ridges that cross the plain and separate it into basins, would submerge nearly 200 sq. m. of the surface. The largest of these is the lake Beishehr, 43 m. W.S.W. of Konieh; but by far the most curious in the peninsula is the *Tatta palus* of antiquity, about 50 m. N. of Konieh, and 2,500 feet above the sea, the waters of which, acc. to Strabo, were so impregnated with brine, that anything immersed in it was soon covered with a saline incrustation. The Turks

call it Tuzla, and it still furnishes in abundance the article for which it was anciently famous; but it contains neither fish nor conchiferous animals. (*Geog. Journ.* x. 299.) The largest rivers of Natolia flow into the Black Sea. The *Halys*, or Kizil-Ermak ("Red River"), rises by 2 branches on the S. side of Mount Erdjik (anc. *Argæus*), and flows by a tortuous course of about 500 m., first N.W., and subsequently N.E., into the Black Sea, where it is about as wide as the Seine at Paris. It is the largest river of Asia Minor; and, in ancient times, was considered the boundary between the Lydian and Median kingdoms, as well as a natural dividing line of the peninsula. (See *Herod.* i. 72.) E. of the Halys is the *Iris* (now the Jekil Ermak), a much smaller river, rising in the N. range of the table-land, and flowing W. by N. past Tokat into the Black Sea, about 20 m. E. of Samsoun (anc. *Amisus*). In the N.W. part of Natolia is the large and celebrated river *Singarius* (now Sakaria), the most distant source of which is in the central plateau, about 60 m. S.S.W. of Angora; Lat. 38° 5' N., Lon. 32° 3' S. After receiving numerous tributaries, it turns northward, near the modern town of Eski-sheh (anc. *Dorylaeum*), and flows into the Black Sea, about 50 m. W. by S. of Ereklî. The three principal rivers flowing into the Archipelago are the *Caius*, the *aurio turbidus Hermus* of Virgil (*Georg.* ii. 137), now the Sarabat, the marshy *Caystrus*, at the mouth of which was the *Ἀσος* *Ἀεῖον* of Homer (*Il.* ii. 461), and the *Meander* (now Mender), by far the largest of the three, and celebrated in antiquity, not only for the sinuosities of its course, but for the fertility of its valleys, and the number of flourishing cities on its banks. It rises by numerous sources in Lon. 30° 8' E., and takes a general course, W. by S., about 220 m. to its mouth, near the ruins of *Miletus*. The rivers on the S. side of the peninsula are, with one or two exceptions, little more than brooks or mountain-torrents; and the *Cydinus*, the scene of the splendid pageant of Cleopatra, is at present only 160 feet wide, and inaccessible to any but the smallest boats. The geological formation of Natolia partakes in many parts of a volcanic character. The high region of Phrygia abounds with lava and other substances, indicating the existence of igneous action at some previous period. Earthquakes have frequently visited the W. part of the peninsula, and all but demolished Laodicea, Apamea, Cibotus, Sardis, and other cities of antiquity; and it has still numerous thermal and sulphureous springs. The most general formation, however, is of white limestone, bold cliffs of which rise in Karamania, from 600 to 700 feet perpendicularly from the sea, exhibiting the most curious contortions of strata. On the N. side of the peninsula the same description of strata prevails, covered with gypsum, and in the highest mountains serpentine is found alternating with the blue mountain-limestone. The marble of Asia Minor was extensively used by the wealthy Romans in building their houses and villas. These mountains abound in mineral riches; copper is wrought to a considerable extent near Trebizond, Samsoun, and Siwas; and the region of the *Chalybes* is still an important mining district of the peninsula. Lead has been found in several places, though not wrought; but rock-alum is procured near Umieh (anc. *Enne*), and exported in considerable quantities. The climate of N., owing to the varying elevation and different aspects of its surface, will admit of no general description. On the central plateau, the height of which, exclusive of mountains, varies from 2,800 to 3,900 feet above the sea, it is cold, though salubrious, and snow lies, in many parts, for 2 or 3 months of winter; but, in July and August, the heat is often intense, and rendered more oppressive by the tendency of the sandy surface to absorb heat. On the W. shores the climate is genial, and the soil very productive; but in some parts, as at Smyrna and elsewhere, epidemics are prevalent, and the plague often makes great ravages among the pop. The heat in July ranges from 84° to 94° Fah. in the shade; rain seldom falls, though the want of it is, in some degree, compensated by heavy dews. The climate on the N. side is far more temperate, and rain is frequent. The soil on the coast is tolerably fertile, producing wines, olives, rice, millet, and other grains; but tillage is much neglected, irrigation and the manuring of land being little practised. The N. shores are covered with forests of oak, ash, larch, beech-trees, &c., furnishing abundant supplies of timber for the Turkish navy. The mountains of Karamania are covered principally with pines. Large flocks of sheep and goats graze on the lofty plains of the interior; their wool and hair forming an important article of commerce between Angora and Smyrna. N. is under a pasha or military governor, to whom are subject the respective beglerbegs of Anadoli, Karamania, Marash, Siwas, and Trebizond, the country being further subdivided into 17 sandjaks. The fixed pop. consists principally of Turks and Greeks, with smaller numbers of Armenians and Jews; besides whom there are nomadic tribes, both Kurds and Turcomans, employed partly in pastoral, but partly also in marauding occupations. N., which was first called simply Asia, afterwards *ἡ κατὰ Ἀσία*, to distinguish it from that more to the E., *ἡ ἀνατολή*, was called *Asia propria*, or *pro-consularis*, by the Romans, and did not receive its appellation of *Asia Minor* earlier than the time of Orosius, in the beginning of the fifth century. The Lydians dispute with the Phrygians the honor of being the first settlers of N. It was the seat of empire of the wealthy Cræsus, who was defeated and his capital taken by Cyrus, B. C. 546. — See *LYDIA*.

Na'trolite, *n.* (*Min.*) Prismatic Zeolite, a hydrated silicate of alumina and soda, which occurs in slender or

acicular crystals, and in small mammillary fibrous masses of a white, yellowish, or grayish color.

Na'tron, *n.* [*L. Lat.*; (*Gr. nitron*).] (*Min.*) The native carbonate of soda has long been known under this name, and hence the term *natrum*, applied to sodium by the German chemists, which has led to the adoption of the symbol Na for that metal. It is found in sandy soils of various countries, but more especially in Egypt, where it was anciently employed in the art of embalming.

Na'tron Lakes, in Egypt, in Natron Valley, 60 m. W.N.W. of Cairo. They consist of 8 pools, from which large supplies of natron are collected.

Nat'tily, *adv.* In a natty or dandified manner.

Nat'ty, *a.* Smart; neat; spruce; genteel; dandyish; as, a natty fellow.

Natural, (*nāt'yū-rāl*), *a.* [*Fr. naturel*; *Lat. naturalis*, from *natura*, nature. See *NATURE*.] Pertaining to, or implanted by nature; produced or effected by nature; consistent with nature; according to the stated course of things; such as is dictated by nature; according to life; derived from nature as opposed to habitual, as inclination; not foreign, forced, or far-fetched; as, *natural* manner or disposition, *natural* appearance. — Consonant to the laws, method, or order of nature; produced or coming in the ordinary course of things or the progress of animal and vegetable creation; conformed to the laws which direct and govern things circumstantial, sensational, and emotional; legitimate; normal; not violent, exceptional, or irregular; as, a *natural* death, *natural* consequences, &c. — Belonging to nature; pertaining to the existing system of things, as derived from the creation, or as known by the world of matter and mind, discoverable by reason; as, *natural* history, *natural* theology, a *natural* law. — According to truth and reality; true to nature; unassumed; unaffected; life-like; not artificial or exaggerated; as, a *natural* tone of voice, a *natural* posture. — Illegitimate; bastard; born out of wedlock; as, a *natural* child. — Derived from the study of the works of nature; formed by the lower or animal nature, in distinction from the spiritual substance of the higher or moral powers.

(*Mus.*) Applied to an air or modulation of harmony which moves by smooth and easy transitions, deviating little or gradually from the original key; — noting a key (C major) which requires neither sharp nor flat to form the intervals. — Applied to music, or musical sounds, produced by the voice, as distinguished from instrumental music or musical sound.

— *n.* One who exhibits, when grown up, the simplicity and want of understanding natural to an infant; a simpleton; an idiot.

— *ph.* Natural circumstances or characteristics.

"Such as presuming on their own naturals deride diligence." Ben Jonson.

(*Mus.*) A character marked thus ♮. Its office is to contradict the flats or sharps placed at the beginning of a stave or elsewhere, and by its use the note to which it is prefixed returns to the natural scale of the white keys.

Natural Bridge, in New York, a post-village of Jefferson co., abt. 25 m. E. by N. of Watertown.

Natural Bridge, in Virginia, a village of Rock-bridge co., so named from one of the most stupendous and extraordinary natural curiosities in the whole of the American continent. It is a natural arch of limestone rock, spanning an immense ravine. This bridge is 200 feet under arch above the stream of Cedar Creek, and in one solid arch of 90 feet span unites the rocks across this sheer abyss. The arch itself, or roadway, is eighty feet wide, and has a depth of 53 feet, being naturally parapeted on either side by blocks of rock bound together by plants and shrubs; and, viewed either from above or below the bridge, is both grand and magnificent. It forms the only means of communication between the two sides of a chasm that seems to admit of no other means of connection.

Natural History,

n. The science which in its most extended signification treats of the structure of bodies spread over the surface of the globe, or forming its mass. — the phenomena exhibited by these bodies, the characters by which they may be distinguished from each other, and the part they play in the entire creation. Its range is immense, and its importance is not inferior to its extent. Some, but little acquainted with science, see in natural history merely a collection of anecdotic facts, more calculated to excite the curiosity than to exercise the understanding, or a dry study of technical terms and arbitrary classifications. Such an opinion is based on ignorance; and the utility of the study of natural history cannot fail to be recognized by all who possess even the pre-

liminary ideas of the science. The grand and harmonious view it presents of nature, whose *beau idéal* is so much superior to that of human invention, tends to elevate the mind to lofty and sound thoughts. The knowledge of ourselves and of surrounding objects is not given merely to satisfy the desire for learning which develops itself always according as the intelligence enlarges; it forms a necessary basis to many other studies, and is eminently calculated to give to the judgment that rectitude in the absence of which the most brilliant qualities lose their value, and in the course of life lead the mind astray. On the other hand, to be convinced of the practical importance of the natural sciences, we have only to look to geology and mineralogy, and the services they have rendered to industry; to botany, and to the myriads of beautiful and useful plants it describes, and to horticulture, of which it is the guide; to recollect the animals to which we owe wool, silk, honey — which lend us that power which man so often requires, or which, far from being useful to us, threaten our harvests with destruction; lastly, to consider the long catalogue of human infirmities, and to reflect on the dangerous character of that medicine which is not based on a scientific knowledge of the human structure. But the utility of these sciences does not stop here; in an educational point of view, their study accustoms the mind to proceed from effect to cause, testing each hypothesis by an appeal to facts. Finally, before all other studies, that of natural history trains the mind to *method*, that part of logic without which all investigation is laborious, every exposition obscure. The term *N. H.*, however, is generally restricted to the external description of objects of nature, whether vegetable, animal, or mineral. It is consequently divided into three separate headings: — 1. *Geology and Mineralogy*; 2. *Botany*; 3. *Zoölogy*; (which see.)

Natural Orders, *n. pl.* (*Bot.*) See *BOTANY*.

Natural Philosophy, *n.* See *PHYSICS*.

Natural Theology, *n.* That science which treats of the being, attributes, and will of God as deducible from the various phenomena of created objects.

Naturalism, *n.* Mere, simple state of nature.

(*Theol.*) The doctrine which ascribes the phenomena of nature to a blind force acting necessarily.

Naturalist, *n.* [*Fr. naturaliste*.] One who investigates nature and nature's laws as manifested in created things; one who is versed in the knowledge or science of nature, such as the various productions of the earth — animal, vegetable, and mineral. — A supporter of the theological doctrines of naturalism.

Naturalistic, *a.* Pertaining, or having reference to the doctrines of naturalism.

Naturalization, *n.* The act of naturalizing or of being naturalized. — The act of investing an alien with the rights and privileges of a native citizen. See *SUPPLEMENT*.

Naturalize, *v. a.* [*Fr. naturaliser*.] To invest with natural or native qualities; to make easy and familiar by association, custom, or habit.

"Custom has naturalized his labor to him." — South.

— To confer on an alien the rights and privileges of a native citizen. — To accustom or habituate to a climate; to adapt to a different temperature; to acclimatize; as, to *naturalize* a tropical fruit to a high latitude. — To receive or adopt as natural, native, or vernacular; to make one's own; as, to *naturalize* a foreign phrase.

— *v. n.* To investigate and expound phenomena by natural agency.

Naturally, *adv.* According to, or after the manner of, nature; by the impulse, agency, or force of nature; not by art, custom, or habit.

"There can be naturally no such thing as certainty of knowledge." South.

— According to life; in consonance with the usual or ordinary course of things; with just representation; without artificialness or affectation.

"That part was aptly fitted, and naturally performed." — Shaks.

— Impulsively; spontaneously; generically; without art or cultivation.

Naturalness, *n.* State or quality of being natural, or of being given or produced by nature. — Conformity to nature, or to truth and reality; without affectation or artificialness.

Nature, (*nāt'yū-r*), *n.* [*Fr.*; *Lat. natura*, from *nascor*, *natus*, to be born, to arise, to spring forth.] The system of created things; the universe; the creation; by a metonymy of the effect for the cause, the agent, creator, author, producer of things, or the powers that produce them; the world of mind and matter.

"And muse on Nature with a poet's eye." — Campbell.

— The essence, created qualities, or attributes of a thing, which constitute it what it is, as distinct from others; characteristic constitution; peculiar embodiment.

"What ailed them their fixed natures to forsake?" — Cowley.

— Sort; species; kind; particular character; as, what is the *nature* of the business? — Established or regular course or order of things; normal association; common law of circumstances, or sequence of events; combination or juxtaposition of cause and effect.

"The course of nature is the art of God." — Young.

— Law or principle of action or motion in a natural body; aggregate powers of a body, especially a living one; constitution and appearance of things; creative agency; personified substance and order of causes and effects. — Natural affection or reverence.

"One touch of nature makes the whole world kin." — Shaks.

— Sentiments or images conformed to nature, or to truth and reality; normal or usual representations.

"Nature and Homer were, he found, the same." — Pope.

Fig. 1916. — NATURAL BRIDGE. (Virginia.)

—A mind, intellect, or character; a person of moral or mental eminence.

"His nature is too noble for the world." — *Shaks.*

—Nudity; nakedness; destitution of artificial covering; natural condition with respect to clothing; also, in frequently, the genital organs.

Good nature, generosity or amiability of disposition; natural excellence of temper. — *In a state of nature*, naked; nude; without covering or clothing.

Nature-printing. (*Fine Arts*.) A technical process by which printed copies of plants and other objects are produced upon paper in a manner so truthful that their size, fabric, and color are represented even to the most minute detail. Although it is only in this century that this art has been so far developed as to become practically useful, it is by no means new in idea; a certain Professor Kniphof, of Erfurt, having been in the habit of taking impressions from leaves, &c. which had been colored with lamp-black or printers' ink, as long back as 1728; and twenty years later, an engraver at Nuremberg published in folio-plates figures of several leaves he had reduced to skeletons, and from which he took impressions in red ink. But although this process was made use of at intervals by several ingenious persons, it was not until 1833 that it was recognized as a regular branch of trade. In that year a Danish goldsmith and engraver, who had applied himself for some time to the ornamentation of articles in silver ware, published a description of the method he pursued of taking copies of flat objects of nature and art on plates of metal by means of two steel rollers, and it was at once perceived, by scientific men, that his invention might be applied to the advancement of the arts and science in general. A great difficulty still, however, prevented any extensive application of his invention, consisting in the fact, that, while the extreme hardness of plates of zinc, tin, and copper crushed and distorted the plant subjected to their pressure, the surface of a leaden plate, after the application of printers' ink, could not be cleansed so thoroughly as to allow the printer to take impressions free from dirty stains. To obviate this difficulty, Dr. Branson, of Sheffield, in 1847, commenced a series of experiments, and in 1851 suggested the application of that most important element in nature-printing, which is now its essential feature — the electrolyte. About the same time Professor Leybold, of Vienna, carried out experiments in the representation of flat objects of mineralogy, such as agates, fossils, and petrifications. Treating their surfaces with fluoracic acid, he then washed them with dilute hydrochloric acid, and when they were dried, carefully blackened them with printers' ink. By placing a leaf of paper upon them, and pressing it down upon every portion of the etched or corroded surfaces with a burnisher, he obtained impressions which represented, in the case of agates for instance, the crystallized rhomboidal quartz black, and the weaker parts, which had been decomposed by the action of the acid, white. As the stone, however, is in most cases too brittle to bear subjection to the printing-press, this process would have been, as in the case of plants, practically useless, had it not been for the aid afforded by the art of electrotyping. Nature-printing, as now practised, and as brought to perfection at the Imperial printing-office of Vienna in 1853, may be described as follows: — The subject, which, if a plant, must be perfectly dry, is placed on a plate of fine rolled lead, the surface of which has been polished by planing. The plate and subject are then passed between others, the pressure of which forces the latter into the surface of the former. The leaden plate is then subjected to a moderate heat, which has the effect of loosening the subject from its bed, and enabling it to be easily removed. The mould, which has been formed in the plate, is then subjected to the galvanoplastic process, and a second cast obtained, which is its perfect fac-simile. When the subject to be printed is of one color only, that pigment is rubbed in, and any superfluous removed; but when it is of two or more colors, the plan adopted in the inking of the plate is to apply the darkest color, which, in the case of plants, generally happens to be that of the roots, first, the superfluous color is cleaned off; the next darkest color — such, perhaps, as that of the stem — is then applied, the superfluous color of which is also cleaned off; and this mode is continued until every part of the plant in the copper-plate has received its proper tint. The plate thus changed, with the paper laid over it, is placed upon a copper-plate press, the upper roller of which is covered with five or six blankets of compact, fine texture. The effect of the pressure is, that all the colors are printed by one impression, and when the paper is removed, the plant is seen quite perfect, highly embossed, with the roots, stems, and other parts, each of its proper tint.

Natured, *a.* Endowed with a nature, disposition, or temper; inclined; — principally employed in composition; as, *ill-natured*, *good-natured*, &c.

Naturism, *n.* Another orthography of *NATURALISM*, *q.v.*

Naturize, *v.t.* To endow with a nature or character. (*R.*)

Naugatuck, *n.* In *Connecticut*, a small stream flowing into the Housatonic River in New Haven co.

—A post-town of New London co., about 27 m. N.N.E. of Bridgeport. Pop. (1897) 6,450.

Naught, (*naught*), *n.* [*A. S. naht, nauht* — *ne*, not, and *ah, auht*, aught; *D. niets*; *Ger. nichts*. See *AUGHT*.] Naught; nothing.

"A woman's nay doth stand for naught?" — *Shaks.*

To set at naught, to slight; to despise; to act in defiance of; to treat as of no account.

"Be you contented
To have a son set your decrees at naught?" — *Shaks.*

—*adv.* In no degree.

"To sovereign power he naught applies." — *Fairfax.*

—*a.* Bad; corrupt; worthless; of no value or account.

"Things naught and things indifferent." — *Hooker.*

—Naughty; vile; depraved. "Thy sister's naughty." *Shaks.*

Naughtily, *adv.* In a naughty manner; wickedly; depravedly; corruptly.

Naughtiness, *n.* Quality of being naughty; worthlessness; badness; wickedness; evil principle or purpose. — Slight wickedness; perverseness; frowardness; mischievousness, as of children.

Naughty, (*naught'y*), *a.* Wicked; corrupt; depraved. — Mischievous; perverse; froward; — used in application to children, or in ludicrous censure.

Naufage, *n.* [*Fr.*, from *Lat. nauulum*.] The freight of passengers in a ship. — *Johnson*. (*R.*)

Naumachy, *n.* [*Fr. naumachie*; *Lat. naumachia*, from *Gr. naus*, ship, and *machē*, combat.] (*Roman Antiq.*) A representation of a naval engagement, which took place most usually in theatres (called also *naumachie*) made for the purpose (Fig. 608). These exhibitions were originally instituted for the purposes of naval discipline: but, in process of time, only malefactors or captives whose lives had been forfeited acted in them. They appear to have been conducted on a scale of such magnitude as almost to exceed belief. Within the places set apart for them whole fleets went through their evolutions. In the sea-fight on the lake Fucinus, given by Claudius, there are said to have been no fewer than 19,000 combatants. Julius Cæsar appears to have first given a *naumachia* on an extensive scale; his example was followed by many of his successors on the imperial throne; and at last they were frequently exhibited at the expense of private individuals, as a means of increasing their popularity.

Naumburg, a fortified town of Prussian Saxony, on the Saale, 25 m. S. of Halle and 28 S.W. of Leipsic. The principal public buildings are the citadel, town-hall, and the cathedral, a fine Gothic structure. *Manuf.* Woollen cloth, hosiery, shoes, and chemicals. — The Hussites besieged *N.* unsuccessfully in 1432. It played an important part during the Thirty Years' War, and was taken by the French in 1806. Pop. 14,352.

Nauplia, or **Na'poli-di-Romania**, a seaport-town of Greece, on the E. of the Morea, on the Gulf of Nauplia, 5 m. S.E. of Argos, and 58 m. W.S.W. of Athens; pop. 12,500.

Nauplia, (*Gulf of*), an inlet of the Ægean Sea, Greece, between the two E. arms of the Morea. It contains several small islands, and receives the river Iliria, on which Argos is situated. *Ext.* Thirty m. long, and twenty broad.

Nauplius, (*Myth.*) A son of Neptune and Anymone, king of Enbeon. He was father to Palamedes, who was sacrificed to the resentment of Ulysses by the Greeks, during the Trojan war. The death of Palamedes irritated Nauplius. When the Greeks returned from the Trojan war, Nauplius saw them distressed in a storm on the coasts of Eubœa, and to make their disaster still more complete, he lighted fires on such places as were surrounded with the most dangerous rocks, that the fleet might be shipwrecked on the coast. This succeeded; but when he saw Ulysses and Diomedes escape, he threw himself into the sea.

Nauscopy, *n.* [*From Gr. naus*, ship, and *skopein*, to view.] The art or practice of sighting ships, or the distant approach to land. — This definition, stereotyped in all English dictionaries, seems to assert the existence of a positive art, though it existed but in the imagination of a Frenchman called Boltineau, who, in 1785, appeared in Paris, and announced that he had found out means of perceiving the approach, or the passage, of ships at distances extending as far as even 250 leagues. According to his own account, he had accidentally perceived, some twenty years before, being then employed in some civil capacity at the Isle of France, that certain phenomena in the heavens indicated the approach of ships; after an immense number of observations, failures, and uncertainties, he had arrived at a method of reading these indications, (of what kind, he declined to state,) which, though from the nature of the case it was not quite certain, was yet so nearly correct as that, out of one hundred and fifty-five predictions of the arrival of ships, more than half, as he asserted, were absolutely correct, while a large part of the remainder were subsequently proved to be correct, so far as the passage of the ships, on the days, and at the distances stated, was concerned. — Boltineau died, leaving only one disciple, M. Feillaffé, who made, it is said, some predictions which proved to be right, and with whom the marvellous art of beholding ships far below the horizon was hopelessly lost.

Nausea, (*naush'e-a*), *n.* [*Lat.*; *Gr. nausia*, sea-sickness, from *naus*, a ship. See *NAUTICAL*.] Sea-sickness; hence, any corresponding sickness of the stomach, accompanied with a tendency to vomit; squeamishness of the palate; qualm; loathing; disgust.

Nauseant, *n.* [*From Lat. nauseare*.] (*Med.*) A substance which excites or promotes nausea.

Nauseate, *v.t.* [*Lat. nauseo*; *nauseātum*.] To become squeamish; to feel disgust; to be inclined to reject from the stomach. — To loathe; to shrink from with disgust.

—*v. a.* To affect with disgust or nausea; to sicken. — To loathe; to reject or shrink from with disgust.

"He turned from her as if he were nauseated." — *Swift.*

Nauseative, *a.* Nauseous; exciting nausea.

Nauseation, *n.* Act of nauseating; state of being nauseated.

Nauseous, (*naush'us*), *a.* Exciting nausea; loathsome; disgusting; regarded with abhorrence; as, a *nauseous* medicine.

Nauseously, *adv.* In a nauseous manner; loathsome; disgustfully.

Nauseousness, *n.* Quality of exciting or producing nausea; loathsomeness; quality of causing disgust.

Nausett' Beach, in *Massachusetts*, on the E. side of Cape Cod. It has 3 light-houses 150 feet apart; Lat. 41° 51' 35" N., Lon. 69° 57' 18" W.

Nau'ta, a town of Ecuador, on the Amazons; Lat. 4° 30' S., Lon. 72° 40' W.

Nautch, *n.* In the E. Indies, a dance-entertainment performed by women.

Nautch-girl, or **Naut'chee**, *n.* The name applied in India to a professional dancing and singing-girl, or bayadere. The Nautchees are recruited from almost every condition in life, but the better sorts are generally derived from good families of the Vaisya and Soodra castes — that is, the merchants and laborers. Girls of tender age, for their beauty, are apprenticed to *dhyas*, a sort of dhennas, who are superannuated nautchees, and are introduced to a severe physical training, and at the same time initiated into all the nautchee's arts of adornment and meretricious attraction. See *BAYADERE*, and *ALMA*.

Naut'ic, **Naut'ical**, *a.* [*Fr. nautique*; *Lat. nauticus* = *Gr. nautikos*, belonging to a ship, from *naus* = *Lat. navis*, Sausk. *nav*, a ship.] Pertaining, or having reference to ships or seamen, or to the art of navigation; as, the *nautical* profession, a *nautical* work, *nautical* experience, &c.

Nautiform, *a.* [*Gr. naus*, a ship, and *Lat. forma*, shape.] Formed like the hull of a ship.

Nautilite, *n.* (*Pal.*) A nautilus in a fossil state.

Nautiloid, *a.* [*Lat. nautilus*, and *Gr. eidos*, form.] Resembling the nautilus in shape.

Nautilus, *n.* [*Lat.*; *Gr. nautilus*.] (*Zoöl.*) A genus of Molluscs, order *Tetrabranchiata*, of which abt. 150 species of fossil shells have been found in all strata, from the Upper Silurian to the most recent deposits. Only three living species are known, the best-known of which is the Pearly *N.* (*N. pompilius*). Its shell is spiral, the spire not at all elevated; and thus, in external form, resembles the shells of many species of snail; but internally, it is *camerated*, or divided into chambers by transverse curved partitions of shelly matter. In a very young state, this structure does not exist; but as the animal increases in size, it deserts its first habitation, which then becomes an empty chamber, and so proceeds from one to another still larger, occupying the outermost only, but retaining a connection with all by means of a membranous tube (*siphuncle*) which passes through the centre of each partition. The use of this connection is not known; but the most probable supposition is, that the animal is enabled, by throwing air or some kind of gas into the empty chambers of the shell, or by exhausting them of air, to change the

Fig. 1917. — PEARLY NAUTILUS.

total weight, so that it may rise or sink in the water at pleasure. It commonly inhabits the bottom of the sea, where it creeps about, probably like the gastropods, by means of a large muscular disc, with which the head is furnished; but it sometimes rises to the surface, and is to be seen floating there. There are numerous arms attached to the head, — 19 in the best-known species; there are also numerous other tentacles; but none of these organs are furnished with suckers, and they are feeble in comparison with the corresponding organs of many of the higher or dibranchiate cephalopods. The mouth is of the parrot's bill form, as in the other cephalopods; but the mandibles are not entirely composed of horny matter, their extremities being calcareous and of a hardness apparently adapted for breaking shells. Their edges are also notched, and show an adaptation for crushing, rather than for cutting. The tongue is large. The gizzard is muscular. The ARGONAUT (*q.v.*), sometimes called *Paper N.*, is a very different animal, resembling the cuttle fish, its shell being only a case for containing its eggs.

Nau'voo, in *Illinois*, a city and township of Hancock co., on the Mississippi River, about 52 m. above Quincy. Pop. (1897) 1,250. See *MORMONS*.

Nauvoo, in *Pennsylvania*, a post-village of Tioga co., abt. 30 m. N. by W. of Williamsport.

Nav'al, *a.* [*Fr.*, from *Lat. navalis* — *navis*, *Gr. naus*, a ship.] Pertaining to ships; belonging or having reference to a navy; consisting of ships; as, a *naval* expedition, a *naval* power, the *naval* service, *naval* stores, &c.

Naval officer, in the U. States Custom-house, an officer appointed to assist the collector in receiving the customs on imported goods.

Naval Architecture, (*nav'al*), *n.* [*Lat. navalis*.] Ship-building may be regarded in two points of view — in the first as a science, and in the second as an art. It is a science, from the fact that it depends upon some fixed laws of nature for its integrity; whereas, it is an art, inasmuch as it depends on the application of rules which are liable to constant fluctuation. By the aid of

various scientific principles, a certain degree of excellence may be obtained in a ship, so as to cause some particular quality to preponderate in it, such as stability, speed, and similar points; but, on the other hand, rules are applied which relate to the nature, such as, for instance, of elastic and non-elastic fluids, where, in fact, the very natural laws themselves have been but imperfectly developed. The form of a ship's body need not necessarily remain imperfect because the curve of the solid of least resistance remains unknown, since enough has resulted from the consideration of the nature of that solid to prove, that, however applicable it might probably be to the navigation of smooth waters, the perfect solution of the problem of its form would only be desirable to the naval architect as contributing to the general theoretical excellence of the science; as it would be but of little practical utility in its application to vessels intended to brave the powers of the elements in the open seas. There are also other considerations to be borne in mind, which regard the resistance of fluids, the fore and aft form of the body of the ship, the size and rake of the masts and other spars, &c., which can only be decided by comparison, experiment, and induction, assisted by the knowledge of the natural laws. The great considerations to be regarded in the form of a ship are, that it shall conveniently carry its stores and lading, besides its artillery, if a ship-of-war; that it shall be moved by wind or steam at a certain estimated velocity; that it shall readily obey the rudder; and, finally, that it have the proper stability, so as to have a firm grasp of the water, which prevents its being overturned by the wind, or heaving and pitching much from the action of the sea, which generally tends to strain the timbers. One or two of these qualities, however, virtually oppose the rest; and, consequently, the architect has to assimilate them into one whole, that the quality most desirable shall be obtained without erroneously sacrificing too much of the rest. The body of a ship, in the form which unites the several qualities just mentioned in the greatest perfection, has, in its middle, nearly the form of a portion of a hollow cylinder, with its axis horizontal, and its convex surface downwards. Above the surface of the water the sides are curved, so as to cause the head of the ship to have the form of a Gothic arch, more or less acute, in an horizontal direction. Towards the stern, the breadth diminishes gradually, and this part of the ship is either a plane surface, nearly perpendicular to the ship's length, or else so curved as to have nearly the form of a semi-ellipse in an horizontal section. Below the surface of the water, the body of the ship is curved in a similar direction towards the head and stern, so as to terminate at those points in angles, which diminish from the surface downwards; and thus a vertical section, taken perpendicularly to the length of the ship towards either extremity, diverging from the middle, presents on each side the form of a curve of contrary flexure. In merchant-ships, as great capacity is more considered than velocity of sailing, the relations between length, breadth, and depth depend less on hydrodynamical principles than in ships of war. The construction of vessels is calculated from three plans, named respectively the *sheer plan*, the *half-breadth plan*, and the *body plan*. The first of these is a projection on a vertical longitudinal plane, dividing the ship into two equal parts, the plane passing through the middle line of the vessel from the middle line of the stem, or fore-boundary, to the middle line of the sternpost, or after-boundary. The half-breadth plan describes half the widest and longest level section in the ship, or, in other words, that of an horizontal plane, passing through the length of the ship at the height of the greatest breadth. The body plan describes the largest vertical and athwartship section of the ship, and it forms the boundary of all the other sections delineated within it. These drawings are usually constructed on a scale of $\frac{1}{4}$ inch to a foot, and when they have been fully settled, enlarged copies of them, to the full size of the ship, are traced with chalk on the floor of the mould-loft. This operation is technically called *laying off*, and it gives the workmen an exact idea of the position, size, and shape of the principal timbers of the ship. The place where the ship is raised is termed the *building-slip*, situated by the side of a river or other water sufficiently deep to float her when ready to be launched. On the floor of this slip are arranged blocks of oak, three feet high and four feet apart, in a row, along the direction of the length of the intended ship. On these blocks is laid the keel, which is the lowest timber in the ship, as upon it the whole fabric is raised. It is generally of elm, as that timber possesses strong, tough fibres, and is also not injured by the action of water when immersed. The size of the keel in a first-rate man-of-war is about twenty inches square, and of length proportionate to the size of the vessel. Below the main keel, pieces of elm, some five to six inches thick, are worked in, and the structure they form is termed the *false keel*, whose use is to give the ship greater immersion in the water, and thus prevent lee-way. At each extremity of the keel, extending to the middle, pieces of wood, termed the *dead-wood*, are placed, the upper surface of which is cut in a curvilinear form to adapt itself to the shape of the bottom of the ship. Beyond these, at each extremity of the keel likewise, a post is set up, called respectively the *stern-post* and *stem-post*. The stern-post is usually of oak, in order to enable it to bear the great strain on it caused by the rudder, and its lower end is inserted in the keel by means of projections or teeth. The frame, or *ribs*, of a ship is composed of a great amount of timber, technically catalogued as *floors*, *cross-lines*, *half-floors*, *floors short and long-armed*, *first futtocks*, *second futtocks*, *third, fourth, and fifth futtocks*, and *top timbers*. Figs.

1918 and 1919 are intended to show in an elementary manner the combination by which strength is secured.

Fig. 1918.

The keel, *a*, is a massive beam, forming as it were the back-bone of the ship. Across it are laid the flat and lower ends of the ribs or timbers, *b*, which support the sides. On the floor formed by these cross-pieces is laid the keelson, *c*, an inner beam similar to the keel. The keelson is firmly bolted through the cross-pieces to the keel, thus holding the ribs at their bases the relative distances apart. Within the ship, on the inside of the ribs, a strong timber (*d*) called the *shelf* is bolted from stem to stern. This retains the ribs in a parallel position, and at the same time supports the deck, *e*. The deck, being slightly arched to prevent it from sinking in the middle under heavy burdens, has a tendency to force the vessel's sides outwards. This is prevented by the employment of knees, *f*, which holds the ribs to the cross-beam on which the deck rests. From the respective ends of the keel rise the stem, *g*, and stern-post, *h*. At these points the ship's beam, or width, is the thickness of the post only. The ribs or timbers near the stem and stern are set at angles less than right angles to the keel, as shown in Fig. 1920, in which the spectator is supposed to look down from above. The planking is attached to the ribs by means of bolts and treenails; but before the planks are attached, the intervals between the ribs are filled up with pieces of wood three inches deep, and also with cement, so as to give a certain solidity below the surface of the sea. The *wales* of a ship are those strong timber planks which rise above the surface of the water, and they are firmly affixed to the ribs, even before the planking is laid on. The deck beams being adjusted, the framing of the deck is the next consideration; for many things have to be provided for, as hatchways, mast-holes, &c. The *breast-hooks* are the strong curved pieces of timber which cross the stem and form the bows. The joints and seams of the external planking are made water-tight by forcing spun yarn and oakum into them. The seams are then closed with melted pitch applied, and lastly, as high up the side of the ship as the copper sheathing will come, a thread of spun yarn is laid on, and that again covered with a mixture of pitch and tar. The ship is then ready to be launched.

Fig. 1920.

—The introduction of iron and steel into ship-building has, of late, wrought many changes, and the words of a prominent ship-builder, "cold iron alone was likely to do all the work," have about come true; so that, with the introduction of the screw-propeller, sailing-vessels are now almost entirely lost sight of. Speed is now reckoned on the steam power alone, and high-power engines, working with three cylinders, have more to do with the quickness of a passage than beautiful lines and a big spread of canvas. Of recent years a new style of engine, the steam turbine (see STEAM ENGINE), has been introduced in some ocean steamships with very satisfactory results. This type of engine is now in use in two great ships of the Cunard line. For years ship-builders could not rely upon steam alone and all ocean-going ships were heavily rigged, so that, in case of accident to the machinery, they could be carried forward under canvas. At present little sail power is retained. With the introduction of the screw propeller, there has been considerable alteration in the structural arrangements of ocean-going steamships. The longitudinal section has been necessarily increased, and we now have ships over 700 feet long. The pioneer great turbine steamer (*Curmania*) is 678 feet long, and the *Baltic*, of the White Star line, is 725 feet long, 75 wide, and 49 deep. The introduction of what is known as the continuous cellular system has also led to considerable reforms in the construction. Many merchant vessels are now being built with double bottoms, so that water ballast can be carried when found necessary. The substitution of steel for iron has caused another great reform, and its success having been so eminently proved it is certain to be the material used in the construction of all large ocean-going steamers, when lightness of hull as conducive to great speed was to be considered. The Clyde in Scotland, and the Delaware river in the United States, are now the principal centers of iron ship-building. See BATTLESHIP; CRUISER; MONITOR; CELLULOSE; GUNBOAT; STEAMSHIP; NAVIGATION; MARINE ENGINE, &c.

Naval Crown, *n.* (*Antiq.* and *Her.*) Among the Romans, a crown of gold or silver, resembling the prow of a ship, awarded to the man who first boarded a hostile vessel. In modern times, a naval crown, composed of a rim of gold round which are placed alternately prows of galleys and square sails, and supporting the crest in place of a wreath, occurs in various grants of arms to English naval commanders.

Fig. 1921.

NAVAL CROWN.

Na'van, a town of Ireland, county Meath, abt. 26 m. N.W. of Dublin: pop. 3,500.

Navarch, (-vark-) *n.* [Lat. *navarchus*, from Gr. *nav*, ship, and *archos*, leader.] Among the ancients, the admiral or commander of a fleet.

Nav'archy, *n.* Nautical skill, experience, or management.

Navar'ino, or **Navarin'**, a seaport-town of Greece, in the Morea, on a bay of the Mediterranean, 6 m. N. of Modon. It stands near the site of Old Navarin, the Pylos of antiquity, and has a large harbor, sheltered by the island of Sphagia, famous in antiquity for the defeat of the Spartans by the Athenian navy. On Oct. 20, 1827, the combined fleets of France, England, and Russia defeated the Turkish and Egyptian squadrons under Ibrahim Pacha, in the Bay of Navarino. Of the Turkish fleet, consisting of 70 sail, no less than 62 were burned, sunk, or driven on shore complete wrecks.

Navarre, (na-var') [Sp. *Navarra*.] A prov. and anc. kingdom of Spain, bounded N. by France, E. by Aragon, S. by Old Castile, and W. by the Basque provinces. Area, 2,440 sq. m. The surface is generally mountainous and bleak, but in the valleys and along the river-banks the soil is very fertile. The principal rivers are, the Aragon, Zidacos, Arga, Ebro, and Bidassoa. Prod. Wheat, maize, barley, and oats. Min. Iron, copper, and rock-salt. Prin. towns. Pampeluna (the cap.), Tudela, Olite, and Estella. — N. was inhabited at an early period by the Vascones, who were expelled by the Romans. It was seized by the Visigoths in 470, invaded by the Saracens early in the 8th cent., and fell under the sway of Charlemagne in 778. It became an independent state in 855. In 1035 N. was divided into three kingdoms, — Navarre, Aragon, and Castile. The first two became united in 1076, and again separated in 1134. In 1255, it became an appanage of France, but recovered its independence in 1328. Ferdinand conquered it in 1512. The estates of N. took the oath of allegiance to him in 1513, and it was incorporated with Castile in 1515. After this act of spoliation, there remained nothing of the ancient kingdom of N. beyond a small territory on the N. side of the Pyrenees, which was subsequently united to the crown of France by Henri IV. of Bourbon, king of N., whose mother, Jeanne d'Albret, was grand-daughter of Queen Catharine; and hence the history of N. ends with his accession to the French throne, in 1589. Pop. 310,944.

Navarre', in Iowa, a village of Des Moines co., about 55 m. S.E. by S. of Iowa City.

Navarrese', *n.* sing. and pl. (*Geog.*) A native or inhabitant of Navarre; plurally, the people of Navarre.

—*a.* (*Geog.*) Pertaining or having reference to Navarre, or its inhabitants.

Navarro, or **NOVARRO**, in California, a small river flowing into the Atlantic Ocean from Mendocino co.

Navarro, in Texas, a N.E. central co.; area, about 1,020 sq. m. Rivers, Trinity river, Pecan creek, and several less important streams. Surface, mostly level; soil, fertile. Cap. Corsicana. Pop. (1897) 28,000.

Navarro, in California, a post-town of Mendocino co.

Navasoto, in Texas, a small river flowing into the Brazos, between Robertson and Brazos cos.

Navaza, an island of the W. Indies, off the W. coast of Hayti, at the S.W. entrance of the Windward Passage; Lat. 18° 25' N., Lon. 75° 2' W.

Nave, *n.* [A. S. *nafu*, *nafa*; D. *naaf*; Dan. *nav*; Ger. *nabe*, the middle of a wheel. See NAVAL.] (*Mach.*) The hollow of the central block or hub of a wheel, into which the ends of the axle are inserted; — also, the hub itself.

Nave, *n.* [Fr. *nef*; Lat. *navis*, a ship.] (*Arch.*) The body of a church west of the choir, in which the general congregation assemble. In large edifices, it consists of a central division, with two or more aisles; and there are, in some structures, several small chapels on the sides beyond the aisles.

Navel, (na'vel) *n.* [A. S. *nafel*, *nafol*; Dn. *navel*.] (*Anat.*) The centre of the body in a full-grown 9-months' child, and, in the foetus, the opening through which the navel-string passes from the liver of the child to the placenta or after-birth of the mother. The navel-string, umbilical cord, or *funis*, as this important part is differently called, is composed of a series of vessels—an artery, vein, nerve, and lymphatic tube—all loosely twined, like the strands of a rope, round each other, and varying in length from 1 to 2 feet. It is through the medium of the navel-cord that arterial blood and nervous power from the mother are carried to nourish the foetus, and the venous blood and impurities brought from it. The cord is sometimes every inch or so doubled upon itself in the form of a series of knots; this is a provision to allow of greater extension, without incurring the risk of making the cord tense. With some children the navel-cord is remarkably short, and neither knotted nor twisted; when such is the case, it is certain to delay the labor very materially, and add considerably to the maternal pains, the shortness of the string preventing the head from descending freely, though the contractions of the uterus are strong, and no other impediment exists. After the birth of the child, and the new circulation has been established in the infant, the navel-cord is tied about 2 inches from the body, and then divided; in the course of a week or fortnight the fragment left sloughs or drops off, leaving, when it has been properly attended to, that closed but indented cavity known as the navel.

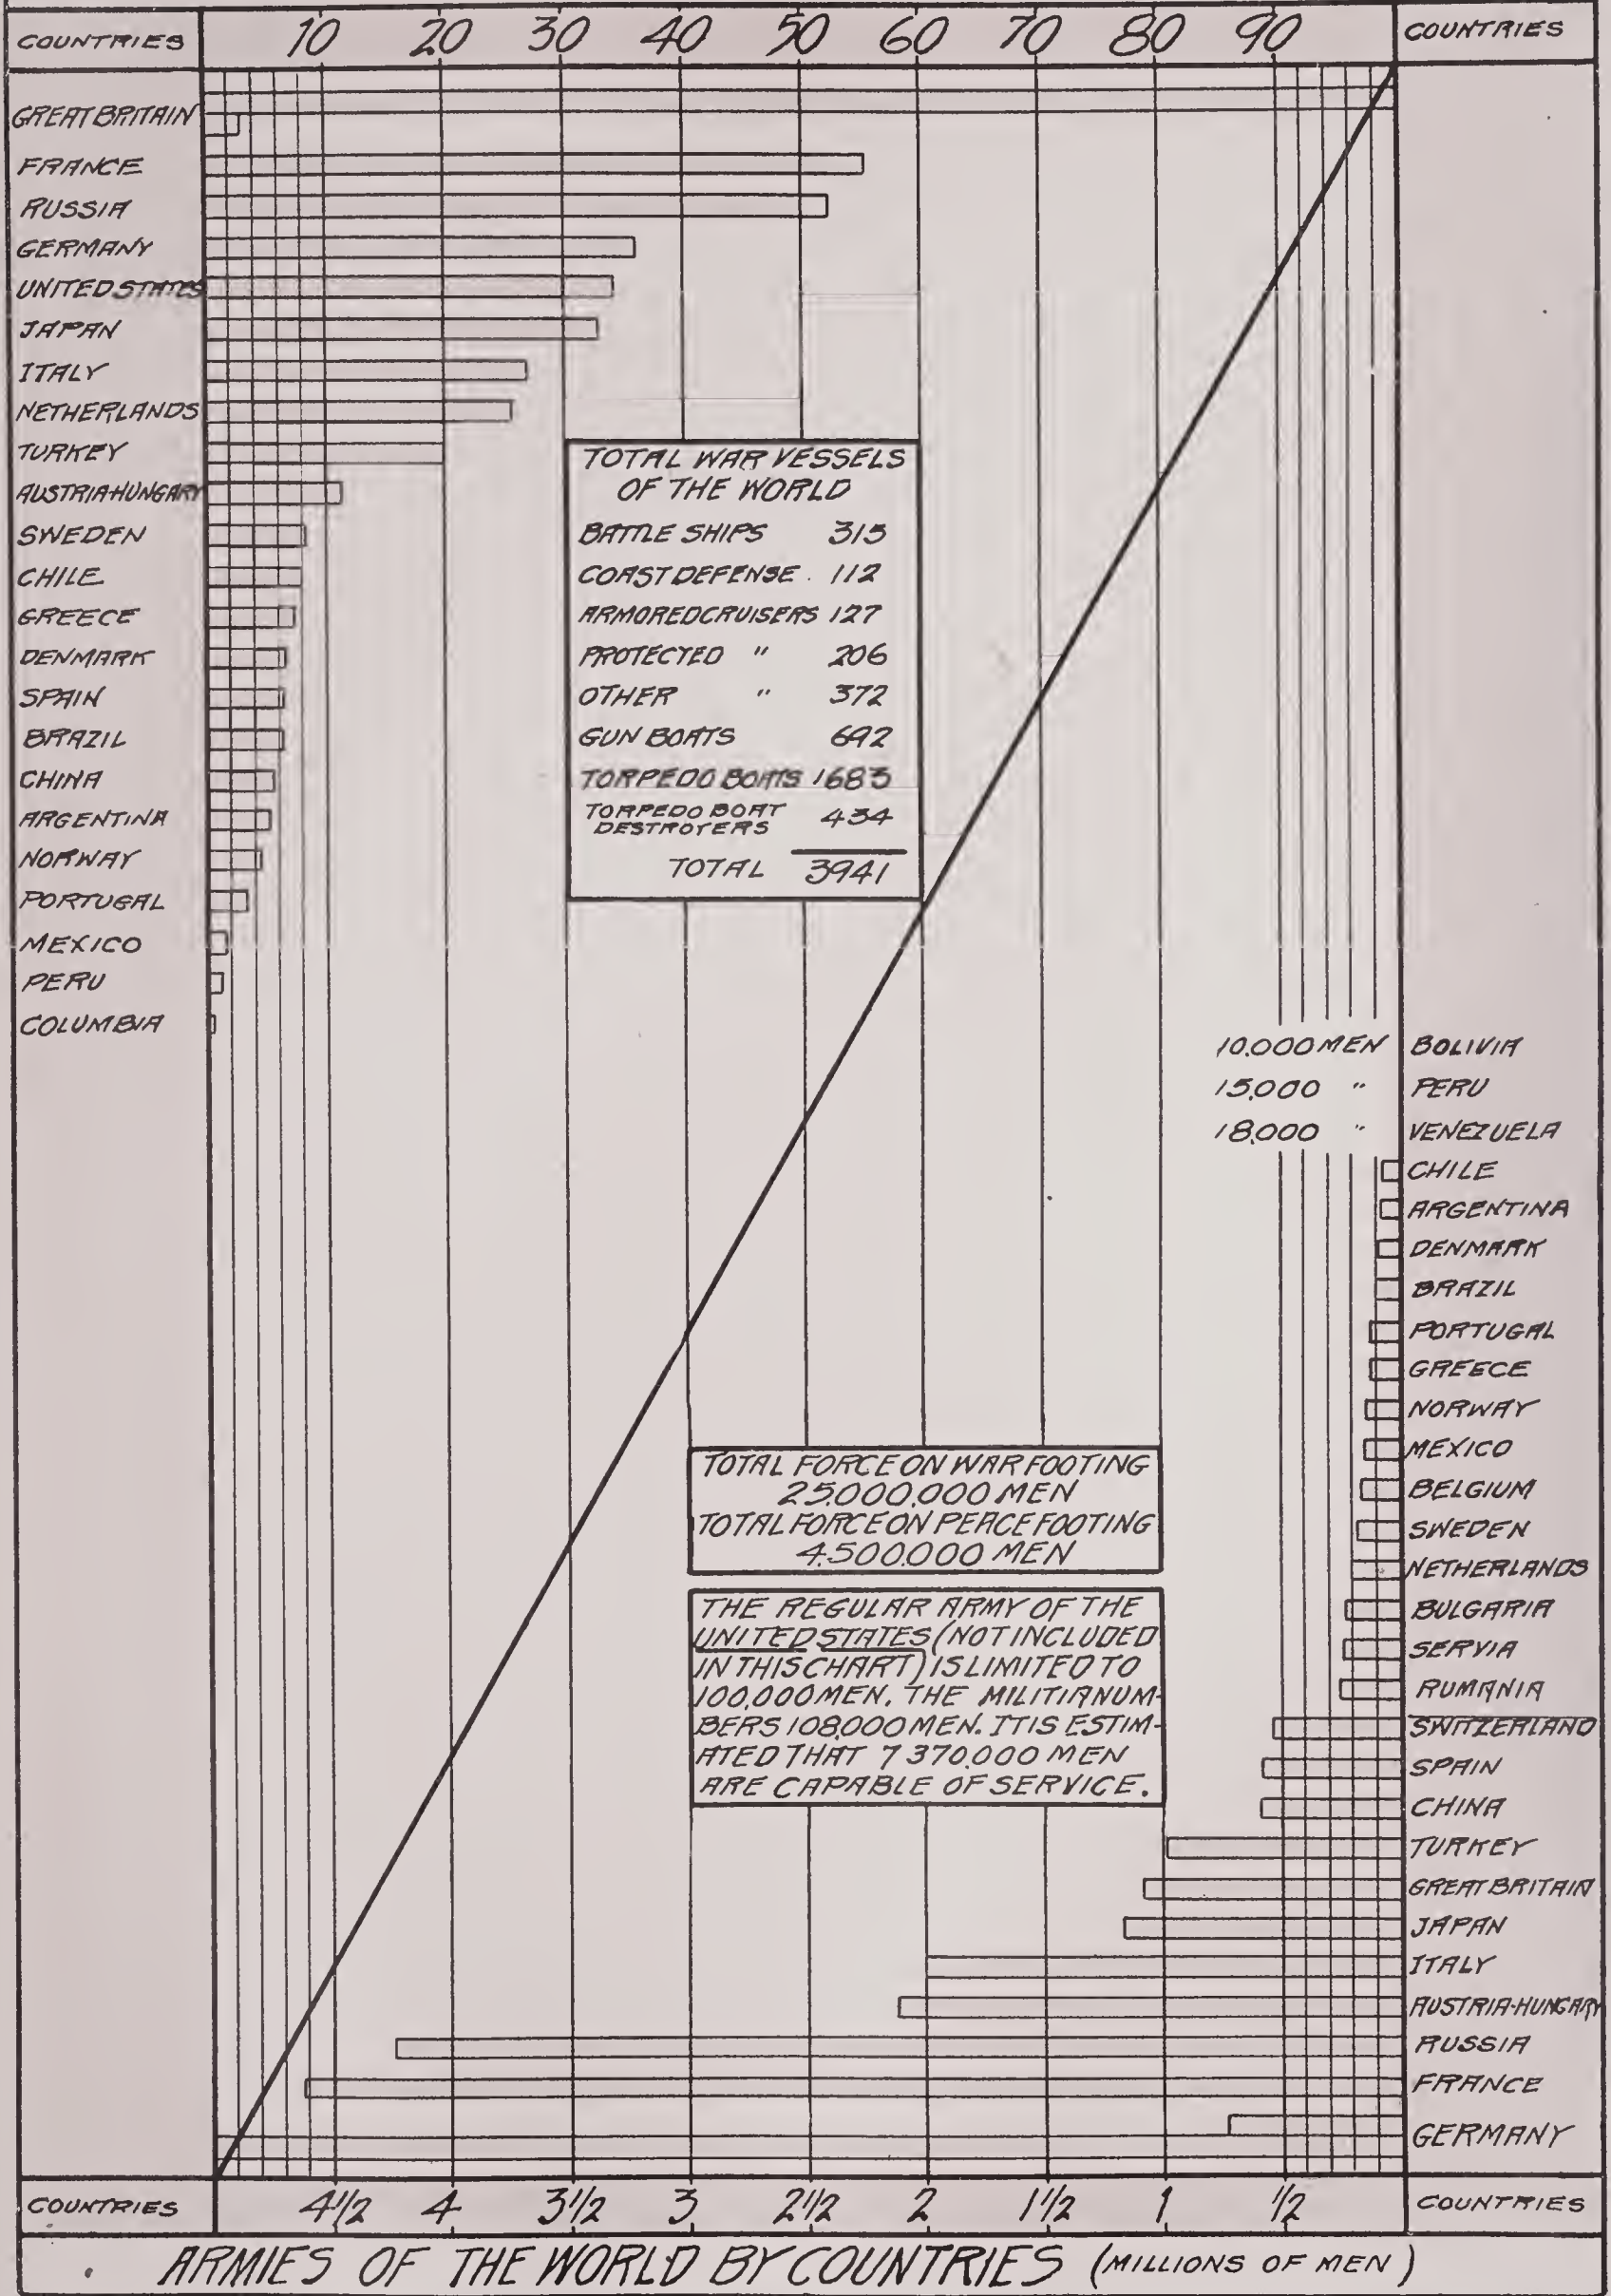

Navel-gall, *n.* A bruise on the top of the chine of the back of a horse behind the saddle, right against the navel.

Navel-string, *n.* (*Anat.*) The umbilical cord.

Navew, *n.* (*Bot.*) The French turnip, *Brassica napus*.

Navic'ular, *a.* Having reference to small ships or boats.

NAVIES OF THE WORLD BY COUNTRIES (THOUSANDS OF MEN)

(Bot.) Boat-shaped; cymbiform.

Navigability, *n.* [Fr. *navigabilité*.] Navigableness; condition or capacity of being navigable.

Navigable, *a.* That may be navigated, or passed in ships or vessels, as a river.

Navigableness, *n.* The state or quality of being navigable; capacity to be passed in vessels.

Navigably, *adv.* In a navigable manner.

Navigate, *v. a.* [Lat. *navigo*, *navigatus*, from *navis*, a ship, and *ago*, to conduct.] To conduct or guide a ship on the sea.—To pass over water in ships; to sail.

—*v. a.* To steer, direct, or manage in sailing, as a vessel.—To pass over in ships; to sail on, as a sea or ocean.

Navigation, *n.* [Fr., from Lat. *navigatio*.] The art of conducting a ship from one port to another on the sea; or, in other words, *N.* is the application of plane trigonometry to the solution of the various problems in *plane* and *global sailing*; of which the object is to find the position of a ship at sea, and the direction and distance it ought to sail in order to reach its intended port. The earliest known records of the practice of navigation are those of the Egyptians, who are said to have established commercial relations with India. The Phœnicians, however, were the most distinguished of early navigators, as they traded with nearly every nation known to them. Tyre was their central port, and, in fact, the port of the world during that æra, it being the centre of commerce, and well designated as the "mart of nations." They procured wood from Lebanon for the purposes of ship-building, and were masters of a considerable fleet shortly after their first attempts. By the aid of their marine establishment they were able to send out colonies, which soon even rivalled the parent country. Of these Carthage was the chief, and she possessed fleets which sailed along the western coasts both of Europe and Africa, after passing through the Straits of Gibraltar. The Greeks were the next to prosecute navigation; the voyage of the celebrated Argonauts is too well known to be here recapitulated. Next, the Romans pursued the art, and by its means were enabled to reduce Egypt, and to raise the port of Alexandria to a position of wealth and commercial activity only second to Rome. After the fall of the Roman empire, navigation received but little impetus for some time, and its resuscitation is doubtless due to the Genoese, although it is sometimes claimed by the French. Venice next devoted herself to careering over the seas. Contemporaneous with the revival of navigation in the south of Europe, a society of merchants was amalgamated for the further prosecution of commerce, termed the Hanseatic League, which not only extended trade to the Eastern and Western Indies, but also drew up rules for the guidance of mariners, still known under the title of Usages and Customs of the Sea. (See HANSEATIC LEAGUE.) The progress of navigation from this period down to the present time may easily be traced, and many and great are the improvements which have taken place both in the form of the vessels used for the purpose, as well as in the methods employed in working them. In former days, merely galleys were used with rowers; but in the present day, rowers have been superseded by the improvements which have been made in the formation of the sails and rigging of ships, which enable them to sail in any direction by means of tacking, even against a contrary wind. Of late years, the use of steam as a propelling power has completely remodelled navigation, and a new æra has opened, which constantly brings forth some new improvement or fresh discovery. The ancients were certainly not so skilled in finding their latitudes, nor in steering their vessels as the moderns, who possess an inestimable advantage over the former in the discovery of the mariner's compass. (See COMPASS.) They used generally to steer by the sun in the daytime, and by the north-star at night; consequently, when the heavens were overcast, they were deprived of their means of progression, and had, therefore, to leave off prosecuting their voyages until the sky became clear again. For some time after the invention of the mariner's compass, navigation was still very imperfect, in consequence of the inaccuracies of the plane chart, which was the only one then known; and not much was done until the publication of Mercator's chart, which greatly altered former theories on the subject of navigating the ocean. Mercator is not, however, believed to have been the real inventor of this valuable map,—that honor being ascribed to Edward Wright, an Englishman. At the first appearance of this chart (see MAP), it was not rightly understood; but in the year 1592 its merit was fully allowed, and was further established, some seven years later, by the publication of Wright's treatise on "The Correction of Certain Errors in Navigation," in which he gives various tables of latitude for dividing the meridian, and other suggestions. (See LATITUDE and LONGITUDE.) The next great step in the history of navigation was the invention of logarithmic tables, by John Napier (*q. v.*), and the increased facilities which they gave in making long calculations, thereby insuring greater accuracy. (See LOGARITHMS.) Having thus given a brief sketch of the rise and improvement in navigation, it will be now necessary to show how and by what means it is carried on. The instruments needed, besides the compass, are a *quadrant* to measure the altitudes of the heavenly bodies, and a *sextant* to measure the distance between the moon and the stars. (See QUADRANT and SEXTANT.) The navigator should also be provided with logarithmic tables, in order to allow him to develop his observations: a copy of the "Nautical Almanac," to give him useful information with regard to the places and declination of the planets and stars; and, finally, he should be provided with the general and local charts applicable to his contemplated

voyage. Having left port, the mariner, just when the last land is about to disappear, selects some conspicuous point, of which the latitude and longitude are known in his tables, and, placing a compass in some elevated position, remote from any iron object which might disturb its polarity, proceeds to determine the bearing of the headland, and so estimate his distance from it, either by the progress made from it, or by the ready calculation of a practised eye. This is called, in nautical parlance, *taking the departure*, and it is, along with the time of making the observation, carefully noted in the log-book, (a journal carefully kept on board, in which entries are made each day, of every circumstance connected with the ship, from the date of her leaving harbor until her return.) The first thing which the mariner does after making that offing, which prudence dictates, in order to avoid the dangers of the land, is to shape a correct course to the port for which he is bound. To commence, he searches in his chart to see if any rocks, shoals, or other obstacles are in the way of a direct route, and if so, he directs his course primarily, so as to avoid them; if not, the difference in latitude and longitude between the two ports being taken, the distance and course can be obtained by the aid of trigonometry. The shortest way to any two places on the face of the globe, is the arc of the great circle passing through those two places. (See MERIDIAN.) At the first noon succeeding his departure, the mariner takes his reckoning; and this period being determined by the passage of the sun over the meridian, is, therefore, well chosen as the beginning of the day. The log-slate (a double slate, on which events are marked down before being copied, at the close of the day, into the log-book) being marked, he copies the courses and distances run, if from head-winds, or other causes, they have been various. The departure from land is also esteemed a course, as is also the current, if there be any known one. He next proceeds to find the difference in latitude and departure from the meridian corresponding to each course, either by geometrical calculation, or, more expeditiously, by the tables; then he adds the several differences of latitude and departure, and if they be of different names,—for instance, some north, some south, some east, or west, he deducts the less from the greater. With the remaining difference of latitude and departure, he not only finds the course and distances made good, but also the latitude and longitude; the difference of latitude being applied to the latitude left, either by adding or subtracting in sailing from or towards the equator, gives at once the latitude of the ship. The most general method of navigating is termed *dead reckoning*; but it is far from being as correct as might be desired. It does very well, however, for short voyages, made not far from land; but in long voyages remote errors accumulate so quickly, that the mariner would find himself far from having kept his right course, and, indeed, might be hundreds of miles away from it. The errors which attend navigation by dead reckoning often escape calculation, as they result from the bad steerage, lee-way, heave of the sea, unknown currents, and many other circumstances which imperceptibly cause the vessel to deviate greatly from her course. It becomes necessary, therefore, for the mariner, in long voyages, to resort to those immovable guides in the heavens that the Deity has placed. All the heavenly bodies are brought by the revolution of the earth daily to the meridian, at which time, if their latitude be measured, their declination, or distance from the equinox being known, the latitude of the ship may be readily deduced; it may also be obtained from single or double altitudes of bodies not in the meridian, if the times be accurately known. But the meridian altitude of the sun is the one which furnishes the readiest and easiest method for obtaining the latitude. The method of obtaining the sun's meridian altitude may be described as follows: Furnished with a sextant, circle, or octant of reflection, the observer goes on deck, and having examined the adjustment of his instrument, proceeds to bring down the image of the sun, reflected by its mirror, until the lower limb just sweeps the horizon. He continues to follow and measure its ascent until it ceases to rise; the moment that it commences to fall, and the lower limb dips in the horizon, the sun has passed the meridian. The altitude marked by the index on the limb of the instrument is then read off, and is next corrected. First, the observer adds the semi-diameter, in order to make the altitude apply to the centre of the object; he next subtracts the dip, to meet the errors caused by the extension of the horizon, owing to the rotundity of the earth and the elevation of his eye; also the refraction of the atmosphere, by which the object, when not vertical, is made to appear higher than its true place; lastly, he adds the parallax, (a small correction, inconsiderable from the sun's distance,) in order to reduce the calculation from the centre of the earth, from which point all calculations are made, and which is ever supposed to be the station of an observer. Having made all these corrections, which most mariners can easily do in a short time, by adding twelve minutes, the true meridian altitude of the sun will be gained. Taking this from 90°, gives its zenith distance, or distance from that point in the heavens which is immediately over the observer. If the sun were forever on the equinoctial, the zenith distance would always be the latitude; but as it is only twice a year on it, and as his distance from it increases at times to 20°, it becomes necessary to take this distance (called his *declination*) into the calculation. The sun's declination is given in the almanac for the noon of each day; by correcting it for the time anticipated or elapsed, according as the sun comes first to him or to the *first meridian*, by his position

E. or W. of it, the observer obtains the declination for noon at his own position. This declination applied to the zenith distance, by adding when the sun is on the same side, gives the true latitude. The knowledge of latitude is obviously more important to a thorough seaman, and it is desirable to know at once, and to be able to tell at any hour of the day, the position of a ship on the ocean. There are various methods for finding the longitude; but in all of them the great element is time. For, as the earth performs her diurnal revolution in 24 hours, from the time any given meridian is brought under the sun until it reaches it again, it follows that 24 hours and 360 degrees are both equal to a circle, and that the equator and other circles of longitude may be indifferently estimated by either of these divisions. Consequently, the difference in time between any two places is no other than the difference between the sun's coming to the respective meridians, or, in other words, their difference of longitude; and hence it follows that if we, by any means, simultaneously ascertain the time of the observation at the first meridian and the time on board ship, we shall have obtained the longitude. The easiest way of doing this is by means of a chronometer. (See article on the subject.) To find the longitude by means of it, the mariner has only to take any observation of the sun, or star, when rising or falling, rapidly, and deduce the time of the ship; this, compared with the time at the first meridian, simultaneously given by the chronometer, at once determines the longitude. Ships generally carry three or four chronometers, in order to insure greater accuracy by means of comparing them with one another. The most expedient plan for obtaining the longitude is undoubtedly by observing the eclipses of Jupiter's satellites. The theory with regard to the times of immersion and emersion at the first meridian is noted in the almanac, and these, compared with the times at which the observer notices the same by means of a good telescope, determine the longitude. The *lunar theory* is another method, and it consists in observing the distance of the moon from the sun and fixed stars, and by comparing the time of observation with that time at which the almanac shows a similar distance at the first meridian. In conclusion, it may be mentioned that there are other things to be borne in mind by the mariner, as every circumstance occurring in nature should be the means of insuring him guidance and information,—the drift of currents, the color of the sea (an admirable guide near coasts), the flight of birds, and many other simple circumstances. He should carefully observe the barometer. By these means the trackless ocean has its well-known highways.

Navigator, *n.* [Lat.; Fr. *navigateur*.] One who navigates or sails; chiefly, one who directs the course of a ship, or who is skilful in the art of navigation.

Navigators' (or Samoan) Islands, a group of 13, in the S. Pacific O., bet. Lat. 13° 30' and 14° 30' S. Lon. 168° and 173° W.; area, 2,650 sq. m. The principal are Tutuila, Upolu, and Savaii. Generally mountainous and fertile. *Prod.* coffee, cotton, sugar, coconuts, &c. *Cap.* Apia. The U. S. have a coaling station at Papeete on Tutuila I. Since 1879, these islands came under the joint protection of U. States, Germany, and Eng., who have agreed that neither may acquire any paramount interest. Confirmed by treaty in 1889.

Navigerous, *a.* [Lat. *navis*, ship, and *gerere*, to carry.] Capable of floating vessels.

Navvy, *n.* [A contraction of *navigator*.] In England, a laborer on railroads, and other public works. (Cant.)

Navy, *n.* [Norm. *navie*, a navy, ships, from Lat. *navis*, Gr. *naus*, a ship.] A fleet of ships; an assemblage of merchantmen, or so many as sail in company.—The whole of the ships of war belonging to a nation or king.—The officers and men belonging to a navy.—For the navy of the U. States, see UNITED STATES, § Navy; and NAVY, section 11; and for the navies of foreign nations, see their respective names.

Navy Bread, or Biscuit, *n.* A small, flat bread, rendered dry and hard by baking, in order to its long preservation. The *unfermented* or *unleavened B.*, generally known as *common sea-biscuits* or *ship-bread*, are made of wheaten flour (retaining some of the bran), water, and common salt. The materials are kneaded together, either by manual labor—that is, by the hands and feet of the workmen—or by introducing the materials into a long trough or box, with a central shaft, to which a series of knives is attached, and which is made to revolve rapidly by machinery. The mass of dough so obtained is then kneaded and thinned out into a sheet the proper thickness of the B., by being passed and repassed between heavy rollers. This sheet being placed below a roller with knife-edge shapes, is readily cut into hexagonal (six-sided) or round pieces of dough, of the required size of the biscuits. These slabs of B. are then introduced into an oven for about 12 minutes, and are placed in a warm room for 2 or 3 days, to become thoroughly dry. The more modern oven is open at both ends, and the B. being placed in a framework, are drawn by chains through the oven. So rapidly is this operation conducted, that about 2,000 lbs. weight of B. are passed through one of these ovens every day of ten hours.

Naxia, (anc. *Naxos*), an island of the Grecian archipelago, the largest of the Cyclades group, 5 m. E. of Paros; Lat. of Naxia (the cap.) 37° N., Lon. 35° 26' E.; area, 106 sq. m. The surface is mountainous, Zia, its highest peak, attaining an elevation of 3,310 ft. The soil is fertile, but agriculture is very backward. *Pop.* 14,500.

Nay, *adv.* [A.S. *ne*, not, by no means.] Not; no; a word that expresses negation, dissent, or refusal.—**Not**

only so; not this alone; intimating that something is to be added by way of amplification.

Nay, *n.* Denial; refusal.

Naylor's Store, in *Missouri*, a post-village of St. Charles co., abt. 38 m. W.N.W. of St. Louis.

Nazaire, (*St.*), a town of France, dep. Loire Inférieure 30 m. W. of Nantes, on the Loire, and near its mouth; pop. 4,000.

Nazarean, Nazarene, *n.* (*Eccl. Hist.*) A name originally given to all Christians, from the fact of the Redeemer having been identified with Nazareth; but later, the term was applied to a sect who blended the Mosaic law with the Gospel. The term was also one of contempt, given by the Gentiles to the followers of Christ.

Nazareth, (now *Nasirah*), a town of Asiatic Turkey, in that part of Palestine anciently called Galilee, 6 m. W.N.W. of Mount Tabor. This small town derives all its historical importance from having been the residence of the parents of Jesus, who consequently lived there till the beginning of his mission. *N.* is situated on the W side of a narrow oblong bastion (see Fig. 214), or depressed valley, about a mile long, by a quarter of a mile broad. The buildings stand on the lower part of the slope of the western hill, which rises steep and high above them. It is now a small, but more than usually

Fig. 1922. — ENTRANCE OF MODERN NAZARETH.

well-built place, containing about 3,000 inhabitants, of whom two-thirds are Christians. The flat-roofed houses are built of stone, and are mostly two stories high. The environs are planted with luxuriantly growing fig-trees, olive-trees, and vines, and the crops of corn are scarcely equalled throughout the length and breadth of Canaan. All the spots which could be supposed to be in any way connected with the history of Christ are, of course, pointed out by the monks and local guides, but on authority too precarious to deserve any credit, and with circumstances too puerile for reverence.

Nazareth, a town of Brazil, on the river Jaquaripe, abt. 40 m. above the Atlantic Ocean; pop. 2,500.

Nazareth, in *Pennsylvania*, a post-borough of Northampton co., about 59 m. N. of Philadelphia.

Nazarite, *n.* [*Heb. nazir*, to separate.] Among the ancient Jews, one who, for a certain period, or for life, devoted himself to the service of Jehovah, by observing a more than ordinary degree of purity. Samson and John the Baptist were Nazarites. During their vow they did not cut their hair, abstained from wine and all manner of strong drinks, and from contact with the dead.

Nazaritism, *n.* The vow and practice of a Nazarite.

Naze, *n.* [*A.S. nase*.] A headland; a promontory; a ness.

Naze, (*THE*), (*naiz*), a cape forming the S. extremity of Norway, in the North Sea; Lat. 57° 57' N., Lon. 7° 2' E.

N.B., an abbreviation for Lat. *nota bene*, mark well.

Neagh, (*Lough*), a lake of Ireland, in Ulster, on the S.W. border of co. Antrim. It covers an area of abt. 150 sq. m., and has a mean depth of 40 ft. It receives the Upper Bann, Blackwater, and several smaller streams, and discharges its surplus waters by the Lower Bann, which empties into the Atlantic.

Neal, (*neel*), *v. a.* To temper by a gradual and regulated heat; to anneal. (*R.*)

—*v. n.* To be tempered in fire. (*R.*)

Neal, JOHN, an American author and poet, b. at Falmouth, New Portland, Maine, 1793. Beginning life as a shop-boy at the age of twelve, he learned and then taught penmanship and drawing. At the age of 21, he was a dry-goods retailer, first in Boston, and then in New York; and a year after, became a wholesale jobber in this business in Baltimore, in partnership with another American literary and pulpit celebrity, John Pierpont. They failed in 1816, and *N.* turned his attention to the study of law. With the energy which acquired for him the sobriquet of "John O'Cataraet," affixed to his poem, *The Battle of Niagara*, he went through the usual seven years' law-course in one, besides studying several languages, and writing for a subsistence. In 1817, he published *Keep Cool*, a novel; the next year, a volume of poems; in 1819, *Otho*, a five-act tragedy; and in 1822, four novels — *Seventy-Six*, *Logan*,

Randolph, and *Errata*. These impetuous works were each written in from twenty-seven to thirty-nine days. In 1824, he went to England, where he wrote extensively for magazines, and enjoyed the friendship and hospitality of Jeremy Bentham. On his return to America, he settled in his native town, practised law, wrote, edited newspapers, gave lectures, and occupied his leisure hours in teaching boxing, fencing, and gymnastics. Among his numerous works are *Brother Jonathan*, *Rachel Dyer*, *Bentham's Morals and Legislation*, *Authorship*, *Down-Easters*, *One Word More*, *True Womanhood*, *Reminiscences*, &c. D. 1876.

Neander, JOHANN AUGUST WILHELM, a German historian, who was born of Jewish parents, but while pursuing his studies at the Johanneum College at Hamburg, became a convert to the Christian faith, and assumed the name of Neander, signifying, in Greek, "a new man." He subsequently studied at the universities of Halle, Göttingen, and Heidelberg. His great attainments led to his being appointed professor of theology at the last-named establishment, and in 1812 he was chosen to fill the chair of theology at the university of Berlin, where he remained until his death. In the same year he published *The Emperor Julian and his Times*, which established his reputation as a theological historian. His greatest work, entitled *Universal History of the Christian Religion and Church*, was given to the world between the years 1825-1845, and was comprised in five volumes. In 1835 he produced a refutation of Strauss' "Life of Jesus," in a work entitled *The Life of Jesus in its Historical Relations*. Both the works above mentioned, as well as some smaller ones, were translated into English, and published in Bohn's Ecclesiastical Library. B. at Göttingen, 1789; d. 1850.

Neap, (*neep*), *a.* (*Naut.*) Noting the lowest tides, which are produced when the attractions of the sun and moon on the waters of the ocean are exerted in directions perpendicular to each other. When the two forces act in the same or in exactly opposite directions, the spring or highest tides are produced. The neap tides take place about four or five days before the new and full moons.

—*n.* A neap-tide.

—The draught-pole of a cart or wagon; a neep. (*Local Eng. and Am.*)

Neaped, (*neep*), *a.* (*Naut.*) Left aground by the tide, as a ship; left aground at the height of the spring-tides.

Neapolis, the ancient name of NAPOLI, *q. v.*

Neapolitan, *a.* (*Geog.*) Of, or belonging, or having reference to the city of Naples, or its inhabitants.

—*n.* A native or inhabitant of the city of Naples.

Near, (*neer*), *a.* [*A.S. neah*, *neahg*, near; *Dan. noei*; *Icel. ná*, to reach to. See *NIGH*.] Nigh; not far distant in place, time, or degree; adjacent; close by one; vicinal; neighboring; not remote. — Imminent; immediate; not distant in time; as, *near death's door*. — Closely related by blood or natural ties; not removed in kindred or degree.

"She's thy father's *near* kinswoman." — *Lev. xviii. 12.*

—United in close bonds of affection or confidence; dear; affecting one's interests or feelings; intimate; familiar; as, a *near friend*. — Literal; not loose, free, or discursive; in close imitation of a model or example; as, "taught to live the *nearest way*." — *Milton.*

—Inclined to covetousness, parsimonious; illiberal; close-fisted; — opposed to *free*; as, a *near man*.

—*adv.* At a little distance only in time, place, or degree; not remote; as, to come *near* one. — Almost; within a little; well-nigh; nearly.

"Such a sum as he found would go *near* to ruin him." — *Addison.*

—*v. a.* To draw or come close to; to approach; to come nearer.

—*v. n.* To draw near; to come close to.

—*prep.* Not far from: in the vicinity; adjacent; close by; as, we are *near* our journey's end. — At; as, the Austrian ambassador *near* the Court of the Tuileries. (*A Gallicism.*) (*R.*)

Near-chus, one of the generals of Alexander the Great, who was employed in conducting his fleet from India by the Ocean to the Persian Gulf. Fragments of a narrative by this early voyager are still extant, and form a curious and valuable record.

Near-legged, (*-legd*), *a.* Walking with the legs touching one another, so as to impede progress.

Nearly, *adv.* Closely; as, they are *nearly* allied. — At no great distance; not remotely. — Intimately; pressing-ly; with a close relation to one's interest or happiness.

"It concerneth them *nearly* to preserve that government." — *Swift.*

—Almost; within a little; as, our suspense is *nearly* ended. — In a niggardly manner; stingily; parsimoniously.

Nearness, *n.* Closeness; small distance. — Close alliance by blood; propinquity. — Close union by affection; intimacy of friendship. — Parsimony; closeness in expenses.

Near-sighted, (*neer'sit-ed*), *a.* Seeing at a small distance only; unable to see at a distance.

Near-sightedness, *n.* The state of being short-sighted.

Neat, *n.* [*A.S. neat*, cattle.] Cattle of the bovine genus, as bulls, oxen, and cows.

Neat's-foot oil, is the fat obtained by boiling calves' feet.

—*a.* Belonging, or having reference to the bovine genus; as, *neat cattle*.

Neat, *a.* [*Fr. net*, *nette*; *It. netto*; *Sp. nito*; *Lat. nitidus*, shining, from *niteo*, to shine.] Free from foul or extraneous matter; clean; cleanly; tidy. — Free from impurities of style or expression; elegant, but without dignity; as, a *neat* translation.

"Pure as the language will afford; *neat*, but not florid." — *Pope.*

—Free from admixture of spurious ingredients; good in

its kind; genuine; excellent; nice; as, *neat wines* of liquors. — Free from tawdry appendages, and well adjusted, as attire; trim; spruce; smart; dapper; of agreeable simplicity; free from the imputation of bad taste; as, a *neat style* of dress, a *neat compliment*. — Dexterous; adroit; perfect in skill or adaptability; as, a *neat pickpocket*. — Net; clear of all deductions; intrinsic; as, a *neat profit*.

Neath, a town of South Wales, co. of Glamorgan, on the Neath, 7 m. E.N.E. of Swansea, and 159 m. N.W. of London. In the vicinity are extensive copper, iron, and coal mines. Pop. 6,810.

Neat-herd, *n.* A cow-keeper; one who has the care of cattle.

Neatly, *adv.* With neatness; in a neat manner; in a cleanly manner. — With good taste; without tawdry ornaments. — Nicely; handsomely.

Neatness, *n.* Quality of being neat; exact cleanliness; entire freedom from foul matter. — Freedom from ill-chosen words. — Freedom from useless or tawdry ornaments; with good adjustment of the several parts.

Neatress, *n.* A female who takes care of cattle. (*R.*)

Neaves, in *Ohio*, a twp. of Darke co.

Neb, *n.* [*A.S. and Du. neb*.] The nose; the beak of a bird; the bill; the month; the nib.

Ne'bel, (*n.*), (*Mus.*) A Hebrew instrument of the harp kind.

Ne'bo, (*Script.*) A mountain of Moab, whence Moses had a view of the Promised Land, and where he died. It is a summit of the range Abarim, "over against Jericho." Seetzen, Burckhardt, &c., identify it with Mount Attarus, about ten miles north of the Arnon. Travellers do not observe any very prominent summit in the range immediately opposite Jericho; but it has not yet been fully explored.

(*Babylonian Myth.*) An idol which probably represented the planet Mercury. It was also worshipped by the ancient Arabians. The extensive prevalence of this worship among the Chaldeans and Assyrians is evident from the many compound proper names occurring in the Scriptures of which this word forms a part; as, Nebuchadnezzar, Nebuzaradan, Nebushasban; and also in the classics; as, Naboned, Nabonassar, Nabopolassar, &c.

Ne'bo, in *Illinois*, a village of Pike co. about 13 m. S.E. of Pittsfield.

Nebraska, a N. central State of the American Union, extends W. from the Missouri River to the 25th and 27th meridian of Lon., W. from Washington, and S. from the 43d to the 40th degree of Lat. It is bounded N. by South Dakota, E. by Iowa and Missouri, S. by Kansas, and W. by Colorado and Wyoming; has an extreme length of 412 miles, decreasing to 310 miles on the S. border, its extreme width being 208 miles, diminishing to 138 m. on the W.

Area, 75,905 sq.

m., or 48,636,800

acres. — *Gen. Desc.*

This region of country, once referred to on our maps as a part of the "Great American Desert," is almost entirely prairie, with an undulating surface. Near the base of the Rocky Mountains is found a sandy belt of irregular contour, partially defining the outline of its supposed former water-surface. The State throughout its entire length dips toward the Missouri River, being upon the W. slope of the great central basin of the N. American continent. The larger portion, as before stated, is elevated and undulating prairie; there are no mountains or high hills; and the bottom-lands of the river valleys are generally flat. Above these, from 40 to 100 ft. are second bottoms or table-lands, sloping backward to the bluffs, which range with the general level of the country. These bluffs sometimes rise hundreds of feet above the riparian level; back of these, again, is the rolling prairie, well watered with springs and running streams, and covered with nutritious grasses. In the W. part of the State are "dunes," or sand-hills, which have been raised by the prevailing winds, piling up the dry and loose materials of which they are shaped into their present picturesque form. These hills have their elongated slopes to the winds, the opposite sides being quite steep, presenting the appearance of high billows all apparently drifting in the same direction. In remarkable contrast with the general appearance of *N.* is the tract known as the "Manvaises Terres," in its W. part, 90 m. long and 30 wide, produced by some powerful agencies of denudation and degradation of the land. Viewed from a distance, it seems like some deserted abode of civilization; the prismatic and columnar masses appear as modern architectural examples, with towers, columns, and walls. A near approach, however, dispels the illusion, the imposing forms of architectural beauty resolving themselves into masses of rocks with labyrinthine defiles. The Missouri, which forms the E. limit of the State, flows through a vast bottom bounded by high bluffs of trap-clay; and its channel, inclining to the W. shore, leaves the great bulk of the bottoms on the E. or Iowa side. The river seems to follow along the line of the State through a rupture in the underlying rocks; the width of this fissure is yet unascertained. The best portion of *N.* is the valley

of the Platte, which extends from 100 to 200 m. on each side of that broad and swift but shallow river. Passing E., the first stream tributary to this beautiful valley is the Wood River, flowing in from the N. opposite Grand Island. The next is the Loup Fork, with its many

Fig. 1924.—THE MAZVAISES TERRES.

branches, extending far into the W. region, and which empties its waters at Columbus. Lastly, the Elkhorn, rising in the N. part of the State, commingles with the Platte, at least 250 m. N.E. of its source, and within 25 m. of the point where the Platte itself, after coursing its way from the mountains of Colorado—the back-bone of the continent, is absorbed into the Missouri. With the exception of Salt Creek and its affluents, no stream falls into the Platte on the S., the waters on that side running S., even though in some places rising within 10 to 15 m. of its banks; thus indicating considerable elevation in the ground immediately back from the river, and from thence a gradual declination to and beyond the Kansas. The S. portion is watered by the Great and Little Nemaha, the Big and Little Blue, and the Republican, with their many tributaries; all these rivers are deep and narrow when compared with the Platte.—*Soil and Veg.* The country is marked by three classes of land: bottom-land, table, and inarable. The first, having a width of from 1 to 12 m., presents on its surface occasional heavy growths of timber, sometimes extending over the bluffs to the table-lands. Wood in N. is not abundant, consisting of fir varieties only; the cottonwood is the most considerable. Oak, elm, hickory, and huckberry are also found. The soil of the arable portion of the State is a rich loam with an impregnation of lime, and varying from 2 to 10 ft. in depth, the deepest being of course on the bottom-lands, which receive the debris from the bluffs. This loam is free from gravel, easily ploughed, very friable, resisting unusual wet or drought, and peculiarly adapted to the growth of corn and wheat. The common garden vegetables are in abundance, attaining an unusual size. Wild plums, grapes, cherries, and hops, grow in profusion, and in the S.E. part of the State, apples, peaches, and pears are successfully cultivated. The destiny of N. is that of an agricultural and grazing country, millions of acres being available for tillage, and millions more for grazing-cattle. Herds are driven from Kansas to fatten on the succulent grasses. Beyond the 22d deg. of Lon. the lands are not available for farming purposes except in the bottoms. E. of this line, not less than 25,000,000 acres are available for stock, grain, or general crops; 13,700,000 being first class, 3,000,000 second class, and 8,300,000 third-class land. The first embraces the bottoms and the equally productive prairies; the second comprises prairies which, although quite productive, are broken by water-worn drains; while the third-class land is subject to drought, and of a sandy character. The grazing region of the State comprises 23,000,000 acres, 12,500,000 of which are well watered, as are also 10,500,000 in the spring, but dry in summer. The State includes 61,000 acres of swamp, of which some 49,000 are reclaimable. The sterile soil of the State may be made productive with irrigation by artesian wells.—*Clim.* The climate of the State is dry and exhilarating. The spring and fall are the rainy seasons, affording sufficient moisture for the growths of the soil, but in the summer and winter the weather is dry. The heat of the summer, however, is tempered by the prairie winds, and the nights are quite cool. The fall months of the year are extremely pleasant, and cold weather seldom commences before the latter part of Dec.—*Min.* Minerals have not yet been found to any extent. Coal has been discovered in some parts of the State,—several companies being engaged in mining,—but it has not so far yielded sufficient quantities for the home demand. Building-limestone has also been discovered, and is in daily use for the erection of dwellings; as, also, is a dark-yellowish gray sandstone, and a dark-red freestone. Clay, for the manufacture of brick, is easily obtained, and this branch of business is being successfully followed. N. has extensive saline deposits in the S.E., at the head of Salt Creek, the main basin embracing 300 acres, and yielding 16½ per cent. of salt.—*Animals.* N., once the grazing ground of vast herds of buffalo, is now destitute of these animals; and antelope, once very abundant, are now seldom seen; but the coyote, the large timber wolf, the fox, skunk, rabbit, and various smaller animals, are still plentiful.—*Agric.* The staple crop of N. is Indian corn, which is raised in great quantities, N. being one of the range of prairie States largely devoted to this staple. The sugar-beet has become of much importance, the first large crop of this being grown in 1890, while a number of factories have been

established for the extraction of sugar, one on Grand Island turning out several hundred barrels a day. The untilled lands yield great quantities of hay, and N. ranks well among the stock-raising States. At the date of the last census it had 2,420,733 cattle and 4,128,000 hogs, in addition to large numbers of sheep, horses and mules. In 1900 it produced 210,974,740 bushels of corn, 1,899,683 of wheat, and 58,007,140 of oats. The yield of beet-root sugar is rapidly increasing, it being 2,734,500 lbs. in 1892, 3,808,500 in 1893, 5,943,200 in 1894, and has since then advanced in like proportion.—*Manuf.* The manufacturing industry is subordinate to that of agriculture, the factories of the State being mainly at Omaha and Lincoln. The products embrace agricultural implements, vitrified paving-bricks, woollen clothing, soap, beet-sugar, and canned goods, for which there are factories in various towns. Omaha, the chief city, possesses the largest silver-smelting works in the world, and the third largest pork-packing business in the U. S., with a large business in other meat products. It has also linseed oil, boiler, safe, and other works.—*Polit. Div.* N. is divided into 90 counties, as follows:

Adams,	Dawson,	Jefferson,	Polk,
Antelope,	Devel,	Johnson,	Red Willow,
Banner,	Dixon,	Kearney,	Richardson,
Blaine,	Dodge,	Kimball,	Rock,
Boone,	Douglas,	Knox,	Saline,
Box Butte,	Dundy,	Lancaster,	Sarpy,
Boyd,	Fillmore,	Lincoln,	Saunders,
Brown,	Franklin,	Loup,	Scott's Bluff,
Buffalo,	Frontier,	Madison,	Seward,
Burt,	Furnas,	Merrick,	Sheridan,
Butler,	Gage,	Nance,	Sherman,
Cass,	Garfield,	Nemaha,	Sioux,
Cedar,	Gosper,	Nuckolls,	Stanton,
Chase,	Grant,	Otoe,	Thayer,
Cherry,	Greeley,	Pawnee,	Thomas,
Cheyenne,	Hall,	Perkins,	Thurston,
Clay,	Hamilton,	Pierce,	Valley,
Colfax,	Harlan,	Platte,	Washington,
Cumby,	Hayes,		Wayne,
Custer,	Hitchcock,		Webster,
Dakota,	Holt,		Wheeler,
Dawes,	Hooker,		York.
	Howard,		

Principal Cities, &c. Omaha, Lincoln (State cap.), Beatrice, Hastings, Nebraska City, Plattsmouth, Kearney, South Omaha, Grand Island, Fremont, York, &c.—*Railroads.* The principal railroads are the Union Pacific and Burlington & Missouri River, which connect Omaha with Denver and the Pacific coast; both have numerous branches ramifying the State. The Fremont, Elkhorn & Missouri Valley R. R. traverses almost the entire N. section of the State, running up to the Black Hills of North Dakota. Chicago and the East are reached by several trunk lines centering in Omaha and crossing the Missouri from Council Bluffs, Iowa, on the great bridge of the Union Pac. R. R. The total mileage in 1902 was 5,742, whose value, as determined for the year named by the State Board of Equalization, was \$25,425,308.—*Govt. and Finances.* According to the State Constitution adopted November, 1875, provision is made for the election of a governor, lieutenant-governor, secretary of State, auditor, treasurer, superintendent of public instruction, attorney-general, and commissioner of public lands. The legislature meets biennially, in odd years. The judiciary consists of a supreme court, district and county courts, the judges being elected by the people. The value of taxable property in 1902 was \$174,439,095, and the tax rate 7.22 per \$100. In 1890 the net state debt was \$253,379, and that of counties and cities \$12,634,681. The latter figures have since been considerably increased, but the State was in 1900 free from debt.—*Education.* The State of N. had at the census of 1900 an enrollment of children of school age of 285,415, with an average daily attendance of 182,589. There were in all 9,485 teachers. The total of the permanent school fund invested was about \$48,000,000, with about \$5,000,000 of interest bearing notes from the sale of school lands, making a total of about \$53,000,000. Normal schools of excellent character exist. The University of N., situated at Lincoln, is a flourishing and well-patronized institution. In addition there are about 50 colleges and academies of the better class.—*Hist.* N. formed part of the Louisiana purchase, and was long part of the Northwest Territory. The overland emigration to Cali-

fornia in 1849 brought it settlers, and it was organized as a Territory in 1854, then extending to British America and the Rocky Mountains. From this area (351,558 sq. m.) Colorado, Dakota, and Idaho were afterward taken, reducing N. to its present proportions. It became a state in 1867. Pop. (1890) 1,058,910; (1900) 1,066,300. **Nebras'ka**, in *California*, a village of Sierra co., about 16 m. E. of Downieville.—In *Illinois*, a township of Livingston co.

Nebras'ka, in *Indiana*, a post-village of Jennings co., about 62 m. W. of Cincinnati, Ohio.

Nebras'ka, in *Iowa*, a township of Page co.

—A village of Pottawattomie co.

Nebras'ka City, in *Nebraska*, a city, cap. of Otoe co., about 46 m. S. of Omaha. It is a place of much business activity, and is increasing rapidly in population and importance. Pop. (1897) 14,500.

Nebuchadnezzar, or **NEBUCHADREZZAR**, **NABUCHODONOSOR**, or **NEBUCODONOSOR**, a king of Assyria, who lived in the 7th century B. C. The chief events of his reign were his defeat of the Medes under their king Arphaxad, and his sending a force of 120,000 foot and 12,000 horse, under Holofernes, against Israel.—See **JUDITH**.

Nebuchadnezzar, or **Nabopolas'sar**, a king of Babylon, who reigned from 626 to 605 B. C. He united with Astyages in the conquest of Syria, and founded the second Syro-Babylonian empire.

Nebuchadnezzar, or **NEBUCHADREZZAR**, surnamed **The Great**, was the son and successor of the preceding. He immediately entered upon a war, by which he extended his empire over the greater part of Asia, and from the Caucasian Mountains in the north to the Great Desert of Africa in the south. He defeated the Edomites and Ammonites, took Jerusalem, and led the inhabitants captive to Babylon. His vassal king of Judah, Jechonias, having revolted, he thirteen years later deposed him, and put an end to the kingdom of Judah. He next turned his arms against Tyre, which, after an obstinate resistance of more than twelve years, he finally took, and which, with Egypt and Persia, made his empire and power enormous. N. died 562 B. C., after which the overgrown empire rapidly declined. It was to this king that the Jewish captive Daniel interpreted the dream that so truly foreshadowed the fall and ruin of his empire. The celebrated hanging-gardens of Babylon, one of the seven wonders of the world, were ex-

Fig. 1925.—GREAT NEBULA IN ORION.

cuted by this monarch, to please his beautiful wife, a Median princess.

Neb'ula, n.; pl. **NEBULAE**. [Lat. *nephos*, *nephelē*, a cloud.] (*Astron.*) The Latin word from which this term is derived accurately describes the appearance of nebulae when viewed through a telescope. In Halley's time only six of these gaseous-like patches were known, and these comprise nearly all that are visible to the naked eye to-day. Since then, mostly through the labors of the two Herschels, Dunlop, Marth, Rosse, Javelle, Swift, and others, the number now known amounts to nearly 10,000. Dreyer's *New General Catalogue* (1860) contains the places of 7,810; his *Index Catalogue*, since issued, has additions of 1,529, to which must be added a list of 50 lately discovered by Swift and published in Gould's *Astronomical Journal*. These and others discovered since by various comet-seekers, will make the number at least 9,500.

Nebulae are divided into four classes: *annular*, *planetary*, *stellar*, and *nebulous stars*, which are again subdivided into *large*, *round*, *elliptical*, *irregular*, *resolvable*, *spiral*, *double*, *bright*, *faint*, and *photographic*. Many that were formerly considered as irresolvable have by the

mammoth telescopes of the present day been resolved into suns; but far the larger number resist all attempts at resolving, thus disproving the once popular theory that all nebulae are clusters of stars, and could be resolved if sufficient optical power were at our disposal. The spectroscopist decides in a moment which are clusters, and which are gaseous. If the lines in their spectra are dark, they are clusters, whether the telescope can resolve them or not; but if the lines are bright, they are immense bodies of luminous gas. The cause of their luminosity is unknown. The brightest and largest of the unresolved sort is the great nebula in Andromeda. Although some 1,500 stars are scattered over its surface, they are probably a long distance this side of it. This is one of six naked-eye clusters. In 1885, a 6th magnitude star suddenly blazed forth from its center, which soon disappeared, even beyond the reach of any telescope, without having moved a measurable distance. Such stars are called *temporary stars*. (See STARS.) Whether it had any connection with the nebula itself is not known. It certainly was an extra-

graphically, is nearly equal to the entire constellation. It shows no indication of partial resolvability, as has been stated. The spectroscopist pronounces it a mass of gas of inconceivable magnitude.

Nebulae, as to shape, observe no rule. While some are perfectly round, like the one between Beta and Gamma Ursa Majoris, others are sharply elliptical, of all eccentricities from almost a line to nearly a circle. The distance of not a single nebula or cluster is known. Whether they be nearer or more distant than the 6th magnitude stars will probably never be known. A supposed motion of translation has been detected in a few, also toward and from us in the line of sight, by the spectroscopist. If as distant as the nearest star (Alpha Centauri) one of the smaller nebulae would fill the orbit of Neptune—5,600,000,000 miles in diameter. Midway between Beta and Gamma Lyra is the celebrated "ring nebula," the largest and brightest of all the seven that are known belonging to this class. The ring is sharply defined and bears magnifying well. The center is faintly illumined by nebulous light; it

plate almost 4,000—a universe of itself. Precepe, or "the Bee Hive," in Cancer, another of the six nebulae known to the ancients, can be resolved into stars with an opera glass. Its place for the year 1900 is in right ascension 8h. 33m.; declination north, $20^{\circ} 21'$.

The gaseous nebulae are doubtless undergoing condensation, preparing for the formation of suns and

ordinary phenomenon. The place for this nebula for the year 1900 is right ascension 0h. 37m. 27s.; declination north $40^{\circ} 43' 24''$. It was discovered in 1612 by Simon Marius, and is the first mentioned in history. In 1618 the great nebula in Orion was discovered by Cysatus. It is the most irregular and the most remarkable nebula in the heavens. Its extent, photo-

is gaseous. Two or three stars are seen within the ring with the Lick telescope.

Of the naked-eye clusters, the Pleiades—or "Seven Stars," as they are usually called—is the best example. The naked eye sees only six stars, but the telescope reveals the existence of over 2,700, and the camera, given an exposure of 8 or 10 hours, depicts on the sensitive

Fig. 3002.—NEBULA IN ORION.

Exposure, 2h. on Jan. 25, 1892.

planets. The process is going on right before our eyes, but it is a very slow one. If we suppose that 5,000 of the 9,500 visible nebulae are in their primitive gaseous condition, then within the reach of our feeble vision there would be 5,000 universes in every stage of advancement from gaseity to suns and planets. The discovery of spiral nebulae is due to Lord Rosse with his six-foot reflecting telescope. Several show the spiral form. The most remarkable one is the doublet in the Hunting Dogs, right ascension 13h. 25m. 42s.; declination $+ 47^{\circ} 42' 38''$. The shape of the so-called "dumb-bell" nebula is unique, there being not another one at all resembling it. It is in Vulpecula, right ascension 19h. 55m. 17s.; declination $+ 22^{\circ} 36' 48''$. In 1714 Halley discovered a nebulous object on a line joining the stars Eta and Zeta, of the constellation Hercules, being another of the six visible to the unassisted eye. It is by far the most gorgeous cluster north of the equator. Sir William Herschel announced that it contained 14,000 stars in a space $\frac{2}{3}$ the size of the moon. The number appears to be overstated, and is probably a misprint for 4,000. By far the most magnificent cluster in the whole heavens is the Omega Centauri cluster, in the southern sky. It is another of the six naked-eye nebulae. It is in right ascension 13h. 20m. 46s.; declination south $46^{\circ} 47' 18''$. On a space one-half the size of the moon there must be at least 20,000 stars packed so closely together as to require a large telescope, armed with a high power, to separate them. They range from the 12th to the 15th magnitudes. Planetary nebulae are extraordinary objects; several have been discovered. They present a round, evenly illuminated disk, as sharply defined as the planet Jupiter. Several have a minute star exactly in the center. One of the most interesting is in Cygnus, right ascension 19h. 42m. 50s.; declination $+ 50^{\circ} 16' 46''$. It has an 11th magnitude star in its center. For nebulous stars see STARS.

Nebular, a. Pertaining to nebulae.

Nebular Hypothesis. (*Astron.*) The comparatively recent theory as to the formation of the planets and stars. It contemplates the idea that these bodies were formed by the condensation of matter in its original elements through the influence of gravitation. By many the great German philosopher, Kant, is believed to be the founder of this theory; he reached this conclusion inductively, by studying the structure of the solar system, and then deductively, by proving that such results would accrue from the force of gravitation. He pointed out the fact that the orbits of all the planets and satellites known in his time were in practically the same plane, and that their revolutions, both on their axes and around the sun, were all in the same direction; and upon these facts his hypothesis was largely based. Scientists of to-day, however, know that this is not true of the satellites of Uranus and Neptune, since discovered. Kant explained the common direction of motion by assuming that all the material out of which the solar system was formed, originally existed in its prime elements and filled that space in the universe in which these bodies now move; but his knowledge of mechanical forces was insufficient to enable him to show clearly just how the condensation of matter was effected. Herschel reached practically the same conclusions through telescopic examinations of the nebulae. He found that the glowing, cloud-like masses, or nebulae proper, and the other form known as star clusters, seemed to shade into each other with no definite line of demarcation; from which he argued

that the stars were formed by the gradual condensation of the vaporous masses. The name of La Place is also frequently mentioned as the originator of the *N. H.* He, like Kant, believed that the wonderful uniformity in the direction of rotation, noted above, could not have been a mere coincidence, and his wide knowledge of mathematics enabled him to demonstrate, with much force, the theory that the sun was originally surrounded by a mass of fiery vapor extending far beyond the present limits of the solar system; that this mass consisted of the elements which now compose the planets and satellites; that by gradual cooling and condensation, with a moderate axial rotation, rings would be successively formed which in turn would be gradually condensed into planets, these throwing off similar rings which in time were condensed into satellites. La Place accounted for the zone of asteroids between Mars and Jupiter by assuming that the more general uniformity of this particular ring caused its formation into many small bodies instead of one large planet. The *N. H.* is one of the important links in the general theory of evolution, and as such has been accepted by Mr. Herbert Spencer and other evolutionists. Although not yet definitely proved to be true, there are many known facts that seem explainable on no other hypothesis.

Nebulos'ity, *n.* The state of being nebulous; haziness; cloudiness.

Nebulous, *a.* Cloudy; hazy; misty; as, *nebulous* weather.

(*Astron.*) Pertaining to, or having the appearance of a nebula.

Neb'uly, *a.* Decorated with wavy lines.

(*Her.*) See *LINE*.

Necessarian, *n.* One who maintains the doctrine of philosophical necessity; a necessitarian.

—*a.* Relating to necessarianism.

Necessarianism, *n.* The doctrine of philosophical necessity.

Necessarily, *adv.* By necessity; in such a manner that it cannot be otherwise; indispensably; by unavoidable consequence.

Necessariness, *n.* The state or quality of being necessary.

Necessary, *a.* [Fr. *nécessaire*; Lat. *necessarius*, from *nece* — *ne*, not, and *cedo*, *cessum*, to yield. See *CEDE*.] That cannot be put off, or which is unavoidable; inevitable or indispensable; that must be, and cannot be otherwise. — Indispensably requisite; needful; essential; that which cannot be otherwise without preventing the purpose intended; inevitable, as a conclusion or a result. — Acting from necessity or compulsion; involuntary; — opposed to *free*; as, is man a *necessary* or a *free* agent?

—*n.* Something necessary or indispensable to some purpose; an essential; a requisite; a requirement; — used generally in the plural.

"We are to ask of God such *necessaries* of life as are needful to us." — *Duty of Man*.

—A water-closet; a privy; a house of convenience.

Necessitarian, *n.* A necessarian; one who maintains the doctrine of philosophical necessity.

Necessitate, *v. a.* To make necessary or indispensable; to render unavoidable.

—To compel; to force; to oblige; not to leave free.

Necessitation, *n.* The act of making necessary; compulsion. (*R.*)

Necessitous, *a.* Very needy or indigent; poverty-stricken. — Narrow; destitute; pinching; as, *necessitous* poverty.

Necessitously, *adv.* In a necessitous manner.

Necessitousness, *n.* Poverty; want; need; penury.

Necessitude, *n.* [Lat. *necessitudo*.] Friendship; necessary connection or relation.

Necessity, *n.* [Fr. *nécessité*; Lat. *necessitas*, from *nece* — *ne*, unavoidable. See *NECESSARY*.] That which cannot be put off, or which is unavoidable, inevitable, or indispensable; that which must be, and cannot be otherwise; or the cause of that which cannot be otherwise; indispensableness; inevitableness; state or condition of being absolutely requisite.

"Necessity is the argument of tyrants." — *Earl of Chatham*.

—Irresistible power; compulsive force, physical or moral; fatality.

—Extreme indigence; pinching poverty or penury; pressing need; exigency; emergency.

"The cause of all . . . proceeded from the extreme poverty and necessity his majesty was in." — *Clarendon*.

—That which is necessary; something absolutely requisite; — chiefly in the plural; "as, the *necessities* of labor and employment." — *Law*.

(*Metaph.*) Negation of the forces of voluntary action; subjection of material or spiritual phenomena to indispensable causation.

Of necessity, by compulsion or imperative force of circumstances; by necessary consequence.

Neck, (*nek*.) *n.* [A. S. *hnecca*; D. *nek*; Dan. *nakke*; Fr. *nuque*, the nape of the neck; Pers. *anik*.] That flexible part of an animal's body which is between the head and the shoulders.

(*Anat.*) That part of the body which connects the head with the trunk. It is principally made up of the cervical vertebrae and the numerous muscles which cover them, and are concerned in their different movements and in those of the head and shoulders. The pharynx and oesophagus lie in contact with the front of the vertebral column, and the larynx and trachea in front of these. The large blood-vessels of the head pass through the neck on the front of the spine, and some important nerves take nearly the same course. These several organs, connected together rather loosely by

cellular substance and surrounded by integuments, compose the neck.

—The long, slender part of a vessel, as a retort; or of a plant, as a gourd.

(*Bot.*) The point of junction between the root and the stem.

Neck and crop, completely; utterly; thoroughly; as, he is ruined *neck and crop*. — *Neck-break*, utter ruin.

Neck of a capital. (*Arch.*) The space between the astragal on the shaft and the annulet of the capital in the Grecian-Doric order. — *Neck of a cascabel*. (*Ord-nance.*) The part connecting the knob to the base of the breech of a gun. — *Neck of a gun*, the minor part of a gun in front of the chase. — *On the neck of*, immediately following; closely after.

Stiff neck, contumacy; obstinacy; perverseness. — *To break the neck of*, to reduce to more than half; to take away the prime difficulty of a thing.

To harden the neck, to grow stiff-necked, contumacious, or obstinate.

Necho, (*ne'ko*.) a king of Egypt, called in Scripture Pharaoh-Necho, succeeded his father Psammetichus, 617 B. C. He planned a canal from the Nile to the Arabian Gulf, which undertaking he was forced to abandon, after losing a great number of men. The ships of Necho sailed from the Red Sea round the coast of Africa into

Fig. 1926.

JEWISH CAPTIVES PRESENTED BEFORE PHARAOH-NECHO.

(Copied from the great Tomb of the Kings explored by Belzoni.)

the Mediterranean, and returned to Egypt, after a voyage of three years. This monarch invaded Assyria, and, on his march, was attacked by Josiah, king of Judah, who was slain in the battle. Necho was in turn defeated by Nebuchadnezzar, and obliged to return to his own country, where he died 601 B. C.

Neck'ar, a river of S.W. Germany, rising in the mountains of the Schwarzwald, and after a N.W. course of 240 m., joins the Rhine at Mannheim. It is navigable 120 m.

Neck-beef, *n.* The coarse flesh of the neck of cattle, sold to the poor at a cheap rate.

Neck-cloth, *n.* A piece of cloth worn on the neck; a cravat; a neck-tie.

Necked, (*neck'd*.) *a.* Having a neck; as, stiff-necked, long-necked.

Neck'er, JACQUES, a French statesman, minister of finance to Louis XVI., b. at Geneva, 1732. He went to Paris at an early age, obtained employment in a banking-house, in which he rose to a partnership, and in 13 years, having made a number of successful speculations, retired from business with a large fortune. He commenced his political career by becoming a member of the council of Two Hundred at Geneva. He was afterwards appointed minister of the republic of Geneva at Paris, where, by degrees, he rose to the highest employments. In 1765 he was appointed syndic of the French East-India Company; in 1775, director of the royal treasury; and was twice director-general of the finances of France. But the Revolution, which all his efforts were unable to check, obliged him to retire to Switzerland. Necker wrote three volumes on the finances of France, a book on the influence of religious opinions, and other works. He married the daughter of a Protestant clergyman, by whom he had a daughter, Madame de Staël-Holstein, the wife of the Swedish ambassador. She afterwards became celebrated by the name of *Madame de Staël*. D. in Switzerland, 1804.

Neck'erchief, *n.* A handkerchief for the neck; — called also *neck-handkerchief*.

Neck'lace, *n.* A string of beads or precious stones, worn by women on the neck.

Neck'laced, (*nek'läst*.) *a.* Wearing a necklace.

Neck-land, *n.* A long, narrow part of land.

Neck-mould, *n.* (*Arch.*) A small convex moulding surrounding a column at the junction of the shaft and capital.

Neck-tie, *n.* A neckerchief; a strip of silken or cotton stuff worn round the throat; as, a fancy *neck-tie*.

Neck-weed, *n.* Hemp; — used in ridicule, because used for hanging criminals.

Necrolog'ic, **Necrolog'ical**, *a.* Pertaining to necrology.

Necrologist, *n.* One who gives an account of, or registers deaths.

Necrology, *n.* [Gr. *nekros*, a dead body, and *logos*, discourse.] An account of the dead or of deaths; a collection of short biographical notices of deceased persons, published shortly after their death; a register of deaths.

Nec'romancer, *n.* One who practises necromancy; a conjurer; an eucharist; a sorcerer.

Nec'romancy, *n.* [Gr. *nekromantia*, from *nekros*, a dead body, and *manterion*, a prophesying, divination.] The art of revealing future events is the divination of the future by consulting the spirits of the dead. The origin of the pretended art extends far beyond the limits of history. It is generally believed to have arisen in Egypt at a very early period, and to have been from hence carried into most of the other countries of antiquity. The Jews, doubtless, became acquainted with it here, and we find it repeatedly, and in very severe terms, condemned in the Old Testament by Moses and others (*Deut.* xviii. 11, 12). In 1 *Sam.* xxviii. 3-8, we have an account of the witch of Endor's pretended raising up of the spirit of Samuel before Saul. In the eleventh book of the "Odyssey," Homer makes Ulysses raise the shade of Tiresias from the infernal regions. In the sixth book of the "Æneid" of Virgil we have an account of the descent of Æneas into Hades, another form which necromancy sometimes took among the ancients. The Greek satirists did not neglect to aim their shafts at this art, and in the "Frogs," of Aristophanes, and particularly in Lucian's "Mnippus," we have elaborate and amusing descriptions of the ceremonies attending the invocation of the dead and the entrance of the living into Hades. The priesthood usually claimed to be the medium of communication between the living and the dead, and the art was practised with peculiar and imposing ceremonies, which could not fail to greatly impress the beholder. The necromancer surrounded himself with mysterious emblems; a multiplicity of rites preceded the evocation of the spirit; and, above all, solitude and darkness, so potent in their influence over the imagination, were regarded as essential to success. The Thessalian workers of spirits performed their rites with many revolting atrocities, and not unfrequently butchered men in order to consult their spirits before they had time to hasten down to the regions of the dead. The establishment of the Christian religion brought necromancy under the ban of the Church; and the Emperor Constantine prohibited, under severe penalties, the evocation of the dead. The necromancer of the Middle Ages seems to have merged into the sorcerer, who, by means of potent spells, summoned demons and infernal spirits to his aid.

Necroman'tic, **Necroman'tical**, *a.* Pertaining to necromancy; performed by necromancy.

Necroman'tically, *adv.* By necromancy; by conjuration.

Nec'ronite, *n.* [Fr. *nécronite*.] (*Min.*) A variety of Orthoclase. It is found in small nodules in the limestone of Baltimore, and when struck it exhales a fetid odor resembling that of putrid flesh.

Necroph'agans, *n.* [Gr. *nekros*, a corpse, and *phago*, I eat.] Same as *SILPHIDE*, *q. v.*

Necroph'agous, *a.* Feeding on dead animals, as carrier-beetles or *Silphidæ*.

Necroph'orus, *n.* (*Zoöl.*) The Sexton-beetle, a genus of the *SILPHIDÆ*, *q. v.*

Necrop'olis, *n.* [Gr. *nekros*, and *polis*, a city.] This word literally signifies the city of the dead, and was the name given to a suburb of Alexandria in Egypt, containing temples, gardens, and superb mansions. Hence it has come to be applied to some of the magnificent cemeteries in the vicinity of some of our large cities.

Necroscop'ic, **Necroscop'ical**, *a.* That relates to post-mortem examinations.

Necrosed, (*ne-krost'*.) *a.* (*Med.*) Affected by necrosis; as, a *necrosed* bone.

Necrosis, *n.* [Fr. *nécrose*; Gr. *nekrosis*, from *nekros*, I kill.] (*Med.*) A word used as synonymous with mortification or gangrene; but it is more commonly used in surgery to denote the death or mortification of a part or the whole of a bone. Necrosis differs from caries of a bone, inasmuch as in the latter case the vitality of the bone is only impaired, not destroyed, as in the former; in the same way as ulceration of the soft parts differs from gangrene. Necrosis is found in either sex, and at all periods of life, and may be occasioned either by external causes, as fractures, contusions, &c., or by internal or constitutional causes, as a debilitated or deranged habit of body. When a portion of a bone becomes dead, it is regarded as an extraneous substance.

Nectan'dra, *n.* (*Bot.*) A genus of plants, order *Lauraceæ*. The species *N. rodiei* is the *Bibiru* or *Bebeera* tree, a plant of considerable importance. It yields the wood called *greenheart*, which is largely imported into this country from Guiana and the West-Indian islands, for ship-building and other purposes. This timber is heavy, hard, and durable, but rather apt to split; it takes a good polish, and is remarkable for its olive-green color. The bark of this tree has been used of late years as a substitute for the cinchona barks in medicine. Its tonic, anti-periodic, and febrifuge properties are due to the presence of a peculiar alkaloid, called *bibiru*, *bibirine*, or *bebeerine*, which may be employed by itself, or in the form of a sulphate, as a substitute for quinine. The seeds of the *bibiru* contain starch, which is mixed with a species of decayed astrigent wood and a certain quantity of cassava starch, and made into a kind of bread by the South-American Indians. *N. cymbarum* yields the substance called

Brazilian sassafras. The cotyledons of *N. puchury*, major and minor, are imported from Brazil, under the names of *sassafras-nuts* and *pichurium beans*. They are used for flavoring chocolate.

Nec'tar, n. [Gr. *nektar*.] (*Myth.*) The supposed drink of the gods; and it was believed that this nectar, which they never gave to mortals, contributed much towards their eternal existence. According to the fables of the classic poets, it was a most delicious liquor, with properties far exceeding anything that mortals could imagine, as it gave a beauty, bloom, and vigor to all who imbibed it. Combined with ambrosia (which formed the solid food of the gods), it repaired all accidental injuries or decays which might assail them.

Nec'tar'al, Nec'tar'ean, Nec'tar'eous, a. Resembling nectar; very sweet and pleasant.

Nec'tared, a. Imbued with nectar; mingled with nectar; abounding with nectar.

Nec'tar'eously, adv. In a nectareous manner.

Nec'tar'eousness, n. The quality of being nectareous.

Nec'tar'ial, a. (Bot.) Pertaining to a nectary.

Nec'tariferous, a. (Bot.) That yields nectar or honey.

Nec'tarine, a. Sweet as nectar; nectareous.

-n. (Bot.) The Brunion, a variety of the peach, in which the velvety covering of the skin is obliterated, and the surface is smooth and shining. Nectarines are generally more highly flavored than peaches.

Nec'tarous, a. Nectareous; sweet as nectar.

Nec'tary, n. (Bot.) The melliferous part of a flower; sometimes it is in the form of a horn or spur; sometimes in that of a cup, whence it is called the *honey-cup*.

Ned'naes, a. dist. of the S.E. of Norway, bordering on the Skager-rack; area, 4,266 sq. m. The surface is mountainous. *Chief towns.* Arendel, Grimstad, and Millesand. *Pop.* 53,000.

Ned's Point, in Massachusetts, a small peninsula and light-house, on the E. side of Mattapoise Harbor, Buzzard's Bay. It exhibits a fixed light 40 ft. above the sea.

Need, n. [A.S. *neod, nead*; Du. *nood*; Ger. *noth*.] Destitution; indigence; penury; a state that requires supply or relief.—Difficulty; exigency; strait; necessity; want; occasion for something.

-v. a. To want; to lack; to require, as supply or relief.

-v. n. To be wanted; to be necessary.

Need'er, n. One that wants anything.

Need'ful, a. Necessary as supply or relief; requisite.

Need'fully, adv. Necessarily.

Need'fulness, n. Quality or state of being needful; necessity.

Need'ham, in Massachusetts, a post-township of Norfolk co.; *pop.* abt. 3,400.

Need'ily, adv. In a needy manner; necessarily.

Need'iness, n. State of being needy; want; poverty; indigence.

Needle, n. [A.S. *neðl, nedl*; Ger. *nadel*.] A small instrument of steel, pointed at one end, with an eye at the other to receive a thread, used in sewing. (See below, § *Manuf.*)—A small pointed piece of steel, used in the mariner's compass, which, by its magnetic quality, is attracted and directed to the pole—called a *magnetic needle*. (See COMPASS.)—Any thing having the form of a needle.

(*Manuf.*) The needle seems to have been one of the earliest implements used by man, examples of it being found among the most ancient relics of human handiwork. In the reindeer caves of France have been found needles of bone pierced with eyes, and "eyed" needles of bone and bronze are among the prehistoric relics dredged up on the site of the ancient lake-dwellings of Switzerland. Egypt also furnishes examples of bronze needles, about $3\frac{1}{2}$ inches long; and the Pompeian relics in the Naples museum embrace surgeon's needles, and also thinblades—which indicate the use of ordinary sewing needles. Needles made of various materials, such as bone, ivory, wood, and metal, are in use among savage tribes, while some of these employ thorns or bone awls to pierce holes, through which they push and pull the thread or string in the method pursued by a shoemaker. The Fuegians sew skins in this manner, tying the string or fiber at every hole. The needles of the Kafirs have a constriction at the head around which they tie the end of the thread. Mediæval artisans made needles of steel at Nuremberg as early as 1370, metal-working and wire-drawing being common arts in this locality at that period. The art spread over the continent, and was practiced in England in the 16th century, the wire used being imported from Spain and Germany. It did not become important in that country, however, until about 1650. These early needles were all made with square eyes. The art of needle-making developed, and in the 19th century became so intricate a process that each needle had to go through the hands of no fewer than 120 workmen before it became ready for the housewife. This intricacy has been much reduced by later improvements, machines which operate with what seems human intelligence doing much of the work formerly performed by hand. The methods employed in former years are of great interest, and may be here described, as there has been little change in process, the principal improvement being in the substitution of machine for hand labor in many parts of the work. The first operation gone through was to reduce the best steel, by means of a wire-drawing machine, to the suitable diameter of the needle. The steel wire was brought in bundles to the manufactory, where it was tested by being re-heated and plunged into cold water, after which it was snapped between the fingers in order to ascertain its quality. The wire was then calibrated, in order to see whether it was equally thick all through and of the required gauge. The coils of wire were next cut by a pair of mechanical shears into pieces of about 8 feet long, and again into the

requisite needle-length. In order to cut 120 wires, only 2 successive incisions were requisite, and, consequently, the shears, by striking 21 blows in a minute, cut in 10 hours fully 400,000 ends of steel wire, which produced more than 800,000 needles. After the wires were cut, being more or less bent, they required to be straightened; and the operation was thus performed:—They were enclosed, from 5,000 to 6,000 at a time, in 2 strong iron rings, and the bundle placed upon a flat smooth bench covered with a cast-iron plate, which had two grooves in it to receive the projecting circumference of the rings. Above the bundle was placed another plate or rule, which had likewise two grooves to receive the rings, and by pressing this down 2 or 3 times, the wires were immediately straightened. The needles, now in their embryo state, were then taken to the pointing-house, where, by means of some 30 grindstones driven by a water-wheel, they were to be sharpened. The workman seated himself in front of the grindstone (which, on account of the rapidity of its revolutions, was inclosed with iron plates or bands, having slits between for the wire to be applied to the stone), and seizing 50 or 60 wires between the thumb and forefinger of his right hand, presented one end of the bundle to the grindstone, by which means the ends were made conical. This operation was termed *roughing down*, and was performed without the aid of water; by which means the steel-dust seriously damaged the eyes and lungs of the workmen. There were many inventions for preventing this cause of bad health to the needle-workers; but they seldom adopted any precautions, preferring to go along on the old plan, and to do as their fathers did before them. The wires, being thus pointed, were then transferred to the first workshop, and were cut in two, so as to form 2 separate needles of equal length and quality. For each different size a small copper plate was employed. It was nearly square, and had a turned-up edge on 2 of its sides; the one being intended to receive all the points, while the other resisted the pressure of the shears. On this plate a certain number of wires were put with their points in contact with the border, and cut together flush with the plate, by means of a small pair of shears, moved by the knee of the workman. These even wires were next taken to the *head-flattener*. This workman, seated at a table with a block of steel before him about 3 inches cube, took up from 20 to 25 needles between his finger and thumb, spreading them out like a fan, with the points under the thumb; he laid the heads on the steel block, and with a small flat-faced hammer struck a few successive blows upon them so as to flatten them in an instant. The heads having become hardened by hammering, were now annealed by heating and slow cooling, and then handed to the *piercer*, generally a child, who formed the eye in a second by laying one side of the head upon a block of steel, and by driving a small punch through the other side with a smart tap of his hammer. The eyes were then trimmed by driving the punch through them again, and, after laying the needle with the punch sticking through it upon the block of steel, hammering the head on the sides, which caused it to take the form of the punch. The next operator made the groove at the eye, and rounded the head, which he did with a small file. The needles being thus prepared, were thrown, by the workman, pell-mell, into a sort of drum or box, in which they were made to arrange themselves in parallel lines by means of a few dexterous shakes of the workman's arm. They were now ready to be tempered, for which purpose they were ranged on sheet-iron plates, generally about 30 pounds weight at a time, containing about 250,000 to 500,000 needles, and were placed in a furnace, whence, after being heated to redness, they were removed, and immersed suddenly in a bath of cold water. Some manufacturers heated the needles by means of immersion in melted lead. *Polishing* was the next operation, and was the longest and most expensive process. This was effected upon bundles containing 500,000 needles, by a machine, under the guidance of one man, who could polish about 30 bundles at once. The needles were rolled up in the bundles, covered with canvas in layers, with quartzose sand interspersed between the layers, which were smeared with rape-seed oil. These packets were then exposed to the to-and-fro pressure of wooden tables, by which the needles were rubbed constantly together on every side, and were finely polished. They were then *soured by the cask*; that is to say, after being worked during 18 or 20 hours under the tables, the needles were taken out of the packets, and were placed in wooden bowls, where they were mixed with sawdust to absorb the black grease. They were then put in a cask, which revolved by means of a handle and axis, on which it was supported in its frame, and some more sawdust was added, and the cask revolved rapidly until they were quite clean, and the eyes were clear. *Winnowing*, the next process, was achieved by means of a mechanical ventilator, the same as is used for winnowing corn, and the operation left the needles bright and clear from all impurity. For the best descriptions of needles, the three operations of polishing, scouring, and winnowing were generally performed

at least 10 times. They were then sorted in the order of their polish, and the sorter separated all that had broken points, heads, or other defects. This description is given in the past tense, though many of the operations described are still in use. At present the making of a needle requires about 22 processes, of which we may confine ourselves to those which differ from those above described. The first is that of pointing, which was formerly done entirely by hand on a grindstone with a concave surface. In the present method the wires are withdrawn (one following another in quick succession) from a hopper by a pulley which revolves at right angles to the grindstone. An india-rubber band holds the wires to the face of the pulley, and as they pass between it and the grindstone they revolve on their axes. One end of the double-needle blank is thus ground and pointed, and the process is then repeated for the other end. The steel and stone dust, formerly so hurtful to the workmen, is now drawn away by the suction of a strong current of air. The old method of stamping these blanks in the middle, to produce the flat for the eyes and the mark for the holes, formerly done by a hand-worked implement, is now performed by automatic machines. Into these the wire blanks are fed, and the work done by an automatically-moving punch and die. The next operation is to punch two oval holes through the flattened center of each blank by a punching machine. The double blanks—now double needles joined by thin films of metal—are next spitted through their eyes on two wires. The heads are then filed to remove the burr made by the punch, the connecting films broken, and the heads again filed, a single row of needles now being left on each wire. After tempering, much as above described, the needles are rolled one by one on a smooth stone, and those that are bent are thus detected and removed. They are next washed and scoured to remove any remnant of the tempering oil, the eyes "blued" to soften them, and the needles threaded on wire and swung—a little fine emery and oil being used—to smooth the eyes so that they will not cut the thread. The best needles are hand-polished with fine emery. The heads are now ground and the points set by hand on a rapidly-revolving stone. Polishing is at present effected in an ingenious machine, differing from the older method, as above described. The needles are fed, in rows one deep, between transverse leather-covered rollers, with holding rollers above them. They turn as they move, while the rollers are made to move laterally as well as backward and forward, thus giving a high polish to the needles. After being polished they are not touched again by hand in the factory, for fear of causing rust. The next process is to bring all the needles with their heads in one direction. This is done by a machine which lets them fall one by one on an inclined glass plate, down which they roll, their taper form causing them to describe an arc in rolling, those with the heads in one direction rolling to the right, the others to the left. The final process is to spit the needles on paper, or to gather them into small packets. In addition to hand-sewing needles, various forms of machine needles are now produced, all of them having a hook, barb, or eye at the pointed end. The best known form is that with an eye, there being a long groove on one side and a short one on the other, the purpose being to keep the thread from wear or cutting. The needles used in knitting machines are bent at the end to form an open loop. These are made by machines differing from those above named, in conformity to their variation in character. Mention may also be made of the common knitting and crochet needles, made of steel, ivory, bone or wood, with a cut or hook at the end to catch the thread. There are in the U.S. about 45 factories for the making of needles, with an annual product valued at over \$1,500,000.

Needle, v. a. To form, as crystals, in the shape of a needle.

-v. n. To shoot into crystals in the form of a needle.

Needle-book, n. Something in which to keep needles, usually made in the form of a book, with cloth leaves; a housewife.

Needleful, n.; pl. NEEDLEFULS. As much thread as is generally put at one time in the needle.

Fig. 1927.—PRUSSIAN NEEDLE-GUN.

Needle-gun, n. [Ger. *zündnadel-gewehr*.] (*Gun.*) A Prussian breech-loading rifle, invented by Nicolas Dreyse, a locksmith, and for a long time the regulation weapon of the German infantry. It was extensively manufactured at Sömmerda, the native place of the inventor, and was effectively used in the war between

Prussia and Austria in 1866. The principle of this weapon is that the fulmination compound, which is to ignite the powder, lies within the cartridge itself, and can only be reached and caused to detonate by a needle which penetrates the cartridge. The needle is fixed in a holder encircled with a spiral spring, whose recoil, when the pulling of the trigger releases the needle from its detaining catch, darts it forward through a little tube or guide into the breech chamber. The mechanism is carried in a cylindrical case, which is fixed to the stock by bands, and into which the barrel is screwed, so that it forms, as it were, a prolongation of the barrel. In the illustration A is the needle-bolt or holder, BB the lock for drawing it back. It has a little tooth for catching the projection A of the needle-bolt. CC is the chamber in which is fixed the needle-guide *d*. D is the trigger acting on the spring *g* and through it on the catch *h*. When the trigger is pulled, the catch *h* is drawn down from the shoulder *a*, and the released spring causes the needle to dart through its guide into the cartridge, its blunt end sharply striking the fulminate and igniting the charge. The needle-gun was a great advance on any weapon known at the time, but its use has long since been superseded in Germany by other and better weapons, the various nations now using some form of the many highly-developed magazine guns now in use.

Needle-bar, n. In a stocking-frame, a bar in which the needles are fitted with thin leads. In a sewing-machine, the reciprocating bar to the end of which the needle is attached.

Needle-bath, n. A shower-bath in which the water is supplied in fine jets like needles.

Needle-carrier, or bearer, n. A porte-aiguille, forming a handle for a needle.

Needle-ore, n. [From the acicular form of its crystals.] (*Mn.*) A native sulphide of bismuth, copper, and lead, found at Beresowsk in Siberia, imbedded in white quartz. It occurs in acicular four- or six-sided prisms.

Needle-pointed, a. Pointed as a needle.

Needler, n. One who makes needles.

Needle-spar, n. (*Mm.*) Aragonite, *q. v.*

Needles, (The,) a. cluster of pointed rocks on the coast

Fig. 1928. — THE NEEDLES.

of the English Channel, off the Isle of Wight; Lat. 50° 39' 9" N., Lon. 1° 34' W.

Needless, a. In want of nothing; having no need. — Not needed or wanted; unnecessary; not requisite; needless.

Needlessly, adv. Without necessity; unnecessarily; without need.

Needlessness, n. Unnecessariness.

Needle-stone, n. (*Min.*) Scolecite, *q. v.*

Needle-woman, n.; pl. NEEDLE-WOMEN. A seamstress; a woman who works with a needle.

Needle-work, n. Work executed with a needle; or, the business of a seamstress.

Needle-worked, (nee'dl-wurkt,) a. Worked with needles.

Needly, a. Relating to, or resembling a needle.

Needs, adv. Necessarily; indispensably; — generally used with *must*.

"Needs must when the Devil drives." — Proverb.

Need'sy, adv. Without need; needlessly.

Need'y, a. Necessitous; indigent; very poor; distressed through want of the means of living.

Needy, n. In Oregon, a post-village of Clackamas co., abt. 15 m. S.E. of Oregon City.

Neel'ghan, n. (*Zool.*) See NYLGHAI.

Neem-tree, n. (*Bot.*) See MELIACEE.

Neenah, n. In Minnesota, a village of Stearns co., abt. 7 m. S. of St. Cloud.

Neenah, n. In Wisconsin, a city and township of Winnebago co., on Fox river and 3 R. Rs., 35 m. N. of Fond du Lac. Pop. (1895) 5,781.

Neenah River, n. In Wisconsin. See FOX RIVER.

Ne'er, (nâr,) adv. A contraction of NEVER, *q. v.*

Neerwinden, (nîr-vînd'en,) a. village of Belgium, 2 m. from Lauden. Here William III. of England was defeated by the duke of Luxembourg, in 1693; and here, in 1793, the French were defeated by the Austrians.

Ne exeat Republica, [Lat., that he may not leave the country.] (Law.) A writ issued against a person who owes an actually due equitable debt and is meditating a departure from the realm, to prevent his flight without the leave of the court. The motion for the writ, except in some special cases, requires to be supported

by an affidavit as to the debt, and the defendant's intention to go into parts without the State; and the person when arrested may obtain his liberty by either depositing the amount indorsed upon the writ, or by executing a bond, with two sufficient sureties in double that sum, not to leave the country.

Nefarious, a. [Lat. *nefarius*, from *ne*, not, and *fari*, to speak.] Impious; wicked in the extreme; sinful, villainous or vile in the highest degree; abominable; detestable; infamous; execrable; atrocious.

Nefariously, adv. With extreme wickedness; abominably.

Nefariousness, n. The quality of being nefarious.

Nells'ville, n. In Pennsylvania, a post-village of Lancaster co., abt. 5 m. N. of Lancaster.

Negaram, n. A decayed seaport-town of Hindostan, presidency of Madras, dist. of Tanjore, on the Bay of Bengal, 162 m. S.E. of Madras; pop. 10,000.

Negation, n. [Lat. *negatio*, from *negō*, *negatus*.] Denial; refusal; a declaration that something is not, or has not been, or shall not be.

(*Logic.*) The absence of a quality in a thing which, by nature, cannot have it; or the description of a thing by denying its possession of some quality which, by nature, it has not.

Negative, a. Implying denial or negation; — opposed to *affirmative*. — Implying absence; — opposed to *positive*. — Having the power of stopping, withholding, or restraining; as, a *negative* vote.

— *n.* A proposition by which something is denied. — A word which denies, as *no*, or *not*. — The right or power of preventing the enactment of a law or decree. — A decision or answer expressive of negation.

(*Photog.*) A photographic picture in which the lights and shadows of the natural object are transposed; the high lights being black, and the deep shadows transparent, or nearly so. Negatives are taken on glass and paper by various processes, and should indicate with extreme delicacy, and in reverse order, the various gradations of light and shade which occur in a landscape or portrait. A negative differs from a positive inasmuch as in the latter case it is required to produce a deposit of pure metallic silver to be viewed by *reflected* light; while in the latter, density to *transmitted* light is the chief desideratum; accordingly, inorganic reducing and retarding agents are employed in the development of a positive, while those of organic origin are used in the production of a negative. The value of a negative consists in the power it gives of multiplying positive proof. See POSITIVE.

Negative Quantity, (Algebra.) A quantity which is opposite to *positive quantity*, and which is characterized by having the symbol — prefixed to it. The theory of negative quantities is attended with great difficulty and many obstructions when it ascends to the higher branches of mathematics. In the expression $a - b$, where a is greater than b , the quantity can readily be solved; but when we have $a - b$, where b is greater than a , the expression is attended with much difficulty, as is also $-a$ by itself. The best definition, and what is most natural, is that given by Newton, and followed by Euler, that negative quantities are less than nothing; the second definition is usually adopted with regard to mechanics, that negative quantities are similar to positive quantities, only that they are taken in a contrary sense, or opposite direction. D'Alembert, however, has shown that both these definitions lead to inaccurate notions. He observes: Let there be the proportion $1 : -1 :: -1 : 1$, which is true in its results, because the product of the means must equal the product of the extremes, or *vice versa*. Now it must be considered that if -1 be less than nothing, it will be consequently much more less than the positive number 1. Therefore it can be deduced that the second term is less than the first, and consequently the fourth be less than the third. That is to say, 1 will be less than -1 ; but it has been proved to be greater than -1 ; consequently, it will be both less and greater, which is absurd. The only true interpretation which we can attach to a *negative quantity*, is, that it is an absolute quantity which does not conform to the system of reasoning by which positive quantities are governed, but that it relates to another system in such a manner, that, in order to render the formulae for the first system applicable to it, the sign which precedes it must be changed from $+$ to $-$, or from $-$ to $+$. For instance, if y represents the difference between a and z , it does not follow that y substituting $-y$ for $+$ y , the quantity represented by y becomes negative; but merely that of the two quantities a and z , the one which was the greater in the case in which y has the sign $+$, becomes the smaller when the symbol of y is changed into $-$. See IMAGINARY QUANTITY.

Negative, v. a. To dismiss by negation; to disprove; to prove the contrary of. — To reject by vote; to refuse to enact or sanction; to resist a choice or what is proposed.

Negatively, adv. With or by denial; not affirmatively. — In the form of speech implying the absence of something.

Negaunee, n. In Michigan, a city and township of Marquette co., on 2 R. Rs., 12 m. W. of Marquette; has iron mines and manufacturing. Pop. (1894) 5,940.

Neglect, v. a. [Lat. *neglectus*, from *negligo*.] To omit by carelessness; not to heed, care for, or attend to; to disregard; to overlook; to omit by carelessness or design; to forbear to do, use, imply, promote, or attend to. — To slight; to take no notice of; to treat with scornful heedlessness. — To omit to accept or embrace, as an offer.

— *n.* Omission; forbearance to do anything that can be

done, or that requires to be done. — Slight; omission of attention or civilities. — State of being disregarded.

Neglect'edness, n. State of being neglected.

Neglect'er, n. One who neglects.

Neglect'ful, a. Heedless; careless; inattentive. — Accustomed or apt to omit what may or ought to be done. — Treating with neglect or slight. — Indicating neglect, slight, or indifference.

Neglect'fully, adv. With neglect; with heedless inattention; with careless indifference.

Neglect'ingly, adv. Heedlessly; carelessly.

Neglige, (neg-li-zhō'), n. [Fr. *négligé*.] A plain gown, fitting easily to the shape, formerly worn by ladies.

Negligence, n. [Fr. *négligence*; Lat. *negligentia*.] Omission to do; habitual omission of that which ought to be done, or a habit of omitting to do things; carelessness. — Instance of neglect; a negligent act.

Negligent, a. [Fr. *négligent*; Lat. *negligent*, from *negligo*.] Careless; heedless; apt or accustomed to omit what ought to be done; regardless; indifferent; inattentive.

Negligently, adv. Carelessly; heedlessly; without exactness. — With slight, disregard, or inattention.

Negotiability, n. Quality of being negotiable or transferable by indorsement.

Negotiable, (-gō'shi-,) a. That may be negotiated.

N. paper; N. instrument. (Law.) Such documents as are freely assignable from one to another, as bills of exchange and promissory notes. It is essential to the negotiability of a bill between all persons, except the government, that the words "payable to order," or "to bearer," or other equivalent words, be used, authorizing the payee to assign or convey the same to third parties. This mode of transfer depends upon the form in which it is made negotiable. If payable to the bearer, then it may be transferred by mere delivery; but if originally payable to a person or his order, then it is properly transferable by indorsement, because in no other way will the transfer convey a legal title.

Negotiate, v. n. To treat with another respecting purchase and sale; to hold intercourse in bargaining or trade. — To hold intercourse with another in respect to a treaty, league, or convention; to treat with, respecting peace or commerce.

— *v. a.* To procure by mutual intercourse and agreement with another: to procure, make, or establish by mutual intercourse and agreement with others. — To sell; to pass; to transfer for a valuable consideration.

Negotiation, (-shi-ā'shun,) n. [Fr. *negociation*; Lat. *negotatio*.] The transacting of business in traffic: the treating with another respecting sale or purchase. — The transaction of business between nations.

Negotiator, (-shi-ā-tor,) n. [Lat.] One who negotiates; one who treats with others.

Negotiatory, a. Relating to negotiation.

Negotiatix, n. A female who negotiates.

Negrais, (neg'rise,) a. small island at the mouth of the Irawaddy River, in Burmah. Lat. of Cape Negrais, 16° 1' N., Lon. 94° 14' E. — Cape Negrais forms the S.W. extremity of the prov. of Pegu, a part of the region in Further India which is known as British Burmah.

Negress, n. A female negro.

Ne'gril, (NORTH and SOUTH,) two promontories of Jamaica, W. Indies. The latter forms the W. extremity of the island: Lat. 18° 16' N., Lon. 78° 22' W. The other is 8 m. further N.

Negritos, or NEGRILLOS, n. [Sp., dim. of Negroes.] (*Ethnology.*) The name given by the Spaniards to certain Negro-like tribes inhabiting the interior of some of the Philippine Islands, and differing essentially, both in features and manners, from the Malay inhabitants of the Eastern Archipelago. They bear a very strong resemblance to the Negroes of Guinea, but are much smaller in size, averaging in height not more than four feet eight inches, whence their appellation of *N.*, or little Negroes. They are also called by the Spaniards *Negritos del Monte*, from their inhabiting the mountainous districts for the most part; and one of the islands where they are most numerous bears the name of *Isla de los Negros*. These *N.* are also known by the names *Aeta*, *Aigta*, *Ite*, *Inapta*, and *Igolote* or *Igorote*. They are described as a short, small, but well-made and active people, the lower part of the face projecting like that of the African Negroes, the hair either woolly or frizzled, and the complexion exceedingly dark, if not quite so black as that of the Negroes. All writers concur in speaking of them as sunk in the lowest depths of savagery, wandering in the woods and mountains, without any fixed dwellings, and with only a strip of bark to cover their nakedness. The *N.* are found only in five of the Philippine Islands, namely, Luzon, Mindoro, Panay, Negros, and Mindanao, and are estimated at about 25,000 souls. A dwarfish people resembling the *N.* in many particulars have been found to exist widely in Africa.

Negro, n. [Lat. *niger*, black.] (*Ethnology.*) A name properly applied to a race or variety of the human species, inhabiting the central portion of Africa, principally between Lat. 10° N. and 20° S., on account of one of their most striking characteristics — their black color. They do not include the Egyptians, Nubians, Abyssinians, &c., of Northern, nor the Hottentots of Southern Africa. Their characteristics are: skin black, hair woolly, lips thick, nose depressed, jaw protruded, forehead retiring, proportions of the extremities abnormal. They occupy about one-half of Africa. The Egyptians became acquainted with Negroes through the conquests of their rulers about 2300 B. C., and represented them on their monuments as early as 1600 B. C.; whence we know that for nearly thirty-five centuries the type has remained unchanged. They were known to the Greeks

till the 7th century B. C. In Africa, the Negro tribes have in general elevated themselves considerably above the simple state of nature, living in settled habitations, practising a rude agriculture, and carrying on certain manufactures. They display considerable ingenuity in the manufacture of weapons, the working of iron, weaving of mats, cloth, and baskets from dried grasses, in the

Fig. 1929. — UNMARRIED ANGOLESE GIRLS.

dressings of skins of animals, structure of their huts and household utensils, and the making of various implements. Their religion is a species of Fetichism, and they believe in good and evil spirits, witchcraft, charms and spells, omens, lucky and unlucky days, &c. Though cruel to their enemies and prisoners, and setting little value on human life, they are naturally kind-hearted, affectionate, hospitable to strangers, unsuspecting, and communicative of their joys and sorrows. They are of a cheerful disposition, and passionately fond of music. Their languages are described as extremely rude and imperfect, almost destitute of construction, and incapable of expressing abstractions.

Neg'roloid, *a.* [*Negro*, and Gr. *eidos*, form.] That resembles the Negroes.

Neg'ropont, or **CHALCIS**, the cap. town of the island and govt. of Eubœa, Greece, situated on the Euripus, a strait separating the island from Bœotia, and which at this point is only 120 feet wide. *Pop.* 5,000. See **EUBŒA**.

Neg'ropout, (**Channel of**) an arm of the Ægean Sea, Greece, lying between Eubœa and Hellas, and consisting of the S.E. portion of the anc. Euripus. *Ext.* 40 miles long.

Negros, one of the Philippine Islands in the Eastern Archipelago, S. of Luzon; *area*, 3,750 sq. m. *Pop.* 40,000.

Negun'do, *n.* (*Bot.*) The Ash-leaved Maple, or Box Elder, a genus of plants, order *Aceraceæ*. The N. American species, *N. aceroides*, is a handsome tree, 20-30 feet high, with irregular, spreading branches, growing in woods. The trunk is about one foot in diameter, and, when young, covered with a smooth, yellowish-green bark.

Negus, *n.* A liquor made of wine, hot-water, sugar, nutmeg, and lemon-juice; — so called from the English Col. Negus, the first maker.

Nehemi'ah, (**Book of**) (*Script.*) The title of one of the books of the Old Testament, whose author, Nehemiah, flourished about 444-405 B. C. He was sent by the Persian monarch, to whom he was cup-bearer, to rebuild the wall of Jerusalem, after the return from the captivity, and "to seek the welfare of the children of Israel." The Book, therefore, contains a narrative of the transactions in which he bore a principal part, and the reforms effected by him. It may be divided into 8 parts: 1. The departure of Nehemiah from Shushan, furnished with a royal commission to rebuild the walls of Jerusalem, and his arrival there (i. ii. 1-11); 2, an account of the building of the walls and gates of the city, notwithstanding the obstacles interposed by the Samaritans (ii. 12-20, iii.-vii. 4); 3, a register of the exiles who first returned from Babylon, and an account of oblations at the Temple (vii. 5-73); 4, a solemn reading of the law by Ezra, at the feast of Tabernacles (viii.); 5, a solemn fast and repentance of the people, and renewal of the covenant with Jehovah (ix., x.); 6, a list of those who dwelt at Jerusalem and in other cities, register and succession of the high-priests, chief Levites,

and principal singers (xi., xii. 1-26); 7, the dedication of the city walls (xii. 27-47); 8, the correction by Nehemiah of abuses which had crept in during his absence (xiii.) This book was once connected with, and formed part of, the book of Ezra; and hence some ancient writers called it the Second Book of Ezra, or Esdras, and even regarded that learned scribe as the author of it. There can be no reasonable doubt, however, that it proceeded from Nehemiah, for its style and spirit, except in one portion, are wholly unlike Ezra's. Nehemiah was unquestionably, and in the strictest sense, the author of the earlier portion down to chapter vii. 4, the greater part of what follows being evidently compiled from records. The canonical character of the work is established by very ancient testimony.

Neigh, (*nā*), *v. n.* To utter a sound, like a horse, expressive of want or desire; to whinny.

n. The voice of a horse; a whinnying.

Neighbor, (*na'bur*), *n.* [*A.S. neh-gebur*; Ger. *nachbar*.] One who lives or dwells near to another. — One who lives in familiarity with another. — A fellow-being; one of the human race; any one who needs our help.

a. Near to another; adjoining; as, a neighbor house.

v. a. To be near to; to adjoin.

v. n. To inhabit the vicinity; as, he neighbors near. (*B.*)

Neighborhood, *n.* A place near; the vicinity; vicinage; the adjoining district, or any place not distant. — State of being near each other. — The inhabitants who live in the vicinity of each other.

Neighboring, (*na'bur-ing*), *a.* Living or being near.

Neigh'borliness, *n.* State or quality of being neighborly.

Neigh'borly, *a.* Like or becoming a neighbor; kind; friendly; civil; obliging. — Cultivating familiar intercourse; interchanging frequent visits.

adv. With social civility.

Neigh'gherry Hills, or **Neigh'gherries**, a range of mountains in S. Hindostan, presidency of Madras, at the junction of the S. and W. Ghauts; Lat. between 11° 10' and 11° 38' N., Lon. 76° 30' and 79° 10' E. *Area*, 700 sq. m. Several of their summits attain an elevation ranging from 6,000 to 8,760 feet.

Neills'burg, in California, a former post-village of Placer co., about 6 m. N.E. of Auburn.

Neills'ville, in Wisconsin, a city, cap. of Clark co., about 60 m. N.N.E. of La Crosse. *Pop.* (1895) 2,206.

Neisse, (*ni'sa*), a river of Prussian Silesia, which, after a N.E. course of 98 m., joins the Oder 15 m. N.W. of Oppeln.

Neisse, a fortified town of Prussian Silesia, on the Neisse, 48 m. S.S.E. of Breslau. The principal public buildings are the castle, the palace, and the commandant's residence. *Manuf.* Woollens, linens, ribbons, and hosiery. *Pop.* 18,747.

Neith, (*Egyptian Myth.*) A deity who was regarded as an incarnation of nature, and as the patroness of all the arts. Her most celebrated temple was at Sais, where stood the famous Veiled Image.

Neither, (*nē'ther*), *pron.* [*A.S. nathor, nauther*.] Not either; not the one or the other.

conj. Not either; nor.

Neiva, **Neva**, **Nitsa**, or **Nitza**, (*na'va*), a river of Asiatic Russia, govts. of Perm and Tobolsk, rising in the E. of the Ural Mountains, 35 m. N.W. of Yekaterinburg, and after an E.S.E. course of 300 m., joins the Tobol, 50 m. from Tumen.

Nejin, or **Nezhcen**, (*nej-in'*), a town of Russia, govt. of Tchernigov, on the Oster, 36 m. S.S.E. of Tchernigov. *Manuf.* Leather, soap, preserves, and liquors. *Pop.* 17,000.

Nek'imi, in Wisconsin, a post-village and township of Winnebago county, about 15 m. south south-west of Oshkosh.

Nekroso'ziac, *n.* (*Med.*) A new mode of embalming, introduced into this country in 1869, and consisting in a wash of the deceased body without wound or incision.

Nel'aton, AUGUSTE, a French physician, b. 1807, was professor of clinical surgery at the University of Paris, member of the Academy of Medicine, member of the Academy of Sciences, and commander of the Legion of Honor. He has introduced a new operation for the stone. He has written *Recherches sur l'Affectio Tuberculeuse des Os* (1837); *Traité des Tumeurs de la Mamelle* (1839); *Éléments de Pathologie Chirurgicales* (1844-59); *Parallèle des divers Modes Opératoires dans le Traitement de la Cataracte* (1850); *De l'Influence de la Position dans les Maladies Chirurgicales* (1851). D. 1874.

Nellore, a district of Hindostan, presidency of Madras, on the Bay of Bengal, between Lat. 13° 55' and 16° N., Lon. 79° 8' and 80° 21' E. *Area*, 8,000 sq. m. *Cap.* Nellore. *Pop.* 936,000.

Nellore, cap. of the above dist., on the Pennar, 13½ m. from the Bay of Bengal, and 100 m. N.W. of Madras; *pop.* 20,000.

Nel'son, HORATIO, VISCOUNT, the greatest of England's naval commanders, and son of a country clergyman, was b. in Norfolk, 1758. He entered the English navy in 1770 as a midshipman, on board the *Raisonné*, commanded by his uncle, Capt. Suckling, and on that ship being paid off, he served on a merchantman trading to the W. Indies. This voyage over, he re-entered the navy, sailed in an expedition to discover the N.W. Passage, and eventually receiving his commission as lieutenant, he took part in the war waged with the American colonies. He earned and obtained his promotion as post-captain before he was 21 years of age, and, in 1779, contributed largely to the capture of San Juan. Always of a sickly constitution, he was obliged to return home in consequence of ill-health. Afterwards, being appointed to the command of the *Albemarle*, he served under Lord Hood in his long cruise off Cape François, and next acted as second in command in the W. Indies,

where he married the widow of Dr. Nisbet, a physician. Upon war with France breaking out, N. took command of the *Agamemnon* (64 guns), and joined Lord Hood in the Mediterranean, doing good service in that sea, by his co-operation with Paoli and the patriot Corsicans against the French. When on this station, he participated in the siege and storming of Bastia, and in the attack on Calvi lost his right eye. After this he attacked the French fleet, and captured two of its vessels after a gallant fight. In 1797, N. commanding the *Captain* (74 guns), took a memorable part in the battle off Cape St. Vincent, when the Spanish fleet was almost annihilated by Admiral Jervis (afterwards Lord St. Vincent). In this action N. ran his ship between two of the enemy's largest vessels (one of which carried 112 guns), and after raking them right and left with broadsides from the "Captain's" battery, took them by boarding. For his gallantry in this sea-fight he was made rear-admiral, and decorated with the Order of the Bath. After this he blockaded Cadiz, and in an unsuccessful attack on Tenerife lost his right arm. He thereupon returned home to recruit, and then received a govt.

Fig. 1930. — LORD NELSON.

pension of \$5,000 per annum, and the freedom of the cities of London, Bristol, and Liverpool. Though at this time only 40 years of age, he had been in action 120 times, had taken 50 French and Spanish merchantmen, and had assisted in the capture of several men-of-war, frigates, and privateers. On the restoration of his health, he returned to the Mediterranean in command of the *St. Vincent*, and was ordered, with a portion of the fleet, to go in pursuit of Napoleon, who had sailed from Toulon. Baffled by contrary winds and weather, it was some time before he came up with the French fleet. However, on the morning of Aug. 1, 1798, he stood in for Alexandria, and there, true to his calculations, he found the enemy moored in the Bay of Aboukir, strengthened by formidable shore-batteries. To see them was to attack them. That night he opened fire, and before the morrow's sunrise every French ship, excepting two which managed to escape, had either surrendered or been destroyed. This great victory, the "Battle of the Nile," paralyzed Napoleon's views on Egypt, and N. was rewarded with the title of *Lord Nelson of the Nile*, with a pension of \$15,000 per annum; while, by the King of Naples, he was created *Duke of Bronté*, in Sicily. In 1801, Lord N. was present as second in command (having Sir Hyde Parker, an old routinist, as his chief) at the bombardment of Copenhagen, or, as it is sometimes called, the *Battle of the Baltic*. This victory, resulting in the annihilation of the Danish fleet and batteries, was entirely due to N. Leading the attack, he refused to cease firing when signalled by his commander-in-chief, continued the action, and only stayed the fight when the ships and batteries opposed to him surrendered. For this achievement, N. received the thanks of Parliament, and the dignity of viscount in the English peerage. In 1804, Lord N. pursued the Spanish fleet to the W. Indies, but they escaped him, and returned to Cadiz. Following up the game, N. returned to Europe, and learning that the combined French and Spanish fleets were cruising off Cadiz, offered his services to the govt. to command a fleet to go out and attack them. His offer being accepted, the gallant old admiral left England for the last time in command of a force of 27 ships of the line, and 5 frigates, and on Oct. 21, 1805, encountered the united enemy's fleet — 33 sail of the line, and 7 frigates — off Cape Trafalgar. Forming line of battle in two columns, he himself led one in the *Victory*, while Lord Collingwood headed the other van in the *Royal Sovereign*. N., sailing right through the centre of the enemy, brought on a general action at once. In four hours, the battle was over, 20 of the enemy's ships

had surrendered, and the marine on which Napoleon had relied for the invasion of England was annihilated, but this with the loss of the victor's life. In the height of the battle, a sharpshooter in the mizzen top of the French ship, the *Redoubtable*, singled out the English admiral, and shot him through the left shoulder. He had, contrary to the entreaty of his officers, gone into action, not only in full uniform, but also decorated with all his orders, and so was a conspicuous mark for the enemy's riflemen. After the fatal shot, Lord N. lingered in great pain for upwards of 3 hours, and then died, learning a few minutes previously that the battle was won. His dying words were, "Thank God, I've done my duty." N., the idol of the English nation, was buried with every mark of national sorrow, love, and honor, in St. Paul's Cathedral, London. His ship, the "Victory," may still be seen at Greenwich, and a brass tablet on her deck records, "HERE NELSON FELL."

Nelson, THOMAS, an American statesman and general, b. in York co., Va., 1738, was son of William N., president of the colonial council. Elected a member of the House of Burgesses when scarcely 21 years old, N. was a member of the first convention which met in Williamsburg in Aug., 1774. He was a conspicuous member of the convention which met in Williamsburg, 1776, to frame a constitution for Virginia, was elected a delegate to the Continental Congress, and signed the Declaration of July 4, 1776. In 1777 he was appointed commander-in-chief of the forces of Virginia; and, in addition to his military duties, he was called, June, 1781, to assume the functions of governor of the commonwealth. Being thus armed with executive and military power, he hastened with all the militia he could muster to oppose the enemy, who were ravaging the country, and did not hesitate to co-operate, as second in command, with the Continental troops under Lafayette. In Nov., 1781, the success of the American cause being then no more the object of a doubt, N. resigned his office, and passed the rest of his life in retirement. After having spent a princely fortune in the cause of his country, he died, 1789, so poor that his remaining possessions were sold at auction to pay his debts.

Nelson, a river-port of Northumberland co., New Brunswick, on the Miramichi River and Bay, about 130 m. N.N.E. of St. John's.

Nelson, in *Illinois*, a post-village of Lee co., abt. 6 m. S.W. of Dixon;

Nelson, in *Kentucky*, a central co.; area, about 380 sq. m. Rivers, Beach Fork and Rolling Fork of Salt river, and Pottinger's creek. Surface, undulating or level; soil, very fertile. Cap. Bardstown. Pop. (1890) 16,417.

Nelson, in *Michigan*, a village and township of Kent co.—In *Minnesota*, a township of Watonwan co.—In *Missouri*, a post-village of Saline co.—In *Nebraska*, a city and cap. of Nuckolls co.

Nelson, in *New Hampshire*, a post-town of Cheshire co.

Nelson, in *New York*, a post-village and township of Madison co., about 25 m. S. E. of Syracuse.

Nelson, in *Ohio*, a post-village and township of Portage co., about 16 m. N. E. of Ravenna.

Nelson, in *Oregon*, a village of Marion co., about 17 m. N. E. of Salem.

Nelson, in *Pennsylvania*, a post-borough and township of Tioga co., 19 m. S.W. of Corning, N. Y.

Nelson, in *Virginia*, a central co.; area, about 375 sq. m. Rivers, James and Rockfish rivers. Surface, hilly; soil, fertile. This county is intersected by the Southern R. R. and the James river canal. Cap. Livingston. Pop. (1890) 15,336.

Nelson, in *Wisconsin*, a post-township of Buffalo co.

Nelson Lake, an expansion of Churchill River, abt. 200 m. above Hudson's Bay, British N. America.

Nelson's Point, in *California*, a village of Plumas co., abt. 75 m. N.E. of Marysville.

Nelson's River, flows N.E. into Hudson Bay, near Fort York, in British N. America.

Nelsonville, in *Missouri*, a post-village of Marion co., abt. 31 m. N.W. of Hannibal.

Nelsonville, in *Ohio*, a post-village of Athens co., abt. 60 m. S.E. of Columbus.

Nelumbiaceæ, *n. pl.* (Bot.) The Water-Beans family, an order of plants, alliance *Nymphales*.—*Diag.* Distinct carpels immersed in a large honeycombed torus, and without albumen. They are aquatic herbs, with peltate leaves rising above the water, and large showy flowers. The thalamus is very large, flattened at top, and excavated so as to present a number of hollows. The carpels are distinct, and partially imbedded in the large honeycombed thalamus. Fruit formed of numerous 1- or 2-seeded, nut-like bodies. The beautiful plants of this order are natives of stagnant or quiet waters of temperate and tropical regions in the northern hemisphere, being most abundant in India. There is but one genus, namely, *Nelumbium*, which includes three species. The most interesting plant is *N. speciosum*, the fruit of which is commonly considered to have been the Egyptian bean of Pythagoras, and the flower the lotus so often represented on the monuments of Egypt and India (Fig. 1628). The plant, however, is no longer found in Egypt, though common in India. The leaf and flower-stalks contain a large number of spiral vessels. These are extracted and burnt as wicks in the sacred lamps of the Hindoos on great and solemn occasions.

Nelumbium, *n.* (Bot.) See *NELUMBIACEÆ*.

Ne'madji, in *Wisconsin*, a former township of Douglas county.

Nemaha (*nem'-a-haw*), in *Kansas*, a N. E. co., adjoining Nebraska; area, about 720 sq. m. Rivers, Nemaha and Grass-hopper creeks. Surface, undulating; soil, very fertile. Cap. Seneca. Pop. (1895) 19,900.

—A township of the above co.

Nem'aha, in *Nebraska*, a S. E. co., adjoining Iowa; area, about 391 sq. m. Rivers, Missouri and Little Nemaha rivers, and Muddy and Honey creeks. Surface, diversified; soil, very fertile. Coal is found in this county. Cap. Auburn. Pop. (1897) 15,450.

—A post-village of Nemaha co., about 6 m. S. of Brownville.

Nem'aha (or **BIG NEMAHIA**) **River**, in *Nebraska*, rises in Lancaster co. and flowing S. E. enters the Missouri river from Richardson co. Length, about 150 m.

Nem'aline, *a.* [Gr. *nema*, a thread.] (*Min.*) Having the form of threads; fibrous.

Nem'alite, *n.* (*Min.*) A fibrous variety of brucite.

Neman'sa, *n.* (*Astron.*) An asteroid discovered in 1858 by Laurent.

Nem'atoids, *n. pl.* [Gr. *nema*, thread, and *eidōs*, form.] (*Zool.*) An order of insects, comprising worms known as Helminthes, Eutozoa, or Intestinal worms. They live and multiply in the interior of other animals. There is scarcely an animal that is not inhabited by one or more species belonging to this order or to the TREMATODES, *q. v.*

Nemaur, or **NIMAR**, a dist. of Western India, comprising a large portion of the valley of Nerbudda and of the Vindhya Mountains; Lat. between 21° 25' and 22° 25' N., Lon. 74° 48' and 76° 45' E.; area, 2,225 sq. m. The surface is mountainous, with numerous fertile valleys. Prod. Wheat, rice, cotton, tobacco, &c. Pop. 250,000.

Nem. Con. A contraction for (Lat.) *nemine contradicente*, signifying "no one contradicting." — *Nem. diss.*, contracted for (Lat.) *nemine dissentiente*, signifies "no one dissenting."

Neme'a. (*Anc. Geog.*) A city of Argolis, to the N.W. of Mycenæ, celebrated as the haunt of the lion slain by Hercules, and the spot where triennial games were held

Fig. 1931. — TEMPLE OF JUPITER AT NEMEA.

in honor of Archemorus or Orpheltes, son of Lyncurgus, king of Nemea. The ruins of Nemea are to be seen near the modern village of Kutchumadi.

Nem'esis. (*Myth.*) One of the infernal deities, daughter of Nox. She was the goddess of vengeance, always prepared to punish impiety, and at the same time, liberally to reward the good and virtuous. Her power not only existed in this life, but she was also employed after death to find out the most effectual and rigorous means of correction. Nemesis was particularly worshipped at Rhamnus, in Attica, where she had a celebrated statue, ten cubits long, carved in Parian marble by Phidias. The Romans were also particularly attentive to her adoration. Her statue at Rome was in the Capitol. The Greeks celebrated a festival called Nemesis in memory of deceased persons, as the goddess Nemesis was supposed to defend the relics and the memory of the dead from all insult.

Nemopan'thus, *n.* (Bot.) A genus of plants, order *Aquifoliaceæ*, including the Canadian Holly, *N. Canadensis*, a shrub 4-6 feet high, with smooth branches, growing in damp or rocky woods.

Nemophil'a, *n.* [From Gr. *nemos*, a grove, and *phileo*, I love.] (Bot.) A genus of beautiful annual flowers, order *Hydrophyllaceæ*, very popular among amateur gardeners, from their free-flowering habit and brilliant colors. *N. insignis*, which has blue flowers with a white centre, yields perhaps one of the gayest of flower-garden ornaments.

Nemours, (*na-moor'*) a title borne by several persons distinguished in French history, among whom are:—JEAN D'ARMAGNAC, Duc de Nemours, cousin by marriage to Louis XI., who caused him to be beheaded, 1477.—LOUIS, his son and successor in the duchy, viceroy of Naples for Charles VIII., killed at the battle of Cerignola, 1503.—GASTON DE FOIX, son of Mary, sister of Louis XII., killed at the battle of Ravenna, 1512.—PHILIPPE DE SAVOY, uncle to Francis I., who invested him with the duchy, 1528.—JEAN DE SAVOY, a distinguished commander, 1531-1585.—HENRI, second son and successor of JEAN, connected with the League, and afterwards with Henry IV., 1571-1632.—HENRI II., second son and successor of Henry I., born 1625, appointed archbishop of Rheims 1651, abandoned the church on the death of his elder brother, and married Marie D'Orleans, daughter of the Duc de Longueville, 1657, died 1659. The lady survived her husband many years, and, in 1634, was recognized sovereign of Neuchâtel. She died in 1707, leaving valuable "Memoirs" of the minority of Louis XIV., and the wars of the Fronde. The title was next borne by the second son of Louis Philippe, late King of the French.

Nemours, (*ne-moor'*) a town of France, dep. of Seine-et-Marne, on the Loing, 18 m. S.E. of Melun. Manuf. Leather. Pop. 4,000.

Nemuch', a town of Hindostan, Gwalior Territory; Lat. 24° 27' N., Lon. 74° 54' E.; pop. 4,000.

Nems, *n.* (Zool.) The ICHNEUMON, *q. v.*

Nen, or **Nene**, a river of England, rising in the W. of the co. of Northampton, and after a N.E. course of 90 m. falling into the North Sea at the Wash.

Nenagh, (*nai-na'*) a town of Ireland, prov. of Munster, co. Tipperary, on the Nenagh River, a tributary of the Shannon, 82 m. W.S.W. of Dublin; pop. 6,000.

Nenagh, or **NEENAGH**, in *Nebraska*, a village of Platte co., abt. 70 m. N.W. of Omaha City.

Nen'aphar, *n.* [Fr., It., and Sp. *nenufar*.] (Bot.) The Water-lily.

Neo'ea, in *Minnesota*, a village of Winona co., about 18 m. S.W. of Winona.

Neolo'gianism, *n.* The same as neologism.

Neolog'ic, **Neolog'ical**, *a.* Pertaining to neology; employing new words.

Neolog'ically, *adv.* In a neological manner.

Neologism, *n.* [Fr. *neologisme*.] The introduction of a new word, expression, or doctrine. See **NEOLOGY**.

Neologist, *n.* An innovator in theology; one who introduces rationalistic views subversive of revealed truth.

Neologis'tic, **Neologis'tical**, *a.* Neological; pertaining to neology.

Neologiza'tion, *n.* The act of introducing new terms.

Neologize, *v. n.* To introduce or make use of new terms.

Neology, *n.* [Gr. *neos*, new, *logos*, word.] The invention of new words or phrases, for the purpose of expressing ideas which are either new or have hitherto been badly expressed. As progress is made in the sciences, the arts, and the various branches of industry, in any particular country, the extension of its language is a matter of course, and is in itself a complete record of the national advance. There are certain generally recognized etymological rules according to which alone new words may be properly introduced into a language; and when these are observed, the adoption of new words may be regarded as a social benefit.

Neome'nia, *n.* [Gr., from *neos*, new, and *mene*, moon.] The time of new moon; the beginning of the month.

Ne'on, *n.* A new atmospheric element, discovered in 1898 by Professors Ramsay and Travis in liquid argon. It is deposited as a white solid by the argon, and yields a spectrum of bright red lines, one very brilliant, also a brilliant yellow line. Its name signifies "new." It has a density of 9.6 and atomic weight of 19.2, and is monatomic.

Ne'onism, *n.* The same as neologism. (R.)

Neon'o'mian, *n.* [Gr. *neos*, new, and *nomes*, law.] (*Theol.*) One who believes the Gospel to be a new law.

Neon'o'mianism, *n.* The doctrine of the Neononians.

Ne'ophyte, *n.* [Fr. *neophyte*, from Gr. *neos*, new, and *phyton*, a plant.] (*Eccles.*) In the primitive Church, newly converted Christians were so termed; and the same appellation is still given in the Roman Church, to converts made by missionaries among the heathen, to any person entering on the priestly office, and to these persons newly received into the communion of the Church. — A beginner; a tyro; a debutant.

Neoplat'onism, *n.* The doctrine of the Neoplatonists.

Neoplat'onists, *n. pl.* (*Phil.*) The mystical philosophers of the school of Ammonius Saccas and Plotinus are commonly so called, who mixed some tenets of ancient Platonism with others derived from a variety of sources, and particularly from the demonology of the East. They flourished in the fourth and fifth centuries of the Christian era. Some, however, have contended that this title is more properly applicable to the eclectic Platonists, or school of Antiochus and Philo.

Neora'ma, *n.* [Gr. *neos*, a temple, and *orama*, a view.] A panorama representing the interior of a large building in which the spectator appears to be placed.

Neo'sho, in *Kansas*, a S. E. co.; area, 576 sq. m. Surface, undulating; soil, fertile. Cap. Erie. Pop. (1895) 18,578.—A village and township of Cherokee co.—A township of Coffey co., about 7 m. S. of Hampden.—A township of Labette co.—A township of Morris co.

Neosho, in *Missouri*, a city and township, cap. of Newton co., on the St. Louis & San Fran. and Kans. C., Pitts. & Gulf R.R.s., 22 m. S. of Carthage. Lead mines exist here. Pop. (1897) 2,340.

Neosho, in *Wisconsin*, a post-village of Dodge co., about 14 m. N. E. of Watertown.

Neosho Falls, in *Kansas*, a post-village and township, former cap. of Woodson co.

Neosho Rapids, in *Kansas*, a post-village of Lyon co., about 12 m. S. E. of Emporia.

Neosho River is formed by the union of two branches in Lyon co., Kansas, and flowing S.S.E. through Coffey, Woodson, Allen, and Neosho cos., into Indian Territory, joins the Arkansas river about 10 m. below Fort Gibson.

Neoter'ic, **Neoter'ical**, *a.* [Gr. *neoterikos*.] New; novel; recent in origin; modern.

Nepaul', a kingdom of N. Hindostan, comprising a great portion of the S. declivity of the Himalaya Mountains; between Lat. 26° 30' and 30° 50' N., Lon. 80° and 88° E.; having N. and N.E. Tibet, E. the territory of Sikkim, S. and W. Hindostan. Area, 53,000 sq. m. Desc. The surface is level in the S., and gradually ascends until terminating N. in lofty mountains, interspersed with valleys ranging from 3,000 to 6,000 ft. above the great plain of Hindostan. The climate is diversified but healthy, except in the S. The soil is generally fertile. The principal rivers are the Kurnalli, Rapti, Gunduk, and Sun Kosi. Prod. Wheat, rice, maize, barley, cotton, tobacco, and sugar-cane. Min. Copper, iron, lead, and zinc. Manuf. Cotton cloth, hells, and brass and copper utensils. It has a considerable trade with China, Tibet, Bhootan, and Cashmere. Exp. Ivory, wax, honey, hides,

timber, &c. *Imp.* Carpets, muslins and silks, tobacco, and European goods. The cap. is Khatmandoo. The inhabitants consist mainly of two tribes, the Ghoorkas, who predominate and rule, and the Newars, who are principally artisans. The govt. is despotic, though somewhat modified by customs. It is divided into the provs. of Khatmandoo, Lalita Patan, Bhartgong, and Kirchipoor. These are governed by Subahs, who are the supreme officers of revenue, justice, and police. The religion is Buddhism. *N.* was formerly divided between numerous independent chiefs, until conquered by the Ghoorkas in 1768. The aggressions of the latter into the Chinese territory was put a stop to in 1792, and the rajah obliged to make an ignominious peace. They next turned their arms against the British, who, after a two years' war, obliged them, in 1816, to cede all the country between the Sutley and the Kali rivers, and to evacuate the territory of Sikkim. They rendered material assistance to the British in the Indian mutiny of 1857. *Pop.* 2,000,000.

Nepalese, *n. sing. and pl.* (*Geog.*) A native, or the natives of Nepal.

Nepe, *n.* A square blanket used by the Indians to wrap the foot and ankle in.

Nepean, (*ne-peen'*) a river of E. Australia, New South Wales, joining the Narragamba to form the Hawkesbury.

Nepentha'cea, *n. pl.* [From *Gr. ne*, not, and *penthos*, grief.] (*Bot.*) The Pitcher-plant family, an order of plants, alliance *Euphorbiales*. *Diag.* An infinite multitude of scabiform seeds, having an inferior radicle. —

Fig. 1932. — PITCHER-PLANT, (*Nepenthes distillatoria*.)

They are herbaceous or somewhat shrubby plants. Leaves alternate, and terminated by a pitcher-shaped structure, provided with an articulated lid. Flowers terminal, racemose, dioecious; calyx inferior, with 4 divisions; stamens collected into a column; anthers 2-celled, extrorse, usually 16; ovary superior, 4-angled, 4-celled. Fruit capsular, 4-celled, with loculicidal dehiscence. Seed albuminous; embryo with an inferior radicle. There is but one genus, *Nepenthes*, which includes about 14 species, natives of swampy ground in China and India.

Nepen'the, *n.* [Fr., from *Gr. nepenthes*, removing sorrow.] A magic potion, calculated to banish the remembrance of grief and enliven the spirits, and supposed to be opium. The first mention of it is in the *Odyssey* of Homer, who describes Helen as administering it to Telemachus, and states that she had learned the art of making it from Polydamna, wife of Thonis, king of Egypt. Of modern poets, Milton and Pope are the principal who have alluded to it. The word is now used figuratively to express any remedy which gives rest and consolation to an afflicted mind.

Nepenthes, *n.* (*Bot.*) See NEPENTHACEÆ.

Nepe'ta, *n.* [*It. nepetella*, cat-mint.] (*Bot.*) A genus of plants, order *Lamiaceæ*. The Cat-nip, Cat-mint, Cat's-ear, Cat's-foot, or *Nep. N. cataria*, is a common wayside weed, naturalized everywhere, and particularly attractive to cats. The Gill-over-the-Ground, or Ground-Ivy, *N. glechoma*, is a creeping plant, leaves petiolate, opposite, roundish, hairy, and glaucous; flowers axillary; corolla bluish-purple, with a variegated throat. This plant is naturalized about hedges, walls, &c.; it is aromatic, and was formerly used in ale, and also in medicine.

Nepen'skin, or NEPEUSKUN, in *Wisconsin*, a post-village and township of Winnebago co., abt. 90 m. N. by E. of Madison; *pop.* of township abt. 1,800.

Neph'eline, *n.* (*Min.*) A double silicate of alumina and soda found on Monte Somma, near Vesuvius, in pure white crystals lining cavities in the older lavas.

Neph'e'lum, *n.* (*Bot.*) A genus of plants, order *Sapindaceæ*. It contains three celebrated exotic fruits, the Litchi or Leechee of China, the Longan of China, and the Rambutan of Malacca. The Litchi produces nearly round fruit an inch and a half in diameter, containing a sweet jelly-like pulp; the Longan is smaller, and possesses an agreeable sub-acid flavor; and the Rambutan, which is of an oblong form and about two inches long, is esteemed for its pleasant acidulous pulp. All are small trees with pinnated leaves.

Nephew, (*nef'yu*) *n.* [*A. S. nefu*; *Ger. neffe*.] The son of a brother or sister.

Neph'i, in *Utah*, a city, cap. of Juab co., about 92 m. S. of Salt Lake city. *Pop.* (1895) 2,515.

Neph'in, and NEPHIN-BEG'. Two mountains of Ireland, in Connought, co. Mayo. The first is abt. 6 m. S.S.W. of Crossmalina. *Height* 2,646 ft. The other is abt. 9 m. N.W. of Newport. *Height*, 2,065 ft.

Nephral'gia, **Nephral'gy**, *n.* [*Fr. nephralgie*, from *Gr. nephros*, kidney, and *algos*, pain.] (*Med.*) Pain and neuralgia in the kidneys.

Neph'rite, *n.* (*Min.*) A hard, tough mineral occurring in compact masses of a leek-green color, passing into gray and greenish white on the western coast of New Zealand. Its common name is *JADE*, *q. v.*

Nephrit'ic, **Nephrit'ical**, *a.* [*Gr. nephritikos*, from *nephros*, the kidney.] (*Med.*) Pertaining to the kidneys or organs of urine; affected with a disease of the kidneys; relieving disorders of the kidneys in general. — *n.* (*Med.*) A medicine employed for the cure of diseases of the kidneys.

Nephrit'is, *n.* [*Gr.*] An inflammation of the kidneys. See *KIDNEY*.

Nephro'dium, *n.* [*Gr. nephros*, and *eidos*, likeness.] (*Bot.*) A genus of ferns, order *Polypodiaceæ*. In the species of this genus the veins of the pinnule-like segments anastomose in a convenient manner with those of adjoining segments for a greater or less distance from the rachis of the pinna, as the segments are more or less united. They are for the most part tropical plants.

Nephrog'raphy, *n.* [*Gr. nephros*, and *graphē*, a description.] (*Anat.*) A description of the kidneys.

Nephrolith'ic, *a.* (*Med.*) Belonging to gravel, or calculi in the kidneys.

Nephrol'ogy, *n.* [*Gr. nephros*, and *logos*, a discourse.] (*Med.*) A dissertation on the kidneys and their functions.

Nephrot'omy, *n.* [*Fr. nephrotomie*, from *Gr. nephros*, and *temnein*, to cut.] Dissection of the kidney. — Operation of extracting calculi or stone from the kidney by cutting.

Nepis'sing, or **Nipissing**, a lake of pr. of Ontario, lying between Lake Huron and the Ottawa River. It covers an area of 750 sq. m., and contains many islands. It is connected with Georgian Bay of Lake Huron by French River. — A dist. of Ontario.

Nepon'set, in *Illinois*, a post-village of Bureau co., abt. 40 m. W.S.W. of Mendota.

Nepon'set River, in *Massachusetts*, enters Boston Harbor from Norfolk co.

Nepon'set Village, in *Massachusetts*, a post-village of Norfolk co., abt. 5 m. S.E. of Boston.

Ne'pos, CORNELIUS, a Roman historian of the time of Julius Caesar and the first six years of Augustus. The only remains of his works are some short biographies of twenty Greek generals, and of Hannibal and Hamibal.

Ne'pos, FLAVIUS JULIUS, a Roman emperor, was a native of Dalmatia, and having married a niece of Leo I., that monarch gave him the Western empire. Nepos marched to Rome to secure his throne, after which he fixed the seat of government at Ravenna, but was obliged to quit that city by his general Orestes. He then retired to Dalmatia, where he was assassinated by two officers of his court, in 480.

Nep'otal, *a.* Of or relating to nephews.

Nepot'ic, *a.* Pertaining to nepotism.

Nepotism, *n.* [*Fr. nepotisme*, from *Lat. nepos*, nepotis, a nephew.] A word first used in Italy in reference to the anxiety displayed by some popes to enrich and aggrandize their nephews. Its meaning has gradually become extended, and it is now generally applied to all persons holding public offices, who endeavor to advance the interests of their relations, whether nephews or not, at the public expense.

Nep'otist, *n.* One who practises nepotism.

Nept'ine, *n.* [*Lat. Neptunus*.] (*Myth.*) The god of the sea in Grecian mythology, son of Saturn and Ops, and brother to Jupiter, Pluto, and Juno. He was devoured by his father upon the day of birth, and again restored to life by means of Metis, who gave Saturn a certain potion. Neptune shared with his brothers the empire of Saturn, and received as his portion the kingdom of the sea. This did not seem equivalent to the empire of heaven and earth, which Jupiter had claimed; therefore he conspired to dethrone him. The conspiracy was discovered, and Jupiter condemned Neptune to build the walls of Troy. Neptune, as god of the sea, was entitled to more power than any of the other gods, except Jupiter.

Not only were the ocean, rivers, and fountains subjected to him, but he could also cause earthquakes at his pleasure, and raise islands with a blow of his trident. The worship of Neptune was established in almost every part of the earth. He was generally represented sitting in a chariot made of a shell, and drawn by sea-horses or dolphins. Sometimes he is drawn by winged horses, and holds a trident in his hand, and stands up as his chariot flies over the surface of the sea. Homer represents him as

Fig. 1933. — NEPTUNE.

issuing from the sea, and in three steps crossing the whole horizon. The ancients generally sacrificed a bull and a horse on his altars.

Nept'ine, *n.* [God of the sea. Sign, ♆, his trident.] (*Astron.*) Knowing the distances of the planets from the sun and from each other, and their perturbing effects on each other by attraction, the mathematical astronomer can locate the place of any one at any epoch, past, present, or future; and the exactness with which he can do it is one of the marvellous powers the Creator has bestowed on man. The five old planets—Mercury, Venus, Mars, Jupiter, and Saturn—were never in advance or behind their computed places. The discovery of Uranus, in 1781, proved the existence in the solar family of a wayward son. He was erratic in his movements, being sometimes in advance of, and afterward behind, his computed place; an effect which no known member of the solar system could possibly cause. One of two things was assumed as the reason of his anomalous behavior, viz.: (1) a wrong value of the mass of Jupiter or Saturn (or both) had been acquired, or (2) there was an undiscovered planet beyond Uranus. The weight of evidence was in favor of latter hypothesis. An inspection of Fig. 3003 will show the position of the two planets in 1781, and how Uranus was accelerated from that time until near 1822, and then retarded until 1840 and later. The inner circle represents the orbit of Uranus, the outer that of Neptune. The discovery place of Uranus was at 1781 on the inner circle, and that of Neptune at the same date on the outer. It will be seen that all the time from 1781 until 1822 the attraction of Neptune had accelerated the motion of Uranus, but retarded it in the several positions of 1830-1840, and until Neptune's discovery in 1846. The only effect Neptune could exert in 1822 on Uranus, was simply to draw him away from the sun. In 1830 it was noticed that Uranus began to lag behind his computed place, and in 1844 the retar-

Fig. 3003. — ORBITS OF NEPTUNE AND URANUS.

dation had amounted to two minutes of arc, equal to $\frac{1}{8}$ of the sun's diameter. Several astronomers took up the theory of the hypothetical planet which had been seen only by the eye of faith. Among these was the illustrious Bessel, who, just as he was about to begin the work, was seized with an illness which resulted in death. Among others who essayed the task of locating the place of the disturber were Adams, of England, and Leverrier, of France. The former located it in Lon. $329^{\circ} 19'$, the latter in Lon. $326^{\circ} 0'$. Leverrier requested Encke to search for it, and on the same evening Galle, his assistant, found the planet in Lon. $326^{\circ} 52'$, or less than $\frac{1}{4}$ sun-breadths from his assigned place. The distance of the planet from the sun is much less than was assumed by the two mathematicians, being 2,746,271,000 miles, a distance so vast that an express train running 40 miles an hour would require over 8,500 years to reach it. The length of Neptune's year is 164½ of our years; consequently his poles must be alternately exposed to light and darkness for 82 years. The length of his day is unknown, as is also the direction of his rotation. As his satellite, however, revolves around him in a retrograde direction, it is reasonable to suppose that the planet rotates in the same direction. His distance from the sun being 30 times our own, his temperature must be $30^2 = 900$ times colder. The sun subtends an angle of only $2\frac{1}{2}''$, shining like a very bright star. The only planet visible from him is Uranus, and occasionally, perhaps, Saturn could be seen, but always close to the sun. A denizen of this frontier world would have no suspicion that a planet inside of Saturn's orbit had an existence. Considering all the circumstances, it seems that a world so unfavorably situated, as regards heat and light, cannot be an inhabited one. As he shines as a star of the 8th magnitude, he can never be seen without a telescope. Both theoretical discoveries, in consonance with Bode's law, assumed that the planet was twice the distance of Uranus from the sun, or about 3,600,000,000 miles, which was too great by nearly 854,000,000 miles, but the assumed mass being too great also, the two discrepancies in a measure balanced each other. The discovery of Neptune will ever be a shining light in the history of astronomical research.

Neptune', in *Ohio*, a post-village of Mercer co., about 115 m. W. N. W. of Columbus.

Nerium, *n.* [Gr. *neros*, humid.] (*Bot.*) A genus of plants, order *Apocynaceae*. To this genus belongs the well-known Oleander, or Rose-bag tree, a shrubby plant, with long, willow-like, leathery leaves, and terminal clusters of large rose-colored flowers. It is very ornamental, but like many others of its order is furnished with a poisonous juice.

Nero, *CLAUDIUS DOMITIUS*, called after his adoption *CLAUDIUS DRESCUS*, Roman emperor, was the son of *Cneius Domitius Ahenobarbus*, and of *Agrippina*, daughter of *Germanicus*. He was B. A. D. 39; had the philosopher *Seneca* for his teacher; was adopted by *Claudius*, A. D. 50, and four years after succeeded him on the throne. At the commencement of his reign his conduct excited great hopes in the Romans: he appeared just, liberal, affable, and polished; but this was a mask which soon fell off. He caused his mother to be assassinated, and vindicated the unnatural act to the Senate on the ground that *Agrippina* had plotted against him. He divorced his wife, and led a most shameless and abandoned life. In 64, Rome was burnt, and popular suspicion pointed to *N.* as the author of the conflagration. He charged the Christians with it, and commenced a dreadful persecution of them. His cruelties, extravagance, and debauchery at length roused the public resentment. *Piso* formed a conspiracy against the tyrant, but it was discovered and defeated. That of *Galba*, however, proved more successful, and *N.*, being abandoned by his flatterers, put an end to his existence, A. D. 68.

Neroli, *n.* An elegant perfume, extracted from the flowers of a peculiar orange, small in size, but very aromatic, a native of Italy. *Neroli* is an essential oil, obtained by distillation from the orange-blossoms, and far superior to the pungent article known as the oil of orange-peel (*oleum aurantii*), and too frequently substituted for this delicate perfume.

Nerva, *MARCUS COCCILIUS*, Roman emperor, who succeeded *Domitian*, A. D. 96, at the age of 64; and *D.* after a reign of two years, during which his virtues did honor to the throne.

Nervation, *n.* (*Bot.*) The manner in which the veins of the leaves, &c. are arranged.

Nerve, *n.* [Fr. *nerf*; Ger. *nerve*; Lat. *nervus*; Gr. *neurōn*.] A sinew; a tendon; a ligament.

—Strength or firmness of body; fortitude; firmness of mind; courage; strength; force; authority; unaliness. (*Anat.*) See NERVOUS SYSTEM.

(*Bot.*) One of the ribs or principal veins of a leaf.

—*v. a.* To give strength or vigor to; to arm with force.

Nerved, *a.* (*Bot.*) Applied to a leaf, of which the veins run parallel from the base to the apex.

Nerveless, *a.* Destitute of nerve or strength; weak.

Nervii, (*ner'vi-i*). (*Anc. Hist.*) The most warlike of the tribes of Belgium, are first mentioned by *Cæsar*, B. C. 57, when he defeated them in a severely contested battle on the banks of the river *Sambre*. They rose again in arms, B. C. 54, when they joined the *Eburones* in an unsuccessful attack upon the camp of *Quintus Cicerō*, and were subdued by the Romans, B. C. 53. At a meeting of the Gallic states, B. C. 52, the *Nervii* sent 5,000 men as their contingent to the relief of *Alesia*. Their country forms the modern province of *Hainault*.

Nervine, *a.* (*Med.*) Having the quality of quieting the nerves.

—*n.* (*Med.*) A medicine which acts on the nervous system.

Nervose, *a.* (*Bot.*) The same as NERVED, *q. v.*

Nervosity, *n.* Nervousness; the quality of being nervous.

—State or quality of being nerved or nervose.

Nervous, *a.* Full of nerve; well strung; strong; vigorous. —Pertaining to the nerves; seated in or affecting the nerves, as weakness or disease; having the nerves affected; diseased in the nerves; weakly; debilitated; easily agitated. —Possessing or manifesting vigor of mind; characterized by strength in sentiment or style; as, a nervous writer.

(*Bot.*) The same as nerved.

Nervous Diseases, (*Med.*) Of the numerous disorders to which the human frame is liable, there are, perhaps, none which exert so extensive an influence, and are at the same time so little understood, as the whole class of *N. D.* The nervous system is the presiding and governing power of the whole animal machine. Whether the patient sleeps or wakes, acts or suffers, all that he does or feels is through its agency. It not only governs individual parts, but harmonizes the action of all, binding together the various portions by the strongest ties of sympathy, so that the well-being of one promotes the general good, and one cannot suffer without affecting all. The suffering and disorders to which it is liable are so varied in their sources, so uncertain in their nature, degree, and combination, — are attended for the most part with such different lesions, if attended with any, that they are not only difficult to describe when first observed, but even more so to recognize when they recur. Connecting, as does this system, the mental with the physical, the diseases affecting it are not confined to the body, but invade the province of the mind itself. *N. D.* are properly divided into structural and functional diseases of the nervous system; the former arising from some morbid change or lesion in the nerve structures, the latter including those in which there is no morbid change or lesion to account for the symptoms. Structural diseases may be divided into — 1. Those of the brain and spinal cord, and their covering or membranes; and, 2. diseases of the nerves. The brain and spinal cord are subject to diseases affecting their membranes, their substance, and their blood-vessels. (See BRAIN, DISEASES OF THE.) Diseases of the nerves themselves are not numerous. They may arise from inflammation of the delicate fibrous

sheath which envelops the nerves, from the development of tumors near the origin or along the course, or amid the ramifications of the nerves, or from the bulbous expansion of the extremities of divided nerves, occurring after amputation, and causing painful stumps. The functional diseases of the nervous system manifest themselves by irregular, depressed, or exalted conditions of the processes and peculiar functions of the system; viz., sense, sensation, and motion. They may be enumerated as follows: — 1. The numerous varieties of neuralgia, which are independent of disease of the nerves or their centres. (See NEURALGIA.) 2. The various forms of insanity and general paralysis, where no morbid change occurs in the brain to account for the symptoms. 3. The various exhibitions of mental and moral perversity, constituting the diseases known as hysteria, convulsions, paralysis of sensation and motion, &c. 4. Delirium tremens, that derangement of the nervous functions manifested by optical illusions, hallucinations, mania, and muscular trembling, which arises from exhaustion of the nervous power produced by prolonged stimulation by alcohol. 5. Chorea, or St. Vitus's dance, an affection occurring generally in young girls, and consisting in irregular contractions of the voluntary muscles, and which has been graphically described as "insanity of the muscles." 6. The convulsions and paralysis that occur in infancy and childhood, from the irritation of teething, or from gastric and intestinal derangements. 7. Tetanus, or locked-jaw, a rigid spasm of the voluntary muscles, arising from an exalted state of the reflex function of the spinal cord, sometimes spontaneous, but more frequently the result of lacerated wounds. Hydrophobia may be included under this head. 8. The rare and curious derangement known as catalepsy and ecstasy. Epilepsy is sometimes a purely functional, sometimes an organic disease. These several diseases will be found described under their special heads in other parts of this work. It is one of the remarkable features of mental disorders, that they are frequently entailed by mimicry or imitation. The treatment of *N. D.* often embarrasses the scientific practitioner, and resists the most skillful applications. The particular nerve medicines which were formerly considered as specific remedies in such complaints have been given up, and the mode of treatment is now more general and rational, being directed to the restoring and strengthening the general system by means of nourishing food, gentle exercise, bathing, tonics, &c. It has been held that the advance of civilization and intelligence has rendered the nerves more irritable, and therefore more liable to be diseased; but a more frequent cause of nervous maladies is to be found in the excessive use of fermented liquors, wine, tea, coffee, &c., which impair the tone of the stomach, and thus give rise to various forms of *N. D.* Besides attention to the state of the body, it is of the utmost importance to strive to maintain a calm and uniform state of mind, one not easily disturbed by the crosses and accidents of life. The mind and the body reciprocally act upon each other and promote each other's health. The elements of mental discipline which, if steadily pursued, fail not to conduce not only to health of mind and body, but also to enduring comfort and happiness, are "the subjugation of gross appetites, the subordination of all turbulent or violent moral and mental emotions; the cultivation of the gentle and contemplative feelings, best cultivated in domestic life and in refined social intercourse; and the regular but moderate application of the intellectual powers to some definite object or set of objects worthy of pursuit."

Nervous System, (*Anat. and Physiol.*) The nervous system embraces that portion of the organism of man by which the mind is brought into connection with the physical world. The nervous system consists of two portions or constituent systems, — the cerebro-spinal, and the sympathetic or ganglionic. The cerebro-spinal system includes the brain and spinal cord, with the nerves proceeding from them, and is denominated by *Bichat* the nervous system of animal life. It includes those nervous organs in and through which are performed the several functions with which the mind is more immediately connected, as those relating to sensation and volition. The sympathetic or ganglionic system, named by *Bichat* the nervous system of organic life, consists of a chain of ganglia extending from the cranium to the pelvis along each side of the vertebral column, and from which nerves with ganglia proceed to the viscera in the thoracic, abdominal, and pelvic cavities. (See GANGLION.) The several organs of the nervous system are composed of two different substances, which differ from each other in density, color, minute structure, and chemical composition. They are the vesicular-nervous and the fibrous-nervous matter, the former being also called the gray or cineritious substance, the latter the white or medullary. The former is distinguished by its dark reddish-gray color and soft consistence, and is found usually collected in masses and mingled with fibrous structure, as in the brain, spinal cord, and the several ganglia, but never in the nerves. The masses constitute what are termed nervous centres, being the organs in which it is supposed that nervous force may be generated, and in which are accomplished all the various reflections and other modes of disposing of impressions when they are not simply conducted along nerve-fibres. The fibrous nerve-substance, besides entering into the composition of the nervous centres, forms along the nerves or cords of communication which connect the various nervous centres with the different tissues and organs. The vesicular nervous substance is composed, as its name implies, of vesicles or corpuscles, commonly called nerve or ganglion corpuscles, containing nuclei and nucleoli; the vesicles being imbedded either in a

finely granular substance, as in the brain, or in a capsule of nucleated cells, as in the ganglia. Each vesicle consists of an exceedingly delicate membranous wall inclosing a finely granular material, part of which is occasionally of a coarser kind and of a reddish or yellowish-brown color. The nucleus is vesicular, much smaller than the vesicle, and adherent to some part of its interior. The nucleolus, which is inclosed within the nucleus, is vesicular in form, of minute size, and peculiarly clear and brilliant. The nerve-corpuscles vary in shape and size; some are small, spherical, or ovoidal, with an uninterrupted outline. The fibrous-nervous matter consists of two different kinds of nerve-fibres, which are distinguished as the tubular fibre and the gelatinous fibre. In most nerves these two kinds are intermingled, the tubular fibres being more numerous in the nerves of the cerebro-spinal system, the gelatinous predominating in the nerves of the sympathetic system. The nerve-fibres vary in size, being largest within the trunk and branches of the nerves, where they measure from 1-2000ths to 1-3000ths of an inch, and becoming gradually smaller as they approach the brain and spinal cord, and usually, also, in the tissues in which they are distributed. In the gray matter of the brain and spinal cord they seldom measure more than 1-10,000ths to 1-14,000ths of an inch. The tubular fibres, in a perfectly fresh state, present the appearance of simple membranous tubes,

Fig. 1934. — DISTRIBUTION OF THE FACIAL NERVE AND OF THE BRANCHES OF THE CERVICAL PLEXUS.

1, The facial nerve at its emergence from the stylo-mastoid foramen; 2, temporal branches communicating with (3) the frontal branches of the fifth or trifacial nerve; 4, infra-orbital branches, communicating with (5) the infra-orbital branches of the fifth nerve; 6, maxillary branches communicating with (7) the mental branch of the fifth nerve; 8, cervico-facial branches; 9, the spinal accessory nerve giving off a branch to the trapezius muscles.

perfectly cylindrical, and containing the proper nerve-substance, a transparent oil-like and apparently homogeneous material, but which, shortly after death, undergoes a change, and has the appearance of being composed of two different materials: the internal or central part, occupying the axis of the tube, becomes grayish, while the outer or cortical portion becomes opaque, and finely granular or grumous, as if from a kind of coagulation. The gelatinous fibres constitute the main part of the trunk and branches of the sympathetic nerve, and are intermingled in various proportions in the cerebro-spinal nerves. They are flattened, soft, and homogeneous in appearance, and when collected together in great numbers, they present a yellowish-gray color. They differ from the tubular fibres in being only one-half or one-third of their size, in the absence of the double contour, their apparently uniform structure, and their yellowish-gray color. The nerves are divided into two great classes, — the cerebro-spinal, which proceed from the cerebro-spinal axis, and are the nerves of animal life, being distributed to the organs of the senses, the skin, and the muscles; and the sympathetic or ganglionic nerves, which proceed from the ganglia of the sympathetic, and are distributed chiefly to the viscera and blood-vessels, and are termed the nerves of organic life. The cerebro-spinal nerves consist almost exclusively of the tubular nerve-fibres, the gelatinous fibres existing only in very small proportion. Each cerebro-spinal nerve consists of numerous nerve-fibres collected together and inclosed in a membranous sheath. A small bundle of primitive fibres so inclosed is called a *funiculus*; and if the nerve is of small size, it may consist only of a single funiculus; but if large, the funiculi are collected together into larger bundles or fasciculi, and are bound together in a common membranous investment termed the sheath. Nerves, in their course, subdivide into branches, and these frequently communicate with the branches of a neighboring nerve; but in these communications the nerve-fibres never coalesce, but merely pass into the sheath of the adjacent nerve, become intermixed with the nerve-fibres, and again pass on to become blended with the nerve-fibres in some adjoining fasciculus. Every nerve-fibre in its course proceeds uninterruptedly from its origin at a nervous centre to its

destination; and however long its course, there is no branching or anastomosis, or union with the substance of any other fibres. The communications which take place between two or more nerves from what is called a *plexus*, in which the component nerves divide, then join, and again subdivide in such a complex manner that the individual fasciculi become most intricately interlaced. As the small bundles of nerve-fibres approach their final and minutest distribution in the several tissues, they commonly form delicate "terminal plexuses." The primitive fibres appear to terminate in various ways, as in loops, in plexuses, by branching, by free ends. The central termination of a nerve-fibre is that in connection with a nerve-centre; the peripheral termination, that in connection with the different organs and tissues. The sympathetic nerve consists of tubular and gelatinous fibres intermixed with a varying proportion of filamentous areolar tissue, and inclosed in a sheath of fibro-areolar tissue. The tubular fibres are for the most part smaller than those composing the cerebro-spinal nerves, and their double contour is less distinct. The nerve-fibres both of the cerebro-spinal and sympathetic system convey impressions of a twofold kind—the one the impressions made upon their peripheral extremities or parts of their course conveyed to the nervous centres, the other the impressions from the brain and other nervous centres to the parts to which the nerves are distributed. For this twofold office two distinct sets of nerve-fibres are provided,—the sensitive, called also the centripetal or afferent nerves, which convey impressions from the periphery to the centre; and the motor, centrifugal, or efferent nerves, which transmit central impulses to the muscles, &c. But with this difference in the function of the nerves, there is no apparent difference in the structure of the nerve-fibres by which it might be explained. Nerve-fibres appear to possess no power of generating force in themselves, or of originating impulses to action; but they possess a certain property of conducting impressions, but which is never manifested till some stimulus is applied. This property of nerves is called excitability, irritability, or nervous force, and one of its peculiarities is the rapidity with which it travels along the nerve-fibres. In many respects it resembles electricity, but the analogy between the two does not amount to identity. Almost all things that can disturb the nerves from their passive state, act as stimuli, and produce the same kind of effect, though not the same in degree, because that on which they act possesses but one kind of excitable force. All stimuli, internal or external, chemical, mechanical, or electrical, when applied to sensitive nerves, produce sensations, and when applied to motor nerves, excite contractions. There are certain kinds of nerves, however, the irritation of which produces effects that are entirely peculiar to themselves; thus, irritation of the optic nerves causes the sensation of light of the auditory nerve, of sound; and of the olfactory or gustatory nerves, of smell and taste. It is a remarkable fact, that, whatever part of a sensitive nerve be irritated, whether it be the centre, middle, or extremity, the same sensation will be produced.

Nervously, adv. With strength or vigor.

—With weakness or agitation of the nerves.

Nervousness, n. State or quality of being nervous; strength; force; vigor; state of being composed of nerves.

—Weakness or agitation of the nerves.

Nervure, n. [Fr. *nervure*.] (*Bot.*) A nerve.

(*Zoöl.*) One of the corneous tubes serving to expand the wing and keep it tense, as well as to afford protection to the air-vessels; they are termed costal, post-costal, mediastinal, externo-median, interno-median, anal, axillary, &c., according to their relative positions.

Nervy, a. Strong; vigorous.

Nes'bit Moor. (*Eng. Hist.*) The name of a battle fought May 7, 1402, between the Scots, under Sir P. Hepburn, of Hailes, and the English, under the earls of Percy and March. The Scots were defeated, their leader and most of his knights slain, and the rest taken prisoners.

Nescience, (nesciens,) n. [Lat. *nescientia*.] Ignorance; the state of not knowing.

Nescopeck', in Pennsylvania, a post-village of Luzerne co., abt. 90 m. N.E. of Harrisburg.

Nescopeck (or Buck) Mountain, in Pennsylvania, a ridge of Luzerne co., abt. 20 m. in length, running parallel to the Wyoming Mountain. Height, abt. 1,000 ft.

Nescopeck Creek, in Pennsylvania, enters the N. branch of the Susquehanna River in Luzerne co.

Nesee'ma, in Nebraska, a village of Otoe co., abt. 18 m. W. of Nebraska City.

Neshaminy Creek, in Pennsylvania, enters the Delaware River from Bucks co.—Another, enters the Shenango river in Lawrence co.

—A post-village of Bucks co.

Neshan'ic, in New Jersey, a post-village of Somerset co., about 10 m. S.W. of Somerville.

Neshko'ro, in Wisconsin, a post-village and township of Marquette co., about 70 m. N. of Madison.

Nesh'oba, or NASHOBA, in Mississippi, an E. central co.; area, about 560 sq. m. Rivers. Pearl river, and some less important streams. Surface, diversified; soil, mostly fertile. Cap. Philadelphia. Pop. (1890) 11,146.

Nesh'onoc, in Wisconsin, an unimportant village of La Crosse co.

Nesho'to, in Wisconsin, a village of Manitowoc co., about 100 m. N. of Milwaukee.

Nesocha'que River, in New Jersey, rises in Camden co., and flowing E.S.E. forms a branch of the Little Egg Harbor river.

Nesqual'ly, in Washington, a river flowing northwest into Puget Sound, between Pierce and Thurston counties. On the N. shore of the mouth of this river stands

FORT NESQUALLY, the nucleus of a thriving village or settlement of the same name.

Ness. [A. S. *nes, nys*.] A termination added to an adjective to change it into a substantive, denoting state or quality; as, poisonous-ness; loveliness.

[Probably akin to Fr. *nez*; Ger. *nase*; Lat. *nasus*, nose.] The termination of several names of places in Great Britain, where there is a headland or promontory, as Inverness, Sheerness.

Ness, (Loch.) a lake of Scotland, co. of Inverness, extending 23 m. from N.E. to S.W., with an average breadth of 1½ m. It receives the rivers Morriston, Oich, and Foyers, and discharges its surplus waters into the Moray Frith by the river Ness.

Nesselrode, CARL ROBERT, COUNT VON, a celebrated Russian statesman and diplomatist, b. at Lisbon in 1770 or 1780. He early entered the diplomatic service, in which his father was also engaged, and after various subordinate employments, was made councillor of the Russian embassy at Paris in 1807. He became a great favorite with Napoleon, succeeded in detaching Russia from the Austrian alliance, and was present at the important conferences between the emperors Napoleon and Alexander at Erfurt in 1808. He gained immense influence over Alexander's mind, was made chancellor of the empire, and dictated his foreign policy; followed him to France in 1814, and signed the Quadruple Alliance; took part in the Congress of Vienna, and in the dismemberment of Poland. At that Congress, N. shared with Metternich and Talleyrand the chief direction of affairs; and while his master sat at the feet of the mystic Madame Krudencr, he managed to make her his instrument. He was the chief contriver of the *Holy Alliance*, which made Russia virtually supreme in Europe, and N. supreme in Russia. The Count took a leading part at the congresses of Aix-la-Chapelle in 1818, and of Verona in 1822. N.'s influence was considerably lessened under the Emperor Nicholas, and he long strove to avert the threatened war with the Western Powers, which broke out in 1853. After the accession of Alexander II., Count N. retired from his office of chancellor of the Russian empire, and d. 1862.

Nes'sus. (*Myth.*) A celebrated centaur, son of Ixion and the Cloud. He offered violence to Dejanira, whom Hercules had intrusted to his care, with orders to carry her across the river Evenus. Hercules saw the distress of his wife from the opposite shore of the river, and immediately discharged a poisoned arrow, which struck the centaur to the heart. Nessus, as he expired, gave his tunic to Dejanira, assuring her that it had the power of calling a husband away from unlawful loves. Dejanira received the present, which afterwards caused the death of Hercules. See HERCULES.

Nest, n. [A. S. *nu*, and Ger. *nest*.] The place or bed formed, generally by interweaving, by a bird for incubation, or the mansion of her young until they are able to fly. See BIRD. — Any place where irrational animals are produced.—An abode; a place of residence; a warm, close place of abode; a receptacle of numbers, or the collection itself.—(*pl.*) Boxes or drawers; little pockets or repositories.

(*Geol.*) A detached mass of a particular mineral isolated in a rock.

—*v. n.* To build or occupy a nest.

—*v. a.* To place in a nest.

Nest'-egg, n. An egg left in the nest to keep the hen from forsaking it;—hence, the nucleus of a hoard.

Nestle, (nes'l,) v. n. To settle; to harbor; to lie close and snug, as a bird in her nest.—To move about in one's seat like a bird when forming her nest.

—*v. a.* To house, as in a nest; to cherish.—To nourish and protect, as a bird her young.

Nestling, (nes'ling,) n. A young bird in the nest or just taken from the nest.

—*a.* Newly hatched; being yet in the nest.

Nes'tor, son of Nelus and Chloris. His father and eleven brothers were killed by Hercules; but the conqueror spared Nestor's life and placed him upon the throne of Pylas. As king of Pylas and Messenia, he led his subjects to the Trojan war, where he distinguished himself among the rest of the Grecian chiefs by eloquence, wisdom, and justice. After the Trojan war he retired to Greece, where he enjoyed the peace and respect due to his old age and his surpassing prudence of mind. The ancients declare that he lived three generations of man.

Nesto'rianism, n. The doctrine or principles of the Nestorians.

Nesto'rians, n. pl. (Eccl. Hist.) The followers of Nestorius, a bishop of Constantinople in the 5th cent. In strenuously opposing certain errors of his time, regarding only one nature in Christ, he went to the other extreme, and maintained not only that he was both God and man, but that the two natures were distinct, and that the actions and sensations of Christ as the Son of God were to be carefully discriminated from those of Christ as the Son of Man. Hence, he objected to the Virgin Mary being styled the mother of God, because it was only the human nature of Christ that was born of her, seeing that God could neither be born nor die. His opinions were vigorously combated by St. Cyril, bishop of Alexandria, and were condemned by several councils. Nestorius himself being declared guilty of blasphemy, was deprived of his bishopric, and sent into banishment. His followers, however, continued to increase, and his doctrines were propagated throughout the East, particularly in Persia. A famous Nestorian school was established at Nisibis; and before the close of the 16th cent. the heresy had spread over Chaldaea, Assyria, Syria, Egypt, Arabia, &c. In 1551, a dispute arose among them respecting the election of a patriarch, and at

that time a section of them became reconciled to the Church of Rome, and their patriarch was consecrated by the Pope. These united Nestorians are now commonly known as Chaldaean Christians, and are under the patriarch of Babylon. The non-united Nestorians still remain as a distinct body, and inhabit principally the W. part of Persia, amounting to about 70,000.

Nesto'rius, a bishop of Constantinople in the early part of the 5th century, under Theodosius II. He was a native of Syria, and was deposed from his bishopric for denying the doctrine of the Incarnation, or the two natures of God.—See NESTORIANS.

Net, n. [A. S. *net*, *nett*; Dn. *net*; Ger. *netz*.] A texture of twine, thread, &c., with meshes, commonly used to catch fish, birds, &c. The contrivance is of very ancient date, as appears from the allusions to it in Isa. xix. 8, 9, but more especially in the representations of nets and the modes of using them by the ancient Egyptians, preserved upon their monuments (Figs. 1935, 1936). They appear to have been the most efficient means these people possessed of securing game of all kinds; and they consequently

Fig. 1935.

had the greatest variety of nets, and of all sizes, sufficient even to enclose considerable tracts of land, into which they drove antelopes and gazelles, and sometimes hyænas and jackals. The animals, being thus confined, became an easy prey to the hunters. Their net for birds was ingeniously contrived, so that when spread and the birds had collected over it, the two sides could be made to collapse by the persons in charge suddenly drawing a rope attached to it (Fig. 1936). Fishing-nets

Fig. 1936.

were furnished, as are those of the present day, with wooden floats along one side, and leaden weights for sinking the other; and they were drawn together with the fish they enclosed by numbers of men upon the shore. Large nets are now employed for taking shoals of fish off our coasts, by means of two boats sailing in company and spreading the net between them, weighed along one edge. Nets are usually made by the fishermen and their families during periods of leisure.

—A cunning device; a snare; an inextricable difficulty.

—*v. a.* To make into a net or network.—To capture by wile or stratagem.—To gain or produce, as clear profit.

—*v. n.* To knit; to form into network.

—*a.* (*Com.*) Being beyond all charges or outlay, as gain; being clear of all deductions; neat; as, *net weight, net profit, net amount*.

Neth'er, a. [A. S. *mithere, mithror, neothra*, lower.] Lying or being beneath or in the lower part; opposed to upper; in a lower place; belonging to the regions below.

Neth'erlands, (Kingdom of the.) See HOLLAND.

Neth'er Providence, in Pennsylvania, a township of Delaware co.

Neth'ermost, a. Lowest; as, the *nethermost* hell.

Nethin'ims, n. pl. [Heb.] Among the Jews, the servants of the priests and Levites, employed in the lowest and meanest offices about the temples.

Net'ing, n. A piece of network.

(*Naut.*) A network of rope or small lines, used for stowing away sails or hammocks.

Nettle, (net'l,) n. [A. S. *nete*, *netle*.] (*Bot.*) See URTICA.

(*Naut.*) The same as KNITTLE.

—*v. a.* To fret or sting, as with nettles; to irritate or vex; to excite sensations of displeasure or uneasiness in, not amounting to wrath or violent anger; to pique.

Net'tle-cloth, n. A thick, tissued cotton, japanned, and used as a substitute for leather for the peaks of caps, waist-belts, &c.

Net'tle Creek, in Illinois, a township of Grundy co.

Net'tle Creek, in Indiana, a township of Randolph co.

Net'tler, n. One who irritates, provokes, or piques.

Net'tle-rash, n. [Lat. *urticaria*.] (*Med.*) A disease characterized by a rash or eruption of the skin, attended with intense itching, and taking its name from the close resemblance it bears to that produced by the stinging of nettles. The eruption consists of little solid eminences of irregular outline, but generally roundish or oblong, and either white or red, or, which is most common, both red and white, the whiteness occupying steadily the central and most projecting part of the spot, or becoming manifest there when the integuments are put upon the stretch. It is accompanied

with intense heat, and a burning or tingling in the affected spots. No part of the body is exempt from nettle-rash. There are two varieties of this disorder, one of which is regarded as acute, and the other as chronic, and either persistent or intermittent. The acute form is usually preceded or attended with feverishness, and a feeling of general uneasiness, headache, nausea, and vomiting. In general, it appears in the morning, vanishes in the course of a few hours, and perhaps reappearing again twice or thrice during the day. It usually disappears entirely in six or eight days. The chronic form of this complaint is intractable and difficult to remove, coming and going for a lengthened period, but with little or no feverishness. In most cases, probably in all, this disease arises from some derangement, manifest or latent, of the stomach; and it may frequently be traced to the use of some particular articles of food, as shell-fish, oatmeal, mushrooms, &c. It is very rarely fatal; and the treatment is simple. The great thing is to ascertain and avoid the offending article of food, and by means of a light diet and mild laxative medicine, the disease may usually be got rid of in a few days. An emetic is frequently of great service in expelling the offending substance. A few grains of rhubarb, or rhubarb and magnesia, taken daily, just before breakfast and just before dinner, have been found to cure chronic cases of long standing. Dusting the itching surface with flour will be found to afford temporary relief.

Nettle-tree, *n.* (*Bot.*) See *CELTIS*.

Nettuno, a seaport-town of S. Italy, in the Campagna, 31½ m. S.E. of Rome; *pop.* 3,000.

Netty, *a.* Like a net; netted.

Network, *n.* A complication of threads, twine, or cords united at certain distances, forming meshes, interstices, or open spaces between the knots or intersections; reticulated work.

Neu-Bran-denburg, a town of Mecklenburg-Strelitz, on Lake Tollens, 17 m. N.N.E. of Neu-Strelitz. *Manuf.* Cottons, woollens, playing-cards, and tobacco; *Pop.* 7,000.

Neuburg, (*noib'boorg*), a town of Bavaria, on the Danube, 29 m. N.N.E. of Augsburg. It contains a handsome palace, and a royal castle. *Pop.* 6,500.

Neufchatel, or **Neuchâtel**, (*nu(r)sh'a-tel*), a cant. of W. Switzerland, between Lat. 46° 50' and 47° 10' N., Lon. 6° 25' and 7° 5' E.; having N.E. and E. the cant. of Berne, S.E. the Lake of Neufchatel, S.W. Vaud, and W. and N.W. the dept. of Doubs in France; *area*, 280 sq. m. *Desc.* The surface is mountainous, being traversed by the Jura, which in some parts attains an elevation of 5,000 feet. The soil is principally calcareous, and is devoted to pasturage and the culture of the vine. *Lakes.* Neufchatel, and a part of that of Bienné. *Rivers.* The Doubs, Reuss, Thiéle, and Tyon. *Manuf.* Matches, cotton fabrics, hosiery, metallic wares, and cutlery. *Cap.* Neufchatel.

NEUFCHÂTEL, cap. of the above cant., on the N.W. shore of the Lake of Neufchatel, 17 m. N.W. of Freyburg, and 45 m. E.S.E. of Besançon. The principal public buildings are the castle, the town-hall, and the church, a fine Gothic edifice. *Manuf.* Printed cottons and linens.

Neufchatel, (**Lake of**), or **Lake of YVERDUN**, in W. Switzerland, between the cantons Neufchatel, Vaud, Freyburg, and Berne. *Ext.* 24 m. long from N.E. to S.W.; average breadth 4 m.; *area*, 90 sq. m. The elevation of its surface above the sea is 1,320 feet; its greatest depth 400 feet. It receives several rivers, and discharges its surplus waters by the Thiéle, to the Lake of Bienné, and thence to the Aar and Rhine.

Neu-Hal'dense'ben, a town of Prussia. See *HALDENSEBEN*.

Neuhaus, (*noih'ous*), a town of Austria, in Bohemia, on the Nescharka, 70 m. S.E. of Prague. *Manuf.* Cloth, paper, and chemicals. *Pop.* 8,000.

Neuhausel, a town of Austria, in Hungary, on the Neutra, 74 m. N.W. of Pesth. *Manuf.* Woollens. *Pop.* 7,300.

Neuilly-sur-Seine, (*nu r'y'e*), a town of France, dept. of Seine, on the river Seine, near the W. extremity of Paris. *Manuf.* Porcelain, starch, and chemicals. *Pop.* 13,216.

Neumünster, a town of Prussia, in Holstein, 17 m. S.E. of Kiel. *Manuf.* Woollen goods. *Pop.* 4,300.

Neural, *a.* [*Gr. neuron*, nerve.] Relating to a nerve, or to the nervous system or centres.

N. arch. (*Anat.*) The arch of the vertebra or primary segment of the skeleton which protects a corresponding segment of the neural axis; it is posterior in man, superior in other vertebrates, and is formed below by the *centrum*, laterally by the neurapophyses, and above by the *neural spine*. — *N. axis* is the central trunk of the nervous system, consisting of brain and myelon; it is sometimes called *cerebro-spinal axis*.

Neuralgia, (*nu-räl'je-a*), *n.* [*Gr. neuron*, a nerve, and *algos*, pain.] (*Med.*) An increased and perverted sensation in a nerve, arising from some disease affecting the function or structure of the nerve or its centres. It is thus of two kinds, — functional (when unconnected with organic lesion at any part of the nervous course or at the nervous centres), or, as is more frequently the case, structural — connected with some organic change, acute or chronic, more frequently the latter, at some part of the nerve's course or at the nervous centres. The causes of neuralgia are various, and generally obscure. They may be either constitutional or local; the former arising from some enfeebled state of the body, or an impoverished condition of the blood, the latter from inflammation of the enveloping sheath of the nerves, or the development of tumors near or along their course. It may also be caused by the circulation of poisonous secretions, as *area*, bile, &c., in the blood, or by the miasma of marshy

regions. The pain is intense, but intermittent; sudden in its onset, and abrupt in its departure, shooting or plunging in its character, and often quite excruciating; readily excited by the slightest external impression; but seldom aggravated by firm pressure on the part — on the contrary, often relieved thereby. The treatment necessarily depends much upon the cause whence it proceeds. When it arises from an enfeebled or impoverished state of body, tonics, nourishing diet, and out-door exercise are to be employed; and in the other cases the treatment has to be directed to removing the causes from which it springs. Where it depends on the pressure of tumors that can be removed, the pain will generally disappear with the removal of the cause. In inflammation of the nerve-sheath, local counter-irritation by cupping, blisters, issues, setons, &c., usually gives relief, and generally effects a cure. Temporary relief in all forms of neuralgia may be obtained by the administration of powerful anodynes, as morphine, used either externally or internally.

Neural'gie, *a.* Pertaining to neuralgia.

Neuritis, *n.* (*Med.*) Inflammation of a nerve. — *Dungrison*.

Neuro'graphy, *n.* (*Anat.*) A description of the nerves.

Neurolog'ical, *a.* Relating to neurology.

Neurologist, *n.* A person who describes the nerves.

Neurology, *n.* [*Fr. neurologie.*] (*Anat.*) The doctrine of the nerves.

Neuropter, *n.* [*Fr. neuroptere.*] (*Zoöl.*) One of the neuroptera.

Neuroptera, *n.* [*Gr. neuron*, a nerve, and *pteron*, a wing.] (*Zoöl.*) A sub-order of insects. It comprises the *Dragon-flies*, *May-flies*, and similar species. The *Neuroptera* are distinguished by their two upper wings, which are membranous, generally naked, diaphanous, and similar to the under ones in texture and properties; they are also distinguished by the number of these organs, as well as by their mouth, which is either fitted for mastication, or else furnished with mandibles and true maxillæ. The abdomen is destitute of a sting,

Fig. 1937. — CADDIS-FLY.

(Family *Phryganidæ*, sub-order *Neuroptera*.)

and is merely furnished with an ovipositor. Their antennæ are usually setaceous, and composed of numerous joints. They have two or three simple eyes, and the trunk is formed of three segments united in a single body, distinct from the abdomen, and bearing six legs, the first of these segments is usually very short, and in the form of a collar. The number of joints in the tarsi varies. The body is usually elongated, and with rather soft, or with slightly squamous segments; the abdomen is always sessile. Many of these insects are carnivorous in their first state and in their last. Some merely experience a semi-metamorphosis, the rest a complete one; but the larvæ have generally six hooked feet, which they employ to reach their food.

Neuropter'al, **Neuropter'ous**, *a.* Belonging to the *Neuroptera*.

Neuroskele'ton, *n.* [*Gr. neuro*, and *skeletos*, dried up.] (*Anat.*) The deep-seated bones which are connected with the nervous axis and locomotion.

Neurotic, *a.* [*Fr. neurotique.*] Relating to the nerves.

— *n.* (*Med.*) A disease having its foundation in the nerves.

— A medicine used in disorders of the nerves.

Neurotome, *n.* (*Anat.*) A long and very narrow two-edged scalpel used to dissect the nerves.

Neurotom'ical, *a.* Pertaining to the anatomy of nerves.

Neurotomist, *n.* [*Fr. neurotome.*] The person who dissects the nerves.

Neurotomy, *n.* [*Fr. neurotomie*; *Gr. neuron*, and *tome*, incision.] (*Anat.*) Dissection of nerves. — An incised wound of a nerve.

Neurypnology, *n.* [*Gr. neuron*, nerve, *upnos*, sleep, and *logos*, discourse.] The philosophy of the sleep of the nerves, or animal magnetism, — or a treatise on the subject.

Neusatz, a town of Austria, in Hungary, on the Danube, opposite Peterwardein, 46 m. N.W. of Belgrade; Lat. 45° 16' N., Lon. 19° 52' 11" E. It has a considerable trade with Turkey. *Pop.* 20,000.

Neusiedel, (**Lake of**), (*nois'eedl*), a lake of Austria, in N.W. Hungary, 22 m. S.E. of Vienna; *ext.* 23 m. long, and 6 m. in average breadth. It receives the Vulker River, and its surplus waters are discharged by the Rabinitz Canal.

Neusohl, (*nois'ole*), a town of Austria, in Hungary, on the Gran, 85 m. N. of Pesth. *Manuf.* Sword-blades, paper, colors, beet-root sugar, &c. In the vicinity are copper and iron mines. *Pop.* 6,200.

Neuss, (*noiss*), a town of Rhenish Prussia, on the Rhine, 4 m. S.W. of Düsseldorf. *Manuf.* Woollens, cottons, ribbons, leather, velvets, dyes, &c. *Pop.* 9,776.

Neustadt, (*nois'tat*), a town of Prussian Silesia, 29 m. S.W. of Oppeln. *Manuf.* Woollen and linen fabrics. *Pop.* 7,263.

Neustadt, or **Wie'ner-Neustadt**, a town of

Lower Austria, 28 m. S. of Vienna. *Manuf.* Silk, velvet, and cotton fabrics, and leather. *Pop.* 13,700.

Neustadt-an-der-Waag, a town of Austria, in the N.W. of Hungary, 33 m. N.N.E. of Neutra. *Manuf.* Woollens. *Pop.* 6,750, nearly half of which are Jews.

Neu-Strelitz, a town of N. Germany, cap. of the Grand-Duchy of Mecklenburg-Strelitz, 60 m. N.N.W. of Berlin. It was founded in 1733, and contains the ducal palace, with a library of 70,000 vols. *Pop.* 7,000.

Neustria, or **WEST FRANCE**. (*Fr. Hist.*) The name given in the times of the Merovingians and Carolingians to the western portion of the Frank empire, after the quadruple division of it which took place in 511. *N.* contained three of these divisions. It extended originally from the mouth of the Scheldt to the Loire, and was bounded by Aquitania on the S., and by Burgundy and Austrasia (*Francia Orientalis*) on the E. The principal cities were Soissons, Paris, Orleans, and Tours. Bretagne was always loosely attached to Neustria, of which the strength lay in the Duchy of France. After the cession of the territory afterwards called Normandy to the Normans in 912, the name Neustria soon fell into disuse.

Neuter, *a.* [*Lat. ne*, not, and *uter*, whether or which of the two.] Neither the one nor the other; neither of two; not adhering to either party; taking no part with either side; indifferent.

(*Gram.*) Of neither gender: neither masculine nor feminine, said of a noun, or pronoun; neither active nor passive, said of a verb.

(*Bot.*) Having neither stamens nor pistils.

— *n.* A person who takes no part in a contest between two or more individuals or nations. — An animal of neither sex, or incapable of propagation.

Neutra, or **Neitra**, a town of Hungary, on the Neutra, 45 m. E.N.E. of Presburg; *pop.* 10,900.

Neut'al, *a.* Being neuter; not engaged on either side; not taking an active part with either of two contending parties; indifferent: having no bias in favor of either side or party. — Neither very good nor bad; indifferent.

(*Bot.*) Having neither stamens nor pistils.

N. bodies, (*Chem.*) are those which exhibit neither an alkaline nor an acid reaction, and which neither act as bases nor as acids. In organic chemistry they are generally distinguished by the absence of the final *e* at the end of the word; such, for instance, as paraffin, naphthalin, stearin, salicin, benzole, and many others. They form their compounds by the displacement of one or more of those atoms by one or more atoms of some other substance.

Neut'al, *n.* A person or nation that takes no part in a contest between others.

Neut'al'ity, *n.* [*Fr. neutralité.*] The state of being neutral, or of being unengaged in disputes or contests between others; the state of taking no part on either side; a state of indifference in feeling or principle.

(*International Law.*) The impartial position maintained by one nation with regard to others which are at war. A neutral nation may render services to either of the belligerents, which do not necessarily tend to assist in carrying on the war; but it may not supply him with troops, arms, or ammunition.

Neutralization, *n.* [*Fr. neutralisation.*] Act of neutralizing: act of reducing to a state of indifference or neutrality.

Neutralize, *v. a.* [*Fr. neutraliser.*] To render neutral to reduce to a state of indifference between different parties or opinions. — To destroy, as the peculiar properties or opposite dispositions of parties or other things, or reduce them to a state of indifference or inactivity.

(*Chem.*) To destroy, or render inert or imperceptible, as the peculiar properties of a body, by combining it with a different substance.

Neutralizer, *n.* The person who, or thing which, neutralizes.

Neutrally, *adv.* Without taking part with either side; indifferently.

Neuvaines, *n. pl.* [*Fr. neuvaine*; *It. novena.*] (*Ecol.*) In the Roman Catholic Church, prayers offered up for nine days successively, in order to obtain the favor of heaven.

Neuwied, (*noiv'eed*), a town of Rhenish Prussia, on the Rhine, 7 miles N.N.W. of Coblenz. *Manuf.* Silk, cotton, and woollen fabrics, hardware, pipes, &c. *Pop.* 7,766.

Ne'va, a river of Russia, govt. of St. Petersburg, with a W. course of 40 m., and connecting Lake Ladoga with the Bay of Cronstadt, in the Gulf of Finland. It is the principal medium of communication between the interior of Russia and the sea. The city of St. Petersburg stands at one end of it, and Schlüsselberg at the other.

Neva'da, the fourth in size of the States forming the American Union, is bounded N. by Oregon and Idaho, W. by California, S. by the last-named State and Arizona, and E. by Arizona and Utah, comprising the center of the great elevated basin, extending from the Rocky Mountains W. to the Sierra Nevada range. The length of the State from N. to S. is 483 m., with a maximum width, E. to W., of 323 m. *Area*, 110,700 sq. m., or 70,848,000 acres, of which 1,690 sq. m., or 1,081,600 acres, are covered by the water-surface of its numerous lakes. — *Gen. Desc.* A peculiar feature of *N.* is the remarkable uniformity with which mountain and valley succeed each other in almost parallel lines nearly throughout its whole extent, the mountains being rocky and but sparsely covered with herbage or timber, and the valleys generally dry, sandy plains, interspersed with salt and alkali flats, though in some cases possessing broad, shallow streams, bordering on which are wide

belts of alluvial formation, covered by luxuriant herbage varied with well-grown timber, the soil possessing elements of the richest fertility. The Sierra Nevada range of mountains, within the W. boundaries of the State, has an elevation of from 7,000 to 13,000 ft. above sea-level, and is covered with dense forests, the trees being principally varieties of evergreens of species abounding on the Pacific coast, many of them attaining to extraordinary circumference and altitude. The timber of the interior is mainly composed of cotton-wood, birch, willow, dwarf-cedar, nut pine, or piñon, and other similar species, generally soft in texture, and of small dimensions, but very useful for fuel in the absence of harder and larger timber. The mountains are often intersected by ravines, constituting passes possessing great natural advantages for the construction of wagon-roads and railroads, many of them furrowing the vast piles of granite and limestone at a level but slightly above that of the surrounding plains. The E. part of the State is intersected by the East Humboldt, the Silver, the Mammoth, and Augusta ranges of mountains; in the centre are the New Pass, Shoshone, Taiyeh, Simpson Park, and Lough ranges, and in the E. section, the E. Humboldt, Ah-Young Spring, Shonicodit, and Diamond Spring Mountains. The principal rivers of N. are the Truckee, which rises in Pyramid Lake, and after receiving a branch from Winemucca Lake, flows S.E. and S.W. into Lake Tahoe; Humboldt River, which is formed by the Little Humboldt and other small streams in the N.E. portion of the State, takes a S.W. direction, and empties into Humboldt Lake; Walker River, rising in the S.E. section and emptying into Walker Lake; King's and Queen's rivers, in the N. part of the State; Reese River, in the central region; Muddy, Colorado, and Franklin rivers in the S. part; and Carson River in the W. The rivers of N. are generally very shallow and unnavigable, with hurried currents and occasional rapids, although there is not a cascade or cataract in the State. The waters are generally wholesome and palatable throughout their entire course, while those of the mountain rills are always excellent. All the lakes, as well as the larger and some of the smaller streams, contain an abundance of fish, some varieties of which, especially the trout in the mountain brooks, are unsurpassed in delicacy. The principal lakes in this State are Pyramid, Walker, Humboldt, Winemucca, and Tahoe. The latter, one-third of which lies in N., has a depth of 1,500 feet, and, although 6,000 feet above the ocean level, never freezes; the temperature of its waters, which, in common with those of Pyramid Lake, abound in trout of large size and excellent flavor, remains nearly the same throughout the entire year. This lake is surrounded by high mountains, rising abruptly from its shores, clothed with vast forests of pine, spruce, and fir, and wearing a cap of snow during 8 months of the year. There are numerous small shallow pools, usually called *mud lakes*, which are quite extensive bodies of water during and subsequent to the rainy season, but generally become perfectly dry during the summer months. Their waters are strongly impregnated with alkaline solutions, which, upon evaporation of the water, appear in glistening sheets overlying the clay which constituted the beds of the former lakes, giving them, at this stage, the name of *alkali flats*.—*Meteorol.* The climate of N., considering the general elevation of the country above sea-level, is mild, not being subject to great extremes either of heat or cold. The days of summer are not warmer than on the E. side of the Rocky Mountains, while the nights are uniformly cool and refreshing. The winters in the valleys are less severe than in N. New York or New England, and but little snow falls except on the mountain ranges. Not much rain falls between April and Oct. in the N. and W. part of the State. In the S. and E. there is a greater rain-fall, and showers are not unusual during the summer months. The maximum quantity of water falls during the autumn and winter. *Min.* Not only the precious metals, but also minerals possessing value from their use in the mechanical arts and in domestic economy, are found in the State, many of the latter existing in such abundance as cannot fail to render them of great importance when better facilities for transportation to the localities of manufacture shall have been introduced. Among them are vast beds of borax, salt, ores of iron and copper, rich in these metals: Nickel, beds of sulphur, from which this substance can often be obtained quite pure, although it is sometimes combined with calcareous deposits; seams of lignite, and, possibly, true coal; yet so far as explored, N. is not a strongly marked carboniferous region; cinabar, gypsum, manganese, plumbago, kaoline, and other clays, useful in the making of pottery and fire-brick; mineral pigments of many kinds; soda, nitre, alum, magnesia, platinum, zinc, tin, galena, antimony, nickel, cobalt, and arsenic, besides various rocks useful for building purposes, as limestone, sandstone, granite, marble, and slate. The salt-beds constitute not only an important feature in the chorography of the State, but also form a considerable item in the economical resources, furnishing a great requisite for the reduction of most of the gold and silver ores. They sometimes extend over hundreds of acres, with strata each about a foot in thickness, separated by thin layers of clay, the beds being encompassed by belts of alkali lands. The importance of these salt-beds can be appreciated from the fact that the companies owning and working them can furnish the article clean, dry, and white, (being, indeed, almost pure chloride of sodium,) for \$40 per ton delivered at the mills, when formerly an inferior article brought from California would cost from \$120 to \$180 per ton on delivery. The saline deposits in N., however, are not confined to beds or plains, as they

sometimes occur in elevated positions, the strata being many feet thick, imbedded in hills and mounds of such extent as almost to attain to the dignity of being called mountains of salt; one of these, situated in the S.E. portion of the State, is composed of cubical blocks of nearly pure chloride of sodium, as transparent as window-glass, and often a foot square. The silver mines of N., thus far in the history of the settlement of the State, have been the great source of its wealth, and the prime inducement for its settlement. At the time of the first discovery of these mines, in 1859, eleven years after its acquisition by the United States under the treaty of Gaudaloupe Hidalgo, and ten years after its first settlement by the whites, it contained less than 1,000 inhabitants, these being principally Mormon farmers and herdsmen located in the fertile lands of Carson and Washoe valleys; two years later, or in 1861, the population had increased to 17,000. The first discovery of the extraordinary wealth of this section of the Union in deposits of argentiferous ore occurred on the Comstock lode, from which mine bullion has since been extracted amounting to more than \$100,000,000. Taken as a whole, the Comstock was one of the most valuable silver-bearing lodes ever found, equalling in its wealth of metal any deposit ever encountered in the history of mining enterprise, and surpassing the famous mines of Mexico and Peru. For its development the great Sinto Tunnel was excavated for a length of $3\frac{1}{2}$ miles into the solid rock, passing through the ramifications of the Comstock lode, and draining the mines at a depth of 3,000 feet. Mining is still the chief interest of N., but it has greatly changed its character and fallen off in its profits since those early days, when the production of silver was so enormous as to produce a material change in its market value, and lift N. rapidly from the condition of an uninhabited desert to that of a State of the American Union. The high grades of ore seem now to be practically exhausted, and the product has fallen to so great an extent that of the 60,000,000 ounces of silver produced in a recent year, N. contributed only 1,561,300, while Colorado yielded 25,838,600; Montana, 16,945,000; Utah, 7,196,300; Idaho, 3,919,600; and Arizona, 2,935,700, so that from the first it has fallen to the fifth rank. Of this silver product less than half now comes from silver mines proper, more than half being an incidental product in the mining of lead and copper ores. In addition to silver, N. has been somewhat prolific in gold, its yield up to the beginning of 1895 being \$33,678,267, which makes it the fifth State in gold, as in silver, product. The White Pine district of N., from which so much was expected in yield of metal, has greatly disappointed expectation. This comprises an area of about 12 miles square, covering a bold chain of hills, whose altitude varies from 6,000 to 9,000 feet, while several high ridges reach a height of 11,000 feet, and whose sides are covered with a dense growth of white pine, from which these mountains, and subsequently the district and county, received their names. Little has been done in the way of developing the other mineral deposits of N., the barrenness of the State forbidding extensive exploration under favorable circumstances. The State is rich in springs—thermal, mineral, and others—often of great size, their great volume, high temperature, and the composition of their waters raising them to the rank of geological curiosities. Many of them are surrounded by incrustations of tufa, often in weird and fantastic forms.—*Soil and Agric.* N. is not wanting in the elements of fertility. The soil in the vicinity of most of the streams is found to be rich alluvion, formed of disintegrated rock, clay washings, and vegetable debris from the forest-covered mountains, and where irrigation is available it can be made very productive, yielding good crops of the cereals, vegetables, and fruits. Among the most successful crops are winter wheat and barley, which ripen sufficiently early to escape the drought of the summer months, potatoes, and garden fruits and vegetables. The fruits raised are apples, pears, peaches, plums, and grapes, while considerable available pasturage exists for stock-raising, in most of the habitable valleys of the State, neither shelter nor food, except that provided by the pastures, being needed for the wintering or maintenance in good condition of cattle, sheep, or swine. In cereal product, however, the State ranks exceedingly low, being the least productive of all the States. Of the three principal cereals grown, corn, oats, and wheat, the latest statistics give no return for the two former, while the yield of wheat was but 122,627 bushels, grown on 5,651 acres. The total area of cultivated land in the State in 1890 was 723,052 acres, valued at \$12,339,410, and yielding crops worth \$2,705,669. The live stock was valued at \$5,801,820. Thus after nearly 50 years of occupation but little over 1 per cent. of the land area of the State has been utilized for agricultural purposes, and the promise of a much greater extension in this direction is not inviting. The rainfall is exceedingly light, nowhere being more than 15 inches annually, and averaging for the whole State scarcely more than 5 inches. Some sections receive no rain for several years in succession. The native vegetation is composed only of those plants capable of enduring drought, such as sage-brush and other innutritive growths. It has been estimated that with careful irrigation about 3 per cent. of the land may be brought under cultivation, but the great remainder of the State must always remain an uninhabitable desert. Nearly the whole of N. is included in the Great Central Basin, occupying the region between the Rocky and the Sierra Nevada Mountains, and very largely a nearly rainless and irremediable desert. This basin formed at some former

period the bed of a great inland sea, which eventually was drained off, leaving a number of great lakes. These, in their turn, have disappeared, their deepest depressions being marked at present by Walker, Carson, Humboldt, Pyramid, and Winemucca lakes, with smaller water beds known as sinks and *playas*, or shallow mud lakes which evaporate in the dry season. The ancient shore line of the former great sea can be distinctly traced in several localities. At that period the climate of the Great Basin, now arid, was moist, and the surrounding area produced an abundant vegetation, though now frowned upon by treeless mountains. The bed of the old sea is almost totally unfit for vegetation, and is traversed by regions of nearly absolute desert. The mountains contain rocks of every geological period, while many of them are volcanic. Metamorphic and trap rocks also abundantly occur. The valleys are occupied by the sediments deposited during long ages by the central sea, which are mingled with cinders and other volcanic debris which made their way downward through the waters. At the mouths of the cañons exist vast moraines, significant of glacial action at a former frigid age.—*Drainage.* But little of the water of N. reaches the sea. In the N. is a small area drained by the Owyhee river, a tributary of the Snake, and in the S. another area forms part of the Colorado valley. With these exceptions, the streams all sink away in the sands, or flow into the lakes, or the salt sinks and *playas*. The Humboldt pursues a winding course of 350 m. N. is marked by a dry atmosphere, remarkably clear in winter. In the summer it is rendered hazy by dust, in minute particles, which produce extraordinary color effects on the sunlight.—*Polit. Div.* The State comprises 15 counties, viz.:

Churchill,	Eureka,	Lyon,	Storey,
Douglas,	Humboldt,	Nye,	Washoe,
Elko,	Lander,	Ormsby,	White Pine.
Esmeralda,	Lincoln,	Roop,	

Principal Cities. The most important cities are Virginia City and Gold Hill, which are situated close together on the Comstock lode, and Carson, the State capital. Other towns are Eureka, Pioche, Reno, and Belmont. There are over 900 miles of railroad.—*Education.* The public schools, about 280 in number, with 7,000 pupils, are under the control of a State board of education. There is a State University at Reno. The State has on reservations about 9,500 Indians, mostly Pah Utes and Shoshones, and there are well-attended schools in the reservations.—*Government.* The executive consists of governor, lieutenant-governor and subordinate State officers, and the legislative branch, of a Senate and House of Representatives. N. sends one member to the national House of Representatives, and has three electoral votes. N. was originally part of the Territory of Utah, from which it was separated and organized as a Territory, March 2, 1861. The great output of gold at that period, and the rapid increase of population led to the belief that it would soon become populous, and it was admitted as a State, March 21, 1864, with a population considerably below the ratio of representation at that period. The population in 1870 was 42,491; in 1880, 62,265; in 1890, 45,761; in 1900, 42,535. It is thus the one State in the Union whose population is decreasing.

Nevada, in Arkansas, a S. W. co.; area, 616 sq. m.; bounded on the N. E. by the Little Missouri river, and drained by Cypress Bayou and Rouge creek. *Surface*, rolling; *soil*, fertile. *Products*, cotton, corn; live stock. *Cap.* Prescott. *Pop.* (1890) 14,832.

Nevada, in California, a N.E. co., adjoining Nevada (State); area, about 1,000 sq. m. *Rivers*, Middle, Yuba, South Yuba, and Bear rivers, and Deer creek. *Surface*, mountainous, the Sierra Nevada traversing the E. part; *soil*, in the valleys fertile. *Min.* Gold, and some copper. *Products*, principally fruits, grapes being produced in large quantities; but little attention is given to other agricultural interests. *Cap.* Nevada City. *Pop.* (1890) 17,369.

Nevada, in Colorado, a village of Gilpin co., about 40 m. N.W. of Denver.

Nevada, in Illinois, a post-township of Livingston co., on a branch of the Chicago & Alton R.R.

Nevada, in Indiana, a post-village of Tipton co., about 31 m. S.S.E. of Logansport.

Nevada, in Iowa, a township of Palo Alto co.

—A post-village and township, cap. of Storey co., about 33 m. N.N.E. of Des Moines.

Nevada, in Minnesota, a village and township of Mower co., about 12 m. S.E. of Austin.

Nevada, in Missouri, a village of Grundy co., about 22 m. N.W. of La Clede.

—A city, cap. of Vernon co., abt. 80 m. N.W. of Springfield. *Pop.* (1897) 8,100.

Nevada, in Ohio, a post-village of Wyandot co., about 9 m. W. of Bucyrus.

Nevada, in Wisconsin, a village of Green co., about 9 m. E. by N. of Monroe.

Nevada, or **Nevada City**, in California, a post-town and capital of Nevada co., on the Nevada Co. R.R., about 60 miles N.N.E. of Sacramento. Rich mines of gold and silver are located in the vicinity; the manufacturing interests include sash, door and blind factories, foundries, wagon works, planing mills, &c.; and the town is a general supply depot for the mining and fruit-growing region surrounding. *Pop.* (1897) about 2,850.

Nevada, or **Nevada City**, in Montana, a village of Madison co., about 5 m. N.W. of Virginia City.

Nevada, **Sierra**, in Spain and California See SIERRA NEVADA.

Ne'vans, in Indiana. See NEVINS.

Neve, (nā'vā) *n.* (*Geol.*) The crest of a glacier, above the perpetual snow-line.

Nev'er, *adv.* [*A. S. nafre, nefor*, from *ne*, not, and *af*, ever.] Not ever; not at any time; at no time. — In no degree: not at all. — Not.

Nevers, (nevair'), a city of France, cap. of the dept. of Nièvre, at the junction of the Loire and Nièvre, 133 m. S.S.E. of Paris. Prominent among the public buildings is the cathedral, a fine Gothic edifice of the 16th cent. It has also a triumphal arch to commemorate the battle of Fontenoy. *Manuf.* Glass, porcelain, iron, and earthenware, brandy, and leather. There is also an important cannon-foundry. *Pop.* 20,700.

Neversink, in *New York*, a post-township of Sullivan co.

Neversink Hills, in *New Jersey*. See HIGHLANDS.

Neversink or **NAVESINK** **River**, in *New Jersey*, enters Sandy Hook Bay from Monmouth co. Above tide it is called *Swimming River*.

Neversink River, in *New York*, rises in Ulster co., and enters the Delaware River near Port Jervis, in Sullivan co.

Nevertheless, *adv.* Not the less: that is in opposition to anything, or without regarding it; notwithstanding; yet; however.

Nev'il Bay, an inlet of British North America, at the N.W. part of Hudson Bay.

Neville, in *Ohio*, a post-village of Clermont co., about 33 m. S.E. of Cincinnati.

Neville, (**Port**), an inlet of British Columbia, in the N. part of Vancouver's Island; Lat. 50° 32' N., Lon. 125° W.

Nevins, in *Indiana*, a township of Vigo co. *Pop.* (1897) 3,220.

Nev'is, an island of the Leeward Group, W. Indies, belonging to Great Britain, about 2 m. S.E. of St. Kitt's; *area*, abt. 29 sq. m. *Cap.* Charlestown. *Pop.* 12,000.

Nevinsink River, in *New Jersey*. See NEVERSINK RIVER.

New, (nū) *a.* [*A. S. niwe*; *Du. nieuw*; *Ger. neu*; *Gr. nua, nuadh*.] Lately made, invented, produced, or come into being; that has existed but a short time only; recent in origin: novel; — opposed to *old*. — Lately introduced to our knowledge; not before known; recently discovered; strange; unknown. — Modern; not ancient: not of ancient extraction, or of long-descended lineage. — Recently produced by change; renovated; repaired. — Not habituated; not familiar. — Not before used; fresh; newly come.

—*adv.* Newly: — used in composition.

Newa'go, in *Michigan*. See NEWARGO.

New Aberdeen, a village of Waterloo co., prov. of Ontario, abt. 8 m. E.S.E. of Goderich.

New Albany, in *Indiana*, an important city, cap. of Floyd co., on the Ohio river, 5 m. below Louisville, Ky.; is reached by the Balt. & Ohio, S.W., and 3 other R.R.s.; has immense glass works, cotton and woollen factories, rolling mills, iron, engine, and boiler works, &c. Seat of DePaul Female College (Methodist). *Pop.* (1897) about 25,000.

New Albany, in *Iowa*, a township of Story co.

New Albany, in *Mississippi*, a post-town, cap. of Union co., 34 m. S.E. of Holly Springs.

New Albany, in *Ohio*, a village of Mahoning co.

—A post-village of Franklin co., 15 m. N.E. of Columbus.

New Albion, in *New York*, a post-town and township of Cattaraugus co. *Pop.* (1897) 1,920.

New Alexandria, in *Pennsylvania*, a post-borough of Westmoreland co., about 35 m. E. of Pittsburg.

New Almaden, in *California*, a post-village of Santa Clara co., about 13 m. S. of San Jose.

New Al'ace, in *Indiana*, a post-village of Dearborn co., about 30 m. S.E. of Indianapolis.

New Amsterdam, a seaport-town of British Guiana, S. America, near the junction of the Berbice and Cange rivers; Lat. 6° 14' 51" N., Lon. 57° 31' 8" W.

New Amsterdam, in *Indiana*, a post-town of Harrison co., about 125 m. S. of Indiana.

New Amsterdam, in *Wisconsin*, a village of La Crosse co., about 14 m. N. of La Crosse.

New Antioch, in *Ohio*, a post-village of Clinton co., about 37 m. S.E. of Dayton.

New Archangel, in *Alaska*. See SITKA.

Newark, a town of England, co. of Nottingham, on the Newark river, a branch of the Trent, 16 m. N.E. of Nottingham, and 110 m. N.W. of London. *Manuf.* Linen sheeting, and tiles; also brass and iron foundries. *Pop.* (1897) 15,850.

Newark, a vill. of prov. of Ontario. See NIAGARA.

Newark, in *California*, a village of Sierra co., about 13 m. N. of Downieville.

Newark, in *Delaware*, a post-town of New Castle co., about 12 m. W.S.W. of Wilmington. It is the seat of Delaware College.

Newark, in *Illinois*, a post-village of Kendall co., about 62 m. W.S.W. of Chicago.

Newark, in *Indiana*, a village of Warrick co., about 14 m. N.E. of Evansville.

Newark, in *Iowa*, a village of Linn co., about 25 m. N. by W. of Iowa City. — A former post-village of Marion co., about 33 m. E.S.E. of Des Moines.

Newark, in *Maryland*, a post-village of Worcester co., about 190 m. S.E. of Annapolis.

Newark, in *Michigan*, a former township of Allegan co. — A post-township of Gratiot co. *Pop.* (1897) 1,400.

Newark, in *Missouri*, a post-town of Knox co., about 100 m. N. of Jefferson city.

Newark, in *New Jersey*, a city, port of entry, and the cap. of Essex co., on the Passaic river, about 47 m. N.E. of Trenton; Lat. 40° 45' N., Lon. 74° 10' W. N. is the largest, most populous, and most important manufac-

turing town in the State. It is regularly laid out in rectangular blocks, and contains many elegant public and private edifices, among the former of which may be mentioned the Court-House, a capacious structure in the Egyptian style of architecture, the U. S. Custom-House, the Post-Office, the City Hall, the Library Building, and the Academy. There are also over 100 churches, and numerous public schools. *Manuf.* Jewelry, Indian-ware, goods, carriages, omnibuses, machinery, castings, leather and leather goods, clothing, &c. Numerous railroads radiate from N., affording immense facilities for inland traffic, while its communication with the Atlantic Ocean through New York and Newark Bays enables its inhabitants to carry on an extensive coast trade. It was settled in 1666 by a company from Connecticut. *Pop.* (1900) 216,070.

Newark, in *New York*, a post-village of Wayne co., about 30 m. E. by S. of Rochester. *Manuf.* Iron furnaces, foundries, flour mills, &c. *Pop.* (1897) 2,920.

Newark, in *Ohio*, a manufacturing city, cap. of Licking co., 33 m. E. of Columbus. *Manuf.* Iron, engines, glass, &c. *Pop.* (1897) 17,250.

Newark, in *Vermont*, a post-town of Caledonia co.

Newark, in *West Virginia*, a post-village of Wirt co.

Newark, in *Wisconsin*, a village and township of Rock co., about 78 m. W.S.W. of Milwaukee.

—A village of Washington co., about 38 m. N.N.W. of Milwaukee.

Newark Valley, in *New York*, a post-village of Tioga co., about 10 m. N.E. of Oswego.

New Ashford, in *Massachusetts*, a post-township of Berkshire co.

New Athens, in *Ohio*, a post-village of Harrison co.

New Auburn, in *Minnesota*, a post-village and township of Sibley co., about 65 m. W.S.W. of St. Paul.

Newaukum, in *Washington*, a post-village of Lewis co., about 6 m. E. of Clagato.

Newaygo, in *Michigan*, a W. co. of the lower peninsula; *area*, about 860 sq. m. *Rivers*. Muskegon, Notepesago, White and Marquette (or Pere Marquette) rivers. *Surface*, nearly level; *soil*, fertile. *Cap.* Newaygo. *Pop.* (1894) 19,124.

—A post-village, cap. of the above co., about 35 m. N. by W. of Grand Rapids. *Pop.* (1897) 1,380.

New Baltimore, in *New York*, a post-village and township of Greene county, about 16 miles S. of Albany.

New Baltimore, in *Ohio*, a post-village of Stark co., abt. 16 m. N.N.E. of Canton.

New Baltimore, in *Virginia*, a post-village of Fauquier co., abt. 105 m. N. by W. of Richmond.

New Barba'does, in *New Jersey*, a township of Bergen co.

New Bar'gain, or **NEW BARGAINTOWN**, in *New Jersey*, a village of Monmouth co., abt. 10 m. S.E. of Freehold.

New Beacon, or **GRAND SACHEM**, in *New York*, the highest summit of the Highlands. *Height*, 1,685 ft. It is in Dutchess co., and commands an extensive view of the Hudson River and the neighboring mountains. During the war of Independence beacons were lighted upon its top, as well as on the adjacent hills, — hence the name.

New Bedford, in *Massachusetts*, a city, port of entry, and semi-cap. of Bristol co., on Buzzard's Bay, at the mouth of Acushnet River, abt. 55 m. S. of Boston; Lat. 41° 35' N., Lon. 70° 55' W. It is conveniently located for trade, is regularly laid out, and generally well-built. Among the more prominent edifices are a fine City-hall, in the Doric style, a Custom House, an Almshouse, and several elegant churches. It has an excellent harbor, defended by Fort Phoenix, and is noted for its extensive fisheries. There are numerous manufactories, principally of shoes, carriages, cordage, Prussian-blue, leather, flour, soap, candles, machinery, oils, &c. This town was occupied and afterwards nearly destroyed by the British during the war of Independence, and again suffered severely in the war of 1812. Since then, however, its progress has been rapid and continued, and it is now one of the leading New England towns. *Pop.* (1895) 55,254.

New Bedford, in *Ohio*, a post-village of Coshocton co., about 100 m. E.N.E. of Columbus.

New Bedford, in *Pennsylvania*, a post-village of Lawrence co., about 240 m. W.N.W. of Harrisburg.

Newberg, in *Ohio*, a former village of Cuyahoga co., now the 18th ward of Cleveland, and spelled NEWBURG.

—A village of Jefferson co., abt. 9 m. N. of Steubenville.

—A former township of Miami co.

—A village of Noble co., about 9 m. N. of Steubenville.

Newberg, in *Wisconsin*, a post-village of Washington co., about 30 m. N.N.W. of Milwaukee.

New Ber'lin, in *Michigan*, a village of Ionia co., about 30 m. E. of Grand Rapids.

New Ber'lin, in *New York*, a post-village and township of Chenango co., about 95 m. W. by S. of Albany.

New Ber'lin, in *Ohio*, a post-village of Stark co., about 124 m. N.E. of Columbus.

New Ber'lin, formerly Longstown, in *Pennsylvania*, a post-borough of Union co., abt. 60 m. N. of Harrisburg.

New Ber'lin, in *Wisconsin*, a post-township of Waushara co.

Newbern, in *Alabama*, a post-village of Hale co., 43 m. W.N.W. of Selma.

Newbern, in *Illinois*, a village of Jersey co., about 16 m. N.W. of Alton.

Newbern, in *Indiana*, a post-village of Bartholomew co., about 9 m. E.N.E. of Columbus.

Newbern, in *Iowa*, a post-village of Marion co., about 36 m. S.S.E. of Des Moines.

Newbern, in *Ohio*, a village of Shelby co., about 7 m. N. of Piqua.

Newbern, in *Virginia*, a post-village, cap. of Pulaski co., abt. 222 m. W.S.W. of Richmond. The Kanawha near here passes along an almost perpendicular wall of rock 500 feet high and several miles in length, called the *Glass Windows*.

Newbern, or **NEW BERNE**, in *North Carolina*, a city, port of entry, and the cap. of Cavern co., at the junction of the Nense and Trent rivers, abt. 120 m. S.E. of Raleigh; Lat. 35° 20' N., Lon. 77° 5' W. It was formerly the seat of the State government, and is still a place of much importance. It has an active trade, chiefly in grain, lumber, tar, naval stores, &c. *Pop.* (1897) 8,200.

Newberry, in *Indiana*, a post-village of Greene co., abt. 10 m. S. of Bloomfield.

Newberry, in *Kentucky*, a village of Wayne co., abt. 129 m. S. of Frankfort.

Newberry, in *Ohio*, a township of Miami county.

Newberry, in *Pennsylvania*, a post-village of Lycoming co., abt. 3 m. W. of Williamsport. — A township of York co.

Newberry, in *S. Carolina*, a N.W. central dist.; *area*, abt. 616 sq. m. *Rivers*. Broad, Saluda, Ennorece, and Little rivers. *Surface*, diversified; *soil*, fertile. *Cap.* Newberry.

—A post-village, cap. of the above co., abt. 45 m. W.N.W. of Columbia.

Newberrytown, in *Pennsylvania*, a post-village of York co., abt. 12 m. S.S.E. of Harrisburg.

New Beth'el, in *Indiana*, a village of Marion co., abt. 9 m. S.E. of Indianapolis.

New Beth'lehem, in *Pennsylvania*, a post-village of Clarion co., abt. 61 m. N.E. of Pittsburg.

New Bloom'field, in *Missouri*, a post-village of Callaway co., abt. 15 m. N.E. by N. of Jefferson city.

New-born, *a.* Recently born.

New'born, in *Georgia*, a village of Newton co., abt. 50 m. N.W. of Milledgeville.

New Bos'ton, in *Connecticut*, a post-village of Windham co., abt. 50 m. E.N.E. of Hartford.

New Boston, in *Illinois*, a post-village of Mercer co., abt. 156 m. N.W. of Springfield.

New Boston, in *Indiana*, a post-village of Spencer co., abt. 4 m. N. of Maxville.

New Boston, in *Iowa*, a post-village of Lee co., abt. 90 m. S. of Iowa city.

New Boston, in *Massachusetts*, a post-village of Berkshire co., abt. 125 m. W.S.W. of Boston.

New Boston, in *New Hampshire*, a post-township of Hillsborough co.

New Boston, in *Ohio*, a village of Clermont co., abt. 25 m. E. by N. of Cincinnati. — A village of Highland co., abt. 64 m. E. by N. of Cincinnati.

New Brain'tree, in *Massachusetts*, a township of Worcester co.

New Braun'fels, in *Texas*, a city, cap. of Comal co., about 32 m. N.E. of San Antonio. *Pop.* 1,800.

New Bremen, in *New York*, a post-township of Lewis county.

New Bremen, in *Ohio*, a post-village of Auglaize co., about 100 m. W.N.W. of Columbus.

New Bridge, in *New Jersey*, a village of Bergen co., about 14 m. N. by W. of Jersey City.

New Brighton (*brí'ton*), in *New York*, on Staten Island. Now part of New York city.

New Brighton, in *Pennsylvania*, a post-borough of Beaver co., about 28 m. N.W. of Pittsburg.

New Brit'ain, a group of islands in the S. Pacific Ocean, in Lat. between 6° and 6° 30' S., Lon. 148° and 152° 30' E., and consists principally of two large and populous islands, discovered by Dauphin in 1699.

New Britain, in *Connecticut*, a post-town of Hartford co., 10 m. S.W. of Hartford. *Pop.* (1897) 22,000.

New Britain, in *Pennsylvania*, a post-township of Bucks co.

New Brook'field, in *Wisconsin*, a village of Vernon co., 4 m. S. of Viroqua.

New Brunswick, a Province forming part of the Dominion of Canada on the W. side of the Gulf of St. Lawrence, bet. 45° and 48° N. Lat., and 63° 47' and 67° 53' W. Lon., bounded S. by Nova Scotia and the Bay of Fundy, N. by prov. of Quebec, and W. by the State of Maine. Extreme length from N. to S., 200 m., greatest breadth, 160 m.; *area*, 27,344 sq. m. The Prov. is divided into 14 cos., and by the Dom. act of 1867 into 15 Electoral Districts, including the City of St. John. It has 500 m. of coast line, and is much less indented than Nova Scotia. The surface is undulating though not mountainous, the greatest elevations being in the N.W., where a continuation of the Appalachian range branches off and rises to the height in some places of nearly 2,000 ft. The country is finely watered. The principal rivers are the St. John, Miramichi, and Restigouche, whose branches with other streams form a complete network over the Province. The principal indentations on the E. coast, Chaleur and Miramichi Bays, Shediac Harbor, and Baie de Verte; on the South are St. John Harbor and Passamaquoddy Bay, into which flows the St. Croix River, dividing the Province from the State of Maine. — *Geol.* The geological character of N. B. is as yet imperfectly known; but limestone seems to be the prevailing feature, though clay-slate, graywacke, and even the primitive formations occasionally occur. Coal is found in abundance at Grand Lake and in Albert County. Iron, manganese, copper, lime, granite, slate, and grindstone, are found in abundance. — *Soil, Prod., &c.* A large part of the Prov. is still covered with dense forests containing excellent timber. More than half this soil is of excellent quality, and only about 1/4 is unfit for cultivation. The prosecution of the lumber trade is constantly increasing the quantity of cleared land. The fauna and flora of the Prov. nearly

resemble those of Nova Scotia, to which it formerly belonged under the name of Acadia.—*Meleor*. The climate is severe but healthy. Dense fogs prevail on the S. coast, but they do not seem to be injurious to the health. Vegetation is very rapid in summer. Winter lasts from Nov. to April. Agriculture, notwithstanding the rich tracts of alluvial soil skirting the rivers, is considerably less advanced than in Nova Scotia and Ontario, owing, in part, to its late settlement, but principally to the superior importance attached to the timber-trade. Within the last few years, however, great improvements have taken place in these respects, owing to the introduction of agricultural societies, and a more improved system of husbandry. Wheat, maize, barley, and oats are the principal crops, but by far the most important article of produce is potatoes. Red and white clover are the grasses most cultivated; and beans, peas, turnips, and mangewurzel and beet-root thrive well, and are raised in considerable quantities. Pasturage is followed to a considerable extent. The exports consist principally of lumber, ships, live stock, fish, &c. Annual value, \$6,500,000. Imports, British and American manufactured goods, W. I. produce and flour. Annual value, \$7,000,000. Shipbuilding is largely prosecuted at St. John and other ports on the Bay of Fundy, and also on the Miramichi. There are woollen, cotton, and leather manufactures.—*Govt*. The constitution places the local administration in the hands of the Lieut.-Governor, aided by a responsible Executive of 9 members, and a Legislative Council and House of Assembly. The Province is represented in the Dominion Parliament by 16 members in the House of Commons and 12 Senators. The judiciary comprises the Court of Chancery, in which the Governor presides; the Supreme Court, directed by 4 justices; a Court of Common Pleas; and circuit and minor courts. There is no regular army, the British Govt. having withdrawn its troops since the confederation of the Provinces in 1867. Numerous volunteer corps have since been enrolled, and the militia placed on a better footing than formerly. The church establishment is similar to that of Nova Scotia, and forms the diocese of Fredericton. There are, likewise, Roman Catholics, Presbyterians, Methodists, and Baptists. The religion of the inhabitants is sufficiently broad and liberal, but is characterized by more of the Puritan element than in the U. S. Education is carefully attended to. A free school system nearly similar to that of Massachusetts has been for some years in operation, with a Normal School for teachers, and a complete system of public schools. There are two colleges, besides a number of academies and private seminaries. The inhabitants consist of a mixed race of British extraction, intermixed with a few French.—*Cities and Towns*. St. John, Fredericton, St. Stephen, St. Andrew's, Portland, Woodstock, Moncton, Chatham, Newcastle, Richibucto, Bathurst, Dalhousie, &c. Pop. (1897) about 360,000.

New Brunswick, in *Indiana*, a post-village of Boone co., about 8 m. S. of Lebanon.

New Brunswick, in *Minnesota*, a village of Cottonwood co., about 70 m. W. of Mankato.

New Brunswick, in *New Jersey*, a city, cap. of Middlesex co., on the Raritan river, about 26 m. N.N.E. of Trenton; Lat. 40° 30' N., Lon. 74° 30' W. It is well laid out, and contains many handsome edifices. *Manuf.* Wall paper, India-rubber goods, &c. Pop. (1895) 9,910.

New Bu'da, in *Iowa*, a village and township of Decatur co., 10 m. S.S.W. of Leon.

New Bu'falo, in *Michigan*, a post-village and township of Berrien co., about 63 m. E. of Chicago, Ill. The village is on the Mich. Cent. R.R. Considerable freight is shipped here.

New Bu'falo, in *Ohio*, a post-village of Mahoning co.

New Bu'falo, in *Pennsylvania*, a post-borough of Perry co., about 19 m. N. of Harrisburg.

New Bu'falo, in *Wisconsin*, a village of Sank co.

Newburgh, a seaport-town of Scotland, co. of Fife, on the Tay, 13½ m. S.W. of Dundee, and 9 m. S.E. of Perth. It has a good harbor. The town was founded in the 12th century.

Newburgh, in *Illinois*, a village of Boone co., about 85 m. N.W. by W. of Chicago.

—A village and township of Pike co., about 70 m. W.S.W. of Springfield.

Newburgh, in *Indiana*, a village of Fountain co., about 8 m. E.S.E. of Covington.

—A township of La Grange co.

—A post-town of Warrick co., about 13 m. S.E. of Evansville. Pop. (1897) 1,150.

Newburgh, in *Iowa*, a village and township of Mitchell co., about 27 m. N.N.W. of Charles City.

Newburgh, in *Kentucky*, a post-village of Jefferson co., about 11 m. S.E. of Louisville.

Newburgh, in *Maine*, a post-town of Sank co.

Newburgh, in *Michigan*, a township of Cass co.

—A post-village of Lenawee co., abt. 12 m. N.E. of Adrian.

—A village of Shiawassee co., about 7 m. S.E. of Corunna.

Newburgh, in *Minnesota*, a post-village and township of Fillmore co., about 50 m. S.E. of Rochester.

Newburgh, in *Missouri*, a post-village of Phelps co. Pop. (1897) 640.

Newburgh, in *New York*, a city and township of Orange co., on the West Shore R.R., 60 m. N. of New York City. It is finely located on the Hudson river (here 1 m. wide), and commands an active trade. Extensive manufactures have been established, chiefly of cotton, wool, flour, machinery, &c., and the surrounding country is noted for its dairies. N. also possesses much historical interest, being the scene of many important events during the War of Independence, and the place where the American army was disbanded at the close of the struggle, June 23, 1783. Pop. (1897) about 26,500.

Newburgh, in *Pennsylvania*, a post-borough of Cumberland co., about 20 m. S.W. of Carlisle.—A village of Huntingdon co., about 90 m. W. of Harrisburg.

Newburgh, in *Tennessee*, a post-village of Lewis co., abt. 72 m. S.S.W. of Nashville.

Newburgh, a village of Addington co., prov. of Ontario, abt. 23 m. W. of Kingston.

New Burlington, in *Ohio*, a post-village of Clinton co., abt. 20 m. S.E. of Dayton.

Newbury, (*nu'bur-e*), a town of England, co. of Berks, on the Kennet, 24½ m. S. of Oxford, and 53 S.W. of London. *Manuf.* Woollen goods. Pop. 6,161.—The Royalist army, commanded by Charles I., attacked the Parliamentarians at this village in Berkshire, Sept. 20, 1643. The cavalry were completely defeated by the Royalists, but the infantry stood firm, and Essex was enabled to retire in good order. Lord Falkland fell in this encounter. A second battle was fought at Newbury, Oct. 27, 1644, when the Parliamentarians, commanded by Waller and the Earl of Manchester, failed in their attack upon the King's forces, and afterwards withdrew into winter-quarters.

Newbury, in *Indiana*, a township of La Grange co.

Newbury, in *Kansas*, a post-village of Newbury township, Wabaunsee co.

Newbury, in *Massachusetts*, a township of Essex co.

Newbury, in *New Hampshire*, a post-township of Merrimack co.

Newbury, in *Ohio*, a post-township of Geauga county.

Newbury, in *Vermont*, a post-village and township of Orange co., abt. 25 m. S.E. of Montpelier. The Monte bello iron and sulphur springs are here.

Newburyport, in *Massachusetts*, a city, port of entry, and cap. of Essex co., on the Merrimack River, about 34 miles N. by E. of Boston; Lat. 42° 48' 32" N., Lon. 70° 52' 47" W. Its proximity to the Atlantic Ocean affords great facilities for commerce. The city is generally well built, and contains some very handsome edifices. *Manuf.* Iron, machinery, leather goods, &c. Pop. (1895) 14,554.

Newburyport Lights, in *Massachusetts*, two fixed lights on the N. end of Plum Island; Lat. 42° 48' N., Lon. 70° 49' 30" W.

New Caledonia, an island of Australia, in the Pacific Ocean, between Lat. 20° and 22° 30' S., and Lon. 164° 5' and 167° E.; area, abt. 6,000 sq. m. It is surrounded on all sides by coral reefs, connecting numerous islets, rocks, and banks of sand, rendering the navigation so intricate and dangerous that the island can be approached by two openings only. Vessels may anchor securely at Port Balade, on the N.E., and at Port St. Vincent on the S.W. Capt. Cook discovered this island, Sept. 4, 1774, and landed upon it, and named it the following day. The French took possession, Sept. 20, 1853, and made it a convict settlement.—British Columbia was at first called New Caledonia. An insurrection took place among the natives in 1878, which was suppressed, but not without considerable bloodshed. The island is rich in gold, copper, and nickel. Pop. (1890) 57,000.

New Can'ada, in *Minnesota*, a township of Ramsey co.

New Can'ton, in *Tennessee*, a post-village of Hawkins co., abt. 275 m. E. of Nashville.

New Canton, in *Virginia*, a post-village of Buckingham co., abt. 63 m. W. of Richmond.

New Carlisle, (*kar-lil'*), a seaport-town of Bonaventura co., prov. of Quebec, on the Bay of Chaleurs; Lat. 48° 3' N., Lon. 65° 19' W.

New Carlisle, in *Indiana*, a post-village of St. Joseph co., abt. 145 m. N. by W. of Indianapolis.

New Carlisle, in *Ohio*, a post-village of Clarke co., abt. 55 m. W. of Columbus.

New Car'thage, in *Louisiana*, a former post-village of Madison parish, about 240 m. N. of Baton Rouge.

New Cas'sel, in *Wisconsin*, a post-village of Fond-du-Lac co., about 18 m. S.S.E. of Fond-du-Lac.

New Cas'tine, in *Ohio*, a village of Darke co., about 12 m. S. of Greenville.

Newcastle, a town of Ireland, in Munster, abt. 25 m. S.W. of Limerick; pop. 2,500.

New Castle, a river-port of Northumberland co., New Brunswick, abt. 130 m. N.N.E. of St. John.

Newcastle, a village of Durham co., prov. of Ontario, abt. 25 m. W. of Coburg.

New Castle, in *Delaware*, a N. co., adjoining Pennsylvania on the N., New Jersey on the E., and Maryland and Pennsylvania on the W.; area, abt. 520 sq. m. *Rivers*. Delaware River and Bay, and Appoquinimink, Blackbird, Brandywine, Christiana, Duck, Red-clay, and White-clay creeks. *Surface*, agreeably diversified; soil, fertile, producing Indian corn, wheat, oats, hay, potatoes, and fruit in abundance. Cap. Wilmington. Pop. (1897) 106,450.

—A city, port of entry, and former cap. of the above co., on the Delaware river, about 42 m. N. of Dover. *Manuf.* Locomotives, machinery, &c. Pop. (1897) 4,010.

New Castle, in *Indiana*, a township of Fulton co. Pop. about 1,500.

—A post-town, cap. of Henry co., about 40 m. E. by N. of Indianapolis.

New Castle, in *Kentucky*, a post-village, cap. of Henry co., about 26 m. N.W. of Frankfort.

New Castle, in *Maine*, a post-village and township of Lincoln co., about 25 m. S.E. of Augusta.

New Castle, in *Missouri*, a post-village of Gentry co., about 37 m. N.E. of St. Joseph.

New Castle, in *New Hampshire*, a post-town and township of Rockingham co.

New Castle, in *North Carolina*, a P. O. of Wilkes co.

New Castle, in *New York*, a post-village and township of Westchester county, about 40 miles N. N. E. of New York.

New Castle, in *Ohio*, a post-village and township of Coshocton county, about 71 miles E. N. E. of Columbus.—A village of Monroe county, about 36 miles N. E. of Marietta.

New Castle, in *Pennsylvania*, a manuf. city, cap. of Lawrence co., about 45 m. N.N.W. of Pittsburgh. Pop. (1897) 13,500.

—A borough and township of Schuylkill co.

New Castle, in *Virginia*, a post-village, cap. of Craig co., abt. 193 m. W. of Richmond.

Newcastle-under-Lyne, or **Lyne**, a town of England, co. of Stafford, 15 m. N.N.W. of Stafford, and 135 m. N.W. of London. *Manuf.* Hats, and silk and cotton goods. Pop. 12,938.

Newcastle-upon-Tyne, a town of England, cap. of the co. of Northumberland, on the Tyne, 54 m. E. of Carlisle. It is built on an acclivity extending along the river. The principal public buildings are St. Nicholas' church, the Mansion House, the Trinity House, Exchange, and Moot Hall. In Grey Street is erected a column 136 feet high, and surmounted by a colossal statue of Earl Grey. *Manuf.* Glass, pottery, chemicals, iron, tin, and other metal goods. Ship-building is carried on largely. Its importance is mainly owing to the coal trade from the mines along both banks of the Tyne. Pop. (1897) 201,100.

New Centerville, in *Pennsylvania*, a borough of Somerset co., abt. 10 m. S.W. of Somerset.

New Chester, in *Pennsylvania*, a post-vill. of Adams co., abt. 30 m. S.S.W. of Harrisburg.

New City, in *New York*, a village, cap. of Rockland co., abt. 35 m. N. of New York city.

New Columbia, in *Pennsylvania*, a post-village of Union co., abt. 16 m. N. of Sunbury.

New Columbia, in *Pennsylvania*, a post-village of Luzerne co., abt. 30 m. W.S.W. of Wilkesbarre.

Newcomb, in *New York*, a post-township of Essex co.

New'-come, *a.* Just arrived.

New'-comer, *n.* One who has recently arrived.

Newcomerstown, in *Ohio*, a post-village of Tuscarawas co., abt. 85 m. N.E. of Columbus.

New Con'cord, in *Kentucky*, a post-village of Callaway co., abt. 10 m. S.E. of Murray.

New Con'cord, in *Ohio*, a post-village of Muskingum co., 15 m. E.N.E. of Zanesville.

New Cor'ydon, in *Indiana*, a post-village of Jay co., abt. 105 m. E.N.E. of Indianapolis.

New Cum'berland, in *Indiana*, a post-village of Grant co., abt. 16 m. S.E. of Marion.

New Cuu'berland, in *Ohio*, a post-village of Tuscarawas co., abt. 110 m. E.N.E. of Columbus.

New Cuu'berland, in *Pennsylvania*, a post-village of Cumberland co., abt. 4 m. S.E. of Harrisburg.

New Cuu'berland, in *West Virginia*, a post-village, cap. of Hancock co., about 20 m. N. of Wheeling.

New Denmark, in *Wisconsin*, a township of Brown co.

New Der'ry, in *Pennsylvania*, a post-village of Westmoreland co., about 45 m. E. of Pittsburgh.

New Dig'ins, in *Wisconsin*, a post-village and township of La Fayette county, about 8 miles N.N.E. of Galena.

New Dungeness (*dunj-ness'*), in *Washington*, a village, former cap. of Clallam co., on the Strait of Juan de Fuca, about 70 m. N. by W. of Olympia.

New Dur'ham, in *Indiana*, a small village and township of La Porte county, about 12 miles S. of Michigan City.

New Durham, in *New Hampshire*, a post-town of Strafford co.

New Dur'ham, in *New Jersey*, a post-village of Hudson co., abt. 9 m. N.E. of Newark.—A village of Middlesex co., abt. 34 m. N.E. of Trenton.

New'el, *n.* (*Arch.*) The central column round which the steps of a circular staircase wind; sometimes continued above the steps up to the vaulting of the roof, and supporting a series of ribs which radiate from it as in Fig. 1938. The term is also used for the principal post at the angles and foot of a staircase. The newel staircase occurs in all turrets, as no other staircase could be designed to occupy so small a space. It is essentially Gothic in its construction, and is not found in the classical styles.

New'ell, in *Illinois*, a township of Vermilion co.; pop. abt. 3,200.

New Eug'land, the N.E. region of the U. States, granted by James I. to the Plymouth Company, in 1606, under the name of *North Virginia*, and which, being explored by Capt. John Smith in 1614, was named by him *New England*. It comprises the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island,

and Connecticut; extending from Lat. 41° to 48° N. and from Lon. 67° to 74° E.; area, 165,000 sq. m.; coast line, abt. 700 m.

New Echo'ta, in Georgia, a village of Gordon co., abt. 80 m. N.W. of Atlanta. It was formerly the chief town of the Cherokee Nation.

New Ed'inburgh, a seaport-town of Digby co., Nova Scotia, abt. 125 m. W. of Halifax.

New Egypt, in New Jersey, a post-village of Ocean co., abt. 19 m. S.E. of Trenton.

New Eng'land, in New Jersey, a village of Cumberland co., abt. 29 m. S.E. of Salem.

New Eng'land, in Tennessee, a village of Blount co., abt. 15 m. S. of Knoxville.

New Eng'land Village, in Massachusetts, a post-village of Worcester co., abt. 40 m. W. by S. of Boston.

New Era, in Pennsylvania, a post-village of Bradford co., abt. 15 m. S.S.E. of Towanda.

New Erin, in Illinois, a village of Stephenson co., abt. 135 m. W.N.W. of Chicago.

New Enre'ka, in Kansas, a small village of Jackson county.

New Fair'field, in Connecticut, a post-township of Fairfield co.

New Fane, in New York, a post-township of Niagara county.

New Fane, in Vermont, a post-township of Windham co. Pop. (1897) 990.

New-fangled, (*nu-fang'gld*), *a.* New-made; formed with the affectation of novelty.—Desirous or fond of novelty.

New-fan'gledness, **Newfan'gleness**, *n.* Vain and foolish love of novelty.

New Farmington, in Indiana. See FARMINGTON.

New-fash'ioned, *a.* Made after a new form or fashion.

Newfield, in Maine, a post-township of York co., 22 m. W. of Portland.

Newfield, in New York, a post-township of Tompkins co.

New Florence, in Pennsylvania, a post-village of Westmoreland co., abt. 64 m. E. of Pittsburgh.

Newfoundland, (*nu-fund-länd*), an island and British colony of North America, lies in the Atlantic Ocean, at the mouth of the Gulf of St. Lawrence, separated from Labrador on the north by the Straits of Belle Isle (about 12 miles broad), and extending in Lat. from 46° 38' to 51° 37' N., and in Lon. from 52° 44' to 59° 30' W. In shape it resembles an equilateral triangle, of which Cape Bauld on the north, Cape Race on the south-east, and Cape Ray on the south-west, form the angles. It is 370 m. in length, 290 m. in breadth, about 1,000 m. in circumference; area, 40,200 sq. m. The country is very unequal, covered with hills and mountains, everywhere overgrown with pines, so as to be practicable only in those parts where the inhabitants have cut roads. In winter the cold is excessive, nothing but snow and ice being seen, and the bays and harbors entirely frozen. The whole circuit of the island is full of bays and harbors, so spacious and sheltered on all sides by the mountains, except their entrance, that vessels lie in perfect security. *Rivers*. The Humber, and the River of Exploits. *Prod.* The soil being ill-adapted to agricultural purposes, kitchen vegetables are the principal crops. Timber is scarce, and the chief resources of the population are in the cod, seal, and salmon fisheries. The plains abound with large herds of the Cariboo deer, which, with dogs, bears, foxes, wolves, and beavers, form the prevailing animals. The fisheries are of two kinds—the "Shore Fishery," and the "Bank Fishery;" the former comprises the shores and bays of N.; the latter comprises a great tract known as the "Banks" of N., from 500 to 600 m. in length, and abt. 200 m. in breadth. The Banks form the greatest submarine plateau known; the depth of the water is from 20 to 108 fathoms, and the most productive "ground" is said to extend between Lat. 42° and 46° N. Great varieties of valuable fish are found in the waters around the colony, as the cod, salmon, herring, &c. The settlements are chiefly on the peninsula of Avalon. The principal are St. John's (the cap.), Harbor Grace, Bonaventure, Carbonear, Ferryland, and Trinity. Pop. (1897) about 200,000.

Newfoundland Dog, *n.* (*Zoöl.*) A splendid variety of the canine race, remarkable for its strength, nobility of character, sagacity, and attachment to its master. There is no doubt that this dog derived its origin from the large Spanish dogs which were introduced into America by the early discoverers; and that from thence it was brought over to Europe. The natives of Newfoundland made them draw sledges and carts, and put them to other degrading uses. There are several varieties of N. D., particularly a smooth breed, with rather small head, white and spotted with black, which seems now to be extinct; a very large breed, with broad muzzle, head raised, noble expression, waved or curly hair, very thick and bushy curled tail, black and white color; and a smaller, almost black breed. Some of the breeds seem to be crossed with hounds and other dogs. The N. D. is remarkable for memory, and for patience and forbearance of temper. It is, however, apt to become irascible in confinement, and will then bite even its master. Some of the most interesting anecdotes of the affection and sagacity of the dog, relate to the N. D. No dog ex-

cels it as a water-dog. Its paws are half-webbed, and its power of endurance in swimming is very great.

New Frank'fort, in Indiana, a village of Scott co., abt. 85 m. S.S.E. of Indianapolis.

New Frank'lin, in Illinois, a village of Wayne co., abt. 28 m. E.S.E. of Salem.

New Frank'lin, in Ohio, a post-village of Stark co., abt. 60 m. S.S.E. of Cleveland.

New Frank'lin, in Pennsylvania, a village of Franklin co., abt. 4 m. S.E. of Chambersburg.

New Gar'den, in Indiana, a post-village and township of Wayne co.

New Gar'den, in N. Carolina, a post-village of Guilford co., abt. 98 m. W. by N. of Raleigh.

New Gar'den, in Ohio, a post-village of Columbiana co., abt. 145 m. N.E. of Columbus.

New Gar'den, in Pennsylvania, a post-township of Chester co.

New Gene'va, in Pennsylvania, a post-village of Fayette co., abt. 195 m. W. by S. of Harrisburg.

New Georgia, a name formerly applied to that part of the W. coast line of N. America, between the Gulf of Georgia on the N. and the Columbia River on the S., including Vancouver Island.

New Ger'mantown, in Indiana, a village of Boone co., abt. 95 m. N.W. of Indianapolis.

New Ger'mantown, in New Jersey, a post-village of Hunterdon co., abt. 35 m. N. of Trenton.

New Ger'mantown, in Pennsylvania, a post-village of Perry co., abt. 45 m. W. of Harrisburg.

New Glau'rus, in Wisconsin, a post-village and township of Green county, about 15 miles north of Monroe.

New Glas'gow, a village of Two Mountains co., prov. of Quebec, abt. 30 m. N.N.W. of Montreal.

New Glas'gow, in Virginia, a post-village of Amherst co., abt. 119 m. W. of Richmond.

New Gloucester, (*glos'ter*), in Maine, a post-township of Cumberland co.

New Go'shen, in Indiana, a post-village of Vigo co., abt. 10 m. N. by W. of Terre Haute.

New Go'shenhoppen, in Pennsylvania, a village of Montgomery co., abt. 21 m. N.N.W. of Norristown.

New Granada, a republic of S. America. See COLOMBIA.

New Granada, or NEW GRENADA, in Pennsylvania, a post-village of Fulton co., abt. 72 m. W. of Harrisburg.

New Guil'ford, in Ohio, a post-village of Coshocton co., abt. 18 m. W. of Coshocton.

New Guil'ford, in Pennsylvania, a village of Franklin co., abt. 143 m. W. of Philadelphia.

New Guinea. See PAPUA.

New Ham'burg, in New York, a post-village of Dutchess co., abt. 66 m. N. of New York city.

New Hampshire, one of the 13 original States of the American Union, is bounded N. by Lower Canada, E. by the State of Maine and the Atlantic Ocean, S. by Massachusetts, and W. by Vermont, from which it is separated by the Connecticut River. The State lies between Lat. 42° 41' and 45° 11' N., and Lon. 70° 40' and 72° 28' W.; length, N. to S., 168 miles; maximum breadth 90 miles, with an average of 45 miles, comprising an area of 9,280 square miles, or 5,939,200 acres. GEN. DESC. For about 30 miles from the seaboard, the surface is generally level, diversified, however, with hills and valleys. Beyond this limit, the country assumes a character of entire hilliness, rising, in the N. part of the State, into the extensive range known as the White Mountains, with the outlying and detached groups of the Grand Monadnock and Kearsarge. The culminating peak of this range is Mt. Washington, at an altitude of 6,285 feet above sea-level; being the highest summit in New England. With the exception of the strip of level land selvaging the seaboard, the whole State is mountainous and rugged, possessing, however, many fine valleys near the river courses. The coastline extends for about 18 miles only, and the shore is, in most parts, a sandy beach fringed with salt marshes. Portsmouth, at the mouth of the Piscataqua, forms the only eligible harbor for large ships, although there are numerous small coves or creeks suitable to the reception of small craft. The general slope of N. H. is from N. to S., and the principal rivers are, the Connecticut, which, rising near the N. frontier, forms nearly the whole W. boundary, and has for its affluents the Upper and Lower Ammonoosuck, and the Ashuelot; the Merrimack and its parent streams; Salmon Falls River, and the Piscataqua; the Cochecho, Margalloway, &c. About 110,000 acres of the area of this State present a water-surface; the chief lakes are those of Winnipisogee, Umbagog, Sanapee, Squam, &c. The magnificent *coup d'œil* exhibited by the scenery of N. H. has entitled it to the designation of the "Switzerland of America," (see Fig. 947.)—*Geol. and Min.* The geological formations of the State are almost wholly those of the ancient metamorphic rocks, the mica and talcose slates, quartz rock, granular limestone, granite, gneiss, &c. Though these strata contain numerous

metallic ores, they have not, as yet, assumed any developable degree of importance. Large beds of magnetic and specular iron-ores exist, but have been, hitherto, only partially worked. Copper, zinc, and lead ores—most of the latter silver-bearing—are found in various parts of the State. A vein of lead, combined with a small quantity of oxide of tin, and associated with arsenic, occurs in the town of Jackson. Beryls, tourmalines, and mica, are found in large sizes, and superior quality. Sulphuret of molybdenum, graphite or plumbago, and steatite or soapstone, are also met with.—*Soil and Veg.* The soil of N. H., naturally infertile, has been to a great degree improved by industry and art. The N. part of the State is principally pasture and woodland. The best soils lie in the valleys of the rivers, some of which are subject to annual inundations. The natural productions include the oak, pine, hemlock, ash, beech, birch, and other large timber, which supply a large annual export of lumber. The sugar-maple and the pitch-pine exist in plenty.—*Clim.* The climatic tendency of N. H. is to severity, the temperature being a trifle colder than that of Maine, but more equable. Difference of elevation within the State, however, causes a corresponding difference in the scale of temperature; so much, indeed, as from 20 to 25 degrees between the valleys and the more elevated localities. In the summer solstice the thermometer sometimes ascends to as high as 100° Fahr., while in winter the cold has been known to freeze mercury. In the region of the White Mountains the winters are excessively cold, and the peaks are covered, more or less, with snow three-fourths of the year,—from which circumstance they have derived their distinguishing appellation. Taken altogether, the climate may be said to be highly salubrious, and cases of remarkable longevity are frequent. The cold season begins about the middle of Sept., and continues until May; and from the close of Nov. till the opening of spring, the whole surface is thickly covered with snow, and the rivers are all ice-bound.—*Zoöl.* The indigenous animals, as wolves, bears, &c., though much thinned in numbers, are still found in the mountainous and forest regions in the N. part of the State. Wild game and fowl are abundant, and all the waters—still and running—are well stocked with fish.—*Agric.* The soil, except in the fertile valleys, is better adapted to pasturage than to agriculture. The yield of the chief cereal products for the year 1908 is as follows: Corn, 1,092,000; wheat, 24,000; oats, 398,000 bushels. Apples are quite largely exported. In the census year (1900) there were in the State 29,324 farms, embracing 3,609,864 acres, of which 1,089,000 were improved, the land and improvements being valued at \$70,124,360, implements and machinery at \$10,551,646, live stock at \$5,163,090, and farm products at \$15,760,000. Large numbers of cattle and sheep find their way to Brighton and Cambridge, and horses are also sold from the hill pastures. More than half of the land is included within farm limits, though it cannot all be classed as improved. Yearly, however, the number of acres under close cultivation increases, both in old enclosures and from new lands. The average value of farm holdings is about \$30 per acre; the average value of wild land is difficult to estimate, much of it being sold to companies for the lumber, and then resold at a nominal price, or suffered to lie until covered with another growth. The flush times succeeding the civil war tempted many young men to leave the farms, which, in some instances, not meeting with ready sale, were deserted. For this, and for various other causes, farms in towns remote from the great centres were almost unsalable. Within a few years, however, the number is diminishing. Not only have men returned to the homesteads, but they are re-taken by Germans and Irish, who, by their frugal ways and industrious habits, have made profitable investments. The population is about equally divided between agriculture and manufacturing and mechanical pursuits. Pisciculture is becoming an object of increasing importance, and the propagation of the various home species of fish, with the introduction of foreign kinds, engages the active attention of the State authorities. Wool, dairy-produce, pulse, flax, tobacco, hops, molasses, beeswax and honey, must, also, be taken into enumeration as steadily advancing articles of growth and production. There are still more than a million acres of forest in the State, its value per acre about double that of cleared land. *Polit. Div.* The State is sectionized into 10 counties, as follows:

Belknap, Coos, Merrimack, Sullivan.
Carroll, Grafton, Rockingham,
Cheshire, Hillsborough, Stafford.

Cities and towns. The principal centres of urban population are Concord (cap. of the State), Portsmouth, Manchester, Dover, Nashua, Keene, Exeter, Bristol, Claremont, Rochester, and Somersworth.—*Govt. & Const.* The State executive consists of a governor, and an advisory council of five members. The former is chosen annually, by a majority of votes, or, in case of no choice by the people, the General Court, in joint ballot, elects one of the two persons having the highest number of votes. The qualifications for the gubernatorial office are, viz., age, not under 30, and domiciliary residence for seven years. Salary attaching to the position, \$1,000 per annum. In case of death or disability, the functions of governor are exercised by the president of the Senate. The governor convenes the council, and their resolutions are recorded in a register, and signed by those agreeing thereto. The governor and council nominate and appoint all judicial officers, the attorney-general, and solicitors, sheriffs, coroners, registrars of probate, and general field-officers of militia. The governor and council have a negative on each other, both in the nominations

and Connecticut; extending from Lat. 41° to 48° N. and from Lon. 67° to 74° E.; area, 165,000 sq. m.; coast line, abt. 700 m.

New Echo'ta, in Georgia, a village of Gordon co., abt. 80 m. N.W. of Atlanta. It was formerly the chief town of the Cherokee Nation.

Large numbers of cattle and sheep find their way to Brighton and Cambridge, and horses are also sold from the hill pastures. More than half of the land is included within farm limits, though it cannot all be classed as improved. Yearly, however, the number of acres under close cultivation increases, both in old enclosures and from new lands. The average value of farm holdings is about \$30 per acre; the average value of wild land is difficult to estimate, much of it being sold to companies for the lumber, and then resold at a nominal price, or suffered to lie until covered with another growth. The flush times succeeding the civil war tempted many young men to leave the farms, which, in some instances, not meeting with ready sale, were deserted. For this, and for various other causes, farms in towns remote from the great centres were almost unsalable. Within a few years, however, the number is diminishing. Not only have men returned to the homesteads, but they are re-taken by Germans and Irish, who, by their frugal ways and industrious habits, have made profitable investments. The population is about equally divided between agriculture and manufacturing and mechanical pursuits. Pisciculture is becoming an object of increasing importance, and the propagation of the various home species of fish, with the introduction of foreign kinds, engages the active attention of the State authorities. Wool, dairy-produce, pulse, flax, tobacco, hops, molasses, beeswax and honey, must, also, be taken into enumeration as steadily advancing articles of growth and production. There are still more than a million acres of forest in the State, its value per acre about double that of cleared land. *Polit. Div.* The State is sectionized into 10 counties, as follows:

Belknap, Coos, Merrimack, Sullivan.
Carroll, Grafton, Rockingham,
Cheshire, Hillsborough, Stafford.

Cities and towns. The principal centres of urban population are Concord (cap. of the State), Portsmouth, Manchester, Dover, Nashua, Keene, Exeter, Bristol, Claremont, Rochester, and Somersworth.—*Govt. & Const.* The State executive consists of a governor, and an advisory council of five members. The former is chosen annually, by a majority of votes, or, in case of no choice by the people, the General Court, in joint ballot, elects one of the two persons

and appointments. The administrative officers of the State are: Secretary, Treasurer, Auditor of Accounts, and Commissary-General, who are chosen by joint ballot of the General Court. County treasurers, registrars of deeds, and commissioners, are elected by the votes in the several counties. The legislative power is vested in two bodies — a Senate, and a House of Representatives. Members of both houses are chosen annually. Senators, must be 30 years of age, inhabitants of their several districts, and have been citizens of the State for 7 years. Senatorial districts are set off according to the proportion of direct taxes paid by the said districts. In case of non-election in any such district, the General Court chooses one of the two persons having the majority of votes. Representatives must be residents of their district, and have been, for two years next preceding election, inhabitants of the State. Every town having 1.0 ratable male polls 21 years old may elect one representative, and every 300 such polls additional shall entitle the town to another representative. The judiciary consists of a Supreme Court, courts probate, and justices of peace. All judges are nominated and appointed by the governor and council, and hold office during good behavior. Justices of peace are appointed for 5 years, and exercise jurisdiction in cases below \$13.33. Clerks of court are appointed by court. The elective franchise is extended to every male citizen of 21 years of age, paupers only excepted. The apportionment, based on the census of 1890, gives to N. H. 2 representatives in the U. S. Congress, and 4 Electoral votes. — *Manuf.* Agricultural interests have steadily declined for a number of years past, though the growing popularity of N. H. as a summer resort has opened a new and lucrative market for the farmers, whose rough and sterile soil did not enable them to compete with the products of the more fertile States. But the decline in agriculture is more than made good by a rapid growth in manufacture, which is much the leading interest of the State. Nature seemingly intended N. H. to be the great workshop of New England, providing it with enormous water-power, much of which yet awaits development. The Merrimac is said to turn more spindles and propel more shuttles than any other river in the world, and is not yet utilized up to its full capacity. The chief centers of manufacture are Manchester (the largest city), Nashua, and Dover. The State is particularly noted for the extent of its manufactories of textile fabrics, few of the States surpassing it in its product of cotton goods, its mills producing sheetings, shirtings, lawns, and fine muslins, print cloth, flannels, gingham and checks, cassimeres, and other classes of goods in great variety and quantity. In addition may be mentioned the production of paper, the next largest interest; the Concord coach-works, the Manchester locomotive and steam fire-engine works, and the iron foundries at Nashua, all of which have a national reputation. In 1905 the manufactories of N. H. employed 65,366 hands, paid in wages \$27,693,203, and produced goods valued at \$123,610,904. — *Scenery.* The salubrious climate and highly picturesque natural scenery of this State have, as above stated, brought it into deserved repute as a place of resort for summer visitors, particularly in the region of the White Mountains. These, in addition to Mt. Washington, include more than 100 peaks of note, a number of them over 5,000 feet high, among which the name of Washington is followed by those of the succeeding presidents, Adams, Jefferson, Madison, and Monroe. This group of mountains, in addition to its healthful and invigorating climate, is rich in attractive scenery, and is annually visited by large numbers from neighboring and distant States. — *Finances.* The total net debt of N. H. in 1908 aggregated a value by estimate of \$10,700,000. Of this the bonded debt of the State was \$706,700; that of cities, counties and minor divisions (towns, villages, &c.) about \$10,000,000. The assessed valuation of real and personal property in the State was \$244,972,264. — *Shipping.* The greater part of the foreign products consumed in N. H. is entered at Boston. Portsmouth is a U. S. port of entry, but the amount of export and import business done there is unimportant. — *Education.* The educational requirements of the State are provided for by the legislature, which has authorized a public-school tax to the amount of over \$2,000,000. In 1908 there were 2,916 teachers and 66,524 pupils enrolled. The scholastic system is generally excellent. Dartmouth College, founded at Hanover, in 1769, as a school for the instruction of Indians, has well-appointed academic, scientific, medical, and agricultural departments, with libraries aggregating 75,000 volumes. There is a State normal school at Plymouth. The other leading educational institutions are the Chandler Scientific School at Hanover, and the Methodist Biblical Institute at Concord. In fact, it may be said that the educational arrangements are good. The New Hampshire Asylum for the Insane is spoken of as one of the best institutions of the kind in the U. States. Journalism flourishes in a corresponding ratio with that of the neighboring States. The value of church property is estimated at more than \$1,500,000. — *Hist.* In 1623, the English colonists, Mason and Gorges (see MAINE), jointly held a grant of land from the Merrimac to the Kennebec rivers, and, in the following year, the first settlements were commenced at Portsmouth, and at Dover. In 1629 the grant was divided, and a separate grant made to Mason of that region W. of the Piscataqua River, called *New Hampshire*, while Gorges retained the territory E. of the Piscataqua, called *Maine*. In 1641, Massachusetts extended her jurisdiction over N. H., and maintained her authority there till 1679, when the case being brought before the highest court of appeal in England on colonial

matters, it was decided that the claim of Massachusetts was illegal, and N. H. was thereupon constituted a separate province. In 1686, the charter of Massachusetts having been annulled, New Hampshire, Maine, Massachusetts, and Narragansett were united in one Royal Province, under President Dudley, and afterwards under Governor Andros. In 1689, upon news of the English Revolution, the govt. of Andros was overthrown, and Massachusetts resumed her old charter. Some of the people of the Colony petitioning Massachusetts to be received under control and protection till orders should come from England, Massachusetts assented, and exercised a merely nominal authority over it. In 1692, the province of N. H. was reestablished by the English government, and ever after remained separate from its neighbor. In 1776, the province issued a public declaration of independence, and organized a temporary government. After taking a prominent and distinguished part in the War of the Revolution, N. H., in Convention (1788), gave in her adhesion to the United States Constitution by a majority of 11 votes in an assembly numbering 103; and in 1807, the seat of government was permanently established at Concord. On July 1, 1869, the State ratified the 15th Amendment to the national Constitution. *Pop.* (1880) 346,984; (1890) 376,530; (1900) 411,588.

New Hamp'ton, in Iowa, a post-village and twp., cap. of Chickasaw co., about 112 m. W.N.W. of Dubuque.

New Hamp'ton, in New Hampshire, a post-township of Belknap co.

New Hamp'ton, in New Jersey, a post-village of Hunterdon co., about 10 m. N.N.W. of Flemington.

New Hamp'ton, in New York, a post-village of Orange co., about 74 m. N. by W. of New York city.

New Han'over, in New Jersey, a township in Burlington co.

New Han'over, in North Carolina, a S.E. co., bordering on the Atlantic Ocean; area, about 90 sq. m. *Rivers.* Cape Fear and South rivers. *Surface*, level; *soil*, not very fertile. *Cap.* Wilmington. *Pop.* (1890) 24,026.

New Han'over, in Pennsylvania, a post-township of Montgomery co.

New Har'mony, in Indiana, a post-town of Posey co., about 15 m. N. of Mount Vernon.

New Har'risburg, in Ohio, a post-village of Carroll co., about 6 m. N.W. of Carrollton.

New Har'tford, in Connecticut, a post-village and township of Litchfield co., about 20 m. N.W. by W. of Hartford.

New Har'tford, in Illinois, a post-village of Pike co., about 80 m. W.S.W. of Springfield.

New Har'tford, in Iowa, a post-village of Butler co., about 10 m. W. of Cedar Falls.

New Har'tford, in Minnesota, a post-township of Winona co.

New Har'tford, in New York, a post-village and township of Onondaga county, about 4 miles W. by S. of Utica.

New Har'tford Center, in Connecticut, a village of Litchfield co., about 20 m. N.W. of Hartford.

New Ha'ven, in Connecticut, a S. by W. co., bordering on Long Island Sound; area, about 619 sq. m. *Rivers.* Housatonic, Naugatuck, and Quinepiac rivers. *Surface*, uneven and hilly; *soil*, moderately fertile. *Pop.* (1890) 209,058.

— A city, port of entry, seat of justice of the county, until 1874 the semi-cap. of the State, about 76 m. N.E. of New York city and 160 m. S.W. of Boston; Lat. 41° 18' 23" N., Lon. 72° 56' 30" W. It is pleasantly located, and the houses are generally built with neatness and regularity. Among the public edifices are the former State House, the State Hospital, City Hall, St. Paul's Chapel, and Yale University. The commerce of this city is, in a great measure, restricted by the shallowness of New Haven Bay, but an immense inland traffic is carried on by means of the numerous railroads which radiate from here in every direction. Extensive manufactories have been established, chiefly of clocks, carriages, India rubber goods, boots, shoes, and ironware. N. H. was settled in 1638 by a company of London immigrants under Theophilus Eaton and Rev. John Davenport, and incorporated as a city in 1784.

New Ha'ven, in Illinois, a post-village and township of Gallatin co., on the Wabash river, about 8 m. above its mouth.

New Ha'ven, in Indiana, a post-town of Allen co., about 6 m. E. of Fort Wayne.

New Ha'ven, in Kansas, a former post-village of Douglas co., about 10 m. W. of Lawrence.

New Ha'ven, in Kentucky, a post-village of Nelson co., about 54 m. S.W. of Frankfort.

New Ha'ven, in Michigan, a township of Gratiot co. — A township of Shiawassee co.

New Ha'ven, in Minnesota, a township of Olmsted co., 11 m. N.W. of Rochester.

New Ha'ven, in Missouri, a post-village of Franklin co., 70 m. W. of St. Louis.

New Ha'ven, in New York, a post-village and township of Oswego co.

New Ha'ven, in Ohio, a village of Hamilton co., about 17 m. N. W. of Cincinnati.

— A post-village and township of Huron co., about 53 m. N. by E. of Columbus.

New Ha'ven, in Pennsylvania, a post-borough of Fayette co., about 44 m. S.E. of Pittsburgh.

New Ha'ven, in Vermont, a post-village and township of Addison co., about 32 m. S.W. by W. of Montpelier.

New Ha'ven Mills, in Vermont, a post-village of Addison county, about 40 miles S.W. by W. of Montpelier.

New Heb'rides. See HEBRIDES.

New Heb'ron, in Illinois, a p.-village of Crawford co.

New Hol'land. See AUSTRALIA.

New Hol'land, in Indiana, a post-village of Wabash co., about 38 m. S.W. of Fort Wayne.

New Hol'land, in Pennsylvania, a post-village of Lancaster co., about 49 m. E. by S. of Harrisburg.

New Hol'stein, in Wisconsin, a post-village and township of Calumet co.

New Hope, a village of Waterloo co., province of Ontario, about 9 m. N.W. of Galt.

New Hope, in Iowa, a prosperous township of Union county.

New Hope, in Missouri, a post-village of Lincoln co., abt. 55 m. N.W. of St. Louis.

New Hope, in Ohio, a post-village of Brown co., abt. 7 m. N. of Georgetown.

New Hope, in Pennsylvania, a post-borough of Bucks co., abt. 32 m. N.N.E. of Philadelphia.

New Hope, in Virginia, a post-village of Augusta co., abt. 114 m. N.W. of Richmond.

New Hope, in Wisconsin, a post-township of Portage co.

New Hope River, in N. Carolina, rises in Orange co., and enters the Cape Fear River in Chatham co.

New Hor'ton, a seaport of Albert co., New Brunswick, abt. 85 m. N.E. of St. John.

New Hud'son, in New York, a post-township of Alleghany co.

New Hur'ley, in New York, a post-village of Ulster co., abt. 10 m. N.W. of Newburgh.

New Iber'ia, in Louisiana, a post-town, cap. of Iberia parish. *Pop.* (1897) 4,100.

New Id'ria Mines, in California, a village of Fresno co., about 75 m. W.S.W. of Millerton.

New'ington, in Conn., a post-town of Hartford co.

New'ington, in N. H., a post-town of Rockingham co.

New Ips'wich, in New Hampshire, a post-village and township of Hillsborough co., abt. 40 m. S.W. by S. of Concord.

New Ireland, a long, narrow island in the So. Pacific Ocean, N.E. of New Britain. *Length*, averages 200 m.; *breadth*, 20 m.; *area*, abt. 4300 sq. m.; *Sur.*, hilly. *Pop.* abt. 11,000.

New'ish, a. Somewhat new; nearly new.

New Jas'per, in Ohio, a p. v. and twp. of Greene co.

New Jefferson, in Iowa. See JEFFERSON.

New Jefferson, in Ohio, a village of Harrison co., abt. 11 m. N.N.E. of Cadiz.

New Jer'sey, a N.E. State of the American Union, is bounded on the N. by New York State, E. by the Atlantic, S. and S.W. by Delaware Bay, and W. by Pennsylvania; extreme length, N. to S., 167 m.; maximum breadth, 58 m.; average breadth, abt. 40 m. It lies between Lat. 38° 44' and 41° 20' N., and Lon. 74° and 75° 20' W. *Area*, 7,576 sq. m., or 4,849,069 acres. *Coast-line*, 120 m. — or, including bays, 540 m. — *Gen. Desc.* N. J. occupies a portion of the great Atlantic slope of the U. States, and partakes to some extent of the physical characteristics which belong to the whole region. The Appalachian chain, with its broad belt or series of ridges, laps over with the N. and N.W. of the State, and gives to it form and character. The belt of red sandstone, with its trap ridges, which is so prominent a feature in all the States from Massachusetts to South Carolina, gives character to the central section, while the comparatively level border, with its sandy soil and forests of pine, which fringes the Atlantic seaboard from New York to Florida, covers all the lower half of the State. The offsets of the Appalachian range in N. J. may be grouped in two main ranges — the Blue or Kittatinny Mountains, and the Highland Range. The former, known in New York State as the Shawangunk, and in Pennsylvania as the Kittatinny Mountains, forms an almost unbroken ridge from the New York State-line to the Delaware Water Gap, a distance of 40 miles. It is the highest ground in the State, being at the Water Gap 1,497 ft. above sea-level, (Fig. 788.) This mountain-range is a remarkable feature of the landscape as seen from the Kittatinny Valley or from the Highland Range beyond. Its almost level crest is everywhere covered with forest; its steep slope brings the trees, fields, and houses on its sides in view as plain as a picture; and the contrast between the wooded crown and upper slope, and the smooth fields of the lower slope, forms a coup d'œil of attractiveness. Towards the N.W., the Kittatinny slopes off very gently, and rises again to lower but still considerable elevations in one or several parallel but subordinate ranges. Nearly the entire surface of these is rocky and wooded, though the underlying rock, being a red sandstone or shale, is subject to disintegration, and in some places is covered with tillable soil. Unlike the Kittatinny Mountains, the Highland Range is composed of a great number of hilly ridges; and while it occupies a belt of country 22 miles wide on the New York State line, and 10 miles wide on the Delaware, it really includes no long, unbroken

NEW JERSEY

SCALE OF MILES

KILOMETERS

ridges, except the Green Pond; and the subordinate ridges by which it is configured are not really in line with each other, nor are their axes parallel to the direction of the main range, but are somewhat oblique to it, so that if the direction of the range is N.E., that of these ridges would be about N.N.E. The effect of this peculiar arrangement is to make it possible to cross from one side of the range to the other in a N.N.E. direction, without surmounting any considerable elevation, while it is impossible to cross it from S.E. to N.W. without rising over a succession of steep and high mountain ridges. The Sparta, the Ringwood, the Rockaway, and many other valleys, owe their form and direction to this remarkable feature of these ridges. The crests of the other mountain groups in the State, too numerous to enumerate, vary greatly in their surfaces, though all are much smoother and more rounded in outline than the Kittatinny Mountain or the trap ridges of the red sandstone. Many of them are covered so deeply with earth or decayed rock that they are susceptible of cultivation to their summits even, while others are covered with stony debris or bare rock, and can be only left in wood. There is one striking feature observable in the greater number of these elevations, and that is the very gentle slope with which they subside towards the N.E., and are lost; while at their S.W. extremities they present a very abrupt fall. The mineral wealth of this mountain region early attracted the attention of settlers, and the working of iron-mines was begun about the year 1700, but the hills, bad roads, and more or less stony surface, joined to the quicker returns of mining, have discouraged agriculture. There are, however, large districts in which the rocks disintegrated rapidly, and which now exhibit a rich and productive soil. The mountains near the Delaware, along the New Jersey Central Railroad, a large tract between Morristown and Dover, and the country about Mendham and Chester, are of this character. These localities are making a good name for themselves, and gradually becoming occupied and improved in sheep-husbandry, dairy-farming, or in arable culture. The red-sandstone region of the State is traversed by various and irregularly distributed ridges of trap-rock. These rough, rocky, and arborescent ridges are remarkable from their occurrence in the midst of a rich, highly cultivated, and productive agricultural territory. The principal of these elevations are Sourland, Round Valley, and Palisade Mountains, Rocky and Bergen Hills, &c. They are rough in configuration, very steep in their descent toward the S.E., and easy in their slope toward the N.W. High Point, in Passaic co., is a high summit of the trap series, being 565 feet above tide-water level. The S. division of the State is characterized by the absence of any rocky eminences, or any elevations worthy the name of mountains. Its circular hills are all earthy, and are results of denudation or erosion. The Navesink Highlands, on which the Navesink light-houses are located, and which are the first points of land sighted when entering New York harbor from sea, are about 400 feet high, and exhibit the highest altitude found in this portion of N. J. The Delaware Valley, striking both sides of the Delaware River in its course from Carpenter's Point to the Water Gap, a distance of about 40 miles, runs nearly parallel to the base of Kittatinny Mountain. This valley, from half a mile to three miles in width, contains limestone and much good land, affording abundant crops to its owners, and presents a variety of picturesque scenery. The belt of country lying between the Kittatinny and Highland ranges is known as the *Kittatinny Valley*. It is a part of that great Appalachian basin of the U. States which extends from Canada to Tennessee, and which is everywhere known for its fine scenery and agricultural wealth. In N. J., it has a length of 50 m., with an average width of 10 m. Its surface is variegated in the direction of its length by short eminences of slate and limestone. These ridges are of slight elevation, covered with soil, and present throughout the summer the richest verdure. Between the subordinate ranges of the Highlands, valleys of various extent are found, adding beauty to the scenery and importance to husbandry. Of such are the valleys of the Request, the Pohatcong, and the Musconetcong, which open to the Delaware. So, too, are the valleys of Sparta and Vernon, which debouch on the Kittatinny Valley in New York State. German Valley, on the S. Fork of the Rappahannock, is almost enclosed by mountains. Succasunna Plains, at the head-waters of the same river, lie between the hills at an altitude of 755 feet above high-water mark. Toward the N.E., they open into Berkshire and Longwood valleys. Some of the vales of the Rockaway and its feeders, which nestle among rugged and wooded hills, are perfectly charming in their picturesqueness. The Valley of the Passaic, which is almost enclosed by the Highlands on the one side, and by the trap ridges of the First, Second, and Third mountains on the other, is on the S.E. edge from 160 to 180 ft. above tide-level, while along its N.W. border and along the Morris Plains it rises to 400 feet. The fine valley extending from the N. Y. line almost to the Raritan, and having the First Mountain on the N.W., and the Palisades and Bergen Hill on the S.E., is another feature of the red-sandstone plain. Some portions of its surface attain the height of from 150 to 200 feet, as at Orange, and Scotch Plains, while the tide flows for a long distance across it in the Hackensack and Passaic. The S.E. selvage of this plain is the least elevated of any land in the centre line of the State. The Delaware and Raritan Canal crosses the State here without any deep cuttings, and with a summit level only 57 ft. above mean tides. The S. half of the State is low, level, sandy, and in many parts barren. It may be described as a great plain, which slopes gently from its

centre towards the Atlantic Ocean and the Delaware, and which has been eroded in the Drift Period, so as to leave bossy hillocks of a few feet in height, and also been furrowed by the streams which give it drainage. A great part of the E. shore is fringed with a chain of low islands, similar to those on the coasts of the more S. maritime States, but with more numerous, larger, and deeper inlets between them. Great and Little Egg Harbors, Barnegat, Delaware, Newark, and Sandy Hook bays, Shark Inlet, and the united bays of Navesink and Shrewsbury, afford shelter to vessels of considerable burden. The tide-marshes form a noticeable feature of the country bordering the ocean, and the tidal waters of N. J. They are usually grassed and soddied, and their upper surface is near high-water level. They are usually of soft mud underlying the soil, and frequently so boggy that horses or cattle cannot pass over them. This substratum of mud varies from 6 inches to 30 ft. in depth, and is underlaid, in its turn, by firm, gravelly, or sandy soil. These marshes are capable of reclamation, and it is stated that of the 295,474 acres which form their area, a considerable percentage have been brought into an improved and cultivable condition, and are utilizable as land. This process of reclamation is still pursued with encouraging results.—*Rivers, &c.* The principal rivers of the State are the Delaware, separating it from Pennsylvania, and receiving quite a number of affluents; and the Passaic, Hackensack, Raritan, Rahway, Navesink, Shrewsbury, Tonis, and Little and Great Egg Harbor rivers, all emptying into the Atlantic. The water-sheds of the State may be thus classified: the Atlantic receives the drainage of an area of 4,546 sq. m.; the Delaware River and Bay, of 2,800 sq. m., and the Hudson River, of 150 sq. m. In the N.W. part of the State there are several small but pleasantly situated lakes.—*Clim.* The climatic difference between the N. and S. parts of the State is very striking. The plain country of the S. is warmer than might have been expected from the Lat., the temperature approximating to that of E. Virginia, and admitting of the partial culture of cotton; while the winter in the N. assimilates in severity to that of the N. States. The melons, sweet-potatoes, and other semi-tropical products, which are raised in perfection in the S. and middle cos., and are scarcely attempted in the extreme N. ones, owe their excellence to a mean summer temperature not more than 3 or 4 degrees higher than is observed in the N. part of the State. Fevers and ague prevail in the neighborhood of the marshes; but upon the seaboard, and in the hilly regions, the climate is in the highest degree healthful and invigorating.—*Geol. and Min.* The State is separated into 3 distinct geological divisions, each of which is clearly defined by its peculiar formations, mineral products, and soils. These represent the azoic; paleozoic; triassic, or red sandstone; cretaceous; and tertiary and recent formations. Of the azoic, the Highland range of mountains forms the extent, and with the paleozoic, includes the iron-ore and limestone districts. The triassic formation occupies the belt of country which crosses the State from N.E. to S.W., adjoining the Highland Range on the S.E., and comprises the red sandstone and trap-rocks. The cretaceous is found immediately S.E. of the red sandstone, in a long and narrow strip reaching from Raritan and Sandy Hook bays to the head of Delaware Bay, near Salem. In this formation is included the green sand marl-beds. Lastly, come the tertiary and recent formations, which are almost entirely limited to the S. part of the State, covering Atlantic, Cumberland, and Cape May cos., and the greater part of Ocean co. The superficial character of this region is that of a sandy plain covered with forests of pitch-pine and oak, and cedar swamps. Extensive deposits of bog-iron ores are found here. Calcareous marls of the miocene period are found in the W. part of Cumberland co., and from the N. outcrop of this formation, which further extends S. and furnishes immense quantities of shelly debris for manure. In the same county, a plentiful supply of suitable sand is extensively made available in the glass manufacture carried on at Millville and other places. The cretaceous formation, known as the *green-sand or marl dist.*, forms the upper secondary group of alternating sands and clays, in which, setting aside a few instances of a brown sandstone, and of a yellowish limestone (inclosing shelly and coralline remains), the mineral beds wholly consist of loose, unconsolidated materials. Numerous deposits of green sand are dispersed throughout this dist., and contribute much to its fertility; and it contains some of the best farming lands in the State. In this district, too, are found extensive beds of plastic clay, largely worked near Amboy, and at other localities for the making of fire-brick. The great belt of metamorphic rocks of the triassic formation extends from Trenton toward the outcrop of the margin on the N. side of Staten Island, and along New York Island; on the other hand, the same group stretches out toward the Pennsylvania frontier. From the N.W. of the State to the border of the green-sand formation, the metamorphic group is overlaid and hidden by the red sandstone of the middle secondary. The strata of argillaceous red sandstone forming the base of this formation dip smoothly toward the N., and describe a basin of 20 m. wide, extending from the Hudson River near the Highlands S.W. through the middle Atlantic States. This is the territory of the red rocks and red sandy soil of the State, whose surface presents a series of moderate undulations, checkered by numerous abrupt and rugged eminences, and long, narrow ridges, with very steep and rocky declivities composed of greenstone trap. The longest of these ridges fringes the W. bank of the Hudson River, and forms the Palisades (q. v.), finally

terminating to the back of Jersey City in New York Bay. The N. J. copper ores occur near the line of demarcation of the sandstone with these greenstone ridges. The metamorphic group occupies the Highlands, developing gneissic rocks from the Ramapo to Poconunk Mountain, where the lower silurian limestone crops out in the valleys stretching S.W. between the parallel ridges of gneiss and metamorphic slates. Toward the S. and W. the limestones run in continuous parallels with the valleys across this section of the State. In this region occur valuable and extensive beds of magnetic and specular iron ores, which yield abundant supplies of raw material to the great iron-manufacturing concerns of the State. In the limestone at Franklin, near its point of association with the gneiss, beds of red oxide of zinc, in combination with franklinite, are met with. This tract is on the W. boundary of the metalliferous region, or, in other words, may be defined by a line reaching from Pechuck Mountain to Belvidere on the Delaware. Lastly succeed the formations pertaining to the lower section of the Appalachian system of rocks. The lower silurian limestones make gradual way to a belt of the Hudson River slates, extending as far W. as the Delaware Water Gap, to the foot of a high ridge of coarse white sandstone, the course of the Shawangunk Mountain and of its characteristic grit rock advancing in a ridge, almost without a break, from near Rondout on the Hudson across the N.W. selvage of the State into Penna. (We must, in this place, express our acknowledgments for the valuable information afforded us by the magnificent work on the *Geology of New Jersey*, compiled by Geo. H. Cook, Esq., State Geologist, by authority of the Legislature)—*Soil, Veg., and Agric.* Sections of the soil of the great plain of the S. and central divisions of the State are not normally fertile; but since the application of marls and other fertilizing substances thereto, the soil has been rendered very productive. In some tracts, however, as those near the seaboard, the soil is of a white, sandy nature, and is not susceptible of any high degree of melioration; nevertheless, even on the coast some arable lands are met with, such as the beaches at Deal and Long Branch, which may be said to be the sole fertile patches immediately on the Atlantic from the extreme N.E. to the S. limit of the U. States coast-line. The N. portion of the State is admirably suited to agriculture and grazing. Excellent pasture-lands are also found among the mountain valleys, while the alluvial bottoms are preëminently productive. The central division of N. J. is the most thoroughly developed region of the State, and may be described as an immense market-garden, whose produce supplies, in great part, the demands of the cities of Philadelphia and New York. The apples and cider of this part of the country have deservedly won a high reputation, as also have the peaches and other semi-tropical fruits and vegetables of the more S. districts. The vegetation is not characterized by any distinctive features, it corresponding with that of the Middle States generally. The oak, hickory, and other forest timber grow to a sizable extent in the N. part, while the S. contributes valuable pine and cedar woods, together with an abundant yield of stunted oak, which derives importance as an article of fuel. Maize, wheat, and the other cereals (excepting a limited product of barley, with the usual hardier fruits and vegetables, are raised in ample quantities; dairy-produce, tallow, and honey are in good supply; and there is also a tolerably fair product of wine, tobacco, silk, hops, and maple-sugar. The smaller kind of fruits, comprising the principal varieties of berries, form quite a considerable quota of the pomological returns of the State. It is estimated that more than half of all the cranberries produced in the United States are grown in N. J. Some 200,000 acres, a large proportion of it being wild or uncultivated land, are devoted to the culture of this fruit, yielding an annual crop of between 100,000 and 200,000 bushels. In addition to the small fruits and market vegetables, the vine is largely cultivated, particularly at Vineland and Egg Harbor, where a large quantity of excellent wine is produced. To the leading cereals about 500,000 acres are devoted, with a yield in 1908 of 8,757,900 bushels of corn, 1,998,000 of wheat, and 1,770,000 of oats. There is also a considerable yield of rye, barley, and buckwheat. But of the cultural acreage in the central and southern districts the chief portion is devoted to the growth of market vegetables, fruits, and berries.—*Cruisades and Summer Resorts.* N. J. offers numerous attractions to travellers, among which are the Falls of the Passaic, at Paterson; the passage of the Delaware through the Line Mountains, called the "Delaware Water Gap;" the well-known bathing places of Cape May, Long Branch, Deal, Squam Beach, Atlantic City, Beach Haven, &c.; Sholey's Mountain, in Morris co., with a mineral spring on its summit; Lake Hopatcong, Greenwood and Budd's lakes, and other points in the northern highlands. In addition to the older summer resorts along the Atlantic coast, there have more recently been added Asbury Park, Ocean Grove, and others, all of them having rapid railroad communication with New York and Philadelphia.—*Pol. Div.* The State consists of 21 counties, viz.:

Atlantic,	Essex,	Middlesex,	Salem,
Bergen,	Gloucester,	Monmouth,	Somerset,
Burlington,	Hudson,	Morris,	Sussex,
Camden,	Hunterdon,	Ocean,	Union,
Cape May,	Mercer,	Passaic,	Warren.
Cumberland,			

Chief Cities and Towns. The principal centers of population in N. J. are Trenton (cap. of State), Newark, Jersey City, Camden, Paterson, Elizabeth, Orange, New Brunswick, Burlington, Rahway, Bridgeton, Gloucester, Hg-

boken, Harrison, Salem, Passaic, Princeton, Phillipsburg, Perth Amboy, Vineland, &c.—*Government, &c.* The Constitution dates from Sept. 2, 1844, and is almost identical with the one framed in 1776. It was amended in 1875. The governor is chosen, by a plurality vote of the people, for 3 years. The general election is held on the first Tuesday in November. The Sec. of State is appointed by the governor with the advice and consent of the Senate. His term of office is 5 years. The treasurer is elected by the legislature on joint ballot, and until his successor is qualified; and the State librarian is appointed for 3 years. The adjutant and quartermaster-general are chosen by the governor. Senators, 21 in number in 1897, are elected every three years, one-third every year. Delegates to the Assembly of Representatives, 60 in number in 1897, are elected annually. The pay of a member of either branch of the legislature is \$3 per diem for the first 40 days, and \$1.50 per day afterwards. The presiding officers receive \$4, and \$2 per diem correspondingly. The legislature meets annually at Trenton every second Tuesday in Jan. The judiciary is vested in a supreme court, a court of chancery held at Trenton, circuit courts, and courts of oyer and terminer, held in most of the counties quarterly; and inferior courts of common pleas, which, with courts of quarter-sessions of the peace, are held in the different counties by unsalaried judges appointed by the legislature. The elective franchise is applicable to every male citizen of the U. States, who has been a resident in the State 1 year, and in the county 5 months next preceding the election. The apportionment based on the census of 1900 gives to N. J. 10 representatives in the National Congress and 10 electoral votes.—*Finances and State Institutions.* The debt of the State, largely contracted during the war for the support of the families of volunteers, &c., was paid off by 1903, when there was no bonded debt. The debts of counties, cities and minor communities were in all \$81,203,759. The assessed valuation of real and personal property was \$918,418,741, being an increase of nearly \$25,000,000 within a decade and constituting a per capita valuation of \$187.63. Upon the total valuation of the State there is levied a general tax of one and a half mills and a school tax of two mills per dollar. Railroad corporations are taxed one quarter of one per cent. on the value of their roads, equipments, &c. The annual taxes amount to about \$3,000,000. The value of farm lands, comprising about 2,000,000 acres, amounts to about \$160,000,000, and that of farm products and live stock to \$45,000,000. Of the public institutions may be named, in addition to a number of county asylums, two large State lunatic asylums near Trenton and Morristown, of which the latter is regarded as a model. There is also an institution for the deaf and dumb, an industrial school for girls, and a State prison, at or near Trenton; a reform school for boys near Jamesburg; and a home for disabled soldiers at Newark.—*Education.* A well-organized public school system is in successful operation for whose support the several appropriations yield about \$8,000,000 annually. There are about 430 school districts, with 400,000 enrolled pupils. There is a State Normal School at Trenton, with several hundred pupils, and a preparatory school at Beverly. Rutgers College, at New Brunswick, has connected with it the State agricultural and scientific school. The leading educational institution of the State, the College of New Jersey, founded in 1746, at Princeton, and now known as Princeton University, ranks high among the institutions of this country for the higher education. N. J. is unusually well provided with railroads, only Massachusetts and Connecticut having a greater length in proportion to territory. The communication with the seaside watering places is abundant and unusually rapid, some of the trains making a greater speed than 60 miles an hour.—*Com. and Manuf.* The manufacturing interests are large and varied. Newark occupies a high rank among the cities of the Union in the value of its manufactured products, and Jersey City, Paterson, Trenton, and some other places are important centers of production. The silk mills of Paterson, the iron works in the counties of Morris, Sussex and Warren, the steel, zinc, and black lead works of Jersey City, the potteries of Trenton, and the glassworks of Glassboro and Millville are all noted for the excellence of their productions. Other articles of manufacture include locomotives, machinery, leather, refined sugar, &c. The chief ports of the State are Newark and Perth Amboy, which are mostly interested in coastwise traffic only. Jersey City possessing a large and direct foreign trade, is included within the collection district of New York, while the commerce of the more S. part of the State is generally transacted through Philadelphia.—*Hist.* The earliest settlement of N. J. was made by the Dutch in 1612. Many Swedes and Danes afterwards settled in it, but the Hollanders continued to maintain possession until finally ousted by the English in 1664. In 1682, it came under the jurisdiction of Wm. Penn and his co-partners in the Commonwealth of Pennsylvania. The last governor for the English Crown was Wm. Franklin, the natural son of Benjamin Franklin. The province adopted a State Constitution in 1776, and throughout the Revolutionary War it was frequently the scene of stirring events. On its soil were fought the battles of Trenton, Princeton, Millstone, Red Bank, and Monmouth. The first legislature was convened at Princeton, in August, 1776, and the Federal Constitution was adopted by a unanimous vote, Dec. 18, 1787. The State capital was definitely located at Trenton in 1790. During the Civil War, N. J. sent 37 regiments of infantry, 5 of cavalry, and 3 batteries of artillery. Pop. (1900) 1,883,669.

New Jerusalem Church. (*Ecl. Hist.*) See SWEDENBORGIAN.

New Kent, in Virginia, an E.S.E. co.; area, abt. 190 sq. m. *Rivers.* Pamunkey and Chickahominy rivers. *Surface,* undulating or hilly; *soil,* moderately fertile. *Cap.* New Kent Court-House.

New Kent Court-House, in Virginia, a post-village, cap. of New Kent co., abt. 30 m. E. of Richmond.

Newkirkite, *n.* (*Min.*) Same as MANGANITE, *q. v.*

New Lancaster, in Indiana, a post-village of Tipton co., abt. 10 m. S.E. of Tipton.

New Lebanon, in Illinois, a post-village of De Kalb co., abt. 60 m. W.N.W. of Chicago.

New Lebanon, in Indiana, a post-village of Sullivan co., abt. 110 m. S.W. of Indianapolis.

New Lebanon, in N. Carolina, a village of Camden co., abt. 145 m. N.E. by E. of Raleigh.

New Lebanon, in New York, a post-village and township of Columbia co., abt. 27 m. S. E. of Albany. The village is occupied by a society of Shakers, who possess the land in common, and who make brooms, baskets, &c., and deal largely in garden seed.

New Lebanon, in Ohio, a post-village of Montgomery co., abt. 12 m. W. of Dayton.

New Lebanon Springs, in New York, a post-village of Columbia co., abt. 25 m. S.E. of Albany.

New Lenox, in Illinois, a post-township and post-village of Will co., on the C. R. I. and P. R. R.

New Leon, a State of Mexico. See NUEVO LEON.

New Lexington, in Alabama, a post-village of Tuscaloosa co., abt. 130 m. N.W. of Montgomery.

New Lexington, in Iowa, a village of Van Buren co., abt. 80 m. S. by W. of Iowa City.

New Lexington, in Ohio, a village of Highland co., abt. 60 m. E.N.E. of Cincinnati.

—A post-village, cap. of Perry co., about 21 m. S.S.W. of Zanesville.

New Liberty, in Kentucky, a post-village of Owen co., abt. 32 m. N. of Frankfort.

New Limerick, in Maine, a township of Aroostook co.

Newlin, in Pennsylvania, a township of Chester county.

New Lisbon, in Indiana, a post-town of Henry co., about 50 m. E. by N. of Indianapolis.

—A village of Randolph co., about 90 m. E.N.E. of Indianapolis.

New Lisbon, in New York, a post-township of Otsego county.

New Lisbon, now called LISBON, in Ohio, a post-village, cap. of Columbiana co., on 2 R. R. lines, 35 m. E. of Canton. Its post-office is LISBON. Pop. (1897) 2,340.

New Lisbon, in Wisconsin, a city of Juneau co., 62 m. E. of La Crosse. Pop. (1895) 1,067.

New Liverpool, former cap. of Levis co., prov. of Quebec, on the St. Lawrence, about 7 m. S.W. of Quebec.

New London, a seaport of Queen's co., Prince Edward Island, on the W. side of the entrance to Greenville Bay; Lat. 64° 33' N., Lon. 63° 32' W.

New London, in Connecticut, an extreme S.E. co., adjoining Rhode Island on the E., and washed by Long Island Sound on the S.; area, abt. 650 sq. m. *Rivers.* Connecticut, Paucatuck, Shetucket, and Thames rivers. *Surface,* hilly, and in some parts mountainous; *soil,* moderately fertile, but rather adapted to grazing. *Caps.* New London and Norwich.

—A city, port of entry, and semi-capital of the above co., on the Thames River, 3 m. from its mouth, and abt. 50 miles E. of New Haven; Lat. 41° 22' N., Lon. 72° 9' W.

Owing to the unevenness of the site, the city is for the most part irregularly laid out. It contains, however, many handsome public and private structures; and possessing, as it does, one of the finest harbors on the coast, it occupies a very prominent rank among the commercial cities of New England. The inhabitants were for years extensively engaged in the whale-fishery. *Manuf.* Glass, machinery, hardware, &c. The harbor is defended by forts Griswold and Trumbull. N. L. was settled in 1644. Pop. (1890) 14,250.

New London, in Iowa, a post-village and township of Henry co., about 19 m. W.N.W. of Burlington.

New London, in Maryland, a post-village of Frederick co., abt. 8½ m. E. of Frederick City.

New London, in Michigan, a village of Sanilac co., abt. 11 m. N. of Lexington.

New London, in Missouri, a post-village, capital of Ralls co., abt. 98 m. N.N.E. of Jefferson City.

New London, in New Hampshire, a post-township of Merrimack co.

New London, in New York, a post-village of Oneida co., abt. 7 m. W. of Rome.

New London, or KING'S CORNERS, in Ohio, a post-village and township of Huron co., about 47 m. S.W. of Cleveland.

New London, in Pennsylvania, a post-township of Chester co.

New London, in Virginia, a former post-village of Campbell co. Now BEDFORD SPRINGS.

New London, in Wisconsin, a post-village of Wau-paca co., 22 m. N.W. of Menasha.

New London Cross Roads, in Pennsylvania, a former post-village of Chester co.

New London Light-house, in Connecticut, is on the W. side of the entrance to Thames river. It exhibits a fixed light 80 feet above the sea; Lat. 41° 18' 54" N., Lon. 72° 5' 48" W.

New Lots, in New York, a former township of King's county.

Newly (*adv.*) Lately; freshly; recently.

—With a new form, different from the former.

—In a manner not existing before.

New Lyme, in Ohio, a post-village and township of Ashtabula county, about 195 miles north-east of Columbus.

New Madison, in Indiana, a post-village of Madison co., abt. 13 m. N. of Anderson.

New Madison, in Ohio, a post-village of Darke co., abt. 100 m. W. of Columbus.

New Madrid, in Missouri, a S.E. co., adjoining Kentucky and Tennessee; area, about 620 sq. m. *Rivers.* Mississippi and Whitewater rivers. In 1811 and 1812, this county suffered severely from earthquakes, during which nearly half of its area sunk several feet, and is now covered with water. *Surface,* generally level; *soil,* alluvium and very fertile, without rock of any description. *Cap.* New Madrid. Pop. (1890) 9,317.

—A city, cap. of the above co., on the Mississippi river, 40 m. S.W. of Cairo, Ill. Pop. (1897) 1,250.

Newman, JOHN HENRY, an English divine and polemical writer, b. in London, 1801, was educated at the University of Oxford, where, in 1822, he was elected Fellow of Oriel College, and subsequently became Vice-Principal of Alban Hall. In 1833 he assumed a leading position in what was then termed "the Oxford movement;" and, in conjunction with Messrs. Pusey, Keble, and others, commenced the publication of the *Oxford Tracts*, which so deeply affected the theological world, and in which an attempt was made to recede from the principles of the English Reformation, and to approach the doctrines of the Roman Catholic Church. The last and 90th number was written by Dr. N. himself; and after its publication, the Bishop of Oxford was called upon to put an end to the series. In 1845, Dr. N. entered the communion of the Roman Catholic Church, and, in 1852, became rector of the new university established by that religious body in Dublin. His letters, addressed to the Duke of Norfolk (1875), in reply to Gladstone's *Vatican Decrees*, have been extensively read. In 1879 he was made Cardinal. His younger brother, FRANCIS WILLIAM, has written extensively on theological matters; but his reputation rests chiefly on his works on philology, the most important of which is a *Grammar of the Berber Language*. Died 1890.

Newman's Mills, in Penna. See CANOE PLACE.

Newmanstown, in Pennsylvania, a village of Lebanon co., abt. 37 m. E. of Harrisburg.

New Marion, in Indiana, a post-village of Ripley co., abt. 75 m. S.S.E. of Indianapolis.

Newmarket, a town of England, partly in the co. of Cambridge, and partly in co. of Suffolk, 13 m. E.N.E. of Cambridge. It is principally noted for its horse-races. The course is upwards of 4 m. in length, and belongs to the Jockey Club. Pop. 4,000.

New Market, a village of York co., prov. of Ontario, abt. 30 m. N.N.W. of Toronto.

New Market, in Alabama, a post-village of Madison co., abt. 200 m. N. of Montgomery.

New Market, formerly GULETTSVILLE, in Georgia, a post-village of Monroe co., abt. 35 m. N.W. of Macon.

New Market, in Indiana, a village of Clarke co., abt. 23 m. S.S.W. of Madison.

New Market, in Indiana, a village of Harrison co., abt. 35 m. S.W. of Louisville, Kentucky. — A village of Vigo co., abt. 80 m. W.S.W. of Indianapolis.

New Market, in Iowa, a village of Van Buren co., abt. 70 m. S.W. by S. of Iowa city.

New Market, in Kentucky, a post-village of Marion co., abt. 68 m. S. by W. of Frankfort.

New Market, in Maryland, a village of Baltimore co., abt. 30 m. N. of Baltimore. — A post-village of Frederick co., abt. 10 m. E. by S. of Frederick.

New Market, in Minnesota, a township and post-village of Scott co., 8 m. S.W. of Fairfield station.

New Market, in Missouri, a post-village of Platt co., abt. 210 m. W.N.W. of Jefferson city.

New Market, in N. Carolina, a post-village of Randolph co., abt. 80 m. W. of Raleigh.

New Market, in New Hampshire, a post-township of Rockingham co.

New Market, or SNYDERTOWN, in New Jersey, a village of Hunterden co., abt. 9 m. S. by E. of Flemington.

New Market, in New Jersey, a post-village of Middlesex co., abt. 9 m. E. of Summerville.

New Market, in Ohio, a post-village and township of Highland co., abt. 68 m. South south-west of Columbus.

New Market, in Tennessee, a post-village of Jefferson co., 26 m. E.N.E. of Knoxville.

New Market, in Virginia, a village of Nelson co., abt. 108 m. W. of Richmond, and the centre of more than one engagement during the rebellion. — A post-village of Shenandoah co., abt. 150 m. N.W. of Richmond.

New Marlborough, in Massachusetts, a post-township of Berkshire co.

New Martinsburg, in Ohio, a post-village of Fayette co., abt. 50 m. S.W. of Columbus.

New Martinsville, in West Virginia, a post-town of Wetzel co., about 40 m. S. by W. of Wheeling.

New Maysville, in Indiana, a post-village of Putnam co., about 14 m. N.E. of Greencastle.

New Mexico, a territory of the United States, formerly constituting a portion of the Mexican Republic, and ceded to the United States in 1848, by the treaty of Guadalupe Hidalgo, lies immediately S. of Colorado, and is bounded on the E. by the State of Texas, on the S. by Texas and Mexico, and on the W. by the Territory of Arizona. Length, about 360 m. breadth, about 400 m. Area, 122,580 sq. m., or 78,617,600 acres. — *Gen. Desc.* A large portion of this extensive region consists of high table-lands intersected by many mountain ranges, and here and there dotted with isolated peaks. The general direction of the mountain system is N. and S. Between the ranges are many broad and fertile valleys; the prin-

cipal one, the Valley of the Rio Grande, extends from the N. to the S. limits of the Territory. The Sierra Madre Mountains form the W. boundary of this valley; and the Jumanes, Del Cabello, with other offshoots of the Rocky Mountains, form its E. frontier. Considerably more than half of the Territory lies E. of the Sierra Madre. In the E. division, and diverging from the main chain of the "Rockies," are the Guadalupe, Sacramento, and Organ mountains, and the Sierras Blanca, Hueca, and other divisions, form the W. limit of the Pecos Valley. W. of the Sierra Madre is a series of detached ranges as yet imperfectly explored, though a number of exceedingly fertile valleys are known to exist in this part of the Territory. N.W. from Santa Fé, in the Sierra Madre, is Mount Taylor, rising to a height of 10,000 ft. above the basin of the Rio Grande, the latter being between 5,000 and 6,000 ft. above sea-level in the N. part, and 3,000 ft. at El Paso, Chihuahua, near the S. confine of the Territory. The mountain chains bordering the valleys of the Rio Grande and Pecos rivers, S. of the Lat. of Santa Fé, have a general altitude of 6,000 to 8,000 ft., while near the N. limits of the Territory they attain an elevation of 10,000 to 12,000 ft. above the level of the sea, their summits being perpetually snow-capped, and presenting to the eye scenes of indescribable beauty and grandeur. The country W. of the Rio Grande consists, for the most part, of lofty plateaux or *mesas*, interspersed among volcanic peaks, and separated from each other by broad valleys, through many of which meander streams of considerable magnitude, their banks fringed with cotton-wood and other timber, affording excellent facilities for cultivation of the soil, and the grazing of live-stock. The Rio Grande del Norte, the largest river of the Territory, takes its rise in the mountains of Colorado, and after traversing the Territory in a longitudinal direction, forms the line of demarcation between Texas and Mexico, and finds its outflow in the Mexican Gulf. The Rio Pecos drains the S.E. section of the Territory, and the Canadian, an affluent of the Arkansas, the N.E. part. W. of the Sierra Madre, the country forms the watershed of the Gila, Rio Puerco, and the San Juan, tributaries of the Colorado of the West. None of these streams are important for navigation, being seldom of depth sufficient for larger craft than canoes or scows. — *Water*. There exists great diversity in the climate of N. M.; in the N. region, among the mountains, the winters are long and severe, but not so subject to sudden fluctuations of temperature as in more humid climates. The common annual range of the thermometer is from 10° to 75° above zero, Fahr. Near El Paso, in the S. part of the Territory, the temperature is mild, rarely falling below the freezing-point. The sky is usually clear, and the atmosphere remarkably dry, the entire country being considered one of the healthiest regions in the Union. Maladies so common in the Mississippi Valley are almost unknown here, and pulmonary complaints are of rare occurrence. In the S. part of the Territory the rainy season extends over July and August. — *Soil, Vegt. Prod., &c.* The table-lands, mountain-slopes, and valleys are abundantly supplied with a variety of nutritious grasses, which, being cured by climatic action, afford excellent pasturage the year round. The most valuable and widely distributed of these is the "gambu" grass or *mesquite*; its peculiar value consisting in its adaptation to all the requirements of an arid climate. The herdsmen and shepherds of N. M., being thus furnished with excellent pasturage during the winter months, have a great advantage over the farmer and stock-raiser of the N. and E. States, who are necessitated to expend a great portion of their time and labor in the production of provender to sustain their beasts during the winter season. The wide range afforded by the extensive grazing-lands of the Territory seems to have had a very cordial effect on the health of sheep and cattle, as diseases common to many localities are here almost unknown. The houses are notable for their staying powers, and the beef and mutton are celebrated for their prime quality. All meats are cured without the use of salt, being jerked, Indian-fashion, by exposure to the sun and air. Although a portion of the Territory is unsuited to cultivation, the river-bottoms, and even the table-lands, where irrigation is feasible, are exceedingly productive. In the valleys maize, wheat, barley, and oats yield ample crops, while apples, peaches, melons, apricots, and grapes are grown in great perfection. The grape is especially prolific, and the quality of the wine produced is excellent. In the S. division of N. M. many of the semi-tropical fruits thrive spontaneously. Owing to the necessity of irrigation, agricultural operations are principally confined to the valleys of the water-courses. In some localities the crops are occasionally curtailed by the failure of the streams in a long-continued drought. Where water is abundant, however, the crops are sure and remunerative, and the husbandman, regulating the supply of moisture himself, need never have his crops destroyed by freshets, and much less permit them to suffer from drought. Forests of pine, cedar, spruce, and other kindred trees, clothe the mountain ranges. On the foot-hills are found extensive tracts of piñon and cedar, while a variety of deciduous timbers skirt the margins of the streams, — cotton-wood and sycamore being the most abundant, — and in the S. districts groves of oak and walnut are met with. The public lands of N. M., although surveyed, have not as yet been brought into market. — *Minerals*. Veins of the precious metals, and rich deposits of copper, iron and coal, are found in many parts of the Territory, and new discoveries are constantly being made and developed. The yield of gold up to the year 1895 amounted to \$6,080,775, and that of silver to \$7,059,250.

Nearly every section of the Territory yields the precious metals, some of the most fully explored regions being the Old and New Placers, Pinos Altos, the Cimarron mining district, Arroyo Hondo, Manzano, Organ Mountains, Sierras Blanca, Carriga, Jicarilla, and the Mogollon and Magdalena Mountains. The region called the Old and New Placers extends over about 200 sq. m. of territory, situated in Santa Fé and Bernalillo cos. In this district a large number of lodes of gold-bearing quartz have been discovered, the principal ones being the Ortiz, Ramirez, Mammoth, and Candelaria. The Pinos Altos mining district, in Grant co., embraces within its limits about 200 sq. m., and contains miles of gold, silver, and copper, the principal gold mines being the Pacific, Arizona, Atlantic, Langston, and Aztec. The veins vary from a few inches to 4 feet in width, and in some of the mines are very rich. The silver ores in this district yield from \$20 to \$30 a ton. The copper ores occur in a felspathic rock, about 2 miles broad and 20 miles in length. Some of the most important mines of the precious metals are in the southwest, near Silver City, Deming, and Lordsburg; others in the central region in the vicinity of Socorro, and others farther north, near Santa Fé. There are also valuable mines in the extreme northwest, in San Juan co. Some of the mines were rudely operated by the early Spaniards, who made the Pueblo Indians work for them like slaves. The Indians subsequently successfully revolted from this tyranny, and filled up the shafts. Several such shafts have been found and reopened. The ore from the Stephenson mine, in the Organ Mountains, yields 80 per cent. of lead, from each ton of which is extracted \$50 worth of silver. In the Cimarron district, embracing 400 sq. m., a ditch 37 m. in length has been constructed, yielding a limited supply of water for the working of the gulch mines. In this district is located the celebrated Maxwell lode, which has turned out as much as \$15,000 in a single week, while no ore taken from this lode has yielded less than \$30 per ton. In the Manzano Mountains, gold, silver, and copper mines are met with. The Carson lode, which has been opened to a depth of 60 ft., furnishes from \$60 to \$1,200 in gold per ton of ore. In the Sierra Blanca a number of rich lodes have been discovered, which give promise of large yields when developed. Veins of bituminous coal have been found cropping out in various places, and anthracite of a superior quality is met with about 20 m. S. of Santa Fé. Zinc, antimony, kaolin, and other minerals are also found, and near Santa Fé are the famous turquoise mines. Mineral and hot springs are numerous. Since the organization of the surveying district in 1854 for N. M., 49,980,824 acres of public lands have been surveyed and prepared for market, of which 42,702,550 remain vacant and subject to entry. This is exclusive of reservations and private claims. — *Polit. Div.* The Territory is divided into 18 counties, viz.:

Bernalillo,	Grant,	San Juan,	Socorro,
Chaves,	Guadalupe,	San Miguel,	Taos,
Colfax,	Lincoln,	Santa Fé,	Union,
Donna Ana,	Mora,	Sierra,	Valencia.
Eddy,	Rio Arriba,		

Chief towns. Santa Fé (the cap.), Las Vegas, Albuquerque, and Taos. — *Govt.* The executive comprises a governor, secretary, pueytor, and superintendent of Indian affairs. The legislative power is vested in the governor and assembly, the latter consisting of a Council and House of Representatives. The council is composed of 13 members, chosen by the people for 2 years, and the house of 20 members, elected annually. The Spanish is the prevailing language. It is both spoken and written. The proceedings of the Territorial Government in both the Senate and House are carried on in this tongue, but they are printed in both Spanish and English. — *Educ.* The school system is in a backward state, and a large percentage of the population are unable to read or write. In 1880 there were no free schools in the Territory except those taught by the Sisters of Charity of the Roman Catholic Church. There were at that time 1 college, 4 academies, and 181 schools, with a total attendance of 8,018. In 1890, the pupils enrolled in the public schools had increased to 21,471 with an average attendance of 16,987. — *Pop.* The present population is of a mixed character, composed of domesticated Indian Indians, Mexicans, Spaniards, and Americans. Independent, however, of the more civilized inhabitants, large tribes of Indians of a wild and warlike character roam over the Territory, and fix their temporary residence therein. The principal of these are the Apaches proper and the cognate tribes, the Navajoes, the Utahs, the Cheyennes, and the Comanches. — *Hist.* This Territory was early settled by the Spaniards, and formed a province of the Republic of Mexico until 1848, when it was ceded to the U. S. In Sept., 1850, it was constituted a Territory of the U. S., and in 1854, a slice of the country then obtained from Mexico was added to it. In this condition it remained till Feb., 1863, when nearly half of the E. part of the Territory was taken away to form the Territory of Arizona. In 1875, a bill for the admission of N. M. as a State failed to become law. *Pop.* (1900) 195,310.

New Middletown, in Ohio, a post-village of Maconing co., about 12 m. E.S.E. of Canfield.

New Milford, in Connecticut, a post-town and township of Litchfield co., about 35 m. N. by W. of Bridgeport. *Manuf.* Tobacco, hats, boots, paper, &c.

New Milford, in Illinois, a post-village and township of Winnebago co., about 7 m. S. of Rockford.

New Milford, in New Jersey, a post-village of Bergen co., about 18 m. N. of Jersey City.

New Milford, in Pennsylvania, a post-borough and township of Susquehanna co., about 10 m. E. of Montrose, on the D., L. & W. R. R.

New-mod'el, *v. a.* To remodel; to give a new form to. **New Mount Pleasant**, in Indiana, a post-village of Jay co., about 80 m. N.E. by E. of Indianapolis.

New Munich, in Iowa, a village of Sac co., about 86 m. E. of Sioux City.

Newnan, in Georgia, a city, the cap. of Coweta co., on the Atlantic & West Point and the Central R. R. of Georgia, 40 m. S.S.W. of Atlanta; has manufactures of cotton goods, iron, guano, cottonseed oil, &c., and a considerable shipping trade, chiefly in cotton. *Pop.* (1897) about 3,240.

Newnanville, in Florida, a village, former cap. of Alachua co., about 120 m. E.S.E. of Tallahassee.

Newness, *n.* The state or quality of being new; lateness of origin; recentness; the state of being lately invented or produced. — The state of being first known or introduced; novelty. — Recent change; innovation. — Want of practice or familiarity. — Different state or qualities introduced by change or regeneration.

New Norfolk, in Alaska, a name formerly applied to the coast-line bet. Admiralty Bay and Baranof Island.

New Oregon, in Iowa, a post-village and township, cap. of Howard co., abt. 20 m. N.W. of Decorah, and 3 m. S.S.W. of Cresco.

New Orleans, [Fr. *La Nouvelle Orléans*.] A city and river-port of the U. States, in Louisiana, and the commercial metropolis of the S. and W. divisions of the Union, is situated on the Mississippi, abt. 120 m. from its mouth; Lat. 29° 58' N., Lon. 90° W. It is a beautiful city, regularly built, except in its older portion, which extends itself on the convex side of a bend of the river, whence the familiar name of *Crescent City*. The limits of the old city, as it existed under the French and Spanish governments, are defined by Canal, Rampart, and Esplanade streets. These three streets, occupying what was formerly the line of the defensive works, are nearly 200 feet in width, with a sidewalk and carriage-way on each side, and in the middle an unoccupied space (called the *Neutral Ground*) planted with a double row of trees. Within the above limits the streets are comparatively narrow, crossing each other at right angles, the houses compactly built, but without uniformity, and the whole presenting the appearance of an European city. This portion of the city constituted the 2d district. Next above, extending from Canal Street to Felicite Road, lies the 1st district, formerly the faubourg St. Mary; while still beyond is the 4th district, prior to 1852 the city of La Fayette, in which the dwellings are remarkably spacious and of great elegance, with ample grounds for shrubbery, &c. Below the old city, again, lies the 3d district, formerly the faubourg Marigny, which is the residence of a large portion of the creole population. N. O. is built on a wide level, and the ground is so spongy that none of the houses have cellars. The surface of the river at high water is from 2 to 4 feet above the level of the city; and even in its lowest stages it is above the level of the swamps in the rear. To obviate inundations, a levee, or embankment, from 5 to 30 feet in height, has been raised for abt. 100 m. along the river. This levee, in front of the city, is extended by a continuous series of wooden wharves or piers, forming a kind of esplanade, several miles in extent, which, during the busy season, present a scene of singular variety and animation. Among the public buildings and monuments the most noticeable are the cathedral of St. Louis, a noble Gothic edifice, flanked by two lofty towers, and erected in 1800, on the site of the original parish church, fronting Jackson Square; the Custom House, commenced in 1848 and costing \$4,500,000; the Post-Office and the branch mint of the U. S. The archiepiscopal palace, erected in 1737, is the oldest building in the city. There are 5 or 6 squares in New Orleans. Jackson Square, formerly the *Place d'Armes*, is coeval with the foundation of the city. It is tastefully adorned with shrubbery and statuary, prominent amid which, in the center of the square, is a bronze equestrian statue of Jackson, by Clark Mills. A colossal statue of Henry Clay (see Fig 1636) was inaugurated, in 1850, in the center of Canal Street. In addition to this there are handsome statues, monuments to Jackson, Lee, Franklin, and others. By its width, the splendor of its buildings, and the elegance and good taste of its stores, Canal Street, which is the line of separation between the two parts of the town popularly called the *French* and the *American*, may advantageously compete with any street of our Northern States. There are in N. O. about 200 churches, belonging to various sects; the Roman Catholic possess more than any other denomination. The creole population belong almost exclusively to that church. The benevolent institutions are numerous, the most remarkable being the Charity Hospital, which accommodates over 800 patients, and is attended by the Sisters of Charity; the asylums for old men and widows, belonging to the Ladies of Providence; Storer's Hospital; the Franklin Infirmary; the U. S. Naval Hospital, &c. There are about 17 cemeteries in and around the city, in which the usual mode of sepulture is above ground, the soil being so moist and marshy that interment beneath is objectionable. Many of these tombs are costly and elegant structures. Besides the public schools, which make great progress, there are numerous private schools, 2 flourishing medical colleges, a Roman Catholic ecclesiastical seminary, a college under the Jesuits, a convent and academy of Ursuline nuns, a convent of Redemptorists, free schools directed by members of several religious orders, &c. The principal theaters are the elegant French Opera House, and the St. Charles Theater. The most

noted hotel is the *St. Charles*. During the time this city was the capital of the State, the legislature met in the building formerly known as the St. Louis hotel, at one time the prominent hotel in the old French quarter, and noted for its handsome rotunda. During the months of July, Aug., Sept., and Oct., the population is much reduced through fear of the yellow fever, which appeared for the first time in *N. O.* in 1769, or, according to Dr. Bennet Dowler, in 1796. Usually this dreadful sickness is almost exclusively caught by strangers and foreigners; but in the great epidemic of 1868 the yellow fever seemed to assume a new character, and did not spare the natives. It is, nevertheless, remarkable that this fever is not now so permanently dangerous as it was in the first half of this century, becoming epidemic only one or two times in ten years. The city is well provided with water, and its fire department is admirably organized. *N. O.* is the grand emporium of all the vast regions traversed by the Mississippi, and its tributary streams, and enjoys, in consequence, a greater command of internal navigation than any other city either of the New or Old World. Dense populations are still to be found in comparatively small portions only of the immense territories of which this city is the entrepôt; and yet her progress has been rapid, the coming decade will doubtless show still greater growth. *N. O.* has direct R. R. connection with San Francisco. There are also steamship lines running to Havana, Baltimore, Philadelphia, New York, Boston, Texas ports, Liverpool, Havre, Bremen, &c. Including those of the R. R.'s, many ferry boats cross the river at short intervals to and from various points on the respective banks of the river. Among the improvements on the levee is a line of sugar-sheds and extensive grain elevators. These, with its numerous cotton presses, cotton pickeries, and cotton brokers, and wagons filled with that staple, suggest the origin and ramifications of the chief industries of *N. O.* In 1883 was inaugurated a new and splendid cotton-exchange, built in Carondelet street, in the Renaissance style. The cotton-district, of which *N. O.* is the port of entry, embraces nearly the entire valley of the Mississippi, with ports of delivery at various points. The direct foreign commerce of a large extent of country accordingly is transacted through this port. In the value of its exports and of its entire foreign trade, it ranks next to New York, though several ports surpass it in the value of imports.—*Hist.* This city was founded by the French in 1717; in 1769 it was occupied by the Spaniards, in whose hands it continued for about 34 years. The most memorable event in the history of *N. O.* is the battle of Jan. 8, 1815, for which see JACKSON (ANDREW). *N. O.* joined the war movement of the so-called "Confederate States," Jan. 25, 1861, on which day the Louisiana Convention passed an "ordinance of secession." The city remained with the Confederates for about a year, till April 25, 1862, when Admiral Farragut, having destroyed their fleet in the Lower Mississippi, and passed by Forts Jackson and St. Philip, appeared before the city with a U. S. flotilla. After negotiations, continued over the two following days, *N. O.* was surrendered to him on the 28th. The loss of this important city was the first great blow to the Confederate cause. Serious political disturbances broke out in 1874, resulting in a battle on the levees between the citizens and the police and militia, in which 46 persons were killed and 216 wounded. Another outbreak occurred in 1877. In 1891 the lynching of some Italians, accused of murder, gave rise to a serious international complication with Italy. In 1880 Baton Rouge succeeded *N. O.* as the capital of Louisiana. In 1885 an International Exposition, on an imposing scale, was held in this city. *Pop.* (1900) 287,104.

New Paltz, in *New York*, a post-village and township of Ulster co.

New Paltz Landing, in *New York*, a village of Ulster county, on the Hudson River, opposite Poughkeepsie.

New Par'is, in *Indiana*, a post-village of Elkhart co., abt. 7 m. S. of Goshen.

New Paris, in *Ohio*, a post-village of Preble co., abt. 57 m. N.W. of Cincinnati.

New Paterson, in *New Jersey*, a village of Sussex co., abt. 5 m. W. of Newton.

New Petersburg, in *Ohio*, a post-village of Highland co., abt. 70 m. E. by N. of Cincinnati.

New Philadelphia, in *Indiana*, a post-village of Washington co., abt. 9 m. S. by E. of Indianapolis.

New Philadelphia, in *Ohio*, a city, cap. of Tuscarawas co., about 100 m. E.N.E. of Cincinnati. Coal and iron ore abound here, and manufacturing is extensive.

New Philadelphia, in *Pennsylvania*, a borough of Schuylkill co., abt. 5 m. E.N.E. of Pottsville.

New Phil'ippines. See CAROLINE ISLANDS.

New Pittsburg, in *Ohio*, a post-village of Wayne co., abt. 90 m. N.E. of Columbus.

New Point Comfort, in *Virginia*, forms the S. extremity of Matthews co., in Chesapeake Bay. It exhibits a fixed light 60 ft. above the sea, abt. 18 m. N. of Old Point Comfort.

New'port, in England, a town of the co. of Monmouth, on the Usk, 20 m. S.W. of Monmouth, and 124 N.W. of London. *Manuf.* Nails, ropes, and pottery. It has an extensive iron, tin, and coal trade; and ship-building is largely carried on. *Pop.* 23,249.

—A town, cap. of the Isle of Wight, on the Medina, 14 m. S.S.E. of Southampton, and 75 m. S.W. of London. *Manuf.* Lace. *Pop.* 7,931.

Newport, a seaport-town of Hants co., Nova Scotia, abt. 30 m. N.N.W. of Halifax.

Newport, in *Delaware*, a post-village of New Castle co., abt. 4 m. W. of Wilmington.

New'port, in *Florida*, a post-office of Wakulla co.

Newport, in *Illinois*, a village of Greene co., about 14 m. W.N.W. of Carrollton.

—A township of Lake co.

Newport, in *Indiana*, a post-town, cap. of Vermillion co., abt. 75 m. W. of Indianapolis.—A village of Wayne co., abt. 10 m. N.N.W. of Richmond.

Newport, in *Iowa*, a village and township of Johnson co., abt. 8 m. N.E. of Iowa City.

Newport, in *Kansas*, a village of Dickinson co., abt. 16 m. W.S.W. of Junction City.

Newport, in *Kentucky*, a city, former cap. of Campbell co., on the Ohio River, opposite Cincinnati, Ohio, and abt. 80 m. N.N.E. of Frankfort. The city is beautifully located, and generally well built. It contains many extensive manufactories, chiefly of iron, machinery, silk, &c., and is connected with Cincinnati and with Covington by superior iron bridges.

Newport, in *Maine*, a post-village and township of Penobscot co., abt. 27 m. W. of Bangor.

Newport, in *Maryland*, a post-village of Charles co., abt. 50 m. S.W. by S. of Annapolis.

Newport, in *Michigan*, a post-village of Monroe co., abt. 8 m. N.E. of Monroe City.—A village of St. Clair co., abt. 45 m. N.E. of Detroit.

Newport, in *Minnesota*, a post-village and township of Washington county, about nine miles below St. Paul.

Newport, in *Missouri*, a village of Franklin co., abt. 67 m. W. of St. Louis.

Newport, in *New Hampshire*, a post-village and township of Sullivan co., abt. 35 m. N.W. by W. of Montpelier.

Newport, or NANTUXET, in *New Jersey*, a post-village of Cumberland co., abt. 28 m. S.E. of Salem.

Newport, in *New York*, a post-village and township of Herkimer co., abt. 85 m. W.N.W. of Albany.

Newport, in *Ohio*, a village of Madison co., abt. 27 m. W.S.W. of Columbus.—A post-village of Portage co., abt. 12 m. E. of Ravenna.—A village of Shelby co., abt. 112 m. N. of Cincinnati.—A post-village and township of Washington co., abt. 14 m. S.E. of Marietta.

Newport, in *Pennsylvania*, a township of Luzerne co.; *pop.* about 900.—A post-borough of Perry co., about 24 m. N.W. of Harrisburg.

Newport, in *Rhode Island*, a S.E. co., adjoining Massachusetts on the E., and washed by the Atlantic Ocean on the S.; *area*, about 100 sq. m., consisting of several islands in Narragansett bay, and the mainland on its E. shore. *Surface*, uneven; *soil*, generally fertile. *Min.* Coal in considerable quantities, and some plumbago. *Cap.* Newport. *Pop.* (1895) 30,972.

—A city, port of entry, seat of justice of the above co., and *semi-capital* of the state, on the W. coast of the island of Rhode Island, in Narragansett Bay, abt. 28 m. S. by E. of Providence; *Lat.* 41° 29' N., *Lon.* 71° 19' 12" W. The harbor is one of the best on the coast, and is defended by two strong forts;—Fort Adams on Brenton's Point, abt. 1½ m. S.W. of the town; and Fort Wolcott on Goat Island, directly opposite *N.*, are beautifully located and contain some very fine edifices. Its salubrious climate, refreshing ocean-breeze, and beautiful scenery, have contributed to render it a favorite summer resort. The most prominent public buildings are the State-house, the Redwood Library (containing over 15,000 vols.), and the Jewish Synagogue. There are also abt. 15 churches, and numerous school-houses. *Manuf.* Clocks, carriages, cabinet-ware, oil, soap, candles, calicoes, muslins, woollen goods, &c. The fisheries are carried on to a certain extent, but the commerce of *N.* is very limited, though several railroad and steamboat lines connect it with the important places in the vicinity. The attention of the inhabitants seem to be more especially directed to the improvement of the town for the convenience of the visitors, who are numbered by thousands during the summer months. *Pop.* (1897) 23,200.

New'port, in *Tennessee*, a post-village, cap. of Cocke co., about 47 m. E. of Knoxville.

New'port, in *Vermont*, a post-village and township of Orleans county, about twelve miles north of Irasburg.

Newport, in *Virginia*, a village of Augusta co., abt. 18 m. W. of Staunton.

New'port, in *Wisconsin*, a township of Columbia co.—A post-village of Sauk county, about 3 miles S.W. of Kilbuck City.

New Portage, in *Ohio*, a post-village of Summit co.

New Port'land, in *Maine*, a p. twp. of Somerset co.

—In *Missouri*, a village of Ralls co.

New'port News, in *Va.*, a post-town of Warwick co., abt. 7 m. ab. Fortress Monroe and the terminus of the Chesapeake & Ohio R. R. The harbor is unsurpassed, large grain elevators have been erected and it has become a favorite port of entry.

New'port Pag'nel, a town of England, co. of Buckingham, at the junction of the Ouse and Ousel, 13 m. E.N.E. of Buckingham. *Manuf.* Lace. *Pop.* 4,000.

New'port Pratt, a seaport-town of Ireland, in Connaught, co. Mayo, about 8 miles W.N.W. of Castlebar; *pop.* 1,000.

New'port Rivers, (NORTH and SOUTH,) in *Georgia*, enter St. Catherine's Sound from Liberty co.

New'port Tip, a town of Ireland, in co. Tipperary, abt. 9 m. N.E. of Limerick; *pop.* 1,000.

New'portville, in *Pennsylvania*, a post-village of Bucks co., abt. 116 m. E. by S. of Harrisburg.

New Pres'ton, in *Connecticut*, a post-village of Litchfield co., abt. 40 m. N.N.W. of New Haven.

New Pros'pect, in *Alabama*, a village of Greene co., abt. 100 m. N.W. by W. of Montgomery.

New Pros'pect, in *Indiana*, a village of Orange co., abt. 8 m. W. of Paoli.

New Pros'pect, in *New Jersey*, a village of Bergen co., abt. 22 m. N. by W. of Jersey City.

New Providence, a British island of the W. Indies, the most important of the Bahama group, between Eleuthera and Andros; *Lat.* 25° 5' N., *Lon.* 77° 21' W. It is 17 m. in length, with an extreme breadth of 7 m. *Surface*, generally low and level. The chief town, Nassau, is situated on an excellent bay of the same name on the N. side of the island.

New Providence, in *Indiana*, a post-village of Clarke co., abt. 19 m. N.W. of New Albany.

New Providence, in *New Jersey*, a post-village and township of Union co., abt. 13 m. W. of Newark.

New Providence, in *Tennessee*, a post-village of Montgomery co., abt. 47 m. N.W. of Nashville.

New Red Sandstone, *n.* (*Geol.*) The name given to a group of sandstones, generally of a red color, belonging to the lowest and oldest division of the secondary period, and distinguished by fossil contents from some other important sandstones, also of a red color, but in rocks below the carboniferous limestone. The latter are called *Old Red Sandstone*.

New Richmond, in *Indiana*, a post-village of Montgomery co., abt. 17 m. S.S.W. of Lafayette.

New Richmond, in *Ohio*, a post-village of Clermont co., abt. 20 m. S.E. of Cincinnati.

New River, in *Louisiana*, enters Lake Maurepas between St. James and Ascension parishes.

New River, in *N. Carolina*, enters the Atlantic Ocean from Ouslow co.

New River, in *S. Carolina*, enters the Atlantic Ocean from Beaufort dist.

New River, in *Virginia*. See GREAT and LITTLE KANAWHA.

New Rochelle, (*ro-shel'*), in *New York*, a post-village and township of Westchester county, abt. 20 m. N.E. of New York city.

New Rock'ford, in *Indiana*, a village of Jackson co., abt. 60 m. S. of Indianapolis.

New Ross, in Ireland. See ROSS.

New Ross, in *Indiana*, a post-village of Montgomery co., abt. 30 m. N.W. by W. of Indianapolis.

New Run'ley, in *Ohio*, a post-village of Harrison co., abt. 128 m. E.N.E. of Columbus.

New'ry, a town of Ireland, prov. of Ulster, on Newry Water, 34 m. S.W. of Belfast, and 56 N. of Dublin. *Manf.* Flint glass, cotton cloth, and linen. *Pop.* 11,426.

New'ry, in *Indiana*, a village of Jackson co., abt. 15 m. E. of Brownstown.

New'ry, in *Maine*, a post-township of Oxford county.

New'ry, in *Minnesota*, a township of Freeborn county.

New'ry, in *Pennsylvania*, a post-village of Blair co., abt. 125 m. W. of Harrisburg.

News, (*nūz*). [*Fr. nouvelles*. This word has a plural form, but is almost always united with a verb in the singular.] Recent account; fresh information of something that has lately taken place at a distance, or of something before unknown; tidings; intelligence; also, a newspaper.

New Sa'lem, in *Illinois*, a village of Edwards co., abt. 8 m. N. of Albién.

—A township of McDonough co.

—A post-village and township of Pike co., abt. 34 m. E.S.E. of Quincy.

New Sa'lem, in *Indiana*, a post-village of Rush co., abt. 47 m. E.S.E. of Indianapolis.

New Sa'lem, in *Massachusetts*, a post-township of Franklin co.

New Sa'lem, in *N. Carolina*, a post-village of Randolph co., abt. 10 m. N. of Ashborough.

New Sa'lem, in *Ohio*, a post-village of Fairfield co., abt. 11 m. N.E. of Lancaster.

New Sa'lem, in *Pennsylvania*, a post-village of Fayette co., abt. 190 m. W. by S. of Harrisburg.

—A borough of Westmoreland co., abt. 28 m. E. of Pittsburgh.

New Sa'lem, or Sa'lem, in *West Virginia*, a post-village of Harrison co., abt. 14 m. W. of Clarksburg.

New Sa'lem, in *Texas*, a post-village of Rusk co.

New Sa'isbury, in *Indiana*, a post-village of Harrison co., abt. 110 m. S. of Indianapolis.

New Santan'der, a town, and formerly a province of Mexico. See NUEVO SANTANDER, and TAMAULIPAS.

News'boy, *n.* A boy who sells or delivers newspapers.

New Scotland, in *New York*, a post-township of Albany co.

New Sew'ickley, in *Pennsylvania*, a township of Beaver co.

New Sha'ron, in *Maine*, a post-village and township of Franklin county, about 26 miles N.N.W. of Augusta.

New Sheffield, in *Pennsylvania*, a post-village of Beaver co., abt. 20 m. W.N.W. of Pittsburgh.

New Shore'ham, in *Rhode Island*, a post-township of Newport co.

New Sibe'ria, a group of barren islands in the Arctic Ocean, lying N.N.W. of the mouth of the river Lena, in E. Siberia; *Lat.* between 73° 20' and 76° 12' N., *Lon.* 135° 20' and 150° 20' E.; *area*, 20,480 sq. m.

News-letter, *n.* A letter sent to convey news.

News-monger, (*nūz-mung-ger*), *n.* One who deals in news; one who employs much time in hearing and telling news.

New Som'erset, in *Ohio*, a village of Jefferson co., abt. 143 m. E. by N. of Columbus.

New South Shet'land, an archipelago in the S.

Sir Isaac Newton

1642-1727

Atlantic Ocean, 600 m. S. of Cape Horn, between Lat. 60° 32' and 67° 15' S., Lon. 44° 54' and 68° 15' W.

New South Wales, a colony in the S.E. of Australia, belonging to Great Britain, bordering on the S. Pacific Ocean; Lat. between 28° and 37° 31' S., Lon. between 153° 45' W. and 141° E.; area, estimated at 323,437 sq. m. The surface is very diversified, and is traversed through the centre from N. to S. by the Blue Mountains, or Australian Alps. The coast is bold and abrupt, with numerous and excellent harbors, the principal of which are Moreton Bay, Hervey Bay, Port Stephens, Port Hunter, Port Macquarie, Broken Bay, Port Jackson, Botany Bay, Jervis Bay, Sussex Haven, and Two-fold Bay. *Rivers*. The Murrumbidgee, Lachlan, Bogan, Macquarie, Peel, Hunter, Parramatta, George, Clyde, Hastings, and the Clarence. The soil is very fertile, and the climate salubrious, the average annual temperature being 64°. *Prod.* Wheat, maize, barley, oats, rye, potatoes, tobacco, and fruits. Numerous herds of cattle, horses and sheep are reared. *Mins.* Gold, silver, copper, iron, coal. The trade is principally with Great Britain. *Exp.* Gold, wool, and tallow. *Govt.* The constitution of N. S. W. was proclaimed in 1858. It vested the legislative power in a Parliament of two houses, called the Legislative Council, and the Legislative Assembly. The first consisted of 21 members, nominated by the Crown, for the term of 5 years; the latter, of 137 members, elected in 74 constituencies. The executive is in the hands of a governor nominated by the Crown. The principal towns are Sydney (the cap.), Newcastle, Goulburn, Parramatta, Bathurst, and Maitland. N. S. W. was discovered in 1770 by Capt. Cook, who took possession of it in the name of the King of England, calling it *New South Wales*. At his recommendation it was made a colony for convicts, and continued so until 1840, when transportation ceased. The discovery of gold in 1851 gave the colony a great impetus. In addition to mining, sheep pasturage has been greatly developed, the colony possessing at present over 50,000,000 sheep. *Pop.* (1891) 1,204,000.

News-paper, *n.* A public print for the circulation of news, advertisements, public announcements, and the like: a sheet of paper printed and distributed for disseminating intelligence of passing events.

(*Hist.*) Among the Romans the *Acta Diurna*, or Journals of Public Events, were, as the name indicates, simply records of daily occurrences; but our accounts of these ancient news-letters are somewhat obscure and uncertain. In modern Europe, Venice appears to have taken the initiative in communicating intelligence to the public through a sheet called *Notizie Scritte*, first published about 1536, and continued monthly. The earliest copy in the library of the British Museum is dated 1570. In England, "news-letters," as they were called, were introduced as early as the reign of Henry VI., (1422-1461.) In these the gossip of the town was collected by "correspondents," and posted to their employers in the country, at a small yearly compensation. The first authentic newspaper published in England was *The Certaine News of the Present Week*, bearing date May 23, 1622. The *Daily Proceedings of both Houses of Parliament*, from Nov. 3, 1640, to Nov. 3, 1641, in 2 vols., formed the first systematic account of the kind laid before the public. This was followed by quite a host of journals, including the famous *Mercurius Britannicus*, from 1642 to 1654. The *London Gazette* appeared in Feb. 5, 1666. The earliest commercial newspaper was the *City Mercury*, conducted by Sir Roger L'Estrange, which commenced operations Nov. 4, 1675. The parent of English literary prints, the *Mercurius Librarius*, was published April 9, 1680. The *Daily Courant*, the first morning paper, appeared March 11, 1702, shortly followed by the *Review*, Defoe's celebrated sheet. In Scotland, the first number of the *Mercurius Politicus*, printed by order of Cromwell, was brought out Oct. 26, 1653. In Ireland, the *Dublin News Letter* made its appearance in 1655. During the early part of the 18th century, the tone of the public press had become so libellous that a newspaper-tax was levied in 1712, as the most effectual mode of suppression. Towards the middle of the century the provisions and the penalties of the Stamp Act were made more stringent, and the great population largely increased by the number of offences against it. Notwithstanding this, the popularity of newspapers continued to increase. In 1767 the aggregate number of copies sold in England was upwards of 10,000,000. That famous paper the *North Briton*, edited by the equally famous John Wilkes (*q. v.*), first appeared in 1762; and the same year witnessed the advent of the *Englishman*, a print which, in 1766, was supported by the powerful pen of Burke (*q. v.*). The letters of "Junius" began to appear in the *Public Advertiser* in 1767, and contributed powerfully to raise the political importance of the newspaper-press, or, as it has been styled in England, the "Fourth Estate." The long reign of George III. exhibits a series of restrictions and criminal prosecutions against the public press, and the newspaper-tax had gradually increased from one penny in 1766, to four pence (less a discount of 20 per cent.) in 1815. The stamp-duty on newspapers, first imposed in the reign of Anne (1712), was abolished in 1855. The *Times*, (sometimes called the "Thunderer,"), one of the leading journals of the world, and the leviathan of the English newspaper-press, first appeared in 1785. The other chief London daily prints are the *Morning Post* (founded in 1772); *Morning Herald* (1781); *Morning Advertiser* (1794); *Telegraph*; *Standard*; *News*; *Pall Mall Gazette*, &c. The first illustrated paper, the *Illustrated London News*, was founded in 1842. There are various others, and several critical and other weeklies of wide influence. In France, newspapers were under strict

control during the Empire; the censorship was continued until 1819, and re-established in 1820, but again abolished in the following year. At that period a law was passed compelling the proprietors to give security for the good conduct of their journals, under a penalty of 10,000 francs in Paris, and various lesser sums in the departments. The censorship was, however, re-instituted, and again abolished in 1827. By the famous ordinances of 1830 the liberty of the periodical press was suspended, a measure which caused the outbreak of the revolution of that year. At the present time, France possesses about 4,000 newspapers, the leading sheets being the *Temps*, *Presse*, *Siècle*, *France*, *Constitutionnel*, *Justice*, *Débats*, *Republique Française*, *Figaro*, &c. *Le Petit Journal* has a circulation of over 1,000,000 copies. The *Gazette de France* appeared regularly from 1631 to 1792, forming a collection of 163 vols.; it was continued, also, but with some interruptions, through the era of the Revolution. *Galignani's Messenger*, established in 1815, is the only journal published in Paris in the English language. The number of journals published in Spain is about 850, the principal being the *España* and the *Imparcial*, both dailies. In Portugal, the government organ, *Diário do Governo*, and some half-dozen others, are published in Lisbon, and a like number in Oporto and other cities. The number of newspapers published in Germany is estimated at about 5,500. In Berlin, the principal are the *Vossische Zeitung* (middle-class organ), *Sprecher'sche Zeitung* (conservative), *Neue Preussische Zeitung* (reactionary organ), and *Volkszeitung* (democratic). In Vienna, the *Wiener Zeitung* (official government organ), *Oesterreichische Zeitung*, *Wanderer*, *Ostdeutsche Post*, &c. In Augsburg, the celebrated *Allgemeine Zeitung*. In Cologne, the *Kölnische Zeitung*; and in Leipzig, the *Deutsche Allgemeine Zeitung*. In Brussels, the *Indépendance Belge*. The principal Russian organs are the *Journal de St. Petersburg*, and the *Invalide Russe*. In British India, the *Bengal Hurkura* is the leading journal. The *Boston News Letter*, the first number being dated April 24, 1704, was the first newspaper published in America, being a half-sheet of paper 12 inches by 8, with two columns on each page. It was published (and probably edited) by John Campbell, postmaster of Boston, a bookseller of Scotch extraction. This journal retained a weekly issue till 1776. The *Boston Gazette* appeared Dec. 21, 1719, and, on the next day, was followed by the *American Weekly Mercury*, from the printing-office of William Bradford at Philadelphia. On Aug. 18, 1721, the *New England Courant* was established at Boston by James Franklin, elder brother of Benjamin "of that ilk." Oct. 16, 1725, the William Bradford before mentioned commenced the publication of the *New York Gazette*, the first journal brought out in that city. From 1754 to 1776, the number of newspapers had increased to 37 throughout the American Colonies. The application of the Stamp Act during the infancy of American journalism had the effect of suppressing the publication of many of the minor public prints. With reference to these difficulties, we present below, as a journalistic curiosity, a fac-simile of the quaint "last number" issued by William Bradford of Philadelphia.

Adieu to the LIBERTY OF THE PRESS.

THURSDAY, October 3D, 1765. NUMB. 1195

THE
PENNSYLVANIA JOURNAL;
AND
WEEKLY ADVERTISER.

EXPIRING: In Hopes of a Resurrection to LIFE again.

AM sorry I to be obliged to my Readers, that as THE STAMP-ACT is fear'd to be obligatory upon us after the FIRST OF NOVEMBER ensuing, (the fatal TO-MORROW) the Publisher of this Paper, unable to bear the Burthen, has thought it expedient to stop awhile, in order to deliberate, whether any methods can be found to elude the Chains forged for us, and escape the insupportable Slavery; which it is hoped, from the last Representations now made against the Act, may be effected. Mean while, I must earnestly Request every Individual of my Subscribers, many of whom have been long behind Hand, that they would immediately discharge their respective Arrears, that I may be able, not only to support myself during the Interval, but be better prepared to proceed again with this Paper, whenever an opening for that Purpose appears, which I hope will be soon.

WM. BRADFORD.

During the revolutionary epoch, journalism in this country maintained its ground, each side being represented by its party organs. In 1794, the *Commercial Advertiser*, the senior of the existing New York journals, appeared, and, in 1801, was followed by the *Evening Post*, now under the editorial rule of Mr. Wm. Cullen Bryant. In 1828, the number of newspapers in the U. States had increased to 852, with a yearly issue of 68,117,776 copies. In 1833, the first "penny paper," the *Sun*, was founded in New York by Benj. H. Day. It was about 12 inches square, and being sold for one

cent, rapidly achieved a circulation of 60,000 copies. This is now a large and influential journal under the conduct of Mr. Dana. In 1835, what has since become one of the "mammoths" of American journalism—the *New York Herald*—entered the arena as a penny sheet, price one cent, afterward raised to two. The other leading New York dailies are the *Tribune* (founded by Mr. Horace Greeley in 1841); the *Times* (established by Mr. H. J. Raymond in 1850); the *World*; the *Daily News*; the *Journal*, &c. Other leading journals are the *Ledger*, *Press*, and *Times*, of Philadelphia; the *Sun*, of Baltimore; the *Globe* and *Herald*, of Boston; the *Tribune*, *Inter-Ocean*, *Herald*, and *News*, of Chicago; the *Globe*, *Democrat*, and *Republic*, of St. Louis; the *Gazette* and *Enquirer*, of Cincinnati; the *Times-Democrat* and *Picayune*, of New Orleans; the *Chronicle*, *Examiner*, and *Bulletin*, of San Francisco. The newspapers and periodicals in circulation throughout the world at the present time are as follows: The total number is about 45,000, of which fully one-half are published in the United States and Canada, the U. S. issuing about 21,500. The remainder principally appertain to Europe, Germany being at the head with 5,500; France and Great Britain, about 4,000 each; Austria-Hungary, 3,500; Italy, 1,400, and the other nations in diminishing proportion.

Newstead, a village of England, co. of Nottingham, 8 m. N.W. of Nottingham. In the vicinity is Newstead Abbey, celebrated as the ancestral home of Lord Byron.

Newstead, in New York, a twp. of Erie co.

New Sweden, in New York, a village of Clinton co.

News-vender, *n.* One who sells newspapers.

Newt, (*nute*), a small reptile of the family *Salamandridæ*, of which there are many varieties, the principal one being termed the Great Water-Newt, *Triton palustris*. This specimen, when it is full-grown, measures about six inches in length, and in its appearance greatly resembles the Salamander, (which see.) On the back the color is a dark brown; the sides are speckled with spots, and the under-surface of the body is a bright orange, variegated with black patches. The head is rather small, and the eyes are of a bright golden hue; the tail

Fig. 1942. — WATER-NEWT, (*Triton aquaticus*.)

is flattened in form, and has thin edges at the extremities; and the limbs are short, the fore-feet being divided into four, and the hind into five toes. The newt inhabits shady places and stagnant waters, and lives principally on insects, of which it consumes an immense quantity. Besides the great water-newt there is the common water-newt, *Triton aquaticus*, common in the Atlantic States, which, in its habits and appearance, so closely resembles the former, as not to need a distinct description. Other species, from 4 to 12 inches long, are also found in the United States.

New Testament, *n.* (*Script.*) See BIBLE.

Newton, SIR ISAAC, the greatest of English philosophers, a mathematician, and astronomer, was born at Woolthorpe, Lincolnshire, 1642. Losing his father in his childhood, the care of him devolved on his mother, who gave him an excellent education. In 1654 he was sent to Grantham School, and at the age of 18 removed to Trinity College, Cambridge, where he had the learned Isaac Barrow for his tutor. After going through Euclid's Elements, he proceeded to the study of Descartes' Geometry, with Oughtred's Clavis and Kepler's Optics, in all of which he made marginal notes. It was in this early course that he invented the method of fluxions, which he afterwards brought to perfection, though his claim to the discovery was unjustly contested by Leibnitz. At the age of 22 N. took his degree of Bachelor of Arts, and about the same time he applied himself to the grinding of object-glasses for telescopes; and having procured a glass prism in order to investigate the phenomena of colors discovered by Grimaldi, the result of his observations was his new theory of light and colors. It was not long after this, that he made his grand discovery of the law of gravitation; but it was not till 1689 that the Newtonian system was first published in his great work, the *Philosophiæ Naturalis Principia Mathematica*. On his return to the university, in 1667, he was chosen Fellow of his college, and took his degree of Master of Arts. Two years afterwards he succeeded Dr Barrow in the mathematical professorship, on which occasion he read a course of optical lectures in Latin. He had not finished them in 1691, when he was chosen Fellow of the

Fig. 1943. — SIR ISAAC NEWTON.

Royal Society, to which learned body he communicated his theory of light and colors, with an account of a new telescope invented by him, and other interesting papers. When the privileges of the university of Cambridge were attacked by James II., N. was appointed to appear as one of the delegates in the High Commission Court. He was next chosen a member of the Convention Parliament, in which he sat till it was dissolved. In 1696 he was made Warden of the Mint, and afterwards Master; which latter place he held with the greatest honor till his death. On his last promotion he nominated Dr. Whiston to fill his chair at Cambridge, assigning to him the profits of the place, and resigned it entirely to him in 1703. During the same year he was chosen President of the Royal Society, in which station he continued 25 years. He was also a member of the Academy of Sciences at Paris, having been chosen in 1699. In 1704 he published his treatise on *Optics*; but the whole merit of this extraordinary work was not at first appreciated. In 1705 he received the honor of knighthood from Queen Anne; and he d. March 20, 1727. On the 28th his body lay in state in the Jerusalem Chamber, from whence it was conveyed to Westminster Abbey, the pall being borne by the Lord Chancellor, two dukes, and three earls. A monument was afterwards erected to his memory; and his statue, by Roubiliac, has been placed in Trinity College, Cambridge. He enjoyed his faculties to the close of his long life. His temper, also, was remarkably even, and he had the humility which always accompanies real greatness. The common estimate, however, of his almost superhuman calmness and freedom from self-love, is contradicted by the stories of his dispute with Leibnitz, and his unjust treatment of Flamstead. N. was not only a philosopher, but a Christian, and spent much of his time in elucidating the sacred Scriptures. When his friends expressed their admiration of his discoveries, he said, "To myself I seem to have been as a child playing on the sea-shore, while the immense ocean of truth lay unexplored before me." The fullest account of N. is to be found in Sir D. Brewster's *Memoirs of the Life, Writings, and Discoveries of Sir Isaac Newton*, published in 1855.

New'ton, in *Alabama*, a post-vill., former cap. of Dale co. **Newton**, in *Arkansas*, a N.W. co.; area, about 838 sq. m. *Rivers*. Buffalo Fork of White river, and numerous less important streams. *Surface*, hilly, and in the S. part mountainous; *soil*, generally fertile. *Cap.* Jasper. *Pop.* (1890) 9,950.

Newton, in *Georgia*, a N. by W. central co.; area, about 260 sq. m. *Rivers*. South, Yellow, and Alcovy rivers. *Surface*, diversified; *soil*, generally fertile. *Min.* Granite and iron, with some gold. *Cap.* Covington. *Pop.* (1890) 14,310.

—A post-village, cap. of Baker co., about 130 m. S.S.W. of Milledgeville.

Newton, in *Illinois*, a city, cap. of Jasper co., on the P., Dec. & E., and Ind. & Ill. So. R. Rs., 42 m. S. of Mattoon. *Pop.* (1897) 1,650.

—A township of Livingston co.

Newton, in *Indiana*, a N.W. co., adjoining Illinois; area, about 400 sq. m. *Rivers*. Kankakee and Iroquois rivers, with several smaller streams and lakes. *Surface*, nearly level; *soil*, fertile. *Cap.* Kentland. *Pop.* (1890) 8,803.

Newton, in *Iowa*, a township of Buchanan co.

—A township of Carroll co.

—A city, cap. of Jasper co., about 35 m. N.E. of Des Moines. *Pop.* (1895) 3,213.

Newton, in *Massachusetts*, a city of Middlesex co., 8 m. W. of Boston. *Pop.* (1895) 27,622.

Newton, in *Michigan*, a township of Calhoun co.

Newton, in *Mississippi*, a S.E. central co.; area, about 576 sq. m. *Rivers*. Chickasawha river, and some smaller streams. *Surface*, generally level; *soil*, fertile. *Cap.* Decatur. *Pop.* (1890) 16,625.

Newton, in *Missouri*, a S.W. co., adjoining Indian Territory on the W.; area, about 648 sq. m. *Rivers*. Shoal, Oliver, Center, and other creeks. *Surface*, generally level; *soil*, fertile. *Cap.* Neosho. *Pop.* (1890) 22,108.

Newton, in *New Hampshire*, a post-township of Rockingham co. *Pop.* (1897) 1,110.

Newton, in *New Jersey*, a post-town and township, cap. of Sussex co., about 68 m. N. of Trenton. *Pop.* (1895) 3,426.

Newton, in *North Carolina*, a post-village, cap. of Catawba co., about 175 m. W. of Raleigh. *Pop.* (1897) 1,120.

Newton, in *Ohio*, a village of Allen co.; now called West Newton.—A township of Licking co.

—A township of Miami co.

—A post-township of Muskingum co.

—A township of Pike co.

—A township of Trumbull co.

—A village of Union co., about 40 m. N.W. of Columbus.

—A post-village of Hamilton co., about 10 m. E. of Cincinnati.

Newton, in *Pennsylvania*, a township of Lackawanna co.

Newton, in *Texas*, an E. co., adjoining Louisiana; area, about 970 sq. m. *Rivers*. Sabine river, and Caney and Big Cow creeks. *Surface*, diversified; *soil*, very fertile. *Cap.* Newton. *Pop.* (1890) 4,650.

Newton, in *Wisconsin*, a township of Manitowoc co.

Newton Centre, in *Massachusetts*, a post-village of Middlesex co., about 8 m. W.S.W. of Boston.

Newton Corner, in *Massachusetts*, a village of Middlesex co., about 7 m. W. of Boston.

Newton Depot, in *New Hampshire*, a village of Rockingham co., about 40 m. N. of Boston.

Newton Factory, in *Georgia*, a post-village of Newton co., about 50 m. N.W. of Milledgeville.

Newton Falls, in *Ohio*, a post-village of Trumbull co., about 50 m. S.E. of Cleveland. *Pop.* (1897) 850.

Newton Ham'ilton, in *Pennsylvania*. See HAMILTONVILLE.

Newto'nia, in *Missouri*, a post-town of Newton co., about 11 m. E. of Neosho.

Newto'nian System. See SOLAR SYSTEM.

New'ton Lower Falls, in *Massachusetts*, a post-village of Middlesex co., abt. 11 m. W. of Boston.

Newton Stewart, in *Indiana*, a post-village of Orange co., abt. 112 m. S. by W. of Indianapolis.

New'ton Upper Falls, in *Massachusetts*, a post-village of Middlesex co., abt. 9 m. W. of Boston.

New'tonville, in *Massachusetts*, a post-village of Middlesex co., abt. 8 m. W. of Boston.

Newtonville, in *Ohio*, a post-village of Clermont co., abt. 28 m. E.N.E. of Cincinnati.

New'town, in *Connecticut*, a post-borough and township of Fairfield county, about 24 m. W.N.W. of New Haven. *Manuf.* buttons, combs, hats, belting, etc.

Newtown, in *Indiana*, a post-village of Fountain co., about 14 m. E.N.E. of Covington.

Newtown, in *Iowa*, a village of Pottawattomie co., about 37 m. E.N.E. of Omaha City.

Newtown, in *Kentucky*, a post-village of Scott co., about 22 m. E. of Frankfort.

Newtown, now POCOMOK CITY, in *Maryland*, a post-village of Worcester co., about 15 m. S.W. of Snow Hill.

Newtown, in *Massachusetts*, a village of Dukes co., about 75 m. S.E. by S. of Boston.

Newtown, in *Mississippi*, a village of Hinds co., about 15 m. S. by W. of Jackson.

Newtown, in *Missouri*, a post-village of Sullivan co., on the Chic., Mil. & St. Paul R. R.

Newtown, in *New York*, a town and township of Queen's co., 4 m. N.W. of Jamaica. Its post-office is ELMHURST. *Pop.* 17,549.

Newtown, in *Pennsylvania*, a post-borough and township of Bucks co., about 20 m. N.E. of Philadelphia.

—A village of Greene co., about 10 m. S.E. of Waynesburg.

Newtown, or STEPHENSBURG, in *Virginia*, a village of Frederick co., abt. 8 m. S. by E. of Winchester.—A post-village of King and Queen's co., abt. 38 m. N.E. of Richmond.

New'town-Ards, a seaport-town of Ireland, in Ulster, co. Down, abt. 10 m. E. of Belfast; *pop.* 10,000.

Newtown Barry, a town of Ireland, in Leinster, co. Wexford, abt. 3 m. S. of Clonegal; *pop.* 1,400.

Newtown Creek, in *New York*, enters the East River from Queen's co., opposite New York city.

Newtown Ham'ilton, a town of Ireland, in Ulster, co. Armagh; *pop.* 1,200.

Newtown-Limavady, a market-town of Ireland, in Ulster, abt. 15 m. N.E. of Londonderry; *pop.* 3,000.

Newtown-Stewart, formerly LISLAS, a town of Ireland, in Ulster, a co. of Londonderry, abt. 5 m. W. of Gorton; *pop.* 1,400.

New Tren'ton, in *Indiana*, a post-village of Franklin co., abt. 30 m. N.W. of Cincinnati, Ohio.

New Tri'er, in *Illinois*, a township of Cook county.

New Trip'oli, in *Pennsylvania*, a post-village of Lehigh co., abt. 85 m. E.N.E. of Harrisburg.

New Ulm, or NEU ULM, in *Minnesota*, a city, cap. of Brown co., 24 m. W. of St. Peter. *Pop.* (1895) 4,790.

New Utrecht, (*u'trekt*), in *New York*, a township of King's co.

New Ver'non, in *New Jersey*, a post-village of Morris co., abt. 5 m. S. of Morristown.

New Vernon, in *New York*, a village of Orange co., abt. 65 m. N.W. of New York city.

New Vernon, in *Pennsylvania*, a post-village and post-township of Mercer county, abt. 18 m. S. of Meadville.

New Vien'na, in *Ohio*, a post-village of Clinton co., abt. 11 m. S.E. of Wilmington.

New Village, in *New Jersey*, a post-village of Warren co., abt. 52 m. N.N.W. of Trenton.

Newville, in *Indiana*, a post-township of DeKalb county.—A village of Wells county, abt. 100 miles N.E. of Indianapolis.

Newville, in *New York*, a post-village of Herkimer co., abt. 65 m. W.N.W. of Albany.

Newville, in *Ohio*, a post-village of Richland co., abt. 12 m. S.E. of Mansfield.

Newville, in *Pennsylvania*, a post-borough of Cumberland co., abt. 12 m. S.W. of Carlisle.

New Vine'yard, in *Maine*, a post-township of Franklin co.

New Wake'field, in *Alabama*, a village of Washington co., abt. 164 m. S. by W. of Tuscaloosa.

New Wash'ington, in *Indiana*, a post-village of Clarke co., abt. 18 m. S.W. of Madison.

New Washington, in *Pennsylvania*, a post-village of Clearfield co., abt. 135 m. W.N.W. of Harrisburg.

New Wav'erly, or WAVERLY, in *Indiana*, a post-village of Cass co., abt. 8 m. E. of Logansport.

New Westmin'ster, a town, cap. of British Columbia, on the Fraser River, 70 miles north north-east of Victoria.

New Wil'mington, in *Pennsylvania*, a post-borough and township of Lawrence co., about 8 m. S.W. of Mercer.

New Win'chester, in *Indiana*, a post-village of Hendricks co., abt. 27 m. W. of Indianapolis.

New Wind'sor, in *Maryland*, a post-village of Carroll co., abt. 30 m. N.W. of Baltimore.

New Windsor, in *New York*, a village and township of Orange co., abt. 85 m. S. of Albany.

New Wine, in *Iowa*, a village and township of Dubuque county, about 20 miles west by north of Dubuque.

New Wood'stock, in *New York*, a post-village of Madison co., abt. 24 m. S.E. of Syracuse.

New-Year, *a.* Pertaining to the beginning of the year; as, a New-Year's gift.

New-Year's-Day, *n.* The day on which the year commences; the first of January; usually called *New-Year*, or *New-Year's*. The celebration of the commencement of the new year dates from high antiquity. The Jews regarded it as the anniversary of Adam's birthday, and celebrated it with splendid entertainments—a practice which they have continued down to the present time. The Romans also made this a holiday, and dedicated it to Janus with rich and numerous sacrifices; the newly elected magistrates entered upon their duties on this day; the people made each other presents of gift dates, figs, and plums; and even the emperors received from their subjects New-Year's gifts, which at a later period it became compulsory to bestow. From the Romans the custom of making presents on New-Year's day was borrowed by the Christians, by whom it was long retained; but even in those countries where it has lingered longest, it is falling rapidly into desuetude.

New-Year's Islands, in the S. Pacific Ocean, on the N. coast of Staten Land; Lat. 54° 41' S., Lon. 64° 28' W.

New York, one of the U. States of America, and, though not the largest, one of the most important States of the Union. It extends between 40° and 45° N. Lat., and 70° and 80° W. Lon. Its shape, exclusive of Long Island, at its S. extremity, is nearly triangular; it has E. Connecticut, Massachusetts, and Vermont, N. and N.W., the Dominion of Canada, being separated from the latter by the St. Lawrence, and Lakes Ontario and Erie; and S. Pennsylvania, New Jersey, and the Atlantic. Length, E. to W. including Long Island, 412 m.; maximum breadth, 311 m. Area, 47,000 sq. m., or 32,332,160 acres. Although one corner only of the mainland touches the Atlantic, the seaboard of the State is extended by Long Island, Staten Island, &c., to 246 m.; while it has a lake coast-line of 352 m., and 281 m. of border, or navigable rivers. — *Gen. Desc.* The State may be described generally as an elevated region with extensive indentations in various parts below its average level. The most remarkable depressions which occur in the surface are the important valleys of the Hudson and Mohawk rivers, by means of which, and the canal system incidental to them, the basin of the St. Lawrence is at many points placed in communication with the Atlantic. The Blue Ridge of the Alleghenies terminates in this State in the Highlands, whose peaks have a mean altitude of 1,500 feet above the Hudson tide-water; to the N. of these again, the Catskill group rise to a superior height, their highest summit, Round Top, having an elevation of 3,804 feet. The Adirondack range in the wild region W. of Lake Champlain, has for its principal peaks Mount Marcy and Mount Anthony, 5,337 and 5,000 feet high, respectively. *Rivers*. The chief river of the State is the Hudson, a broad and deep stream with a tidal flow of 150 m., and traversing a country almost unrivalled for picturesqueness of scenery. The St. Lawrence, which forms its N. boundary as aforesaid, the Genesee, Oswego, Mohawk, Oswegatchie, St. Regis, and the head-waters of the Delaware, Susquehanna, and Alleghany, form the remaining chief constituents of the riparian system of the State. Several lakes of considerable size are interspersed throughout the State, the larger ones being those of Champlain, Oneida, Cayuga, Seneca, Canandaigua, George, and Chautauqua. Lake George is famous for the picturesque beauty of its island and mountain scenery, and for the important historical events which have taken place in its vicinity, and several of the central lakes are of great beauty, Seneca lake being rendered especially attractive by the striking scenic beauty of Watkins Glen at its head. Cataracts of the first order occur within the State, among them the world-renowned Falls of Niagara, the greatest cataract of the earth. Others include the High Falls of the Genesee at Portage, the Trenton Falls on West Canada creek, the Taghianic Falls, near Ithaca, and various smaller ones. Water power is developed largely at Niagara, and in considerable measure at Little Falls and Cohoes on the Mohawk, at Pilton, &c., on the Oswego, at Rochester on the Genesee, at Waterloo and Seneca Falls on the Seneca, at Watertown on the Black river, and in many other localities. The Thousand Islands of the St. Lawrence have become a popular summer resort, while Chautauqua lake is the center of a popular educational meeting. The Adirondacks, with their many beauties of lake and forests, are similarly popular, while the springs of Saratoga, Richfield, and Sharon are noted summer resorts,—all of which are described elsewhere in this work.—*Geol. and Min.* There are many features of interest in the geology of N. Y., since nearly the entire geological series, from the earliest to the latest period, is represented in its rocks, the principal exceptions being the Jurassic and some other Mesozoic strata. These deposits outcrop as follows: Within and surrounding the Adirondack region, in the northeastern section of the State, lies an area of Archæan rocks, of somewhat circular shape. Similar rocks appear along the eastern side of the Hudson, where they are continuous with those of New England. The Archæan rocks of the Adirondacks are in great part surrounded with a belt of Silurian deposits, extending southward west of the Hudson, and bordering on Lakes Ontario and Erie. A belt of Cambrian deposits occurs north of the Adirondacks, while Devonian strata exist largely south and west of the Silurian.

There are also traces of the Carboniferous formation, but no coal-bearing strata. The later strata, Secondary, Tertiary, and alluvial, occur in more limited localities. American geology of the Palaeozoic period has received its names from N. Y. localities of the successive formations, these various geological strata having been first systematically studied, and yielding in great abundance the characteristic fossils of the formations. Gneiss and granite are the most abundant primary rocks, and carboniferous slate, greywacke, and limestone the principal transition and secondary formations. In the latter, to the S. of Lake Erie, many salt springs exist, a bushel of salt being obtained from 45 gallons of brine. Productive salt-beds also occur in the N. central part of the State, near Syracuse, and in 1878 large new salt deposits were disc. in Onondago co. Iron is extremely plentiful in the N., where a layer of argillaceous iron ore, yielding from 15 to 30 per cent. of metal, extends E. and W. for 200 m. In the Highlands are many beds of magnetic iron ore, and numerous deposits of white marble also are worked at several localities. As the rocks of the Appalachian system are traced from Pennsylvania and New Jersey, those of a later period than the Hudson River slates, instead of crossing the river on the general range of the outcrop toward the N.E., are deflected toward the N.W. before reaching the Mohawk River, the great development of azoic rocks in the N. part of the State seeming to split and turn aside these stratified formations. This is the case with all that group of silurian rocks which compose the Shawangunk Mountains, and run parallel with this ridge from the N.W. corner of New Jersey to the Hudson River at Rondout. In the valley W. of the mountains are the limestones and shales of the Helderberg and Hamilton groups. These rocks, as they approach the Hudson River, sweep around to the W., the great length of the State, and pass across the head of the Niagara River into Canada. In the intermediate formations are included the lead and copper ores of the Shawangunk grit, the fossiliferous iron ores of the Clinton group near Oneida Lake, and the salt and gypsum beds of the Onondaga group. Gypsum occurs in large deposits, and is highly useful in agriculture, being used generally in the proportion of about a ton to 10 or 15 acres of soil. An argillaceous limestone which makes a valuable cement, lead, marble, and peat, are the other chief mineral developments. Coal in small quantities has been found, and also petroleum and natural gas, in the W. part of the State. Among the numerous mineral springs, those of Saratoga and Ballston Spa are the most frequented watering-places of their kind through-

Fig. 1944. — SEAL OF THE STATE.

however, the rearing of live-stock is the most profitable branch of rural industry, and a large portion of the State, especially about its center, is appropriated to sheep-farming. The principal wheat district commences in the valley of the Mohawk, about Lon. 75°, and extends W. to the Great Lakes, including the fertile Seneca valley and the Genesee country. The average produce of wheat is estimated at from 25 to 30 bushels per acre; but from 40 to 50 bushels are frequently reaped. Apples, pears, and cherries succeed admirably well. The apples called *Newtown pippins*, produced in this State, are superior to any grown in Europe, and are extensively exported to England. In the remote parts of the State, the original log cabins still remain upon farms well cleared, well fenced, and under high cultivation; but even there they are gradually giving way to more substantial and commodious buildings, and, in many cases, to large and elegant mansions. In the grazing counties, the buildings are generally of a better character than in the purely agricultural districts. Long Island, and the adjacent county of Westchester, though comparatively unproductive, are more improved and better farmed than most other parts of the State, probably in consequence of their vicinity to the city of New York. Agriculture, however, is everywhere improving. Agricultural societies are to be found in almost every co., and the State govt. has contributed large funds for the promotion of their objects, especially in premiums for raising the best crops. (Further allusion will be made to State encouragement of agriculture in another place in this article.) In many parts, where the soil is inferior, it has been found that grazing husbandry has been substituted for tillage, especially since the Erie Canal has brought the produce of the more fertile W. cos. of the State into competition with those of the E. land is almost always in the holding of the proprietor, except in the neighborhood of the cap, and some of the larger cities and towns. When it is let, it is generally on the *metayer* principle, the landlord providing half the seed, and receiving half the produce; and in the case of pasture farms, half the stock belongs to the proprietor. Wheat is the most valuable crop, and the attention of the farmers seems chiefly directed to the raising enough of maize for home consumption only, and of wheat for sale. A good deal of buckwheat and rye is grown, but the degree of heat is not favorable for oats and barley. Potatoes, turnips, and other root crops are not at all general in large fields. Indian corn is sown during the latter half of May, in drills, from 3½ to 4 ft. apart, and is harvested in Oct., or sometimes later. The cultivation of this and other crops is largely done by means of the improved implements of agriculture, many of which are the invention of citizens of this commonwealth. From 35 to 40 bushels an acre is considered a good average crop of maize; the same proportion of wheat, however, is esteemed a very abundant crop. Hops are extensively grown. Hay is easily made, the sun in the hay-making season being very powerful, and, like other crops in this State, it is seldom damaged by bad weather. Clover and all sorts of grass are used. The soil and temperature of this State are well adapted to the successful cultivation of the principal crops and fruits of the temperate zone. Somewhat more than one-half of the total area of the State is improved and under successful cultivation; 37 per cent. of the ameliorated land is devoted to pasturage, 25 per cent. to meadow lands, 37 per cent. to the raising of oats, Indian corn, wheat, rye, buckwheat, and barley, and 1 per cent. to the minor crops and gardens. In the northern counties and the highland regions along the southern border, and near the Hudson, stock and sheep rearing, and dairy farming, are the almost exclusive agricultural pursuits; while the low-lands that form the greater part of the surface of the western portion of the State, are best adapted to cereal productions. Broom-corn has long been the staple crop of the Mohawk Valley and its sub-valleys; tobacco is extensively raised in the Chemung Valley, an Onondaga and Wayne cos.; grapes are raised in several of the central lake valleys, and maple-sugar is an important product of the northern and central counties. Orchards are highly productive. Various kinds of excellent apples are grown, and a good deal of inferior cider is made from the crab fruit, selling at from \$2 to \$4 per barrel of 30 wine gallons. Melons and pumpkins are raised for domestic use, and for cattle-feeding. Great exertions are being made to improve the breeds of cattle and horses by importations of the best English stock of cattle and in selecting superior stud horses. Dairy produce forms an important element in the rural economy of the State. Milch-cows sometimes yield 10 or 11 lbs. of butter a week, and, perhaps, 20 quarts of milk a day. The manufacture of cheese, both for home use and export, is conducted on a very extensive scale, and the exportation to England has become within recent years a heavy annual item of commerce. The price of ordinary horses runs from \$80 to \$125. Sheep are less attended to than they deserve in a country where the dryness of the weather preserves them from diseases to which they are subject in other lands. The merinoes, and crosses with them, are the breeds generally seen; the mutton is generally of inferior quality. The great extent of the forests favors the breeding of hogs, which thrive well, and, before being slaughtered, are usually fattened with maize or meal. Turkeys, guinea-fowl, and the usual kinds of domestic poultry are in great abundance. From the S.E. counties immense quantities of eggs and spring chickens are sent to the New York markets. The products of the State comprise nearly the whole of those grown in the temperate zones. At the date of the census of 1890 N. Y. stood second in rank in the value of its farm

produce, being surpassed only by Illinois, the yield of N. Y. being valued at \$161,593,009, that of Ill. is at \$181,759,013. In number of milch cows it was surpassed in 1900 only by Texas and Iowa, while it was far in advance in the value of its milk, butter and cheese production, yielding 772,799,352 gals. of milk, 74,714,346 lbs. of butter, and 2,624,552 of cheese. Butter is made largely in creameries and nearly all the cheese manufactured in factories. In its buckwheat yield this State ranks first, while its hop product is greater than that of all the remainder of the U. S., it yielding 20,063,029 lbs. out of a total of 39,171,270 lbs. The dairy industry is mainly located in the central counties of the State and on the lower Hudson, in the vicinity of the great cities of that section. For the same reason market gardening is a thriving industry on Long Island, and in a smaller measure near the other large cities. Of fruits, in addition to apples, pears, plums, and cherries are abundant, and the smaller fruits and berries are largely grown. The State possessed in 1900, 226,720 farms, embracing 15,599,906 acres of improved land, valued with its buildings and fences, at \$889,131,180, a landed value surpassed only by Illinois and Ohio. The live stock was valued at \$125,583,715. Of the area of cultivation in 1908, 413,000 acres were devoted to wheat, yielding 7,752,000 bushels; 625,000 to corn, yielding 24,350,000 bushels; and 1,250,000 to oats, yielding 37,625,000 bushels.—*Div.* The State is partitioned into 50 counties, viz:

Albany,	Franklin,	Oneida,	Schoharie,

Cities and Towns. New York, Brooklyn, Albany (State cap.), Buffalo, Rochester, Syracuse, Troy, Oswego, Utica, Batavia, Newburgh, Hudson, Binghamton, Auburn, Poughkeepsie, Schenectady, Canandaigua, Elmira, Saratoga, Cohoes, Amsterdam, Corning, Dunkirk, Geneva, Ithaca, &c. The State possesses, besides, nearly 1,000 other towns, many of considerable size and importance. —*Govt.* The legislature of the State consists of a Senate of 50 members, elected for 2 years, and a House of Assembly of 150 members, chosen annually. The governor and lieutenant-governor are elected for 3 years; and the latter presides in the Senate, where he has a casting vote. The secretary of state, comptroller, treasurer, attorney-general, state engineer and surveyor are also elected by popular vote for 2 years. The right of suffrage is enjoyed by every male citizen above 21 years of age, who has resided for 12 months in the State and for 4 months in the county for which he tenders his vote. The salary of the governor is \$10,000 per annum; while the lieutenant-governor receives \$5,000. Each member of the legislature shall receive for his services an annual salary of \$1,500. The two bodies meet annually at Albany on the first Tuesday of Jan., unless otherwise ordered.—*Judiciary* consists of a supreme court, with general jurisdiction in law and equity, subject to appellate jurisdiction of the court of appeals, which latter is composed of a chief judge and 6 associate judges, who shall hold their office for 14 years. The superior court of the city of New York, the court of common pleas for the city and county of New York, the superior court of Buffalo, and the city court of Brooklyn, are continued with the powers and jurisdiction they now severally have; the county courts are continued. The entire judiciary is elective; the limitation of age is restricted to 70 years. The English common law, with various modifications, forms the basis of the jurisprudence. A new code of criminal procedure went into effect Sept., 1881, and a new penal code in May, 1882. N. Y. has 37 members in the U. S. Congress, and 39 electoral votes. There are 3 State prisons, viz.: at Auburn, Cayuga co.; Dannemora, Clinton co., and Sing Sing, on the Hudson, in Westchester co., abt. 35 m. N. of the city of New York. —*Finances.* The State debt of N. Y. in 1890 was \$2,308,230; in 1902 it had increased to \$7,498,239; and in 1909 to \$26,230,000; there being a sinking fund of about \$3,000,000. The city and county debts enormously exceeded that of the State, New York City having a net funded debt, including schools, of \$596,204,494. Of other large cities, the debt of Buffalo was \$20,046,218; and Rochester, \$12,366,908. The assessed value of real property in the State in 1908 was \$8,553,298,187; of personal property, \$620,268,058; total, \$9,173,566,245. The annual receipts of the State treasury are about \$30,000,000, of which about half comes from taxes, the remainder from other sources. Of this the Raines liquor law yields about \$3,600,000. Of this revenue about \$4,000,000 is devoted to school purposes; as much to State care of the insane; \$2,000,000 to maintenance of the canals, and the remainder to various other purposes.—*Com. and Manuf.* The manufacturing interests of this, the "Empire" State, are most extensive, and in many sections they exceed those of agriculture or commerce. Since the increased development of lines of interior communications, manufactures have received an accession of importance which is seen in the flourishing factories and workshops found in almost every part of the State. Nearly every branch of mechanical industry is, more or less, brought into active operation, and it would be tedious to attempt to detail within our circum-

Fig. 1945. — HIGHLANDS OF THE HUDSON.

out the Union. — *Meteorol.* The climate is very variable; but an estimate of five years gives 40° Fahr. as the mean annual temperature of the whole State. Thunderstorms accompanied with lightning occur frequently during the summer solstice, but the atmosphere is, for the most part, dry and equable, and the State is, in general, very healthy. — *Soil, Prod., and Agric.* In the N. and S.W. parts of the State much of the surface is covered with forests, and the principal business of the residents in these districts is the getting in and selling lumber. There is little or no underwood, and in cultivated tracts, wherever a sufficient quantity of land has been cleared, the woodland of a farm bears as high a price per acre as the land actually cleared. The trees are sometimes above 80 feet in height. Numerous varieties of oak, the hickory, black-walnut, chestnut, plane (*Platanus occidentalis*), maple, ash, beech, elm, tulip-tree (*Liriodendron tulipifera*), here called poplar, and wild cherry, are ordinary trees, with red cedar and pine. The locust-tree, which is not indigenous to the State, and the cedar, have been extensively planted, for the purpose especially of ship-building. The soil in the S. is rather unfertile, but it improves on proceeding northward. Along the banks of the St. Lawrence, and in the region around the Oneida, it is well adapted for grain-growing; upon the whole,

scribed limits each and every application of such manifold interests. It will suffice to say that in this branch of industry New York exceeds any other State in the Union, the value of its fabricated products, as given in the 1905 census of manufactures, being \$2,488,345,579, exceeding Pennsylvania, the second State in production by \$330,000,000, and being nearly double that of any other State. Of these manufactured articles clothing holds the first rank, the second in order being cotton and woollen textiles, the third silk goods, the fourth foundry and machine shop products, and the fifth malt liquors. Clay, suitable for brick, terra-cotta, and tile manufacture, exists in practically inexhaustible quantity, and there is an immense output of bricks, to the number of 1,300,000,000 in a year. Half the hydraulic cement of the U. S. is made in this State, the water-lime group yielding the material. In its production of salt New York is exceeded only by Michigan, its yield of over 5,000,000 barrels annually being partly mined, partly obtained from brine. In iron ore it occupies the fifth rank, the works being mainly in the Adirondacks, while in building stones, including granite, marble, limestone, and slate, it ranks sixth among the States. The ports of entry for the collection of customs revenue are (excluding the city of New York) Sag Harbor, Plattsburg, Ogdensburg, Cape Vincent, Sackett's Harbor, Oswego, Rochester, Lewiston, Buffalo, and Dunkirk. The vast commercial business of the State having its center and outlet in New York city, we refer to our article thereon for a succinct view of the condition of the home and foreign trade of the State, on the authority of the latest statistical reports.—*Public Works.* New York is distinguished above every other State in the Union by her extensive inland water communications. Of these, the principal, formed partly by the navigable river, the Hudson, and partly by the Erie canal, 364 miles in length, from Albany on the Hudson to Buffalo on Lake Erie, connects the city of New York with the great American lakes, and makes her, in fact, the proper port of Upper Canada, and of all the vast and fruitful countries surrounding those lakes. Upper Canada may, indeed, be reached from Europe by way of New York in less than half the time in which it can be reached via the St. Lawrence and Quebec, and with incomparably less risk. The Erie canal, commenced in 1817, was opened for traffic throughout its entire extent in 1825. Originally it was only 4 ft. deep; but provision was made, in 1835, for increasing its depth to 7 ft. Its first cost amounted to \$7,143,789, and the expense attending its enlargement was estimated at about \$7,000,000 more. The canal is now free. Buffalo, at the W. termination, is 698 feet above the level of Albany, its E. terminus, where it commences. It is joined by a branch canal with Oswego, on Lake Ontario, and by another branch with the Susquehanna, and, consequently, with the Chesapeake. This great work was undertaken at the expense of the State, and has been eminently successful, both in a national and in a pecuniary point of view, the tolls, which are comparatively moderate, amounting to, on an average, \$3,500,000 a year; in 1869, however, the receipts fell off to \$3,335,544.41. New York city has also a direct communication with the basin of the St. Lawrence, by the Champlain canal. The latter, which may be regarded as the N.E. branch of the Erie canal, connects the Hudson with Lake Champlain, which latter unites, by means of the navigable river Richelieu, with the St. Lawrence. Another important canal connects the Hudson with Port Jervis, on the Delaware. The Harlem river ship-canal, connecting the Hudson river and Long Island sound, by way of Spuyten Duyvel creek and Harlem river, was opened for traffic in 1895. (See CANALS.) There are now considerably over 1,000 m. of canal intersecting the State, constructed at a total cost of upwards of \$40,000,000. It is her canal system that has enabled New York to become so prominent and successful a factor in the great trade between the West and the Eastern seaboard. Various efforts to improve the transporting capacity of the Erie canal, by the employment of steam and electric trolley propulsion in place of the antiquated mule power, have been made, though the latter has not yet been superseded. The design of deepening this canal and adapting it to ship navigation, in order that vessels might be enabled to reach New York harbor without breaking bulk, has also been long entertained, and in 1897 the subject of a ship-canal from the lakes to the Hudson was investigated by a governmental commission. The report of this commission did not favor the utilization of the Erie as the basis of the proposed canal, but advocated a shorter route, via Lake Ontario and some of the minor rivers of the State to the Hudson. The question of the construction of this canal is still in embryo, many maintaining that so costly a work is inadvisable in view of the activity and cheapness of railroad transportation through the State. A still more important class of public works is that of railroads. The first railroad in New York (the Mohawk & Hudson from Albany to Schenectady, 17 m. long) was opened in 1831. In the following year the Saratoga & Schenectady, 21 m., and 1 m. of the New York & Harlem, were opened. The mileage of the State had increased to 719 m. in 1845, 1,361 in 1850, 2,682 in 1860, 3,928 in 1870, 5,991 in 1880, and 7,475 in 1890, and had increased to 8,504 by the year 1908. The two most extensive railroad corporations of the State are the N. Y., Lake Erie & Western (formerly Erie), and the New York Central & Hudson River. The former, chartered in 1832, now operates more than 2,000 m. of railroad, the latter more than 2,600.—*Public Inst.* The public institutions of the State comprise the State Lunatic Asylum at Utica; the New York State Asylum for Idiots at Syra-

cuse; the State Inebriate Asylum at Binghamton, and the State Asylum for the Insane opened at Binghamton in 1880; besides other establishments for the relief of the sick or destitute in connection with N. Y. city (*q. v.*). The work of the State Board of Health in abating nuisances, improving the sanitary condition of various localities, diffusing useful information, and promoting the establishment of local organizations, has been of great and generally acknowledged value. For the first time in their history, the State prisons, in 1881, were self-sustaining. The earnings of the convicts paid current expenses, leaving a small balance to the credit of the prisoners.—*Relig., Educ., &c.* The principal religious denominations dispersed throughout the State, are the Methodists, Presbyterians, Baptists, Roman Catholics, Episcopalians, and Dutch Reformed. In no State of the Union is scholastic instruction more thoroughly carried out. The constitution of 1822 set apart the proceeds of future sales of certain State lands as a fund for the support of common schools, and the revised constitution declares the inviolability of the capital of this fund, of the literature fund as well, and of the U. S. deposit fund, which is incorporated with the common-school fund. The product of this general fund is distributed among the townships on condition of their raising a proportionate sum to that given by the State. The whole of these sums are expended in payment of teachers' wages, the erection of school-houses, and the establishment of libraries. In each of the Senatorial districts there is an academy for teachers, and there are, besides the State Normal School at Albany, a number of others in active operation, with an attendance of several thousand students. In 1896 the school districts numbered 11,800, and the children of school age 1,651,858, of whom 1,176,074 attended school during some part of the year. The expenditure for school purposes aggregated \$23,173,180, of which \$15,542,171 was used for city, \$7,581,019 for country schools. The high schools, in 1895, numbered 391; the academies, 133; and the students, in high schools and colleges, 76,704. The State possesses, besides its institutions for public education, the following colleges and universities: Union College, at Schenec-

Fig. 1946.—THE CAPITOL AT ALBANY.

tady; Hamilton, at Clinton; Hobart, at Geneva; Genesee, at Lima; Elmira (for females); the People's College, at Havana; St. John's, at Fordham; New York City University; Madison University, at Hamilton; the universities of Rochester and Troy, and the Ingham University, at Le Roy. In addition to the above are the Cornell University at Ithaca, the State University at Albany, and the N. Y. State Agricultural College at Ovid, besides a number of medical colleges. At West Point (*q. v.*), on the Hudson, the celebrated U. S. Military Academy is located. The literary and journalistic requirements of the public are supplied by the diffusion throughout the State of printed books, magazines, and newspapers, counted by thousands.—*Hist.* The State was originally peopled by the "Iroquois, or Five Nations," comprising the *Mohawks, Oneidas, Onondagas, Cayugas, and Senecas*, ultimately becoming, with the accession of the *Tuscaroras* to the Iroquois league, the well-known "Six Nations." In 1609, a Frenchman, named Champlain, from Canada, explored the country as far as the lake which has since borne his name, and defeated the Mohawks. This event gave rise, among the Iroquois, to a feeling of hostility toward the French that endured till the final overthrow of the power of the latter on the American continent. In the same year, Henry Hudson, an English navigator in the employ of the Dutch East India Co., discovered the bay of New York, and sailed for some distance up the river which bears his name. The region he discovered was at once claimed by the Dutch, and called the *New Netherlands*. During the next 12 years, numerous colonists arrived from Holland, who further explored the country along the Hudson and around Long Island sound, and founded trading-posts at Fort Orange (now Albany), and at New Amsterdam, on Manhattan Island, the latter ultimately becoming the nucleus of the present city of New York. The Dutch settlements, in course of time, were invaded by the English from Connecticut, and by the Swedes in Delaware. The English having set up a claim to New Netherlands as being part of Virginia, priorly discovered by Cabot, Charles II., in 1664, granted a charter of all

the lands lying between the Hudson and the Delaware to his brother, the Duke of York. This included New Netherlands, and a portion of the territory previously granted to Connecticut, Massachusetts, and New Hampshire. In August of the same year, the whole country passed into the possession of the English, who gave the name of *New York* to New Amsterdam, and that of *Albany* to Fort Orange (after the titles of the grantee—"Duke of York and Albany.") In 1664, the colony possessed more slaves in proportion to its inhabitants than Virginia. When the Duke of York ascended the English throne as James II., the government became an appendage to the crown, and was administered by viceroys bearing the title of governor. An insurrection, in 1689, headed by one Leisler, broke out, when the latter seized the government and administered it in the name of William III. and Mary, for two years, when he was superseded by a governor sent direct from England, who authoritatively caused Leisler to be arrested, tried for treason, and executed. From the dawn of the settlement, the French had been engaged in almost continual warfare with the Five Nations. In 1684, Gov. Dongan concluded an offensive and defensive treaty with the Indians; and from that time forward the English became their allies and fast friends. The peace of Ryswick, in 1697, terminating the war between England and France, Count Frontenac, the then French governor of Canada, directed his force against the Five Nations. This proceeding was, however, frustrated by the Earl of Bellamont, English governor of the province, who promised the Indians support in case of their being attacked. Border warfare continued to be conducted for some years on both sides; and in 1731 the French erected the important fort of Crown Point, on Lake Champlain, completely commanding the natural defile between the Hudson and the St. Lawrence. The great final conflict between England and France to decide the sovereignty of America broke out in 1754. Next year, a battle took place near Lake George, when the English, commanded by Sir W. Johnson, nearly annihilated a French force under Gen. Dieskau. In 1756, the French destroyed Oswego; and, in the following year, Fort William Henry capitulated to the French, when the English garrison was massacred by the Indian allies of the victors. In 1758, General Abercrombie was defeated at Ticonderoga, and Col. Bradstreet took Fort Frontenac. In 1759, Niagara surrendered to Gen. Prideaux and Sir W. Johnson, and Ticonderoga and Crown Point were abandoned, leaving no French troops within the limits of the colony. In 1775 the Revolutionary War broke out, and in February of the next year an American force took possession of New York city, which they held till August, when, after being disastrously defeated at Long Island, they surrendered the city and its environs to the British. In 1783, New York city was evacuated by the latter,—forming the closing scene of the Revolutionary drama. The first constitution of the State was adopted in 1777, and was successfully revised in 1801, 1821, 1846, 1877. In 1788 N. Y. adopted the Federal Constitution, and received popularly the name of the Empire State, from its importance as a member of the Union. The national government under the constitution was first located in New York city, which was also the State capital until 1797, when Albany was made the capital. During the war of 1812 important events took place on the northern boundary, along Lake Ontario and the Niagara river, and on Lake Champlain. Slavery was finally abolished throughout the State in 1817. Steamboat navigation began on the Hudson in 1807, and in 1825 the canal system was perfected by the completion of the Erie canal from the lakes to the Hudson. N. Y. took an active part in the Civil War, supplying large numbers of troops to the army. Since the close of the war rapid steps of progress have been made, and the State has attained a position which gives it fair claim to the title of Empire State. *Pop.* (1890) 5,997,853; (1900) 7,238,894.

New York, the principal city of the State of New York, the largest in population and the most important in commerce and finance in America, and the second in wealth and population on the globe. It is situated on the east side of the Hudson (locally known as the North) river, and on both sides of New York bay, including in its area Manhattan Island, Staten Island, the western extremity of Long Island with the municipality of Brooklyn, and part of the mainland north of Harlem river. Lat. 40° 42' 43" N., Lon. 74° 0' 3" W. The inner bay of New York, included within this area, forms one of the finest harbors in the world, being about 8 m. in length north to south, and with a breadth varying up to 5½ m., and an area of about 14 sq. m. It has three channels of communication with the ocean—the Narrows, the East river (opening into Long Island sound), and Staten Island sound. Of these the first is much the best and far the most frequented. The bar at Sandy Hook, at the mouth of the outer bay, is crossed by two ship channels, from 21 to 32 feet deep at ebb tide, so that entrance is afforded to the largest vessels. Within the bar and along the Hudson the water is so deep that ships of the largest tonnage may lie close to the quays, while the strength of the tide and the vicinity of the ocean usually keep the bay free from impediment by ice. Navigation by way of Long Island sound is hindered by the rocky shoals and intricate currents at Hell Gate, but these have been largely removed by blasting. The inner bay is nowhere surpassed in the advantages which it offers to commerce. Over 6,000 steamers and 9,000 sailing vessels enter and clear from it annually, while its annual exports and imports aggregate nearly \$1,500,000,000 in value. In the harbor near the city are a number of fortified islands, and the ap-

proach via the Narrows, which is a strait about a mile wide between Long and Staten Islands, is defended by Forts Wadsworth, Tompkins, and Hamilton, while the Sound entrance is defended by fortifications at Throggs Neck and Willett's Point. The navigation on entering the harbor is very easy, and but for the risk of vitiating marine insurances a pilot would seldom be required. There is a light-house on Sandy Hook, and several others further in, while on Liberty (formerly Bedloe's) Island the lofty Bartholdi statue, its apex lit by an electric light by night, serves the purpose of an additional light-house. Across the East river stretches a great extension bridge, while others are projected, both across this stream and the Hudson.—*Area.* New York was originally confined to Manhattan Island, lying between the East and North rivers, and cut off from the mainland by Harlem river and Spuyten Duyvel creek (now the Harlem ship-canal). This island is about 13½ m. in length and 1½ m. in average breadth, with an area of 22 sq. m. In 1874 a portion of Westchester co., on the mainland north of Harlem river, reaching to the city of Yonkers, and bounded by the Hudson river and the Bronx (a small stream), was annexed, giving the city a total area of 38.85 sq. m. On the 1st of January, 1898, the city gained a much greater accession of territory and population, through legislation perfected in 1897, an addition which has raised it to the rank of the second city on the globe, and the largest in area and population in the United States. For many years previously it had been evident that the municipality, as then organized, did not include the whole population fairly entitled to be claimed as part of New York, the great city of Brooklyn and various smaller communities having grown up through the outflow of population from Manhattan Island. The feeling that it was desirable to consolidate these various communities into a single great municipality at length bore fruit, the necessary legislation being obtained and the consent of the various communities concerned given. Jersey City, one of the suburban municipalities, lying in a different State, could not be included, and the city as extended embraced the following communities, with areas and populations as given in the State census of 1892:

	Sq. m.	Population.
New York city (Manhattan).....	38.85	1,801,739
Brooklyn.....	77.51	995,276
Richmond co. (Staten Island).....	57.19	53,452
Flushing.....	29.65	19,803
Hempstead (in part).....	17.86	17,756
Jamaica.....	33.50	14,441
Long Island city.....	7.14	30,506
Newtown.....	21.32	17,549
Jamaica Bay.....	25.63
East Chester, West Chester and Pelham.....	50.00	35,000
TOTAL,	358.65	2,985,522

New York, as thus constituted, is mainly situated on islands (Manhattan, Long, and Staten Islands), but has added to its former extension on the mainland the territory east of the Bronx river. The population of its several sections in 1900 was as follows: Manhattan, 1,850,093; Brooklyn, 1,166,582; Bronx, 200,507; Queens, 152,949; Richmond, 67,021; total, 3,437,202. It is surpassed only by London (4,536,541 in 1901).—*Manhattan.* As, however, the various localities above named as constituents of New York are elsewhere described in this work, we shall confine ourselves here to a description of the city as formerly constituted, now the Manhattan section of the new city. The oldest portion of the city, at the S. extremity of Manhattan Island, was laid out very irregularly, and contains a number of narrow and crooked streets. Yet in this section the wholesale traffic and the financial business of the city are largely concentrated. Wall Street, scarcely half a mile in length, is unequalled in the world for the extent of its monetary operations, while New and Broad Street are other important centers of banking and speculative business. At the extreme S. point of this district is located the Battery, an open space of some 20 acres, once a fashionable promenade. Here was once an old brick fort, succeeded by a building named Castle Garden, used successively as a concert hall and a depot for arriving emigrants, and now transformed into a salt-water aquarium, which is growing to be a favorite place of resort. From this point extends northward Broadway, one of the finest thoroughfares of the world, 80 feet wide, lined on both sides with edifices of imposing architecture, and extending in a devious line through the center of the island to 59th Street, where it expands into a grand boulevard 150 feet wide, which pursues a somewhat winding course northward to 155th Street. Passing from the old to the more modern part of the city, we come to a series of broad, straight streets, comprising 12 great avenues and several smaller ones, 75 to 150 feet in width, which extend north and south, and are crossed at right angles from 14th Street northward by streets, mostly 60 feet wide, and running from river to river. Of these Fifth Avenue, the most central and the most striking in its edifices, divides the city into east and west sides. The streets are, as a rule, well paved and lighted, and under the new system are kept in a very satisfactory state of cleanliness. Several of them are traversed by elevated passenger railroads, besides which there are many lines of street railway, and subways many miles in length. From the Grand Central Depot radiate several lines of railroad, while others run from Jersey City and Brooklyn. The rush

of travel is so great that the ferry service across the rivers has long been unsatisfactory, four bridges now cross the East River. The North and East Rivers are both tunneled for the use of swift electric trains used for passenger traffic, as is also the Island of Manhattan, trains running throughout its entire length and reaching to nearly all the suburbs. On the Hudson and East rivers and down the Narrows pass night and day great passenger steamers, and various lines of ocean steamships connect New York with various parts of Europe and other parts of the world. The water frontage of Manhattan Island is nearly 25 m., with a considerable length of the shore awaiting future utilization. 13 m. of this are on the Hudson river side. There are more than 70 piers on each river, and the Brooklyn and Jersey City sides are similarly utilized, while about 30 steam ferries afford constant communication with the opposite shores. Into this port come about two-thirds of all the imports, and from it go nearly half of all the exports of the U. S., its total commerce

Fig. 1947.—NEW YORK FROM FORT RICHMOND.

in the year 1897, being over \$1,000,000,000 and in the year 1907, \$1,500,000,000.—*Architecture.* The building material of the city in its humbler portions is red brick, while the dwellings of the richer classes are usually massive and stately brownstone edifices. The stores are built of iron, brown and yellow sandstone, and a few of marble, granite being little used, while wood is forbidden to be employed. The dwelling houses in the upper part of the city bring high prices, and the rents are so high as to be a severe burden to all other than the wealthy. Of late years the custom has grown to erect very lofty buildings, fireproof or semi-fireproof, for apartment houses and business and office purposes, the stairs being supplemented by passenger elevators which render access to the highest stories easy. Many of these structures are from 75 to 100 feet in height, and internally are roomy and elegant. Among the great apartment houses may be named the Spanish Flats, Dakota, Knickerbocker, Florence, and Central Park edifices. In the poorer districts equally lofty tenement houses arise in which the poor find contracted, incon-

Fig. 1948.—THE COURT-HOUSE.

venient, unclean, and insanitary quarters. In a tenement house recently constructed, however, by a public-spirited citizen, much more desirable and well-adapted homes have been provided for the poorer classes, and this step may lead to an abolition of the New York tenement-house abomination. The public buildings are numerous, large, and substantial, though with no particular claim to architectural merit. The Custom House, a granite edifice in the Grecian style, built at a cost of \$1,800,000, is one of the finest structures in the city. The U. S. Sub-treasury (formerly the Custom House) was erected at a cost of \$1,175,000. These are on Wall Street, which, in addition, contains many fine banking houses. The Stock Exchange is one of the finest edifices on Broad Street. The City Hall, long the chief public edifice of the city, stands in the center of an open square of about 10 acres called the Park, and is highly regarded for its architectural beauty. On the same square, facing on Chambers Street, stands the County Court-House, constructed of white marble, with

Corinthian columns (Fig. 1948). On the S. extremity of the Park stands the U. S. Post-Office and Court building, a granite structure which cost over \$6,000,000. Other buildings which call for mention are the Masonic Temple, Academy of Design, Cooper Union, Madison Square Garden Hall, the World, Tribune, and Herald buildings, University of the City of New York, Temple Emanuel, Trinity Church, and Roman Catholic Cathedral. The new buildings of Columbia University, now in part erected, on the plot of ground between 116th and 120th Streets, Amsterdam Avenue and the Boulevard, add to the attractions of that handsome section of the city. Of these may be mentioned the library building, on Morningside Heights, which has been erected at a cost of \$1,000,000 and is adapted for 1,000,000 volumes. The other 2 large library buildings are the Astor and Lenox libraries. These have been consolidated with the library provided for by the will of Samuel J. Tilden—setting aside a fund now amounting to \$2,500,000—into a great New York Public Library, for which the city has donated the site of the distributing reservoir on 5th Avenue, between 40th and 42d Streets, and has erected there a building at a cost of \$1,750,000. Of other interesting edifices employed for the benefit of recreation of the public may be named the Metropolitan Museum in Central Park, which contains a great wealth of objects of art, and the Museum of Natural History, on an annex to the park. New York is rich in hotels and theaters, the former including St. Regis, Plaza, Manhattan, Waldorf-Astoria, Holland, Belmont, Knickerbocker, Hoffman, Astor, Imperial, Savoy and many others; the latter including the Grand Opera House, Academy of Music, Broadway, Fifth Avenue, Madison Square, Metropolitan, &c. Noted clubs are the Manhattan, St. Nicholas, Knickerbocker, Union League, Lotus, Century, &c. The principal railroad buildings are the Grand Central Depot at 42d

Fig. 1949.—ST. PATRICK'S CATHEDRAL.

Street, the Pennsylvania at 7th Ave. and 32d St. These are among the finest and costliest railroad stations in the world. The Pennsylvania Railroad connects with tunnels under the Hudson and East Rivers, and runs through to Long Island City. Of the institutional edifices of the city may be named the several hospitals, the Almshouse, Female Lunatic Asylum, and Penitentiary, on Blackwell's Island, in East river; the Men's Lunatic Asylum, Inebriate Asylum, Soldiers' Retreat, &c., on Ward's Island; the Idiot Asylum, Infant Hospital, House of Refuge, Nursery, &c., on Randall's Island; the New York Hospital, on 15th Street; the Bloomingdale Insane Asylum, on 117th Street, and a series of private benevolent institutions far too numerous to mention. The churches of the city number over 400, the principal denominations being the Episcopal, Methodist, Presbyterian, Roman Catholic, Baptist, and Jewish. The libraries, in addition to those named, include the Mercantile, Apprentices', Historical Society, &c. Prominent among the musical associations are the Liederkreis, Arion, and Philharmonic.—*Parks.* Central Park, begun in 1857, and with an area of 843 acres, has long been the principal park of New York. It extends from 59th to 110th Street, and is bounded by 5th and 8th Avenues, being 2½ miles long by ½ mile wide. Its upper extremity contains the reservoirs for supplying the city with water. This park has been converted into a beautiful landscape garden, containing walks and drives, artificial lakelets, bridges, statues, fountains, and various architectural structures, including the museums mentioned. Near the Metropolitan Museum, stands the Egyptian obelisk brought from Alexandria in 1880. Riverside Park is an irregular strip of land between Riverside Avenue and the Hudson, though the Hudson River R. R. passes between it and the river. It averages about 500 feet wide and is nearly 3 miles long, extending from 72d to 130th Street. Near its northern end is the tomb of Ger-

eral Grant, the most stately and beautiful mausoleum in this country. The park affords picturesque views of the river and the opposite Weehawken hills. The acquirement of great park expanses by Philadelphia and other cities has stimulated New York to active movements in this direction, and in the mainland district north of the Harlem six parks have been laid out, some of them of large area. The most extensive is Pelham Bay Park, on Long Island Sound, 12 m. north of the Grand Central Station. It contains about 1,700 acres, including Hunter's Island, and, with its coast indentations and open water front, has a shore line of 9 miles. Van Cortlandt Park, near the Hudson and the upper limit of the city, has 1,069 acres. Bronx Park, 653 acres in extent, is traversed by the Bronx river. Smaller parks are Closter, 135 acres; Claremont, 38 acres, and St. Mary's, 25 acres. Parkways or boulevards

Fig. 1950.—THE BELVIDERE (CENTRAL PARK).

connect these parks, and in Bronx Park have been laid out a Botanical Garden of 250 acres in extent, and a Zoological Garden, to which 261 acres have been assigned.—*Croton Aqueduct.* New York, which in former times was insufficiently supplied with water, is now abundantly provided through the aid of the Croton Aqueduct, a work worthy of being ranked with the noblest of those of ancient Rome. The original aqueduct was completed in 1845, taking its water from a reservoir, 41 miles away, formed by a great dam in the Croton river. The aqueduct, of elliptic form, measures 8½ feet vertically and 7½ horizontally, and discharges 75,000,000 gallons every 24 hours. It crosses the Harlem river over the famous High Bridge, a granite structure 1,450 feet long and 110 feet high. Apart from Croton Lake there are several other reservoirs, artificial and

Fig. 1951.—THE TOMBS.

natural, with a total capacity of 9,500,000,000 gallons, or more than 3 months' supply. The receiving reservoir in Central Park has a capacity of 1,030,000,000. A new aqueduct was begun in 1883 and completed in 1890. This is constructed mainly underground, and has a working capacity of 250,000,000 gallons every 24 hours. (See *AQUEDUCT*.) A new dam is contemplated on the Croton which will give a reservoir capacity of 16,000,000,000 gallons.—*Education.* New York has an excellent public school system, embracing several hundred grammar and primary schools, and various institutions for higher education. These include a Normal College for girls, the College of the City of New York for boys, and numerous scholastic institutions under private control, of which the most important are Columbia University and the University of the City of New York.—*Manuf.* New York has large manufac-

turing interests, its industrial establishments in 1890 numbering 25,403, covering about 300 branches of industry. These had a capital of \$126,118,273, and produced goods valued at \$777,222,721. The leading branch of manufacture was clothing, of which the production averaged \$50,000,000; printing and publishing, \$35,000,000; malt liquors, \$28,000,000; electric applications, \$22,000,000; foundry products, \$15,000,000; tobacco, \$16,000,000, &c. This city is the center of the book publishing and general printing trade of the U. S., and of the issue of newspapers and other periodicals. Ship building is conducted on a large scale.—*Govt.* The city government is under a mayor, elected for 2 years, and a board of aldermen, chosen annually. The various heads of departments are appointed by the mayor, with approval of the board of aldermen. The police force and the fire department are large and well conducted. In the lighting of the city gas is generally used, though the electric light is rapidly growing in use. The street-cleaning department is remarkably well managed, though it was formerly greatly neglected. An important duty of the city government was, until 1890, the receiving and disposal of immigrants, of whom the great majority of those coming to the U. S. landed in this city. The U. S. government took charge of them in 1890, and in 1892 removed the immigrant headquarters from the Battery to Ellis Island in the bay. The greatest number landed was in 1882, when the total was 476,086.—*Fin.* The net funded debt of New York on Jan. 1, 1903, was \$596,204,494, it having very greatly increased during a decade. The total value of real and personal property was \$7,158,190,400, being an enormous increase since the date of consolidation. The city has 56 National banks, capital \$120,000,000; 46 State banks, capital, \$22,000,000, and 52 Savings banks with \$930,000,000 deposits. In addition there are about 100 fire-insurance companies, 40 life-insurance companies, and a considerable number of trust, safe-deposit, and other financial institutions.—*Hist.* Manhattan Island was discovered by Henry Hudson in 1609, and a permanent settlement made on it by the Dutch in 1623. It was purchased from the Indians for \$24 worth of trinkets in 1626. In 1636 there were 120 houses and 1,000 inhabitants. In 1664 the English took possession, changing the name from New Amsterdam to New York. In 1700 the population amounted to about 5,000. During the Revolutionary War the city was held by the English, being taken in 1776 and evacuated in 1783. At that time the population was less than that of either Philadelphia or Boston. In 1790 the city reached the lower end of the Park and had a population of 29,906. There were

Fig. 1952.—NEW YORK IN 1664.

severe attacks of yellow fever in 1789 and 1822, and of cholera in 1832, 1834, 1849, and 1854. A disastrous fire swept the 1st ward in 1835, destroying property valued at \$18,000,000. The first street railroad was built in 1852, and an international exhibition held in 1853. The street railway system has been extended to cover every part of the city, with underground electric traction, and there are several lines of elevated railway, on which the electric-motor system is being applied. For the purpose of rapid transit an immense subway, or tunnel, to contain four tracks, is being constructed. This will extend from the City Hall to the upper end of Manhattan Island and for some distance into the Bronx district, and will be connected by a tunnel under East river with Brooklyn. Work was begun on it in March, 1900. Pop. (1900) 3,437,202.

New York, in *Tennessee*, a village of Montgomery co., about 55 m. W. by N. of Nashville.

New York Mills, in *New York*, a post-village of Oneida co.

New York University. (*Educ.*) The present legal title of the institution which was incorporated April 18, 1831, by the name of the University of the City of New York, and opened in 1832. Until 1883 the government of the corporation was by a council of thirty-two members elected by the subscribers to the endowment, together with five officials of the city. By a change of the charter in 1883 the council was made self-perpetuating, one-fourth of the members going out each year unless re-elected. The city officials were dropped, and also a clause providing that no religious denomination shall have a majority in the council. The faculty of arts and sciences dates from 1832; until 1886 its instruction was to undergraduates only. This faculty has twenty professors and more than 400 students. It has included many names eminent in literary and scientific efforts, among whom were S. F. B. Morse, Loomis, Tayler Lewis, the Drapers, father and son. The faculty of medicine, founded in 1841, has its buildings on Twenty-sixth Street, opposite the Bellevue Hospital. This faculty has over 20 professors, and more than 30 lecturers and assistants. There are about 550 students. In 1858 was founded the faculty of law, which comprises 4 professors and 7 lecturers. Graduate law courses were opened in 1891, leading to the degree of LL.M. There are in the law department about 300 students. In 1896 was founded the Graduate Seminary, which receives candidates for the degrees of master of

arts or sciences, and doctor of philosophy. A school of pedagogy was permanently established in 1880, having been begun provisionally in 1887. It is the first university school of pedagogy in the U. S. One of the first collegiate buildings in America was erected on Washington Square, E., in 1832-35. This was replaced in 1894-95 by a larger structure, partly as a source of income, partly for the use of the school of law, school of pedagogy, and the graduate department. In 1892 a tract of 20 acres, a superb site, at 200th Street, on the Harlem river, was purchased, on which new buildings have been erected for the undergraduate department. The value of the property of the university approaches \$2,000,000 in value. Its income in 1896, exclusive of benefactors, was \$140,000.

New Zealand. See *ZEALAND, NEW.*

New Zealand Flax, *n.* See *PHORMIUM.*

Next, *a.* (super. of *nigh*.) [*A. S. next, or nexsta, from nēh, neah, nigh.*] Nearest in place; that has no object intervening between it and some other. Immediately preceding or following in order. Nearest in time; as, the next day. Nearest in degree, quality, rank, right, or relation; as, next in rank, next in kindred.

—*adv.* At the time or turn nearest or immediately succeeding.

Nex'um, *n.* [*Lat. nexu, bound.*] A solemn contract by which the Roman law gave a creditor the power to enslave, sell, or even kill a defaulting debtor. Several creditors of one debtor could cut his body to pieces and share it in proportion to their claims.

Ney, MICHEL, Duke of Elchingen and Prince de la Moskva, peer and marshal of France, and one of her greatest military heroes, born at Saarlouis, in 1769. His early years were devoted to the study of the law, but disliking the confinement, he entered the army as a private hussar in 1787. His intrepid courage rendered him distinguished in the first years of the Revolutionary War, when serving with the army of the Rhine; and in 1796 he rose to the rank of brigadier-general. On his marriage with Mlle. Anguî, the friend of Hortense de Beauharnais, Napoleon presented him with a magnificent Egyptian sabre, and named him his envoy and minister plenipotentiary to the Helvetic republic; but in 1803 he was recalled to take command of the army intended to make a descent upon England. In the following year, when Napoleon received the title of emperor, he resolved on restoring titles and decorations. N. was then created a marshal, and also received other distinctions, while he was with one accord denominated by the army "the bravest of the brave." After a succession of victories, during which N. never relaxed in his exertions, he obtained the additional title of *Prince de la Moskva*; and in June, 1814, he was invested with the dignity of a peer of France. He retired to his seat in the country, from which he was recalled in March, 1815, by information that Napoleon had quitted Elba. Hitherto, one motive alone, the love of country, had impelled his every action; personal or family interest had never appeared throughout his conduct; he would have considered even a bare attempt at deception degrading. He thought the return of Napoleon would prove injurious to France, and maintained that the mischief ought to be prevented. Therefore, on taking leave of Louis XVIII., he made many protestations of his zeal and fidelity to the king, and expressed his determination to stay the progress of the invader. Arriving at Besaçon, N. found the whole country hastening to meet the returning emperor at Lyons; the dukes d'Artois and d'Angoulême acknowledged the fruitlessness of resistance. The troops which he commanded shared the delirium; and N. himself yielded his opinion, and went over with his army to his former friend and master. He again fought under his banner at the battle of Waterloo, where he had five horses killed under him, and his cloak perforated with bullets. After the conclusion of that eventful day, and the second abdication of Napoleon, N. was advised to quit France, for which money and every facility of escape were offered him. He refused them all, and retired to the residence of a near relative; but he was soon arrested, and brought to trial; and his colleagues and companions in arms having declared themselves incompetent to form a court-martial whereby to judge him, the affair was carried to the House of Peers, by whom he was condemned. Every avenue to the royal presence was purposely closed against his unhappy wife, who anxiously sought his pardon; and N. suffered with firmness, declaring with his last breath that he never had acted treacherously to his country. He was shot Dec. 7, 1815, in the garden of the Luxembourg, Paris.

Neyva, or **Neiva,** a town of the Island of Hayti, West Indies, about 70 m. E. of Port au Prince.

Nez Perce, in *Idaho*, a N. central co.; *area*, about 1,610 sq. m. *Rivers.* Clearwater river, and Lewis Fork of Columbia river, besides numerous smaller streams. *Surface*, much diversified; *soil*, in some parts fertile. *Min.* Gold in the eastern part. *Cap.* Lewiston. *Pop.* (1890) 2,847.

Nez Perce Indians. See *SECTION II.*

N'Gami Lake (*nya'me*), a lake in Africa, discovered by Dr. Livingstone, in 1849; Lat. between 20° and 21° S., Lon. 22° 10' and 23° 30' E. *Ext.* about 60 m. long, with an average breadth of about 10 m.

N-gan-Hoei (*Hwi*), or **Ganhwa**, a province in the E. of China; Lat. between 29° and 34° N., Lon. 113° and 119° E.; *area*, 48,461 sq. m. The surface is level and fertile. The principal river is the Yang-tse-Kiang. *Prod.* Tea, rice, grain, and silk. It is rich in minerals. *Pop.* Ngan-King-Foo. *Pop.* (1897) est. from 40,000,000 to 50,000,000.

Niagara, a river of N. America, being that portion of the great river St. Lawrence extending between lakes Erie and Ontario, the level of the former being 334 feet above that of the latter. The N. issues from the N.E. extremity of Lake Erie, at Black Rock, near Buffalo, where it is $\frac{3}{4}$ m. wide, and runs northward about 35 m., embracing in its course numerous islands, and running over a high ledge of rocks, forms the Great Falls, the most stupendous cataract in the world. On flowing out of the upper lake, the river is almost on a level with its banks; so that any considerable rise of its level would make it lay under water the adjacent flat country of Upper Canada on the W., and of the State of New York on the E. For 3 m. from Lake Erie it has a rapid current; but it then becomes smooth and placid, and continues so till within a mile of the Falls. About 3 m. from Buffalo the river widens, forming several islands, one of which, called *Grand Island*, 12 m. in length, comprises about 17,000 acres. About 2 m. below Navy Island, on the left or Canadian bank, the river receives the Chippewa, which is connected with the Welland Canal, the artificial channel of communication between the upper and lower lake. The shores on either side are but thinly settled. The river, before reaching the Falls, is propelled with great rapidity, being a mile

Fig. 1953. — NIAGARA FALLS.

broad, abt. 25 feet deep, and having a descent of 50 ft. in half a mile. An island at the very verge of the cataract divides it into two sheets of water: one of these, called the *Horse-shoe Fall*, is 600 yards wide, and 158 ft. in perpendicular depth; the other, called the *American Falls*, being about 200 yards in width, and 164 feet in height. The breadth of the island is about 500 yards. This great sheet of water is precipitated over a ledge of hard limestone in horizontal strata, below which is a somewhat greater thickness of soft shale, which decays and crumbles away more rapidly than the former stratum, so that the calcareous rock forms an overhanging mass, projecting 40 feet or more above the hollow space below. The depth of the water is much greater on the Canadian than on the American side; and hence, while the scarcely hidden rocks below the American Fall cause the flood to be broken into foam, the deep-green hue of the billows beneath the Horse-shoe Fall is but slightly changed by the crests rising above them. The finest view of the Fall is, perhaps, from the table-rock on the Canadian shore, and from the banks above it. Another good view is from a boat crossing the river 200 or 300 yards below the Falls, both of which are thus seen to the greatest advantage. The rapids, however, are best seen from Goat Island, to which a very ingeniously constructed and strong bridge has been thrown on the American side, over rapids and great blocks of rock. On the N. side of the island, the rocks, projecting into the river 200 or 300 feet immediately over the Falls, are accessible by a second wooden bridge, below which the water runs with fearful velocity. From the rocks the view over the precipice and great fall is terrific, absolutely appalling, in fact, although the prodigious volume of the tumbling waters is not so apparent at this spot as from the table-rock and the boat. The banks rise from the ravine perpendicularly above the river for upwards of 180 feet, and hence, artificial means are necessary for effecting a descent to the water's edge; spiral staircases have been constructed, both on the Canadian and the American sides; besides which a third was constructed, in 1829, at the lower end of Goat's Island, for the purpose of descending to a ledge actually underneath the Fall. By these means the spectator is enabled to view the falling waters in almost every possible direction. "The overwhelming sensation," says a traveller, "with which the spectator can hardly fail to be affected, are produced by the immense flood, precipitating at least 100,000,000 tons per minute, as well as by the stupendous mass and overpowering force of the roaring and falling waters. Every surrounding object, indeed, is viewed with indifference, while the mind is wholly absorbed in the contemplation of a spectacle so sublime, surpassing in majesty and grandeur and power all the works of Nature that have ever arrested the attention, or presented themselves to the imagination." These stupendous Falls have attracted, and continue to attract, large numbers of visitors, to accommodate whom numerous hotels have been built on both sides of the river. Many private villas have also

been erected on the Canadian side. After the river has passed over the Falls, its character is immediately and completely changed. The waters, which had expanded at the Falls to an entire width of 1,300 yards, including Goat Island, are again contracted after their union into a stream not more than 160 yards broad; and the river then runs furiously along a deep wall-sided valley, or huge trench, which has been cut by the continued action of the stream during the lapse of ages. The cliffs on both sides are in most places perpendicular, and the ravine is only perceived on approaching the edge of the precipice. By the continued destruction of the rocks, owing to the eddies and spray rushing against the soft shale strata, the Falls have, within the last 50 years, receded upwards of 150 ft., or, in other words, the ravine has been prolonged to that extent. Through this deep chasm the Niagara flows with a constantly decreasing velocity for about 7 miles; and then the table-land, which is almost on a level with Lake Erie, suddenly sinks down at Queensdown, and the river emerges into a plain, continuing for 7 m. to Lake Ontario. There seems to be no reasonable ground for doubting that the Falls were once at Queenstown, or 7 m. below their present position; and that, from the force of the water undermining and wearing away the rock, they have receded from Queenstown to where we now find them. This recession is still going on, and a large projection on the Canadian bank, known as the Table Rock, had partly fallen off in 1863; consequently they seem destined, in process of time, to reach Lake Erie, which, being only about 70 feet in depth, would thus be completely drained. In 1885 the state of N. Y. purchased, at a cost of nearly \$1,500,000, some lands near the falls, including Goat Island, Prospect Park, the American falls, and about half the Horse-shoe falls, for a public park. On the Canadian side a somewhat larger area (154 acres) was laid out in 1888 as the Queen Victoria Niagara Falls Park. A tunnel has been constructed from the river above the Falls on the American side, and the great water-power of the stream utilized in generating electric power, it constituting the greatest electric power station in the world; for full description of this, see SECTION II.

Niagara, in New York, a W. co., bordering on Lake Ontario on the N. and Canada on the W.; area, about 490 sq. m. Rivers, Niagara and Tonawanda. Tuscarora and Wilkins' creeks. Surface, mostly level or undulating; soil, fertile. Min. Gypsum in extensive deposits. Cap. Lockport. Pop. (1890) 62,491.

Niagara Falls, in New York, a city of Niagara co., on Niagara river at its falls, 22 m. N.N.W. of Buffalo; a famous pleasure resort, and now an important manufacturing city. Pop. (1897) 13,200.

Nian'gua, in Missouri, a river rising in Webster co., and flowing N. into the Osage from Camden co.

Nibble, v. a. To bite by little at a time; to eat slowly or in small bits.—To bite, as a fish does the bait; just to catch by biting.

—v. n. To bite at slightly or gently, as fishes nibble at the bait.—To carp at; to find fault; to censure little faults.

—n. A little bite, or seizing.

Nibbler, n. One who bites a little at a time; a carper.

Nibblingly, adv. In a nibbling manner.

Nibelungenlied (nē-bēl-ong'ēn-lēd), n. This German epic, the name of which signifies "Song of the Nibelungs," was composed by some anonymous poet near the close of the 12th century. It has been claimed that the poem, in the form in which it has come down to us, was not written by one person, but is a conglomeration of old hero-songs. The acutest critics, however, agree that the work has a unity which could not be attained by a mere compiler, but must owe its existence to the skill of a single mind. The Nibelungs, in German legend, were a race of northern dwarfs, so styled from their king, Nibelung. Later the name was applied to the followers of Siegfried, the principal hero of the first part of the *Lied*, who, with his followers, conquered from the Nibelungs in Norway a "hoard" or treasure collected by them. The poem is divided into cantos, called adventures, the number of which varies in the different manuscripts. Two great parts can be distinguished in the poem. Of the first part the principal hero is Siegfried, king of Niderland, the region about Xanten on the lower Rhine. Siegfried assists Gunther, king of the Burgundians, in obtaining the hand of Brunhilde, the powerful queen of Iceland, and is rewarded by getting for a wife Kriemhilde, the sister of Gunther. The envy and jealousy of Brunhilde cause a quarrel between her and Kriemhilde, as a result of which Siegfried is murdered by Hagen, his deadly enemy, and the faithful vassal of Gunther. The scene of this first part is laid on the Rhine, with Worms as the center. The second part begins 13 years after, when Kriemhilde, in order to get revenge for the murder of her husband, marries Attila (Etzel, in the poem), king of the Huns. She has, however, to wait for her revenge 13 years more, when she induces Hagen and Gunther and his two brothers to visit Attila's court on the lower Danube. They march thither, accompanied by 11,000 knights and men-at-arms. Here, after a long and dreadful struggle, all the Burgundians are killed, and also Kriemhilde. The scene of the chief events of the second part is on the lower Danube.

Beyond question, the subject-matter of the poem is based upon German hero-legends which originated in the times of the migration of the tribes. The legend of Siegfried, as well as that of the Burgundians, originated among the Franconians, and emigrated thence to other German tribes and Norway. In the old Norse version of the Siegfried legend in the *Eddas*, Siegfried and Brunhilde seem to belong to the family of Ger-

maudic gods and demigods. No trace of such divine origin has, however, been found in Germanic mythology. That the *Nibelungenlied* was once a very popular epic is proved by the number of manuscripts still extant. Yet for several centuries it was entirely forgotten, until Bodmer, in 1757, called attention to the epic by editing parts of it. His efforts did not arouse much interest, although the poem was studied and interpreted in several universities. It was resuscitated by the rise of national feeling during the wars of Napoleon I. In 1815 Zenne published an edition of the epic for young men to carry with them to the battle-fields. Since then the *Lied* has constantly increased in popularity, and the greatest German philologists of the nineteenth century have devoted themselves to its elucidation. It is now universally considered the greatest national epic of the Germans, who regard it as one of the most precious gems of their literature. It has little of the grace of courtly poetry. Its characters are without subtlety or refinement. We are throughout in the presence of vast elemental forces. These forces, however, are rendered with extraordinary vividness of imagination, and with a profound feeling for what is sublime and awful in human destiny. No competent critic now disputes the fact that the *Nibelungenlied* takes rank next after the Homeric poems among the great epics of the world. There are three English versions of the poem: Lottsom (1850), Foster-Barham (1887), and Birch (3d ed., 1887). Wagner, in his *Ring of the Nibelungs*, has taken little but names from the old epic. The source of his material is the old Norse version of the legend in the *Volsunga Saga* and the *Edda*.

Nica'a. See NICE.

Nicaise, (St.), a martyr of the 3d century, said to be the first bishop of Rome. Another martyr and saint of the name was bishop of Rheims, in the 5th century.

Nican'dra, n. (Bot.) A genus of plants, order Solanaceae. The apple of Peru, *N. physaloides*, is a large, coarse herb, 1-5 feet high, very branching; leaves large, oblong; corolla slightly lobed, pale-blue, white, and with 5 blue spots in the centre. It is a native of Peru, and is cultivated in gardens.

Nicandro, (St.), (nē-kan'dro,) a town of S. Italy, prov. of Capitanata, 24 m. from Manfredonia; pop. 8,000.

Nicenor, commander of the Syrian army for Antiochus Epiphanes, slain by Judas Maccabaeus at Bethron, B. C. 161.

Nicaragua, (nik-a-rah'gwa,) a republic of Central America, having Honduras and San Salvador on the N., the Caribbean Sea on the E., Costa Rica and the Pacific on the S., and the latter again on the W. It lies between Lat. 10° and 15° N., and Lon. 82° 10' and 87° 40' W. Area, abt. 57,780 sq. m. The surface of N. is much diversified. It is traversed by two mountain ranges, the western of which follows the direction of the coast-line, varying from 10 to 20 m. from the Pacific. The eastern range (a part of the great range of the Cordilleras) runs nearly parallel to it, sending off several spurs towards the Mosquito Territory, q. v., and forming the immense basin which contains Nicaragua and Managua lakes. These mountains often attain an elevation of 11,000 ft. The more important rivers are the Rio Coco, or Segovia, Escondido, or Bluefields, and San Juan. The soil is very fertile, producing a superior quality of sugar-cane, cacao, cotton, indigo, tobacco, maize, and rice, with all the fruits and edibles of the tropics in great abundance. Expts. Sarsaparilla, aloes, ipecacuanha, ginger, copal, gum-arabic, caoutchouc, &c. Min. Gold, silver, copper, iron, and lead are found in the N. part. N. is divided into 4 departments—Rivas, Granada, Segovia, and Matagalpa. Cap. Managua. N. was discovered by Gil Gonzales de Avila in 1521, and conquered by Pedro Arias de Avila, the governor of Panama, in 1522. During the great year of revolution in Central America—1821—it threw off allegiance to Spain, and, after a severe and desperate struggle, gained its independence, and became the second state in the Federal Republic of Central America. On the dissolution of that union, in 1839, N. became an independent republic; but, like most of the Central and South American republics, it has been the scene of much discord and confusion. The dispute with England, concerning the Mosquito Territory (1847-48), was settled in favor of N., but subsequently, in 1855, the leaders of the opposing parties of "Liberals" and "Conservatives" plunged the country into all the horrors of civil war, which only ended in the total defeat of the former. In 1897 it joined with its neighboring republics to form the Greater Republic of Central America.

NICARAGUA, an extensive lake of Central America, in the above republic. It is about 110 m. in length, by about 40 m. in width, and covers an area of nearly 4,500 sq. m. Its surface is about 110 feet above sea-level, and it is surrounded on all sides by mountains. It receives numerous streams, and has its outlet in the Caribbean Sea through Rio San Juan. It contains many islands, and the scenery is said to be of the most beautiful description, while the waters abound in fish of fine quality. The island Zapatero, though uninhabited, is noted as containing extensive ancient ruins and monolithic idols. The other important islands are Ometepe, Selentanami, and the Corales, a cluster of volcanic islets (several hundred in number) lying around the base of the volcano of Mombacho.

Nicaragua, a town of Nicaragua, on a lake of same name. Pop. (1897) 9,600.

Nicaragua, San Juan de, a town of Central America. See SAN JUAN DE NICARAGUA.

Nicaragua-wood, n. (Bot.) The wood of the *Cesalpinia cecumae*, a tree growing in Nicaragua; it is

a species of Brazil-wood, and is used with a solution of tin as a mordant, to dye a bright but fugitive red.

Nicaria, or Nikaria, (anc. *Icarus* or *Icaria*;) (*nek'-ree-ä*;) an island of the Grecian Archipelago, belonging to Turkey, 12 m. W. of Samos; lat. 37° 55' N., lon. 26° 10' E.; area, 50 sq. m.; pop. 1,000.

Nicas'tro, a town of S. Italy, prov. of Calabria Ulteriore, 1,124 m. S. of Cosenza; pop. 10,000.

Nicausis, (or, according to the Arabians, BALKIS,) queen of Sheba, who visited Solomon upon the report of his wisdom. Her country was probably that part of Arabia Felix which was inhabited by the Sabæans; but Josephus asserts that she reigned over Egypt and Ethiopia.

Nice, or Nicæ'a. (Anc. *Geog.*) A city of Bithynia, in Asia Minor, on the E. shore of the Lake Ascenia. This city, called Ancore, or Heliore, is said to have been colonized by Bottiæans, and destroyed by the Mysians. Antigonius rebuilt it B. C. 316, and named it *Antigonæa*; but Lysimachus, having conquered this part of Asia, changed its name to Nicæa, in honor of his wife Nicæa, daughter of Antipater. It became a city of great importance, and the kings of Bithynia often resided here. The celebrated Council of Nicæa, the first general council, was convened, A. D. 325, at Nicæa in Asia Minor by the emperor Constantine, in order to settle the differences that had arisen in respect to the doctrines of Arius. This council was attended by upwards of 250 bishops, of whom a great majority came from the East, besides presbyters, deacons, and others from all parts of the Christian world. The chief question was the Arian heresy; and the council decreed in the excommunication of Arius. (See ARIANS.) The 2d council of Nice, recognized œcumenic Council of the Roman Catholics, assembled under the authority of Pope Adrian I. by the desire of the Empress Irene, and which sat from Sept. 24 to Oct. 23. The bishops declared the veneration of images and the cross to be agreeable to Sacred Scripture and reason, and to the teachings of the Church.

Nice, (nicee.) [It. *Nizza*.] A city and seaport of France, dept. of Alpes Maritimes, on the Mediterranean: 95 m. S.W. of Genoa. It is beautifully situated at the foot of the Alps, which protect it from the N. and E. winds. The port is convenient for vessels of 300 tons only. The river Paglione divides the city into Old and New Town, the latter is handsomely built. The principal public buildings are the cathedral, governor's residence, the municipal casino, completed in 1884, at a cost of \$1,200,000, college, and public library. Also a fine arch in honor of Victor Amadeus III. *Manuf.* Silk, twist, soap, and perfumery. It has a fishery of ancovies. *Exp.* Oil, wine, oranges, and hemp. *Imp.* Corn, salt-fish, manufactured goods, and colonial produce. Owing to its genial climate, it is a resort for invalids during the winter months. — *N.* is supposed to have been colonized by Phœceans from Marseilles in the 5th century. With the neighboring territory, it was made a Roman province under Augustus, and after undergoing various changes, became a dependency of Genoa in 630. It was incorporated with the French republic in 1792, and formally ceded by the King of Sardinia in 1796, but was restored to the latter in 1814. It was annexed to France by treaty in 1860. In April, 1881, the Opera House was burned, and 61 persons perished in it.

Nice, a. [A. S. *niæsc*, *nisc*, soft, tender; Du. *nisch*.] Tender; dainty; sweet or very pleasant to the taste; delicate. — Gratifying; pleasant; agreeable; as, a *nice* ride. — Fine; minutely elegant; accurate; exact; precise; requiring scrupulous exactness; as, a *nice* point. — Perceiving the smallest difference; distinguishing accurately and minutely by perception; perceiving accurately the smallest faults, errors, or irregularities; distinguishing and judging with exactness; refined. — Over-scrupulous or exact; fastidious; squeamish. — Scrupulously and minutely cautious; showing great delicacy; of a delicate nature; easily injured or impaired, as reputation.

Nice'ly, adv. With delicate perception; accurately; exactly; precisely; with exact order or proportion; finely; with minute elegance.

Nic'ene Creed, n. (*Ecll. Hist.*) The confession of faith in which the consubstantiality of the Father and Son is asserted against the Arians. (See ARIANS.) This creed was commenced by the council of Nice, A. D. 325, and completed by the second general council of Constantinople, A. D. 381. The Nicene Creed was generally used by the Eastern churches in the administration of baptism; but was not inserted in their daily service till the 5th century. In the service of the Church of Rome it was inscribed A. D. 1014.

Nice'ness, n. The state or quality of being nice; delicacy of perception; the quality of perceiving small differences. — Extreme delicacy; excess of scrupulousness or exactness; accuracy; minute exactness; precision; nicety.

Nicephorus, (ni'-sefo'-rus.) the name of two saints — the first, a martyr of Antioch about 260; the second, a Greek historian and patriarch of Constantinople, B. abt. 750, d. 828.

Niceph'orus, CALLISTUS, a Greek historian, who, among other works, produced an *Ecclesiastical History*, in 23 books, the date of which commences with the year 610. This work was translated into French by Du Luc, and again into Latin by Lange. Flourished in the 14th century.

Niceph'orus I., Emperor of Constantinople, was at first chancellor of the empire, but usurped the throne, in 802, from the empress Irene, whom he banished to the isle of Mitylene. The beginning of his reign was marked by wisdom and clemency; but afterwards he committed such cruelties, that his subjects revolted, and

proclaimed Bardanes, surnamed the "Turk," emperor. Bardanes was defeated, however, and sent to a monastery, where he was deprived of his eyes. The Bulgarians having invaded the empire, and ravaged Thrace, Nicephorus marched against them; but was vanquished and slain, 811.

NICEPHORUS II., (Phocas), a nobleman of Constantinople, whose character was so popular, that he was raised to the imperial throne in 963. He married the widow of his predecessor, Romanus II., and drove the Saracens out of a great part of Asia. He was assassinated by John Zimisces and other conspirators, in 969.

NICEPHORUS III., was invested with the purple by the army which he commanded, in 1078. He was deprived of this dignity in 1081, by his general, Alexis Comnenus, who sent him to a convent, where he died shortly after.

Nicetas, (St.) abbot of Mount Olympus; d. 824.

Nice'ty, n. Niceness; the quality of being nice; delicacy of perception; excess of delicacy; fastidiousness; squeamishness; minute difference; minuteness of observation or discrimination; precision; accuracy; delicate management; exactness in treatment.

— *pl.* Dainties; delicacies in food.

Niche, (nich, n.) [Ger. *nische*; Fr. *niche*; Sp. *niche*;

It. *nicchia*.] (*Arch.*) A

recess in a wall for a statue, vase, or other erect ornament. Among the ancients they were sometimes square, but oftener semi-circular at the back, and terminated in a half-dome at the top; occasionally small pediments were formed over them, which were supported on consoles, or small columns or pilasters placed at the sides of the niches, but they were frequently left plain, or ornamented only with a few mouldings. In the Middle Ages architecture niches (often called *Tabernacles*) were extensively used, especially in ecclesiastical buildings, for statues (Fig. 1954.) The arches of the beads were either cinque-foiled, trefoiled, or plain, and when canopies were used they were generally made to project.

Niched, (nicht, a.) Put in a niche; having a niche.

Nicholas, (nik'-o-las,) one of the seven deacons mentioned in the Acts. He was a proselyte of Antioch; but afterwards founded a sect called by his name, which permitted concubinage and the offering of meats to idols. By some, however, this Nicholas is said to have been a person other than Nicholas the deacon.

Nicholas I., Pope, was elected in succession to Benedict III. in 858. He excommunicated Photius, patriarch of Constantinople, whose schism led to the separation of the Roman and Byzantine churches. D. at Rome, 867.

NICHOLAS II., was a native of Burgundy, who became archbishop of Florence, and succeeded Stephen IX. in 1058. He was opposed by a rival, who styled himself Benedict X.; but being disavowed by the council of Satri, the latter was obliged to forego his claim to the papal chair. This pope assembled a council at Rome, and caused a decree to be passed which was very important in the subsequent elections to the tiara. He was succeeded by Alexander II. D. 1061.

NICHOLAS III., was of a noble Italian family, and elected pope in succession to John XXI., in 1277. He obtained from the Emperor, Rudolph of Hapsburg, large grants of Italian territory; among the rest, the exarchate of Ravenna. He dispatched a number of missions to heathen countries, and deprived Charles d'Anjou, King of Naples, of the dignity of a senator of Rome. His successor was Martin IV. D. 1280.

NICHOLAS IV., was a native of Ascoli, and was elected to the papal chair upon the death of Honorius IV., in 1288. He excommunicated James of Aragon and his followers in the island of Sicily, and advanced the claims of Charles II. of Anjou to that kingdom. He likewise endeavored to excite a new crusade, but without success. This disappointment hastened his death, which took place in 1292.

NICHOLAS V., Cardinal-Bishop of Bologna, became Pope after Eugenius IV., in 1447. He restored peace to the Roman and Western churches, and caused the sovereigns and states of Italy to forget their feuds. He collected books and manuscripts, and ordered translations to be made of the Greek classics. The Vatican library was also founded by him, and he embellished Rome with numerous fine edifices. He was an enlightened and distinguished pope. D. 1455.

Nicholas, an emperor of Constantinople, deposed after a few days' reign by Alexis Ducas, 1204.

Nicholas I., EMPEROR OF ALL THE RUSSIAS, the third son

of Paul I., who was murdered by his officers in 1801, was B. in 1796. His early education was superintended by his mother, at whose desire he was especially instructed in modern languages, music, and the art of war, towards all of which he showed a great predisposition. On the general peace in 1814, the Grand-Duke Nicholas started on a foreign tour, visiting the courts of Berlin, Vienna, and St. James's. Shortly after his return to Russia, in 1816, he married Princess Charlotte, sister of Frederick William IV., King of Prussia, and from this period his time was divided between his domestic duties and the life of the camp, in which he took great delight. On Dec. 1, 1825, his eldest brother, the Emperor Alexander, d. at Taganrog. The Grand Duke Nicholas hastened to take the oath of fidelity to his elder brother Constantine, then governor of Poland, though he was well aware that the council of the empire was in possession of a sealed packet intrusted to them by the late emperor, which contained the announcement that his brother Constantine having voluntarily renounced all pretensions to the empire, the Grand-Duke Nicholas was to be his successor. After an interregnum of three weeks, on the 24th of Dec., *N.* was at last proclaimed emperor. *N.* had, however, to repress a formidable insurrection, comprising powerful members of the military and nobility. During that critical period, *N.* displayed a fearless and energetic character, which rapidly awed the insurrectionists, many of whom were shot down or subsequently executed, or banished to Siberia. Shortly after his coronation, he sent his troops against the Shah of Persia, whose army was defeated in several engagements by Marshal Paskiewitch. The Shah was compelled to sign the treaty of Turkmanchay, by which the provinces of Erivan and Nakhichevan were ceded to Russia, an additional indemnity of about three millions sterling being exacted from him. *N.* also joined with England and France in aiding the Greeks to achieve their independence, and the Russian fleet co-operated with those of the two first-named powers in annihilating the Turkish flotilla at Navarino. In 1828 war broke out between Russia and Turkey; upon which General Diebitsch captured the fortress of Silistria, routed the Turkish army at Shumla, crossed the Balkan, and appeared before Adrianople. In 1829 the treaty of Adrianople was concluded, which gave to Russia, besides large tracts of territory in Asia, the right to trade in all parts of Turkey and upon the Danube, and the free passage of the Dardanelles. In virtue of this concession, *N.* likewise became the protector of the Danubian principalities. In 1830 he displayed considerable hostility towards the revolution that had brought about a change of dynasty in France; and in the same year an insurrection burst forth in Poland, which was not repressed until after a terrible struggle of 10 months. The brave but unsuccessful Poles were treated with the utmost rigor; many were sent to Siberia or the army of the Caucasus; the universities were suppressed, the libraries and other great establishments were transferred to St. Petersburg; and finally, in 1832, the kingdom of Poland became extinct. In 1839 a formal declaration of war was made against the Circassians, with whom the Russians had long been engaged in a desultory warfare. This struggle was vigorously maintained by the emperor throughout his whole life, but it remained for his successor, Alexander, to thoroughly subdue the brave mountaineers. During the Hungarian insurrection in 1849, the troops of *N.* enabled Austria to triumph over her revolted subjects, and to complete the subjugation of Hungary. In 1853 he dispatched Prince Menschikoff to Constantinople, to exact from the Porte a treaty whereby Russia might be permitted to interfere in the internal affairs of Turkey, and secure to herself the prerogative of protecting the Greek subjects of the Ottoman empire. The result of Prince Menschikoff's mission is well known; Russia occupied the Danubian principalities as "a material guarantee;" the fleet of *N.* destroyed the Turkish vessels at Sinope; and France and England, after employing every effort at conciliation fruitlessly, declared war against the Czar, invaded the Crimea, where the Russian arms were subjected to defeat at the Alma, at Inkermann, and at Sebastopol; all the forts upon the southern side of which were captured and destroyed. This last event, however, was subsequent to the death of the Emperor, who succumbed to a mortal malady, whilst busily engaged in projecting renewed efforts against the allies. The emperor Nicholas was a man of prodigious industry; his energetic character enabled him to assume the position of defender of order and legitimacy throughout the continent of Europe. Order and legitimacy signified to him, however, a total repression of national liberty. With respect to his own country, he was professedly despotic. "Despotism," he observed, "is the very essence of my government." The great object of his public life was to realize the ambitious projects of Peter I. and Catharine II., — the possession by Russia of Constantinople, and of the territories of the Sultan. D. March 2, 1855.

Nicholas, (nik'-o-las,) in *California*, a town of Placer co. **Nicholas, (nik'-o-las,)** in *Kentucky*, a N.E. co.; area, abt. 300 sq. m. *Rivers.* Licking and South Licking rivers. *Surface,* diversified; *soil,* very fertile. *Cap.* Carlisle.

Nich'olas, in *W. Virginia*, a S. central co.; area, abt. 600 sq. m. *Rivers.* Kanawha, Gauley, and Meadow. *Surface,* hilly; *soil,* in some parts fertile, but mostly sterile. *Cap.* Summersville.

Nicholas, (St.) bishop of Myre, in Lycia, lived in the 3d century and was persecuted by Diocletian. He is the patron of youth, and also of Russia. His festival day is celebrated Dec. 6.

Fig. 1954.
FROM MAGDALEN COLLEGE,
OXFORD.
(End of 15th century.)

Nicholas, (St.) a town of Belgium, prov. of E. Flanders, 20 m. E.N.E. of Ghent. *Manuf.* Cotton, woollen, and silk fabrics, hosiery, hats, leather, and tobacco; besides sugar-refineries, distilleries, &c. It is one of the largest markets for flax in Europe. *Pop.* 23,388.

Nicholas, (St.) one of the Cape Verde Islands, between Santa Lucia and Santiago; Lat. 16° 35' N., Lon. 24° 15' W. *Ext.* 30 m. long, and 13 broad. *Pop.* 6,000.

Nicholasville, in Kentucky, a post-village, cap. of Jessamine co., abt. 12 m. S. of Lexington.

Nichols, (nik'olz), in New York, a post-village and township of Tioga county, about 8 miles south-west of Oswego.

Nicholson, in Pennsylvania, a post-township of Wyoming co.

Nicholsville, or NICHOLVILLE, in New York, a post-village of St. Lawrence co., abt. 31 m. E. by N. of Canton.

Nicholsville, in Ohio, a post-village of Clermont co., abt. 24 m. E. of Cincinnati.

Nicias, (nik'si-as), an Athenian general, who took a prominent part in the Peloponnesian war. He was a wealthy citizen, and a successful general, caution being his leading characteristic. On the death of Cleon, whom he had steadily opposed, he negotiated the treaty called the Peace of Nicias (B. C. 421), by which the Athenians and Spartans agreed to a truce of 50 years. In 415, the peace being almost a dead letter, Nicias was joined with Alcibiades and Lamachus in command of the expedition to Sicily, of which, however, he wholly disapproved. After temporary success the tide was turned by the arrival of Spartan auxiliary forces at Syracuse, to meet which Athenian reinforcements were sent under Demosthenes and Enymedon; but after more than two years' efforts, the Athenians had to raise the siege and retire. An eclipse of the moon took place at the time fixed for their secret departure, and Nicias, a superstitious man, deferred the retreat; the Athenians were completely overthrown, and Nicias with his colleague put to death, 413.

Nicias, a celebrated Grecian painter, who was contemporary with Apelles. His greatest picture was that which illustrated the passage in Homer's *Odyssey*, where Ulysses invokes the shades of the departed. Ptolemy I., king of Egypt, offered Nicias sixty talents (about \$75,000) for the picture; but the painter preferred to present it to his native city of Athens. One of his pictures was taken to Rome by Augustus, in whose temple it was afterwards fixed. He is likewise stated to have painted some of the statues of Praxiteles. Flourished about the 3d century B. C.

Nick, n. [Sw. *nick*; Du. *knik*, a uod; Ger. *nicken*] The exact point of time required by necessity or convenience; the critical time. — A notch cut in anything; a score for keeping an account. — A winning throw at dice. — *v. a.* To notch or make incisions in; to cut in nicks or notches. — To suit or fit into, as tallies cut in nicks. — To hit; to touch luckily; to perform a slight artifice used at the lucky time. — To defeat or cozen, as at dice; to disappoint by some trick or unexpected turn. — To notch or make an incision in, as a horse's tail, to make him carry it higher.

Nick, (Northern Myth.) [A. S. *hnæan*, to kill; Icel. *nikker*, a water-spirit, a devil.] An evil spirit of the waters; — hence *Old Nick*, a term for the Devil, in vulgar discourse.

Nickel, (nik'el), n. (Chem. and Metal.) A metal discovered by Cronstedt in 1751, with a singular analogy to cobalt, being always associated with it in nature. Its principal ore is kupfernickel, which is the diarsenide of the metal. It is also extracted from nickel speiss, which is an impure arseniosulphide of nickel, left after the manufacture of cobalt-blue from its ores. Nickel is extensively employed in alloys, of which German silver is the most important. The process for purifying it is kept a secret; but the following is generally supposed to be the method adopted at Birmingham. The speiss is first fused with chalk and fluor-spar, and the mass obtained reduced to powder, which is roasted for twelve hours to expel the arsenic. The residue is dissolved in hydrochloric acid, the solution diluted, and the iron peroxidized by the addition of bleaching-powder. The iron is then thrown down with milk of lime, and the precipitate well washed. The liquid, which contains all the cobalt and nickel, is treated with sulphuretted hydrogen, which throws down everything but these two metals, which are afterwards separated from it by precipitating the cobalt with the chloride of lime; and, lastly, the nickel with milk of lime. Pure nickel is a brilliant, silver-white, ductile metal, nearly as infusible as iron. It is magnetic up to 630° Fahr., and becomes oxidized by exposure to a current of air at a high temperature. It is easily attacked by nitric acid and aqua regia, and slowly by sulphuric and hydrochloric acids. *N.* forms useful alloys with copper and zinc, of which German silver and certain white compounds used for coinage are the most important. It is also of great utility, from its resistance to oxidation, as a plating material for steel instruments, and for coating chemical vessels and iron cooking-pots. A new and important use for nickel is the alloying of steel for armor-plating of vessels, the steel being greatly hardened by its employment. *Equiv.* 58.6; *Sp. gr.* 8.3 to 8.7; *Symbol* Ni.

Oxides of N. With oxygen nickel forms two oxides, — the protoxide (NiO) and sesquioxide (Ni₂O₃). The protoxide is obtained as an olive-green powder by igniting the carbonate in a covered crucible, and as a bulky green hydrate by precipitating its salts with potash. The protoxide forms numerous well-defined salts, mostly of an apple-green color. The sesquioxide is a black powder, procured by treating the hydrated protoxide with chloride of soda. It does not combine with acids, but

gives off a part of its oxygen when submitted to their action, and forms salts of the protoxide.

Salts of N. The principal are the sulphide, obtained as a black hydrate when salt of nickel is precipitated by sulphide of ammonium; the chloride, formed by dissolving the oxide in hydrochloric acid; — on evaporation, it yields green hydrated crystals, which, when submitted to a high temperature, sublime in crystalline, yellow scales; the sulphate is formed by dissolving the oxide in sulphuric acid. It crystallizes in green rhombic prisms, which, on exposure to light, are converted without loss of water into octohedra. It is sometimes used in medicine as a tonic. With potash it forms a double salt. The other salts of nickel are unimportant.

Nickeline, NICKEL BLOOM, NICKEL VITRIOL, n. (Min.) The kupfernickel of the German miners. It is an important ore of nickel, and is found principally in Saxony, associated with cobalt, silver, and copper ores.

Nick'er, n. One who nicks; particularly one who watches for an opportunity to pilfer, or to practise some knavish artifice.

Nick-nack, n. A bauble; a trifle; a small toy; — generally used in the plural. See KNICK-KNACK.

Nick-nack'ery, n. A trifle; a toy; a knick-knack.

Nick-name, n. [Fr. *nom-de-nique*, name of contempt.] A by-name; a name given in contempt, derision, or reproach; an opprobrious appellation.

— *v. a.* To give a name of reproach to; to call by an opprobrious appellation.

Nicobar Islands, a group in the Indian Ocean, between Lat. 3° and 10° N., Lon. 93° and 94° E., about midway between Sumatra and the Andaman Islands. There are 7 large and 12 small islands. The principal are Sumbelong and Carnicobar. The surface is generally hilly and the soil fertile, but they are deemed unhealthy for foreigners. *Prod.* Sugar, tobacco, coconuts, oranges, &c. *Pop.* unknown.

Nicodemus, (nik-o-de'mus), (Script.) A member of the Jewish Sanhedrim, at first a Pharisee, and afterwards a disciple of Jesus. He was early convinced that Christ came from God, but was not ready at once to rank himself among His followers. In John iii. 1-20, he first appears as a timid inquirer after the truth, learning the great doctrines of regeneration and atonement. In John vii. 45-52, we see him cautiously defending the Saviour before the Sanhedrim. At last, in the trying scene of the crucifixion, he avowed himself a believer, and came with Joseph of Arimathea to pay the last duties to the body of Christ, which they took down from the cross, embalmed, and laid in the sepulchre. (John xix. 39.)

Nicolai'eff, a town, and river-port of European Russia, gov't. of Kherson, at the confluence of the Ingul with the Bug, 20 m. above where the latter falls into the estuary of the Dnieper. It was founded in 1790, and intended as the naval depot for the Russian fleet in the Black Sea. Prominent among the public buildings are the cathedral, the admiralty, the town-hall, the marine barracks, and the naval hospital. It has extensive dock-yards for ship-building.

Nicola'itans, n. pl. (Ecc. Hist.) Heretical persons or teachers, mentioned in Rev. ii. 6-15. Whether they were the same as the Nicolaitans of the second century and later, is very doubtful. Some suppose them to be followers of Nicholas the deacon, but there is no good evidence that he ever became a heretic.

Nicolans, in California, a post-village in Sutter co., abt. 17 m. S. of Marysville.

Nicolet, PIERRE, (nik'ol), an eminent French divine and moralist, b. at Chartres, 1625. He became a member of the society of Port Royal, where he taught with great reputation, and assisted Arnauld in many of his works. In his latter years he espoused the cause of Bossuet against the Quietists, and was engaged in other controversies. His principal works are, *Moral Essays*, 23 vols.; *The Perpetuity of the Faith of the Catholic Church respecting the Eucharist*; and *A Treatise on the Unity of the Church*. D. 1695.

Nicolet, (ne'ko-la), a central co. of prov. of Quebec; area, abt. 487 sq. m. *Rivers.* St. Lawrence and Becancour rivers. *Cap.* Nicolet. *Pop.* 24,000.

NICOLET, a town of prov. of Quebec, cap. of the above co., abt. 84 m. N.N.E. of Montreal.

Nicollet (nik-o-lé), in Minnesota, a S. central co.; area, abt. 455 sq. m. *Rivers.* Minnesota river, and numerous less important streams, besides several lakes. *Surface*, nearly level; *soil*, very fertile. *Cap.* St. Peter. *Pop.* (1895) 14,299.

Nicollet, in Minnesota, a post-village and township of the above county, about 10 miles north of Mankato.

Nicollet, in Utah, a lake in Yuab co., abt. 125 m. S.W. of Salt Lake City. It covers an area of 200 sq. m. The Nicollet River flows into it, but there is no apparent outlet.

Nic'olo, properly NICOLAS ISOUARD, a musical composer, b. at Malta, 1777. At Naples he completed his study of composition, under the famous Guglielmi. When the French evacuated Italy, General Vaugeois took him to Paris as his private secretary. Here he formed himself on the compositions of Monsigny and Grétry, and produced the popular opera of *Cendrillon*, in 1810. In light dramatical compositions, he is distinguished for the ease and sweetness of his melodies, the fertility of his imagination, and the happy combination of the characteristics of the modern Italian school with those of the French. D. at Paris, 1818.

Nicomedes I., (nik-o-me'dees), king of Bithynia, succeeded his father Zipoetas, B. C. 278. In the following year he sought the assistance of the Gauls against his

brother Zibætas, who disputed the throne with him. His barbarian auxiliaries subsequently turned against him, and overran the whole of Asia Minor. D. about 250 B. C.

NICOMEDES II., succeeded Prusias II., 149 B. C. During his long reign, he remained the ally of the Romans, and assisted the latter against Aristonicus, king of Pergamus, 131 B. C. The last years of his reign were spent in contending against Mithridates VI., king of Pontus. D. 91 B. C.

NICOMEDES III., son and successor of the preceding, was deposed in the first year of his reign, by Mithridates VI., but was afterwards restored to it by the Romans. In 88 B. C. he engaged with the Romans in attacking Mithridates, whose general defeated him in Paphlagonia; whereupon he fled to Italy, where he remained till the conclusion of the war, B. C. 84. Dying without issue, he left his crown to the Romans, 74 B. C.

Nicomedia, (Anc. Geog.) The capital of ancient Bithynia, situated at the N.E. angle of the Gulf of Astacus, in the Propontis, now called the Bay of Ismid, was built about 264 A. D., by Nicomedes I., who made it the capital of his kingdom, and soon became one of the most magnificent and flourishing cities in the world. Constantine died at a royal villa in the immediate vicinity. Ilannibal committed suicide in a castle close by. It was the birthplace of the historian Arrian. The small town of Ismid, or Isnikmid, now occupies its site, and contains many relics of ancient *N.*

Nicopolis, a city of ancient Greece, in Epirus, on the Ambracian Gulf, built by Augustus, 31 B. C., to commemorate his victory over Antony at Actium. *N.* became subsequently the capital of Epirus, but in the Middle Ages it sank into obscurity and disappeared. It was probably the place where St. Paul passed the last winter of his life. — There were 5 or 6 other towns of this name in antiquity.

Nicopolis, or Nicopoli, a fortified town of European Turkey, in Bulgaria, on the Danube, 56 m. W. of Roosthook; Lat. 43° 45' N., Lon. 24° 8' E. It was founded by Trajan, and here the Hungarians, under Sigismund, were, in 1396, defeated by the Turks. *Pop.* 10,000.

Nico'sia, a town of Italy, in Sicily, prov. of Catania, 14 m. N.E. of Castro-Giovanni; *pop.* 13,630.

Nico'sia, the cap. of the Island of Cyprus. See LEFKOSIA.

Nicot, JEAN, (ni'ko), a French courtier and writer, b. at Nîmes, 1530, who was sent by Francis II. as ambassador to Portugal, whence he brought the plant named tobacco, which, in France, has been called *Nicotiana*, out of compliment to the importer. D. at Paris, 1600.

Nicotiana, (ni-ko-she-a'na), n. [After John Nicot, of Languedoc, who seems to have introduced it into Europe.] (*Bot.*) A genus of plants, order *Solanaceæ*. They are

coarse, narcotic, annual herbs, with simple leaves, and terminal flowers; corolla white, tinged with green or purple. The species and varieties supply the different kinds of tobacco now in general use in some form or other all over the globe. Most of the tobacco of commerce, as that of Virginia, is yielded by the species *N. tabacum*, a native of the warm parts of America, but now cultivated in various countries. The Shiraz, or Persian tobacco, is obtained from *N. Persica*; the Syrian and Turkish, from *N. rustica*; Cuba and Havana, from both *N. tabacum* and *N. repanda*; and Orinoco, from *N. macrophylla*. — See TOBACCO.

Nicotianin, n. (Chem.) The essential oil of tobacco, obtained on distilling the leaves with water. It has the appearance of camphor, and by distillation with caustic potash is said to give nicotine.

Nicotine, n. (Chem.) A volatile alkaloid contained in the tobacco-plant (*Nicotiana tabacum*), in which it occurs in combination with malic and citric acids. It is also contained in the smoke of the burning leaves. It is a limpid, colorless, oily liquid, with an irritating and powerful odor of tobacco. It is extremely poisonous, a single drop being sufficient to poison a large dog. *Form.* C₁₀H₁₄N₂.

Nicoya, (ne-ko'ya), a peninsula on the Pacific coast of Costa Rica, Central America, forming a gulf of the same name; Lat. 9° 40' N., Lon. 85° W.

NICOYA, a river of Costa Rica, flowing W. into the Gulf of Nicoya.

NICORA, two towns of Costa Rica, respectively 76 m. W. N.W. and 96 m. W. of Cartago; *pop.* of the latter 3,500.

Nic'tate, v. n. [Lat. *nicto*, *nictatus*, from *nico*, to beckon.] To wink.

Nicta'tion, Nictita'tion, n. (Med.) Winking of the eyes. This is generally a nervous affection, and very frequently it becomes a trick or habit. When it arises from any local irritating cause, bathing the eyes with warm water affords relief.

Nic'titate, v. r. To wink; to nictate.

Nidamen'tal, a. [From Lat. *nidus*, a nest.] (*Zoöl.*) Relating to nests; applied to the organs that secrete the materials of which many animals construct their nests.

Ni'day, in Oregon, a post-village of Josephine co., abt. 50 m. S. of Roseburg.

Fig. 1955. — NICOTIANA.

Nide, *n.* [Fr. *nid*; Lat. *nidus*.] A nest or brood.

Nidget, (*nij'et*), *n.* [Fr. *nigaud*.] A worthless fellow; a coward; a poltroon.

Nidificate, *v. n.* [Lat. *nidificare*, from *nidus*, a nest, and *facio*, *facere*, to make.] To build a nest.

Nidification, *n.* [Fr. *nidification*.] Act of building a nest, and the hatching and feeding of young in the nest.

Nidulant, *a.* [Fr. *nidulant*.] (*Bot.*) Nestling or lying loose in pulp, as cotton.

Nidulate, *v. n.* To build or make a nest; to nidificate. (*R.*)

Nidulation, *n.* The time of remaining in the nest.

Nidus, *n.* [Lat.] A nest; a place where the eggs of birds, insects, &c., are deposited. Hence, a place where germs (of disease) are propagated.

Niebuhr, BERTHOLD GEORG, a German historian and philologist, son of the following, b. at Copenhagen, 1776. At the age of 18 he was sent to the university of Kiel, where he studied two years. After holding situations in a government office at Copenhagen, he was invited to Berlin in 1805, and entered the service of the king of Prussia, whose confidence he long enjoyed, and who charged him with important diplomatic negotiations, and made him privy-councillor. On the establishment of the university of Berlin, *N.* was chosen lecturer on Roman history; and the lectures then delivered formed the basis of the great work by which his name is immortalized. He served in the campaigns of 1813-14, and was sent ambassador to the court of Rome in 1816. He succeeded in negotiating a concordat with the holy see in 1821. While at Rome he was the friend and associate of the learned Mai, librarian of the Vatican, and disputes subsequently arose between them as to certain literary discoveries. *N.* visited Verona, and there, after patient searching, discovered the fragments of the work of the great jurist Gaius. Quitting Rome in 1823, he was appointed adjunct-professor at the new university of Bonn. He occupied himself with the preparation of a new edition of his great work, and with a republication of the Byzantine historians; but his labors were interrupted and his health and spirits broken by the French revolution of July, 1830. He d. January 2, 1831. The *Römische Geschichte*, which first appeared in 1811, and in an extended and greatly altered form in 1827, is one of the most original historical works of the present century. It was a masterly attempt to reconstruct a true and vivid picture of the history of early Rome out of the most confused and hopeless materials, and was hailed as a great success. The method and system of *N.*, however, have not been able to stand the test of recent criticism. *N.* was a great linguist and philologist, as well as historian, and published, besides his *History—Frontonis Reliquiæ; Cæcero pro Ponto et Rabirio; Corpus Scriptorum Historiæ Byzantinæ; et Kleinæ historisch und philologische Schriften*. The *History of Rome* was translated into English by Hare and Thirlwall; and some *Lectures on Roman History*, and on *Ancient Ethnography*, by Schmitz.

Niebuhr, CARSTENS, a celebrated traveller, was b. at Lüdingworth, in Hanover, in 1733. At the age of 22 he went to Hamburg, for the purpose of studying geometry, after which he devoted several years to the study of mathematics at Göttingen. Count Bernstorff, the Danish minister, having determined to send a scientific expedition for the purpose of exploring Arabia, *N.* accompanied it as geographer, in March, 1761, and after touching at Constantinople, proceeded to Egypt. Here they remained a year, and reached Yemen, their point of destination, in 1762. In September, 1763, he sailed for Bombay, and in December, 1764, set out on his return overland, through Persia and Turkey. He arrived at Copenhagen in November, 1767, and laid the fruits of his researches before the world in his *Description of Arabia*, and his *Travels in Arabia*, which have been translated into various languages. He was the only one that returned from the mission, was liberally rewarded by the Danish monarch, and d. in 1815. Carsten Niebuhr was father of the great historian. (See preceding memoir.)

Niece, (*nēs*), *n.* [Fr. *niece*; Lat. *neptis*, from *nepos*, *nepotis*, a nephew, *q. v.*] The daughter of a brother or sister.

Niel, (*neél*), ADOLPHE, a marshal of France, b. 1812 at Muret. Admitted in 1821 into the École Polytechnique, he became a lieutenant in the Engineers in 1827, and rose slowly to the rank of General of Division, in 1852. *N.* commanded the engineers at the siege of Bomarsund, upon the capture of which he was appointed aide-de-camp to the Emperor. He contributed largely to the success of the Crimean war, and was created a senator in 1857. At the commencement of the war in Italy, April, 1859, he was appointed to the command of the 4th corps of the army of the Alps, and after the victory of Solferino, in which the artillery played so important a part, he was appointed a marshal of France. In 1867 he was nominated minister of war, and d. 1869.

Niello, *n.* [It. *niello*; Fr. *nielle*; Lat. *nigellum*, from *nigellus*, diminutive of *niger*, black.] (*Fine Arts*.) A kind of engraving of considerable antiquity, and the origin of engraving as it is understood at the present time. During the Middle Ages, when the art was chiefly practised, the method consisted in drawing a design with a style upon gold and silver plates, and then cutting it with a burin. These incised lines were filled with a composition made by heating together quicksilver, lead, and silver, the compound being of a bluish color; whence the name. It was the practice to decorate the communion-service of the churches, as well as other plate, in this manner. The art having passed out of use, old nielli are exceedingly rare, and are only to be found in the collections of national museums or of wealthy virtuosi.

Niemcewicz, JULIAN URŠIN, (*neem'tse-vitch*), a distinguished Polish statesman, poet, and miscellaneous writer, was born in Lithuania in 1757. He served a short time in the army, and became acquainted with Kosciusko; was a leading member of the constitutional Diet of 1788-1792; served the popular cause at the same time by several patriotic dramas; and was aide-de-camp to Kosciusko in the fatal campaign of 1794. After two years' imprisonment at St. Petersburg, he was released by the emperor Paul, and with his friend Kosciusko went to this country, where he married, and paid a long visit to Gen. Washington at Mt. Vernon. He came back to Europe in 1802, but soon quitted it again for America; once more returning after the treaty of Tilsit and the establishment of the grand-duchy of Warsaw. He was then named secretary of the Senate, and made a member of the Council of Public Instruction. He assisted, after the Congress of Vienna, in drawing up another constitution for Poland; was dismissed from the Council of Education in 1821, and lost his secretaryship after the failure of the insurrection of 1830-31, which he supported. He spent part of his exile in England, and then settled at Montmorency, near Paris. The most popular of his poetical works are the *Historical Ballads*, which were set to music. Among his other poems are a collection of Fables, several tragedies and comedies, and translations from popular English poems. *N.* published also Memoirs of his own Times, a series of Memoirs on Ancient Poland, an account of his visit to Washington, and several novels. He left many manuscripts unpublished. D. at Montmorency, 1841.

Niemen, or **Memel**, (*ne'men*), a large river of Russian Poland, rising in the govt. of Minsk, and after a N.W. course of 400 m. falling into the Frische Haff by the Rast and Gilge mouths, 30 m. W. of Tilsit. On the waters of this river Napoleon I. and Alexander of Russia held an interview in 1807.

Niemes, (*neems*), a town of Austria, in Bohemia, 18 m. W. of Buntzlau. *Manuf.* Cotton and linen goods and paper. *Pop.* 4,300.

Niepce-de-Saint-Victor, CLAUDE MARIE FRANÇOIS, a French chemist and photographer, and the discoverer of the process of obtaining images on glass, b. at St. Cyr, 1805. He is the nephew of that M. Niepce who was the friend and fellow-worker of M. Daguerre; was educated for the military profession, and was acting as lieutenant of dragons in 1842, when an accident turned his thoughts towards the science of chemistry. Having stained his uniform with some drops of lemon-juice, he undertook a series of chemical experiments for the purpose of restoring the lost color, and at length succeeded by employing ammonia. This discovery having received a useful application, *N.* obtained an exchange into the municipal guard of Paris, which step gave him the means of prosecuting his scientific studies in the capital. During the revolution of 1848, the barrack in which he lodged was destroyed, and with it the whole of his scientific apparatus and collections. Notwithstanding, he contrived to conclude his experiments, and to present to the Academy his second memoir upon photography on glass, in the same year. Besides his first great discovery, he has made researches upon producing photographic images in colors, and photographically engraved steel plates. In 1855 he published a collection of his scattered memoirs, with the title *Photographic Researches*; and another entitled *Treatise upon Engraving upon Steel and Glass*. In 1850 Napoleon III. appointed him commandant of the Louvre, for the purpose of enabling him to prosecute more perfectly his photographic researches. D. 1870.

Nieuport, **Niewport**, a fortified town of Belgium, prov. of W. Flanders, on the Yperlee, near its mouth in the North Sea, 10 m. S.W. of Ostend. *Manuf.* Ropes; and ship-building is also carried on. *Pop.* 3,500.

Nievre, (*ne-ai'vr*), a river of France, which joins the Loire at Nevers after a S. course of 25 m.

NIVÈRE, a dept. of France, formerly comprised in the old prov. of Nivernais, between Lat. 46° 40' and 47° 45' N., Lon. 3° and 4° E., bounded by the depts. of Yonne, Cote d'Or, Saône-et-Loire, Allier, and Cher. *Area*, 2,595 sq. m. The surface is mountainous in the E., but level and fertile in the W. *Rivers*, Loire, Allier, and Yonne.

Prod. Principally corn and wine. *Min.* Iron, copper, lead, and coal. *Manuf.* Linen and woollen cloths, cutlery, porcelain, glass, and jewelry. The chief industry is iron and steel works. *Chief towns*, Nevers (the cap.), Châteaun-Chinon, Clamecy, and Cosne. *Pop.* 342,773.

Nig'deh, or **Nikde**, a town of European Turkey, pashalic of Caramania, 47 m. N.E. of Ereglee; *pop.* 5,000.

Niger, JOBBA, QUORRA, KOVAREE, or KWARA, a celebrated river of Central Africa, having its sources near the W. coast of the continent. The river is estimated to be 2,600 m. long, and the area of its basin and that of its tributaries to be 1,023,280 sq. m. It rises in the region now known as the States of Samory, inland from Liberia and Sierra Leone, its headwaters being contiguous to those of the Senegal, which flows in an opposite course. Of the various streams which unite to form the Niger, the Tembe, rising in the Loma Mountains, at about 3,000 feet elevation, and in N. Lat. 8° 36' and W. Lon. 10° 33', is looked upon as the parent stream. The *N.* flows northeasterly as far as Timbuktu, 300 m. above which it is joined by the Mayel-Bulevel, a large tributary, and splits up into numerous diverging channels. After passing Timbuktu, it flows easterly for 200 m.; then turns southeast through a rocky country. Finally, bending more to the south, it is joined by a tributary of first-class size, the Benue, or Mother of Waters, a rival in volume which has come from a source 860 m. to the E. The united stream now "passes through a series of bold picturesque hills by a narrow gorge," and

eventually breaks up into one of the most remarkable mangrove-covered deltas of the world. In its course it passes through much fertile valley land, while numerous towns and villages stand on its banks, and a considerable canoe commerce is prosecuted. The exploration of the *N.* has been principally accomplished by English travellers, and Great Britain holds the protectorate of its border-lands as far as Timbuktu. Above this city the control is in the hands of the French, who have steamers on the upper stream, and forts on its banks. Slaves were formerly nearly the only article of export from the *N.*, but palm oil is now the principal staple, the delta outlets being known as Oil rivers. The *N.* is one of the greatest rivers in the world. So strong is its current that driftwood from the vast estuary is frequently carried scores of miles out to sea.

Nigella, *n.* (*Bot.*) A genus of plants, order *Ranunculaceæ*. The seeds of *N. sativa*, the common Fennel-flower, or Gith, were formerly employed instead of pepper. It is supposed that these seeds, or those of another species which are used by the Afghans for flavoring curries, are the black cummin of Scripture.

Niggard, *n.* (*Goth. njugg*, that holds fast or back, stingy.) One who is griping, stingy, parsimonious; a miser; a person meanly close and covetous.

—*a.* Miserly; meanly covetous; sordidly parsimonious. — *Sparingly*; careful.

—*v. a.* To stint; to supply sparingly.

Niggardish, *a.* Having some disposition to avarice.

Niggardliness, *n.* State or quality of being niggardly; mean, covetous, sordid parsimony.

Niggardly, *a.* Meanly avaricious; extremely sparing of expense; covetous; parsimonious; miserly; penurious.

—*Careful*; cautiously avoiding profusion.

—*adv.* Sparingly; with cautious parsimony.

Nigged Ashlar, *n.* (*Arch.*) A mode of dressing the surface of stone, in which the face is left rough, or dressed only with a pointed hammer instead of a chisel; this kind of work is also known by the name of *hammer-dressed*, and it is generally employed in basements, or in rough masonry where the appearance of strength is desired.

Nigger, *n.* A negro; a black man; a colored person; — generally used in contempt or derision.

Niggle, *v. a.* and *n.* [O. Fr. *niger*, to trifle.] To mock; to play on; to make sport or game of. (*R.*)

Niggler, *n.* One who niggles. (*R.*)

Nigh, (*nī*), *a.* [A. S. *neah*, *neahg*, *neh*.] Near; not distant or remote in place or time; close; adjacent; contiguous. — Closely allied by blood; intimate in relation; proximate; present.

—*adv.* Near; at a small distance in place or time, or in the course of events. — Almost; as, he was *nigh* dead.

—*prep.* Near; at no great distance from; almost close to.

Nigh-ness, *n.* Nearness; proximity. (*R.*)

Night, (*nīt*), *n.* [A. S. *nicht*; Gr. *nacht*; Lat. *nox*; Gr. *nux*.] That part of the natural day between the time when the sun sinks below the horizon and the time of his rising, or the time from sunset to sunrise. (See DAY). — Darkness; gloom; obscurity. — Unintelligibility; a state of ignorance; intellectual and moral darkness; heathenish ignorance. — Adversity; a state of affliction and distress. — The time after the close of life; death.

Night-blindness, *n.* (*Med.*) A peculiar affection of the eye, in which the patient sees very well during the day, but becomes blind as night approaches. It is generally met with in warm climates, and seems to arise from the excessive stimulus to which the eye is exposed during the day by strong light. It usually gives way to mild antiphlogistic treatment, purging, and blistering the temples.

Night-blooming Cereus. See CEREBUS.

Night-cap, *n.* A cap worn in bed, or in undress. — A glass of warm liquor taken before retiring to bed. (*Vul.*)

Night-cart, *n.* A cart used for removing night-soil.

Night-crow, *n.* A bird that cries in the night.

Night-dog, *n.* A dog that hunts in the night.

Night'ed, *a.* Darkened; clouded; black. — Benighted; overtaken by night.

Night-eyed, *a.* Able to see at night; keen-sighted.

Night-fall, *n.* The close of the day; evening.

Night-faring, *a.* Travelling in the night.

Night-fire, *n.* Ignis-fatuus; Will-o'-the-Wisp. — A fire which burns in the night.

Night-flier, *n.* A moth or other insect that flies by night.

Night-glass, *n.* A telescope for night use.

Night-gown, *n.* A loose gown used as an undress.

Night-hag, *n.* A witch supposed to wander in the night.

Night-hawk, *n.* (*Zoöl.*) The *Chordeiles popetus* (Baird), a bird of the family *Capriusulgidæ*, common in N. America, generally measuring nine inches in length, and so well known as to require no further description here. Night-hawks are not strictly nocturnal, as the name implies; but are often upon the wing

Fig. 1956.
NIGELLA SATIVA.
a, top of stem; b, fruit.

throughout the entire day, especially if it be cloudy. They are generally most active just before night, and retire to rest at dark. Their loud, squeaking notes are familiar to all. The singular loud and half-booming

Fig. 1957. — NIGHT-HAWK, (*Chordeiles popetue*.)

sound which they make in plunging from the great height is said to be produced by the concussion caused by the new position of the wings at the moment when the bird passes the centre of its plunge and commences the ascent. The Night-hawk makes no nest, but deposits its two oval, freckled eggs on the bare ground, or on a flat rock, in fields or in very open woods. Some persons suppose that the Night-hawk and Whip-poor-will are identical, but they do not even belong to the same genus. The Night-hawk has the bristles of the bill hardly appreciable, wings sharp-pointed, longer than the tail, which is rather narrow, and forked or emarginate. The Whip-poor-will has the mouth margined by long stiff bristles, the wings short, not reaching the end of the tail, which is short and rounded; and they differ in their colors and markings.

Night-heron, n. (*Zoöl.*) A genus of *Ardeidae* (see HERON) intermediate between bitterns and herons, but with shorter and thicker bill than either, and legs shorter than in herons. This is abundant in N. America. It feeds chiefly by twilight or at night, and its cry is very loud and coarse.

Night-house, n. A tavern, or inn, which is open at night; also, a brothel.

Night-ingale, n. [*A. S. nihtegale*.] (*Zoöl.*) An European migratory species of birds, family of Warblers or *Sylviolidae*. The males of the nightingale reach the southern counties of England sometimes in April, but more commonly not till the beginning of May; the females do not arrive till a week or ten days after the males. Migrating from the south, they visit the northern countries for the purpose of breeding, and the famed song of the male is his *love chant*, and ceases when his mate has hatched her brood. "Vigilance, anxiety, and caution now succeed to harmony; and his croak is the

Fig. 1958. — NIGHTINGALE.

hush, the warning of danger and suspicion, to the infant charge and the mother-bird." If by accident his mate be killed, the male resumes his song; and will continue to chant very late in summer unless he can attract, as he commonly soon does, another female. The nightingale feeds chiefly on the larvae of insects. The nest is built near the ground; the eggs are four or five in number, of a uniform dark-brown color; the young are fledged in the month of June, and are ready to accompany the parents in their southward migration in the month of August.

Night-fish, a. Pertaining to night, or attached to the night.

Night-less, a. Having no night.

Night-ly, a. Done by night; happening in the night, or appearing in the night. — Done every night; nocturnal; as, a *nightly* watch.

—*adv.* By night; at night. — Every night.

Night-man, n.; pl. NIGHT-MEN. One who carries away ordure in the night.

Night-mare, n. [*Du. nacht-merrie*.] A sensation in sleep resembling the pressure of a weight on the breast, and depriving of speech or motion. See INCUBUS. — A morbid oppression, or sensation.

Night-piece, n. A piece of painting so colored as to be intended to be viewed by candle-light, or seen to the best advantage by artificial light.

Night-raven, n. A bird, supposed of ill-omen, that cries loud in the night.

(*Zoöl.*) The NIGHT-HERON, *q. v.*

Night-shade, n. (*Bot.*) See ATROPA.

Night-shirt, n. A night-gown; a long, loose shirt for sleeping in.

Night-soil, n. The contents of privies; — usually so called because carried away at night.

Night-spell, n. A charm used as a preventive against accidents by night.

Night-tripping, a. Going about lightly in the night; as, a *night-tripping* fairy.

Night-walk, n. A walk in the evening or night.

Night-walker, (nīt'wauk-er,) n. One who walks in his sleep; a somnambulist. — One who roves about in the night for evil purposes.

Night-walking, n. Walking in one's sleep; somnambulism. — A roving in the streets at night with evil designs.

Night-ward, a. Approaching toward night.

Night-watch, (nīt'wotch,) n. A watch or guard in the night. — A period in the night, as distinguished by the change of the watch.

Night-watcher, n. One who watches during the night.

Night-witch, n. A night-hag; a witch who appears in the night.

Nigrescent, a. [*Lat. nigrescens*.] Growing black; approaching to blackness.

Nigrification, n. [*Lat. niger*, black, and *facio*, to make.] The act of making black. (*R.*)

Nigrine, n. [*Lat. niger*.] (*Min.*) The reddish-brown or black varieties of titaniferous iron, from Transylvania.

Nigritia, n. A country of Central Africa. See SOUDAN.

Nigra, (nee'gra,) n. a seaport on the S. of Hayti.

Nihil, n. Nothing.

Nihilism, n. [*Fr. nihilisme*, *Lat. nihil, nihilum*, from *ne*, not, and *hilum*, a little thing, a trifle.] Nothingness.

Nihilistic, a. Pertaining to nihilism.

Nihilists, n. A political party of Russia, so-called from their aim to reduce society to its original state of nothingness and then to commence anew; they are socialistic.

They want unity, suffrage, a free press. See *Arnauco's Le N. L'ingé's L'hist. du N.*, Paris, 1880. They date from 1869.

Nihil-ity, n. [*Lat. nihilum*.] Nothingness.

Nijni-Novgorod, or LOWER NOVGOROD, a govt. of European Russia, between *Lat.* 54° 26' and 57° 6' N., *Lon.* 41° 40' and 46° 38' E., having N. the government of Kostroma, E. Kasan and Simbirsk, S. Pensa and Tamboff, and W. Vladimir; *area*, 18,740 sq. m. The surface is level, fertile, and generally well cultivated. *Rivers*, Volga, Oka, Kama, Betloug, and Piana. *Prod.* Corn, hemp, and flax. Great numbers of cattle and horses are bred. *Manuf.* Coarse linen, canvas, cordage, glass, hardware, and soap. Its commerce is extensive. *Exp.* Corn, flour, cattle, horses, leather, tallow, iron, timber, &c. *Cap.* Nijni-Novgorod. *Pop.* 1,285,196.

NIJNI-NOVGOROD, NIJEOROD, or NIZHNI, capital of the above govt., at the junction of the Oka and Volga. It is situated on a steep hill 400 feet high, the summit of which is occupied by the Kremlin or citadel. N. is the grand entrepôt for the trade of the interior of the empire, and during the fair held in the month of July it is visited by about 200,000 people, including merchants from all parts of Europe and Asia, and even some from America. Among the articles of traffic are gold, silver, copper, furs, silks, shawls, teas, corn, wine, cattle, &c. *Pop.* 31,543. The importance of the annual fair has of late much declined.

Nijni-Tagilsk, a town of Russia, govt. of Perm, on the river Tagil, in the Ural Mountains, 150 m. E. of Perm. It is one of the most important mining towns of Russia, the soil in the vicinity being rich in iron, copper, gold, and platinum. Not far off is the famous magnetic mountain Blagodat, 1,422 feet high. *Pop.* 25,000.

Nikola'iev, n. a town of Russia. See NICOLAIEFF.

Nikolsburg, or Niklasburg, a town of Austria, in Moravia, 28 m. S. of Brünn. *Manuf.* Woollens. *Pop.* 8,500.

Nil, n. (*Book-keeping*.) A term used to denote an entry that is cancelled.

Nile. [*Lat. Nilus*; *Gr. Nilos*, from *nea ilus*, "new mud."] A large and famous river in the N.E. of the African continent, flowing north through Abyssinia, Nubia, and Egypt, to the Mediterranean Sea, celebrated alike for its magnitude, the inexhaustible fertility of the basin through which it flows, its connection with some of the most interesting events in the remotest periods of authentic history, the great cities that were early built on its banks, and the stupendous monuments still remaining to attest the wealth and power of their founders. The discovery of its *real* source was an object of intense inquiry to the ancients, as it remained, till within the last few years, to modern geographers and travellers. The N. is formed by the junction, at *Lat.* 15° 34' N., and *Lon.* 32° 30' 58" E., of two great branches, the "Bahr-el-Azrek," or Blue River (often called *Blue Nile*), from the S.E., and the "Bahr-el-Abiad," or White River (*White Nile*), from the S.W. The sources of the former, which derives its name from the dark color of its waters, were discovered and described by Paez in 1615, and were subsequently visited by Bruce, the Abyssinian traveller, who ridiculously pretended to have, for the first time, ascertained the true sources of this river, and thus solved a problem that had for ages occupied the attention of the learned world. This E. arm rises from two springs near Geesh in Gojam, in Abyssinia, at an elevation of about 10,000 feet above sea-level, in *Lat.* 10° 59' 25" N., and *Lon.* 36° 55' 30" E. It thence flows N. to the lake of Dembea, or Tzana, a large sheet of water which receives many other streams; but the N. is said to preserve its waters with little intermixture with those of the lake, across which its current is always visible. Escaping from this lake it sweeps, in a S. direction, round the E. frontier of the provs. of Gojam and Damot, till, within 9° and 10° N. *Lat.*, it travels a N.W. course, which it keeps, till at Khartoum it unites with the other great arm, the

Bahr-el-Abiad, flowing from the S.W. The Bahr-el-Azrek receives in its course several important tributaries, and is in several parts interrupted by cataracts, one series of which has a fall of 280 feet. At the point of confluence with the sister-branch, it is about $\frac{1}{4}$ m. in breadth, and has a rapid current; but, during half the year, its waters are low. The W. arm, Bahr-el-Abiad, or "White Nile," derives its name from the fine whitish clay usually suspended in, and coloring, its waters. It is broader and deeper than the E. arm, brings down a larger volume of water, and appears to have been regarded by the ancients as the true N. If, however, the derivation of the name previously given be correct, the Bahr-el-Azrek would seem to have the best right to be considered the *genuine N.*, inasmuch as it carries down the greater portion of the mud, whence its name has originated, and the deposits of which have, in the lapse of ages, formed the land of Egypt. The course of the Bahr-el-Abiad was traced, in 1827, by Linant, for about 160 m. from its confluence with the Bahr-el-Azrek. A party sent by the Pasha of Egypt on a shaving expedition, subsequently traced it to a much greater distance, or to a point in about 10° N. *Lat.*, and 2° E. *Lon.*; and at this point no mountains were in sight, the river being, also, of great breadth, full of islands, and shallow. The course of the Bahr-el-Abiad, so far as it was up to this time explored, was little further than to its junction with the Bahr-el-Azrek. At the point of junction, the Bahr-el-Abiad is only about 1,500 feet across; but a little above it enlarges much, its banks being frequently 3 and 4 m. apart, and, in some places during the inundations, the waters extend 21 m. from side to side. In its ordinary state, and in mid-channel, it has here from 3 to 4 fathoms of water. The honor of discovering the real source of this great river has hitherto been ascribed to three English explorers, Captains Grant and Speke, and Sir Samuel Baker (*q. v.*). According to their report, the first source of the N. is in the great lake called *Victoria Nyanza*, discovered by the two former; Sir Samuel Baker, however, discovered another great lake about 100 m. W. of M'Rooli, at Vacovia, in N. *Lat.* 1° 14'. This he named the *Albert Nyanza*, and determined it to be the *second* great source of the N.—second, not only in importance, but also in order of discovery to the Victoria. Later research has shown that several streams flow into the Victoria Nyanza, but it is not known which has its source farthest south, the credit lying between the Shimayu and the Isanga. Which-ever be considered the mother stream of the N., it may be looked upon as drawing its most distant waters from about 4° S. *Lat.* It flows from the Victoria Lake at its northern end, forming there the Ripon Falls, a cataract over 150 yards wide, but only 12 feet high. For 300 m. it flows between rocky walls, forming rapids and cataracts in its course, until it enters the Albert Nyanza, near its northeast corner. This lake forms a great basin much below the level of the adjacent country, receiving the entire drainage of extensive mountain ranges on the W., and of several native states on the E. At its southwestern extremity it is joined by the Semliki river, bringing the outflow of the Albert Edward Nyanza. This lake, discovered by Stanley, in 1889, receives the drainage of the snow-clad Ruwenzori and other mountains. Leaving the Albert Nyanza, under the native title of Bahr-el-Jebel, the N. flows in a generally northward course to the far distant Mediterranean. For 130 m. it traverses a level country, frequently expanding into lakes. For the next 120 m. rocky hills narrow the stream to a width of a quarter-mile, its course being broken by the Yarborah Rapids. At Lado it reaches the plains, through which it flows sluggishly to Khartoum, 900 m. N. This distance is navigable for steamers of considerable size, though in 7 $\frac{1}{2}$ ° N. *lat.* the stream divides and flows for about 150 m. through a swampy country, both channels being often completely choked by great collections of vegetable growth. The Bahr-el-Ghazel, a large tributary, joins the main stream at 9 $\frac{1}{2}$ ° N. *lat.* Farther on the two channels unite and are joined by the Sobat. It now flows to Khartoum without receiving another tributary, and here is joined by its great Abyssinian branch, the Blue Nile. The great united main stream of the N., after the junction of its two branches, takes a direction generally N., but with almost innumerable windings. Not far from below the point of confluence is a low range of mountains, through which the river rushes in a narrow gorge, forming what is called the *Sixth Cataract*; and thence deflecting E. through extensive and verdant plains, it passes the Cap. Shendi, and the ruins of the ancient Meroe. It receives, close to the town of Addamar, in *Lat.* 17° 45' N., the waters of its important tributary, the Tacazzé (anc. *Astaborus*). From this point to its embouchure, a distance of about 1,350 m., the N. receives no affluent whatever, on either bank; a solitary instance, as Humboldt has remarked, in the hydrographic history of the globe. At Abu Hamed, in abt. 19 $\frac{1}{2}$ ° N. *Lat.*, and 33° E. *Lon.*, the river, hitherto flowing N., trends suddenly to the W., and thence pursues a S.W. course to Edab, in the prov. of Dongola, 18° *Lat.* N., where it again makes a curve to the N. This deflection is called the *Great Bend of the Nile*. The river enters Lower Nubia in abt. 19° 40' N. *Lat.*, where it is precipitated over a ledge of granite rocks, forming what commonly is called the *Third Cataract*. Under the 22d parallel occurs the *second cataract*, that of Wady-Halfa. The *first*, or *lowest cataract* is that of Assouan (anc. *Syene*), near the island of Elephantine, where the river has cut a way through a ridge of granite rocks. It must be observed, however, that the term "cataract," as applied to the broken course of the N., bears no analogy to the great cataracts of Niagara, the Pissu-Vache, and others; for most of them

scarcely exceed a few feet in height, and are, in fact, rather rapids than cataracts. At Kalabsheli (anc. *Talmis*), the *N.* rises from 30 to 40 ft. during the floods; and after their subsidence in Feb., the stream flows at the rate of 2 or 3 nautical miles per hour. The river, after crossing the Egyptian boundary at Philæ, 6 m. from Assuan, runs in a sluggish and very tortuous stream, generally N., through the entire length of the country, enriching it by its waters and deposits, which, indeed, not only give to Egypt its fertility, but also make it habitable. But with the exception of the dist. of Faioum, the valley of the *N.* in Upper and Central Egypt is of very contracted dimensions, the mountains and the burning sands of the desert encroaching so closely upon it, that it seldom exceeds 10 m. in width, and is frequently not half so much. But how limited soever, this narrow strip is of extraordinary beauty and fertility, and contains the magnificent remains of some of the noblest and most populous cities of the ancient world. In antiquity, the *N.* seems to have discharged its waters into the sea by 7 mouths; but it has now only two outlets, those of Rosetta and Damietta. The former, or most W., has a width of 1,800 ft., with a depth of abt. 5 ft. in the dry season. The Damietta mouth is only 900 ft. wide; but its depth averages between 7 and 8 ft. when the river is lowest. The greatest breadth of the Delta is abt. 85 m. from E. to W., the distance of its apex from the sea being rather more than 90 m. Great changes have, however, taken place in it during the lapse of ages; the soil has not only been elevated many feet by alluvial accumulations, but its shape and the position of its apex have greatly altered even within the period of modern history. The river begins to swell in its higher parts in April, and even earlier in the Bahr-el-Abiad; but at Cairo no increase occurs till the beginning of June, its greatest height at that city being in Sept., when the Delta is almost entirely under water. The waters begin to subside in Nov., leaving a rich alluvium, which is the great source of the fertility of Lower Egypt. The greatest breadth of the river may be estimated at 2,000 ft., while its average current does not exceed 3 m. an hour. The water is always turbid; and even in April and May, when it is clearest, it has a cloudy hue. When it overflows, the color is of a dirty red, consisting chiefly of the red-clay deposits of the Bahr-el-Azrek; for, as already stated, the Bahr-el-Abiad brings down a fine whitish clay. The *N.* abounds with a great variety of fish, such as the *Labrus Niloticus*, or white trout, the *Morone anguilla*, and a large species of salmon. Among the waterfowl peculiar to the *N.*, the most characteristic is the *Anas Nilotica*, or Turkey-geese, the flesh of which is both palatable and nutritious. Hippopotami are found on its banks in Nubia, but not in Egypt; the crocodiles, also, are greatly reduced in number, and are now confined to the dist. above Assiout. From Assiout to Cairo, abt. 360 m., the banks, except in the rocky parts, present no native plant, but abound with all sorts of esculent vegetables, raised by the industry of the inhabitants on this peculiarly fertile soil. Cultivation is, however, more common on the E. than on the W. bank of the river. See LIVINGSTONE, DAVID.

Nile, in Ohio, a township of Scioto co., on the Ohio river.

Niles (nills), in Illinois, a post-township of Cook co.

Niles in Indiana, a township of Delaware co.

Niles, in Iowa, a post-town in Floyd co.

Niles, in Michigan, a city and township of Berrien co., about 191 m. W. by S. of Detroit, on the St. Joseph river and on the Mich. Cent. R. R. It is an important manufacturing center, chiefly flour, paper, woollens, iron, furniture, carriages, &c. Pop. (1894) 5,508.

Niles, in New York, a post-township of Cayuga co. Pop. (1897) 1,620.

Niles, in Ohio, a city of Trumbull co., about 5 m. N.E. of Warren; has large iron works. Pop. (1897) 5,160.

Nil, n. Shining sparks emitted from brass when melted in a furnace.

Nilot'ie, a. Pertaining to the Nile.

Nil'wood, in Illinois, a post-township of Macoupin co., 29 m. S.W. of Springfield.

Nils'son, CHRISTINE. See SECTION II.

Nim'ble, a. [A. S. *numol*, capable, receiving, from Old S. *niman*, to take.] Moving with ease and celerity; agile; quick; lively; swift; speedy; active; prompt; expert.

Nim'bleness, n. Quality of being nimble; lightness and agility in motion; quickness; celerity; speed; swiftness.

Nim'bly, adv. With agility; with light, quick motion.

Nimbose, a. [Lat. *nimbosus*.] Stormy; tempestuous. (R.)

Nim'bus, n. (*Fine Arts*.) A halo round the head or body of divine persons. It is called a *nimbus* when it surrounds the head, and an *aureola* when it envelops the whole body—the union of the two being called a *glory*. It is of Pagan origin. Images of the gods were adorned with a crown of rays; and when the Roman emperors assumed divine honors, they appeared decorated in the same manner. It afterwards became so common, that it appears on coins, round the heads of the consuls of the late empire. It was for a long time avoided in the Christian representations, and the first example is a gem of St. Martin in the early part of the 6th century. After the 11th century it was employed to distinguish the Saviour, the Virgin Mary, the apostles, saints, &c. From the 5th to the 12th century the *N.* had the form of a disc or plate over the head; from the 12th to the 15th century it was a broad golden band round or behind the head; from the 15th century it was a bright fillet over the head, and in the 17th it disappeared altogether. See HALO.

(Meteor.) See CLOUD.

Nime'guen, or **Nymwe'gen**, a fortified town of the

Netherlands, prov. of Guelderland, on the Waal, $9\frac{1}{2}$ m. S. of Arnhem; lat. $51^{\circ} 51' N.$, lon. $5^{\circ} 51' E.$ *Manuf.* Pale ale, leather, and glue. Pop. 24,000.

Treaty of N. (*Hist.*) Conferences for peace were opened at Nimeguen in July, 1675, and Charles II. of England having signed a convention with Holland, Jan. 26, 1678, for the withdrawal of the English contingent from the French army, a treaty of peace was concluded at Nimeguen between France and Holland, Aug. 10. Spain acceded to the treaty Sept. 17, 1678, the Emperor of Germany Feb. 2, 1679, and Sweden March 29, 1679.

Nimes, or **Nismes**, (*neems*), a city of France, cap. of the dept. of Gard, 23 m. W.S.W. of Avignon, and 30 m. N.E. of Montpellier; lat. $43^{\circ} 50' 8'' N.$, lon. $4^{\circ} 21' 15'' E.$ It is surrounded by boulevards on the site of the ancient fortifications. The principal public buildings are the cathedral, erected on the site of the temple of Augustus, the Palais de Justice, Hotel Dieu, the general hospital, and the new theatre. But *N.* is particularly interesting for its numerous remains of antiquity, the most prominent of which are the *Maison Carrée*, an oblong temple, of the age of Augustus, built in the Corinthian style; the *Amphitheatre*, the *Roman baths*, and the *Thermæ*, an ancient tower 200 ft. high. The Pont du Gard, formerly part of the Roman aqueduct $25\frac{1}{2}$ m. long, crosses the river Gardon, 11 m. N. of *N.* (See AQUEDUCT.) *Manuf.* Silks, hosiery, ribbons, linen, and leather; likewise printing and dyeing works, and an extensive trade in raw and wrought silk, corn, wine, olive-oil, and dried fruit. Pop. 60,240.

Nimi'ety, n. The state of being in excess.

Nimishil'ten, in Ohio, a creek flowing into the Tuscarawas River from Stark co.

—A township of Stark co.

Nim'rod, grandson of Ham, who is supposed by some to have been the founder of Babylon, where he reigned while Asshur ruled in Assyria. He is also supposed to be the first king, and the first conqueror. In the Scriptures, he is called "a mighty hunter before the Lord."

Nin'compoop, n. [A corruption of Lat. *non compos mentis*.] A fool; a blockhead; a trifling dotard. (Colloq.)

Nine, a. [A. S. *nigan*; Ger. *neun*; Lat. *novem*.] Denoting the number composed of eight and one.

—n. The number composed of eight and one.

Nine Eagles, in Iowa, a post-village of Decatur co., abt. 145 m. S.W. by W. of Iowa City.

Ninefold, a. Nine times repeated.

Nine'holes, n. A play in which nine holes are made in the ground in the angles and sides of a square, for the purpose of bowling a pellet into them according to certain rules.

Nine-killer, n. (*Zoöl.*) A popular name of the butcher-bird. — See COLLYRIO.

Nine'men's-morris, n. A game played with nine holes in the ground. — See MORRIS.

Nine'pence, n.; pl. NINE-PENCES. An old English silver coin, valued at nine pence.

Nine'pins, n. A play where nine pieces of wood are set up on the ground, to be thrown down by a bowl. In the U. States, it is sometimes called *ten-pins*, from ten pins being used instead of nine.

Nine'score, a. Nine times twenty.

—n. The number of nine times twenty.

Nine'teen, a. [A. S. *nigantyne*.] Noting the number of nine and ten united.

—n. The sum of ten and nine.

Nine'teenth, a. [A. S. *nigantothē*.] Designating nineteen.

—n. One of nineteen equal parts.

Nine'tieth, a. The ordinal of ninety.

—n. One of ninety equal parts.

Nine'ty, a. [A. S. *nigan*, nine, and *tig*, ten.] Nine times ten; as, *ninety* years.

—n. The sum of nine times ten.

Nin'veh, or **Ninus**. (*Anc. Grog.*) A famous city, and the capital of the great Assyrian empire. Nimrod, or Asshur, is said to have founded this city about B. C. 2218; but some authorities believe that it had no existence till the reign of Ninus, B. C. 2182. It is mentioned on the tablet of Karnak (q. v.). Diodorus asserts that Nineveh was destroyed by Arbaces the Mede, B. C. 876;

Fig. 1959. — NINEVEH, (Modern Mosul.)

but Layard considers this destruction to have been most probably a mere depopulation. Jonah's prophecy to the inhabitants of Nineveh was delivered some time

between B. C. 760–B. C. 750, or B. C. 862 according to some authorities; and the city was conquered and destroyed by Cyaxares B. C. 625. The extent of the ancient city was 60, or, according to some authorities, 74 square miles. Heraclius defeated Khazates, the Persian general, in a great battle, on its site, Dec. 1, 627. Layard's discoveries of antiquities at Nineveh commenced in 1845, but no excavations of importance were made till the autumn of that year. The discoveries made by Layard and later explorers have been of the greatest importance, including numerous striking sculptures and the clay-inscribed books of an ancient library, from which much concerning the history and customs of ancient Assyria has been learned. See MOSUL.

Nin'veh, in Indiana, a township of Bartholomew co. —A post-village and township of Johnson co., abt. 30 m. E. by S. of Indianapolis.

Nin'veh, in Missouri, a post-village of Adair co., abt. 36 m. N.E. of La Clede.

Nin'veh, in New York, a post-village of Broome co., abt. 16 m. E.N.E. of Binghamton.

Ning-po', a city of China, prov. of Tche-Kiang, at the confluence of the rivers Kin and Yaou, near their mouth in the harbor of Chusan, 46 m. S.E. of Hang-choo-foo, and 180 S.E. of Nankin; lat. $29^{\circ} 55' N.$, lon. $120^{\circ} 17' E.$ The streets are broad and long; and the shops surpass those of Canton in elegance and splendor. *N.* is considered the fourth emporium of the Chinese empire; and its trade with N. and S. China and Siam is important. The port is open to European commerce. Pop. Estimated at 250,000.

Nin'ians, (*St.*) a town and parish of Scotland, co. of Stirling, 2 m. S. of Stirling. *Manuf.* Woollens, leather, and nails. In this parish, which includes also the town of Bannockburn, three memorable battles were fought: the first in 1297, between the troops of Wallace and the English, whom they totally routed; the second was the famous battle of Bannockburn (q. v.); and the third, in 1488, in which James III. of Scotland was defeated and killed by his rebellious nobles. Pop. 10,000.

Nin'inger, in Minnesota, a p. twp. of Dakota co.

Nin'ny, n. [*Sp. nino*, a child; Gr. *nevmos*, foolish, stupid.] A fool; a simpleton. (Vulgar.)

Nin'ny-hammer, n. A simpleton. (Vulgar.)

Nin'sin, or **Nin'zin**, n. (*Med.*) A bitter root of *Siam ninsi*, possessing medicinal properties similar to those of ginseng.

Ninth, a. [*A. S. nigetha*.] The ordinal of nine; designating the number nine; the next preceding ten.

—n. A ninth part.

(Mus.) One of the dissonant intervals, being the ninth from the fundamental, or an octave above the second, with which, however, it is not to be confounded, as its harmonic and contrapuntal treatment is different.

Ninthly, adv. In the ninth place.

Ninus, king of Assyria, and a celebrated conqueror, who, about 2068 B. C., succeeded Belus, his father, as king of Babylon and Nineveh. He entered into an alliance with the Arabs, subjugating Egypt and Bactria. He became enamored of Semiramis, the wife of one of his generals, and married her after her husband's death. Semiramis was supposed to have subsequently poisoned Ninus, who reigned during 52 years, and enlarged Nineveh, to which city he gave his name.

NINUS II., or **NINYAS**, son of the preceding and Semiramis, who profited by his youth to assume the regency. According to some, she subsequently voluntarily abdicated, while others state that she was put to death by Ninus. His reign is remarkable for its luxury and extravagance. His successors imitated the example of his voluptuousness; and very little further is known of the Assyrian monarchs until the age of Sardanapalus. His reign is placed between the years 2017–1927 B. C.

Nio, (anc. *los*.) (*ne'o*.) a small island of the Grecian Archipelago, 16 m. from Naxos, lat. $36^{\circ} 46' N.$, lon. $50^{\circ} 24' E.$ Ext. 11 m. long, and 5 broad. *Prod.* Cotton, oil, wine, and honey. Pop. 4,000.

Niobe. (*Gr. Myth.*) A daughter of Tantalus, married to Amphion, king of Thebes. Proud of her children, she provoked the anger of Apollo and Artemis, who slew them all. Her grief turned her into stone. (*Soph. Electr.* 151.) This fable is the subject of the beautiful group in the Tribune at Florence, known by the name of *Niobe and her Children*. Some antiquaries attribute it to Scopas. Winckelmann inclines to believe it the workmanship of Praxiteles.

Niobra'ra (or **RUNNING**) **River**, called also **L'Eau QUI COURT**, rises near Platte Bridge, in Wyoming, and flowing E. into Nebraska, enters the Missouri at Niobrara, in L'Eau Qui Court co. Length, about 500 m.

Niobra'ra, in Nebraska, a post-village, cap. of Knox co., 40 m. above Yankton, S. D.

Nip, v. a. [*Du. knippen*; Ger. *kneifen*; A. S. *knipan*.] To cut, bite, or pinch off with the ends of the fingers; to cut off, as the end of anything; to clip, as with the knife or scissors.—To blast; to kill or destroy the end of anything; to pinch, as frost; to check the progress or advance of.—To vex; to bite.

—n. A small bite or cut, or a cutting off the end.—A pinch with the nails, teeth, &c.—A blast, a blight.

Nip'pur An ancient city of Babylonia. See BABYLONIAN EXPLORATIONS, SECTION II.

Nipor'na, or **Napo'ma**, in California, a village of San Luis Obispo co., about 18 m. S.E. of San Luis Obispo.

Nip'penose, in Pennsylvania, a remarkable basin or valley in Lycoming co. It is surrounded by high mountains, and occupies an area of about 40 sq. m. The bed consists of cavernous limestone, which, absorbing the numerous streams that flow down from the mountains, collect the waters under ground, and send them forth in one large stream near a gap in the Bald Eagle Mountain.

Niort, (*nyor*), a town of France, cap. of the dept. of Deux-Sèvres, on the Sevre-Niortaise, 34 m. E.N.E. of La Rochelle, and 43 m. W.S.W. of Poitiers. It is pleasantly situated on the declivities of two hills, and has been latterly much improved. Among the public buildings are the castle, town-hall, and public library containing 20,000 vols. — *Manuf.* Leather, gloves, shoes, woollen stuffs, woollen and horn articles; *N.* is also an entrepôt for the wines of the Gironde. *Pop.* 2,775.

Nip'pon, is the term which is wrongly applied by foreigners to the main island of the Japanese Empire. The Japanese call their country "Dai Nippon." It is a manifest error to restrict the name Nippon to one island. The name Japan has been corrupted from Nippon. Dai Nippon means Great Japan, or Great Root of Light. See JAPAN.

Nip'penose, in Pennsylvania, a post-township of Lycoming co.

Nip'per, *n.* He or that which nips.—A fore-tooth of a horse.

Nip'pers, *n. pl.* Small pincers.

(*Naut.*) A number of yarns warled together, used for fastening the messenger to the cable.

Nippingly, *adv.* With bitter sarcasm.

Nipple, *n.* A teat; a dug; the conical tubercle situate at the centre of the breast.—The orifice at which any animal liquor is separated. (*R.*)—(*Gun.*) That part of a percussion lock over which the cap is placed.

Nip'ter, *n.* (*Ecol.*) The ceremony of washing the feet, observed by members of the Greek Church on Good Friday.

Nir'gua, (*neer'gwa*), a town of Venezuela, abt. 50 m. W.S.W. of Valencia.

Nir'vāna. See BUDDHISM.

Nis'an, *n.* [*Heb. nisān*.] Among the Jews, the first month of the civil year, corresponding with the month of April.

Nisao, (*ne-sa'o*), a river of Hayti, W. Indies, rises on the S. slope of the Ciboa Mountains, and flows S. into a bay of its own name. *Length*, abt. 55 m.

Nisey, *n.* An old term for a uincompoop; a fool; a simpleton.

Nishapoor', a city of Persia, prov. of Khorassan, 40 m. W.S.W. of Meshed. It is situated in one of the most fertile valleys of Persia, but is very much decayed. *Pop.* 8,000.

Nishnabato'na River, rises in Carroll co., Iowa, and flowing a general S. by W. course into Missouri, enters the Missouri River from Holt co.

Nisi, (*nī'si*), *conj.* [*Lat.*] Unless; if not; as, to take a rule nisi.

Nisi Prius, [*Lat.*, unless before.] (*Law.*) The name (borrowed from the first two words of the old writ which summoned juries) usually given in England to the sittings of juries in civil cases. Thus a judge sitting at nisi prius, means a judge presiding at a jury trial in a civil cause, and the nisi prius sittings are the jury sittings.

Niskay'u'na, in New York, a post-township of Schenectady co.; *pop.* abt. 1,860.

Nismes, a city of France. See Nîmes.

Nis'roch, (*Myth.*) A god of the Assyrians, in whose temple, and in the very act of idolatry, Sennacherib was slain by his own sons (2 *Kin.* xix. 37). According to the etymology, the name would signify "the great eagle," and the earlier Assyrian sculptures recently exhibited at Nineveh have many representations of an idol in human form, but with the head of an eagle, as in Fig. 1960. Among the ancient Arabs, also, the eagle occurs as an idol.

Nis'sa, (*anc. Naisus, Naisus, or Nesus*), a fortified town of European Turkey, in Servia, on the Nissava, a tributary of the Morava, 130 m. S.E. of Belgrade; *pop.* 4,000.

Nissa'va, a river of European Turkey, in Servia, which after a W. course of 80 m., joins the Morava 8 m. W. of Nissa.

Nit, *n.* [*A.S. lmitu*; *Dn. neel*.] The egg of a louse or other small insect.

Nitche'gon, (*nitch-e-gwon*), a lake of Labrador, between James Bay and the Atlantic Ocean.

Nit'ency, *n.* [*Lat. nitentia*.] Lustre; brightness; pelliculosity.

—[*From Lat. nitor*.] Endeavor; attempt; effort.

Nith, a river of Scotland, rising in the co. of Ayr, and after a S.E. course of 60 m., flowing into the Solway Frith, 8 m. S. of Dumfries, by an estuary 5 m. in width.

Nit'id, *a.* [*Lat. nitidus*.] Bright; shining; lustrous; brilliant; as, a nitid yellow.

—[*Spruce*; *gay*; *debonnair*.] (*R.*)

Niti-Ghaut, or **Netee-Ghaut**, (*nee'lee-gawt*), a pass across the Himalayas between Thibet and the British dist. of Kumaon, with an elevation of 17,000 ft. above the sea; *Lat.* 30° 47' N., *Lon.* 79° 56' E.

Nit'inat (or **BERKELEY**) **Sound**, an inlet of the Pacific

Ocean, on the W. coast of Vancouver's Island, British Columbia; *Lat.* 48° 50' N., *Lon.* 125° 24' W.

Nit'aria, *n.* (*Bot.*) A genus of trees, order *Malpighiaceae*. The species *N. tridentata*, a native of the desert of Sonssa, near Tunis, has fruit of a somewhat intoxicating nature, and is supposed to be the true lotus-tree of the ancients. It takes its name from the Latin *nitrum*, nitre, because it was first found by Schreber near the nitre-works of Siberia.

Nitrate, (*nī'trait*), *n.* (*Chem.*) A combination between nitric acid and a base. Nearly all the metallic oxides are dissolved by nitric acid; a numerous class of nitrates is thus produced, which, if prepared with heat and with excess of acid, generally contain the metal at its maximum of oxidizement. The nitrates are all decomposed by a red heat; they give off oxygen and nitrogen, either separate or combined, and the metallic oxide ultimately remains. They are also decomposed when heated with sulphur, phosphorus, or charcoal; and sulphurous, phosphoric, and carbonic acids, are usually expelled. When nitrates are decomposed by hydrated sulphuric acid, nitric acid is evolved, and sulphates are formed.

N. of Silver. See SILVER, (NITRATE OF.)

Nit'rated, *a.* In combination with nitric acid.—

(*Photog.*) Prepared with nitrate of silver.

Nit'ratine, *n.* (*Min.*) A native nitrate of soda, covering large areas on the borders of Chili and Peru.

Nitre, (*nī'ter*), *n.* [*Fr.*, from *Lat. nitrum*; *Gr. nitron*.] (*Chem.*) Nitrate of potash. See POTASH, (NITRATE OF.)

Cubic nitre, nitrate of soda;—so called from its crystallizing in rhombs.

Nit'riary, *n.* An artificial hot-bed for the manufacture of nitre.

Nit'ric Acid, *n.* (*Chem.*) See NITROGEN, (OXIDES OF.)

Nit'rifaction, *n.* [*Fr.*] Art, process, or operation of manufacturing nitre by the decomposition of animal substances. (See SECTION II.)

Nit'role, *n.* (*Chem.*) A name applied to artificial bases consisting of ammonia, in which the three equivalents of hydrogen are replaced by three equivalents of some other substance. Trimethylamine and triethylamine are examples of nitriles.

Nit'rifly, *v. a.* To convert into nitre.

Nit'rite, *n.* [*Fr.*] (*Chem.*) A salt of the nitrous acids.

Nitro-aë'rial, *a.* Consisting of a combination of nitre and air.

Nitro-ben'zole, *n.* (*Chem.*) See BENZINE.

Nit'rogen, *n.* [*Fr. nitrogene*; *Gr. nitron*, nitre, and *gennao*, to produce.] (*Chem.*) A transparent, colorless gas, first liquefied in 1877, one of the constituents of the atmosphere, which contains volumetrically about 78 per cent., mechanically united with 22 per cent. of oxygen. Although characterized by its inactivity when in a free state, it enters into combination with the other elements, forming compounds possessed of the most energetic properties. With hydrogen it forms ammonia; with oxygen, nitric acid; with carbon, cyanogen; with carbon, hydrogen, and other elements, an almost infinite number of bodies, known as the vegetable and artificial alkaloids, such as quinine, morphine, aniline, &c., &c. Besides these, most coloring-matters contain nitrogen, and it is an essential constituent of the proximate principles of animal and vegetable bodies; such as albumin, fibrin, casein, &c. It was at first called *azote*, from its incapability of supporting life; but Chaptal named it nitrogen, from its entering into the composition of nitre, nitric acid, &c. It is readily obtained in a variety of ways by abstracting the oxygen from the air. The easiest, perhaps, is by igniting a few pieces of phosphorus floating in a small capsule on water, and covering the whole with a bell-jar. The remaining gas is then washed from the phosphoric acid with which it is contaminated, and passed over caustic potash, to remove any traces of aqueous vapor and carbonic acid. Thus obtained, it is a colorless, uncondensable gas, tasteless, inodorous, and without action on vegetable colors. It is incombustible, and does not support combustion. It may be breathed with impunity as far as itself is concerned, but destroys life by preventing the inspiration of oxygen. Its compounds with the metallic elements are of little importance.

Fulminating gold, silver, platinum, and mercury, are supposed to be nitrides of those metals; and a nitride of copper, Cu_2N , has been formed. The compounds it forms with the non-metallic elements are most numerous and important. From the similarity of their chemical characteristics, nitrogen, phosphorus, arsenic, antimony, and bismuth, have been formed by Gerhardt into a group termed by him the *Nitrogen group*. *Equiv.* 14; *density* 14; *Sp. gr.* 0.9713; *Symbol* N.

Bisulphide of N. When chloride of sulphur is dissolved in ten times its bulk of bisulphide of carbon, and decomposed by ammoniacal gas, it yields, on filtration, beautifully golden-yellow rhombic crystals. It detonates powerfully by percussion, and explodes if heated to 314° Fahr.

Chloride of N. When a bottle of dry chlorine is inverted over a dish containing one part of sal-am-

moniac dissolved in twelve parts of water, the chlorine becomes gradually absorbed, oily drops of terchloride of nitrogen being formed. It is harmless while wet, but the slightest touch with oil, fat, turpentine, or phosphorus, causes it to detonate with fearful violence. It is one of the most violently explosive substances known. Nitrogen forms similar explosive compounds with iodine and bromine.

Oxides of N. With oxygen, nitrogen forms five well-defined compounds:

N_2O —Nitrous oxide, or protoxide of nitrogen.

NO —Nitric oxide, or deutoxide of nitrogen.

N_2O_3 —Nitrous acid.

N_2O_4 —Peroxide of nitrogen.

N_2O_5 —Nitric acid.

The first of these, nitrous oxide, is commonly known as *laughing-gas*, from the exhilarating effects it produces on the human system when breathed. It was discovered by Priestley in 1776, and minutely investigated by Davy. It is best prepared by heating nitrate of ammonia in a retort to a temperature of 400° Fahr., beyond which the operation becomes dangerous. It may be condensed by powerful pressure into a colorless liquid, which freezes into a transparent solid at -150° . When liquid protoxide of nitrogen is mixed with bisulphide of carbon, and evaporated *in vacuo*, a temperature of -220° is obtained, which is a lower point than has been hitherto obtained by any other means. It is a transparent, colorless gas, soluble in three-fourths of its bulk of cold water, and has a spec. grav. of 1.527. It is neutral and non-combustible, but supports combustion with great energy. Deutoxide of nitrogen, or nitric oxide, is obtained by pouring nitric acid, diluted with twice its bulk of water, on copper clippings, placed in a retort. The red fumes at first given off are speedily dissipated, and a gas is disengaged, which, if collected over water, is colorless. The gas has a strong, disagreeable odor, and cannot be breathed. It has hitherto resisted all attempts to liquefy it. It is non-combustible, and will not support combustion. It is neutral in its properties, but is at once converted into the red peroxide of nitrogen in the presence of oxygen, for which it has a great affinity. From this circumstance, it is often used as a qualitative test of the presence of oxygen in any gaseous mixture. It is regarded by many chemists as a body acting both as a base and a radical, and is called by them azotyl or nitrosyl.—*Nitrous acid*, or *hyponitrous acid*. This gas is obtained by mixing in an exhausted flask four vols. of deutoxide of nitrogen and one of pure oxygen; brown fumes are formed, which at a cold of 0° Fahr. condense into a blue liquid. The presence of a small quantity of water converts the blue into a dark green liquid, and a larger quantity decomposes it into peroxide of nitrogen and nitric acid. Although so unstable in its free state, it forms permanent compounds with the alkalis known as nitrites.—*Peroxide of nitrogen*. The red fumes produced on mixing deutoxide of nitrogen with oxygen or atmospheric air consists mainly of this compound. It may be obtained in prismatic crystals by passing four vols. of deutoxide and two of oxygen into tubes cooled down to 0° Fahr. These crystals melt at 16° Fahr., and form an orange liquid, which boils at 71° Fahr. When once melted, it cannot be frozen again. Much speculation has been indulged in as to its real composition. When it reacts on an alkali, equal parts of the nitrate and nitrite of the base are formed. It has the property of replacing one or more equivalents of hydrogen in certain organic compounds, such as benzol, naphthaline, aniline, &c. It is readily absorbed by nitric acid, to which it communicates a deep brown or yellow tinge. It was formerly supposed to possess acid properties, and was called nitrous acid.—*Nitric acid*. Of all the compounds of oxygen and nitrogen, nitric acid is the most important; its power of forming useful compounds with most of the bases, and its powerful oxidizing properties, render its uses most manifold, both in the factory and the laboratory. It was known to the alchemists under the name of *aqua fortis*; but its composition was first made out by Cavendish. It may be formed systematically by passing a current of electric sparks through a mixture of nitrogen and oxygen; and nitrate of ammonia may be detected in rain-water during stormy weather,—the flashes of lightning passing through the moist air producing the same effect. Nitric acid occurs in nature in combination with potash or soda, as an efflorescence on the surface of the earth in tropical countries. Nitrate of potash, nitre, or saltpetre, is imported principally from Tirhoot, in Bengal; and nitrate of soda, or cubic nitre, is found in distinct layers under the surface of the soil in Chili and Peru. Nitric acid is produced for commercial purposes by distilling nitrate of soda and sulphuric acid in large iron retorts lined with fire-clay; the sulphuric acid uniting with the alkaline base, and the nitric acid passing off into a series of stoneware Wolf's bottles containing water. In its most concentrated form, nitric acid contains one equivalent of water, and has a specific gravity of 1.52. It is a colorless, limpid, powerfully corrosive liquid boiling at 184° Fahr., and freezing into a buttery mass at -40° . The monohydrated acid is a very unstable compound, eliminating peroxide of nitrogen when heated until a tetrahydrated compound is formed, when it distils over unchanged. When weaker acids are boiled, they, on the contrary, lose water until this definite hydrate is formed. Nitric acid with four equivalents of water is a definite and stable compound. It has a specific gravity of 1.424, and distils at 250° without change. Nitric acid, especially when heated, is one of the most powerful oxygenants known, a property which is much increased when it contains peroxide of nitrogen in solution, as in the red fuming acid of commerce, often called *Acid-nitros*. 14

Fig. 1960. — NISROCH.

Fig. 1961.
PREPARATION OF NITROGEN.

Deville has succeeded in forming anhydrous nitric acid in transparent rhombic crystals by acting on nitrate of silver with dry chlorine gas. These crystals melt at 85° Fahr., and boil at 113° Fahr. They may be preserved in the cold for any length of time. With water they form nitric acid by evolution of heat. Nitric acid combines with one equivalent of the various bases to form neutral salts, known as nitrates. No acid nitrates corresponding to the acid sulphates are known; but several sub-nitrates may be formed. The nitrates are characterized by deflagrating when thrown on glowing coals, and by decomposing when heated to a high temperature, the oxide of the metal being generally left behind. Nitric acid is not precipitable from solutions of nitrates. The method of detecting its presence is described under the head of TESTS.

Nitro-cal cite, n. (Min.) Native nitrate of lime. It occurs as an efflorescence upon old walls and on calcareous rocks, in the form of silky tufts, with a sharp and bitter taste.

Nitrogenize, v. a. To imbue with the properties of nitrogen.

Nitrogenous, a. Containing nitrogen; pertaining, or having reference to nitrogen.

Nitro-glycerine, (-glis-), n. (Chem.) A violently explosive substance, easily prepared by dissolving glycerine in a mixture of equal measures of the strongest nitric and sulphuric acids, previously cooled, and pouring the solution in a thin stream into a large volume of water, when the nitro-glycerine is precipitated as a colorless heavy oil (sp. gr. 1.6). It is advisable to add the glycerine to the mixed acids in very small quantities at a time, and to cool the mixture in a vessel of water after each addition. When the N. has subsided, the water may be poured off, and the oil shaken several times with water, so as to wash it thoroughly. The formation of N. resembles that of gun-cotton, three equivalents of hydrogen being removed from the glycerine by the oxidizing action of the nitric acid, and three equivalents of nitric peroxide introduced in their place. This oil is far more violent in its explosive effects than gun-cotton, more nearly resembling the fulminates, though not so easily exploded. If a drop of nitro-glycerine be placed on an anvil and struck sharply, it explodes with a very loud report, even though not free from water; and if a piece of paper moistened with a drop of it be struck, it is blown into small fragments. On the application of a flame or of a red-hot iron to nitro-glycerine, it burns quietly; and when heated over a lamp in the open air it explodes but feebly. In a closed vessel, however, it explodes at about 360° Fahr. with great violence. For blasting rocks the nitro-glycerine is poured into a hole in the rock, and exploded by the concussion caused by a particular kind of fuse charged with a little gunpowder. It has been stated to produce the same effect in blasting as ten times its weight of gunpowder, and much damage has occurred from the accidental explosion of nitro-glycerine in course of transport. When N. is kept, especially if it be not thoroughly washed, it decomposes, with evolution of nitrous fumes and formation of crystals of oxalic acid; and it may be readily imagined that, should the accumulation of gaseous products of decomposition burst one of the bottles in a case of nitro-glycerine, the concussion would explode the whole quantity. N. is readily soluble in ether and in wood-spirit, and somewhat less soluble in alcohol; it is reprecipitated by water from these last solutions. It solidifies at 40° Fahr. A drop of N. is said to cause very violent headache, and in larger doses it appears to be decidedly poisonous. See BLASTING.

Nitro-mag'nesite, n. (Min.) A native hydrated nitrate of magnesia, found with nitro-calcite, which it resembles in color and other characters.

Nitrom'eter, n. [Fr. nitromètre.] (Chem.) An apparatus for determining the quality and value of nitre.

Nitro-prus'side, n. (Chem.) One of a very interesting series of new salts, discovered by Dr. Playfair. Their formation arises from the action of nitric acid upon ferrocyanides and ferricyanides. Exhibiting an intimate relation with the salts of the ferro- and ferricyanides, the general formula of the nitro-prussides would appear to be $M_2Fe_2Cy_2NO_2$. According to this scheme, the formation of the nitro-prussides would consist in the reduction of the nitric acid to the state of binoxide of nitrogen, which replaces one equivalent of cyanogen in two equivalents of ferrocyanide. A number of secondary attend upon the formation of these salts, such as hydrocyanic acid, oxanide, cyanogen, carbonic acid, nitrogen, &c. Perhaps the most important of the series is the nitro-prusside of sodium.

Nitrose', Nitrous, a. Pertaining to nitre; partaking of the qualities of nitre, or resembling it; as, *nitrous oxide*.

Nitrous Acid and Oxide. See NITROGEN, (OXIDES OF.)

Nit'ry, a. Nitrous.

Nit'tany Mountain, in Pennsylvania, a ridge traversing Centre and a portion of Union cos.

Nit'ter, n. The horse-louse.

Nit'ty, a. Abounding with the eggs of lice; as, a *nitty* head.

Nivelles, (nee-vell'), a town of Belgium, prov. of S. Brabant, 17 m. S. of Brussels. *Manuf.* Woollens, cotton, and linen fabrics, lace, and paper. *Pop.* 8,000.

Ni'ven, in Pennsylvania, a post-village of Susquehanna co., abt. 14 m. S. of Montrose.

Nive'ous, a. [Lat. *niveus*, from *nix*, *nivis*, snow.] Snowy; partaking of the qualities of snow; resembling, or characterized by, snow.

Nivose', n. See CALENDAR 626.

Nix'burg, in Alabama, a post-village of Coosa co.

Nixdorf, (niks'dorf), a town of Austria, in Bohemia, 33

m. N.N.E. of Leitmeritz. *Manuf.* Woollens and linens. *Pop.* 5,090.

Nix'on, in Illinois, a post-township of De Witt county.

Niz'am's Domin'ions, an extensive territory in the interior of Southern India, lying to the N.W. of the presidency of Madras, in Lat. 15° 10' to 21° 42' N., and Lon. 74° 40' to 81° 32' E. *Area*, 95,000 sq. m. The surface is a slightly elevated table-land. The principal rivers are the Godavari (Godavery), with its tributaries the Dndhna, Manjera, and Pranhita; and the Kistna (Krishna), with its tributaries the Bimah and Tungabhadro. The soil is naturally very fertile, but poorly cultivated; yet, wherever it receives moderate attention, it yields harvests all the year round. The products are rice, wheat, maize, mustard, castor-oil, sugar-cane, cotton, indigo, fruits, and all kinds of kitchen vegetables. Marsh and jungle, however, occupy a great space, and originate fevers, agues, diseases of the spleen, &c., though the climate is quite healthy where these do not abound. The mean temperature of the capital, Hyderabad, in January, is 74° 30', and in May 93°. The inhabitants manufacture for home use woollen and cotton fabrics, and export silk, dressed hides, dye-stuffs, gums, and resins. The ruler is called the *Nizam*.

Nizampatam', or Nizampatnam, a seaport-town of Hindostan, presidency of Madras, 30 m. S.S.E. of Guntoor; *pop.* 25,000.

Niz'za, a town of France. See NICE.

No, adv. [A. S. *na*; Goth. *ni*.] Nay;—a word of denial or refusal, expressing a negative. In the comparative degree, it is used instead of *not* before an adjective or adverb, for *in no degree, not at all*; as, *no* faster, *no* slower. It derives emphasis when immediately following another negative; as, *not* here, *no*, *not* here.

a. Not any; none; not one.

"There is no new thing under the sun."—*Eccles.* i. 9.

n. pl. NOES. A denial; a refusal expressed by using the word *no*.

A negative vote; also, one who votes in the negative;—opposed to *aye*; as, the *noes* had the majority in the division.

Noa'chian, a Pertaining or having reference to Noah, or to the time he lived in; as, the *Noachian* Deluge.

Noah, (no'a.) (Script.) The name of the celebrated patriarch who was preserved by Jehovah with his family, by means of the ark, through the Deluge, and thus became the second founder of the human race. The history of Noah and the Deluge is contained in Genesis, ch. v.-ix. He was the son of Lamech, and grandson of Methuselah; was B. A. M. 1056, and lived six hundred years before the Deluge, and three hundred and fifty after it, dying two years before Abraham was born. Traditions resembling that of Noah are found in many parts of the world, ranging from the legend of the Greeks respecting the flood caused by Deucalion and Pyrrha to those of various tribes of American Indians, some of which bear a striking analogy to that of Noah. The study of the literature of ancient Babylonia has yielded the story of a deific hero of that country who was preserved in a boat from a universal deluge. This forms one section of a very ancient epic poem, and its resemblance to the story of Noah is so close that, in view of the fact that the fathers of the Hebrews came from Babylonia, and some literary connection with that country probably continued, literary critics are of the opinion that the story of Noah was a Hebrew rendition of that of the Babylonian Izdubar.

Noank', in Connecticut, a post-vill. of New London co.

Nob, n. (See KNOB.) The head; the occiput. (Slang.)

A person of wealth or consequence; an aristocratic-looking man; a swell;—opposed to *snob*; as, he's a regular *nob*. (Slang.)

One who strikes for higher wages. (An English localism.)

Nob'bler, n. A wine-glassful of neat spirits; as, a brandy *nobbler*;—an English colloquialism.

Nobility, n. [Fr. *noblesse*; Lat. *nobilitas*.] State or quality of being noble;—hence, dignity of mind; elevation of soul; commanding excellence; greatness or eminence of natural gifts; grandeur.—Loftiness of birth; antiquity of family descent from honorable ancestors; patrician dignity; distinction by rank, dignity, or title.

"Virtue alone is true nobility."—*Dryden*.

The body of nobles; persons of noble lineage taken collectively; the aristocracy; the peerage; the patrician class.

"It is a purpos'd thing to curb the will of the nobility."—*Shaks.*

Noble, a. [Fr., from Lat. *nobilis*.] Renowned; illustrious; eminent; great; elevated; dignified; being above anything that can debase the soul and dishonor reputation; as, a *noble* heart, a *noble* mind.—Grand; stately; imposing; magnificent; splendid; as, a *noble* castle.

"An honest man's the noblest work of God."—*Pope*.

Free; generous; magnanimous; liberal; ingenuous; candid; as, *noble* beneficence, a *noble* act.

Specifically, of high or exalted rank; of aristocratic or patrician race or family; distinguished in birth above the class of commoners or plebeians; as, a man of *noble* blood.

(*Note.* *Noble* is sometimes used in the construction of certain compounds which explain themselves; as, *noble-hearted, noble-natured, noble-minded, &c.*)

n. In Europe, a person of rank above a commoner; a peer; a nobleman.

(*Numis.*) An English gold coin of the Middle Ages, of the value of 6s. 8d. sterling, equivalent to \$1.61. It was struck in the reign of Edward III., in 1344.

No'ble, in Illinois, a post-village and township of Richland co., abt. 38 m. W. of Vincennes.

Noble, in Indiana, a N. E. co.; *area*, about 420 sq. m. *Rivers.* Elkhart river, and numerous less important streams, besides several lakes. *Surface*, nearly level; *soil*, fertile. *Mta.* Iron ore in large deposits. *Cap.* Albion. *Pop.* (1890) 23,359.

A township of Cass co.—*A* township of Jay co.—*A* township of La Porte co.—*A* township of Noble co.—*A* township of Rush co.—*A* township of Shelby co.—*A* township of Wabash co.

Noble, in Michigan, a post-township of Branch co.

A post-village of Branch co.

Noble, in Ohio, an E. S. E. co.; *area*, about 415 sq. m. *Rivers.* Muskingum river, and Wills, Seneca, and Dutch creeks. *Surface*, undulating; *soil*, very fertile. *Min.* Coal and limestone. *Cap.* Caldwell. *Pop.* (1890) 20,753.

A township of Anglaize co.

A township of Defiance co.

A township of Noble co.

A post-office of Cuyahoga co.

No'bleborough, or Noblesborough, in Maine, a post-town and township of Lincoln co. *Pop.* (1897) 970.

Nobleman, n.; pl. NOBLEMEN. One of the nobility; an ennobled person; a peer; a noble; one who is distinguished by rank above a commoner, either by birth, patent, or official station.

"If I blush, it is to see a nobleman want manners"—*Shaks.*

No'bleness, n. State or quality of being noble; greatness; dignity; magnanimity; elevation of mind or of station; distinction derived from a noble ancestry; nobility; lustre of family pedigree.—Stateliness; grandeur; imposing appearance; as, the *nobleness* of a monument.

Noblesse', n. [Fr.; Sp. nobleza.] The nobility in general; persons of high rank, or noble birth, taken collectively, and of both sexes; as, the ancient French *noblesse*.

Noblesse oblige (no-blis' o-bleez'). [Fr.] Rank has its duties; noble birth imposes obligations—used as a figure of speech.

No'blestown, in Pennsylvania, a post-village of Allegheny co., about 13 m. S.W. of Pittsburg.

No'blesville, in Indiana, a city and township, cap. of Hamilton co., about 20 m. E. N. E. of Indianapolis. *Pop.* (1897) 3,650.

A village of Noble co., abt. 24 m. N.W. of Fort Wayne.

No'bleton, in Missouri, a village of Newton co.

Noblewoman, n.; pl. NOBLEWOMEN. A female of noble rank or high birth.

Nobly, adv. Of noble extraction; with nobility of birth or descent; of ancient and honorable lineage; as, *nobly* born.—With elevation of mind or greatness of soul; magnanimously; heroically.—Magnificently; stately; splendidly; imposingly.

No'body, n. Not any body; no one; no person.

An insignificant person; one of no worth, value, interest, or importance; a cipher. (Used colloquially.)

Nobosque Point, in Massachusetts, a promontory and light-house at the entrance of Buzzard's Bay. It exhibits a fixed light 80 feet above the sea; Lat. 41° 31' 5" N., Lon. 70° 39' 53" W.

No'cake, n. A kind of cake made of maize, and eaten by some of the N. American Indian tribes.

No'cent, (no'sent.) a. [From Lat. *nocere*, to injure.] Having a bent or tendency to inflict harm or injury; mischievous; baneful; as, *nocent* qualities.

No'cently, adv. Harmfully; injuriously; mischievously.

Nocera dei Pagani, (no-cha'ra da'e pa-ga'nee), a town of S. Italy, prov. of Principato Citeriore, on the Sarno, 8 m. N.W. of Salerno. *Manuf.* Linen and woollen fabrics. *Pop.* 8,000.

Noci, (no'chee), a town of S. Italy, prov. of Bari, 29 m. S.E. of Bari; *pop.* 6,000.

Noekamix'on, in Pennsylvania, a township of Bucks co.

Noctambulist, n. [Fr. noctambule.] A somnambulist; a sleep-walker.

Noctho'ra, n. [Gr. *nox*, *noktos*, night, and *thouros*, leaping.] (Zool.) The *Douroucoulis*, a gen. of S. American quadrumanous animals, closely allied to the Lemurs, but having the face naked, the fingers of the fore-hands not susceptible of extension, and the tail not prehensile.

Noctil'ne'a, n. [Lat.] A name anciently given to phosphorus.

Noctil'ne'ous, a. Lament by night.

Noctiv'agant, Noctiv'agous, a. [Lat. *nox*, *noctis*, night, and *vagari*, to roam.] Roaming abroad in the night, as wild animals after prey.

Noctivaga'tion, n. A roving or rambling by night.

Noctiv'agous, a. See NOCTIVAGANT.

Noctograph, n. [Gr. *noktos*, night, and *graphein*, to write.] A kind of frame for instructing the blind in writing.

Noctuary, *n.* [From Lat. *noctis*.] A nightly journal; — opposed to *diary*.

Noctuidæ, *n. pl.* (Zool.) A family of lepidopterous insects, to which belongs the Cotton-worm. The body is robust, and covered with scales; the antennæ almost always simple, or but rarely pectinated or ciliated in the males; the thorax stout, and often erected; and the mouth well developed, the maxilla being greatly elongated. The wings are of moderate size, with strong nervures, and ear-shaped spots on the disc of the anterior pair; and when in repose the wings are ordinarily deflexed at the sides of the body. The larvæ, for the most part, are naked, with 16 feet; and they in general undergo their transformations underground in cocoons, often formed of particles of earth mixed in with the silk. The typical groups of this family, as their name imports, fly only by night, and repose during the day in the crevices of the bark of trees, old walls, palings, &c. There are others, however, which fly also during the afternoon and at twilight.

Nocturn, *n.* [Lat. *nocturnus*, from *noctus* — *nox*, *noctus*, night.] (Eccles.) An office, consisting of psalms and prayers, celebrated in the Roman Catholic Church at midnight. It now forms a part of the service of matins.

Nocturnal, *a.* Pertaining to night; done or happening at night; nightly; done or being every night.

Nocturnally, *adv.* In the night; nightly.

Nocturne, *n.* [Fr.; It. *nocturno*.] (Mus.) A serenade; a piece of night-music.

Nod, *v. n.* [Lat. *nudo*, from *nuo*; Gr. *neuo*, to incline in any direction, to beckon.] To incline or bend the head with a quick motion; to make a slight bow; to beckon with a nod. — To incline the head with a quick motion, either forward or sideways, as persons do when sleeping in a sitting posture; to be drowsy. — To bend or incline with a quick motion; as, *nodding* plumes.

— *v. a.* To incline or bend; to shake. — To signify by a nod; as, a *nod* of approbation.

— *n.* A quick declination of the head; a quick declination or inclination. — A quick inclination of the head in drowsiness or sleep. — A slight obeisance; a salutation. — A command.

Nodal, *a.* Pertaining to a node or knot, or to nodes; nodated.

(Mus.) A vibrating chord can spontaneously divide itself into any number of aliquot parts, each of which will vibrate separately, as if it were fixed at its two extremities and formed a separate chord. The points of separation between two such contiguous parts, which do not participate in the vibration of either the one or the other, but remain at rest, are called *nodal points*. In like manner, when elastic plates are put into a state of vibration, the molecules separate themselves into parcels which vibrate independently of each other; and the lines of separation thus formed, or lines of repose in which no vibration takes place, are called *nodal lines*.

Nodated, *a.* [Lat. *nodatus*, from *nodus*, a knot.] Knotted; having knots.

Nodation, *n.* The state of being knotted, or act of making knots. (R.)

Nodaway, in Iowa, a township of Adams co.

— A township of Page co.

— A township of Taylor co.

Nodaway, in Missouri, a N.W. co., adjoining Iowa; area, abt. 600 sq. m. Rivers. One Hundred and Two, Nodaway, and Little Platte rivers. Surface, generally level; soil, fertile. Cap. Maryville.

Nodaway River, rises in Cass co., Iowa, and flowing an almost direct S. course into Missouri, enters the Missouri River between Holt and Andrews cos.

Nodder, *n.* One who nods.

Nodding, *a.* (Bot.) Having a drooping position.

Noddy, *n.* The head; — used in contempt.

Noddy, *n.* A simpleton; a fool. — A sort of vehicle, with two wheels, and usually drawn by one horse.

(Zool.) The Booby, *q. v.*

Node, *n.* [Lat. *nodus*; It. *nodo*; Fr. *nœud*.] A knot; a knob; a lump; a protuberance.

(Astron.) The point where the orbit of a planet intersects the ecliptic. The line in which the two circles intersect is called the *line of the nodes*. When the planet is in this line, in the act of passing from the south to the north side of the ecliptic, it is in its *ascending node*, and its longitude at that moment is the element called the *longitude of the node*.

(Surg.) A hard tumor or swelling upon a bone, usually attended with little pain; but sometimes the pain is considerable, particularly in the night-time. The bones more particularly liable to it are those which are thinly covered with flesh.

(Bot.) A point situated upon the axis of a plant, whence a leaf or leaf-bud originates.

(Geom.) A small oval figure resulting from the intersection of one branch of a curve with another.

(Dialing.) A small hole in the gnomon of a dial, which indicates the hour by its light.

(Lit.) The plot of a drama, of a poem, &c.

(Mus.) A point of rest at which a vibrating string divides itself in producing its harmonic sounds.

Nodial Month, *n.* See LUNAR MONTH.

Nodose, *a.* Knotty; having knots or swelling joints; knotted.

Nodosity, *n.* Knottiness; complication. — A knot; a node.

Nodular, *a.* Pertaining to, or having the shape of, a knot or nodule.

Nodule, *n.* [Lat. *nodulus*, dimin. of *nodus*, a knot.] A little knot or lump; a small woody body found in the bark of some trees; a rounded mineral mass, of irregular shape.

Noduled, *a.* Having little knots or lumps.

Nodulose, **Nodulous**, *a.* (Bot.) Having little knobs.

Noël, *n.* (Eccles.) The French name of Christmas-day, derived, it is said, from *dies natalis* (Lat., birthday).

Noemias, *n. sing.* The science of the understanding; metaphysics; psychology. (R.)

Noetic, **Noetic**, *a.* Belonging to the understanding.

Nog, *n.* [Abbrev. of *noggin*.] A mug; a noggin. — Hot, spiced ale; as, *egg-nog*.

(Naut.) The bolt or tree-nail which secures the heel of each shore employed in sustaining a ship in dock or on the slip.

Nogent-le-notrou, (*no'zhong-leh-no'trou*) a town of France, dept. Eure-et-Loire, on the Huine, 31 m. W.S.W. of Chartres; pop. 7,000.

Noggin, *n.* A small mug or wooden cup; also, a small measure; as, a *noggin* of whisky.

Nogging, *n.* (Arch.) Brick-work carried up between upright pieces or quarters, introduced in order to give the wall or partition greater lateral stiffness and strength.

Noheacab, (*noh'ka-kab*), a village of Mexico, in Yucatan; Lat. 20° 30' N., Lon. 89° 35' W. Pop. 6,000.

Noils, *n. pl.* Short pieces and knots of wool left after combing out the tops.

Noir, (*nwar*), an island of S. America, in the Pacific Ocean, off the S.W. coast of Terra del Fuego; Lat. 54° 30' S., Lon. 73° 5' 40' W.

Noirmoutier, (*nwar-moo'te-a*), an island of the Atlantic, on the coast of France, dept. of Vendee, from which it is separated by a narrow channel. Ext. 12 m. long, and 3 m. broad. Cap. Noirmoutiers. Pop. 8,500.

Noise, *n.* [Fr. *noise*, strife; Lat. *nox*, injury, from *nocere*, to injure.] Sound of any kind; a loud tone; as, a loud *noise*. — Outcry; clamor; boasting or importunate talk; loud, importunate, or continued talk expressive of boasting, complaint, or quarrelling. — Frequent talk; much public conversation.

— *v. n.* To sound loud.

— *v. a.* To spread by rumor or report; — followed by *abroad*.

Noiseless, *a.* Making no noise or bustle; silent.

Noiselessly, *adv.* Without noise; silently.

Noiselessness, *n.* State of being noiseless; a state of silence.

Noisily, *adv.* With noise; by making a noise.

Noisiness, *n.* State or quality of being noisy; loudness of sound; clamorosity.

Noisome, (*noisum*) *a.* [Norm. *noisife*; It. *noioso*, wearisome, *nocivo*, harmful.] Noxious to health; hurtful; mischievous; unwholesome; insalubrious; destructive. — Offensive to the smell or other senses; disgusting; fetid.

Noisomely, *adv.* With a fetid stench; with an infectious steam.

Noisomeness, *n.* Offensiveness; unwholesomeness; aptness to disgust.

Noisy, *a.* Making a loud noise or sound; clamorous; turbulent; obstreperous. — Full of noise.

Nokomis, in Illinois, a post-town of Montgomery co., about 27 m. N.E. of Litchfield. Pop. (1897) 1,500.

Nola, a town of Italy, prov. of Terra-di-Lavoro, 14 m. E.N.E. of Naples. N. was anciently one of the largest cities of Magna Græcia, and took a prominent part in the wars of Rome. It was besieged by Hannibal for three successive years, 216, 215, and 214 B. C. Augustus D. here A. D. 14. Pop. 9,000.

Nolanaeæ, *n. pl.* (Bot.) A small order of plants, alliance *Echiales*. — DIAG. Regular symmetrical flowers, 5 stamens, 5 or more nuts, distinct or partly confluent, a naked stigma, and straight inflorescence. — There are 35 species in 6 genera, consisting of prostrate or erect, herbaceous or suffrutescent plants, natives of S. America. Their properties are unknown.

Noland's Fork, in Indiana, rises in Randolph co., and enters the West Fork of Whitewater River in Wayne co.

Nolaud's River, in Texas, enters the Brazos River from Hill co.

Nolensville, or NOLINSVILLE, in Tennessee, a post-village of Williamson co., abt. 20 m. S.E. of Nashville.

Nolens volens, [Lat., unwilling or willing.] (Law.) Whether one will or not; by force and compulsion.

Noli me tangere, *n.* [Lat., touch me not.] (Surg.)

A disease of the skin, commencing with small ulcerations which eat away the part. These ulcerations sometimes affect the cartilage of the nose, which is destroyed by their progress. Almost all applications rather increase than stop the ravages of the disease, which has received the name of *lupus* (Lat. *wolf*) from its devouring qualities.

(Bot.) See IMPATIENS.

Nolin, in Kentucky, a post-village of Hardin co., abt. 53 m. S. of Louisville.

Nolin Creek, in Kentucky, enters Green River in Edmonson co.

Nolition, (*no-lish'un*) *n.* [Lat. *nolitio*, from *nolle*, to be unwilling.] Unwillingness; — opposed to *volution*.

Nolle prosequi, [Lat., unwilling to prosecute.]

(Law.) A proceeding by which a plaintiff withdraws from the further prosecution of his suit, when he has either misconceived the nature of the action or mistaken the proper party to be sued. It may be entered as to a part of the suit only, or as to some of the defendants, in which case he is at liberty to proceed as to the rest. If it be entered before judgment, the plaintiff may bring another action for the same cause; but if after judgment, it operates as a restraint, and bars any future action for the same cause. When entered as to the whole declaration, or as to one or more of the defendants in any personal action, every such person is entitled to his costs.

Nom, (*nong*), *n.* [Fr.] Name.

Nomad, *n.*; *pl.* NOMADS, or NOMADES. [Gr. *nomas*, *nomos*, from *nomos*, pasture.] A roaming or wandering shepherd; one who leads a wandering life, and subsists by tending herds of cattle, which graze on herbage of spontaneous growth.

— *pl.* (Hist.) Tribes of men without fixed habitation. The nomads of ancient times were generally tribes devoted to pastoral pursuits; for the Greeks and Romans knew of no races subsisting wholly by the chase. The principal nomadic tribes of antiquity were those of Southern Russia and the interior of Asia, from whom sprang, in the decline of the Roman empire, many of the tribes which overran W. Europe; and, at a later era, those which conquered empires in W. and S. Asia. The vast regions of Mongolia are inhabited by nations which still retain their wandering habits.

Nomadian, *n.* The same as NOMAD. (R.)

Nomadie, *a.* [Gr. *nomadikos*.] Pertaining to, or resembling nomads; pastoral; subsisting by tending of cattle, and wandering for the sake of pasturage.

Nomadically, *adv.* In a nomadic manner.

Nomadism, *n.* The state of being a nomad.

Nomadize, *v. n.* To lead a wandering or nomadic life; to subsist by grazing herds on herbage of spontaneous growth.

Nomancy, *n.* [Fr. *nomancie*, *nomancee*; Lat. *nomen*.] The art of divining the fates of persons by the letters that form their names.

Nomarch, *n.* [Gr. *nomos*, a district, and *archein*, to rule.] The ruler of a district or division of a province, among the modern Greeks.

Nomarchy, *n.*; *pl.* NOMARCHIES. A district, or division of a province among the modern Greeks.

Nomble, (*num'blz*) *n. pl.* [Fr. *nomble*, from Lat. *lumbulus*, dimin. of *lumbus*, a loin.] The entrails of a deer.

Nombre-de-Dios, (*nom'bra-da-dee'oce*) a seaport of the United States of Colombia, on the N. coast of the Isthmus of Panama, abt. 40 miles N.E. of the town of Panama.

Nom-bre-de-Di'os, a town of Mexico, abt. 60 m. E. of Durango; pop. 7,000.

Nombril, *n.* [Fr., the navel.] (Her.) The centre of an escutcheon.

Nom de guerre, (*nôm-de-gâr'*) [Fr., a name during the war.] A name assumed for a certain purpose; a fictitious name.

Nom de plume, (*plum'*) [Fr., a pen-name.] A name assumed by an author; a pseudonym.

Nome, *n.* [Gr. *nomos*, from *nemein*, to distribute.] (Anc. Geog.) The Greek name for the provinces into which Egypt was anciently divided. According to Diodorus Siculus, the division into nomes was made by Sesostris, whom some modern writers consider as identical with the Rameses II. of the monuments; but such statements refer to a time of which we have no historical knowledge. There were thirty-six nomes, which, in the time of Strabo, were thus divided, — ten in the Thebaid, sixteen in the Heptanomis or intermediate district (which, according to its name, probably consisted in earlier times of seven only), and ten in the Delta. This division was not materially altered until the latest age of the Roman government.

(Algebra.) A single quantity affixed to some other quantity by its proper sign.

(Mus.) In the ancient Greek music, a term used to denote any melody determined by inviolable rules.

(Med.) A phagedenic ulcer.

Nomenclator, *n.* [Lat., from *nomen*, a name, and *calare*, to call.] A person who gives names to things, or classifies them by their names.

Nomenclatress, *n.* A female nomenclator.

Nomenclatural, *a.* Pertaining to nomenclature.

Nomenclature, *n.* [Lat. *nomenclatura*.] A list or catalogue of the more usual and important words in a language, with their significations; a vocabulary or dictionary. (R.) — In a more special sense, this term is employed to denote the language peculiar to any science or art; thus, we speak of the *nomenclature* of chemistry, botany, &c.

N., (Chemical.) See CHEMICAL NOMENCLATURE.

Nomenclat'urist, *n.* One versed in nomenclature.

Nomial, *n.* (Alg.) A single term; a nome.

Nominal, *a.* [Lat. *nominalis*, from *nomen*, *nominis*, a name.] Pertaining to a name or names; titular; consisting in names. — Existing in name only; as, a *nominal* distinction.

Nominalism, *n.* The doctrinal principles of the Nominalists.

Nominalistic, *a.* Belonging, or having reference to, the Nominalists.

Nominalists, **Realists**, **Conceptualists**, (*nom'i-nal-ists*, *re'al-ists*, *kon-sep'tu-al-ists*.) were three prominent and conflicting sects among the scholastic philosophers. The contest turned upon the nature of general terms, or *universals*. While all parties agreed that the object of the science of logic was universals, they differed upon the question as to whether these universals were *real* things, or only *names*. The Nominalists maintained that the so-called universal ideas do not stand for any conception of the mind, still less for any entity out of it, but are merely verbal signs; that there is no such thing as an abstract animal, or a tree in general, but only individual animals and trees; that, in fact, there is nothing in the universe of matter or mind but separate individualities. The Realists, on the contrary, affirmed that universals were not mere figments of language, but that they have an objective existence, are incorporeal realities, the essences or types of things, not to be confounded with the things themselves.

Conceptualism was proposed as an intermediate doctrine between the two extremes. It gave to universals a logical or psychological existence, as mental conceptions. The Nominalists cited Aristotle as their authority; the Realists adduced Plato. The former maintained that particulars are the only real substances, and that general ideas are abstractions of the human reason. Plato, on the other hand, believed in the eternal existence of ideas. (See *IDEA*.)—Logic, with Aristotle, was the science of names and nations; with Plato, of names and realities. Rarehnus, a canon of Compiègne, in the 11th century, was the first to give a distinct and complete development to Nominalism. His opinions were believed to affect the doctrine of the Trinity, and were condemned by the Synod of Soissons (1092). He was attacked by Anselm in a work on the Unity of the Trinity; but Anselm's Realism was of an undecided and incomplete character. William of Champeaux, the founder of scholastic Realism, maintained that universals, so far from possessing a merely nominal existence, are the only real entities. Thus, Realism verged toward Pantheism, while Nominalism inclined toward scepticism. Abelard sought to reconcile the opposing parties by advancing the doctrine of Conceptualism. This, however, rather avoided than solved the problem; but its moderation secured its triumph. John of Salisbury wrote, "that there had been more time consumed in the discussion than the Cæsars had employed in making themselves masters of the world; that the riches of Cræsus were inferior to the treasures that had been exhausted upon it; and that the contending parties, after having spent their whole lives on this single point, had neither been so happy as to determine it to their satisfaction, nor to find in the labyrinths of science, where they had been groping, any discovery that was worth the pains they had taken." Nominalism had become nearly extinct, when it was revived by William of Occam, an English Franciscan of the 14th century. The contest was renewed with the greatest fury in the schools of Britain, France, and Germany; and when words failed to carry conviction, fists, and even clubs and swords, were had recourse to. Afterwards Realism became identified with the cause of the Pope and the Church, and flourished in Italy while Nominalism became associated with the political movement against the power of the papacy, and was generally received throughout the continent of Europe. However, in 1473, Louis XI. of France prohibited the teaching of Nominalism, and ordered the books which favored it to be seized and bound in chains in the public libraries. At length the revival of letters and the advent of the Reformation put an end to the fiercest controversy that has been known to prevail in philosophical speculation.

Nom'inally, adv. By name, or in name only; in a nominal manner.

Nom'inate, v. a. [Lat. *nominare*, *nominatus*, from *nomen*, *nominis*, a name.] To name; to mention by name.

"To nominate them all, it is impossible."—*Shaks.*

—To call; to denominate. —To name, or designate by name, for an office or place; to appoint; —usually, to name for an election, choice, or appointment; to propose by name; as, to *nominate* a candidate.

Nomina'tion, n. [Lat. *nominatio*.] Act of proposing by name for an office. —The power of nominating or appointing to office; the state of being nominated.

Nom'inative, a. [Fr. *nominatif*; Lat. *nominativus*.] Pertaining to the name which precedes a verb, or to the first case of nouns.

—*n.* (*Gram.*) The first case of nouns which are declinable. It is the simple position of a noun or name, designating a substance absolutely, or without relation to any other substance; and is chiefly placed before verbs, as the subject of the proposition or affirmation.

Nom'inatively, adv. As a nominative; in the manner of the nominative.

Nom'inator, n. One who nominates.

Nominee', n. [Fr. *nommé*, named.] One who is named or designated by another to any office, position, or duty.

Nom'inor, n. One who nominates, as to an office.

Nomog'raphy, n. [From Gr. *nomos*, a law, and *grapho*, to write.] A treatise on laws.

Nomology, n. Rational psychology. — *Sir W. Hamilton.*

Nom'othete, n. [Gr. *nomos*, law, and *tithenai*, to lay down, as a law.] A lawgiver.

Nomothet'ic, Nomothet'ical, a. Enacting laws; legislative. (*R.*)

Non, adv. [Lat.] Not; — used as a prefix, in the English language, to nouns and verbs, applying to them a negative sense, and governing and varying their meaning; as, *non-agreement*, *non-residence*. It is also, in some cases, prefixed to adjectives; as, *non-electric*.

Non-abil'ity, n. Want of ability.

(*Law.*) Want of ability to do an act; — a plea founded on such cause.

Non-acced'ing, a. Not acceding; declining to comply.

Non-accept'ance, n. A want of acceptance; denial of acquiescence.

Non-ac'id, a. Not acid.

Non-acquaint'ance, n. State of being unacquainted; lack of acquaintance.

Non-acquies'cence, a. Refusal to comply or acquiesce.

Non-admis'sion, n. Failure to receive admission.

Non-adult', n. Not of age; not adult.

Non-age, n. State of being not of age, or under age; minority; the time of life before a person, according to the laws of his country, becomes of age to manage his own concerns. See *INFANT*.

Non-aged, a. Not having due maturity; being in nonage.

Nonagena'rian, n. [Lat. *nonagenarius*.] A person ninety years old.

Nonages'im'al, a. [Fr. *nonagesime*, from Lat. *nonagesimus*.] Pertaining to a nonagesimal.

—*n.* (*Astron.*) The ninetieth degree of the ecliptic, reckoned from either of the points in which it is intersected by the horizon. It is, therefore, the highest point of the ecliptic at any instant; and its altitude is equal to the distance of the pole of the ecliptic from the zenith. The nonagesimal is used in calculating the parallaxes of the moon.

Non'agon, n. [Lat. *nonus*, nine, and Gr. *gonia*, an angle.] (*Math.*) A plane figure, having nine angles and nine sides. It will be found, by reference to *MENSURATION*, that when the side of a nonagon is 1, the area of the figure will be 6.1818242.

Non-aliena'tion, n. The state of not being alienated.

Non-appear'ance, n. Default of appearance, as in court, to prosecute or defend.

Non-appoint'ment, n. Neglect of appointment.

Non-arriv'al, n. Failure to arrive.

Non-assump'sit. [Lat., he did not undertake.] (*Law.*) A plea by way of traverse in the action of *assumpsit*, or promises, whereby a man denies the existence of any promise to the effect alleged in the declaration, &c.

Non-attend'ance, n. A failure to attend; omission of attendance.

Non-atten'tion, n. Inattention; want of attention.

Non-bitu'minous, a. Containing no bitumen.

Nonce, n. The present purpose or occasion; — generally employed in the phrase *for the nonce*.

"I'll have prepar'd him a chalice for the nonce." — *Shaks.*

Nonchalance, (non-sha-lons'), n. [Fr., from *nonchalance*.] Indifference; coolness; sang-froid; carelessness.

Nonchalant', a. [Fr., from *nonchaloir*, to have no care for a thing.] Indifferent; cool; careless; as, a *nonchalant* demeanor.

Non-claim, n. Omission of claim within legally limited time.

Non-cohe'sion, n. Want of cohesion.

Non-coin'cidence, n. Lack or want of coincidence.

Non-coin'cident, a. Not coincident.

Non-com'batant, n. (*Mil.*) A person belonging to an army or navy whose position does not involve the duty of fighting, as a chaplain, bandsman, &c.

Non-commissioned, (-mish'und,) a. Not having a commission, as a soldier or seaman.

Non-commis'sioned Officer, n. (*Mil.*) One who, while he is not commissioned as an officer, holds an appointment by virtue of which he exercises authority over the private soldiers. Such are sergeant-majors, quartermaster-sergeants, and sergeants. A non-commissioned officer can be reduced to the ranks by sentence of court-martial, or order of the colonel or other officer commissioned as *commandant* of his regiment; but so long as he holds his rank, he can receive no minor punishment.

Non-commit'tal, n. A forbearance of not committing one's self; a state of not being pledged or committed.

Non-communion, (-mun'yun,) n. Neglect of communion; not of the communion.

Non-comple'tion, n. Failure of completion; want of finish.

Non-compli'ance, n. Failure or neglect of compliance.

Non-comply'ing, a. Refusing or neglecting to comply.

Non-com'pos, Non-compos MENTIS. [Lat.] (*Law.*) Not of sound mind; — hence, used as a noun, a lunatic, an idiot; a person of deranged intellect.

Non-con, n. See *NON-CONTENT*.

Non-conclud'ing, a. Not closing or ending.

Non-concur', v. n. To disagree; to refuse to concur.

Non-concur'ence, n. A refusal to concur or assent.

Non-conduct'ing, a. Not transmitting; not conducting another substance or fluid.

Non-conduc'tion, n. The quality of not being able to transmit or conduct.

Non-conduc'tor, n. (*Electricity.*) See *CONDUCTOR* AND *NON-CONDUCTOR*.

Non-conform'ing, a. Not conforming to, or joining in, the established religion.

Non-conform'ist, n. One who does not conform to an established church; particularly, one who refused to conform to the Established Church of England at the restoration of Charles II. — See *DISSENT*.

Non-conform'ity, n. Neglect or failure of conformity; — especially, in England, neglect or refusal to unite with the Established Church in its rites and mode of worship.

Non-con'stat. [Lat.] (*Law.*) It is not plain, clear, or conclusive.

Non-conta'gious, a. Not contagious, as a disease.

Non-conta'giousness, n. The state or quality of not being contagious, or of not being communicable from a diseased to a healthy body.

Non-contem'poraneous, a. Not contemporaneous; not coeval.

Non-content', n. (Sometimes abridged into *non-con*.) A member of the English House of Lords who votes in the negative; — opposed to *CONTENT*, *q. v.*

Non-contrib'uting, Non-contrib'utory, a. Not contributing

Non-deliv'ery, n. A failure or neglect to deliver.

Non-deposit'ion, (-zish'un,) n. A neglect or failure to deposit or throw down.

Non-descript, a. [Lat. *non*, not, and *descriptus*, described.] That has not been described; that cannot easily be described.

—*n.* Anything that has not been described or classed; a person or thing not easily described or classed.

Non-develop'ment, n. A failure of development.

Non-discover'ery, n. Lack of discovery.

None, (nun,) a. and pron. [A. S. *nan*, *næn*, from *ne*, and *an*, *sean*, *ain*, one.] No one; not anything; — often employed also partitively, or, as a plural, not any.

"With none who bless us, none whom we can bless." — *Byron.*

—No; not any; — rarely used adjectively, particularly before a vowel, as formerly.

"Thou shalt have none assurance of this life." — *Deut. xxviii.*

None of, not; not at all; also, nothing of; — employed emphatically.

"My people would not hearken to my voice; and Israel would none of me." — *Ps. l xxxi. 11.*

—*n.* [Lat. *nona*, ninth.] (*Ecl.*) In the Roman Catholic Church, one of the lesser canonical hours, so called from its recitation being primitively fixed at the ninth hour.

Non-elect', n. A person not elected or chosen to salvation.

Non-elec'tion, n. Failure to hold election, or be elected.

Non-elec'tric, Non-elec'trical, a. Not electric.

—*n.* A non-conductor of electricity.

Non-emphat'ic, Non-emphat'ical, a. Without emphasis; unemphatic.

Nonen'tity, n. [Lat. *non*, and L. Lat. *entitas*, from Fr. *entité*.] Non-existence; the negation of being. — A thing not existing; as, a theological *nonentity*.

Non-epis'copal, a. Not episcopal; not belonging to the Episcopal Church.

Non-episcopa'tian, n. A person who does not belong to the Episcopal Church or denomination.

Nones, n. pl. [Lat. *nonæ*, from *nonus*, the ninth.] (*Roman Calendar.*) One of the three divisions of the Roman month, and so called because they fell on the *ninth* day, reckoned inclusively before the *ides*. The months of March, May, July, and October, the *ides*, fell on the 15th day of the month, and the *nones* consequently on the 7th. In the other months, the *ides* were on the 13th day, and the *nones* on the 5th.

Non-essen'tial, a. Not essential; not absolutely necessary.

—*n.* That which is not essential or necessary to a particular purpose.

Non est fac'tum. [Lat., is not his deed.] (*Law.*) A plea to an action of debt on a bond or other speculation.

Non est inven'tus. [Lat., he is not to be found.] (*Law.*) The term applied to a sheriff's return to a writ of *capias*, when the defendant is not to be found within his jurisdiction. The return is usually abbreviated *N. E. I.*

None'such, Non'such, n. A thing that has not its equal; an extraordinary thing.

(*Bot.*) See *MEDICAGO*.

Non-excommu'nicable, a. Not liable to be excommunicated.

Non-execution, n. Failure of execution.

Non-exist'ence, n. Absence of existence; the negation of being. — A thing that has no existence.

Non-exist'ent, a. Not having existence.

Non-exporta'tion, n. A failure or neglect of exportation.

Non-exten'sile, a. Not capable of being stretched; not extensible.

Nonfea'sance, n. (*Law.*) The offence of omitting what ought to be done.

Non-fulfil'ment, n. Failure or neglect of fulfilment.

Nonillion, (-nil'yun,) n. [Lat. *nonus*, and Eng. *million*.] According to the English method of numeration, the number obtained by involving a million to the ninth power, represented by a unit with fifty-four ciphers annexed; — according to the French method, in general use on the continent of Europe and in the U. States, the tenth power of a thousand, which is denoted by a unit with thirty ciphers following. — Also, the symbols which represent either of these numbers.

Non-importa'tion, n. Neglect or failure of importation.

Non-import'ing, a. Not importing or bringing from foreign countries.

Non-inhab'itant, n. One not an inhabitant; a foreigner; a stranger.

Non-join'der, n. (*Law.*) The omission of one or more persons who should have been made parties to a suit at law or in equity as plaintiffs or defendants.

Non-jur'ant, a. Non-juring; Jacobite.

Non-jur'ing, a. [Lat. *non*, and *juro*, *jurare*, to swear.] Not swearing allegiance; pertaining to non-jurors.

Non-ju'ror, n. (*Eng. Hist.*) One who refused to take the oath of allegiance to the new government, and the Crown, at the Revolution of 1688, when James II. having abdicated, the throne was offered to William III., partly in right of his wife Mary Stuart. The non-jurors were the adherents of James, and called, also, *Jacobites*.

Non-limita'tion, n. A want of limitation.

Non-li'quet. [Lat., it does not appear.] (*Law.*) A verdict given by a jury, when, in consequence of the absence of sufficient evidence, the trial is postponed to a future occasion.

Non-malig'nant, a. Not malignant; — said of a disease.

Non-manufact'uring, a. Not having manufactures.

Non-mem'ber, n. Not a member.

Non-mem'bership, n. The state of not being a member.

Non-metal'lic, a. Not consisting of metal. — Not having metallic properties.

Non-metallic elements. (*Chem.*) The sub-divisions of these bodies is much more difficult than that of the

metals. If their arrangement be founded either on their general electrical or chemical relations, or into supporters of combustion and combustibles, or into acidifiable and acidifying substances, difficulties arise in the details which are of great practical inconvenience. The electrical arrangement brings together substances extremely dissimilar in their chemical character, such as oxygen and sulphur, both of which are electro-negative bodies. The chemical arrangement again leads us at one time to class oxygen with sulphur, both being supporters of combustion; and at another to separate them, as oxygen is preëminently a supporter of combustion, and sulphur as eminently a combustible. In all these arrangements, also, nitrogen, as an element, stands out as an obstinate exception. It is acidifiable by oxygen, but alkalisable by hydrogen. It is not combustible, nor is it a supporter of combustion. These and other difficulties have caused the electrical and chemical analysis of the non-metallic elements to be rejected as a basis of classification. Berzelius divides them into *oxygen*, which he places by itself as a supporter of combustion, and into inflammable substances, in which he includes all the other elements; then, adverting particularly to the non-metallic substances, he divides them into three classes: namely, —1. Permanently elastic or gaseous bodies (*Gazolytes*), — oxygen, hydrogen, and nitrogen. 2. Metalloids, — sulphur, phosphorus, carbon, boron, and silicon. 3. Salifying substances (*Halogenia*), — chlorine, iodine, bromine, fluorine.

Non-natural, a. Unnatural.

Non-naturals, n. pl. [Lat. *non naturalia*.] (*Med.*) Things which are necessary for the existence of man, without entering into his composition, or constituting his nature, such as air, meat, drink, sleep, watching, motion, rest, the retentions and excretions, and the affections of the mind.

Non-necessity, n. State of being unnecessary.

Non-ny, n. A nincompoop; a simpleton; a ninny.

Non-obedience, n. Lack of obedience.

Non-observance, n. Failure to observe or fulfil.

Non-obstante, [Lat.] (Law.) Notwithstanding; in antagonism to what is to be stated or admitted.

Nonogenarian, n. The same as NONAGENARIAN.

Nonpareil, (non-pa-rel') n. [Fr. *non*, and *pareil*, from Lat. *par*, *paris*, equal, like.] A person or thing having no equal:

"You were crowned the nonpareil of beauty." — *Shaks.*

(*Printing.*) A small kind of type. (This work is printed in *Nonpareil*.)

—A kind of apple. —A small bon-bon. —A kind of narrow riband.

Non-payment, n. Neglect or failure of payment.

Non-performance, n. Failure of performance.

Non-plus, n. [Lat. *non*, and *plus*, more, compar. of *multus*, many.] A state in which one can say or do no more; puzzle; insuperable difficulty; a state in which one is unable to proceed.

—*v. a.* To bring to a state in which one can say or do no more; to put to a stand; to puzzle; to confound; to stop by embarrassment.

Non-ponderosity, n. Lack of weight.

Non-ponderous, a. Wanting in weight.

Non-preparation, n. Want of preparation.

Non-presentation, n. Failure or neglect to present.

Non-production, (-duk'shun), n. Failure to produce.

Non-professional, (pro-fesh'un-al) a. Not of or belonging to a profession; not performed by or proceeding from professional men.

Non-proficiency, n. Failure to improve or make progress.

Non-proficient, (-fish'ent), n. One who has failed to improve or make progress in any study or pursuit.

—*v. a.* To allow to drop without a trial; — said of a lawsuit.

Non-recurrent, a. Not occurring again.

Non-recurrence, a. Not recurrent.

Non-regent, n. In the English universities, a master of arts whose regency has terminated.

Non-rendition, n. Failure to render what is due.

Non-resemblance, n. Want of resemblance; dissimilarity; unlikeness.

Non-residence, n. Failure or neglect of residing at the place where one is stationed, or where official duties require one to reside, or on one's own lands.

Non-resident, a. Not residing in a particular place, on one's own estate, or in one's proper place.

—*n.* One who does not reside on one's own lands, or in the place where official duties require.

Non-resistance, n. Passive obedience; submission to authority; omission of resistance.

Non-resistant, a. Making no resistance to oppression or power; non-resisting.

—*n.* One who maintains that no resistance should be made to the injuries inflicted by others.

Non-resisting, a. Making no resistance; non-resistant.

Non-ruminant, a. Not ruminating.

Non-sane, a. In an unsound condition; imperfect.

Non-sense, n. Words or language which have no meaning, or which convey no just ideas; absurdity. — Trifles; things of no importance.

Nonsensical, (-sens'i-kal), a. Unmeaning; absurd; foolish.

Nonsensically, adv. Absurdly; without meaning.

Nonsensicalness, n. Jargon; absurdity.

Non-sensitive, a. Without sense or perception.

Non-sequitur, (-sek'wi-tur.) [Lat.] It does not follow.

(*Logic.*) An inference not deducible from the premises.

Non-sexual, a. Neuter; without distinguishing sex; hermaphrodite.

Non-slaveholding, a. Not holding or possessing slaves.

Non-solution, n. Failure of solution.

Non-solvency, n. Inability to pay debts.

Non-solvent, a. Unable to pay debts; insolvent; bankrupt.

—*n.* An insolvent; a bankrupt.

Non-sparing, a. Merciless; all destroying.

Non-submission, n. Want of submission.

Non-submissive, a. Not submissive.

Non-subscribing, n. Failure or refusal to subscribe.

Non'such, n. See NONESUCH.

Non'suit, n. (Law.) The name of a judgment given against the plaintiff when he is unable to prove his case, or when he refuses or neglects to proceed to the trial of a case after it has been put at issue, without determining such issue.

—*v. a.* To stop or quash in legal process.

Non-term, n. (Law.) A vacation between two terms of a court.

Nontronite, n. [So called from being found in the arrondissement of *Nontron*, France.] (*Min.*) A hydrated terferrite of iron, occurring in France, at Nontron, in small kidney-shaped masses, varying in color from green to yellow, and with a dull lustre.

Non-uniformist, n. One who believes that the causes which formerly produced changes in the earth are not now operating in the same manner.

Non-usage, (non-yuz'ans), n. Disusage; neglect of using.

Non-user, (non-yuz'er), n. Failure or incapacity to use.

Non-vernacular, a. Not vernacular; as, a non-vernacular phrase.

Noödle, n. A fool; a simpleton. (*Vulgar.*)

Nook, n. [Scot. *neuk*; Gael. *niac*.] A narrow place formed by an angle in bodies, or between bodies; a corner; a recess; a covert retreat.

Nookahoe'va, NOUKAHIVA, or NUKAHIVA, the largest of the Marquesas Islands in the S. Pacific Ocean; Lat. 8° 53' N., Lon. 159° 49' W. Length 18 m. The surface is mountainous. *Pop.* 15,000.

Nook-shotten, a. Fall of nooks; as, nook-shotten islands.

Noölogical, a. Pertaining to noölogy.

Noölogist, n. One versed in noölogy.

Noölogy, n. [Gr. *noös*, the mind, and *logos*, discourse.] The science of intellectual phenomena.

Noon, n. [A. S. *non*, the ninth hour of the day; O. Fr. *none*, from Lat. *nona hora*, the ninth hour.] The middle of the day; the time when the sun is in the meridian; twelve o'clock. — The zenith or period of greatest lustre.

"This dead of midnight is the noon of thought." — *Barbauld.*

—*a.* Meridional; having reference to mid-day.

Noon-day, n. Mid-day; twelve o'clock in the day.

—*a.* Pertaining to mid-day; meridional.

Noon'ing, n. Repose at noon; a repast at noon.

Noonivak, or NOUNIVACK, or NUNIVACK, in *A'ska*, an island in Behring Sea, off Cape Vancouver; Lat. 60° N., Lon. 166° W. *Area*, abt. 2,100 sq. m.

Noon-shun, n. Same as NUNCHEON, *q. v.*

Noon-tide, n. The time of noon; mid-day.

—*a.* Pertaining to noon; meridional.

"Noon-tide repast, or afternoon's repose." — *Milton.*

Noose, (nōōz'), n. [Ir. *nas*, a band, tie, *nasgaim*, I bind; Gael. *nasg.*] A running knot which binds the closer the more it is drawn.

—*v. a.* To tie in a noose; to catch in a noose; to entrap; to ensnare.

Noot'ka Sound, an inlet of the Pacific Ocean on the W. coast of Vancouver Island, British N. America; Lat. 49° 35' N., Lon. 126° 34' W.

Nopal, n. [Mexic. *nopalli*.] (*Bot.*) See OPUNTIA.

No'palry, n. A thicket of nopal for rearing the cochineal insect.

Nopc, n. (Zool.) An English provincialism for the bullfinch.

Nor, conj. A word that denies or renders negative the second or subsequent part of a proposition, or a proposition following another negative proposition; — correlative to *neither* or *not*.

No'ra, in Illinois, a post-village and township of Jo Daviess co., abt. 30 m. E. of Galena; *pop.* of twp abt. 2,000.

No'ra Springs, in Iowa, a post-village of Floyd co.

Nor'cia, a town of Central Italy, prov. of Perugia, 17½ m. E. N. E. of Spoleto; *pop.* 4,000.

Nord, a dept. in the N. of France, between Lat. 50° and 51° N., Lon. 2° and 4° E., having N. the North Sea, E. Belgium, S. the dept. of Aisne, and W. Pas-de-Calais; *area*, 2,278 sq. m. The surface is generally level, and the soil fertile and well cultivated. *Rivers.* Aa, Yser, Lys, Scheldt, and Sambre. *Prod.* Wheat, flax, hemp, tobacco, fruits, and vegetables. *Min.* Iron and coal. *Manuf.* Important; principally, lace, linen, carpets, cordage, arms, cutlery, glass, paper, beet-root sugar, &c. *Chief towns.* Lille (the cap.), Avesnes, Cambrai, Donay, Dunkerque, Hazebrouke, and Valenciennes. *Pop.* 1,392,041.

Norden, a town of Prussia, prov. of Hanover, 14 m. N. W. of Aurich; *pop.* 6,000.

Nordhausen, a town of Prussian Saxony, district of Erfurt, on the Zorge, 49 m. W. of Halle, and 38 m. N. W. of Erfurt. *Manuf.* Woollen cloth, sealing-wax, vitriol, soap, and cream of tartar; also numerous oil-mills, marble-works, and a considerable trade in corn. *Pop.* 17,686.

Nordhausen Acid, n. (Chem.) A peculiar sul-

phuric acid, intermediate between the anhydrous and monohydrated acid, so called from the place where it was formerly manufactured. It is generally in the form of a brown fuming liquid. It is a good solvent of indigo.

Nordheim, or Northeim, a town of Prussia, prov. of Hanover, on the Rube, 12 m. N. of Göttingen. *Manuf.* Tobacco. *Pop.* 5,000.

Nordland, or Norrland, a division of Norway, bordering on the Atlantic, between Lat. 6° and 70° N., Lon. 12° and 22° E.; *area*, including Loffoden Islands, 14,887 sq. m. *Pop.* 15,512.

Nordlingen, a town of Bavaria, dist. of Middle Franconia, on the Eger, 48 m. S. W. of Nuremberg. *Manuf.* Woollens, linens, carpets, gloves, and hosiery. Here, 1634, the Swedes and their allies, under Bernhard, Duke of Weimar, were defeated by the Austrians and Bavarians under the Archduke Ferdinand; and, 1796, the Austrians were defeated by the French. *Pop.* 7,000.

Nordkoping, a seaport-town of Sweden, district of Linköping, on the Molata, at its mouth in the Baltic, 85 m. S. W. of Stockholm. *Manuf.* Brass and hardware goods, linen, cotton, and woollen fabrics, gloves, paper, leather, and starch. *Pop.* 21,079.

Nordstrand, an island of Denmark, off the W. coast of Schleswig, 15 m. N. E. of the mouth of the Eder; *area*, 20 sq. m.; *pop.* 3,000.

Nore, a sand-bank in the estuary of the Thames, in England, 4 m. N. E. of Sheerness, Lat. 51° 29' N., Lon. 0° 48' W. It has a floating light called the Nore Light.

Norfolk, (nor'fok), an ancient English house, descended from the royal family of Plantagenet, through Thomas Plantagenet of Brotherton, Earl of Norfolk, second son of Edward I., and Earl Marshal of England. The heiress of the Norfolk family, Margaret, eldest daughter of Thomas de Mowbray, Duke of Norfolk, having espoused, at the commencement of the 15th century, Robert Howard, the title of Duke of Norfolk passed to the latter, and was transmitted by him to his descendants. The living head of this family takes precedence as premier duke and Earl Marshal of England, and follows immediately after the princes of the blood-royal.

Norfolk, (nor'fok), a marit. co. of the E. of England, having N. and E. the German Ocean, S. Suffolk, and W. Cambridge; *area*, 2,024 sq. m. The surface is generally level, and the soil moderately fertile, except on the S. and S. E. which is marshy. *Rivers.* Great and Little Ouse, Nen, Waveney, Yare, and Wensum. *Prod.* Wheat, barley, oats, rye, and vegetables. *Manuf.* Woollens, silks, shawls, crapes, and hosiery. *Chief towns.* Norwich, (the cap.), Yarmouth, and King's Lynn. *Pop.* 44,798.

Norfolk, in prov. of Ontario, a S. W. co., bordering on Lake Erie; *area*, about 600 sq. m. *Cap.* Simcoe. *Pop.* 39,500.

—A fort and township in the above co.

Norfolk, in Connecticut, a post-town and township of Litchfield co. *Pop.* (1897) 1,620.

Norfolk, in Massachusetts, an E. co., bordering on Massachusetts Bay on the E., and adjoining Rhode Island on the S.; *area*, about 494 sq. m. *Rivers.* Charles and Neponset rivers, with several smaller streams. *Surface*, diversified; *soil*, fertile, being the chief source of fruit and vegetables for supplying Boston. *Min.* Granite of a superior quality. *Cap.* Dedham. *Pop.* (1895) 134,781.

Norfolk, in New York, a post-township of St. Lawrence co. *Pop.* (1897) 2,140.

Norfolk, in Virginia, a S. E. co., adjoining N. Carolina; *area*, about 476 sq. m. *Rivers.* James river (Hampton Roads), Deep creek and Elizabeth river. *Dismal* Swamp and Lake Drummond occupy the S. W. angle of the co. *Surface*, level; *soil*, not very fertile. *Cap.* Portsmouth. *Pop.* (1890) 77,038.

—A city, port of entry, former cap. of the above co., on the Elizabeth river, 8 m. S. of Hampton Roads and 106 m. S. E. of Richmond; Lat. 36° 51' N., Lon. 76° 19' W. It is situated opposite Portsmouth, and with that city formed, before being destroyed at the outbreak of the Civil War, the most important naval station in the U. S. In point of population, N. is next to Richmond. The harbor is excellent, being capacious, safe, easy of access, and the entrance defended by two strong forts. The city is located upon a level plain, and though irregularly laid out, is for the most well built, and contains many fine public and private edifices. Among the former are the City Hall, the Norfolk Military Academy, Masonic Temple, the Cotton Exchange, and U. S. Custom House. There is a government navy yard at Portsmouth. By means of railroads, canals, and steamers, N. is connected with all the important cities and towns of the N., W., and S. It was laid out in 1705, and in 1776 was burnt by the British. A large export is done in early fruits and vegetables, besides an immense trade in cotton, tobacco, naval stores, &c. *Pop.* (1897) 41,250.

Norfolk Island, in the S. Pacific Ocean, 1,100 m. E. N. E. of Sydney, in Australia. Lat. 29° 10' S., Lon. 167° 58' E. *Ext.* 5 m. long and 2 broad.

Norfolk, (New), a district of Tasmania, having N. E. Clyde and Richmond, and S. Hobart Town; *area*, 1,500 sq. m. The chief river is the Derwent. The principal settlements are Hamilton, and New Norfolk.

Norfolk Sound, in Alaska, an inlet of the Pacific Ocean, on the W. side of King George's III. Archipelago. Sitka, or New Archangel, is situated on it.

No'ria, n. [Sp.] (Mach.) An hydraulic apparatus for drawing water.

Noricum, (Anc. Geog.) A prov. of the Roman empire in S. E. Germany, which comprised the whole of the modern prov. of Upper Austria, almost the whole of Lower Austria, Styria, and Corinthia, parts of Carniola, Salzburg, and Bavaria.

Norimon, n.; pl. NORIMONS. In Japan, a palanquin or litter.

Norm, n. A type; a model; a fixed standard for imitation.
Norma, n. A square for measuring right angles, used by masons, carpenters, and other artificers, to make their work rectangular.

Norma, in Missouri, a village of Webster co., abt. 32 m. E. by S. of Springfield.

Normal, a. [Fr.; Lat. *normalis*, from *norma*, a rule, a square to measure right angles.] According to an established law, rule, or principle; relating to rudiments or elements; teaching rudiments or first principles; instructing in the art of teaching; as, a *normal school*.
 (Geom.) According to a square or rule; perpendicular; forming a right angle.

—*n.* (Geom.) A perpendicular to a curve at some particular point, at which point the normal is also perpendicular to a tangent.

Normal, in Illinois, a city and township of McLean co., about 2 m. N. of Bloomington. It is the seat of the Illinois State Normal University. Pop. (1897) 4,250.

Normalcy, n. State or occurrence of being normal. (R.)
Normalization, n. Reduction to a normal state or standard.

Normal School, n. A school for the education of teachers. It is not a little surprising, that for the important duty of educating the young, it is only recently that any special training schools have come to be regarded as necessary. They originated in Germany, and were for a long period confined to that country. The first was organized at Stettin, in Prussia, in 1735; the next by Frederick the Great, at Berlin, in 1748; another was opened in Hanover in 1757; and others followed in various parts of Germany. Since the beginning of the present century they have rapidly increased in number, and been greatly improved in their internal organization. The course of instruction generally extends to three or four years, and in some of the States the great majority of the teachers are graduates of the N. S. The first seminary for teachers in France was established in 1810; the first in Holland in 1816; and, in England, in 1830. The first in the U. States was opened at Lexington, July 3, 1839; and now most of the principal cities have their normal schools.

Norman Architecture, n. A style of architecture which flourished originally and principally in Normandy, as its name denotes. It afterwards became prevalent in other places wherever the Normans obtained influence and dominion—among others, in England, where we shall treat of it. The Norman style is allied, to the decayed Roman examples of the Eastern and Western empires, and may be with them included in the general title of *Romanesque*. It cannot, however, be ranked as of equal importance with the Byzantine or Lombardic divisions, of both of which it is a modification. It is not decided at what period the Norman style was first introduced into England. Some persons are of opinion that it was introduced by William the Conqueror; others, by Edward the Confessor; while a third party maintain that it was merely a development of the Saxon, or the style immediately preceding. It would seem, however, that the Saxon and Norman were distinct styles, emanating from the same grand type, and consequently to a certain extent modifications of each other. They are both derived from the Roman, and both developments of the Romanesque; but here they separate, and in the two styles may be traced such a similarity as might be expected in developments from a common source. While the Saxon style was reared in an uncultivated soil, and by rude hands, the Norman was developed amid more advanced civilization. The Norman style may be said to have been fully developed in England soon after the Conquest, flourishing from the middle of the 11th century, and prevailing to the latter part of the 12th, or the close of the reign of Henry II. In general, it is styled as the architecture of the 12th century, and dates from 1066 to 1170. According to the monkish chronicles, soon after the arrival in England of William the Conqueror and his followers, who were great builders, churches began to spring up in every village, and monasteries were erected in the towns and cities, designed in a novel style of architecture. In the larger Norman churches, the plans are generally cruciform. At the intersection between the nave, choir and transepts, there is a low, massive tower; and the choir is usually terminated with a semi-circular apse. In many cases, the aisles of the nave are continued at the sides of the choir, and the high altar is situated between the easternmost piers, with a sacristy behind, stretching between the piers. A space was thus left clear at the back of the altar, which was called the retro-altar, and thus allowed processions

to perambulate entirely round the church. The choir, in some cases, was surrounded by chapels, having also apsidal terminations. The width of the aisles was very small, in some cases being not more than four to six feet. In most cases, the western façades are flanked by turrets or buttresses, but occasionally by towers. (Fig. 1963.) The parish churches were usually small, consisting of a nave, often without either porch or aisles, with a chancel and tower. Small churches, however, often consisted of a nave and chancel, only without any

Fig. 1964. — PORCH OF GREAT ADDINGTON, (England.)

(A. D. 1180.)

tower or other appendage. In the buildings of this period, the walls were of great thickness, but the masonry was not solid, being composed of two external walls of ashlar-work, having the space between filled up with rubble, gravel, flints, &c. Sometimes, however, the walls were made up of solid rubble-work, with quoins of ashlar. The former kind were not durable; but the introduction of buttresses at a later period led to a great improvement in the construction of walls. The arches of the Norman style are invariably of the semi-circular form. (Fig. 1964.) but occasionally stilted; and the only variety in the proportions of arcades depends upon the height of the piers, the height of the opening usually averaging about twice its width. Chancel arches are sometimes deeply recessed and ornamented with a number of rich mouldings. The piers which support the principal arches of construction are very massive. (Fig. 177.) and frequently of stunted proportions. The capitals are very varied in character, some bearing a more or less close resemblance to the Corinthian and other classic styles. In general, however, they are merely rude and unskilful imitations, and when contrasted with the originals, have a heavy appearance. The foliage is crowded and without regularity; and the capital, on account of its squatness, inelegant. Many, however, are not elaborately carved, several of them being quite plain. The most common of these is the cushion capital, which is of cubical form, being rounded at the lower end to meet the shaft. In the Norman and Lombardic styles, mural arcades are a common feature. They sometimes cover the greater portion of both external and internal walls, but are most common on the exterior, especially on the façades, the clerestories, and the upper stories of towers. The doorways in this style are to be found in very great variety, from the most simple to the most elaborate. Windows were subordinate members of an edifice, and in the earlier examples are nothing more than mere slits, or narrow oblong apertures, often not exceeding a few inches in breadth, and finished with a plain semi-circular head. Larger windows are to be found in cathedrals, and in the larger churches. After a time, windows began to be decorated with a slight degree of enrichment, and the zigzag and other mouldings were added round the arch. In the upper stories of towers a more advanced window is sometimes to be found. It consists of a semi-circular light with a triforium, separated by a central shaft, and having a lancet-shaft in either side. The two lights are en-

Fig. 1965. — CHURCH OF BUCKNELL,

OXFORD, (England.)

(A. D. 1160.)

closed under another large semi-circular arch, which is surrounded by a hood-mould (Fig. 1965). The mouldings in the Norman style are of great variety, and in some instances are very elaborately carved. One of the most favorite and characteristic is the zigzag, which is composed of a series of salient and reentrant angles, recessed or otherwise carved on the surface of the stone, sometimes in a single line, but more frequently in two, three, or more lines running parallel to each other. Other kinds are the *indented* or *trawel-point*, the *beak-head*, *bird's-head*, and *cat's-head* mouldings, the *nail-head*, the *billet*-moulding, the *embattled*, *star*, *medallion*, and *lozenge* mouldings, &c. No less than 15 of the 22 English cathedrals retain considerable portions which are undoubtedly of Norman workmanship, and of which the dates are ascertained. The nave and choir of Norwich Cathedral, with the exception of pointed windows of later English character inserted in the upper part of the choir, are almost entirely Norman. There are very few examples, however, of the exterior Norman style. Many of the churches belonging to the greater abbeys were constructed in the Norman period; but few have escaped the general demolition which took place at the Reformation. As the Normans knew that they could not live in security without building strong places of defence, military structures were therefore established or built on every lordship. The leading feature in a Norman fortress was a lofty mound of earth, thrown up in the centre of other works from the excavations necessary in forming the ditch, fosse, or moat. A square or circular tower, of several stories, rose from the upper ballium, or a low circular story of considerable diameter, which was generally approached on the outside by a very steep stone staircase. The gateway, or tower of entrance, was built at the foot of the artificial mount, from which was a sally-port with stone stairs leading to the keep. It contained the portcullis and drawbridge fixed to the archway, and several spacious chambers. The gateway, and the barbican, or watch-tower, had both of them a communication with the keep. (See CASTLE.) From the year 1155, the Norman architecture began to be mixed with new forms and additions, and was at length superseded by the more elegant and lofty style of building, usually called the Gothic.

Norman, n. A Northman. (See NORTHMEN).—An inhabitant of the French prov. of Normandy.

(Naut.) A kind of capstan-bar, used on shipboard.

—*a.* Pertaining to Normandy or to the Normans; as, the *Norman Conquest*.

Norman, or NORMAN'S ISLAND, one of the Virgin group, W. Indies, lying N.E. of St. John; Lat. 18° 19' N., Lon. 64° 32' W. Area, abt. 2 sq. m. Man-of-war Bay is on its W. side.

Norman, in Illinois, a township of Grundy county.

Normanda, or NORMANDY, in Indiana, a post-village of Tipton co., abt. 40 m. N. of Indianapolis.

Normandy, an anc. prov. of France, bordering on the English Channel, now divided into the depts. of Seine Inférieure, Eure, Orne, Calvados, and Manche. N. anciently comprised a portion of the kingdom of Neustria, and was ceded to Rollo, Rolf, or Raoul, by Charles III., in 911. William I. Duke of N. invaded England in 1066, and established a Norman dynasty, thereby uniting N. with the latter country. Philip Augustus conquered it in 1204, the French holding it until 1417, when it was recovered by the English, who held it till 1450, when it was finally wrested from them by Charles VII.

Normandy, in Missouri, a post-village of St. Louis co., 10 m. N.W. of St. Louis.

Normandy, in Tennessee, a post-village of Bedford co., abt. 62 m. S.S.E. of Nashville.

Norman's Kill, in New York, a small stream flowing into the Hudson River from Albany co.

Norns, Nor'ns, n. pl. (*Scandinavian Myth.*) The three irrevocable Fates,—past, present, and future.

Norridgewock, in Maine, a post-town and township, former cap. of Somerset co., about 28 m. N. of Augusta. Pop. (1897) 1,702.

Norris, in Illinois, a post-village of Fulton co., about 33 m. S. E. of Galesburg.

Norristown, in Arkansas, a village of Pope co., about 65 m. N.W. by W. of Little Rock.

Norristown, in Ohio, a post-village of Carroll co., about 130 m. E. N. E. of Columbus.

Norristown, in Pennsylvania, a post-borough, cap. of Montgomery co., about 16 m. N.W. of Philadelphia. It is finely situated in a rich farming district; is regularly laid out, and neatly and handsomely built. The Court-house is one of the finest of its class. Cotton and woollen factories have been established, also rolling mills, foundries, iron furnaces, glass works, &c. It is connected with Philadelphia by the Reading and Penna. R. Rs. The State Asylum for the Insane is 1 m. from the town. Pop. (1897) 23,450.

Norrisville, in Alabama, a village of Wilcox co.

Norriton, in Pennsylvania, a township of Montgomery co.

Norritown, in Pennsylvania, a post-village of Montgomery co., abt. 3 m. N. of Norristown.

Nor'roy, n. [Fr. *nord*, north, and *roy*, r. king.] (*Her.*) See HERALD'S COLLEGE.

Norse, a. Pertaining or having reference to ancient Scandinavia, or to the language spoken by its peoples.

—*n.* [From Icel. *Norvegr*, Norway.] The language of ancient Scandinavia.

Norseman, n ; pl. NORSEMEN. A Northman; a native of ancient Scandinavia.

North, n. [A. S. *north*; Du. *noord*; Dan. and Ger. *nord*, *norden*; Fr. *nord*.] One of the cardinal points,

being that point of the horizon which is directly opposite to the sun in the meridian.—A name loosely given to any country or region situated nearer the north point than another.—The north wind.

—a. Being in the north; as, the north polar star.

North, in *Indiana*, a township of Lake co.

—A township of Marshall co.

North, in *Ohio*, a thriving township of Harrison co.

North Abington, in *Massachusetts*, a post-village of Plymouth co., about 18 m. S.S.E. of Boston.

North Acton, in *Maine*, a village of York co., about 38 m. W. of Portland.

North Adams, in *Massachusetts*, a post-town and township of Berkshire co., about 20 m. N. by E. of Pittsfield, on the Bost. & Albany and Fitchburg R.R.s; has very extensive manuf. of shoes, cotton and woollen goods, &c. *Pop.* of township (1895) 19,155.

North Almond, in *New York*, a village of Allegany co., 20 m. N.E. of Belmont. Post-office is ALMOND.

Northampton, a town of England, co. of York, 13½ m. S.S.E. of Darlington, and 31 m. N.W. of York. Here was fought, 1138, the "Battle of the Standard," in which the Scots were defeated by the English. *Pop.* 5,300.

Northampton, a central co. of England, having N. the co. of Lincoln, E. and S.E. Cambridge, Huntingdon, Bedford, and Buckingham, S. Oxford, W. and N.W. Warwick, Leicester, and Rutland. *Area*, 1,016 sq. m. The surface is diversified, the soil generally fertile and the climate mild and healthy. *Rivers*, Nen, Ouse, and Welland. *Prod.* The usual cerealia. Horses and cattle are extensively reared. *Manuf.* Boots and shoes, lace, and woollen stuffs. *Chief towns*, Northampton, the cap., Peterborough, and Wellingborough.

Northampton, capital of the above co., on the Nen, 29 m. S.S.E. of Leicester, and 59 m. N.W. of London. The principal edifices are the Town Hall, Corn Exchange, the churches of St. Sepulchre, and the Norman church of St. Peter. *Manuf.* Boots and shoes, leather, lace, and hosiery; there are, also, brass and iron foundries. *Pop.* (1897) 64,331.

Northampton, in *Massachusetts*, a thriving city of Hampshire co., about 17 m. N. of Springfield. The State Lunatic Asylum and Institution for Mutes are located here; also a fine building called Memorial Hall, used as a public library, and containing a tablet with the names of those who fell in the Civil War. *Manuf.* Woolen, cotton, and silk goods, iron, cutlery, sewing machine, paper, sewing silk, baskets, &c. *Pop.* (1895) 16,738.

Northampton, in *North Carolina*, a N.E. co., adjoining Virginia; *area*, about 568 sq. m. *Rivers*, Roanoke and Meherrin. *Surface*, diversified; *soil*, fertile. *Cap.* Jackson. *Pop.* (1890) 21,242.

Northampton, in *New Jersey*, a township of Burlington co.

Northampton, in *New York*, a post-town of Fulton co. *Pop.* (1897) 2,100.

Northampton, in *Ohio*, a township of Summit co.

Northampton, in *Pennsylvania*, an E. co., adjoining New Jersey; *area*, about 380 sq. m. *Rivers*, Delaware river, and Marlin's, Monaca, Sancon, and Baskill creeks. *Surface*, much diversified and mountainous in the N.W. and S.E.; *soil*, generally very fertile. *Min.* Iron, zinc, slate, and limestone. *Cap.* Easton. *Pop.* (1890) 84,220.—A twp. of Bucks co.—A town of Lehigh co. (See ALLENTOWN).—A township of Somerset co.

Northampton, in *Virginia*, an E. co., washed on the E. by the Atlantic Ocean, and on the W. and S. by the Chesapeake bay; *area*, about 290 sq. m. The coasts are indented with numerous bays and inlets. *Surface*, level; *soil*, not fertile. *Cap.* Eastville. *Pop.* (1890) 10,313.

North Andover, in *Massachusetts*, a post-town of Essex co., about 3 m. N. of Boston.

North Anna, in *Virginia*, a river rising in Orange co., and flowing S.E. joins the South Anna in Hanover co. to form the Pamunkey. On this river, at a point about 20 m. above Hanover Court House, an engagement occurred (May 24, 1864) between the National and Confederate troops, under Generals Warren and Brown respectively, in which the latter were defeated, losing their leader and 1,000 men. The Union loss was 350 men.

North Annville, in *Pennsylvania*, a township of Lebanon co.

North Anson, in *Maine*, a post-village of Somerset co. *Pop.* (1897) 770.

North Apple Creek, in *Illinois*, a former township of Greene co.

North Argyle (ar-ghil'), in *New York*, a post-village of Washington co., about 50 m. N.N.E. of Albany.

North Ashford, in *Connecticut*, a post-village of Windham co., about 17 m. N.N.W. of Brooklyn.

North Attleborough, in *Massachusetts*, a post-town of Bristol co., about 30 m. S.W. of Boston; has extensive manuf. of jewelry, &c. *Pop.* (1895) 6,576.

North Auburn, in *Maine*, a post-village of Androscoggin co., about 5 m. N.N.W. of Auburn.

North Augusta, in *Iowa*, a village of Des Moines co., about 70 m. S. by E. of Iowa City.

North Beaver, in *Pennsylvania*, a township of Lawrence co.

North Beck's, in *Massachusetts*, a village of Berkshire co., about 70 m. W. of Boston.

North Belgrade, in *Maine*, a post-village of Kennebec co., about 15 m. N. of Augusta.

North Belleville (bel'vil'), in *Indiana*, a village of Hendricks co., about 19 m. W. by S. of Indianapolis.

North Beltingham, in *Massachusetts*, a post-village of Norfolk co., about 25 m. S.W. of Boston.

North Bend, in *Indiana*, a village and township of Stark co., about 35 m. N.N.W. of Logansport.

North Bend, in *Nebraska*, a post-village of Dodge co., on the K. C., B. & S. F. R.R.

North Bend, in *Utah*, a village of San Pete co., about 22 m. N.N.E. of Manti.

North Bend, in *Wisconsin*, a post-village of Jackson co., abt. 22 m. N. by E. of La Crosse.

North Bennington, in *Vermont*, a post-village and township of Bennington co., abt. 4 m. N.W. of Bennington Centre.

North Ben'tousport, in *Iowa*, a village of Van Buren co., abt. 75 m. S. by W. of Iowa City.

North Bergen, in *New Jersey*, a township of Hudson co.

North Bergen, in *New York*, a post-village of Genesee co., abt. 240 m. W. by N. of Albany.

North Berwick, (ber'rik'), a seaport-town and bathing-place of Scotland, co. of Haddington, at the mouth of the Frith of Forth, 19 m. E.S.E. of Edinburgh; *pop.* 1,800.

North Berwick, in *Maine*, a post-township of York co.

North Billerica, in *Massachusetts*, a post-village of Middlesex co., abt. 21 m. N. by W. of Boston.

North Blackstone, in *Massachusetts*, a post-village of Worcester co., abt. 40 m. S.W. of Boston.

North Blandford, in *Massachusetts*, a post-village of Hampden co., abt. 120 m. W. of Boston.

North Blenheim, in *New York*, a post-village of Schoharie co., abt. 40 m. W.S.W. of Albany.

North Bloomfield, in *California*, a post-village of Nevada co., abt. 12 m. N.E. of Nevada.

North Bloomfield, in *New York*, a post-village of Ontario co., abt. 219 m. W. of Albany.

North Bloomfield, in *Ohio*, a township of Morrow co.

North Boothbay, in *Maine*, a post-village of Lincoln co., abt. 60 m. S.E. of Augusta.

Northborough, in *Massachusetts*, a post-township of Worcester co.

North Bosque Creek, (bosk'), in *Texas*, enters the Brazos River near McAllen.

North Branch, in *Michigan*, a post-township of Lapeer co.

North Branch, or BAILIES, in *New Jersey*, a post-village of Somerset co., abt. 5 m. N.W. of Somerville.

North Branford, in *Connecticut*, a post-township of New Haven co.

Northbridge, in *Massachusetts*, a post-township of Worcester co.

Northbridge Centre, in *Massachusetts*, a post-village of Worcester co., abt. 38 m. S. by W. of Boston.

North Bridge-ton, in *Maine*, a post-village of Cumberland co., abt. 44 m. N.W. of Portland.

North Bridge-water, in *Massachusetts*, a post-village and township of Plymouth co., abt. 21 m. S. of Boston; now BROCKTON.

North Brookfield, in *Massachusetts*, a post-township of Worcester co.

North Bruns'wick, in *New Jersey*, a township of Middlesex co.

North Bucks'port, in *Maine*, a post-village of Hancock co., abt. 8 m. S. of Bangor.

North Buffalo, in *Pennsylvania*, a township of Armstrong co.

North Can'ton, in *Connecticut*, a post-village of Hartford co., abt. 18 m. N.W. of Hartford.

North Carmel, in *Maine*, a post-village of Penobscot co., abt. 14 m. W. by N. of Bangor.

North Carolina, one of the 13 original States of the American Union, '33 between 33° 53' and 36° 33' N. Lat., and 75° 25' and 84° 30' W. Lon., presenting an extreme length, E. to W., of 420 m., with a maximum breadth of 180 m. N. to S. It is bounded on the N. by Virginia, S. by South Carolina, S.E. by the Atlantic, S.W. by a small segment of Georgia, and W. by Tennessee. *Area*, 50,704 sq. m., or 32,450,500 acres.—*Gen. Desc.* For a distance extending from the seaboard 60 to 80 m. into the interior, and including the turpentine region, the surface of the State is level, and dotted with many series of oozy swamps and morasses; the streams intersecting it are sluggish and slimy, and the lands, for the most part, are unproductive and poor, except along the river-bottoms, where it is highly productive, yielding abundant crops of cotton, maize, tobacco, and rice. N. of Albemarle Sound, the "Great Dismal Swamp," covering an area of 150,000 acres, extends into Virginia, while its sister swamp, the "Little Dismal, or Alligator," with a superficies nearly as large as the former, is located between Pamlico and Albemarle Sounds. Other considerable-sized swamps lie further S., interspersed with number of small lakes. Parts of the Little Dismal Swamp have been sufficiently reclaimed to bear valuable rice and cereal crops. It is estimated that the whole area of swamp-lands throughout the State spreads over not less than 3,000,000 acres. As the interior becomes further penetrated, the characteristic configuration of the country undergoes a change. The surface is found to acquire a hilly, or, rather, undulating aspect, consisting of alternate ridges and valleys, and forming what is called the *Pitch-pine region*. Here the soil is of decided fertility, producing the principal agricultural staples, while towards the W. extremity of the State, beyond the Yadkin and Catawba rivers, a large plateau of considerable altitude—being from 1,000 to 2,000 feet above sea-level—forms, as it were, the W. base of the Alleghany range traversing the State from N.E. to S.W., and culminating in summits of superior elevation. Many of the peaks of this chain, lying within the limits of this State, are the loftiest east of the Mississippi River; such as Mount Clingman, Mitchell, Buckley, and Guyot, the highest of which rises to between 6,500 and nearly 7,000 feet above tide-water. The coast-line of N. C. is long and deeply indented. Commencing at Little River Inlet on the S. Carolinian frontier, it takes a course nearly E. to Cape Fear, thence N.E. to Cape Lookout and Cape Hatteras, and terminates at the Virginia line, forming a distance of over 400 m. Three large, shallow sounds, Albemarle, Currituck, and Pamlico, cut far into the land, and have *anemur* in the shape of numerous small bays or inlets on either hand. A concatenation of narrow, shoaly lagoons, charged with ever-shifting sand-bars, skirts the coast S. of Cape Lookout, and, hence, the navigation of the whole seaboard is exceedingly intricate and hazardous. The principal rivers are those of Cape Fear, flowing E. by S. for about 250 m., and navigable for small craft 120 m. from its outlet in the Atlantic; the Roanoke, rising in Va., and discharging into Albemarle Sound; the Neuse, Tar, Chowan, Yadkin, and Catawba.—*Geol. and Min.* The State is geologically divided into three parallel zones, the first or E. comprising the level sandy coast-region, extends to the midland belt, bounded W. by the skirting-line of the outlying spurs of the Blue Ridge Mountains. The third zone embraces the W. and mountainous sections of the State. The prevailing systems of rocks are the recent and tertiary, cretaceous, new red-stone, permian, igneous, and metamorphic. The rocks of the last-named formation, associated with granite, occupy the middle cos., in part, and the extreme W. confines, and contain the most important repositories of ores. The rocks of the lower belt are tertiary or cretaceous, and contain no metals, excepting the earthy ores of manganese and iron. The most important minerals found in the State are iron and coal, which are extensively deposited on the Deep and Dan rivers. The iron lodes comprise the hematites and the magnetic and specular ores; but they are comparatively little mined. Bituminous and semi-bituminous coal-measures exist somewhat extensively, and in various localities are rich in coal. Excellent coal has been profitably mined in the vicinity of Deep river, and similar material is found abundantly near the Dan river. Among the other minerals may be named gold, silver, copper, porphyry, and steatite. Since mining for the precious metals began there have been produced over \$12,000,000 in gold and silver. In 1838 a branch U. S. mint was established at Charlotte, which since 1883 has been continued as an assay office. Silver is found in association with lead in Clay and Davidson cos., and zinc in the latter county. Copper and plumbago are found in many counties of the State. Among other minerals of value may be named corundum and monazite, while mica of commercial value exists widely in the west. In addition to the minerals named, N. C. is rich in gems, of which numerous varieties have been found, among them the rich "hiddenite," or lithia-emerald, which has been found in no other locality. In some localities are large beds of granite and marble, while in the eastern section beds of phosphate rock of much value exist.—*Clim.* The meteorological characteristics of N. C. are varied. In the low region the atmosphere is hot and moist, while in the mountainous country it is cool and dry. In the interior it unites both peculiarities according to localization. The mean temperature is estimated at 60°.—*Nat. Prod., &c.* The upland tracts are well timbered with ash, oak, walnut, hickory, lime, and other trees; the low country produces pine in great perfection; and the swamp-lands luxuriate in dense collections of cedar, cypress, maple, oak, and poplar, undergrown with vines and other creepers. The fruits assimilate with those of the neighboring States.—*Agric.* Up to a recent period Indian corn has been the leading agricultural product of the State, though tobacco is also a valuable product. But within late years cotton has become a rival in the annual value of its crop. The other agricultural products of importance include wheat, oats, hay, sweet potatoes, and groundnuts, the American culture of the last-named being largely confined to this State. The product of corn in 1895 was 36,378,412 bushels, in 1908 it was 50,166,000. Cotton advanced from 465,000 to 675,000 bales and wheat and oats made a similar progress. The tobacco crop, 42,013,620 lbs. in 1895, was 134,000,000 lbs. in 1908, a yield exceeding that of any other State except Kentucky. In the culture of rice there has been considerable progress. The census of 1900 reported for N. C. 224,637 farms, of 22,749,356 acres, of which 8,327, 06 were improved. The valuation of land and improvements was \$194,655,920; of live stock, \$30,106,173; and of farm products, \$60,708,000.—*Manuf. and Ind.* Next to agriculture, the distillation of turpentine and tar forms the leading industrial feature of the State. The turpentine lands are valued at from \$2 to \$20 per acre, with from 500 to 1,000 pine-trees growing upon an acre, containing on an average 2,000 boxes, (or pockets cut in the stem above the ground) and producing, on an average, from 12 to 16 barrels of turpentine, or 2 barrels of spirits and 8 of resin. This business is regarded as favorable to health and longevity, and is generally found very profitable to the proprietors. Reliable statistics of the produce of the turpentine forests are not obtainable, but De Bow, in his

Fig. 1966. — SEAL OF THE STATE.

Resources of the South, estimates the annual produce of the State at 800,000 barrels, at an approximate value to the makers of from \$1,700,000 to \$2,000,000. The cutting and exportation of lumber forms another considerable commercial item.—*Cotton Manuf.* In 1869 *N. C.* had but 20,743 spindles in operation; in 1880, they had increased to 102,767 spindles, using 27,508 bales of cotton. Since that date there has been a large increase in the number of looms and spindles for the manufacture of cotton and woollen fabrics, the production of which has grown into an industry of large importance. There are also many iron works, distilleries, and tobacco works pursuing a profitable business, there having been a considerable enlargement of the tobacco industry of late years. The first silk factory in the South was established in *N. C.* in 1838. In the coast region the fisheries form a profitable business, employing from 6,000 to 7,000 men, their annual yield being valued at over \$1,000,000. The manufactures in 1890 yielded products valued at \$40,375,450, an aggregate which rapidly increased, being in 1905, \$142,520,776.—*Pol. Div.* The State is divided into 90 counties, viz.:

Alamance,	Cumberland,	Johnson,	Randolph,
Alexander,	Currituck,	Jones,	Richmond,
Alleghany,	Dare,	Lenoir,	Robeson,
Anson,	Davidson,	Lincoln,	Rockingham,
Ashe,	Davie,	Macon,	Rowan,
Beaufort,	Duplin,	Madison,	Rutherford,
Bertie,	Durham,	Martin,	Sampson,
Bladen,	Edgecombe,	McDowell,	Stanly,
Brunswick,	Forsyth,	Mecklenburgh,	Stokes,
Buncombe,	Franklin,	Mitchell,	Surrey,
Burke,	Gaston,	Montgomery,	Swain,
Cabarrus,	Gates,	Moore,	Transylvania,
Caldwell,	Graham,	Nash,	Tyrell,
Camden,	Granville,	New Hanover,	Union,
Carteret,	Greene,	Northampton,	Vance,
Caswell,	Guilford,	Oswego,	Wake,
Catawba,	Hallfax,	Orange,	Warren,
Chatham,	Harnett,	Pamlico,	Washington,

Chowan,	Henderson,	Pender,	Wayne,
Clay,	Hertford,	Perquimans,	Wilkes,
Cleveland,	Hyde,	Person,	Wilson,
Columbus,	Iredell,	Pitt,	Yadkin,
Craven,	Jackson,	Polk,	Yancey.

Cities and Towns. The principal centers of trade and population are Raleigh (State cap.), Wilmington, Newbern, Edenton, Beaufort, Fayetteville, Salisbury, Charlotte, and Elizabeth.—*Govt.* The Constitution of the State was established in Dec., 1776, and modified in 1835 and 1857. The 15th amendment to the National Constitution was added in 1869. Until amended in 1875, it provided that every male citizen, 21 years of age, resident one year in the county, and who shall have paid a tax, shall be a qualified voter. The franchise for the senatorial vote formerly required proprietorship of 50 acres of land, in addition to the foregoing qualifications. The executive vested in a governor chosen by popular vote for a term of 2 years, an advisory council of 7 members, secretary of state, treasurer, comptroller, and a superintendent of common schools, all elected by the legislature. The governor's age must not be under 35, and he must possess a property qualification of \$5,000, and have been a resident of the State for 5 years. His emoluments consist of a furnished dwelling-house, and a salary of \$3,000 per annum. The legislature consisted of a Senate of 50 members elected for 2 years, and a House of Commons of 120 members for a similar term. In former times, senators were compelled to own 300 acres of land in the county from which they were elected, and members of the House of Commons 100 acres. The legislature meets biennially at Raleigh on the second Monday in Nov., and an apportionment of representatives is made once in 20 years—that of the Commons being based on federal population, that of the Senate on taxation. The judiciary comprises a Supreme Court consisting of a chief justice and 2 associate judges, holding 3 courts each year; and superior or circuit courts, 7 in number, with judges accordingly, who hold court biennially in each county. Under the old Constitution, the judges were all chosen by joint ballot of the legislature, also the attorney-general; the former during good behavior, and the latter functionary for 4 years. The Supreme Court possesses merely an appellate jurisdiction, while the judges of the superior court have complete equity of jurisdiction. The salary of the judges of the Supreme Court is \$2,500 per annum, and of the superior court, \$1,950, and \$90 for each court (over 12) held on a circuit. No clergyman engaged in his calling was permitted to be a member of the legislature or of the governor's advisory council.—*Finances.* The debt of *N. C.* stated at over \$27,000,000 in 1880, was given as \$6,880,950 in 1908, the total debt, State, county and city, being about \$16,000,000. The assessed valuation of real and personal property for the same year was \$575,370,313, forming a per capita valuation of \$303.94.—*Educ.* The Constitution of 1868 provided for free public schools four months in the year, to be maintained by taxation and by the proceeds of a fund for which an appropriation of resources is made, for the free use of the State University, for a superintendent of public instruction, and for a State board of education. The State University (1795) is located at Chapel Hill, near Raleigh, and there is a State Agricultural College at Raleigh, founded in 1889. There are colleges in several localities. In some parts of the State, good schools are lacking; but the principal towns possess graded schools of excellent character. Other institutions comprise asylums for the insane at Goldsboro, Raleigh, and Nurgantown (the first being for negroes only), and schools for the blind, and for deaf mutes, both white and black. The penitentiary is conducted on the contract system,

the convicts being hired out to contractors.—*Hist.* *N. C.* was first partially colonized by a party of Englishmen sent out by Sir Walter Raleigh in 1585, but no permanent settlement was established until 1663, when Charles II. made a grant of the territory which now forms the State to 8 English noblemen. The celebrated philosopher John Locke drew up its original scheme of government, which, however, did not continue in operation longer than 25 years. In 1674, the population was about 4,000, and the annual product of tobacco 8,000,000 lbs. In 1705 an intestine conflict took place among the colonists with reference to the claims of two rival governors. From 1711 to 1713 a war was waged with the Tuscaroras and other Indian tribes, who were ultimately reduced to subjection. In 1769 the colony declared against the right of the home government to levy taxation. *N. C.* sent representatives to the first Continental Congress in 1774, who joined in the declaration of colonial rights. In April, 1776, *N. C.* united with the other colonies in the Declaration of Independence. A partisan warfare next ensued between the patriots and the loyalists, which latter were in strong force throughout the State. On March 15, 1781, the American Gen. Greene, with a force of 4,500 men, was defeated at Guilford Court-House by a body of British troops, 2,000 strong, commanded by Lord Cornwallis. The National Constitution, formed in 1787, was finally adopted in 1789. The State joined the Confederacy at the outbreak of the Civil War, and furnished some of the very best troops in the Confederate army, and some exceptionally able commanders. The present Constitution, as amended in 1875, provides for the election by the people, for four years, of a governor, lieutenant-governor, secretary of state, auditor, treasurer, superintendent of public instruction, and attorney-general. Judges of the Supreme and superior courts are elected for eight years; property qualification is abolished, as well as most of the peculiar enactments under the old Constitution alluded to in first column. Presidents Jackson, Polk, and Johnson were natives of the "Old North State." *Pop.* (1890) 1,617,947; (1900) 1,893,510.

North Cas'tine, in *Maine*, a post-village of Hancock county.

North Cas'tle, in *New York*, a post-town of Westchester co.

North Cen'ter Hall, in *Pennsylvania*, a village of Center co.

North Charles'ton, in *New Hampshire*, a post-village of Sullivan co.

North Chat'ham, in *Massachusetts*, a post-village of Barnstable co.—In *New York*, a post-village of Columbia co.

North Chelms'ford, in *Massachusetts*, a post-village of Middlesex co.

North Chel'sea, in *Massachusetts*, a village of Suffolk county.

North Chich'ester, in *New Hampshire*, a post-village of Merrimack co.

North, Chris'topher. See WILSON, JOHN.

North Clar'endon, in *Vermont*, a post-village of Rutland co.

North Clay'ton, in *Ohio*, a post-village of Miami co.

North Dako'ta. See SECTION II.

North Dor'set, in *Vermont*, a post-village of Bennington co., abt. 22 m. S. of Rutland.

North Dumber'ton, in *New Hampshire*, a post-village of Merrimack co., abt. 8 m. S. S. W. of Concord.

North-east', n. The point between the north and east, at an equal distance from each.

—*a.* Pertaining to the north-east, or proceeding from that quarter.

North-East, in *Illinois*, a thriving township of Adams co.

North-East, in *Indiana*, a township of Orange county.

North-East, in *Maryland*, a post-village of Cecil co., abt. 45 m. N. E. of Baltimore.

North-East, in *New York*, a post-village and township of Dutchess co., about 95 m. N. N. E. of New York City.

North-East, in *Pennsylvania*, a post-borough and township of Erie county, about 16 miles north-east of Erie.

North-East'erly, a. Toward, or from the north-east.

North-east'ern, a. Belonging or having reference to, or being in, the north-east, or in a direction to the north-east.

North-East Pass, or BALIZE, in *Louisiana*, a village of Plaquemine parish, on a pass of its own name, at the mouth of the Mississippi River.

North-East Passage. See NORTH-WEST PASSAGE.

North-East River, in *Maryland*, enters Chesapeake Bay from Cecil co.

North Eau Claire, in *Wisconsin*, a township of Eau Claire co.

North Eg'remont, in *Massachusetts*, a post-village of Berkshire co., abt. 170 m. W. by S. of Boston.

North El'ba, in *New York*, a post-township of Essex co.

North Ells'worth, in *Maine*, a post-village of Hancock co., abt. 75 m. E. N. E. of Augusta.

North'er, n. [Sp. norte.] A heavy gale of wind blowing from the north.

North'erliness, n. State of being northerly; inclination toward the north.

North'erly, a. Northern; being toward the north.

—*adv.* Toward the north.—In a northern direction.—Issuing from a northern point.

North'ern, a. [A. S. *nordhem.*] Being in the north,

or nearer to that point than to the east or west.—In a direction toward the north, or a point in its vicinity; as to steer a *northern* course.

Northern Di'ver, n. (Zool). See COLUMBIDAL.

Northern lights. See AURORA BOREALIS.

Northern Circars, (sir-kars'), a prov. of British India, on the W. side of the Bay of Bengal, between Lat. 15° and 20° N. Area, 17,000 sq. m. Pop. 2,995,500.

North'erner, n. A native or inhabitant of the North.—In the U. States, a native or inhabitant of the Northern States of the Union;—correlative to *Southerner*.

Northern Lib'erties, in *Pennsylvania*, a former district of Philadelphia co., now included within the limits of the city of Philadelphia.

North'ermost, a. Fixed or situated at the point furthest north.

North Fair'field, in *Maine*, a post-village of Somerset co., abt. 18 m. N. of Augusta.

North Fairhaven, in *Massachusetts*, a village of Bristol co., abt. 55 m. S. of Boston.

North Fal'mouth, in *Massachusetts*, a post-village of Barnstable co., abt. 62 m. S. S. E. of Boston.

North Farm'ington, in *Michigan*, a post-village of Oakland co., about 21 m. N. W. of Detroit.

North Fayette', in *Pennsylvania*, a former township of Allegheny co.

North Fer'risburg, in *Vermont*, a post-village of Addison co., abt. 15 m. S. of Burlington.

North'field, or NOR'FIELD, in *Connecticut*, a village of Fairfield co., about 28 m. W. S. W. of New Haven.—A post-village of Litchfield co., about 27 m. W. by S. of Hartford.

North'field, in *Illinois*, a post-village and township of Cook county, about 20 miles north north-west of Chicago.

North'field, in *Indiana*, a post-village of Boone co., abt. 19 miles N. by W. of Indianapolis.

North'field, in *Maine*, a township of Washington co.

North'field, in *Massachusetts*, a post-village and township of Franklin county, about 100 miles W. by N. of Boston.

North'field, in *Michigan*, a township of Washtenaw county.

North'field, in *Minnesota*, a city and township of Rice co., on C., M. & St. P. and Minn. & St. L. R. Rs., 39 m. S. of St. Paul. *Pop.* (1895) 3,456.

North'field, in *New Hampshire*, a township of Merrimack co.

North'field, in *New Jersey*, a village of Essex co.

North'field, in *New York*, a township of Richmond co.

North'field, in *Ohio*, a post-township of Summit co.

North'field, in *Vermont*, a post-village and township of Washington county, about 10 miles S. by W. of Montpelier.

North'field, in *Wisconsin*, a township of Jackson co.

North'field Farms, in *Massachusetts*, a post-village of Franklin co., abt. 82 m. W. N. W. of Boston.

North'ford, in *Connecticut*, a post-village of New Haven co., abt. 12 m. N. E. of New Haven.

North Fork, in *Arkansas*, a township of Izard county.

North Fork, in *California*, a post-village of Trinity co., abt. 13 m. W. of Weaverville.

North Fork, in *Illinois*, a village of Vermilion co., abt. 125 m. E. by N. of Springfield.

North Fork, in *Iowa*, a township of Delaware county.

North Fork, in *N. Carolina*, a post-village of Ashe co., abt. 214 m. W. by N. of Raleigh.

North Frank'fort, in *Maine*, a village of Waldo co., abt. 62 m. E. N. E. of Augusta.

North Frank'lin, in *New York*, a post-village of Delaware co., abt. 78 m. W. S. W. of Albany.

North Gal'veston, in *Indiana*, a post-village of Kosciusko co., abt. 8 m. N. W. of Warsaw.

North Garden, in *Virginia*, a post-village of Albemarle co., abt. 11 m. S. by W. of Charlottesville.

North Go'shen, in *Connecticut*, a village of Litchfield co., abt. 35 m. W. by N. of Hartford.

North Gran'by, in *Connecticut*, a post-village or Hartford co., abt. 20 m. N. N. W. of Hartford.

North Gran'ville, in *New York*, a post-village of Washington co., abt. 65 m. N. N. E. of Albany.

North Green'bush, in *New York*, a post-township of Rensselaer co.

North Greenwich, (gren'ij) in *Connecticut*, a village of Fairfield co., abt. 45 m. W. S. W. of New Haven.

North Guilford, (ghil'ford), in *Connecticut*, a post-village of New Haven co., abt. 12 m. E. by N. of New Haven.

North Guilford, in *New York*, a post-village of Chenango co., abt. 50 m. S. by W. of Utica.

North Had'ley, in *Massachusetts*, a post-village of Hampshire co., abt. 90 m. W. of Boston.

North Hamp'ton, in *Illinois*, a post-village of Peoria co., abt. 18 m. N. of Peoria.

North Hamp'ton, in *New Hampshire*, a post-township of Rockingham co.

North Hamp'ton, in *Ohio*, a post-village of Clarke co., abt. 53 m. W. of Columbus.

North Har'persfield, in *New York*, a post-village of Delaware co., abt. 20 m. N. N. E. of Delhi.

North Hartland, in *Vermont*, a post-village of Windsor co., abt. 9 m. N. of Windsor.

North Ha'ven, in *Connecticut*, a post-town and township of New Haven co., about 5 m. N. of New Haven.

Pop. (1897) 1,940.

North Ha'ven, in *Maine*, a post-township of Knox co.

North Hav'erhill, in *New Hampshire*, a post-village of Grafton co., abt. 45 m. W. by N. of Concord.

North He'bron, in *New York*, a post-village of Washington co., abt. 55 m. N.N.E. of Albany.

North Hee'tor, in *New York*, a post-village of Schuyler co., abt. 22 m. W.N.W. of Ithaca.

North Heidelberg, (*hi'del-berg*), in *Pennsylvania*, a post-township of Berks co.

North Hemp'stead, in *New York*, a village and township, the former cap. of Queen's co., about 10 m. E. of New York city.

North Hen'derson, in *Illinois*, a post-village and township of Mercer co., abt. 135 m. N.W. of Springfield.

North He'ro, in *Vermont*, a post-village and township, cap. of Grand Isle co., on an island of its own name, abt. 60 m. N.W. of Montpelier.

North Hoo'sie, in *New York*, a post-village of Reus-selaer co., abt. 27 m. N. of Troy.

North Hudson, in *New York*, a post-village of Essex co., abt. 105 m. N. of Albany.

North Hunt'ingdon, in *Pennsylvania*, a township of Westmoreland co.

North Hyde Park, in *Vermont*, a post-village of Lamoille co., abt. 30 m. N. of Montpelier.

North In'dustry, in *Ohio*, a post-village of Stark co., abt. 4 m. S. of Canton.

North'ing. n. (*Nar.*) Distance northward from a point of departure, measured on a meridian.

(*Astron.*) North declination of any heavenly body.

North'ington, in *N. Carolina*, a village of Cumberland co., abt. 50 m. S. of Raleigh. — A village of Har-nett co., abt. 33 m. S.W. of Raleigh.

North Jay, in *Maine*, a post-village of Franklin co., abt. 12 m. S.S.W. of Farmington.

North Ken'nebunk Port, in *Maine*, a post-vil-lage of York co., abt. 80 m. S.S.W. of Augusta.

North Kill'ingly, in *Connecticut*, a village of Wind-ham co., abt. 48 m. E. by N. of Hartford.

North King'ston, in *Rhode Island*, a township of Washington co.

North Lams'ing, in *New York*, a post-village of Tom-pkins co., abt. 14 m. N. of Ithaca.

North Law'rence, in *New York*, a post-village of St. Lawrence co., abt. 35 m. E. of Ogdensburg.

North Lebanon, in *Pennsylvania*, a village and township of Lebanon co., abt. 25 m. E. by N. of Harris-burg.

North Leominster, (*lemp'ster*), in *Massachusetts*, a post-village of Worcester co., abt. 42 m. W.N.W. of Boston.

North Les'lie, in *Sichigan*, a village of Ingham co., abt. 20 m. S.E. of Lansing.

North Lev'ere'tt, in *Massachusetts*, a post-village of Franklin co., abt. 82 m. W. by N. of Boston.

North Lew'isburg, in *Ohio*, a post-village of Cham-paign co., abt. 15 m. N.E. of Urbana.

North Liberty, in *Indiana*, a post-village of St. Joseph co., abt. 15 m. S.W. of South Bend.

North Liberty, in *Iowa*, a post-village of Johnsou co., abt. 9 m. N.W. of Iowa City.

North Liberty, in *Ohio*, a village of Adams co., abt. 87 m. S.S.W. of Columbus.

—A post-village of Knox co., abt. 50 m. N.E. of Columbus.

North Lim'ington, in *Maine*, a post-village of York co., abt. 3 m. N. of Limington.

North Liv'ermore, in *Maine*, a post-village of And-roscoggin co., abt. 25 m. W. by N. of Augusta.

North Lon'donderry, in *New Hampshire*, a post-village of Rockingham co., abt. 25 m. S.E. of Concord.

North Lyme, in *Connecticut*, a post-village of New London co., abt. 35 m. E. by N. of New Haven.

North Mad'ison, in *Connecticut*, a post-village of New Haven co., abt. 17 m. E. by N. of New Haven.

North Mad'ison, in *Indiana*, a post-village of Jeffer-son co., abt. 2 m. N. of Madison City.

North Mah'oning, in *Pennsylvania*, a township of Indiana co.

North man. n. One of the NORTHMEN, *q. v.*

North Man'chester, in *Indiana*, a post-village of Wal-lash co., abt. 10 m. N. by E. of Indianapolis.

North Manheim, (*man'hime*), in *Pennsylvania*, a township of Schuylkill co.

North Marsh'field, in *Massachusetts*, a post-village of Plymouth co., abt. 21 m. S.E. of Boston.

North'men, or Nor'mans. n. pl. (*Hist.*) A name applied to the ancient inhabitants of Scandinavia, or Norway, Sweden, and Denmark, but more generally restricted to those sea-rovers called Danes by the Saxons, who sailed on piratical expeditions to all parts of the European seas, made their first appearance on the coast of England in 787, and from the year 832 repeated their invasion almost every year, till they became masters of all the country under their king Canute (*q. v.*) and reigned in England during the next fifty years, down to 1042, when the Saxon dynasty was restored in the person of Edward the Confessor. A Danish invasion penetrated to the Mense in 515, but was repelled. The victories of Charlemagne over the Saxons led to a league being formed between that people and the Danes; and Gott-fried, king of Jutland, with his piratical bands, ravaged the French and Spanish coasts, even as far as the Straits of Gibraltar. Their great invasion of France, however, did not take place till 841, after which the whole coast of W. Europe, from the Elbe to the Guadalquivir, fell a prey to the Northmen. In 837, they had sacked Utrecht and Antwerp, and fortified themselves on the island of Walcheren, spreading themselves on the mainland. Flanders was obstinately defended; but Friesland, Lower Lorraine, and Neustria fell without resistance.

Roland devastated Holland, and appeared upon the Seine, while Gottfried ravaged the valleys of the

Mense and Scheldt.

Hastings, at the head of a band of

Northmen, sacked

Bordeaux, Lisbon, and Seville, defeat-

ed the Moorish con-

querors of Spain at

Cordova, overrun

Italy and Sicily, and

crossed the straits

into Morocco. In

885, they laid siege

to Paris, but were at

length bought off

by Charles the Fat.

Rollo, one of the most renowned of the Norman chieftains,

after ravaging Friesland and the countries watered by the

Scheldt, accepted the hand of a daughter of Charles the

Simple, and received with her, under the tie of vassalage,

possession of all the land in the valley of the Seine, from

the Epte and Eure to the sea, which then went by the

name of Normandy. They rapidly adopted the more

civilized form of life that prevailed in the Frankish

kingdom — its religion, language, and manners — but

inspired everything they borrowed with their own vital-

ity. Their conquest of England, in 1066, gave that

country an energetic race of kings and nobles, on the

whole well fit to rule a brave, sturdy, but somewhat

torpid people like the Anglo-Saxons. But though the

Normans had acquired comparatively settled habits in

France, the old passion for adventure was still strong

in their blood; and in the course of the 11th century,

many nobles, with their followers, betook themselves to

S. Italy, where the strifes of the native princes, Greeks,

and Arabs, opened up a fine prospect for ambitious de-

signs. In 1059, Robert Guiscard, one of the ten sons of

the Norman count, Tancred of Hauteville, all of whom

had gone thither, was recognized by Pope Nicholas II.

as duke of Apulia and Calabria, and in 1071 as lord of

all Lower Italy. His brother and liegeman Roger con-

quered Sicily, 1060-1089. Roger II. of Sicily united the

two dominions in 1127; but in the person of his grand-

son, William II., the Norman dynasty became extinct,

and the kingdom passed into the hands of the Hohen-

stauffen family.

North Men'don, in *New York*, a village of Monroe co.

North Mid'dleborough, in *Massachusetts*, a post-village of Plymouth co., abt. 35 m. S. by E. of Trenton.

North Mid'dleton, in *Pennsylvania*, a township of Cumberland co.

North Mid'dletown, in *Kentucky*, a post-village of Bourbon co., about 10 m. E. of Paris.

North Mon'mouth, in *Maine*, a post-village of Kennebec co., abt. 15 m. W. by S. of Augusta.

North Montpe'tier, in *Vermont*, a post-village of Washington co., abt. 6 m. N. of Montpelier.

North'most, a. Northernmost; situated at the point furthest north.

North Monn'tain, in *Pennsylvania*, an eminence in Columbia and Lycoming cos. — This name is also applied to the most N. ridge of the Alleghenies in Pennsylvania, as contradistinguished from South Mountain.

North Moun'tain, in *W. Virginia*, a post-village of Berkeley co., abt. 25 m. N.W. of Harper's Ferry.

North Mount Pleas'ant, in *Mississippi*, a post-village of Marshall co., abt. 15 m. N.W. of Holly Springs.

North Mud'dy, in *Illinois*, a township of Jasper co.

North'ness, n. An inclination in the end of a mag-netic needle to point to the north.

North New Port'land, in *Maine*, a post-village of Somerset co., abt. 50 m. N.W. of Augusta.

North New Sa'lem, in *Massachusetts*, a post-village of Franklin co., abt. 75 m. W. by N. of Boston.

North Nor'wich, (*nor'ij*), in *New York*, a post-village and twp. of Cheango co., abt. 45 m. S.S.W. of Utica.

North Og'den, in *Utah*, a post-village of Weber co., about 7 m. N. by E. of Ogden City.

North Or'ange, in *Massachusetts*, a post-village of Franklin co.

North Or'well, in *Pennsylvania*, a post-village of Bradford co.

North Ox'ford, in *Massachusetts*, a post-village of Worcester co.

North Par'is, in *Maine*, a post-village of Oxford co., about 55 m. N. by W. of Portland.

North Park, in *Colorado*. See COLORADO.

North Par'sonfield, in *Maine*, a post-village of York co., about 80 m. S.W. of Augusta.

North Penn. in *Pennsylvania*, a former township of Philadelphia co., now included within the chartered limits of Philadelphia, about 3½ m. N. of the City Hall.

North Pitts'ton, in *Maine*, a post-village of Kennebec co., about 8 m. S.S.E. of Augusta.

North Plains, in *Michigan*, a township of Iona co.

North Plym'pton, in *Massachusetts*, a village of Plymouth co.

North Point, in *Maryland*, a promontory having on it two light-houses, on the N. side of the entrance to Patapsco river.

North Pole. See ARCTIC; ARCTIC EXPLORATIONS; ARCTIC OCEAN; ARCTIC SEA; FRANKLIN, SIR JOHN; JACKSON-HARNSWORTH EXPEDITION; NANSEN; N. W. AND N. E. PASSAGE; NORDENSKJOLD; PEARY, &c.

North Port, a village of Prince Edward co., prov. of Ontario.

North'port, in *Alabama*, a post-village of Tuscaloosa county.

North'port, in *Indiana*, a post-village of Noble co.

Fig. 1967. — NORTHMEN'S GALLEY.

North'port, in *Maine*, a post-town and township of Waldo co. Pop. (1897) 724.

Northport, in *Michigan*, a post-village, former cap. of Leelanaw co., about 28 m. N. of Grand Traverse City.

Northport, in *New York*, a post-village of Suffolk co., abt. 40 m. E. by N. of New York city. Pop. (1894) 1,800.

Northport, in *Wisconsin*, a post-village of Waupaca co., about 60 m. N.W. of Oshkosh.

North Pots'dam, in *New York*. See RACKETVILLE.

North Prairie (*pra'ree*), in *Illinois*, a village of Knox co., about 56 m. N. W. by W. of Peoria.

North Prairie, in *Wisconsin*, a post-village of Wan-kesha co., about 31 m. S.W. of Milwaukee.

North Pres'cott, in *Massachusetts*, a post-village of Hampshire co., abt. 75 m. W. by N. of Boston.

North Providence, in *Rhode Island*, a township of Providence co.

North Reading, in *Massachusetts*, a post-village and township of Middlesex county, about 17 miles N. of Boston.

North Reho'both, in *Massachusetts*, a post-village of Bristol co., abt. 38 m. S. by W. of Boston.

North River, rises in Windham co., Vermont, and flowing generally S. into Massachusetts, enters the Deer-field River in Franklin co.

North River, in *Alabama*, enters the Black Warrior River in Tuscaloosa co.

North River, or UPPER THREE, in *Iowa*, enters Des Moines River in Polk co.

North River, in *Massachusetts*, enters the Atlantic Ocean from Plymouth co.

North River, in *New York*, a name sometimes ap-plied to the Hudson River, *q. v.*

North River, in *Virginia*. See CAPE PASTURE RIVER.

—A name sometimes applied to the upper part of the Rap-pahannock River, *q. v.*

North River, in *W. Virginia*, enters the Cacapon River in Hampshire co.

North River Mills, in *W. Virginia*, a post-village of Hampshire co., abt. 14 m. E. of Romney.

North Roch'ester, in *Massachusetts*, a post-village of Plymouth co., abt. 46 m. S. by E. of Boston.

North Sa'lem, in *Indiana*, a post-village of Hendricks co., abt. 30 m. W.N.W. of Indianapolis.

North Salem, in *Missouri*, a post-twp. of Linn co.

North Salem, in *New York*, a post-town and township of Westchester co., about 110 m. S. by E. of Albany. Pop. (1897) 1,920.

North Salem, in *Oregon*, a precinct of Marion coun-ty.

North Sand'wich, in *Massachusetts*, a post-village of Barnstable co., abt. 58 m. S.S.E. of Boston.

North San Ju'an, in *California*, a post-village of Nevada county, about 12 miles North-west of Nevada City.

North Seitnate, (*sit'u-at*), in *Massachusetts*, a post-village of Plymouth co., abt. 20 m. S.E. of Boston.

North Seitnate, in *Rhode Island*, a post-village of Providence co., abt. 10 m. W. of Providence.

North Sea, or GERMAN OCEAN, that portion of the At-lantic Ocean extending from the Straits of Dover to the Shetland Islands, having E. Norway and Denmark, S. Hanover, the Netherlands, Belgium, and France, and W. the British Islands. Ext. 700 m. long, and 420 broad. It communicates with the Atlantic by the Straits of Dover and Pentland Frith, and with the Bal-tic by the Skager-rack, the Cattegat, the Sound, and the Great and Little Belts. It receives the waters of the Elbe, Rhine, Weser, and Scheldt, on the E., and the Thames, Ouse, Humber, Tyne, Tweed, Forth, and Tay on the W. Navigation is very difficult and dangerous, owing to the sand-banks along the English coasts, and extending N.E. from the Frith of Forth, and one N.W. from the mouth of the Elbe, besides the variety of cur-rents, which generally show a tendency towards the N. E., owing to the prevalence of the S.W. winds. The influence of tidal currents of the Atlantic is felt in the N. S. so as to cause a rise of 20 feet in the estuary of the Humber. The fisheries of the N. S. are important, and employ many thousands of people. Lights both stationary and floating are placed along the difficult parts of the coasts for the convenience of traffic, which of late years is enormous.

North Sears'mont, in *Maine*, a post village of Waldo co., abt. 11 m. W. of Belfast.

North Sears'port, in *Maine*, a post-village of Waldo co., abt. 8 m. N. by E. of Belfast.

North Sedg'wick, in *Maine*, a post-village of Han-cock co., abt. 20 m. S.S.W. of Ellsworth.

North Sew'ickley, in *Pennsylvania*, a post-town-ship of Beaver co.

North Shade, in *Michigan*, a post-township of Gratiot co.

North Shenan'go, in *Pennsylvania*, a post-township of Crawford co.

North Sid'ney, in *Maine*, a post-village of Kennebec co., abt. 14 m. N.N.E. of Augusta.

North Som'ers, in *Connecticut*, a village of Tolland co., abt. 24 m. N.N.E. of Hartford.

North Spen'eer, in *Massachusetts*, a post-village of Worcester co., abt. 53 m. W. by S. of Boston.

North Stam'ford, in *Connecticut*, a post-village of Fairfield co., abt. 40 m. S.E. by E. of New Haven.

North Star, in *Michigan*, a post-township of Gratiot co.

North Stock'holm, in *New York*, a post-village of St. Lawrence co., abt. 8 m. N.E. of Potsdam.

North Sto'nington, in *Connecticut*, a post-township of New London co.

North Strabaue, (*stra-ban'*) in *Pennsylvania*, a township of Washington co.

North Stuke'ly, a village of Shefford co., prov. of Quebec, abt. 24 m. W. of Sherbrooke.

North Sudbury, (*sud'ber-e*), in *Massachusetts*, a post-village of Middlesex co., abt. 23 m. W. by N. of Boston.

North Swan'sea, in *Massachusetts*, a post-village of Bristol co., abt. 46 m. S. by W. of Boston.

North Tewkesbury, in *Massachusetts*, a village of Middlesex co., abt. 25 m. N.N.W. of Boston.

North Towan'da, in *Pennsylvania*, a post-township of Bradford co.

North Tru'ro, in *Massachusetts*, a post-village of Barnstable co., abt. 60 m. S.E. of Boston.

North Two River, in *Missouri*, enters the Mississippi River from Marion co.

Northumberland, (*Dukes of*). See DUDLEY and PER Y

Northumberland, a marit. co. of the N.E. of England, bordering on the German Ocean, having N. a small detached portion of Durham, which separates it from Scotland; S. Durham, and W. Cumberland. *Area*, 1,871 sq. m. The surface is diversified, and the soil generally fertile. *Rivers*. Tyne, Coquet, Alne, Blyth, Wansbeck, and Till. *Prod.* Wheat, oats, barley, rye, and vegetables. Cattle are extensively reared. *Min.* Iron, lead, and coal. *Chief towns*. Newcastle-on-Tyne, Tynemouth, North Shields, and Morpeth. *Pop.* 343,025.

Northumberland, a S. co. of prov. of Ontario, bordering on Lake Ontario; *area*, abt. 730 sq. m. *Rivers*. Trent river, and several smaller streams. *Cap.* Cobourg. *Pop.* (1897) 38,100.

Northumberland, in Canada, a co. of New Brunswick, bordering on the Gulf of St. Lawrence. *Cap.* Newcastle. *Pop.* (1891) 25,713.

Northumberland, in *New Hampshire*, a post-town and township of Coos co., about 110 m. N. of Concord. *Pop.* (1897) 1,410.

Northumberland, in *New York*, a post-township of Saratoga co. *Pop.* (1897) 1,500.

Northumberland, in *Pennsylvania*, an E. central co.; *area*, about 463 sq. m. *Rivers*. North and West Branches of the Susquehanna river, and Shamokin, Mahanoy, and Mahantango creeks. *Surface*, hilly and mountainous; *soil*, in the valleys very fertile. *Min.* Iron, limestone, and coal. *Cap.* Sunbury. *Pop.* 74,698.

—A post-borough of the above co., about 56 m. N. of Harrisburg, on the Susquehanna river. *Pop.* (1897) 3,150.

Northumberland, in *Virginia*, an E. co., bordering on Chesapeake bay; *area*, about 180 sq. m. *Rivers*. Potomac river, and some smaller streams. *Surface*, nearly level; *soil*, moderately fertile. *Cap.* Heathsville. *Pop.* (1890) 7,885.

Northumberland, a marit. co. of E. Australia, in New South Wales, having N. the river Hunter, S. the Hawkesbury, and E. the S. Pacific Ocean; *area*, 2,342 sq. m. *Surface*, mountainous. Coal is the principal product. *Chief towns*. Newcastle, Maitland, Singleton, and Morpeth. *Pop.* 14,000.

Northumberland Cape, in S. Australia; Lat. 38° 3' S., Lon. 140° 37' E.

Northumberland In'let, a bay of British N. America, between Cumberland Island and Frobisher Strait; Lat. 65° N., Lon. 65° W.

Northumberland Islands, near the N.E. coast of Australia; Lat. 21° 32' and 22° S., Lon. 149° 47' to 150° 37' E.

Northumberland Strait, separates Prince Edward Island from New Brunswick and Nova Scotia, British N. America.

Northumb'ria, one of the kingdoms of the English heptarchy, comprehending the cos. of Northumberland, York, Westmoreland, and the S.E. part of Scotland. It was conquered in 867 by the Danes, who were compelled to acknowledge the supreme power of Edward the Elder in 922.

Northumb'rian, *n.* (*Geog.*) A native or inhabitant of the English county of Northumberland.

—*a.* Belonging or having reference to Northumberland, England, or to its inhabitants.

North Union, in *Pennsylvania*, a township of Fayette co.

North Unity, in *Michigan*, a post-village of Leelanaw co., abt. 19 m. N.W. of Grand Traverse City.

North Vassalborough, in *Maine*, a post-village of Kennebec co., abt. 16 m. N.N.E. of Augusta.

North Ver'non, in *Indiana*, a city of Jennings co., on 3 R. Rs. 21 m. S.E. of Columbus.

Northville, in *Connecticut*, a post-village of Litchfield co., abt. 18 m. N. by E. of Danbury.

Northville, in *Illinois*, a post-village and township of La Salle county, about 65 miles South south-west of Chicago.

Northville, in *Iowa*, a post-village of Greene co., abt. 12 m. N.W. of Jefferson.

Northville, in *Michigan*, a post-village of Wayne co., abt. 27 m. W.N.W. of Detroit.

Northville, in *New York*, a village of Cayuga co., abt. 26 m. S. by W. of Auburn.

—A post-village of Fulton co., abt. 55 m. N.W. of Albany.

North Wal'doborough, in *Maine*, a post-village of Lincoln co., abt. 25 m. E.S.E. of Augusta.

Northward, *a.* Being towards or in the direction of the north.

Northward, Northwards, *adv.* Towards the north.

Northwardly, *a.* Having a direction toward the north.

—*adv.* In a northern direction.

North Washington, in *Pennsylvania*, a village of Butler co., abt. 14 m. N.E. by E. of Butler.

—A post-village of Westmoreland co., abt. 25 m. E. by N. of Pittsburgh.

North Water'ford, in *Maine*, a post-village of Oxford co., abt. 15 m. W. by S. of Paris.

North Wayne, in *Maine*, a post-village of Kennebec co., abt. 16 m. W.N.W. of Augusta.

North-west, *n.* The point in the horizon between the north and west, and equidistant from each.

—*a.* Pertaining to the point between the north and west; being in the north-west; as, the north-west passage.

—Proceeding from the north-west; as, a north-west wind.

North-West, in *Indiana*, a township of Orange county.

North-West, in *Ohio*, a post-township of Williams co.

North-West and North-East Passages.

(*Geog.*) The report of the fabulous wealth of the regions discovered by the Portuguese and Spaniards in the southern latitudes of Asia, excited the attention of the other maritime nations of Europe, and prompted them to send out expeditions to the East Indies for the purpose of obtaining a share in the lucrative traffic of which Spain had hitherto possessed the monopoly. But the latter nation having at that time the complete command of the Atlantic and Indian oceans, attempts were made to find a North-East passage by coasting along the N. of Europe and Asia, or a North-West passage by sailing N.W. across the Atlantic.—The first expedition to discover a route to Eastern Asia by coasting along the north of Europe and Asia, was dispatched from England under Sir Hugh Willoughby in 1595, and, which, after discovering Nova Zembla (*q. v.*), was laid up in winter-quarters on the coast of Lapland, where the crew were frozen to death. Other expeditions were conducted by Burroughs in 1586, and by Petty and Jackman in 1580. William Barentz made three voyages for this purpose on behalf of the Dutch government, between 1594 and 1596; and Henry Hudson, in 1608, resumed the attempt for the English. In 1609 he conducted a Dutch expedition, and in 1670 a voyage was undertaken for the same nation by Wood. Behring made an abortive attempt in 1741, and several sledge expeditions sent out by the Russian government (1820–1823) established the impossibility of opening the passage in consequence of the alternations of open sea with fields of ice.—The idea that a shorter track to India might be discovered than that around the Cape of Good Hope, was first broached by John Cabot about 1496, and in 1500 the Portuguese dispatched the first expedition sent out for the express purpose of discovering the passage, under the command of Gaspar de Cortereal. But the first success was achieved by Capt. John Davis who discovered the strait which bears his name, 1585–1588. Henry Hudson, who had previously been unsuccessful in discovering an E. passage, followed in 1610, and discovered Hudson's Strait and Bay. Baffin, a skilful navigator, who accompanied Captain Bylot on his second voyage in 1616, discovered the bay which bears his name. Elated by these discoveries, and encouraged by the reward of \$100,000 promised by the English Parliament to the fortunate discoverer, in 1743 new expeditions were set on foot. In 1818 the English Admiralty took up the search, and an expedition was dispatched under Capt. Ross, when, he being unsuccessful, another sailed in the following year under Lieut. Parry, who succeeded in reaching Lon. 110° W. in Melville Sound. In 1829, Capt. Sir John Ross, after a difficult voyage, reached a point 200 m. from Point Turnagain (Lon. 109° W.) in the course of which voyage he discovered the Magnetic Pole. Other expeditions met with but indifferent success until the ill-fated expedition of Sir John Franklin in 1845. The interest created throughout Europe and the U. States by the loss of this navigator, caused the equipment of seven different expeditions in 1850, as well to clear up the mystery attending his fate, as to further the cause of science. Among the most celebrated of these were that under Capt. McClure, and the American expedition under Lieut. De Haven, and Dr. Kane. The former sailed from Plymouth, England, in Jan. 1850, and reached Behring's Strait in August, the same year. Sailing E. the following spring, they became fixed in the ice 60 m. W. of Barrow's Strait, whence they were rescued by Sir Edward Belcher, who had been sent to their assistance in 1852. Belcher, who had reached Melville Sound by the E. passage through Lancaster Sound and Barrow's Strait, returned by the same route, and thus McClure had the honor of being the first who had penetrated the Western passage. In 1860, Dr. Hayes followed the same route, and rendered valuable service to the cause of Arctic Discovery. In the meanwhile, various expeditions were sent out by the Swedes, the Germans, and the Austrians, some of them following the route between Spitzbergen and Nova Zembla, and others trying a course between the island of Spitzbergen and the E. shore of Greenland. Of these the most important was that of Nordenskjöld (1872–78), who in the last-named year reached Bering Strait from Norway, and accomplished the Northeast Passage.

North-west'ly, *a.* Toward or from the north-west.

North-western Provinces, one of the grand political divisions of British India, comprising the provinces of Delhi, Agra, Allahabad, Benares, Meerut, and Rohilcund (*q. v.*); Lat. between 21° 17' and 31° 6' N., Lon. 73° 2' and 84° 40' E.; *area*, 72,000 sq. m. *Pop.* 31,000,000.

North-west'ern, *a.* Pertaining to or being in the north-west, or in a direction thereto; as the London and North-Western Railway.

North Wey'month, in *Massachusetts*, a post-village of Norfolk co., abt. 18 m. S. by W. of Boston.

North White Creek, in *New York*, a village of Washington co., abt. 36 m. N.E. of Albany.

North White'hall, in *Pennsylvania*, a post-township of Lehigh co.

North Wil'ma, in *New York*, a post-village of Jefferson co., abt. 20 m. E.N.E. of Watertown.

North-wind, *n.* The northerly; the wind that blows from the north; figuratively, Boreas.

North Wind ham, in *Connecticut*, a post-village of Windham co., abt. 50 m. E. by S. of Hartford.

North Windham, in *Maine*, a post-village of Cumberland co., abt. 17 m. N.W. of Portland.

Northwood, in *Iowa*, a post-township of Worth co.

Northwood, in *New Hampshire*, a township of Rockingham co.

Northwood, in *Ohio*, a village of Logan co., abt. 64 m. N.W. of Columbus.

North Wood'stock, in *Connecticut*, a post-village of Windham co., abt. 46 m. E.N.E. of Hartford.

North Wrenth'am, in *Massachusetts*, a post-village of Norfolk co., abt. 23 m. S.W. of Boston.

North Yam Hill, in *Oregon*, a post-village of Yam Hill co., abt. 7 m. N.W. of La Fayette.

North Yar'mouth, in *Maine*, a post-township of Cumberland co.

Nor'ton, CAROLINE ELIZABETH SARAH, an English poetess, and grand-daughter of the Right Hon. R. Brinsley Sheridan (*q. v.*), was b. in 1808. From a very early age she manifested the literary talents hereditary in her family by the production of the *Dandies' Rout*, a witty brochure, with illustrations from her own designs. The *Sorrows of Rosalie* appeared shortly after her marriage in 1829, with the Hon. G. C. Norton, a union productive of unhappiness. Of her numerous subsequent works, the *Child of the Islands*, a poem (1846); the *Dying One*, a poem based on the legend of the "Wandering Jew," (1853); *Bungen on the Khair*, and the *Lady of La Garaye* (1861), are the most important. D. (Lady Stirling Maxwell) 1877.

Nor'ton, in *Illinois*, a township of Kankakee co.—A township of Tazewell co.

Nor'ton, in *Massachusetts*, a post-vill. and twp. of Bristol co., abt. 27 m. S.W. of Boston.

Nor'ton, in *Michigan*, a township of Muskegon county.

Nor'ton, in *Ohio*, a post-village of Delaware county, about 34 miles N. of Columbus.—A township of Summit county.

Nor'ton Centre, in *Ohio*, a post-village of Summit co., abt. 120 m. N.E. of Columbus.

Nor'ton Sound, in *Alaska*, an extensive inlet of Behring Sea, between Lat. 62° and 65° N., Lon. 161° and 167° W. It has Cape Rodney on the N., Cape Romanoff on the S., and is 200 m. wide at its mouth; extending inland abt. 200 m. Discovered by Captain Cook in 1778.

Nor'tonsville, in *Virginia*, a village of Albemarle co., abt. 30 m. E. of Staunton.

Nortonville, in *Michigan*, a village of Ottawa co., abt. 96 m. N.W. of Lansing.

Nor'val, a village of Haldou co., prov. of Ontario, abt. 27 m. W. of Toronto.

Nor'vell, in *Michigan*, a post-village of Jackson co., abt. 22 m. N.N.W. of Adrian.

Norwalk, (*nor'walk*), in *Connecticut*, a small river flowing into Long Island Sound from Fairfield co.

—A post-town and township of Fairfield co., about 32 m. W.S.W. of New Haven. *Pop.* (1897) 18,200.

Nor'walk, in *Iowa*, a post-village of Warren co., about 12 m. S. of Des Moines.

Nor'walk, in *Ohio*, a city and township, cap. of Huron co., about 100 m. N. by E. of Columbus. *Pop.* (1897) 8,870.

Nor'way. [*Norw. Norge*; *Ger. Norwegen*.] A kingdom of N. Europe, forming the W. portion of the Great Scandinavian peninsula, and until 1905 united to the crown of Sweden. It extends, including Norwegian Lapland, between Lat. 58° and 71° N., and Lon. 5° 31' E.; having Russian Lapland and Sweden E.; the Skager-rack S., separating it from Denmark; and the North Sea and Atlantic and Arctic oceans W. and N. Its entire length, from the Naze, its most S. promontory, to the North Cape, is upwards of 1,100 m. Its breadth varies greatly. In Norrland, near its N. extremity, it may average abt. 50 m.; but towards the S. it is as much as 250 m. The coast is extensive, and deeply indented with openings, called fiords or firths. *Area*, 121,807 sq. m. *Desc. N.* is divided into 18 provs., and presents a very uneven surface, comprising a succession of mountains and valleys; the former in general barren and uninhabited; the latter not deficient in the products of a high latitude. The line of separation between N. and Sweden is very clearly marked by a chain of mountains, extending above 1,000 m. from N. to S., and composed of several ridges. These form the watershed of the peninsula, and, on the side of N., descend abruptly, and throw off ranges to the N. and W. The S. part of this range is called the *Norriska Fiellen*, the N. part being known as the Kiölen Mountains, and the centre as the *Dovre-Fjeld*. The highest summits are those of Skagstols Tind and Sneheotta, both above 8,000 feet.—*Rivers*. Numerous, and of difficult navigation, being either mountain torrents, or interrupted in their passage by rapids and falls. The principal are the Glommen and the Tana.—*Lakes*. Extremely numerous. The most remarkable are those of Miosen, Fœmund, and Spærdillen.—*Clim.* Not severe throughout. In the mountains the cold of winter is intense. On the sea-coast the atmosphere is softened by the W. breeze, and is often less cold, in the depth of winter, than in the interior of Germany. There is no spring, however, and the summer is both very hot and dry.—*Prod.* Flax and hemp are raised in many parts of the country, and in others barley and oats. The

pastures are pretty good, and cattle are reared and exported in numbers; but the main article of export is timber. The mountains are covered with forests of pine, ash, but in particular of fir, which grows over almost all the country. The horses are small but hardy; goats are more plentiful than sheep; swine are not abundant. — *Min.* Iron and copper of a very superior quality, besides lead, nickel, and some silver. Stone for building, and slate, are in great abundance; and the loadstone, or natural magnet, is also frequently found and exported. — *Zoöl.* In Norwegian Lapland, the reindeer forms the sole wealth, and almost the only source of the subsistence of the inhabitants. In the mountains and forests are numbers of beasts of prey, such as bears, wolves, lynxes, and foxes. Water-towl, especially the eiderduck, are very plentiful. During the hot season, mosquitoes are almost as troublesome as they are in tropical countries. — *Manuf.* The only works of industry possessed by N. are forges, foundries, glass-houses, potash-refineries, and saw-mills. The inhabitants of the towns import the various articles they are in want of. The fisheries are extensive, and may be considered, after timber and iron, the chief support of the export trade. The herring and cod fisheries are the principal branches. — *Inhabitants.* The Norwegians are a hardy, sober,

Fig. 1968. — NORWEGIAN COSTUMES.

honest, and hospitable people, of Teutonic origin, extremely simple in their habits, and so wedded to the customs of their forefathers, that the costume in vogue in the 16th and 17th centuries is still to be found in use in many of the remote parishes at the present day, (Fig. 1968;) at the same time, the dress of every district is different, so that the locality of a man's residence is known by the color or peculiarity of the dress he wears. With the exception of about 4,000 persons, all the Norwegians belong to the Lutheran Church. — *Principal towns.* Christiania, the cap. and Bergen. — *Govt.* Though N. was until 1905 united with Sweden, it differed greatly from that country in the form of its government. The constitution, proclaimed Nov. 4, 1814, is one of the most democratic in Europe. According to its terms, the whole legislative and part of the executive power of the realm is in the *Storting* (from *stor*, great, and *ting*, court) of the realm, the representative of the sovereign people. The king has the nominal command of the land and sea forces, but can make few appointments, and, with the exception of the governor-general, is not allowed to nominate any but Norwegians to public offices under the crown. He can only remit punishment of death, and not grant a complete pardon to criminals condemned by Norwegian courts of law. The king possesses the right of veto over laws passed by the "Storting," but only for a limited period. The royal veto may be exercised twice; but if the same bill pass three successive times, it becomes the law of the land without the assent of the sovereign. The king is forbidden to grant any titles, dignities and prerogatives, or to create an hereditary nobility. While the Norwegians had a warm affection for King Oscar, the commercial system of the joint kingdoms was disadvantageous to N., and about 1890 an agitation arose in favor of a separate consular service and Minister of Foreign Affairs. As the king would not grant these, the Storting finally passed a law creating a separate consular service, and the refusal of King Oscar to sanction this led that body on June 7, 1905, to decree a dissolution of the Union. This, after a vigorous opposition in Sweden, was consummated on October 16, by a convention of delegates from both kingdoms. A popular vote was subsequently taken in Norway on the question of establishing a kingdom or a republic, the former being carried by a large majority. Prince Charles of Denmark was offered the throne, and on his acceptance was elected Nov. 18, 1905, he taking the title of Haakon VII. and being crowned, with due cere-

mony, on June 22, 1906. *Army and Navy.* The total military force of the nation may be estimated at 154,000. The navy consists of 7 battleships, 5 coast-defense ships, 13 cruisers, 31 gunboats, and 39 torpedo boats, manned by about 4500 men. The naval dock yards are at Horten on the west side of Christiania-fjord. *Pop.* 2,240,032. **Norway**, in Iowa, a twp. of Winnebago co.

Norway, in Maine, a post-village and township of Oxford co., abt. 45 m. W. by S. of Augusta. *Manuf.* carriages, clothing, flour, and lumber.

Norway, in Minnesota, a township of Fillmore co. — A post-village of Goodhue co., about 16 miles E. of Faribault.

Norway, in New York, a post-village and township of Herkimer county, about 20 miles North-east of Utica.

Norway, in Wisconsin, a post-village of Racine co., abt. 50 m. E.S.E. of Madison.

Norwegian, *a.* (*Geog.*) Pertaining or having reference to Norway.

n. (*Geog.*) A native or inhabitant of Norway.

Norwegian Language and Literature.

The ancient Norwegian tongue was formerly the common language, with only trifling variations of dialect, of Denmark, Norway, and Sweden. With the advent of Christianity, however, about the 10th century, this language was by degrees supplanted by the modern Danish, and only found a permanent abiding place in Iceland, where it is still spoken in its purity; and hence it is now commonly known as the *Icelandic*. Norway, in consequence of her remote situation, retains the old tongue longer than either of her sister kingdoms. The few mediæval Norwegian documents that still exist, do not exhibit any important grammatical changes until about the time of the annexation of Norway to Denmark, towards the close of the 14th century. But from this time the influence of the governing nation was such that a rapid transformation took place, and soon after the beginning of the 16th century the written language and speech of the higher classes became identical with those of Denmark. At present, the Danish is the language of the people generally; but among the peasantry, and in the more remote districts, the old Norse language is still spoken in various dialects, diverging more or less in their structure from the ancient tongue. The different Norwegian dialects have been classed in three divisions, corresponding to the natural divisions of the country: the *Nordenfjeldsk* group, comprising those spoken in the province of Drontheim and the extreme northern provinces; the *Veslenfjeldsk* group, or those spoken west of the mountains, in Bergen and the western portion of Christiansand; and the *Soudenfjeldsk* group, including those spoken in southern Norway, or to the east of the mountains. Of these three divisions, the second approaches nearest to the Icelandic, while the last-named, lying nearer to Christiania, has been most largely influenced by the Danish. All of them possess some peculiarities in common which distinguish them from the written speech. The earliest literature of the northern countries is of an antiquity vastly remote; consisting of those accounts of their gods and heroes which had been handed down from age to age by a class of poets and oral historians, educated for the purpose, and styled *Scalds* and *Sagamens*. This system of oral tradition continued till the introduction of letters with Christianity. But the Christianity which was introduced displayed so great an antipathy to the original literature, or traditional lore of the country, as being inseparably mixed with the paganism of the people, that almost every trace of it was rooted out. Fortunately, some of the grand and curious literary monuments of this period were preserved by such of the Scandinavians as had fled to Iceland from the oppression of some of their conquering monarchs, and who there maintained a greater independence of the Romish Church. There the ancient order and arts of the Scalds were preserved. Sæmund Sigfusson, surnamed "Frodé," or the "Learned," who flourished in the latter half of the 11th century, wrote down all that remained of the great mythologic and heroic poems of the ancient Scalds, under the name of the *Elder*, or *Rhythmical Edda*. After him followed Ari Hinn Frodé, who began the chronicles of Iceland in the *Landnama Bok*; and Snarro Sturleson, the author of the *Second* or *Prose Edda* and the *Heimskringla*, or chronicles of the kings of Norway. These, with a great number of romantic and popular sagas, constitute the mass of the ancient Norse literature, which, escaping the annihilating hands of the Roman priests in that remote island, which remained an independent republic till 1261, astonished the learned world of Denmark and Sweden by their discovery in the middle of the 17th century. (See *Howell's History of Northern Literature*.) During her political connection with Denmark, and as using the language of that country, Norway, though she produced a number of writers, cannot be said to have had any distinct literature of her own. The writings of her historians, poets, and men of science, properly form a part of Danish literature. Her political union with Sweden, a country possessing a different language, and the establishment of an independent government in 1814, gave an impulse to the national spirit, and with the establishment of the university of Christiania (founded in 1811), led to the development of an independent literature. For the first few years, however, as was to be expected in the case of a country which, for more than four centuries, had not possessed a government of its own, attention was chiefly directed to the discussion of subjects connected with political economy and jurisprudence, and the literature consisted chiefly of political essays, legal tracts, treatises on agriculture and manu-

factures, and text-books for popular instruction. As noted publicists and economical writers, are C. M. Falcken, Sverdrup, Reeder, Maribce, Petersen, Plalau, Daa, Blom, and E. Monrad, the last of whom has recently given to the public a large work on the history of political science. Keyser and Munch have critically and philologically edited the ancient Norwegian code of laws. Schweigaard has written commentaries upon the present jurisprudence; and among other judicial writers of eminence, are Aubert, Reeder, P. C. Lassen, Smidt, Bull, and Brandt. Besides numerous valuable statistical tables issued annually by the government, J. E. Kraft has published an able topographical and statistical description of the kingdom (6 vols. 1820-35); Tvethe issued his *Norges Statistik* in 1848; and in the department of social statistics, the treatises of Elert Smidt are well known. In physics, several Norwegians have achieved a European reputation: as Christopher Hansteen (astronomy and terrestrial magnetism); B. M. Keilian (geology); Theodor Kjerulf (geology); Jens Esmaik (geology, and the structure and formation of glaciers); J. C. Harbye (the erosion of mountains). The leading botanists have been Christen Smitt Summerfeldt, and Blytt. In zoölogy, the splendid work of Michael Sars, a Norwegian *Ennu Littoralis*, is widely known; and Halvar Rasch has also written some able treatises on the same subject. In mathematics are the names of N. H. Abel, B. Holmboe, and O. J. Broch. In medical science, Danielssen and Bocck have laid before the world important investigations on elephantiasis, and more recently (1860), Bolenkop has published a valuable treatise on the same subject. Bocck was the first to advocate inoculation in syphilitic diseases; F. Holst has by his writings contributed to the improvement of hospitals and prisons; Skjelderup has published some volumes of interest. Metaphysics have been but little cultivated, the only names of note being M. J. Mourad and C. Heiberg; but in theology there have been a number of distinguished writers; as W. A. Wexel, S. J. Stenersen, and K. P. Caspari. The history, philology, and antiquities of Norway have been studied with unflagging industry. Jacob Hall has translated the voluminous chronicles of Snarro Sturleson, and also left interesting memoirs of his own time. A. Faye has published a history of Norway; Rudolph Kayser, an account of the religion of the ancient Northmen, and a history of the Norwegian Church during the Catholic period; C. A. Lange and C. R. Unger are editing *Diplomatarium Norvegicum*; and Nicolaysen and others have illustrated the ancient remains scattered through the country. P. A. Munch is bringing out a most important national historical work, entitled "*Det Norske Folks Historie*," of which four volumes have already appeared, and come down to the end of the 14th century. The publication in 1847 of the elder Edda, by Munch, with a grammar and chrestomathy of the old language, led to the formation of the Norwegian school of philology, whose national zeal has led to many warm disputes among the Scandinavian philologists. The dialects of the Laplanders, who live under the Norwegian government, have been industriously studied by Stocketh and Friis; and C. A. Holmløe has done good service in the cause of comparative philology, by the publication of his *Comparative Lexicon of several of the Indo-European Tongues* (Vienna, 1852), and other works. The most popular poet was An Irey, Munch (1811-84), a cousin of the historian, who has produced a number of poetical and dramatic works. H. A. Wergeland (1808-45) was long the favorite poet of the Norwegians, and a complete edition of his works in 9 volumes has recently been published. The poems and dramas of H. A. Bjerregaard (1792-1842) are national in spirit, but lack originality and brilliancy. J. S. Welhaven (b. 1807) has published a great number of lyrics, and several historical dramas, founded chiefly on national subjects; and M. C. Hansen (1794-1842) produced a number of poems and romances. Among the younger poets, the best known are J. Moe, Kjerulf, Schiwe, Bentsen, Schwach, and Sivertsen; and the dramatic writers, C. P. Riis, H. Ilsen, and R. Olsen. M. B. Landstad and Sophus Bugge have each edited collections of old popular ballads, and P. C. Asbjørnsen and J. Moe have collected the popular tales, which have been orally preserved by the peasantry for many generations. A literal reprint of the well-known *Flutey-jarboek* (*Coder Platonensis*), containing all sorts of historical legends, in prose and verse, is in course of publication, with the assistance of the government. Two novelists have during the later period attracted special attention; namely, Bjornson, whose *Synnøve Solbakken*, a tale of Norwegian peasant life, met with great success; and Mrs. Amelia Collet, whose novel, *Antimodens D're* (1854-5), passed through several editions. In addition to the work named, Bjornson has produced a number of novels of great power and effectiveness, while Ilsen has become famous through his historical and social-satirical plays.

Norwich, (*nor'ij*), a city of England, cap. of the co. of Norfolk, on the river Wensum, 56 m. N.E. of Cambridge, and 96 m. N.N.E. of London. It is 5 m. in circumference, and is skirted on the N. and E. by the river. Prominent among the public buildings are the castle, built about the 10th century, the cathedral in the Norman style, the Corn-Exchange, Town-hall, and St. Andrew's Hall. There is also a public library of 20,000 vols., and the library of the Norwich Literary Institution of 15,000 vols. *Manuf.* Important, principally, bandanas, bombazines, shawls, crapes, gannes, damasks, camelets, muslins, silk, and cotton fabrics, and shoes; also iron and brass foundries, oil, corn and mustard mills, &c.

Norwich, in Connecticut, a city, semi-cap. of New London co., on the Thames River, abt. 13 m. N. of New

London; Lat. $44^{\circ} 33' N.$, Lon. $72^{\circ} 7' W.$ It is finely located, and for the most part neat and handsomely built. It is noted for the number and variety of its manufactures. Lines of railroad and steamboats connect it with the important places in the Middle and other New England States, and its trade is flourishing. *Manuf.* Cotton and woollen goods, paper, machinery, rolling mills, fire-arms, &c.

Nor'wich, in *New York*, a post-village and township, cap. of Chenango county, about 50 miles S.S.W. of Utica. *Manuf.* Iron works, carriages, &c.

Norwich, in *Ohio*, a township of Franklin county.—A township of Huron county.—A post-village of Muskingum county, about 74 miles East of Columbus.

Norwich, in *Pennsylvania*, a post-village and township of McKean county, about 190 miles North-west of Harrisburg.

Norwich, in *Vermont*, a post-village and township of Windsor county, about 43 miles S.S.E. of Montpelier. *Manuf.* Leather, carriages, &c.

Norwich Town, in *Connecticut*, a post-village of New London co., abt. 2 m. N.W. of Norwich.

Norwichville, a village of Oxford co., Upper Canada, abt. 95 m. S.W. of Toronto.

Norwood, a village of Peterborough co., Upper Canada, abt. 3 m. N.N.E. of Peterborough.

Norwood, in *N. Carolina*, a post-village of Stauley co., abt. 90 m. W.S.W. of Raleigh.

Norwood, in *Ohio*, a village of Putnam co., abt. 10 m. N. by W. of Kalida.

Nose, (*nōz*, *nōz*) *n.* [A. S. *nose*, *næse*; D. *neus*; Ger. *nase*; It. *naso*; Sp. *nariz*; Fr. *nez*; Lat. *nasus*; Sansk. *nāsā*, *nāsikā*, the nose.] (*Physiol.*) The fleshy protuberance which contains the external cartilages serving to receive the sensation of smell. It is so termed in the higher vertebrate animals. The nose, anatomically considered, consists of two large cavities, called nostrils (*nares*), a right and a left, formed by the bones of the face, and separated from each other by a perpendicular flat partition called the *septum narium*. There are 14 bones which enter into the composition of the cavities of the nose; the principal of which are the nasal bones, which bound the nasal cavities in front, and are attached to the frontal bone above and to the superior maxillary on the sides. The other bones of the nose are the frontal, ethmoid, and sphenoid, which are common to the head and face; and all the bones of the face, excepting the two malar and inferior maxillary: being the two superior maxillary, two lachrymal, two inferior spongy, the vomer, and the two palatal bones. The septum of the nose is formed by the vomer, nasal lamella of the ethmoid bone, and an extensive cartilage. The nasal cavities are bounded anteriorly by the nasal bones, superiorly by the frontal bone and the cribriform plate of the ethmoid bone, and posteriorly by the body of the sphenoid. The floor is formed by the superior maxillary and palatal bones, and the outer wall by the ethmoid, the internal pterygoid plates of the sphenoid bone, the lachrymal bone, inferior spongy bone, palatal bone, and superior maxillary. Each nostril is divided by the spongy bone into chambers, termed the *superior*, *middle*, and *inferior meatus*. The openings into these, in addition to the anterior and posterior common openings, are as follows: In the inferior meatus, the opening from the nasal duct, concealed by a fold of mucous membrane; in the middle meatus, one from the maxil-

Fig. 1969. — A LONGITUDINAL SECTION OF THE NASAL FOSSÆ OF THE LEFT SIDE, THE CENTRAL SEPTUM BEING REMOVED.

1. The frontal bone; 2, the nasal bone; 3, part of the ethmoid bone; 4 the sphenoidal sinus. a, The superior turbinate bone; b, the superior meatus; c, middle turbinate bone; d d, the middle meatus; e, the inferior turbinate bone; f f, the inferior meatus; g g, a probe passed into the nasal duct.

lary sinus, one from the frontal sinus, and anterior ethmoidal cells; in the superior meatus, the opening from the posterior ethmoidal cells and sphenoidal sinuses, and the sphenopalatine foramen. The Eustachian tube might also be said to enter the nostrils, for its anterior aperture corresponds with the posterior part of the inferior spongy bone. The upper wall of the nose is pierced by numerous foramina, through which enter the filaments of the olfactory, or nerve of smell. The mucous membrane lining the nose is called the *Schneiderian*, or *pituitary*, and is continuous with the common integument anteriorly and with the mucous membrane of the pharynx posteriorly. It is, for the most part, well supplied with vessels, especially veins, and presents also numerous glandular follicles, whose secre-

tion is well known. It receives the filaments of the nerves of smell and of common sensation. The nerves of smell arise from the anterior lobes of the cerebral hemispheres, and their bulbs rest on the cribriform plate of the ethmoid bone, which the branches pierce, to the number of 15 or 20, on each side, and then, running under the mucous membrane, are distributed principally to the septum and outer wall of the nose, communicating with filaments from the sympathetic cerebral ganglia. Besides smell, the nose has ordinary sensation, like other parts of the face, depending on filaments of the trifacial or fifth pair of cerebral nerves. That these two sensations are distinct is evident from those who have lost the sense of smell still retaining unimpaired susceptibility to the action of snuff and other irritants. The openings of the nose are provided with stiff curved hairs, which prevent the entrance of many particles floating in the air. The external prominent part of the nose, which gives character to the feature, is composed of several cartilages connected to the bones and to each other by strong fibrous tissue, sufficiently firm to preserve the shape of the organ, and so elastic and flexible as to permit the expansion and contraction of the nostrils in respiration. The varying expression given to the face by the movements of the nose depends on the action of its muscles attached to the cartilages, skin, and upper lip; and most of the expressions arising from these movements are disagreeable; indicating contempt, anger, fear, or pain. The motor nerves of the nasal muscles are branches of the facial or seventh pair of cerebral nerves. The arteries are derived from the ophthalmic, internal maxillary, and facial branches of the carotids. The nose is not only the organ of smelling, but serves also as the chief passage of the air into the lungs, and has a considerable influence upon the voice. The nose forms one of the characteristic features of the human face, and has been regarded by physiognomists as a faithful index of character. The nose has always been regarded as a principal element in conferring beauty on the face; but different races have differed greatly as to what form of this organ is to be regarded as the most beautiful. The ancients seem to have had an aversion to small noses; and the Romans esteemed above all the aquiline nose, which Pliny termed, by way of distinction, "royal." According to Plutarch, Cyrus had this form of nose, which thus came to be regarded as beautiful among the Persians. But the aquiline nose was only regarded as beautiful when the curve was gentle and almost imperceptible. The Greeks indeed seem, generally speaking, to have held a straight, or almost straight, line from the forehead to be the *beau idéal* with respect to this feature; and, accordingly, we find it so represented in all their best statues. The short nose is never to be found in Roman sculpture earlier than the times of Caracalla, when the art had evidently declined. In Tartary, the greatest beauties are those who have the smallest noses; and the wife of Genghis Khan is said to have been regarded as an extraordinary beauty, because she had only two holes for a nose.

—The faculty of smelling;—hence, scent; olfactory sagacity.

"We are not offended with a dog for a better nose than his master."—*Collier*.

—The end of anything, as of a spout or tube; a nozzle; a snout.

"The aspera arteria is the nose of the bellows."—*Holder*.

Nose of wax, an English colloquialism for anything pliant or ductile;—hence, a person over-accommodating or compliant.

To have one's nose on the grindstone, to be browbeaten or oppressed; to be in abject subjection to another.—*To lead by the nose*, to cause to follow blindly or obsequiously; to make abjectly docile and compliant.—*To make a bridge of one's nose*, to slight or overlook one in offering a service or civility, &c.—*To measure noses*, to meet, and make comparisons.—*To pay through the nose*, to give for a thing more than it is worth, to pay an unjust or extravagant sum for anything.—*To put one's nose out of joint*, to supplant one in the affections of another.—*To take pepper in the nose*, to grow choleric, to take offence.—*To thrust one's nose into*, to meddle officiously in; to interfere with in a meddlesome manner.—*To wipe one's nose*, *to*, to take from; to rob.

Nose, *v. a.* To scent; to smell; hence, to look after or trace out.

"Nose him as you go up the stairs."—*Shaks.*

—To face; to oppose; to affront.

"A sort of national convention... nosed Parliament in the very seat of its authority."—*Burke*.

—To utter with a nasal twang; to pronounce through the nose; as, to *nose* a prayer.

—*v. n.* To carry the nose high; to carry a blustering, pompous, self-sufficient manner.—*To pry into*, or meddle officiously with that which does not concern one.

Nose-bag, *n.* A bag to be suspended to a horse's nose, containing provender.

Nose-band, *n.* That part of the head-stall of a bridle which comes over a horse's nose.

Nose-bleed, *n.* A bleeding at the nose; a nasal hemorrhage.

(*Bot.*) The Yarrow. See *ACHILLEA*.

Nosed, (*nōz'd*) *a.* Having a nose;—principally used in composition; as, pug-nosed, crooked-nosed, long-nosed, &c.

Nose-gay, *n.* [*nose* and *gay*.] A bunch of sweet flowers used to regale the sense of smelling; a bouquet; a posy.

Nosel, *v. a.* To foster; to nurse;—hence, to lead or instruct; also, to nuzzle.

Nose-less, *a.* Wanting a nose; deprived of a nose.

Nose-piece, *n.* The nozzle of a hose, tube, or pipe.

Nos'ing, *n.* (*Arch.*) The prominent edge of a moulding or drip; also the projecting moulding on the head of a step.

Nosing of steps, (*Arch.*) The projecting parts of the tread-board or cover, which stand before the riser. They are generally rounded, so as to have a semi-circular section; and, in good stair-cases, a hollow is placed under them.

Nosle, (*nōz'l*) *n.* Same as *NOZZLE*, *q. v.*

Noso-comial, *a.* [Lat. *nosocomium*, from Gr. *nosos*, disease, and *komein*, to look after, to take care of.] Having reference to a hospital.

Nosography, *n.* [Gr. *nosos*, disease, and *graphein*, to describe.] The science of the description of diseases.

Nesological, *a.* [Fr. *nosologique*.] Having reference to nosology, or a systematic classification of diseases.

Nesologist, *n.* One skilled in nosology; one who classifies diseases, arranges them in order, and gives them suitable names.

Nesology, *n.* A treatise concerning diseases; a medical nomenclature, in which diseases are arranged according to their classes, orders, and specialties. Many scientific systems of *N.* have been at different times framed by men of ability, in different countries. All of these systems have rested on some theory which time eventually proved faulty and objectionable. That arrangement by which all the diseases affecting the same part or structure are classed together seems the one which is the least artificial and the most practical, as by such a system the pupil has, at least, the advantage of being able to compare and contrast one disease with another.

Nostalgia, *Nostalgy*, *n.* [Fr. *nostalgie*, from Gr. *nostalgia*, to be homesick.] Home-sickness; melancholy occasioned by separation from home and friends.

(*Med.*) A disease, or, more properly, an affection which consists in an unconquerable desire which seizes on men of nervous temperament to return to their native homes, tempting them to brave every danger, and sacrifice all moral obligations, to gratify their longing to revisit their native land. The Swiss are remarkably subject to this infatuation, which is attended with melancholy, loss of appetite, and want of sleep.

Nostalgic, *a.* Pertaining, or having reference, to nostalgia.

Nostalgy, *n.* Same as *NOSTALGIA*.

Nostoc, (*Bot.*) A genus of *Algae* or sea-weeds. *N. edule* is eaten in China and Japan. *N. commune* is a valuable article of food in the Arctic regions. Other species are edible.

Nostradamus, MICHEL, a celebrated French astrologer and empiric of the 16th century, b. 1503, at St. Rémy, in Provence. After graduating in medicine at Montpellier, in 1529, he acquired the reputation of a skilful physician by successfully arresting the progress of a pestilential disease. But he aimed at the character of an astrologer and adept in the occult sciences, and published a volume of obscure metrical rhapsodies in 1555 under the title of *Prophetical Centuries*. Though some persons regarded these with contempt, and the author as an impostor, there were not wanting persons of distinction who had faith in these prognostics; one of which bore so remarkable an allusion to the death of Henry II., that N. received many presents, and was appointed first physician to Charles IX., who came himself in person to Salon, where N. then resided, for the purpose of visiting him. D. 1556.

Nostril, *n.* [A. S. *nosethryl*, *nosterel*—*nose*, and *thryl*, *thryl*, a hole, aperture.] (*Anat.*) One of the two elliptical passages in the nose through which air is inhaled and exhaled in respiration. See *NOSE*.

Nostrum, *n.* [Lat., from *noster*, ours.] A medicine, the ingredients of which are kept secret for the effect of restricting the profits arising from its sale to the inventor or proprietor; a patent medicine; hence, any quack or empirical medicine.

Not, *adv.* [A. S. *note*; Ger. *nicht*.] A word that expresses negation, denial, or refusal.

"The question is, May I do it, or may I not do it?"—*Sanderson*.

Notability, *n.* State or quality of being notable; notaleness.

—*a.* A notable person or thing; a person of mark or eminence.

Notable, *a.* [Fr.; Lat. *notabilis*, from *nota*, a mark, sign, note; root *gno*, whence *nosces*, to know. *Noteworthy*; remarkable; worthy of notice, memorable; distinguished or noted.—Conspicuous; evident; observable; noticeable; plain; susceptible of remark.

—*n.* A person, or thing, of note or distinction.

Notables, (*Assembly of*) (*Fr. Hist.*) One of the stipulations obtained by the nobles from Louis XI. of France, by the treaty of St. Maur (Oct. 29, 1465), was, that he should call an assembly of notables, to consist of 12 prelates, 12 knights and squires, and 12 lawyers. The Guises summoned an assembly of notables at Fontainebleau, Aug. 20, 1560. L'Hôpital caused one to be assembled at Moulins in Jan. 1566. Richelieu assembled one in Paris in 1626. An assembly of notables was summoned by the advice of Calonne, to consider how the financial difficulties of the country were to be met, Jan. 29, 1787. It met Feb. 22, and was dismissed May 25. They were again convoked by the King, with the concurrence of Necker, Nov. 6; but their resistance to innovations compelled the court to half-measures, which helped to prepare the way for the revolution.

Notableness, *n.* State or quality of being notable; eminence; conspicuousness; remarkableness; importance.

Notably, *adv.* Memorably; remarkably; eminently; with show of consequence or importance.

—With bustling activity; smartly; industriously.

No'tal, *a.* [Gr. *nōtos*, the back.] Pertaining to the back; dorsal.

Notan'dum, *n.*; *pl.* NOTANDA. [Lat., from *notare*, to take notice of.] Anything to be noticed or observed; — generally used in the plural.

Notarial, *a.* [Fr.] Pertaining or having reference to a notary; as, *notarial* attestation. — Done, taken, or performed by a notary.

Notariaily, *adv.* After the manner of a notary.

Notary, *n.* [Fr. *notaire*; Lat. *notarius*, from *nota*, a mark or sign in writing, a note; *notie*, secret characters, occult penmanship, cipher.] Among the Romans, a person employed to take notes of public law proceedings.

(*Law*.) A public functionary authorized to protest notes, &c., and attest contracts or writings of any kind, to give them the evidence of authenticity; a notary public.

Notary-public, *n.* (*Law*.) Same as NOTARY, *q. v.*

Notate, *v.* [From Lat. *notare*, to note.] (*Bot.*) Characterized by colored lines or spots.

Notation, (*ta'shun*), *n.* [Lat. *notatio* — *noto*, *notatus*, to mark, to note, from *nota*, a mark, a note.] Act, art, or practice of taking record of anything by marks, figures, characters, symbols, &c. — Any particular system of signs and symbols.

(*Math.*) The art or method of representing abstract numerical magnitudes by means of symbols; and it comprises scales dependent on the symbols or figures employed. In the usually adopted scale, every number can be expressed by the ten characters — 1, 2, 3, 4, 5, 6, 7, 8, 9, 0 — of which the nine first denote the different numbers of units, ascending in value from right to left, while the figure 0 is the *radix* or scale of the series, and fixes the different values of which the various figures taken might be equal. Thus, for instance, if we take the number 12,345, it is equivalent to $5 + (4 \times 10) + (3 \times 100) + (2 \times 1,000) + (1 \times 10,000)$. Adding all these, we get

5
40
300
2000
10000

Total.....12345

which exemplifies the rule. The Romans possessed a decimal numerical system, but not a decimal scale of notation. They first adopted the unit I as the commencement of their system, and they brought five of them together with the sign V. They then added two of these V's — equivalent to X. Five tens then made 50, or L. 100 was expressed by the letter C, the initial of the word *centum*; 500 by the letter D; and 1,000 by the letter M. It must be observed that the position of one of these signs before another one takes that amount from it, as can be seen in the number LX (9), which is 10 less the unit I. The Greeks used the letters of their alphabet as the symbols of notation. Thus, $\alpha = 1$, $\beta = 2$, $\gamma = 3$, and so on to the end, — only that they stopped with the figure 9; and the next letter, ι , was 10, $\kappa = 20$, $\lambda = 30$, up to 90, when the hundreds ran on. The thousands were expressed by α , β , γ , &c., only with the stroke, as α , underneath. In mathematics, occasionally other scales of notation are adopted, which differ from the usual one in consequence of the *radix* being altered, as the *binary*, *ternary*, &c., up to the *duodecimal* scale, which latter is of much use in calculating *artificers' work*. In conclusion, it may be stated that in respect to the advantages and disadvantages of the various scales of notation which originate by ascribing different values to the *radix*, it would be desirable, in point of practical convenience, to elect one wherein the number of figures expressing any numerical magnitude might be confined within limits not too widely extended, as this would tend to prevent extensive prolixity in the execution of arithmetical operations.

(*Mus.*) The method which, by means of certain characters called notes, represents the pitch, or tone and duration of the various sounds. The notation of the ancients did not at all resemble that at present in use. The Greeks employed the letters of their alphabet placed in various positions, and mutilated and compounded in various ways, producing in all over a thousand signs, thus rendering years of study necessary to obtain anything like a perfect knowledge of it. This system was rejected by the Romans, who employed 15 letters of their own alphabet to express the sounds of the *bid diapason*. This was afterwards improved by St. Gregory, who reduced the number of letters to 7, thus bringing it nearer the modern system. About the beginning of the 11th century, points placed upon parallel lines were introduced. These points, however, have been in their turn superseded by other characters, which not only mark the pitch, but the time of the notes. Of these, the 6 principal ones are the semibreve, the minim, the crotchet, the quaver, the semiquaver, and the demisemiquaver, each of which is differently formed; thus:

Semibreve. Minim. Crotchet. Quaver. Semi- Demisemi-
quaver. quaver.

Fig. 1970.

To these may be added the half-demisemiquaver, much used, and often unnecessarily, by modern musicians. The use of varying the forms of the notes is to mark the various degrees of time. The longest is the semibreve; the next in duration is the minim, which is $\frac{1}{2}$

its length; the crotchet is $\frac{1}{4}$; the quaver $\frac{1}{8}$; the semi-quaver 1-16; the demisemiquaver 1-32; and the half-demisemiquaver 1-64.

Notch, *n.* [O Eng. *nock*; Belg. *nocke*, an incision; Ger. *knicken*, to crack, break; same as *nick*, *niche*, *q. v.*] An incision; a nick; an indentation; a hollow cut in anything.

"He . . . on the stick ten equal notches makes." — *Swift*.

— A deep, narrow pass or defile cleft between two hills or mountains.

— *v. a.* To cut an indentation into; to cut in small hollows. — To place in a notch; to adapt to the string, as an arrow.

Notch-board, *n.* (*Carp.*) A board notched or grooved out, to receive and support the ends of the steps of a staircase.

Notching, *n.* The cutting of an excavation through the whole breadth of a surface. By this means timbers are fastened together, or their surfaces, when joined at angles, are made to coincide. — The hollow or excavation so cut.

Note, *n.* [Fr.; Lat. *nota*, from *notum*, supine of *nosco*, to know, from *gnō*, root of *know*, *q. v.*] A mark, sign, or token; a visible symbol or indication; something by which a thing may be known. — A mark made in a book, indicating something worthy of particular notice; a short annotation or comment; a passage or explanation recorded in the margin of a book; — generally in the plural. — A minute memorandum, or short writing, intended to assist the memory.

"When found, make a note of." — *Dickens*.

— A billet; a short letter; a brief written communication; also, a diplomatic missive; an official paper sent from a minister of state to an envoy, or *vice versa*. — A written or printed paper, acknowledgment, or debt or money obligation, and promising payment; as, a promissory note, a note of hand, a bank-note, &c.

"His note will go further than my bond." — *Arbutnot*.

— Notice; heed; observation; remark.

"We take no note of time but from its loss." — *Young*.

— Reputation; consequence; eminence; distinction; as, a person of note.

"The spirit of a youth that means to be of note begins betimes." — *Shaks*.

(*Mus.*) A sound in music, or the mark or character which represents it; tune; voice. — See NOTATION.

— *pl.* Minutes or heads of a discourse or argument, or of a discourse fully written; as, to lecture from notes.

— *v. a.* [Lat. *noto*, from *nota*.] To carefully observe; to notice with attention; to heed; to remark; to attend to. — To set down in writing; to record; as, to note a protest. — To denote; to designate; to stand for or represent. (*R.*) — To annotate; to supply with notes, memoranda, or data.

To note a bill, draft, or other negotiable monetary paper. To write on the back thereof a refusal of acceptance, forming the basis of a protest.

Note-book, *n.* A book in which data or memoranda are entered. — A book in which notes of hand are registered.

Noted, *a.* Remarkable; much known by reputation or report; eminent; illustrious; renowned; celebrated; distinguished; conspicuous; famous; notorious; as, a noted author, a noted coquette, a noted humbug.

Notedly, *adv.* With notice, remark, or observation.

Notedness, *n.* Remarkableness; conspicuousness; celebrity.

Noteless, *a.* Not attracting notice or remark; not conspicuous.

"Noteless as the race from which he sprung" — *Sir W. Scott*.

Notelessness, *n.* State or condition of being obscure or noteless.

Notelet, *n.* A short note; a billet. (*R.*)

Noter, *n.* One who observes, or takes notice; as, a noter of other people's peccadilloes. — A commentator; an annotator.

Note-worthy, *a.* Deserving observation, remark, or notice; as, a noteworthy example.

Not guilty, *n.* (*Law*.) A plea by way of traverse, occurring in actions *ex delicto*, and amounting to a denial only of the breach of duty, or wrongful act, alleged to have been committed by the defendant. In criminal proceedings, the plea of not guilty is proper wherever a prisoner means either to deny or to justify the charge in the indictment; as, for instance, on an indictment for murder, a man cannot plead that it was done in self-defence, but must plead not guilty, and give this special matter in evidence. By the plea of not guilty, the prisoner puts himself upon the trial by jury.

Nothing, (*nūth'ing*), *n.* No thing; not any thing; — correlative to *something* and *anything*.

"Nothing is but what is not." — *Shaks*.

— Negation of being or existence; nonentity; nihility; nothingness; state of annihilation.

"We do not create the world from nothing, and by nothing." — *Bentley*.

— Not any particular thing, deed, or event; no other thing; no part, portion, quantity, or degree; something of no value, importance, relevance, or significance; a thing of no merit or consideration; a bagatelle; a trifle.

"Narcissus is the glory of his race;

For who does nothing with a better grace?" — *Young*.

— A symbol or character denoting nothing; a cipher, thus, 0.

To make nothing of, to consider as trifling, unimportant, or insignificant; to make no difficulty or trouble.

"We make nothing of suffering our souls to be slaves to our lusts." — *Ray*.

— *adv.* In no manner or degree; not at all; in no wise.

Noth'ingism, *n.* Nothingness; nonentity; nihility. (*R.*)

Noth'ingness, *n.* Non-existence; nothingism; nihilism.

— Nothing; a thing of no value or consequence.

"I, a nothingness in deed and name." — *Hudibras*.

Notice, (*nō'tis*), *n.* [Fr.; Lat. *notitia*, from *nosco*, *notus*, See NOTIC. Observation by the eye, or the other senses; observation by the mind or intellectual power; cognizance; remark; note; heed; as, a woman is always first to take notice of another woman's appearance. Information given or received; intelligence, by whatever means communicated; something said on a particular subject; intimation; premonition; as, he gave him notice to leave.

— A paper communicating official, authentic, or customary information; as, a written notice. — Attention; civility; courtesy; respectful or friendly treatment; as, he was taken much notice of.

(*Law*.) That notice by which a party is supposed to communicate, or to receive, the presumed or real knowledge which is necessary to affect the receiver with legal liabilities. For instance, when a party purchases or takes a transfer of a debt, he must give notice to the debtor that he has done so, and until such notice is given his title is not complete, for the debtor, if he has no notice of the transaction, may pay his debt to the original creditor, and will be discharged by his receipt. Notices which pass between landlord and tenant are familiar in practice. Of these the most important is *notice to quit*, which must be given by either party, in the ordinary case of a tenancy from year to year, six months before the termination of the current year of the tenancy. Three months is the common time under statutory regulations; and when the letting is for a shorter period, the length of notice is regulated by the time of letting.

— *v. a.* To mark; to observe by the senses; to see; to heed; to pay attention or regard to; to take note of. — To remark upon; to mention; to take public note of or observations; as, another change was noticed in his behavior. — To treat with respectful attentions or civilities; as, to notice visitors.

Noticeable, (*nō'tis-a-bl*), *a.* That may be noticed or observed; worthy of observation.

Noticeably, *adv.* In a noticeable manner.

Noticer, *n.* One who remarks or takes notice.

Notification, *n.* [Late Lat. *notificatio*.] Act of notifying, or giving notice; act of making known; particularly, the act of giving official information to the public, or to individuals or public bodies, by speech or proclamation, or by other means. — Notice given verbally, orally, or by signs. — The writing which conveys or imparts information; an advertisement, announcement, citation, &c.

Notify, *v. a.* [Fr. *notifier*; Lat. *notus*, known, and *facio*, to make; It. *notificare*.] To make known; to announce; to publish; to declare; — frequently before *to*; as, he notified the state of the case to me. — To make known, as a fact; to give information or declaration of; as, we were notified to be at the appointed place at noon.

Notion, (*nō'shun*), *n.* [Fr.; Lat. *notio*, from *nosco*, *notus*, to know.] A becoming or making one's self acquainted with a thing; conception; idea; mental apprehension of whatever may be known or imagined. — Sentiment; opinion; judgment; thought.

— Intention; idea; inclination; purpose; — used colloquially, as, he has a notion to do something wonderful.

— *pl.* Small wares, haberdashery; knick-knacks; toys; any small articles of dry goods, &c.; as, Yankee notions. (*An Americanism*.)

Notional, *a.* [It. *nozionale*.] Partaking of the nature of a notion; imaginary; ideal; fanciful; fantastical; visionary; existing in idea only. — Containing or expressing notions; dealing in abstract conceptions. — Apt to indulge in romantic, absurd, or visionary anticipations; capricious; whimsical; fanciful; as, a notional individual.

Notionally, *adv.* Ideally; by mental apprehension; in conception; not in reality; as, a faculty notionally distinct.

Notionate, *a.* Notional. (*R.*)

Notionist, *n.* One who maintains an indefensible opinion.

Notipes/kago (or MARQUETTE) River, in Michigan, rises in Newaygo co., and flowing N.W. enters Lake Michigan from Mason co.

No'to, a town of S. Italy, cap. of the prov. of Syracuse, near the river Noto, 16 m. S.W. of Syracuse; pop. 12,529.

Noto'ma, in California, a township of Sacramento co.; pop. abt. 654.

No'to, (Val di.) an old prov. of S. Italy, in Sicily, now comprising the provinces of Catania, Caltanissetta, and Syracuse.

Notoriety, *n.* [Fr. *notoriété*.] State of being notorious; exposure to the public notice or knowledge; as, the notoriety of a criminal. — The state of being generally known; publicity; public knowledge; as, to achieve notoriety.

Notorious, *a.* [L. Lat. *notorius*, from *noto*, *notatus*, to mark, to indicate, from *nota*, a mark. See NOTE.] Publicly known; manifest to the world; evident; conspicuous; noted; remarkable; usually, known to disadvantage; — hence, almost always employed in an ill sense; as, a notorious scoundrel, a notorious liar, a notorious swindle, a notorious crime, &c.

"The inhabitants of Naples have always been notorious for leading a life of laziness and pleasure." — *Addison*.

Notoriously, *adv.* Publicly; openly; ardently; in a manner to be known or manifest; beyond doubt or denial.

Notoriousness, *n.* Notoriety; state or condition of being notorious.

Notre Dame Bay. (*nôl'r dām*), an inlet of the Atlantic Ocean, on the N.E. coast of Newfoundland, between Lat. 49° 30' and 50° N., Lon. 55° and 56° W.

Not'self, n. The negative of self. (R.)

Nottawasaga, (*not-ta-wa-saw'ga*), a river of prov. of Ontario, rises in the co. of Wellington, and flowing a general N. course, enters the S.E. extremity of Georgian Bay, generally known as Nottawasaga Bay.

Not'tawa, in *Michigan*, a post-township of St. Joseph co. Pop. (1897) 2,015.

Not'taway Creek, in *Michigan*, enters the St. Joseph River in St. Joseph co.

Not'tingham, a central co. of England, having N. the cos. of York and Lincoln; E. Lincoln and Leicester; S. Leicester; W. Derby; area, 822 sq. m. The surface is undulating, the soil generally fertile, and the climate dry and healthy. Rivers, Trent, Idle, Mann, and Erewash. Prod. Wheat, barley, oats, and vegetables. Numerous cattle are reared. Min. Coal, limestone, and gypsum. Manuf. Lace, silk and cotton stockings, thread, and sailcloth. Chief towns. Nottingham (the cap.), Newark, and East Retford.

NOTTINGHAM, cap. of the above co., on the Leen, near its junction with the Trent, 14 m. S.E. of Derby, and 128 m. N.N.W. of London. The principal public buildings are the castle, the county-hall, the corn-exchange, the town-hall, St. Mary's and St. Barnabas churches. Manuf. Lace, bobbin-net, and hosiery, also, flax-mills, dye-works, wire-works, breweries, &c. Pop. (1897) 235,450.

Not'tingham, in *Kansas*, a former post-village of Marshall co., about 16 m. S. of Marysville.

Nottingham, in *Indiana*, a post-township of Wells co.

Nottingham, in *Maryland*, a post-village of Prince George co., abt. 23 m. S.E. of Washington, D. C.

Nottingham, in *New Hampshire*, a post-township of Rockingham co.

Nottingham, in *Ohio*, a township of Harrison county.

Nottingham, in *Pennsylvania*, a township of Washington co.

Nottingham Square, in *New Jersey*, a village of Mercer co., abt. 6 m. E. of Trenton.

Not'ting-hill, a district of London, co. of Middlesex, Eng., 5 m. from St. Paul's Cathedral.

Not'toway, in *Virginia*, a S. by E. central co.; area, abt. 330 sq. m. Rivers. Nottoway River, and several less important streams. Surface, diversified; soil, moderately fertile. Cap. Nottoway Court-House.

Nottoway Court-House, in *Virginia*, a post-vill., cap. of Nottoway county about 60 miles South-west of Richmond.

Nottoway River, rises in Nottoway co., Virginia, and flowing an E. and S.E. course into N. Carolina, joins the Meherrin River in Gates co., to form the Chowan River; length, abt. 110 m.

Notts'ville, in *Kentucky*, a village of Daviess co., abt. 13 m. E. of Owensboro.

Notturno, n. [It. *notturnal*.] (*Mus.*) A term originally synonymous with *serenade*; but applied at present to a piece of music in which the emotions, chiefly of love and tenderness, are developed. The *N.* is a favorite movement with modern pianoforte composers.

Nottu'roë, an island of Norway, in Christiania Fiord, immediately S. of Tonsberg; ext., 7 m. long, and 3 m. broad; pop. 3,500.

Notus, n. [Lat.: Gr. *Notos*.] The south wind.

Not'wheat, n. Unbearded wheat.

Notwithstanding, conj. [Not, and withstand.]

Not opposed to; not obstructing; however; nevertheless.

"He hath . . . a hand open as day for melting charity: Yet, notwithstanding, being incens'd, he's blind."—*Shaks.*

—*prep.* Without prevention or impediment from; in spite of; for all that.

Nougat, (*nôo'ga*), *n.* A French cake made of almonds and honey.

Nought, n. Same as NAUGHT, *q. v.*

Nou'menon, n. [Gr.] (*Metaph.*) A word opposed to *phenomenon*, and applied by Kant to an object taken in itself, without relation to us.

Noun, n. [Norm. *nom*, from Lat. *nomen*, a name] (*Gram.*) The name of one of the parts of speech into which grammarians have distributed the words of a language. A noun is the name of a thing, or, more accurately, the name of a notion or conception, whether general or particular. As we may have conceptions of substance or of attribute, nouns are either *substantive* or *adjective*. Again, as we have particular conceptions, or conceptions of individuals, and general conceptions, or conceptions of classes of individuals, nouns are either *proper* or *common*. In order to express unity or plurality of conception (number), the terminations of nouns undergo certain modifications of form: as *book*, *books*, *liber*, *liberi*. In most languages there are two numbers, the singular and the plural, the former expressing one, the latter more than one; but in some languages, as in Greek, there is an intermediate number.—the *dual*, used to express the conception of two objects. To express the relations of conceptions to each other, most languages make use of an inflection of the primitive form of the noun, called *case*; but the English language makes use of prepositions or juxtaposition. The number of cases of nouns varies in different languages, but it is rarely more than six.

Nou'reddin, MALEK-AL-ADEL NOUR-ED-DEEN MAHMOUD, sultan of Syria and Egypt, son of Emadeddin, sultan of Aleppo, b. 1118. He succeeded his father in 1145, and continued the war with the Christians; his success in which, and especially his complete conquest of Edessa, gave occasion to the second crusade, preached by St. Bernard, and led by Louis VII. and the Emperor

Courad III. N. compelled the crusaders to raise the siege of Damascus. Their own want of discipline was fatal to success, and in 1149 they retired. The sultan immediately attacked and defeated Raimond, prince of Antioch, who fell in the battle. The next year he unsuccessfully besieged Tell-basher, a dependency of Edessa held by Josceline de Courtenay; but he soon after captured Josceline, and made himself master of Edessa. In 1154 he added Damascus to his dominions, and made the city his capital. The war continued, and in 1159, N. was defeated by the Christians near the lake of Genesareth, and was menaced by the Greek Emperor Manuel Comnenus. By giving up to Manuel all the Christian captives, 6,000 in number, he induced him to relinquish his enterprise. And soon after one of his generals defeated and made prisoner the famous Renaud de Chatillon, who was kept in captivity at Antioch for sixteen years. N. being called in to support one of the rival claimants to the caliphate of Egypt, effected the conquest of it, and made it his own. The great Saladin was governor, but was ambitious of being an independent sovereign, and refused to obey the orders of N. The latter was preparing to pass into Egypt, when he was attacked with the quinsy, and d. 1173. Friends and foes have agreed in the praises of this great ruler. Among the Moslems he is revered as hero and saint.

Nourish, (*nûr'ish*), *v. a.* [Fr. *nourrir*, from Lat. *nutrie*, to suckle, nourish. See NUTRITION.] To suckle, feed, foster, or rear; to feed and cause to grow; to supply with nutriment; to support; to maintain by feeding.—To furnish the means of support and increase to; to encourage.

"We nourish 'gainst our senate the cockle of rebellion."—*Shaks.*

—To cherish; to nurture; to comfort.—To train; to educate; to instruct; to promote the growth of, by care and preservation.

—*v. n.* To foster or promote growth.—To derive or obtain nourishment. (R.)

Nourishable, (*nûr'ish-a-bl*), *a.* Susceptible of nourishment.

Nourisher, n. The person who, or thing which, nourishes.

Nourishing, p. a. Nutritive; nutritious; fostering growth; as, a *nourishing* diet.

Nour'ishingly, adv. Nutritively; fosteringly.

Nourishment, (*nûr'ish-ment*), *n.* Nutrition; act of nourishing, or the state of being nourished; sustentation.—That which nourishes, or serves to promote the growth of animals or plants, or to repair the waste of animal matter; food; sustenance; nutriment;—also, instruction; encouragement, or that which supports growth in attainments, especially in a spiritual sense; as, "the *nourishment* of souls."—*Hooker.*

Nourjehan, or NOUR-DJAHAN, (*noor-ji-han'*) the wife of JEHANGIR, *q. v.*

Nous, (*nous*), *n.* Wit; shrewdness; smartness; guppition;—used in a humorous or vulgar sense. (Colloq.)

Novaculite, n. [From Lat. *novacula*, a sharp, cutting instrument] (*Min.*) A stone of which hones are made for sharpening razors. It is of a slaty structure, and owes its quality of giving an edge to the metal to the fine silicious particles which it contains.

Novalis, the pseudonym of Frederick von Hardenberg, a celebrated German writer, b. at Mansfeld, 1772. He was the son of Baron von Hardenberg, and was sent in 1790 to the university of Jena; after which he passed to that of Leipsic, in 1792. About the year 1797 he published his *Hymns to Night*; and between that time and the year 1801, when his premature death took place, he produced a number of works displaying a boundless imagination and a love of the mystical and supernatural such as is not to be equalled in any other writer. In 1800 he gave to the world his wild and grotesque romance entitled *Heinrich von Ofterdingen*. A complete collection of his writings was made by his friends Tieck and Frederick Schlegel.

Nova'ra, a city of N. Italy, prov. of Novara, 52 m. N.E. of Turin, and 27 S.W. of Milan. Manuf. Silks, linens, hats, and leather. In 1849 the Sardinians were defeated by the Austrians near N. Pop. 14,395.

No'va Scotia, (*sko'she-a*), a British prov. of N. America, forming actually a part of the dominion of Canada. It consists of an oblong-shaped peninsula, between Lat. 43° and 46° N., Lon. 61° and 67° W.; connected with New Brunswick by a low sandy isthmus, only 14 m. across, and separated from Cape Breton by the narrow strait called the Gut of Canso. It is about 370 m. in length, and 110 m. in width. Area, 18,660 sq. m., about 15th part of which consists of lakes, rivers, and salt water inlets. The coast-line is extremely irregular, forming numerous capes and bays. Capes George and Canso are the chief promontories on the N.E. side, and at the S. extremity is Cape Sable. The basin of Minas is a deep inlet on the N.W. side of the peninsula, forming a part of the Bay of Fundy, which separates Nova Scotia from New Brunswick. St. Mary's and Argyle Bays are on its S.W. side; Pictou, Antigonish, and Chedabucto Bays form the chief irregularities on the N. coast; and the E. coast, from Cape Canso to Cape Sable, is indented with almost innumerable small bays, harbors, and rivers. Rocks and islands fringe its shores, and the aspect of the entire Atlantic coast is exceedingly picturesque. Deep water is found almost without exception, close to the rocks and islands; and the peninsula presents towards the Bay of Fundy bold and almost precipitous cliffs. The interior is intersected in almost every direction by streams, rivers, and lakes; but with the exception of Annapolis River and Lake Rossignol, connected with the sea by the Liverpool R., most of them are of very inferior size. The peninsula has no elevations deserving the name of mountains; its highest

range is the Cobequids on the northern side of the peninsula, not rising more than 1130 ft. above the sea. The north and south mountains enclose the Annapolis Valley. The climate is temperate and salubrious, though changeable. The summer is hot, and the winter long and very severe. The soil along the coast is rocky and barren, but in the interior fertile. Prod. Wheat, rye, oats, potatoes, and turnips. Numerous cattle and hogs are reared. Min. Coal, iron, gypsum, and stones suitable for grindstone, known as "Nova scotia blue grits." Manuf. Coarse woollen cloth, carpets, and ropes; also, numerous mills, tanneries, distilleries, and breweries. Exp. Fish and fish-oil, timber, lumber, and coal. Imp. Corn, flour, British manufactures, and colonial produce. A considerable trade is carried on between the United States and N. S. in coal, fish, tobacco, and various manufactured goods. This country was discovered by Cabot, in the year 1497, and under the name of *Acadia* was subsequently settled by the French. In 1758 it finally came into the possession of the British. Chief towns. Halifax, Yarmouth, Pictou, Sydney, Liverpool, and Lunenburg. Pop., according to the last census (1891), 450,192.

No'va Scotia, in *Michigan*, a village of Ingham co., abt. 20 m. S. of Lansing.

Novatianism, n. The doctrinal theory held by the Novatians.

Novatians, n. (*Ecol. Hist.*) The followers of Novatian, a presbyter of Rome, who founded a sect in the third century, which continued to flourish to the end of the fifth. Novatian denied readmission into the church to all who, in time of persecution, or on other accounts, had once lapsed from the faith. In this extreme severity he was opposed by the greater number of the clergy of Rome, and especially by Cornelius, upon whose election to the see Novatian, who was a disappointed candidate, withdrew from his communion, and established a society of which he became himself the first bishop. This sect was also known by the title of *Cathari*, or Puritans, which they assumed to express their high sense of the excellence necessary to Christians.

Novation, n. [Fr., from Lat. *novare*, to make new.] (*Law.*) A new debt substituted in lieu of an old one.

Novator, n. [Lat.] Same as INNOVATOR, *q. v.*

No'va Zem'bla, a group of islands in the Arctic Ocean, belonging to Russia, govt. of Archangel, from which they are separated by the Straits of Waigatz; Lat. between 70° 30' and 76° 30' N., Lon. 52° and 56° E. Length of group 470 m.; average breadth 56 m. They take their name from the most S.; the principal of the others are Mathew's Land and Lütke's Land. They are barren and uninhabited except occasionally by fishermen and hunters.

Novel, a. [Lat. *novellus*, dim. of *novus*, new, young; Gr. *neos*.] New; of recent origin or introduction; not ancient;—hence, unusual; strange; of a kind calculated to attract attention or to excite wonder.

"The Presbyterians are exactors of submission to their novel injunctions."—*King Charles I.*

—*n.* That which is new or strange; a novelty. (R.)

—A fictitious tale or narrative in prose, intended to depict the operation of the passions; a word-picture of human actions; as, the *Waverley Novels*.

(*Lit.*) A species of fictitious narrative somewhat different from a romance; yet it would be difficult to assign the exact distinction, and, in the French language, the same name (*roman*) is used for both; while it differs from a tale merely in the circumstance that a certain degree of length is necessary to constitute a novel. Although, in fact, the terms *novel* and *romance* are often used indifferently, yet they have often been treated as distinct classes of composition in English literature. It may perhaps be said, that the proper object of a novel is the delineation of social manners, or the development of a story founded on the incidents of ordinary life, or both together. On this hypothesis, we must exclude from the class of novels, on the one hand, tales of which the incidents are not merely improbable (for this may be the case in a novel), but occurring out of the common course of life, and such as are founded on imaginary times and imaginary manners, tales of supernatural incidents, chivalrous romances, &c.; and, on the other hand, fictitious narratives, in which the author's principal object is neither the story nor the costume, but which are obviously written with an ulterior view. Thus, political, philosophical, and satirical fictions are clearly not to be ranked as novels. But it is obvious that no definition can be drawn which shall, on this subject, entirely satisfy the caprices of popular language.

Novel'da, a town of Spain, prov. of Alicante, 13 m. W. of Alicante. Manuf. Lace. Pop. 9,000.

Novellette, n. [Fr.] A small novel; a short sketch or tale.

Novelist, n. [Fr. *novelliste*.] A writer of a novel or novels; a fictionist.

Novelize, v. a. To represent in the form of novels or prose fiction.

"The desperate attempt to *novelize* history."—*Sir J. Herschel.*

Nov'els, n. pl. [Lat. *novellæ*.] (*Roman Law.*) The name given to those constitutions of the civil law which were made after the completion of the 2d edition of the Justinian code (*Code repetitæ prælectiones*), for the purpose of supplying what was deficient in that work. See JUSTINIAN I.

(*Law.*) A supplementary constitution to an established code.

Nov'elty, n. [Fr. *nouveauté*.] Newness; recentness of origin or introduction; state or quality of being novel.—A new, strange, or novel thing; something fresh or uncommon.

Novem'ber, n. [Lat., from *novem*, the ninth month,

according to the ancient Roman year.] The eleventh month of the year, containing thirty days.

Nov'enary, a. [Fr. *novenaire*; Lat. *novenarius*, from *novem*, nine.] Belonging or relating to the number nine. — *n.* The number nine; nine collectively.

"Climacterical years; that is, septenaries and novenaries." — *Brown.*

Novene', a. [L. Lat. *novenus*, from *novem*, nine.] Novenary; pertaining or having reference to the number nine.

Noven'ual, a. [Lat. *novennis*, from *novem*, nine, and *annus*, year.] Happening every ninth year; done every ninth year.

Noven'siles, n. pl. [Lat., from *novem*, nine, or *novus*, new.] (*Myth.*) The name of certain Latin gods, who, according to the double etymology, have been taken for the nine Muses, or, with more reason, for gods newly introduced (as after the conquest of a place), in contrast with the *di indigetes*, or old gods of the country.

Nov'er cal, a. [Lat. *novercalis*, from *noverca*, a step-mother.] Pertaining or having reference to a step-mother; in the manner of a stepmother; befitting a stepmother.

Nov'gorod, a govt. of European Russia. between Lat. 57° and 61° N., Lon. 30° and 40° E., having N. Petersburg and Olonetz. E. Vologda, S. Jaroslav, Tver, and Pskof, and W. Pskof and Petersburg; area, 47,033 sq. m. The surface is low and level, except towards the S.W., which is elevated. The soil is moderately fertile, but the climate is severe. *Rivers.* Volkhof, Msta, Chexna, Molozda, and Lovat. *Lakes.* Bielo-Ozero, Voje, and Illmen. *Prod.* Rye, oats, barley, hemp, and flax. *Manuf.* Glass, leather, woollen cloth, &c. *Chief towns.* Novgorod (the cap.), Tikhvine, and Valdai. *Pop.* 1,006,293.

Novgorod, (called Veliki, or "the Great.") cap. of the above govt., and formerly the most important of the empire, on the Volkhof, 100 m. S.S.E. of St. Petersburg, and 305 N.W. of Moscow. It was formerly so populous and flourishing as to become a proverb, but rapidly decayed after the building of St. Petersburg. *Pop.* 18,768.

Nov'gorod-Severskoie, or Nov'gorod-Sieverskoi, (-sa-ver-sko'ya), a town of Russia, govt. of Tchernigov, on the Desna, 109 m. E.N.E. of Tchernigov; *pop.* 8,000.

Nov'i, a town of N. Italy, in Piedmont, prov. of Genoa. 14 m. S.E. of Alessandria; Lat. 43° 47' N., Lon. 8° 40' E. *Manuf.* Silks. It is an entrepôt for goods passing between Italy and Germany. *N.* was the scene of a sanguinary battle, 1799, between the Russians and Austrians under Suvarrow, and the French under Joubert, in which the latter was killed, and the French were terribly beaten.

Nov'i, in Michigan, a post-village and township of Oakland co., about 25 m. N.W. of Detroit, on the Flint and Père Marquette R. R.

Nov'i-Bazar', a town of European Turkey, in Bosnia, on the Bachka, 130 m. S.E. of Bosna-Serai; *pop.* 8,000.

Novice, (nô'ves, a.) n. [Fr.: Lat. *novitius*, from *novis*, new.] One who is new in any business; one unacquainted or unskilled; one in the rudiments; a freshman; a beginner; a tyro. — One newly planted in the Church, or one newly converted to the Christian faith.

(*Eccl.*) A person of either sex who is living in a monastery, in a state of probation, previous to becoming a professed member of an order. The time of probation is called the *novitiate*, and must be at least one year; after which, if their behavior is approved, they are professed; that is, admitted into the order, and allowed to make the vows, &c. During their novitiate, the candidates are bound to conform to the discipline of the house; but they are under no permanent vows, and may leave if they find that the monastic life does not suit them. They are under the direction of a master or mistress of novices, whose duty it is to examine their characters and fitness for the religious state, and to try their strength, by exposing them to the most serious obstacles to perseverance which they are likely to encounter in the order.

Noviceship, n. State or condition of being a novice; novitiate.

Novilu'ar, a. [Lat. *novus*, new, and *luna*, moon.] Belonging or having reference to the moon.

Novita, (no-ve'ta), a town of the United States of Colombia, abt. 130 m. S.W. of Antioquia; *pop.* 2,500.

Novitiate, (no-ve'sh-i-ât, a.) n. [Fr. *novitiat*; L. Lat. *novitatus*.] State or time of being a novice, or of learning rudiments; a year or other time of probation for the trial of a novice. — A novice; one who is going through a period of probation.

Novo-Tcherkask, (-cher-gask'), a town of Russia, cap. of the country of the Don Cossacks, on the Don, 24 m. E.S.E. of Yekaterinoslav; *pop.* 17,800.

Now, adv. [O. Sax. *A. S.*, Belg., Swed., Dan., and Goth. *nu*; O. Ger. *nawa*; Lat. *nunc*; Ger. *nun*; Gr. *nun*, now; Heb. *na*, with imperatives of entreaty, now, I pray thee.] At the present time; at this time or moment; at the time contemporaneous with something mentioned or contemplated.

"Now 's the day, and now 's the hour." — *Burns.*

—*conj.* Things being so; under present circumstances; — used inferentially.

"Now glowed the firmament with living sapphires." — *Milton.*

Now and now, again and again; by repetition; often; frequent. — *Now and then*, occasionally; at one time and another; at intervals.

"He will have opportunities every now and then to exercise his forgiving temper." — *Asterbury.*

Now . . . now, rendered alternatively; at one time . . . at another time.

"Now high, now low; now master up, now miss." — *Pope.*

—*n.* The present time or moment.

Nowadays, adv. In these days; in this age; at the present period of time.

Nowagurh', a rajaship of Hindostan, between Lat. 20° 20' N., Lon. 82° E. Area, 1,512 sq. m. *Pop.* 70,000.

No'wau'nger, a town of Hindostan, prov. of Guze- rat, 310 m. from Bombay. It has an active trade.

No'way, No'ways, adv. [No and way.] Nowise; in no manner or degree; not at all.

Nowed, (nô'ed, a.) [Fr. *noué*, from Lat. *nodare* — *nodus*, knot.] (*Her.*) Knotted.

Now'el, n. (Metall.) The core of a mould for casting large cylinders.

Nowhere, (nô'hwâr, a.) [No and where.] Not in any place or state; not anywhere.

No'whither, adv. [No and whither.] Not anywhither; nowhere.

"Thy servant went no'whither." — *2 Kings* v. 25.

No'wise, adv. Nowadays; not in any manner or degree.

Now'y, a. (Her.) Applied to a line of partition. See *Fig.* 1591.

Noxious, (nôk'shus, a.) [Lat. *noxius*, from *noxa*, hurt, harm, injury, from *nocere*, to hurt, harm, or injure. See *NOISOME*.] Hurtful; harmful; injurious; pernicious; baneful; destructive; unwholesome; insalubrious; corrupting to morals.

"Kill noxious creatures, where 'tis sin to save." — *Dryden.*

—*Guilty*: criminal; as "noxious in the eye of the law." — *Bramhall.*

Noxiously, (nôk'shus-ly, adv.) Hurtfully; injuriously; perniciously.

Noxiousness, (nôk'shus-nes, n.) State, condition, or quality of being noxious; hurtfulness; the quality which causes harm, injury, or destruction; insalubrity; the quality that corrupts or perverts.

Noxubee', in Mississippi, an E. co., adjoining Alaba- ma; area, abt. 720 sq. m. *Rivers.* Noxubee River, and some smaller streams. *Surface*, mostly level; soil, very fertile. *Cap.* Macon.

Noxubee River, rises in Choctaw co., Mississippi, and flowing S.E. into Alabama, enters the Tombigbee River from Sumter co. It is also called RUNAWAY CREEK.

Noyades, (nô'a-dêz, n. pl. (Fr. Hist.)) The name given to a peculiar punishment resorted to by the infamous Carrier in the first French revolution. The *noyades* were effected by drawing out a plug inserted in the bottom of a boat in which the wretched victims were launched. See *CARRIER*.

Noyau, Noyeau, (nô'a-yô, (Fr., from Lat. *nux*, *nucis*, nut.) (Drinks.) A delicate and aromatic French liqueur made with white brandy, the kernels of perches, and sweet and bitter almonds, and then sweetened with lump-sugar. The finest noyau, both in strength and flavor, is made in the island of Martinique. This agreeable cordial forms a good vehicle for many unpleasant medicines, and is very useful to sweeten and flavor draughts and mixtures: and for culinary purposes, to give flavor to farinaceous foods, custards, &c.; and for the invalid, it is invaluable. It is, however, unsafe to take it in any quantity as a mere cordial, from the amount of prussic acid contained in the kernels used in its manufacture.

Noyls, n. pl. Short filaments of woollen yarn.

Noyou', a town of France, dept. of Oise, on the Vorse, 42 m. E.N.E. of Beauvais; Lat. 29° 35' N., Lon. 31° E. *Pop.* 6,348.

No'yo River, in California, flows N.W. into the Pa- cific Ocean from Mendocino co. — A village of Mendocino co., abt. 50 m. N.W. of Ukiah.

Noz'zle, Noz'le, Nos'le, n. [From *nose*.] The projecting extremity of anything; the nose; the snout; as, the nozzle of a hose-pipe.

—*pl. (Mach.)* Those portions of a steam-engine in which are placed the valves that open and close the communication between the cylinder and the boiler and condenser, in low-pressure or condensing engines; and between the cylinder and boiler and atmosphere, in high-pressure or non-condensing engines.

N. S. Abbreviation of *new style*.

Nab, v. a. To beckon; — used as an English localism.

—*n.* A knob; a boss; a protuberance; — used colloquially.

Nub'bin, n. An Americanism for a half-grown ear of Indian corn.

Nube'ula, n.; pl. NUBECULÆ, [dim. of Lat. *nubes*, cloud.] (Astron.) A nebula. — *pl.* Specifically, the Magellanic clouds.

(*Med.*) A speck on the cornea; also, a cloudy or ropy appearance in urine.

(*Physiol.*) A granule from which all mineral and vegetable bodies are presumed to be formed; — called *mesoblast* by Professor Agassiz.

Nu'bia, an extensive tract of E. Africa, having N. Egypt, E. the Red Sea, S. Abyssinia, and W. the desert of Libya; Lat. between 15° and 24° N., Lon. 33° and 36° E.; area, estimated at 360,000 sq. m. It is divided into Lower Nubia, or Nubia Proper, and Upper Nubia. The surface of Lower N. is generally a sandy and rocky desert, except along the valley of the Nile, which is rendered productive by artificial irrigation, effected by *sakkas*, or Persian water-wheels. In Upper N. the country is more elevated, and watered by several streams. *Rivers.* The Nile (Blue and White). *Cimate.* Though intensely hot, it is not unhealthy; the higher districts are subject to violent tropical rains, and the deserts on the E. and W. of the Nile to violent storms of winds. (*Zoöl.*) Lions, tigers, crocodiles, and the hippopotamus are frequently seen, and wild dogs and foxes are numerous. The giraffe, and antelopes of three kinds frequent the mountains and the banks of the White Nile. But the scourge of the country is the locusts, which, at times, settle in clouds upon the land,

and destroy all vegetation. *Inhab.* They are generally well made, strong and muscular, and their character and disposition are more susceptible of improvement than most of the African tribes. The women are generally well formed, modest, and reserved in their manners, and remarkable for conjugal fidelity. (see *Fig.* 46). As girls they wear nothing but a little apron of leathern thongs called a *rábat*. This apron is about 9 inches or a foot in width, and perhaps 6 or 7 in depth, and in general appearance resembles that of the Kafir girl. When the girls marry, they retain the apron, but wear over it a loose garment, which passes over one shoulder, and hangs as low as the knee. The hair is dressed in a way that recalls the ancient Egyptian woman to the traveller. It is jetty black, and tolerably long, and is twisted with hundreds of small and straight tresses, generally finished off at the tips with

with little knots of yellow clay, which look at a distance as if they were humps of gold. Annulets of different kinds are woven into the locks, and the whole is so saturated with castor-oil that an experienced traveller who wishes to talk to a Nubian woman takes care to secure the windward side, and not to approach nearer than is absolutely needful. As a rule, the Nubian women are not so dark as the men, but approach nearly to a copper tint. "Two beautiful young Nubian women," says Lady Duff Gordon, (*Letters from Egypt*), "visited me in my boat, with hair in the little plaits finished off with lumps of yellow clay, burnished like golden tags, soft deep bronze skins, and lips and eyes fit for Iris and Athor. Their very dress and ornaments were the same as those represented in the tombs, and I felt inclined to ask them how many thousand years old they were." The Nubians usually speak the Arabic language; and the learned castes among them cultivate most branches of Mohammedan literature. *Prod.* Barley, a grain called "dhonria," tobacco, indigo, coffee, dates, senna, and vegetables. Cattle, sheep, and goats are reared. There is a considerable trade in gold, silver, senna, ostrich-feathers, and dhonria. The traffic of slaves is extensively carried on, upwards of 5,000 being annually imported from the interior of Africa. *Govt.* N. is divided into 13 states, each governed by its melak, or chief, formerly independent, but now subordinate to the pasha of Egypt. Ten of these states are in Lower N., and 3 in Upper N. *Hist.* N., formerly comprising part of anc. Ethiopia, formed a treaty with the emperor Diocletian from 284 to 305. It was converted to Christianity at an early period, continuing in that faith until the 13th cent. The caliph Omar I. exacted from it an annual tribute of 360 slaves, about the year 637, which was maintained until 1150. Contests were carried on continually between the people of Nubia and the Sultan of Egypt during the 14th cent., which ended in the extinction of Christianity, and the breaking up of the kingdom into a number of petty Mohammedan states. An expedition under Mehemet Ali brought them into subjection, more nominal than effective, to the Pasha of Egypt in 1820. *Chief towns.* Shendi, Senaar, Suakim, New Dongola, Ipsamboul, Halfay, and Berber. *Pop.* Estimated at 500,000.

Nubility, n. [Fr. *nubilité*.] State of being marriageable; puberty.

Nu'bilose, Nu'bilons, a. [Lat. *nubilosus*, from *nubes*, cloud.] Cloudy; hazy; nebulous. (*n.*)

Nuble, (nô'bla, a.) a river of Chili, rises on the W. slope of the Andes near the volcano of Chillan, and flowing W. by S. joins the Chillan River to form the Itata River.

Nucamentaceous, (-ta'shus, a.) [From Lat. *nux*, *nucis*, nut.] (*Bot.*) Pertaining to a nut or nuts.

Nu'eiform, a. [Lat. *nux*, *nucis*, nut, and *forma*, form.] Having the form or shape of a nut; resembling a nut.

Nu'cleal, Nu'clear, a. Belonging to a nucleus.

Nu'cleate, a. Possessing a nucleus.

—*v. a.* [Lat. *nucleare*.] To collect, as about a nucleus, focus, or centre.

Nucle'iform, a. [Lat. *nucleus*, and *forma*, form.] Kernel-shaped.

Nu'cleolated, a. Having a nucleolus.

Nu'cleole, Nu'cleolus, n. [Dimin. of *nucleus*.] (*Physiol.*) A cell containing a single granule; — called also *entoblast*.

Nu'cleus, n.; Eng. pl. NUCLEUSES; Lat. pl. NUCLEI. [Lat., from *nux*, *nucis*, a nut, a kernel. See *NUT*.] The kernel of a nut. (See below, *2 Bot.*) — Hence, the central part of any body, or that about which matter is collected; the central portion which attracts accretion; the material portion of anything; — employed both in a literal and figurative sense.

(*Bot.*) The central fleshy pulpy mass of an ovule; or that part of a seed which is contained within the testa, and consists of either the embryo and albumen, or of the embryo only. In lichens, this word is applied to the disc of the shield which contains the sporules and their cases.

(*Crystallol.*) The solid centre about which the particles of a crystal are aggregated.

(*Astron.*) The solid part or body of a comet, as distinguished from its nebulousity.

Nu'cule, n. [Lat. *nucula*, a small nut.] (*Bot.*) Either

Fig. 1971.
NUBIAN GIRL.

that fruit which is otherwise called a gland or acorn, or any small, hard, one-seeded pericarp.

Nudation, *n.* [From Lat. *nudare*, from *nudus*, naked.] The act of stripping bare, or making nude.

Nuddea, *a.* dist. of British India, presidency of Bengal, in the delta of the Ganges, between Lat. 23° and 24° N., Lon. 88° and 89° E. *area*, 3,105 sq. m. *Cap.* Nuddea. *Pop.* Estimated at 1,187,000.

Nudde, *v. n.* To walk rapidly with the head bending forward; — followed by *along*. (*R.*)

Nude, *a.* [Lat. *nudus*; akin to Hind. *nangla*, *nigut*, naked. See **NAKED**.] Naked; bare; without covering; as, a nude figure.

(*Law.*) Divested of force or efficacy; null; void; as, a nude agreement (*ex nudo pacto non oritur actio*).

Nudge, (*nāj*.) *v. a.* [Perhaps from Prov. Ger. *knütschen*, to pinch.] To push or touch gently, as with the elbow, in order to attract attention.

—*n.* A gentle push or touch, as with the elbow.

Nudibranchia, *ta*, **Nudibranchians**, *n. pl.* [Lat. *nudus*, naked, *branchia*, gills.] (*Zool.*) An order of hermaphrodite gastropodous Molluscs, which have the branchia exposed on some part of the body. The genus *Doris* (Fig. 853) is an example.

Nudibranchiate, *a.* (*Zool.*) Belonging to one of the *Nudibranchia*.

Nudification, *n.* [Lat. *nudus*, nude, and *facere*, to make.] The act of rendering nude, or making naked.

Nudity, *n.* [Fr. *nudité*; Lat. *nuditas* — *nudus*, naked.] State, quality, or condition of being nude; nakedness.

—*pl.* (*Fine Arts.*) Figures either wholly or in part divested of drapery.

Nudum pactum. [Lat., naked contract.] (*Law.*) See **NUDE**.

Nueces, (*nwa'ses*), in Texas, a river rising by several branches in Maverick co., and flowing a tortuous S.E. course of abt. 350 m., enters the Gulf of Mexico by a bay of its own name, bet. San Patricio and Nueces cos.

—A S. by E. co., bordering on the Gulf of Mexico; *area*, abt. 2,430 sq. m. *Rivers.* Nueces and San Fernandez rivers, besides several smaller streams. *Surface*, nearly level; *soil*, not very fertile, but affording pasture for vast herds. *Cap.* Corpus Christi. *Pop.* (1890) 8,093.

Nueva (or **NEW**) **Helvetia**, in California. See **SACRAMENTO CITY**.

Nueva (or **NEW**) **León**, a state of Mexico, between Lat. 24° and 27° 30' N., Lon. 99° and 100° W.; *area*, abt. 23,592 sq. m. *Rivers.* Salinas and Sabinas. *Surface*, mostly mountainous; *soil*, fertile. *Min.* Gold, silver, lead, and salt. *Cap.* Monterey. *Pop.* (1897) 314,400.

Nueva (or **NEW**) **Sego**, *via*, a small town of Nicaragua, Central America, abt. 110 m. N.N.E. of León.

Nuevitas, or **NUEVITAS DEL PRÍNCIPE**, a town on the N.E. coast of the island of Cuba, W. Indies, forming the port, and abt. 44 m. E. by N. of Puerto Príncipe. *Pop.* abt. 820.

Nuevo (or **NEW**) **Santan**, *der*, a town of Mexico, abt. 120 m. N.W. of Tampico.

Nugatory, *a.* [Lat. *nugatorius*, from *nugæ*, trifles, trumpery, bagatelles.] Trifling; vain; futile; worthless; insignificant.

—Inoperative; inconsequential; ineffectual; of no force.

Nugent's Grove, in Iowa, a post-village of Linn co., abt. 50 m. W.S.W. of Dubuque.

Nugget, *n.* (*Mining.*) The name given to the larger lumps of gold occasionally found in gold alluvium. Smaller lumps are called *pepitas*, and the finest particles *granos* or gold grains. Nuggets have been found of extraordinary dimensions and weight; but, as may be supposed, they are comparatively rare. They are always water-worn.

Nugify, *v. a.* [Lat. *nugæ*, trifles, and *facere*, to make.] To stultify; to make futile.

Nuisance, (*nū'sans*), *n.* [O. Fr., from Low Lat. *nocentia*, guilt, transgression, from Lat. *nocens* — *nocere*, to hurt.] That which hurts, harms, or injures; that which annoys or gives trouble and vexation; that which is offensive or noxious.

"A dun is an infernal nuisance." — *Hook*.

(*Law.*) Anything that works hurt, inconvenience, or damage. Nuisances are of two kinds — *public* or common nuisances, and *private* nuisances. The former are those which affect the public, and are an annoyance to all the community, for which reason they are referred to the class of public wrongs or crimes. The offence consists in an encroachment on the common rights of the whole society; as where one obstructs the common highway, or sets up an offensive trade in the midst of a town. Private *N.* may be defined as anything done to the hurt or annoyance of the lands, tenements, or hereditament of another, and not amounting to a trespass; as where one projects the eaves of his house over those of his neighbor, or stops or obstructs a right of way. It is a *N.* if a neighbor sets up and exercises any offensive trade, or keeps pigs or other noxious animals near the house of another; and, also, if a man by carelessness in excavating his own ground causes the fall of a house erected on land adjoining. It is no *N.* to set up any trade, or a school, in neighborhood or rivalry with another. *N.*, whether private or public, is rather a tortious than a criminal act. The injury from it arises rather from a misuse of one's own than from abuse of or aggression on another's right; and it is, therefore, indirect or remote, as distinguished from actual invasion of another's property. It is not committed with force, either actual or implied. The remedy at law for the injury of *N.* is by action of trespass on the cause, in which the party injured may recover a satisfaction in damages for the injury sustained. The party aggrieved has also the right to abate the *N.* by his own act; that is, he may take away or remove it, provided he commits

no riot in so doing, nor occasions (in cases of private *N.*) any damage beyond what the removal of the inconvenience necessarily requires. "The reason," says Blackstone, "why the law allows this private and summary method of doing oneself justice is, because injuries of this kind, which obstruct or annoy such things as are of daily convenience and use, require an immediate remedy, and cannot wait for the slow progress of the ordinary forms of justice."

Nuisancer, *n.* (*Law.*) One who causes or upholds a nuisance.

Null, *a.* [From Lat. *nullus*, none.] (*Law.*) No; not any; as, *null* tort.

Null-gan River, in Vermont, enters the Connecticut River from Essex co.

Null, *v. a.* Same as **ANNUL** (*q. v.*), of which it is an abbreviation.

Null, *a.* [Lat. *nullus*, none, not any — *ne*, not, and *ullus*, any one; contracted from *nullus*, dimin. of *unus*, one.] Of no value or force; void; invalid; of no efficacy, or legal or binding force or vitality.

—*n.* Something that has no power, force, or meaning. — Anything valueless; a cipher.

Nullah, *n.* [Hind.] In India, a stream, canal, or water-course; also, an inlet of the sea.

Nullification, *n.* [L. Lat. *nullificatio*] Act of nullifying, or state of being nullified; a rendering void and of no effect, or of no legal efficacy.

Right of nullification. (*U. S. Pol.*) The right formerly claimed on behalf of a State to nullify or make void, by its sovereign act or decree, an enactment of the general government which it deems unconstitutional.

Nullifier, *n.* One who nullifies or makes void.

—In the U. States, a person who advocates the political principle of nullification.

Nullify, *v. a.* [Lat. *nullus*, and *facio*, to make.] To annul; to render null; to make void or invalid; to deprive of legal force or efficacy.

Nullipora, *n.* [Lat., from *nullus*, and *porus*, pore.] (*Bot.*) A gen. of marine plants, order *Ceramiales*, consisting of rigid, branching, inasculate, calcareous species, formerly supposed to be polypi.

Nullity, *n.* [Fr. *nullité*, from Lat. *nullus*.] Nonentity; nothingness; want of existence; lack of legal force or efficacy.

—That which lacks force or efficacy; that which is null, void, or invalid.

Numa, in Indiana, a post-village of Parke co., abt. 11 m. N. of Terre Haute.

Numa, in Iowa, a post-village of Appanoose co., abt. 40 m. S.W. of Ottumwa.

Numan, *ta*. (*Anc. Geog.*) A city of Spain, cap. of the Arevaci, which offered a brave resistance to the Roman arms for 20 years. It was reduced B. C. 133, after a siege of 15 months, by Scipio Africanus, who brought against it an army of 60,000 men. The conqueror received the surname of Numantius. The place of this battle is supposed to be marked by the ruins of Puente de don Guaray, on the Donro, 3 m. of Soria, Old Castile.

Numa Pompilius, second mythical king of Rome, a Sabine by birth, and elected, according to the legends, after the death of Romulus. Wise, devout, and peace-loving, he reigned about 40 years, and inspired by the nymph Egeria, he gave the Romans all the institutions of their religion. About B. C. 180 a pretended discovery was made of the sacred books of Numa.

Numb, (*nūm*), *a.* [A. S. *numen*, taken, *pp.* of *nimen*; and *beniman*, *pp.* *benimn*, to benumb, to stupify.] Benumbed; deprived or destitute of the power of sensation and motion; torpid; paralyzed; chill; motionless.

"Like a stony statue, cold and numb." — *Shaks.*

—*v. a.* To benumb; to deprive of the power of sensation or motion; to deaden; to stupefy; to make torpid; to render motionless or paralyzed.

"Like dull narcotics, numbing pain." — *Tennyson*.

Number, *n.* [Fr. *nombre*; Lat. *numerus*.] A unit considered in reference to other units, or in reckoning, counting, enumerating: an assemblage of two or more units; an aggregate made up of distinct things expressible by figures.

"There is divinity in odd numbers." — *Shaks.*

—More than one; many; a multitude; a collection of many persons. — Comparative multitude; numerousness. — Quality of being numerable or countable; quantity considered as made up by an aggregate of separate things. — The order and quantity of syllables constituting feet, which render verse musical to the ear; hence, verse; poetry; — chiefly employed in the plural.

"I lisp'd in numbers, for the numbers came." — *Pope*.

(*Gram.*) The difference of termination or form of a word, to express unity or plurality. The termination which denotes one, or an individual, is in the *singular number*; the termination that denotes two or more individuals or units constitutes the *plural number*. Hence, we say a noun, an adjective, a pronoun, or a verb, is in the *singular* or the *plural number*.

(*Math.*) Numbers are units considered in reference to other units; as in counting, or performing the mathematical operations of addition, multiplication, &c. According to Sir Isaac Newton, a number is the abstract ratio of one quantity to another quantity of the same species; and, consequently, there are three different sorts: as, *integers*, or whole numbers; *fractions of uneven numbers*; and *suras*, or irrational quantities. Cardinal numbers are such as consider the number of units, — as, 1, 2, 3; while *ordinals* consider their position, — as, 1st, 2d, and 3d. A compound number is such as can be divided by some other number besides unity. A rational number is one which can be measured by unity; as an irrational one is the reverse. Prime numbers are such

as are only divisible by unity, as 3, 5, 7, 11, &c. Perfect numbers are those, the sum of whose aliquot parts added together forms the whole number. A square number is one which is multiplied into itself, as 9, which is the square of 3; while a cubic number is one which is multiplied twice into itself, as 27 is the cube of 3, which equals 3×3×3. As the theory of numbers is usually contained in most elementary treatises on algebra, it need not be entered into the present article; suffice it to say, that it owes its perfection to Diophantus, who lived in the 3d century; to Vista, Bachet, and Fermat, of the 16th; and to the essays of Euler, Legendre, and Newton, of a later æra.

—*v. a.* [Lat. *numero*, from *numerus*, number.] To count; to reckon; to enumerate; to calculate; to ascertain, as the units of any sum, collection, or multitude.

"I will number you to the sword." — *Isa.* lxx. 12.

—To reckon as one of a collection or multitude.

"He was numbered with the transgressors, and bore the sin of many." — *Isa.* liii. 12.

—To give the number of; to assign or specify the place of in a numbered series; as, to number the folios in a book. — To contain; to include; to consist of; to amount to; to give as the result of enumeration; as, the malcontents number strongly.

Numberer, *n.* One who numbers or enumerates.

Numberless, *a.* That cannot be enumerated; countless; innumerable.

Numbers, (**Book of**) (*Script.*) The fourth book of the Old Testament, being a translation of the Greek name given to it in the Septuagint, *Arithmoi*, because it contains an account of the numbering of the people. In Hebrew it is called, after the usual practice, by the word with which it begins, signifying "and he spake;" also by the fifth word in the first verse, signifying "in the wilderness," because it narrates the transactions of the Israelites in the wilderness. It is the history of a period of 38 years in the wilderness, opening with the second month of the second year after the deliverance from the land of Egypt, to the eleventh month of the fortieth year of the same epoch; but it is chiefly confined to the first and last of these years. It may be divided into three parts: — (1) the numbering of the people, as also additions to the laws given in Exodus and Leviticus (i.-x. 10); (2) the further events in the wilderness, beginning with the departure of the people from Sinai down to the commencement of the fortieth year, with the laws promulgated during that time (xii.-xix.); (3) the occurrences and prescriptions in the first ten months of the fortieth year (xx.-xxxvi.) The greatest part of the book is occupied in enumerating the several laws and ordinances not mentioned in the preceding books: such as the office and number of the Levites; the trial by the waters of jealousy; the rites to be observed by the Nazarites; the making of fringes on the borders of their garments; the law of inheritance; of vows; of the cities of refuge, &c. Among the more remarkable events which it records, are the sedition of Aaron and Miriam; the rebellion of Korah and his companions; the murmurings of the whole body of the people; Balaam's prophecy; and the miraculous budding of Aaron's rod. It likewise gives a distinct account of the several stages of journeyings through the wilderness. The authenticity of this book has frequently been called in question; and some critics, while admitting its genuineness, are disposed to give a mythical character to many of its parts; but its minute and straightforward narratives, and other internal marks, are strong objections to such an hypothesis, and it is received literally by the great majority of biblical students.

Numb-fish, (*nūm'-fīsh*), *n.* (*Zoöl.*) The **TORPEDO**, *q. v.*

Numbles, *n. pl.* The entrails of a deer.

Numbness, (*nūm'-ness*), *n.* State or quality of being numb.

(*Med.*) A loss of power, and partially of feeling, which may occur in any part of the body, or affect an entire side. When the effect of long exposure to cold, or a cramped position, a warm bath and friction will soon, by restoring the circulation, relieve the torpidity experienced; when, however, the numbness is caused by disease, it must be treated in accordance with the disease that has produced it; friction, however, and exercise, are the standard local remedies.

Nummerable, *a.* [Lat. *numeralis*.] That may be numbered, reckoned, or counted.

Numeral, *a.* [Fr. *numéral*; Lat. *numeralis*, from *numerus*, number.] Pertaining to, or consisting of, number. — Expressing or representing number; standing as a substitute for figures; numerical; as, numeral letters, thus, X for ten.

—*n.* (*Arith.*) A figure or symbol by means of which numbers are expressed; the distinctive name of Arabic numerals being given to the nine figures or digits and the zero, that are now in almost universal use among civilized nations for this purpose. Both the origin of these figures, and the period at which they became known in Europe, have been made subjects of laborious investigation; and it seems to be now proved beyond a doubt that they are of Indian, not Arabic origin, and were invented by the Brahmans some time B. C. But the more important inquiry as to the time of their introduction into Europe has hitherto baffled all research. For Roman and Greek numerals, see **NOTATION**.

(*Geom.*) A word expressive of number.

Numerally, *adv.* In number; according to number.

Numerary, *a.* Pertaining or having reference to a certain number.

Numerate, *v. a.* [Lat. *numero*, *numeratus*, from *numerus*, a number.] (*Arith.*) To count; to reckon; to enumerate; to divide and read off numbers or figures according to the rules of numeration.

Numeration, *n.* [Fr., from Lat. *numeratio*.] (*Arith.*) The art of classing numbers together and expressing them properly according to the general principles of notation.

Numerator, *n.* One who numbers; — a term applied in mathematical science.

(*Arith.*) That part of a fraction which expresses into how many parts the unit is divided. In the fraction $\frac{5}{8}$, for example, the figure 5 is the *numerator*, as it shows that the denominator has been divided into eight parts, of which only five are taken to constitute the fraction. See FRACTIONS.

Numerianus, MARCUS AURELIUS, (*nu-me-ri-ai-nus*), a Roman emperor, who succeeded to the throne on the death of Carus, his father, A. D. 282; but was murdered by his father-in-law, after a reign of 8 months. He displayed considerable talent both as a writer and an orator.

Numeric, **Numerical**, *a.* [Fr. *numérique*, from Lat. *numerus*.] Belonging to, denoting, or consisting in numbers; expressed by numbers, and not letters; as, a *numerical* equation. — The same in number; hence, identical; one and the same. — *Numerical*, as contradistinguished from *algebraical*, is employed to express a value independent of its sign; thus, —7 is numerically greater than —5, though algebraically less.

Numerically, *adv.* In numbers; in a numerical manner; with regard to number, or sameness in number: as, a thing is *numerically* different.

Número, *n.* [It., from Lat. *numerus*, number.] Number. — frequently contracted to *No*.

Numerous, *a.* [Lat. *numerosus*.] Being many; consisting of a great number of persons; as, a *numerous* army. — Consisting of regular numbers; rhythmical; poetic; musical; melodious.

Numerously, *adv.* In great numbers; as, the levee was *numerously* attended.

Numerousness, *n.* State, condition, or quality of being many or numerous; characteristic of consisting of a great number of individuals. — Quality of consisting of poetic number or rhythmical harmonies; musicalness. (*R.*)

"That which will distinguish his style, is the *numerousness* of his verse." *Dryden*.

Númida, *n.* (*Zool.*) A Linnean genus of birds, family *Psittacidae*, including the Guinea fowl and the Crested Pintado.

Numidia, (*Anc. Geog.*) A former inland country of N. Africa, bounded on the N. by the Mediterranean Sea, S. by Getulia or Libya, E. by Jusca, and W. by Mlueha, separating it from Mauritania; it had a length of nearly 500 m., and an indefinite width, though probably not exceeding 50 or 60 m. In the time of the Carthaginians, Numidia contained two powerful nations, the *Masyli* and the *Masseili*; and by the Romans was divided into *Numidia proper*, including the first-named people, and the *Mauritania Cesariensis*, or the country of the *Masseili*, the capital being Cirta. The Romans became acquainted with this country B. C. 264, during the first Punic war, when the Carthaginians employed the people as light cavalry. They transferred their services to the Romans B. C. 256, and aided them throughout the second Punic war, B. C. 218–201. Massinissa, the king, who was rewarded with a large accession of territory, died B. C. 149; his son Micipsa, at his death, left the kingdom to Adherbal and Hiempsal, his sons, and his nephew Jugurtha, B. C. 118. Jugurtha having murdered his cousins, the Romans declared war against him B. C. 111; and he was captured and put to death B. C. 104. (See JUGURTHINE WAR.) The country was made a Roman province by Julius Cæsar for having taken part in the civil war against him, and Sallust the historian was appointed governor B. C. 46. Caligula changed the government of the province in 39. It was wrested from the Romans by the Vandals, under Genseric, in 429. They were subdued by Belisarius, general of the Emperor Justinian I., in 533. The Mohammedans, commanded by Akbar, seized Numidia in 667. A large part of Numidia is now incorporated with French Algeria, and the modern city of Constantine (Fig. 66s) stands on the ruins of the ancient Cirta.

Numidia, in *Pennsylvania*, a village of Montour co., abt 17 m. S.E. of Danville.

Numismatic, **Numismatical**, *a.* [Fr. *numismatique*, from late Gr. *numismatikos*, belonging to coin.] Pertaining or having reference to money, coin, or medals. — relating to the science of numismatics.

Numismatics, (*nu-miz-mat'iks*), *n. pl.* [Gr. *nomisma*; Lat. *nummus*, a coin or medal.] That science which has for its object the study of ancient and modern coins and medals. *Coins* are pieces of metal on which different marks have been impressed by public authority, to indicate their weight and value, in order to make them a convenient medium of exchange; *medals* are pieces of metal similar to coins, not intended as a medium of exchange, but merely struck to commemorate some important event. The science of numismatics has the same divisions as history. Ancient numismatics extend to the fall of the Western empire; the numismatics of the Middle Ages commence with Charlemagne; and modern numismatics with the revival of learning. The pieces of metal originally used as money were rude and shapeless; and some ancient writers mention money of leather among the Carthaginians, Spartans, and Romans. Wooden money was also used by the Romans, and shells, which are still employed by some tribes in Africa. Gold, silver, and copper, however, are, and have been, the ordinary materials of money. See MINT, MONEY. — The ancient coins which have been preserved are much more numerous than those handed down from the Middle Ages. The principal stores have been found in tombs, or in places where they have been concealed, either through

fear, avarice, or superstition. Till the 3d century the faces on medals were represented in profile. In the coins of the Lower empire, however, there are Gothic front faces filling up the whole field of medals. Both methods are employed by the moderns; but the ancients gave more relief to the figure. The coins of the kings of Macedon are the most ancient of any yet discovered bearing portraits; and Alexander I., who commenced his reign about 500 years B. C., is the earliest monarch whose medals have yet been found. The medals of the sovereigns who ruled in Sicily, Caria, Cyprus, Hieraclea, and Pontus, then succeed. Afterward comes the series of kings of Egypt, Syria, Thrace, Parthia, Damascus, Cappadocia, Galatia, Sparta, Epirus, Illyricum, Gaul, and the Alps. This series comprises a period of 330 years, and extends from the time of Alexander the Great to the Christian era. A perfect and distinct series of ancient medals is formed by the Roman emperors from Julius Cæsar to the overthrow of the empire by the Goths, and, indeed, still later. In a cabinet, the Grecian coins claim the chief place, not only on account of their antiquity, but also for their workmanship, the finest examples being those which were struck before the subjection of Greece to the Roman empire. The Roman coins are divided into two classes — the *consular* and the *imperial*. The latter term is specifically applied to those struck after the conclusion of the republican era of Rome down to the fall of the Roman empire. Caius Julius Cæsar was the first Roman who gained permission to put his figure upon medals. The coins of the Middle Ages embrace the *bracteates*, &c., which, after the dissolution of the Roman empire, were circulated in the newly-formed European states. As a science, numismatics appear to have been entirely unknown to the ancients. The first treatise on the subject was published by a Spaniard, Antonio Agostino, in 1577. As the researches into the different branches of the subject became more extensive, more attention was paid to this matter, and the works of Vaillant, Spanheim, J. J. Gessner, and Pellerin, display immense stores of learning, and are worthy of perusal, although they are not altogether to be relied on. For an elaborate work on *N.*, see *Boutkowski's Dic. Numismatique*.

Numismatist, *n.* One learned in coins and medals. **Numismatography**, **Numismatology**, *n.* [Gr. *nomisma*, *numismatōs*, current coin, *graphein*, to write, and *logos*, treatise.] That branch of historical science which pertains to, or treats of, coins and medals; numismatics.

Numismatologist, *n.* Same as NUMISMATIST, *q. v.*

Nummular, **Nummular**, **Nummulary**, *a.* [From Lat. *nummulus*, dim. of *nummus*, a coin; Fr. *nummulaire*.] Pertaining or having reference to coin or money; pecuniary; monetary.

Nummulites, *n. pl.* [Lat. *nummus*, a coin, and Gr. *lithos*, a stone.] (*Pal. and Geol.*) A genus of the family *Foraminifera*, the shells of which, in various parts of the world, are found in immense numbers, and which receive their name from their external resemblance to battered coins. They are orbicular, (Fig. 1972), convolute, and show no trace of spire externally; whorls contiguous, and not apparent; cells numerous and small;

Fig. 1972. — NUMMULITE LIMESTONE.

(From Peyrehorade, Pyrenees.)

partitions transverse, and not perforated. Some are very minute, and scarcely any are more than an inch in diameter. The beds of the Middle Eocene period are chiefly composed of *N.* They cover portions of the Pyrenees and Alps at a height of 10,000 feet above the sea-level, and the southern slopes of the Himalayas at a height of 16,500 feet. The pyramids of Egypt are built of stone composed of the *Nummulina discoidalis*, and perhaps other species.

Nummulitic, *a.* Containing, or composed of, nummulites.

Numskull, *n.* A blockhead; an ignoramus; a dolt; a dunce; a stupid, heavy-witted fellow. (Used colloq.) **Numskulled**, (*-skuld*), *a.* Doltish; stupid; thick-headed; dull in understanding.

Nun, *n.* [A. S. *nunne*; Fr. and Ger. *nonne*; L. Lat. *nonna*, a pious widow, or from L. Lat. *nonnus*, a monk; probably corrupted from Gr. *monos*, alone, solitary; Sp. *monja*, a nun.] (*Ecc. Hist.*) A woman who devotes herself in a cloister or nunnery, to a religious life. The name is probably from a Coptic or Egyptian root, signifying a virgin; and at a very early period in the Church there were women who made public profession of virginity, and were enrolled in the canon or matricula of the Church, but they did not dwell in religious houses. They do not seem to have been absolutely forbidden to marry; but as celibacy and the monastic life rose in the esteem of the Church, the censures against marriage became more stringent. The virgins were of great esteem in the Church, and had some particular honors paid to them. Their persons were sacred, and severe laws were enacted against any

that should presume to offer the least violence to them. The consecration was usually performed publicly in the church by the bishop. The virgin made a public profession of her resolution, and then the bishop put upon her the accustomed habit, part of which was a veil, called the *sacrum velamen*; hence the modern phrase, "to take the veil." They seem also to have worn a kind of mitre or coronet, and in some places the head was shaved, a practice condemned by the council of Gangra. Certain canons required virgins to be forty years old before they were veiled; and the imperial laws decreed that if any virgin were veiled before that age, either by the violence or hatred of her parents, she was at liberty to marry. The first nunnery is said to have been founded by one St. Syncletica, a contemporary of St. Anthony, in the 3d cent., and they soon spread throughout Europe. (See MONACHISM.) There are various orders of nuns, some devoting themselves entirely to private religious exercises, while others engage in the more active duties of Christian charity. In the Roman Catholic Church, when a young woman is to be professed, or made a nun, the habit, veil, and ring of the candidate are carried to the altar, and she herself, accompanied by her nearest relatives, is conducted by the bishop. Two ancient venerable matrons attend upon her as brideswomen. When the bishop has said mass, the arch-priest chants an anthem, the subject of which is that she ought to have her lamp lighted, because the bridegroom is coming to meet her. Then the bishop calls her in a kind of recitative, to which she answers in the same manner. Being come before the prelate, and on her knees, she attends to the exhortation he makes to her with regard to a religious life, and in the meantime the choir chants the litanies. Then the bishop, having the crosier in his left hand, pronounces the benediction. She then rises up, and the bishop consecrates the new habit, sprinkling it with holy water. When the candidate has put on her religious habit, she again presents herself before the bishop, and sings on her knees *Ancilla Christi sum*, &c. ("I am the servant of Christ"). Then she receives the veil, and afterwards the ring, by which she is married to Jesus Christ; and, lastly, the crown of virginity. When she is crowned, an anathema is denounced against all who shall attempt to break her vows. After the communion, the prelate gives her up to the conduct of the abbess, saying to her, "Take care to preserve pure and spotless this young woman, whom God has consecrated," &c.

(*Zool.*) A kind of pigeon, *Columba vestalis*, which has a white hood.

Nun-buoy, (*-boi*), *n.* (*Naut.*) A buoy rotund in the middle, and tapering to each end. See BUOY.

Nunc dimittis, [Lat., now lettest thou depart.] (*Ecc.*) The name given to the canticle of Simeon (*Luke* ii. 29–32), which forms part of the compline office of the Roman breviary, and is retained in the evening service of the Anglican Church when it follows the second lesson.

Nunchion, (*nūn'shun*), *n.* A luncheon; a portion of food taken between meals.

"Laying by their swords and truncheons, They took their breakfasts or their nunchions." — *Hudibras*.

—A quantity of food sufficient for a luncheon. (Used as an English provincialism.)

Nuncio, (*nūn'shi-o*), *n.* [It. *nunzio*; Fr. *nonce*; Lat. *nuncius*—*uox*, new, and *ciao*, to set in motion.] Properly, one who bears news; a messenger; but it is usually applied to a person sent by the Pope to represent his holiness at a foreign court. A nuncio is, in fact, the Pope's ambassador, as an internuncio is his envoy-extraordinary. Strictly speaking, he represents the Pope only as a temporal sovereign; but he is often commissioned to treat of spiritual affairs, and to report on the condition of churches, and the character of church dignitaries, especially of candidates for the mitre. The nuncio in France is forbidden by law to exercise ecclesiastical jurisdiction, being recognized only as the papal ambassador.

Nuncupative, **Nuncupatory**, *a.* [Fr. *nuncupatif*, from Lat. *nuncupo*, *nuncupatus*, to call by name — *nomen*, a name, and *capio*, to take.] Publicly or solemnly; declaratory. — Oral; verbally pronounced; not written, as a will. — Nominal; existing only in name.

Nuncupative will or testament. (*Law.*) A will or testament made orally, though afterwards put into writing.

Nunda, in *Illinois*, a post-village and township of McHenry co. Pop. of township (1897) 2,140.

Nunda, in *Minnesota*, a township of Freeborn co. Pop. (1897) 864.

Nunda, in *New York*, a post-village and township of Livingston co., about 67 m. E.S.E. of Buffalo. Pop. (1897) 2,650.

Nundinal, *n.* A nundinal letter.

Nundinal, **Nundinary**, *a.* [Lat. *nundinalis*, *nundinarius*, from *nundinus*, relating to nine days — *novem*, nine, and *dies*, day.] Pertaining or having reference to a market or fair-day; belonging or relating to a fair.

Nunea-ton, a town of England, co. of Warwick, 14 m. N.W. of Rugby. *Manuf.* Ribbons. Pop. 5,000.

Nunez, or KAKUNDY, a river of W. Africa, in Senegambia, which, after a W. course, enters the Atlantic Ocean, Lat. 10° 40' N., Lon. 14° 40' W.

Nunez, ALVARADO, (CABEÇA DE VACA,) one of the earliest explorers of the N. American continent, and an associate of Pánfilo de Narváez, first governor of Florida appointed by the Spanish Crown. Landing in that country in April, 1528, Narváez with his followers penetrated into the interior in quest of gold. After a fruitless search, they returned to the coast, to find the vessels of their fleet having left for Havana. They thereupon built 5 boats, and, after many dangers and difficulties, reached

in October, the mouth of a river, which is assumed to have been the Mississippi. Becoming separated in a storm, *N.* left his boats, and proceeded westward overland, until he reached a country answering to the description of the present New Mexico. There he found the natives suffering from an epidemic, which, possessing some knowledge of medicine, *N.* relieved, and thereby acquired considerable influence over the tribes. After a protracted sojourn, *N.* proceeded on his course W. by S., and, in 1536, eight years after leaving Florida, *N.*, with the three other survivors of the expedition, arrived at the Spanish settlement of Callacan, on the Pacific coast. The events of his after-life are not known.

Nung, *n.* A bale of cloves.

Nungeenah', a town of Hindostan, in the N.W. provinces; Lat. 29° 27' N., Lon. 78° 30' E. Manuf. Firearms. Pop. 30,000.

Nun'ica, in Michigan, a post-village of Ottawa co., abt. 22 m. W.N.W. of Grand Rapids.

Nunua'tion, *n.* [Lat. *nunatio*.] In the Arabic grammar, the pronunciation of the terminal *n* in words.

Nun'ery, *n.* A religious house, serving as the abode of nuns; a cloister devoted to females.

Nun nish, *a.* Pertaining to, or resembling, or having reference to a nun or nuns.

Nu'ro, a town of Italy, island of Sardinia, 78 m. N.N.E. of Cagliari; pop. 5,162.

Nuphar, *n.* [Ar. *naufar*.] (*Bot.*) A genus of aquatic plants, order *Nymphaeaceae*. The Yellow Pond-lily, *N. advena*, common in the U. States in sluggish streams and muddy lakes, is a well-looking and very curious plant, but from its filthy habits it has been called, with some justice, the *frog-lily*. The rhizoma is large, creeping extensively. Leaves large, dark-green, shining above, and, when floating, pale and slimy beneath. Petioles half round. Flowers rather large and globular in form, erect, on a thick, rigid stalk. Three outer sepals yellow inside, and the three inner entirely yellow, as well as the petals and stamens.

Nuptial, (*-shi-al*) *a.* [Fr.; Lat. *nuptialis*, from *nuptia*, marriage — *nubo*, *nuptum*, to marry, said of a woman, properly, to veil.] Belonging or having reference to marriage; done at, or characterizing a wedding. — Constituting marriage.

"Confirm that amity with nuptial knot." — *Shaks.*

—*n. pl.* Nuptial ceremony; marriage; wedding; matrimonial union.

Nur, *n.* A hard, knobby piece of wood used by boys in the game of hockey. — An English provincialism for the head.

Nuremberg, [Ger. *Nürnberg*.] a city of Bavaria, cap. of circ. Middle Franconia, on the Pegnitz, 93 m. N.N.W. of Munich. It is surrounded by walls and turrets, with arched gates and four massive cylindrical towers, more however for ornament than use. The anc. *N.* is one of the most remarkable and interesting cities of Germany, on account of the numerous remains of mediæval architecture which it presents in its picturesque streets, with their gabled houses, stone balconies, and quaint carvings. Among the most remarkable of its numerous public buildings are the churches of St. Sebald and St. Lawrence, the *Rathhaus*, or town-hall, adorned with paintings by Albert Durer, and the *Reichsveste*, or imperial castle, the residence of the German emperors in the Middle Ages. In the great market-place is the *Schöner Brunnen*, or "beautiful fountain," and a Gothic obelisk. There are numerous institutions of learning, and a number of public libraries, among which the city library contains 40,000 printed vols., and 800 MSS.

Fig. 1973. — NUREMBERG.

Manuf. Jewelry, metallic goods, mathematical and musical instruments, mirrors, ivory and alabaster articles, paper, woollen yarn, and the celebrated children's toys and dolls, which are extensively exported to all parts of Europe and America. *N.*, supposed to have been founded in the 9th century, became the seat of the first Germanic diet in 938, and was made a free city in 1219. It early embraced the cause of the Reformation, and diets were held in 1523 and 1524; and the first religious peace, called the Peace of Nuremberg, was concluded in 1532, by which full toleration was granted to those professing the new doctrines. *N.* retained its independence till 1803, when Napoleon I. bestowed it upon the King of Bavaria.

Nurse, *n.* [Fr. *nourrice*, from Lat. *nutrix* — *nutrire*, to nourish, feed, support. See *NUTRITION*.] A woman who suckles infants; a female that has the care of infants, or a woman employed to tend the children of others; as, a wet-nurse. — A person who has the care of

a sick person; specifically, a female attendant upon another woman during her lying-in; a "Sairey Gamp." A person who breeds, educates, fosters, or protects; that which breeds, trains, or causes to grow. — An old woman; — used in a contemptuous sense.

To put to nurse, or to put out to nurse, to cause to be attended by a nurse; to send away to be placed under a nurse's care.

Wet-nurse, a woman hired to suckle another woman's infant.

—*v. a.* To suckle; to nourish at the breast; to tend, as infants. — To attend and take care of in childhood or in sickness; to wait upon, as an invalid. — To feed; to foster; to maintain; to cherish; to bring up; to train; to encourage; to promote growth in.

"To nurse the saplings tall." — *Milton*.

—To manage with care and economy, with a view to accumulation.

"Nursing her wrath to keep it warm." — *Burns*.

Nurse'-child, *n.* A nursling; a child placed at nurse.

Nurse'-maid, *n.* A girl or female domestic who has charge of children.

Nur'ser, *n.* One who, or that which, fosters or promotes growth.

Nurse'-pond, *n.* A pond for the propagation of fish.

Nursery, *n.* The place or apartment in which children are nursed and taken care of. — A plantation of young trees; a growing copse of shrubs for transplanting. — The place where anything is nourished and encouraged, and the growth and development promoted. — A luxurious court is the nursery of disorders. — *L'Estrange*.

—That which forms, trains, or educates.

"My paper is a kind of nursery for another." — *Addison*.

—That which is the object of a nurse's care.

Nurseryman, *n.*; *pl.* *NURSERYMEN*. One who keeps, cultivates, or takes charge of a nursery of young trees and shrubs.

Nurs'ling, *n.* One who or that which is nursed; an infant; a child at nurse; a fondling; a foster-child.

"She was made the nursing of nobility." — *Spenser*.

Nurture, (*ner'tür*) *n.* [Fr. *nourriture*.] That which nourishes; food; diet; nutriment. — Act of nourishing, nursing, or fostering; education; training; instruction.

—*v. a.* To nourish; to feed. — To bring or train up; to instruct; to educate.

"He was nurtured where he had been born." — *Wotton*.

Nus'co, a town of S. Italy, prov. of Principato Ultriore, 46 m. N.E. of Naples. Pop. 4,000.

Nut, *n.* [A.S. *hnut*, *hnutu*; D. *noot*; Ger. *nuss*; Fr. *noix*; Lat. *nut*, *nutis*.] The name popularly given to the roundish fruit of certain trees and shrubs, consisting of a hard shell inclosing a kernel; as, a walnut, a coco-nut, a hazel-nut, &c. In this country, as in England, the name *nut*, without distinctive prefix, is commonly given to the hazel-nut, but in France to the walnut.

(*Bot.*) The term nut (*nut*) is used to designate a one-celled fruit, with a hardened pericarp containing, when mature, only one seed. The *Achenium* (*q. v.*) was by the older botanists generally included in this term. Some of the fruits to which it is popularly applied scarcely receive it as their popular designation. The hazel-nut is an excellent example of the true nut of botanists.

(*Mech.*) A short internal screw, which acts in the head of an external screw, and is employed to fasten anything that may come between it and a flange on the bottom of the external screw or bolt. A piece of metal with a cylindrical grooved hole, screwed upon the end of a screw-bolt.

(*Naut.*) A projecting nozzle on each side of the shank of an anchor, to hold the stock firmly in its place.

—*v. n.* To gather nuts; as, to go nutting.

Nu'tant, *a.* Nodding; having the head inclined downward, as certain plants.

Nuta'tion, *n.* [Fr.; Lat. *nutatio*.] The act of nodding. (*n.*)

(*Astron.*) A slight oscillatory movement of the earth's axis, which disturbs the otherwise circular path described by the pole of the earth round that of the ecliptic, known as the "precession of the equinoxes." It is produced by the same causes, viz., the attraction of the sun, moon, and planets (the attraction of the last-mentioned being so small as to be quite imperceptible), upon the bulging zone about the earth's equator, though in this case it is the moon alone that is the effective agent. It also, for reasons which need not be given here, depends, for the most part, not upon the position of the moon in her orbit, but of the moon's node. The effect of nutation, when referred to the equator and ecliptic, is to produce a periodical change in the obliquity of the ecliptic, and in the velocity of retrogradation of the equinoctial points. It thus gives rise to the distinction of "apparent" from "mean" right ascension and declination, the former involving, and the latter being freed from the fluctuations arising from nutation. This motion is common to all the planets.

(*Bot.*) The action of a flower in following the apparent movement of the sun, from the east in the morning to the west in the evening.

Nut'-breaker, *n.* (*Zoöl.*) Same as NUT-HATCH, *q. v.*

Nut'-brown, *a.* Brown as a nut long kept and dried; hazel-colored; as, nut-brown ale.

Nut-cracker, (*kral'kr.*) *n.* An instrument for cracking the shells of nuts by pressure.

(*Zoöl.*) A genus of European birds (*nucifraga* or *caryocataces*) of the family *Corvidæ*, with a straight conical bill, both mandibles terminating in an obtuse point, and tail nearly square at the end. The form and characters are nearly similar to those of crows, but the habits are rather those of jays, and in some respects indicate an approach to woodpeckers.

Nut'-gall, *n.* See GALL-NUT.

Nut'-hatch, **Nut'-breaker**, **Nut'-jobber**, *n.* (*Zoöl.*) A genus of Insectivorous birds, *Sitta*, family *Certhiidae*, having a straight conical or prismatic bill, short legs, the hind-toe very strong. The female lays her eggs, which are white with a few pale-brown spots, in holes of trees, frequently in those which have been deserted by the woodpecker; and when driven from her nest, on being disturbed, hisses like a snake. The *N.*, like the woodpecker, runs with facility upon and about the trunks and branches of trees; but the tail, which is short and rounded, is of no assistance to the bird in its progress. Unlike the woodpecker, however, the *N.* runs with the head downwards as well as upwards, and indeed the former position of the head appears to be the favorite one; it generally alights on a branch with the head in a downward position, and sleeps in that posture. The *N.* feeds on caterpillars, beetles, and various kinds of insects; it also eats nuts, of which it lays up considerable hoards in the holes of trees. Its mode of fastening the nut in a chink, perforating the shell, and extracting the kernel, is as ingenious as it is amusing to witness; when disturbed at its work, it very readily removes the nut, and flies away with it. These birds are found in all cold and temperate climates. The White-bellied *N.* of N. America (*Sitta Carolinensis*, Fig. 1974) is 6 inches long, and the wings about 4 inches; its color is ashy-blue above, the under parts white, top of the head and neck black.

Fig. 1974.
WHITE-BELLIED NUT-HATCH,
(*Sitta Carolinensis*.)

Nut'-hook, *n.* A long pole or staff with a hook at one extremity, serving to pull down boughs when gathering nuts. — A thief who steals by means of a hook; also a tipstaff, or constable who hooks, or seizes, offenders.

Nut'-jobber, *n.* (*Zoöl.*) See NUT-HATCH.

Nut'meg, *n.* [Fr. *noix muscade*; It. *noce muscata*, *nut-musk*.] (*Bot.*) See MYRISTICA.

Nut'ria, *n.* (*Con.*) The fur of the COYPU, *q. v.*

Nut'ritant, *a.* Encouraging or fostering growth or development; nutritious; nourishing.

—*n.* Any nutritious substance or aliment which promotes growth.

Nut'ritment, *n.* [Lat. *nutrimentum*, from *nutrire*, to nourish.] That which nourishes or encourages growth; that which replenishes the natural waste of animal or vegetable matter; aliment; food; diet. — That which tends to promote and diffuse increase and improvement.

"Virtue is the nutriment that feeds the mind." — *Swift*.

Nutritement'al, *n.* Alimantal; possessing dietetic characteristics, or the qualities of nutriment.

Nutrition, (*-trish'un*) *n.* [Fr.; Lat. *nutritio*, from *nutro*, *nutritum*, to suckle, nourish. Etymol. unknown.] (*Physiol.*) The complicated process by which a perpetual course of reproduction is going on in every part of the system, — the component particles of the various tissues, — bone, muscle, nerve, &c., which are disintegrated and removed by the vital acts of the organism, being constantly replaced by new matter capable of continuing the functions necessary to life. In order to this, a due supply of proper food is necessary, which, after being digested, its nutritious particles are absorbed, converted into healthy blood, and circulated over the system. The effete matter is removed by the organs of excretion, or modified by the purifying action of the lungs. Of the modes in which the substitution of new tissue takes place, and in which the effete particles are removed in the interior of the system, our knowledge is as yet very imperfect. Each tissue seems to possess an elective affinity for certain constituents of the blood, which it appropriates to its own use in the process of conversion into organized material. See BLOOD, CHYLE, DEGLUTITION, DIGESTION, PHYSIOLOGY.

Nutritious, (*-trish'us*) *a.* [Lat., from *nutrix*, nurse.] Nourishing; accelerating or promoting the growth, or replenishing the waste of animal or vegetable matter; as, nutritious food.

Nutritiously, *adv.* In a nutritious or feeding manner.

Nutritiousness, *n.* Quality of being nutritious.

Nut'ritive, *a.* [Fr. *nutritif*.] Nutritional; alimental; having the quality of affording nutriment; as, the nutritive juices.

Nut'ritively, *adv.* In a nutritive manner; so as to nourish; nutritiously.

Nutritiveness, *n.* Nutritiousness; quality of being nutritive; alimentariness.

Nut'-shell, *n.* The hard shell of a nut; the external covering of the kernel. — A thing proverbially of little compass or of little value.

"A thousand pounds to a nut-shell." — *J. Estrange*.

To lie in a nut-shell, to admit of very brief and concise definition, arrangement, or statement; as, the question lies in a nut-shell.

Nut'talite, *n.* [From Thomas Nuttall.] (*Min.*) The common scapolite; an anhydrous silicate of alumina and lime, occurring in prismatic bluish-gray crystals at Bolton, Mass.

Nut'ting, *n.* The act of gathering nuts.

Nut'-tree, *n.* The HAZEL, *q. v.*

Nutty, *a.* Abounding in nuts; resembling or possessing the flavor of a nut; as, *nutty* sherry, *nutty* ale, a *nutty* tree. — In England, a cant term for fine, pleasant, agreeable.

Nux Vomica, *n.* [Lat. *nux*, nut, and *vomicus*, from *vomere*, to vomit.] See STRYCHNOS.

Nuzzle, (*nūz'z'l.*) *v. a.* [Corrupted from *nestle*.] To nestle; to house, as in a nest; to ensnare, as in a noose or trap.

—*v. n.* To nestle; to hide the head, as a child in the mother's bosom.

Nuzzle, *v. n.* [From *nose*.] To work or root with the nose, like a hog in the mire.

"Lawyers nuzzling like an eel in the mud." — *L'Estrange*.

—To go with the nose throughout and down, like swine — To idle; to loiter; to hang about; to dilly-dally. (Used as an English provincialism.)

Nyack, in *New York*, a post-village of Rockland co., abt. 29 m. N. of New York City.

Nyas, *n.* Same as *NIAS* (*q. v.*).

Nyas Lake. (*Geog.*) The most southerly of the great equatorial lakes of East Africa, about 400 m. from the east coast. Long and narrow, it is about 340 m. from north to south, and from 15 to 34 m. wide. Its waters are 1,575 feet above the sea, very deep in the middle, but shallow toward its northern end. The river Shiré issues from the southern extremity and flows south into the Zambesi. Its waters are sweet and abound in edible fishes. Livingstone was the first to fix, in 1859, its exact situation and to navigate it, although the lake, under the name of Maravi, was known to the Portuguese early in the 17th century. Young circumnavigated it in 1875. Mountains rise about the lake to the height of from 10,000 to 12,000 feet, and Livingstone found dwelling among them a numerous population, raising maize, cassava, tobacco, and English pease. The Germans and British have divided between them the coasts of the lake, on which ply German and British steamers.

Nyasaland, *n.* (*Geog.*) The name given by the British to the region west and south of Lake Nyassa (*q. v.*), over which they proclaimed a protectorate in 1891. The country has for some years been under the influence of British missionaries and of the African Lakes Company.

Nyctagina cœcæ, *n. pl.* (*Bot.*) An order of plants, alliance *Chenopodales*. *DIAG.* A tubular, often colored calyx, which separates from its base, the latter becoming a hard spurious pericarp. — They are herbs, shrubs, or trees, with stems usually turned at the joints. Leaves generally opposite. Flowers with an involucre. Stamens 1 or many, hypogynous. Ovary superior, 1-celled, with a single ovule; style 1; stigma 1. Fruit an utricle inclosed by the hardened persistent base of the calyx. Seed solitary; embryo coiled round mealy albumen with foliaceous cotyledons and inferior radicle. There are 17 genera and about 100 species, natives exclusively of warm regions. Some are cultivated as garden-flowers. See *MIRABILIS*.

Nyctalopia, *n.* [Lat.; from Gr. *nyktalopia*.] (*Med.*) The faculty of seeing best at night. A person suffering from this defect of vision sees little or nothing during the day, but in evening and night has his vision tolerably unobscured. It is the total opposite of *NICT-BLINDNESS*, *q. v.*

Nyctanthus, (*nik-tān'theez*), *n. pl.* [Gr. *nux*, night; *anthos*, flower.] (*Bot.*) A gen. of the nat. ord. *Jasminaceæ*, remarkable for the flowers expanding and smelling only in the night. *N. arbor tristis* is often grown in English hot-houses; in India its flowers are used for dyeing yellow.

Nycthemeron, *n.* [Gr. *nyx*, *nyktos*, night, and *emer*, a day.] The natural space or period of twenty-four hours, constituting day and night.

Nye, *n.* A brood of pheasants.

Nye's Corner, in *Maine*, a village of Somerset co., abt. 8 m. N. of Waterville.

Nyireghyaza, (*ny-ir'e-dy-a-za*), a town of Hungary, co. of Szabolcz, 20 m. N. of Debreczin. It has soda and salt works. *Pop.* 15,740.

Nykoping, or **Nykjoping**, (*nu'cho-ping*), a län or dist. of E. Sweden, having N. the lakes Mälän and Hielmar, and S.E. the Gulf of Bothnia; *area*, 2,516 sq. m.; *pop.* 132,000.

NYKOPING, cap. of the above district, on an inlet of the Baltic, 58 m. S.W. of Stockholm. *Manuf.* Brass-ware, woollen and cotton stuffs, hosiery, tobacco, paper, &c.; also ship-building, and a brisk export trade. *Pop.* 4,000.

Nylghau, **Nyl'gau**, *n.* [Hind. *nilgāw*, blue cow.] (*Zool.*) The White-footed Antelope, *A. portax* or *picta*. This animal, which inhabits various parts of India, is one of the largest

and finest antelopes known. Its face is long and narrow; its horns are black, round, pointed, and slightly curved forwards, though only about seven inches long; the ears broad and fringed with white hairs; the neck deep and compressed; along the top of the neck runs a slight mane of black hair, which is continued to some distance down the back; and on the breast is a long hanging tuft of a similar color. The general color of the Nylghau is a fine dark-gray or slaty blue on the upper parts, and white underneath. The female resembles the male in general appearance, but is considerably smaller, of a pale-brown color, and has no horns. There is a large white spot on the throat, and a smaller one on each cheek; and the pastern joints are marked in front with one, and behind with two white spots or bars. The native haunts of this powerful animal are the dense forests of India.

Fig. 1975. — NYLGHAU.
(*Antelope portax* or *picta*.)

Nymph, (*nimf*), *n.* [Fr. *nympe*; It. and Sp. *nimfa*; Lat. *nympha*, pl. *nymphæ*; Gr. *nimphē*.] (*Myth.*) A kind of female deities, divided into aquatic and terrestrial divinities, or land and sea-nymphs. The nymphs of the land held supremacy, some over woods and valleys, others over hills, and rocks, and plains; and others, again, over certain trees, or special objects of vegetation; among the latter were the Wood-nymphs, the *Dryades*, and the *Hamadryades*, or oak-tree nymphs, and the mountain genii, the *Oreads*. Of the Sea-, or more properly speaking, Water-nymphs, the number is almost legion, and embraces divinities, presiding, not only over ocean and sea, but over river, lake, rivulet, stream, and fountain; receiving the name of Oceanides, Nereides, Naiades, Potamides, etc. Nymphs were represented as young and beautiful virgins, by some authors endowed with eternal life, by others, with unending youth and beauty, for 3,000 years; and only usually represented in a light azure skirt, extending from the hips to the feet in flowing folds, while all above was undraped; a vase or urn of water was sometimes placed in the hands of the water-nymphs, from which they seemed to be pouring.

—A poetical name for a handsome young maiden; a damsel; a frolicsome lass.
"The nymph I dare not, need not name." — *Waller*.
Nymph, **Nym'pha**, *n.* [Lat. *nympha*.] (*Zool.*) An insect in a pupa state; a chrysalis. See *INSECT*.
Nymphæa, (*nim-fē'ah*), *n.* [Lat. *nympha*.] (*Bot.*) The typical genus of the order *NYMPHÆACEÆ*, *q. v.*
Nymphæaceæ, *n. pl.* (*Bot.*) The Water-lily family, an ord. of plants, alliance *Nymphales*. *DIAG.* A many-celled fruit and dissepimental placenta — They are aquatic herbs with floating leaves. Thalamus large, forming a disc-like expansion more or less surrounding the ovary. Carpels united so as to form a compound, many-celled pistil; stigmas radiating on the top and alternate with the dissepiments; ovules numerous, attached all over the dissepiments. Embryo minute, on the outside of farinaceous albumen, inclosed in a vitellus. The plants of this order are chiefly found in quiet waters, throughout the whole of the N. hemisphere; they are, generally speaking, rare in the S. hemisphere. They have bitter and astringent properties. Many contain a large quantity of starch, both in their rhizomes and seeds; hence these parts are often employed as food.

They are remarkable for their large showy flowers. The Egyptian water-lily, *Nymphaea lotus* (Fig. 1976), described under *Lotus*, *q. v.*, was the favorite flower of ancient Egypt. See also *VICTORIA*.

Fig. 1976. — THE EGYPTIAN WATER-LILY.
(*Nymphaea lotus*.)

Nymphal, (*nimf'al*), *a.* Nymphaean; pertaining or having reference to a nymph; nymphish.

Nymphæales, *n. pl.* (*Bot.*) An alliance of plants, sub-class *Hypogynous Erogens*. *DIAG.* Dichlamydeous flowers, axile or sutural placentæ, stamens indefinite, and an embryo on the outside of a large quantity of albumen; or, if exalbuminous, the seeds have a very large plumule. The alliance is divided into 3 orders, viz.: *NYMPHÆACEÆ*, *CABOMBACEÆ*, and *NEUNBIACEÆ*, *q. v.*

Nymphalidæ, *n. pl.* (*Zool.*) A numerous family of *Lepidoptera*, (see Figs. 767 and 1757.) distinguished by the rudimental structure of the fore-legs, which are thickly covered with hair; the labial palpi are proportionally longer; the wings more robust; the posterior grooved to receive the abdomen; and the discoidal cell either open or closed by a slender nerve. The caterpillars are variable in form; and the chrysalis is simply suspended by the tail.

Nymph'et, *n.* A young nymph; — used in poetry only.

"The nymphets sporting there." — *Drayton*.

Nymphical, (*nimf'ik-al*), *a.* [Gr. *nymphilos*.] Belonging to nymphs.

Nymphiparous, *a.* [Lat. *nympha*, and *parere*, to produce.] Bringing forth nymphs.

Nymphish, (*nimf'ish*), *a.* Relating to nymphs; nymphal; lady-like.

"Tending all to nymphish war." — *Drayton*.

Nymphlike, **Nymph'ly**, *a.* Resembling, characteristic of, or befitting nymphs; as, *nymphlike* grace.

Nymph'olepsy, *n.* [Gr. *nymphē*, and *lambanein*, to seize.] A kind of weird possession coming upon one after an accidental meeting with the nymphs. (*R*)

"The nympholepsy of some fond despair." — *Byron*.

Nymphoma'nia, **Nymph'omany**, *n.* [Gr. *nymphē*, and *mania*, madness.] (*Med.*) Morbid and irrepressible concupiscent desire in women. It is a true and proper disease, and no more under the control of the will than hysteria or tetanus. The unfortunate patient, instead of being regarded as a stain on morality, should be commiserated for her physical misfortune.

Nyon, (*ne'on*), a town of Switzerland, in the canton of Vaud, on the Lake of Geneva, 21 m. from Lausanne; *pop.* 2,500.

Nyons, (*nee-on'*), a town of France, dept. of Drôme, on the Aigues, 33 m. N.E. of Avignon. *Manuf.* Silks, leather, and earthenware. *Pop.* 4,000.

Nys'sa, *n.* (*Bot.*) A gen. of plants, order *Alangiaceæ*, including the Black-gum, or *TUPÉLO-TRÉZ*, *q. v.*

Nystad, a seaport-town of European Russia, in Finland, dist. of Abo, on the Gulf of Bothnia, 38 m. N.W. of Abo; *pop.* 2,600.

Nystag'mus, *n.* [Gr. *nystagmos*.] Nistation; drowsy winking of the eye.

N.—SECTION II.

NANS

Na'glee, HENRY M., U. S. A., was born in Philadelphia, in 1815; graduated from West Point (1835); became a brigadier-general in the Federal army early in 1862, and commanded a brigade at the battle of Fair Oaks, May 30 of that year. Died March 5, 1886.

Nail'bourne, *n.* In England an intermittent spring or stream flowing only at intervals, sometimes of several years.

Nama'qualand, **Great**, or **Nama'land**. The southern and least desirable part of the German possessions in Southwest Africa. It fronts the Atlantic Ocean, and is separated on the south from Cape Colony by the Orange river. It is principally inhabited by the remnant of the uncivilized portion of the Hottentots, who call themselves Namas or Namaquas, now reduced to less than 10,000.

Nam'aycush, *n.* [N. A. Ind.] (*Ichth.*) The great lake-trout (*Salvelinus namaycush*) of the Great Lakes and other lakes along the northern border of the U. S. It becomes 3 ft. long, is dark gray to black in color, marked everywhere with rounded paler, sometimes redish, spots. It is a gamy fish and excellent eating. Called also Mackinaw trout, bear trout, longe, and (in Maine) togue.

Nance, in *Nebraska*, an E. central co.; area, 436 sq. m.; traversed by the Loup river. Surface consists of picturesque table-lands and valleys; soil, highly productive; a great live-stock country and good agricultural region. *Cap.* Fullerton. *Pop.* (1890) 5,773.

Nan'cy, *n.* A womanish or effeminate young man; usually Miss *Nancy*.

Nan'nie, **Nan'ny**, *n.* The familiar or pet term for Ann, Anna, Anne, or Nancy.—*Nanny-goat*, a female goat.

Nan'sen, FRIDTJOF, Ph.D., scientist and explorer, son of a well-known Norwegian advocate, was born at Froen, near Christiania, Oct. 10, 1861. He entered the University of Christiania in 1880, where he devoted himself to the study of zoölogy. He was appointed curator of the Natural History Museum at Bergen, Norway, in 1882, having in the same year made a voyage to the Jan Mayen and Spitzbergen seas, and the sea between Iceland and Greenland, in a sailing vessel, for the purpose of studying animal life in high latitudes. He then first became acquainted with Greenland, and acquired that intimate knowledge of the Eskimo which he displayed in his later comments. In 1888, he made his famous journey across Greenland from east to west on snowshoes, which feat won for him his reputation as a scientist and an explorer. This journey was described in his book, *The First Crossing of Greenland*. He took his degree of Ph.D. at the university that year, and in 1889 was appointed curator of the Museum of Comparative Anatomy at the University of Christiania. It was in 1884 that he first thought of his Polar journey, and his plans were slowly matured, based on that theory of Polar currents which has since received such remarkable confirmation. On June 24, 1893, he sailed from Christiania at the head of an Arctic expedition, intending to drift from the Siberian coast straight across the North Pole to the coast of Greenland. His vessel, the *Fram*, was designed by him specially to resist ice-pressure. The crowning event of the year 1896 was the return, after an absence of more than three years, of Nansen, quickly followed by that of the *Fram*. On Aug. 13, Dr. Nansen arrived at Vardo, on board the Jackson-Harmsworth steamer *Windward*. The unexpected meeting of Dr. Nansen with Mr. Jackson, on June 17, on an ice-floe S.E. of Cape Flora, was an event of dramatic interest, as the English and the Norwegian explorers had unwittingly wintered only a few miles apart. (See JACKSON-HARMSWORTH EXPEDITION.) Dr. N. has published (1897) a complete account of his expedition in his book *Farthest North*. Briefly, the details are as follows: After leaving Yugor Strait on Aug. 3, 1893, the *Fram* sailed for the mouth of the Olenek, which was reached on Sept. 15. Three days later the New Siberia Islands were passed, and on the 22d the ship was made fast to a floe in latitude 78° 50' north, and longitude 133° 37' east, and allowed to be closed in by the ice, to drift with the current. It was carried slowly to the N.W., for more than a year experiencing all the vicissitudes incident to changing seasons, but with no accident to ship or crew, nor any illness or unusual hardship. On Christmas Eve, 1894, the highest latitude previously reached (83° 24', by Lockwood and Brainard in the Greeley Expedition) was passed; and on March 3, 1895, 84° 4' was attained. Dr. Nansen, now feeling satisfied that the vessel would

be carried forward in the direction that he had anticipated, determined to leave it and explore northward. Lieut. Johansen accompanied him, and the *Fram* was left in charge of Capt. Sverdrup, at 83° 59' north, and 102° 27' east longitude. Nansen and Johansen started on March 4, 1895, taking with them 28 dogs, 2 sledges, 2 kyacks for possible open water, and provisions for 100 days for the men, and dog food for 30 days. At first they made fair progress; but the ice becoming more broken, advance was very slow, and supplies falling short, some of the dogs were killed to feed the others. By April 7, 1895, they had reached latitude 86° 14', but seeing nothing to the northward but a rough sea of frozen breakers, it was deemed best to turn southward. They had gone 200 miles nearer the Pole than had been attained by any previous expedition. They now directed their course toward Franz Josef Land, experiencing on their journey great hardships (in a temperature varying from -49° to -20°), as they wore only woollen clothing, having left their fur clothing on the ship, to save weight in travelling. They floated with the ice, continuing their journey as best they could across the flocs toward land, which they reached on Aug. 6, at 81° 38' north, and about 63° east. This land proved to be unknown ice-capped islands. They continued their journey in the kyacks in open water along these islands until a suitable spot was found (81° 13' north and 56° east) for wintering, as it was too late to expect

Fig. 3004.—FRIDTJOF NANSEN.

to make the journey across to Spitzbergen. They built a hut, shot bears and walruses, and lived in perfect health and reasonable comfort until spring. In March, 1896, they set out to cross the ice at Spitzbergen, and after two unsuccessful attempts occurred the happy meeting with Jackson and his party. Jackson offered Nansen and Johansen a passage home in the *Windward*, which had been sent out to him with supplies. The offer was accepted, and a speedy voyage brought them to Vardo, though Nansen very reluctantly abandoned his project of crossing to Spitzbergen. When Nansen left the *Fram*, in 83° 59' north latitude, 102° 27' east longitude, it had been drifted, entirely by the current, nearly half the distance between New Siberia Islands and Spitzbergen. It subsequently drifted farther north, the highest point reached being 85° 57'. After making, for a time, good progress, the vessel became stationary about the end of February, 1896, and there continued till the middle of July, when it was found possible to force a passage through the ice, and open water north of Spitzbergen was reached on Aug. 12. The lowest temperature recorded was -62° Fahr., and the highest 37½° Fahr. No land was seen, and the depth of the sea was from 1,800 to 2,200 fathoms. The scientific results of the expedition are highly important; for, besides proving in a very remarkable degree the correctness of Nansen's theory with regard to the direction of the Arctic currents, it has been shown that the Polar

NASM

Sea, instead of being, as was formerly supposed, a shallow basin, is, on the contrary, of great depth, 1,600 to 1,900 fathoms having been sounded immediately north of the 79th parallel, up to which the depth was about 90 fathoms. Below the surface a warmer and saltier stratum of water was found, due to the Gulf Stream, with a temperature of 31° to 33° Fahr. No land was seen, and in the higher latitudes no open sea—only narrow cracks in the ice. Dr. Nansen believes that this sea extends quite to the Pole, and that on this side, at least, there is no important Polar land. Special geographical discoveries include an island north of the Kara Sea, and several islands off the Siberian coast. Many important observations have been made relating to meteorology and magnetism, and numerous photographs taken. Nansen himself calls the expedition successful, and scientists generally agree in the opinion. That the mathematical pole was not reached matters little; the task of bringing to light a part of the Arctic region hitherto wholly unknown was fully performed.

Naph'a-water, *n.* A fragrant perfume distilled from orange blossoms.

Naph'tha (*náf'thá*), *n.* [Lat. *naphtha*, to throw out, to boil, to be angry.] Any one of several highly volatile, colorless, inflammable oils, especially that obtained from petroleum. Naphtha is the most volatile product of petroleum, and constitutes about 15 per cent. of the total flow of a well. The distillate is divided into grades A, B, C, D, according to gravity, the average specific gravity being about .885. Gasoline and benzine are distilled from crude naphtha. Naphtha is widely used in the trades and arts, taking the place of turpentine in many cases. It is used extensively as fuel for vapor-stoves and for street-lamps, the readiness with which it vaporizes making it easy to burn as a gas. Manufacturers of paints, varnishes, rubber goods, floor-cloths, &c., make large use of it, and it is also useful for cleaning clothes and gloves. Wood naphtha is the volatile liquid obtained when distilling wood for the production of pyroligneous acid, and it is from this that methylic alcohol is refined. The volatile liquid obtained in the dry distillation of crude India-rubber is called caoutchouc-naphtha. Other naphthas are named from their source, as coal naphtha, coal-tar naphtha, and shale naphtha.

Nar'colepsy, *n.* [Gr. *narkōsis*, and *lēpsis*, a seizing.] (*Pathol.*) A nervous disorder characterized by frequent, sudden, short attacks of irresistible drowsiness.

Narco'ma, *n.* [Gr. *narkē*, numbness.] (*Pathol.*) Stupor from use of narcotics; narcosis.

Nar'row-gauge, *a.* (*Railway Engin.*) Noting a width of track less than the standard or usual gauge.—*n.* A gauge of less than 56½ inches in width between the rails, which is the standard gauge both in the U. S. and in England. A few roads have been constructed on the narrow-gauge system—2 feet being the narrowest—but the advantage of uniformity is so great that the standard gauge is now almost universally adopted.

Nas-, **Nasi-**, **Naso-**. A prefix derived from the Lat. *nasus*, the nose.

Nasard (*náz'-ard*) *n.* An organ-stop, of 2 to 2½ feet tone, in that part of a large concert organ called the echo-organ.

Nas'by, PETROLEUM V. See LOCKE, D. R.

Nash, RICHARD, noted leader of fashion, was born at Swansea, Wales, on October 18, 1674, and died on February 3, 1761. He was popularly called "Beau Nash," and sometimes the "King of Bath" (from the watering-place of that name, where he was master of ceremonies). His *Life* was written by Goldsmith, in 1762.

Nash'ville, in *Arkansas*, a post-village of Howard co., 142 m. S.W. of Little Rock. *Pop.* (1897) 940.

Nashville, in *Michigan*, a post-village of Barry co., 44 m. S.E. of Grand Rapids; has furniture and other factories. *Pop.* (1894) 1,232.

Nashville, University of. (*Educ.*) In 1785, when what is now the State of Tennessee was part of the State of North Carolina, there was organized at Nashville the Davidson Academy. Its name was changed in 1806 to Cumberland College, which became, in 1826, the University of Nashville. It is a co-educational, non-sectarian institution, with 78 instructors, 1,439 students, and a library of 12,000 volumes, in 1897. Its income in that year was about \$76,000.

Nas'myth, ALEXANDER, portrait painter, was born in Edinburgh, Sept. 9, 1758; died April 10, 1840. Among his best portraits is that of Burns, in the Scottish National Gallery.

Na'smyth, JAMES, engineer, inventor, and astronomer, son of Alexander N., was born in Edinburgh, Aug. 19, 1808, and died May 7, 1890. He was the inventor of the steam-hammer, which he designed in 1839, and patented a few years later.

Nasmyth, PATRICK, landscape painter, son of Alexander N., was born at Edinburgh, Jan. 7, 1787, and died Aug. 13, 1831.

Nast, THOMAS, caricaturist, was born at Landau, Bavaria, Sept. 27, 1840; came to the U. S. in early childhood; went to England as a special artist for an illustrated paper in 1860. He began war sketches for *Harpers' Weekly* in 1862; and later became noted for political caricatures, directed chiefly against the "Tweed Ring" and the Democratic party. In 1891 he went to London to take a professional position in connection with the *Pall Mall Gazette*. Died Dec. 7, 1902.

Natalie, Queen of Milan I., of Serbia, was born on May 2, 1859. She is the daughter of Pierre Ivanovitch Kechko, and married Milan (then Prince of Serbia), October 17, 1875. Her husband secured a divorce in 1888, which has been pronounced illegal because granted without the required consultation with the Holy Synod. King Milan abdicated in favor of his son Alexander, in 1889, in consequence of these troubles with Queen N. and his resulting unpopularity.

Natatorium, *n.* [Lat. *natatorium*.] A place or a school for swimming.

National Airs, Hymns, &c. Popular patriotic or religious tunes, hymns, or songs, characteristic of particular nations; especially such tunes as have come to be expected on all important public occasions in the countries to which they belong. The most widely known, and probably the oldest national hymn, is the English *God, Save the King* [or Queen]; there is some uncertainty as to its origin, for when it was printed in the *Harmonia Anglica* in 1842, varying only slightly from the present version, it was without the name of author or composer; it was afterward attributed to Henry Carey, who was writing popular songs and music about 1740; but later investigation seems to prove that the music has been taken from an "Ayre" by Dr. John Bull, but throws no light upon the authorship of the words. The hymn became widely known during the great Scottish rebellion of 1745, when it was sung every night in the London theaters. In 1790 the words were translated into German and sung with a new air in honor of the King of Denmark; and a hymn based upon those words has been used since that time as the Prussian national hymn, *Heil dir im Siegerkranz*. Haydn was inspired by it to write the *Emperor's Hymn*, the national hymn of Austria. The Danish national hymn is *Kong Christen*; the Swedish, *King Karl, the Yonny Hero*, by Esaias Tegner; the Norwegian, either *Somer af Norge*, or *Ja, vi elsker dette Landet* (Yes, we love this land); the Hungarians have two hymns, the *Szánt* (Appeal) and the *Malyar Hymnus*. Besides its two national hymns, Hungary has also the Rakóczy March, which has played a part in Hungary and Transylvania similar to that of the Marseillaise, in France. It is by an unknown composer, its name being in honor of Francis Rakóczy II., Prince of Transylvania and leader of the Hungarian revolutionists in 1703. The Russians have a grand national anthem, which was written and composed in 1830 by Gen. Alexis Lwoff; the Belgians, instead of a hymn, have a revolutionary song, *La Brabançonne*; the widely known French *Marseillaise*, written by Claude Joseph Rouget de Lisle, in 1792, and sung by the revolutionary volunteers from Marseilles, is also more accurately a song than a hymn; and so is *The March of the Men of Harlech*, the old Welsh battle song, which is said to have originated during the siege of the castle of the town of Harlech (the ancient capital of Merionethshire), which was captured by the Lancastrians from the Yorkists in 1468. In America there are many patriotic songs, among which *Hail, Columbia!* and *Yankee Doodle* come nearest to falling under the term *national*. *Dixie*, the air always associated with the Southern States and the time of the Confederacy, was and still is to the South what no song or hymn has ever been to the entire U. S., although in foreign judgment *Dixie* and *Yankee Doodle* are classed together, the one for the South, the other for the North. The air of *Yankee Doodle* is probably of English origin, and the words are attributed to Dr. Shuckburgh, an army surgeon, in 1755; it became popular during the American Revolution. *Dixie* was first sung in a New York theater, but was adopted by the South.

National City, in California a post-village of San Diego co., on San Diego bay adjoining San Diego; has railroad shops, mills, creosote works, riveted pipe works, and reduction works. Pop. (1897) 1,450.

National Guard, (*Milit.*) It seems to have become the settled policy of the United States that, in addition to the regular army, each State shall organize and hold available for service a force of militia, now commonly known as National Guard; this militia force is enrolled for discipline, and not for military service except in time of insurrection, invasion, and occasionally of riot; under the national Constitution it is held liable, at the call of the President, for enrollment in the service of the United States, but at other times it is exclusively subject to State control, and is provided for and governed by the State statutes, although by act of Congress the national government furnishes certain financial aid and encouragement, tending to the greater efficiency of the force. The organization of the National Guard in the different States is modelled upon that of the regular army to secure a certain uniformity; and yet it is not entirely uniform in organization or in efficiency, from the fact that State militia laws are often

based upon almost obsolete provisions, independently adopted at different times in the history of the different States. Although Congress is empowered to provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, the power of appointing officers and the authority of training the militia according to the discipline prescribed by Congress is reserved to the several States, and until the militia has been actually called into United States service, the State government may legislate as to its organization and control, subject to the paramount right of Congress. When, however, the militia has actually been called forth, and has entered the United States service, the authority of Congress over it is exclusive. Either the State or Federal government has the right of requiring militia service from citizens, or of suppressing unauthorized military organizations, while an authorized organization must comply with all the requirements of the statute under which it is to be provided with funds or stores before such funds or stores may be issued. Discipline in the militia service is usually maintained by means of fines, which are imposed by officers or courts-martial, and collected through the machinery of the sheriff's office.

State camps of instruction for the National Guard are now held by 33 States, and detachments of the regular troops take part in the drill of these camps, with profit both to regulars, who get a better opinion of the soldierly qualities of the militia, and to the militia, who learn attention to details from the regulars. Instruction of portions of the militia of the seaboard States in the use of modern heavy ordnance is one of the projects for military education and coast defence which the Federal and State authorities must soon undertake; for with the fortification of the principal seaports, the regular army will not be able to furnish full garrisons for all the fortified ports. The issue of field-guns and ordnance-supplies to militia is now carried on as far as appropriations permit, but does not meet the increasing requests of the States. The total number of men in active militia service in the United States is 102,358; of officers 8,583; total 110,941. These had hitherto been subject only to State call for military duty, but in 1908 an Act was passed in Congress making them subject to call by the President for military service at home or abroad, their organization, armament and discipline to be the same as that prescribed for the regular army, the number of which is limited to 100,000. During the Revolutionary War the Federal armies were made up of State troops adopted by Congress, and there was no other system of maintaining an army until the present Constitution of the United States was ratified. The real Continental militia ("train bands"), i. e., those not adopted by Congress, played a less part than might have been expected in the Revolution, being available only for brief periods and lacking in training, in spite of the experiences of the French and Indian Wars. In 1795 the present militia system was inaugurated; it has received no general revision since, and is deficient in many particulars; in some States there is no general enrollment, and although encouraged by the government, the organization of such forces as the National Guard is due to public spirit rather than government activity. The efficiency of the system was first tested in the War of 1812-15, when the value of the service rendered by the militia was lessened by the attitude of some of the States, which claimed a right either to consent or to refuse to furnish the forces asked by the President, and which objected to having their troops sent out of the State boundaries, or placed under any superior command except the personal command of the President; these difficulties were raised on account of the unpopularity of the war in certain States, but they have never been met by statute, and the same question between State and Federal control of the State volunteers arose again in the Civil War. In both wars the uselessness of undrilled militia was demonstrated; this fact has given impetus to the formation and drilling of the companies of the National Guard, as known to-day, in which the term of first enlistment gives each member a thorough understanding of elementary military tactics. In most of the States medals are given for marksmanship and regular attendance at drill, and in New York they are also given for long terms of service.

The NAVAL MILITIA, commonly termed NAVAL RESERVES, come under the cognizance of the Assistant Secretary of the Navy, but are under the immediate supervision of the governments of the several States in which such organizations exist. The duty of the Naval Reserves, in case of war, is to man the coast and harbor defence vessels and operate in boat squadrons against attacking forces, leaving the regulars free to carry on offensive operations at sea. In 1909 such corps existed in 18 States, viz.: California, Connecticut, Georgia, Illinois, Louisiana, Maine, Maryland, Massachusetts, Michigan, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, Minnesota, Missouri, Ohio and South Carolina. The total number of enlisted men was 5,687. The various battalions in seaboard States are quartered in old government vessels (as the New Jersey battalion on the monitor *Ajax*, at Camden), and each year a practice cruise of ten days gives the young tars a taste of the realities of a "bluejacket's" life. In the several States the Naval Militia is enumerated with the National Guard as a part thereof.

National Library. See LIBRARY OF CONGRESS, under LIBRARIES OF THE UNITED STATES.

National Parks. Several extensive tracts of territory have been, within the last few decades, set aside by the U. S. government as national parks, to be kept

forever for the enjoyment or benefit of the people. The two most notable of these, the Yosemite and the Yellowstone National Parks, owe their origin to the marvels of nature which they embrace—for an account of which see these titles. The "Big Tree" reservation in California is a national park of the same description. In Canada a similar park has been set aside at Banff, in Alberta, and also Roger's Park, 135 miles to the west, the attraction of both being their magnificent mountain scenery. New York State and Canada have set aside similar parks at Niagara, and New York has a State park in the picturesque Adirondack region. A series of national parks of different character consist of the principal battlefields of the Civil War, including Gettysburg, Chickamauga, and others. Large tracts of the forest lands of the West have similarly been set aside, not, however, as parks, but as reservations to preserve the rapidly diminishing forests. See FORESTRY; PARKS AND FOREST PRESERVES.

Nationalism, *n.* The quality or state of being national; devotion to the interests of the nation as a whole rather than to a part of it, in opposition to sectionalism; nationality; a national trait or characteristic.—As a form of civil polity, in the U. S., as advocated especially by the followers of F. V. Bellamy, N. demands the extension of the functions of government to include the control of all economic operations, and all personal services now rendered for profit or hire. It calls for the nationalization of the postal service, telegraphs, telephones, railroads, and coal mines; the municipalization of light and water supply, local transit, and other public functions; and the equalization of educational opportunities. The growth of nationalistic ideas has been rapid, and most of them have been adopted by the People's Party, and thus brought into general politics. See PEOPLE'S PARTY; PORTLISM.—In Ireland N. signifies a desire for national independence, and manifests itself in the platform and principles of the advocates of Home Rule.

Nationalist, *n.* An advocate of nationalism in any of its phases.

Natona, in Wyoming, an E. central co.; area, 5,475 sq. m.; intersected by the North Platte river. Surface, broken with large level valleys; soil, white clay loam, with a little sand. Products, Oil, coal, soda, iron, asbestos, silver, and building stone; mountains are heavily timbered. Cap. Casper. Pop. (1897) 1,500.

Nattes (*n'at*), *n.* [Fr. *natte*, mat.] (*Arch.*) A kind of surface decoration, so called from the resemblance of its interlacement to that of matting.

Natuna Islands lie N.W. of Borneo, in the China Sea, and belong to the Dutch. They are densely wooded and mountainous. Ranay, or Great Natuna, rising to a height of 3,500 feet. The largest of the islands is about 600 sq. m. Pop. 2,000.

Natural Gas. See GAS, NATURAL.

Natural Selection. (*Biol.*) The cardinal principle of the theory of evolution in nature as advanced by Charles Darwin, and expressed in the phrase, "survival of the fittest." The term is, in form and idea, the opposite of "artificial selection," or the practice, common among breeders of domestic animals, of selecting parents having certain characteristics, with the view of obtaining progeny having the same characteristics. It is by this course of selective pairing, constantly tending to reproduce parental characteristics and to intensify them, that races, breeds, or strains of various useful and ornamental domesticated animals have been produced, perfected to arbitrary standards, and maintained. In a similar manner, horticulturists have produced and perpetuated the countless varieties in garden-plants. The origin in each case was some accidental variation, considered useful or ornamental, and perpetuated by selective breeding, as above outlined. Assuming the undoubted (though unexplained) existence of variations in all living things, plants and animals, Mr. Darwin supposed that when it happened that a union of male and female accidentally possessed of similar peculiarities took place these characteristics would tend to become more prominent in the progeny, just as happened when the parents were arbitrarily married under human control. He described the constant action and reaction upon one another of animals or plants living in competition by the picturesque phrase, "a struggle for existence"; and pointed out that those individuals and species would be the winners in this struggle that were best fitted to cope with the difficulties they encountered; or, in other words, were best adapted to their environment. The weakest, least competent, most unadapted, would die off, while the superior species and individuals would live. This process he called a "survival of the fittest"; and it followed that only the best in each case would, as a rule, produce young, and perpetuate their kind. Now, assuming the variability of all creatures within certain limits, it is plain that any variation from the type must in many, if not all cases, be either to the advantage or disadvantage of its possessor; and should it be perpetuated and intensified in the progeny by fortuitous mating, it would increase in that generation the weakness or strength of the individual or race. A tendency toward weakness, or unfitness, would soon lead to extinction in the fierce struggle for existence; but were the tendency toward strength, greater fitness or adaptability to its circumstances would assist in making its possessor a winner, and consequently be likely to be continually handed on to succeeding generations, always strengthening in some one, if not more, respects its possessors, and contributing to their continued survival. Meanwhile, some other line of variation, or many other lines, might be taken by other branches of the original stock (the beginning of this

process going back to the most primitive and simply organized beings), which would ever result in the submergence or extinction of disadvantageous variations, and the emergence and perpetuation of advantageous variations. The result would be a divergence of forms which would, in the course of time, amount to the vast and highly diverse groups and species of plants and animals now known. Natural selection, then, is the fortuitous selection by nature of parents breeding toward the advantage of their race in the struggle for existence, as men arbitrarily select parents to breed toward some artificial standard of form. One phase of it is distinguished as **SEXUAL SELECTION** (*q. v.*). See **Neo-Darwinism**. The works of Darwin, Wallace, Herbert Spencer, Asa Gray, Joseph Hooker, G. Romanes, Mivart, and others, should be read. See **DARWINISM**; **EVOLUTION**; **DEGENERATION**, &c.

Naturalization, n. (Law.) The act of receiving an alien into the condition and investing him with the rights and privileges of a natural-born subject or citizen. The Constitution of the United States vests in Congress the exclusive power to establish a uniform rule of naturalization. Persons of age may be naturalized, with their resident minor children, upon taking an oath to support the Constitution of the United States, and renouncing all allegiance to a foreign prince or state, provided they belong to one of the following classes: 1. Those who have resided in the United States at least five years continuously, and have legally declared their intention to be naturalized, and to renounce foreign allegiance, more than two years before applying for naturalization. 2. Those who have resided here for a continuous period of five years, of which three were during minority. 3. Those who have resided here one year, and have served in and been honorably discharged from the military forces of the United States. 4. Those who have served three years on a merchant vessel of the United States, after legal declaration of intention. Citizens of countries at war with the United States are excepted. Widows and children of those who have made legal declaration before death are deemed citizens. So much trouble has been caused heretofore, especially in the city of New York, by crowds of persons applying for naturalization just before an election that the amended Constitution of 1894 of the State of New York now provides that a naturalized citizen cannot vote in that State until 90 days after he has been naturalized. In Great Britain the power to naturalize is vested in the principal Secretaries of State, any one of whom, on receiving a petition from an alien intending to reside in the United Kingdom and desirous of being naturalized, may issue a certificate, to be enrolled for preservation in Chancery, granting to the petitioner, on condition of his taking within 60 days a prescribed oath, all the privileges of a natural-born British subject, except that of becoming a member of the Privy Council or of either House of Parliament.

Naturel, n. [Fr.] A state of nature without bias or perversion.

Nau- A prefix derived from the Gr. *naus*, a ship.

Nau'binway, in *Michigan*, a post-village of Mackinac co. Pop. (1894) 529.

Naucratis, n. (Anc. Geog.) An ancient Egyptian city in the delta of the Nile, about half way between Cairo and Alexandria; its site was discovered in 1884 by Petrie, near the modern village of Nebireh, and excavation has revealed ruins of the Hellenium (a famous temple, the common property of the Greeks), and of other temples known to history.

Nau'mann, EMIL, musical composer and writer, was born at Berlin, on Sept. 8, 1827, and died at Dresden, on June 23, 1888. His chief work is an illustrated *History of Music*.

Naumann, JOHANN FRIEDRICH, ornithologist, was born at Ziebigk, near Köthen, Germany, Feb. 14, 1780, and died Aug. 15, 1857. He wrote *Natural History of Birds of Germany*.

Naumann, JOHANN GOTTLIEB, or AMADEUS, musical composer, was born at Blaswitz, near Dresden, April 17, 1741, and died Oct. 23, 1801. His chief operas are *Amphion*, *Coro*, *Gustav Wasa*, and *Orpheus*.

Naumann, KARL FRIEDRICH, mineralogist and geologist, son of J. G. N., was born at Dresden, May 30, 1797, and died Nov. 26, 1873. He was professor of Mineralogy and Geology at Leipzig from 1842 to 1871. He wrote *Manual of Geognosy*, &c.

Naumann, MORITZ ERNEST ADOLPH, physician, son of J. G. N., was born at Dresden, Oct. 7, 1798, and died Oct. 19, 1871. He was a professor at Bonn from 1828. His works include a *Handbook of Medical Clinics*.

Naupometer, n. [Gr. *naus*, ship; *rhoiē*, an inclination, and *metron*, measure.] An instrument for measuring the amount of a ship's heeling, or inclination at sea.

Navajos, n. pl. (Ethnol.) A tribe of American Indians of Athapaskan stock, of warlike and roving habits, formerly dwelling mainly in the San Juan Valley of New Mexico and raiding extensively. They now occupy a reservation at the northwestern corner of New Mexico, and are sedentary and peaceful, owning immense herds of cattle, donkeys, sheep, and goats, cultivating farms, and weaving fine blankets. The *Navajo blankets* are the most famous of all Indian blankets, having a superior finish and greater artistic variety in their patterns. They are less frequently and more carelessly woven now than formerly, and the cheap, fading, aniline dyes are often used instead of the fast colors made by the Indians themselves from various plants. As a consequence, the older and finer specimens now bring large prices. The modern blankets

are woven on just such primitive looms as those first seen by white men, and the patterns of the blankets are still the same. All Navajo blankets are single-ply, and the designs, no matter how complex, are the same on both sides. The colors most in use are red and black, sometimes relieved by yellow and green, which vary the numberless arrangements of bars, diagonals, diamonds, zigzag lines to symbolize lightning, crosses for stars, and terraced pyramids for rain clouds.

Navarre', in Ohio, a post-village of Stark co., 6 m. S. of Massillon. Pop. (1897) 1,260.

Navarre'te, MARTIN FERNANDEZ DE, naval officer and historian, was born at Avalos, Logroña, Spain, on Nov. 8, 1705, and died Oct. 8, 1844; became a captain in the Spanish navy in 1796, and subsequently held high offices in the department of marine. He planned and collected the first four volumes of the great collection of documents relating to Spanish history. During his later years he was a peer and senator.

Navasota, in Texas, a city of Grimes co., 141 m. E. of Austin; has a cottonseed-oil mill and gins. Pop. (1897) 3,650.

Navassa, n. (Geog.) A West Indian island under the control of the United States. It contains guano deposits, and is owned and occupied by a company engaged in mining and shipping fertilizing material.

Naval Reserve'. See NATIONAL GUARD.

Navy of the United States. (History.) The American colonies fitted out many armed vessels for defensive and offensive warfare before the Revolution. In 1690 Massachusetts sent out armed vessels for defence against the French privateers of Acadia, and fitted out an expedition against Quebec. Quite a navy was extemporized during the French and Indian wars, and in 1741-63 there were said to be 400 colonial privateers. The line between privateering and piracy was not always clear; and after peace was declared in 1763 these were mainly dismantled. On the outbreak of the Revolution, in 1775, Massachusetts fitted out some privateers, and in October, 1775, the Continental Congress began to organize a navy, and by December had authorized 20 cruisers. John Paul Jones hoisted the first ensign from a regular American man-of-war, on the *Alfred*, then lying in the Delaware. The *Alfred*, with seven other vessels, under command of Ezekiel Hopkins, sailed Feb. 17, 1776, against British vessels then ravaging the coast of Virginia. They were unsuccessful, and Hopkins was dismissed. Paul Jones was promoted to command, and captured 16 prizes. In 1776-77, after the Declaration of Independence, Congress authorized the building of 7 frigates, 2 cutters, 2 sloops-of-war, and 3 seventy-four gun ships, and organized the force of naval officers. During the War of Independence the Continental vessels lost by capture, wreck, &c., numbered 24, carrying in the aggregate 470 guns. The loss of the British was 102 vessels, carrying 622 guns. About 800 vessels of all sorts were captured from the English by cruisers, privateers, &c. After the peace of 1783 the cruisers remaining were sold. In 1794, difficulties breaking out with the Barbary states, Congress ordered the building of 6 frigates, among which were the famous *United States* and *Constitution*. In 1798 a naval war broke out with France. During this strife 84 armed French vessels, nearly all privateers, carrying a total of over 500 guns, were captured, but almost all by American privateers. The only vessel of the American navy captured by the French was the *Retalion*. The *Constellation* captured the French frigate *L'Insurgent*, an event of importance, as it was a victory over an equal adversary. In 1801 peace with France was declared, and the government sold the most of its ships. The hostility of Tripoli called for naval activity in 1801-5, and in the War of 1812 the *Constitution* captured the British frigate *Guerrière*, the *Wasp*, the *Frolic*, and the *United States* the *Macedonian*. This war was marked also by the naval victories of Lake Erie and Lake Champlain.

The navy played a minor part in the war with Mexico, but was actively engaged in the civil war on the interior waters and in the coast blockade. Of its achievements may be named the battle between the *Monitor* and *Merrimac*, the first combat of ironclads; the sinking of the *Alabama* by the *Kearsarge*, and the victories on the Mississippi and in Mobile harbor. A naval event of importance was Commodore Perry's expedition to Japan (1852-53), by which that country was opened to commerce. In the war with Spain (1898) the navy played the leading part, winning signal victories at Manila and Santiago, in each of which the Spanish fleet was totally destroyed, while in the two engagements the U. S. had only one man killed and a few wounded, and its ships almost uninjured.

PRESENT EFFECTIVE STRENGTH.—Of the vessels built during the Civil War few remain in use. A number of the old monitors were kept until 1905 with the idea that they might be of avail for harbor defense, but, attacked by rust and decay, the few remaining at that date have been disposed of. The other old ships of the navy are of no value for present day warfare, their only service being as receiving ships, training ships, and Naval-Reserve rendezvous. The venerable *Constitution*, which became so famous from its exploits in the war of 1812-15, is retained as a cherished relic. On January 1, 1902, the new navy of the U. S. embraced the following numbers and classes of ships, in commission or building, viz.: 9 battleships of the first class, 1 of the second class, and 6 turret ships and monitors; 2 armored cruisers, 15 protected and 3 unprotected cruisers; 17 gunboats; 1 dynamite cruiser; 1 harbor defense ram; 1 submarine boat; 22 torpedo-boats; 1 dispatch boat. Besides these may be named

the fleet steamers *St. Paul*, *St. Louis*, &c., of the American Line, which are reckoned as auxiliary cruisers, subject to duty on demand of the government in case of necessity. On January 1, 1906, there were vessels in commission, building, or authorized sufficient to more than double the numbers and strength of the navy as above given. These included 27 battleships, 14 armored cruisers, 10 effective monitors, 22 protected cruisers, 32 torpedo boats, 20 torpedo boat destroyers and 12 submarine boats. Those building are, as a rule, considerably larger and more powerful than those now in commission, rivalling the heaviest ships of their class abroad. While the larger of our older battleships are of less than 12,000 tons displacement, the *Georgia*, *New Jersey* and *Nebraska* of the new fleet are of 15,000, and the *Connecticut* and its sister ships of 16,000 tons each, while their horse-power greatly exceeds that of the older ships. Latest under order for construction is the 20,000 ton battleship, to cost approximately \$10,000,000, intended to surpass in size and power the great British ship *Dreadnought*. Of the armored cruisers now in commission, the *Brooklyn* is of 9,215 and the *New York* of 8,200 tons; while the newer ships of this class range from 13,600 to 14,500 tons, with 23,000 horse-power. The relative strength in numbers of ships, built and building, of the several principal nations is given below, estimated for January 1, 1907.

Nations	Battleships	Coast Defense	Armored Cruisers
Great Britain	69	7	37
France	41	8	19
United States	29	22	12
Germany	29	6	12
Japan	26	13	13
Italy	20	4	7
Russia	19	12	5
Austria	16	7	3
Turkey	12	1	
Netherlands	8	15	
Sweden	8		2

In the case of Russia and Japan the naval strength changed largely during 1904-05, the former losing much the greater part of its navy in battle, while the latter added largely to its naval strength by the capture of Russian ships. The true naval strength of the nations cannot be judged from the numbers of ships. Thus many of the battleships of Great Britain have been rendered practically obsolete through the great improvements in naval architecture. Those of Turkey are in great measure useless, and the other nations have many old ships. The United States and Germany began to build later and have few ineffective ships. The American navy contains splendid examples of naval architecture, and when its new and still more powerful vessels are set afloat, it will be able to hold its own upon the sea with any nation of the old world. The flag officers of the navy in 1906 consisted of Admiral George Dewey and 20 rear-admirals, with a large number of rear-admirals and commodores on the retired list. The grade of commodore on the active list has recently been abolished. The regular sea stations of the navy are the North Atlantic Station; Asiatic Station, with headquarters in China or Japan; European Station, headquarters in the Mediterranean; Pacific Station, headquarters at San Francisco; and South Atlantic Station. There are 19 shore stations, including the 8 navy yards. There are naval stations at Newport, R. I., where is a marine barracks, the training-ship *Constellation*, a naval war college, and a torpedo station; New London, Conn.; Indian Head, Md., where is an ordnance proving ground; Port Royal, S. C.; Key West, Fla.; Puget Sound, Wash.; Sitka, Alaska, where is a marine barracks; and Yokohama, Japan, where is a naval hospital.

NAVY YARDS.—At one time the navy yards built, equipped, and repaired almost all the vessels of the navy, and were fitted with large ship-houses and dry docks, as well as foundries and machine-shops for the forging of cannon and anchors. The six wooden steam frigates built before the War of the Rebellion were built in the yards, and were the finest war vessels constructed up to that time. Of these, the *Niagara* was used in laying the first Atlantic telegraph cable, and the *Merrimac* was seized by the Confederates and cut down into the ironclad that fought the *Monitor* in Hampton Roads. The new steel warships have been chiefly built by contract by private builders, and the Secretary of the Navy has reported that the main service of the navy yards was for repairs. The eight navy yards are as follows:

Portsmouth, N. H. (Kittery, Me.); extent, 164 acres; 1 dry dock, 3 ship-houses, a marine barracks.
Boston (Charlestown, Mass.); extent, 83½ acres; 1 dry dock, 3 ship-houses, 3 slips, a naval hospital.
New York (Brooklyn, N. Y.); extent, 193¼ acres; a marine barracks, a naval hospital.
League Island (Philadelphia, Pa.); extent, 923 acres; 4 dry docks, 2 ship-houses, a naval home.
Washington, D. C.; extent, 42 acres; a marine barracks, a naval hospital.
Norfolk (Portsmouth, Va.); extent, 109 acres; 1 dry dock, 4 slips, a marine barracks, a naval hospital.
Pensacola, Fla.; extent, 83¼ acres; a marine barracks, a naval hospital.
Mare Island, Cal.; extent, 900 acres, a marine barracks, a naval hospital.

NAVAL ACADEMY.—During the War of 1812, boys of 14 years were sent to sea as midshipmen under care of naval captains; and in 1813 Congress authorized

schoolmasters for each ship which had 12 midshipmen. There were 25 such teachers, of whom 14 were at sea, and 11 at Boston, Norfolk, and Philadelphia. In the latter city was a sort of headquarters at the Naval Asylum, where a board of examiners, formed from the teachers, examined midshipmen for promotion. In 1836 a meeting of naval officers, held on the U. S. S. *Constitution*, passed resolutions in recommendation of a naval school, and these were presented to the Senate April 23, 1836; but action was not taken till 1845, when the Hon. George Bancroft was secretary of the navy, and under his influence Fort Severn, at the mouth of the Severn river, on what was known as Windmill Point, at the eastern end of the city of Annapolis, Md., was transferred from the War Department to the Navy Department, and its buildings and grounds were appropriated to a naval school. There were collected those midshipmen who were on shore, and the school was regularly opened October 10, 1845. In January, 1846, there were 56 midshipmen, of whom 36 had been appointed in 1840, 13 in 1841, and 7 in 1845, and 8 instructors. They were instructed in "mathematics, nautical astronomy, theory of morals, international law, gunnery, the use of steam, the Spanish and French languages, and other branches." In December, 1847, the number had risen to 90. Congress appropriated in 1846, \$28,200 for the school, and in 1847 a like sum. In 1849 the school was re-organized, by a board of naval officers, after the example of the military academy at West Point, and in November, 1851, the course of study was fixed at four years. The sloop-of-war *Preble* was assigned to the school for practice, and three and a half months assigned for summer cruising. The name was changed from the Naval School to the United States Naval Academy, and it was placed under the chief of the Bureau of Ordnance and Hydrography. In 1861 Captain George S. Blake, superintendent of the academy, was warned of an attack, and planned embarking the cadets on the *Constitution* for Philadelphia; but by orders of April 27 he removed them to Newport, R. I., where part of the school was quartered in a hotel, leased for the purpose, and the rest on the practice-ships which were brought from Annapolis with them. They remained at Newport till 1865, carrying on actively the school work during the Civil War, and each year graduating a class for active service. Valuable and convenient buildings had been erected at Annapolis before the war, and afterward the site was enlarged from the original 50 acres by the purchase of the executive mansion of the governor of Maryland and 109 acres of ground; and on the return of peace, in 1865, the academy returned from Newport to its original home. In 1867 it was placed under the direct supervision of the Navy Department.

NAVAL OBSERVATORY.—The observatory was established at Washington, D.C., in 1842, as a "Dépot for Naval Charts and Instruments." It has for many years compiled the *Nautical Almanac*, a publication of the greatest importance to navigators, and has gradually grown to be a very important astronomical observatory. In 1873 it was fitted with a new telescope with a 26-inch object glass, made by Alvan G. Clark, of Cambridge, Mass., which, except one of the same size made at the same time for the University of Virginia, was at that time the largest telescope in use. A new observatory building was erected in 1892, and is fitted, besides the great equatorial telescope, with all other usual apparatus of observation.

MARINE CORPS.—The United States Marine Corps was established in 1775, by act of Congress authorizing the formation of 2 battalions. Its duties are those of a naval police, and a certain number of marines are assigned to ships and naval stations, as needed. They are subject to the laws and regulations of the navy, except when detached to serve with the army, to which they are liable, and then they fall under the Articles of War.

NAVAL CIRCUMNAVIGATION OF THE GLOBE.—The greatest naval feat on record was that made by the U. S. Navy between Dec. 16, 1907, and February 22, 1909, when a great fleet of American battleships, sixteen in number, circumnavigated the earth, visiting all the principal ports of the Pacific, and returning to its starting point at Hampton Roads without an accident and little the worse for wear from its long voyage of 42,227 miles, approaching twice the distance round the earth at the equator. These ships were: The *Connecticut*, *Kansas*, *Minnesota*, *Vermont*, *Georgia*, *Nebraska*, *New Jersey*, *Rhode Island*, *Louisiana*, *Virginia*, *Ohio*, *Missouri*, *Wisconsin*, *Illinois*, *Kearsarge*, *Kentucky*. Accompanying them was a small fleet of store ships, repair ships, &c. Starting under Rear Admiral Evans, ill-health obliged him to leave the fleet at San Francisco, and Rear Admiral Sperry commanded during the remainder of the voyage. Stopping at Rio de Janeiro, Punta Arenas, Valparaiso, Callao and Magdalena Bay, San Francisco was reached May 6, 1908, and Honolulu on July 16. The remaining stops were at Auckland, Sydney, Melbourne, Manila, Yokohama, Amoy, Colombo, Naples, Villefranche, Malta, Marseilles and Gibraltar, thence across the Atlantic to Hampton Roads. Everywhere the mariners met with an enthusiastic reception, and the good condition of the ships on their return spoke volumes for the perfection of American seamanship and the skill of American shipbuilders. As a practice voyage for officers and seamen and a trial of the staunchness of the ships this feat stands without parallel.

Nazarites. *n. pl.* (*Eccl.*) The name of a Christian sect which flourishes in Russia and Hungary, especially in the latter. Originally they were known only in the

Bannat and in the neighborhood of Szegedin, but more recently they have spread over the greater part of Hungary. Between the Danube and the Theiss they now number more than 80,000. The most of their adherents are in the Magyar districts. They are Spiritualists; reject the sacraments, approve the civil marriage only, and refuse to pay taxes or do military service. In order to escape from the latter, the parents of the young men or, in case of inability, the parishes buy substitutes for them.

Ne-, Ne'o-. A prefix, derived from the Gr. *neos*, new. **Ne Plus Ultra.** [*Lat.*, no more beyond.] The utmost limit; perfection.

Neal, JOSEPH CLAY, humorist, was born at Greenland, N. H., Feb. 3, 1807, and died July 18, 1847. He edited the *Pennsylvanian* (1831-44); his works were collected in *Charcoal Sketches* (1837 and 1849), and *Peter Ploddy and Other Oddities* (1844).

Neale, JOHN MASON, hymnologist and ecclesiastical historian, was born in London, Jan. 24, 1818; educated at Trinity College, Cambridge; he belonged to the extreme High Church party; was inhibited by his bishop for fourteen years, and burned in effigy in 1857. He founded the Sisterhood of St. Margaret in 1856. His contributions to hymnology are notable. He translated the medieval hymn, *De contemptu mundi*, by Bernard of Cluny, in several parts, commencing "Brief life is here our portion," "Jerusalem, the golden," &c. He also wrote *History of the Holy Eastern Church; Hymns of the Eastern Church; Essays on Liturgiology*, &c.

Neal'ogy, n. [*Gr.* *neutis*, young; *logos*, discourse.] The study or description of an animal in its early adolescent stages.

Neanderthal Man. (*Anthrop.*) The fossil remains of a man which were found in a limestone cave in Neanderthal, a valley between Düsseldorf and Elberfeld in Rhenish Prussia; it is believed to be the oldest specimen of prehistoric man yet discovered; its skull is peculiarly formed, being less human and more Simian than any other human skull, and it has led some archaeologists to consider it the type of a distinct race of ancient cave-dwellers, but, as its characteristics have sometimes been repeated in modern instances, the better authorities are inclined to think them the result of special causes during the life of the man.

Nebraska, University of. (*Educ.*) A coeducational, non-sectarian institution, situated at Lincoln, founded by an Act of the Legislature, in 1869; maintained and controlled by the State. The university is governed by a board of 6 regents, elected by popular vote, and holding office for 6 years. Tuition is free except in the law department, in which the fees are \$45 a year. In 1896 there were 133 instructors and 1,506 students, with a library of 32,000 volumes. By Act of the Legislature, a tax of $\frac{3}{8}$ of a mill is provided for the support of the university. Besides, it has revenues from land leases and sales under a Congressional grant of 1862, and from the Morrill Fund Act for Agricultural Stations of 1890. The income from all sources in 1895 was \$272,250.

Nebule, n. (*Arch.*) An ornament of the zigzag form, but without angles; it is chiefly found in the remains of Saxon architecture, in the archivolt of doors and windows.

Nee'dah, in Wisconsin, a post-village and township of Juneau co., abt. 20 m. N. of Manston. *Pop.* of village (1895) 1,680.

Neck'-wear, n. Clothing for the neck or throat.

Nec'to-. A prefix derived from the Gr. *nektois*, swimming.

Née (née), a. [*Fr.*] Literally, born; used to show the family or maiden name of a married woman; as, Mrs. Swallow, *née* Robius.

Need'-le-beam, n. (*Civil Engin.*) A transverse floor-beam of a bridge, resting on the chord or girders, according to the construction of the bridge.

(*Car-building.*) The cross-frame tie-timber bolted to the lengthwise sills and floor-timbers, between the bolsters, to which may be attached the king-posts, queen-posts, or truss-blocks.

Nef, n. [*Fr.*] The nave of a church.

(*Obs.*) A piece of decorative table-plate, in the shape of a ship or boat.

(*Archæol.*) A commercial or trading vessel.

Neg'ley, JAMES SCOTT, soldier, was born in Pennsylvania in Dec., 1826. He served as a private in the Mexican War. In 1861 he raised a brigade in eight days, and was made brigadier-general; served in Alabama and Tennessee with the Army of the Ohio, commanding the Federal force at the battle of Laverne, Tenn., and defeating the Confederates under Anderson and Forrest. For gallantry at Stone River he was made major-general of volunteers. Gen. N. resigned shortly after the battle of Chickamauga, owing to some misunderstanding with other officers, but his course was finally approved by the authorities. He has of late years resided at Plainfield, N. J.

Neil'son, ADELAIDE (stage name of ELIZABETH ANN BROWN), actress, was born at Leeds, Yorkshire, England, March 3, 1848. At 17 she made her *début* as *Juliet*; and in 1878 she won first place among English actresses by her acting of *Amy Robsart*. She made four successful visits to America, the last in 1880. Died August 14, 1880.

Ne'igh, in Nebraska, a city, cap of Antelope co., 36 m. W. by N. of Norfolk, on F., E. & M.V. R. R. Seat of Gates College (Congregational). *Pop.* (1897) 1,800.

Nel'liston, in New York, a post-village of Montgomery co., 11 m. S.W. of Fonda. *Pop.* (1897) 740.

Nel'son, in North Dakota, a N.E. co.; area, 1,008 sq. m.; intersected by Cheyenne river, and also drained by

numerous small streams and lakes. *Surface*, undulating; *soil*, a very fertile black loam, with clay subsoil. *Cap. Lakota*. *Pop.* (1897) 5,500.

Nem-, Nema-, Nemat-, Nemato-. A prefix derived from the Greek *nēma*, thread.

Nemob'ius, n. (*Entom.*) A genus of diurnal *Lepidoptera*, fam. *Lycaenidae*, of which the best-known species is *N. lucina*, or Duke of Burgundy Butterfly.

Nemours (ne-moor'), LOUIS CHARLES PHILIPPE RAPHAEL D'ORLEANS, Duc de, second son of Louis Philippe, King of France, was born in Paris, October 25, 1814; educated at the College of Henry IV., and was appointed a colonel by Charles X. while only a child. At the age of 16 he rode into Paris at the head of his regiment. A few years later he served gallantly in Algeria, and was promoted lieutenant-general in 1837. In 1831 he was elected King of the Belgians, but his father declined on his behalf this offer of the National Congress, as he also did a similar offer of the throne of Greece. Married (1840) the Princess Victoria of Saxe-Coburg. In 1841 he was again with the army in Africa. On the death of the Duc d'Orleans, Louis Philippe submitted a bill appointing the Duc de N. regent in case the throne devolved upon his brother's infant heir, and this was carried against the opposition of the Liberals, who opposed his clerical and absolutist leanings. Owing to this law the Duchesse d'Orleans, whom the Liberals favored, could not be appointed regent in 1848, and to this extent the Duc de N. was contributory to the revolution of February. He joined the other members of the exiled family at Claremont. He was the first of the Orleanist princes to recognize the Comte de Chambord as the rightful King of France. In 1857 he was left a widower, with two sons and two daughters. His eldest son, Comte d'Eu, married the daughter of Dom Pedro, late Emperor of Brazil; his younger son is the Duc d'Alençon. The Duc de N. returned to France in 1870, and afterward lived quietly in Paris and Versailles, taking no part in politics. In 1886, when pretenders were banished, his name was stricken from the army list. Died June 25, 1896.

Né'o-Cath'olic, a. (*Ch. Hist.*) Pertaining to a new school in the Church of England, different from the older Catholic party, represented by Pusey and Keble, in that it openly avows sympathy with the Roman rather than the Anglican Communion, in both ritual and doctrine. In France, pertaining to a school of liberal Catholicism, opposed to ultramontanism.

Neodesha', in Kansas, a city of Wilson co., 14 m. N. of Independence; has a pottery, flour mills, grain elevators, and railroad machine shops. *Pop.* (1895) 1,783.

Neo'la, in Iowa, a post-village of Pottawattamie co., 20 m. N.E. of Council Bluffs; has a shipping trade in grain, live stock, and farm produce. *Pop.* (1895) 841.

Né'o-Lamarck'ism, n. (*Biol.*) The views at present entertained, largely by American scientists, concerning the Lamarckian theory of evolution. The views enunciated by Lamarck (*q. v.*) were briefly as follows: Species of animals are not unalterable, as had been maintained by preceding naturalists, with the exception of Buffon, but are subject to gradual variations, which, in course of time, may amount to radical changes. His system, explanatory of this hypothesis, embraced four laws: (1) Life, by its proper forces, tends continually to increase the volume of every body possessing it, and to enlarge its parts, up to a limit which it brings about. (2) The production of a new organ in an animal body results from the superintention of a new want continuing to make itself felt, and a new movement which this want gives birth to and encourages. (3) The development of organs and their force of action are constantly in ratio to the employment of these organs. (4) All which has been acquired, laid down, or changed in the organization of individuals in the course of their life is conserved by generation and transmitted to the new individuals which proceed from those which have undergone these changes. The second of these laws is the one that is principally associated with Lamarck's name. In illustration of it he suggests that the constant stretching of the giraffe's neck to reach the foliage on which it fed may have led to its gradual elongation, while he imagines that the kangaroo, through a habit of sitting upright to support the young in its pouch, may have had its fore-limbs dwarfed by disuse, and its hind-legs and tail largely developed through their use in leaping. He does not teach that the desires of the animal directly affect its form, but that new wants lead to new habits, and these lead to the development of new organs, and the growth, modification, or dwindling of old ones. This hypothesis failed to gain many adherents among scientists in general, and the older idea of the persistence of species was generally held until Darwin's theory suggested a new principle of development, and quickly gained a host of adherents. Both Lamarck and Darwin held that the more complex forms descended from simpler ancestors. This they both held to have been accomplished by the action of a variety of modifying influences. But Lamarck believed that the most important of these influences was the effect of new wants or desires in giving rise to new habits, and stimulating new growth. Darwin gave similar leading importance to the appearance of accidental variations and their

Fig. 3005.
NEMOBIUS LUCINA.

preservation through the advantage which they gave in the struggle for existence. The general acceptance of Darwin's theory, as compared with that of Lamarck, was not alone due to its more satisfactory character, but, in a measure, to the fact of the great advance in biological science, and the growing doubt of the immutability of species. In other words, science was ready for the Darwinian theory, while it had been far from ready for the Lamarckian. The keen criticism to which the Darwinian theory has been subjected has led to a doubt, among many scientists, of its complete sufficiency. There are phenomena for which it seems incapable of accounting, and which seem to need some supplementary explanation, and the views of Lamarck have been revived by such leading American scientists as Cope, Hyatt, and others as an aid in the solution of these problems. These new views, in which Lamarckism is not adapted as a whole, but simply as a necessary supplement to Darwinism, have received the name of Neo-Lamarckism, they being a modification of the original doctrines of Lamarck; while it is held that to the preservation of variations through natural selection, as maintained by Darwin, must be added the doctrine of use and effort of Lamarck to form a complete theory of the modification and development of species. Neo-Lamarckism maintains that the variations on which development depends are not solely fortuitous, but that they are, in a considerable measure, influenced by use and effort on the part of the animal, followed by the increase in size of limbs, organs, muscles, &c., which is known to attend use, or in case of disuse by decrease in size and gradual atrophy. The action of such an influence would be a tively directive in development. While fortuitous variations would still take place in every direction, backward and lateral as well as forward, these self-directed variations would be all forward, or in the direction of progressive development. Their preservation would be due to transmission to offspring and natural selection, but their effect would be to direct the bulk of changes into the course of progressive development, and thus greatly aid the rapidity of developmental progress. In this system, the variations are not left to the blind effect of chance, but consciousness and mental action come in as agencies. Effort may be in a measure unconscious or instinctive, but must be in a large measure conscious, being made with a mental purpose to produce some desirable result. Thus thought, or mental activity, plays an important part in the variation of species, giving rise to that specially directed use of limbs or organs from which their advantageous growth or modification arises. It is evident, if such a hypothesis be accepted, that the course of development would be due to a double series of influences: those of variations due to ante-natal causes, and those of variations arising through life and due to the particular use of some organ or some consciously directed effort. Such a hypothesis points to an increase of directed development as mental action becomes more potent. The development of plant life would be nearly or completely a result of fortuitous variation. The same may be affirmed of animal life in its lowest stages, though in both these cases it must be taken into account that the chance variations are not solely ante-natal, but that many of them arise during life through the action of external influences. With the development of the nervous system, and the growth of consciousness and mentality, the agency of internal influences begins, effort to perform certain actions manifests itself, growth or modification takes place in consequence, and an important new agency in evolution comes into being. As the development of the mental powers goes on the activity of this agency increases, so that it becomes a steadily more important agent in the developmental changes of animals, its influence, for instance, being much greater in the vertebrates than in the invertebrates, and greatest of all in the mammals. Neo-Lamarckism, however, does not mean a purpose to produce some motion, but a purpose to produce some effect, or the use of some organ in a new way or a greater degree without any conscious purpose. Thus, in the development of the horse, the gradual evolution of the hoof and atrophy of all the fingers but one may have been due to the slow passage from a habit of soft to one of harder soil, ending in acceptance of hard-surfaced plains as the habitat, and a steady increase in speed of motion perhaps due to flight from enemies. To the sharp downthrust of the foot and the resistance of the soil the evolution of the single hoof seems due, while the double hoof of the ox and other tribes is in conformity with the softer soil of their habitat and the need of a wider basis of support. A theory has of late years been advanced by August Weismann that, if sustained, would render the Neo-Lamarckian effect impossible. This is that no changes produced during the life of the individual are hereditarily transmissible, and that all the transmitted variations are ante-natal in origin. This hypothesis has won many strenuous adherents, but has also been met by as determined a body of opponents, and is at present passing through the crucible of criticism. The arguments in its favor, it may be said here, are almost wholly negative, consisting in the denial of hereditary transmission of such changes. The arguments against it are mainly positive, consisting in the statement of examples of such transmission. These the Weismannians seek to dispose of by supplementary hypothesis. As the case stands now, Neo-Lamarckianism is in question, though it may be said that the leading American biologists are pronounced opponents of the views of Weismann, and advocates of the hereditary transmission of variations due to use and effort or other influences acting during life.

Neolith'ic, a. [Gr. *neos*, and *lithos*, stone.] (*Geol.*) Pertaining to the later stone age, which was characterized by polished stone implements, with remains of recent or extinct animals, and a trace of gold or bronze ornaments.

Neolithic Age and Implements. See **STONE AGE**.

Ne'o-Pla'tonism, n. (*Philos.*) An eclectic philosophy which sought to harmonize or, at the least, to reconcile the teachings of the various ancient schools of philosophy. It was a method of philosophizing which, claiming Plato as its leader, incorporated with his views other, especially Oriental, conceptions. The Neo-Platonists were remarkable for the novelty, audacity, and ingenuity of their reasonings. They aimed at constructing a religion on a basis of dialectics. They strove to attain a knowledge of the highest, and the way in which they endeavored to accomplish this was by assuming a capacity in man for passing beyond the limits of his personality and acquiring an intuitive knowledge of the absolute, the true—that which is beyond and above the fluctuations and dubieties of "opinion." This impersonal faculty is called ecstasy. By means of it, man—ceasing, however, it should be observed, to be individual man; that is, himself—can identify himself with the absolute (or infinite). Plotinus, in fact, set out from the belief that "philosophy"—that is, absolute truth—is possible only through the identity of the thinker, or rather of the subjective thought, with the thing thought of, or the objective thought. This intuitive grasp or "vision" of the absolute is not constant; we can neither force nor retain it by an effort of will; it springs from a divine inspiration and enthusiasm, higher and purer than that of poet or prophet, and is the choicest "gift of God." Such unification with God is attainable by asceticism and profound contemplation. This conception of a mystic blending of the divine with the human gives to Neo-Platonism its peculiar character. Neo-Platonism claimed to be not merely the absolute philosophy, the keystone of all previous systems, but also the absolute religion, re-invigorating and transforming all previous religions. It contemplated a restoration of all the religions of antiquity, by allowing each to retain its traditional forms, and at the same time making each a vehicle for the religious attitude and the religious truth embraced in Neo-Platonism; while every form of ritual was to become a stepping-stone to a high morality worthy of mankind. In short, Neo-Platonism seizes on the aspirations of the human soul after a higher life, and treats this psychological fact as the key to the interpretation of the universe. Hence, the existing religions, after being refined and spiritualized, were made the basis of philosophy. The earliest Christian philosophers, particularly Justin Martyr and Athenagoras, prepared the way for the speculation of the Neo-Platonists—partly by their attempts to connect Christianity with Stoicism and Platonism, partly by their ambition to exalt Christianity as "hyperplatonism." The Neo-Platonic school originated in Alexandria, where its founder was Ammonius Saccas, who died about 245 A. D. He left no written works behind him. He had distinguished disciples, among whom were Origen, who ranks with the best of the Christian Fathers and the holiest men of the Church, and Plotinus. The work of Plotinus entitled the *Enneads*, so called because its treatises are arranged in 6 divisions, each containing 9 books, is the primary and classical document of Neo-Platonism. With Plotinus the restoration of the worship of the old gods was far from being the chief object. His pupil, Porphyry, however, made Neo-Platonism completely subservient to polytheism, and sought before everything else to protect the Greek and Oriental religions from the assaults of Christianity. The hopes of the Neo-Platonists rose high when their disciple, the enthusiastic, noble-minded, but mentally ill-balanced Julian, became emperor (361-363). He lived long enough, however, to see that his policy of restoration would leave no results. In the chief cities of the empire Neo-Platonic schools flourished till the beginning of the 5th century; during that period, indeed, they were the training schools of Christian theologians. In one of these schools at Alexandria the noble and beautiful Hypatia taught. Her murder by a mob led by priests was the death of philosophy in Alexandria. In the ancient world there was only one Western theologian who came directly under the influence of Neo-Platonism; but that one is Augustine, the most important of all. In the 7th book of his *Confessions* he has recorded how much he owed to the personal of Neo-Platonic works. In regard to the cardinal doctrines—God, matter, the relation of God to the world, freedom, and evil—Augustine retained the impress of Neo-Platonism; at the same time he is the theologian of antiquity who most clearly perceived and most fully stated wherein the Neo-Platonic philosophy and Christianity differ. In fact, the influence of Neo-Platonism has lasted to our time. That man shall not live by bread alone the world had learned before Neo-Platonism; but Neo-Platonism has enforced the deeper truth—a truth which the older philosophy had missed—that man shall not live by knowledge alone. It is to this day the nursery of that whole type of devotion which affects renunciation of the world, which strives after an ideal, without the strength to rise above esthetic impressions, and is never able to form a clear conception of the object of its own aspirations.

Neo-trop'ical, a. (*Zoöl.*) Designating that part of the New World which includes tropical and South America, and the islands adjacent.

Neo-volcan'ic, a. Pertaining to the rocks formed since the Cretaceous period.

Neph'alism, n. [Gr. *nephalismos*, soberness.] A name given by Prof. James Miller, of Edinburgh, to the principles or practice of total abstinence.

Neph'alist, n. A total abstainer.

Nephel'oscope, n. An early meteorological device, designed by Espy, for illustrating the formation of clouds from vapor. He used a glass vessel with a condensing pump and pressure gauge. By compressing moist air, and then allowing it to escape suddenly, the cooling, consequent on expansion, produced a cloud.

Neph'roscope, n. An instrument for observing the motion, and judging of the velocity of the clouds. It consists of a mirror set in a circular frame, and having radiating degree-marks drawn on the frame, or sometimes on the mirror itself. Above is an arrangement of wires bearing a ring, hole or the like, to serve as a fixed point of view. The degree marked zero is intended to be set toward one of the cardinal points. An observer watching the clouds can then calculate their angular velocity by means of the concentric degree-marks, and if he have also means of ascertaining the height of the clouds, he can determine the linear velocity.

Neph'r-, Nephro-. A prefix, derived from the Greek *nephros*, a kidney.

Neph'rite. See **JADE**.

Nep'igon, or Nip'igon, n. (*Geog.*) A large, deep, island-studded lake, about 40 m. N. of Lake Superior; also its outlet, a swift, clear, rocky river, emptying into Nipigon Bay. These waters are known for their game-fish, particularly white-fish and very large trout, and are the resort of parties of anglers, who ascend the river in canoes and camp along its shores. The Canadian Pacific R. R. crosses the mouth of the river, and has a station of the same name, but formerly known as Red Rock.

Neptune, in Wisconsin, a post-village of Richland co.

Neptu'nian, a. Belonging to the ocean.

N. Theory. (*Geol.*) The name given to the theory of Werner, a German geologist, who, towards the end of the last century, assumed that the globe had been at first invested by an universal chaotic ocean, holding the materials of all rocks in solution. From the waters of this ocean, granite, gneiss, and other crystalline formations, were first precipitated; and afterwards, when the waters were purged of these ingredients, and more nearly resembled those of our actual seas, the transition strata were deposited. These were of a mixed character, not purely chemical, because the waves and currents had already begun to wear down solid land, and to give rise to pebbles, sand, and mud: nor entirely without fossils, because a few of the first marine animals had begun to exist. After this period, the secondary formations were accumulated in waters resembling those of the present ocean, except at certain intervals, when, from causes wholly unexplained, a partial recurrence of the "chaotic fluid" took place, during which various trap-rocks, some highly crystalline, were formed. This arbitrary hypothesis rejected all intervention of igneous agency, volcanoes being regarded as partial and superficial accidents, of trifling account among the great causes which have modified the external structure of the globe. This theory, after enjoying many years of popularity, was superseded by the Vulcanian or PLUTONIAN THEORY, q. v.

Neptu'nian, Neptu'nist, n. One who, in geology, adheres to the Neptunian theory.

Nerbud' dah. ("the bestower of pleasure,") a river of Hindostan, in the N. of the Deccan, rising in the table-land of Gundwana, Lat. 22° 40' N., Lon. 81° 45' E., and after a W. course of 700 m., falling into the Gulf of Cambay. 28 m. W. of Baroach; Lat. 21° 36' N., Lon. 72° 50' E. It is navigable for small craft for about 100 m. from the sea.

Ne'reid, n.; pl. NEREIDS, or NEREIDES. (*Myth.*) Nymphs of the sea, daughters of Nereus and Doris. They were fifty, according to the greater number of the mythologists. They had altars chiefly on the coasts of the sea, where milk, oil, honey, and often the flesh of goats, were offered up. Their duty was to attend upon the more powerful deities of the sea, and to be subservient to the will of Neptune. They are represented as young and handsome virgins, sitting on dolphins, and holding Neptune's trident in their hand, or, sometimes, garlands of flowers.

Ne'reid, n.; Nere'idæ, n. pl. (*Zoöl.*) The Sea-centipeds, a genus and family of marine *Amphipoda*, which have an even number of tentacula attached to the sides of the base of the head, two other biarticulated ones a little more forward, and between these two simple ones. Their branchiæ consist of little laminae, traversed by a network of vessels; each foot is furnished with two tubercles, two bundles of bristles, and a cirrus above and beneath.

Ne'ri, (St. Philip de,) founder of the congregation of the Oratory in Italy, was b. in 1515, of a noble family, at Florence, and d. at Rome in 1595. His order obtained its name from the place of its original establishment, which was an oratory of St. Jerome's Church, at Rome.

Ne'riad, a town of Hindostan, presidency of Bombay, 28 m. N.E. of Cambay; pop. 40,000.

Ne'rita, n. (*Zoöl.*) A genus of marine Mollusca, inhabiting the Eastern and American seas, the West Indies, Moluccas, &c. The shell is thick, smooth, or ribbed, semiglobose; spire short, consisting of few volutions; aperture large, semicircular; inner lip flattened, and frequently toothed, as well as the outer, the operculum horny, covered with shelly laminae. One species (*Ne'rita pelodonta*) is called the Bleeding Tooth, from the red appearance of the teeth on the inner lip. The head of the animal is furnished with two pointed tentacula

having eyes at the base; foot large. There are about thirty species recent, and ten fossil.

Nerve-center, *n.* A collection of nerve cells that are believed to be connected with some special function of the body.

Nescientist (*nesh'-en-tist*), *n.* An advocate of nescience, or the doctrine of the incompetence of the finite intelligence to comprehend the supersensuous.

Nesquehoning, in *Pennsylvania*, a post-village of Carbon co. Pop. (1897) 1,885.

Ness, in *Kansas*, a W. central co., area, 1,080 sq. m. It is intersected by Walnut creek and the Pawnee Fork of Arkansas river. Surface, rolling prairie; timber only on streams; soil, fertile. Products, wheat, broom corn, sorghum, but principally live stock. Cap. Ness City. Pop. (1895) 3,785.

Neur-, Neur-, Neuro-. A prefix, from the Greek *neuron* (plural, *neurā*), nerve.

Neurasthenia (*-ni'a*, or *nē'a*), *n.* [Gr. *neuron*, nerve; *asthenia*, weakness.] (Pathol.) Debility or inactivity of the nerves; nervous prostration or exhaustion.

Neuron, *n.* [Gr. nerve.] A nerve-cell with its fiber, considered as a structural unit.—The brain and spinal cord taken together.

Neuropath, *n.* A physician who bases his treatment of disease on nervous influences.—A sufferer from some nervous affection.

Neuropathy, *n.* [Gr. *neuron*, nerve; *pathos*, suffering.] Disease of any particular nerve, or nervous disease in general.

Neurosis, *n.*; *pl.* NEUROSES. [Gr. *neuron*.] (Pathol.) Nervous disease or affection, especially without lesion of parts.—A change in the nerves, or physical basis of consciousness, as distinguished by Huxley from psychosis, a change in consciousness itself.

Nevin, JOHN WILLIAMSON, theologian, was born in Franklin co., Pennsylvania, 1803. In 1841 he entered upon the presidency of the Mercersburg Theological Seminary, and has since published *The Mystical Presence* (1846) and *Anti-Christ, or the Spirit of Sect and Schism* (1848). Died in 1886.

Newchwang, or **Ninchuang**, the treaty port for Manchuria, is situated on Liao River, 20 miles above its mouth. The foreign settlements and trading port are at Ying-tse, near the river's mouth, which is also known as Newchwang. It extends for three miles along the right bank of the river, and is 183 miles north of Port Arthur railway. The Northern Chinese railway from Peking and Tien-tsin has its terminus here, and also a westward branch of the Manchurian Railway. Opened to foreign trade in 1858, N. enjoys a considerable commerce. It was captured by the Japanese in 1895, and fell under Russian control in 1900, a large Russian settlement being afterward built there. It was fortified at the opening of the war of 1904, but was abandoned on the advance of the Japanese, and occupied by them without resistance. Pop. 60,000.

New Burnside, in *Illinois*, a post-village of Johnson co., 16 m. from Vienna. Pop. (1897) 660.

New Canaan, in *Connecticut*, a post-town of Fairfield co., 44 m. N. E. of New York; has manufactures of shoes, clothing, and wire sieves. Pop. (1897) 2,790.

New Canton, in *Illinois*, a post-town of Pike co., 20 m. W. of Pittsfield. Pop. (1897) 520.

New Church. See SWEDENBORGIANISM.

New Columbia. See WRANGEL ISLAND.

New Decatur, in *Alabama*, a post-town of Morgan co., 1 m. S. of Decatur. Pop. (1897) 3,690.

New Donglas, in *Illinois*, a post-village of Madison co., 19 m. from Edwardsville. Pop. (1897) 620.

New Florence, in *Missouri*, a post-village of Montgomery co., 77 m. W.N.W. of St. Louis. Pop. (1897) 540.

New Haven, in *Michigan*, a post-village of Macomb co., 30 m. N.E. of Detroit. Pop. (1894) 458.

New Haven, in *West Virginia*, a post-village of Mason co. Pop. (1897) 660.

New Lewisville, in *Arkansas*, a post-town, cap. of Lafayette co., 148 m. S.W. of Little Rock. Pop. (1897) 580.

New Madison, in *Ohio*, a post-village of Darke co., 10 m. from Greenville. Pop. (1897) 550.

New Oxford, in *Pennsylvania*, a post-borough of Adams co., 10 m. E. of Gettysburg; has manufactures of carriages and cigars. Pop. (1897) 670.

New Prague, in *Minnesota*, a post-village of Scott co. Pop. (1895) 1,042.

New Richmond, in *Wisconsin*, a city of St. Croix co.; has water power. Pine lumber is largely manufactured here. Pop. (1895) 1,680.

New River Depot, in *Virginia*, a post-village of Pulaski co. Pop. (1897) 750.

New Shar'on, in *Iowa*, a post-town of Mahaska co., 12 m. N. of Oskaloosa; has coal mines and live stock interests. Pop. (1895) 1,263.

New Siberia Islands. (Geog.) A group of small islands N. of Asia and N.E. of the mouth of the Lena delta; also called Liakov. Not far from the mainland and frequently joined to it by the ice, these islands contain many animals, such as white bears and foxes, reindeer and birds; also the remains of extinct animals, particularly those of the mammoth. The islands are rich in fossil woods, New Siberia containing a range of hills partly composed of carbonized wood, belonging, probably, to the Jurassic period. See *The Voyage of the Jeannette* (De Long), and *The Voyage of the Vega* (Nordenskiöld).

New South Wales. (Geog.) [See AUSTRALIA.] Its population has increased more rapidly than formerly, and on June 30, 1895, was estimated at 1,268,150. The aborigines have nearly all disappeared from the

colony. The production of gold is at present decreasing. The construction of railways—very important to the colony, because it is ill supplied with navigable rivers—has been vigorously pushed. On June 30, 1895, the lines opened for traffic were 2,531 miles owned by the government and 85 miles of private railways, besides 419 miles of tramway belonging to the government. The staple export of the colony is wool, about half of the total in value. The main exports to the U. S. are specie, coal, and wool. About 10 per cent. of the total exports go to the U. S., and 5 per cent. of the imports are from that country. The tariffs in force in 1890 were less in this colony than in the other Australasian colonies, were on few articles, and were specific. In 1891 the tariffs were changed in the direction of higher duties and more of them. The chief revenue from duties is derived from stimulants and narcotics. During a very severe financial crisis in 1893 eight of the banks of the colony failed, but reopened afterward on a reconstructed basis.

New Straitsville, in *Ohio*, a post-village of Perry co. Pop. (1897) 3,100.

New Washington, in *Ohio*, a post-village of Crawford co., 24 m. N.W. of Mansfield. Pop. (1897) 810.

Newberg, in *Oregon*, a post-town of Yam Hill co., 26 m. S.W. of Portland; has several saw mills, tile factories and a tannery. Pop. (1897) 850.

Newbern, in *Tennessee*, a post-town of Dyer co., 10 m. N. E. of Dyersburg; has flour and lumber mills. Pop. (1897) 1,330.

Newberry, in *Michigan*, a post-village, cap. of Luce co., 55 m. N. of St. Ignace. Pig iron and chemical products are manufactured. Celery is largely raised. A lumber shipping point. Pop. (1894) 1,136.

Newburg, in *West Virginia*, a post-town of Preston co. Pop. (1897) 850.

Newcomb, SIMON, mathematician and astronomer, was born at Wallace, Nova Scotia, March 12, 1835, removed to the U. S. in early life, and for some years taught school in Maryland; appointed a computer on the U. S. *Nautical Almanac* (1857) and professor of Mathematics in the U. S. Navy (1861), being stationed at the Naval Observatory, where he supervised the installation of the great equatorial telescope. In this position he was closely associated with numerous astronomical expeditions. He was given charge of the *Nautical Almanac* in 1877, and remained at the Naval Observatory until 1897. Prof. N. was one of the greatest mathematicians of the age, and received many medals and other honors, including membership in the leading scientific societies of two continents. Among his published works is *Popular Astronomy* (1877). He was also one of the special contributors to the Twentieth Century Encyclopedia. Died July 11, 1909.

Newgate, *n.* [Originally called "Westgate"; afterward "Chancellor's gate"; finally, in the reign of Henry I., rebuilt and called Newgate.] The western gate of London by which the Watling Street passed out of the city and at the extreme end of Newgate Street, opposite Old Bailey. Long famous for the prison built in the great portal about 1218. When first rebuilt it was utilized for detaining prisoners from Middlesex, that county having been given to the people of London about this time. In 1666 it was destroyed by the fire which swept over the city, and the present building was erected in 1780, when the new buildings were much damaged by the Gordon riots, and 300 prisoners were set at liberty to menace the public. Dickens, in *Barnaby Rudge*, has described this scene, while Newgate and the *Newgate Calendar*, which regularly published the reports of the prison, with the history of noted criminals, have been famous in English fiction. After the passing of the Prisons Bill in 1877, Newgate was less used, until it is now practically closed. It is only opened for executions by hanging, since they have ceased to be carried out at Tyburn. Newgate is famed for its ill repute, all efforts at reform in the locality having met with almost hopeless opposition.—*Newgate Fringe*. Beard worn under the chin, and supposed to resemble the hangman's rope.—*Newgate Fashion*. To march two by two, as prisoners were at one time marched into Newgate.

Falstaff: Must we all march?

Bardolph: Yea, two and two, Newgate fashion.

—*Shakespeare* (Henry IV.).

—*Connecticut Newgate*. A rude stone structure on the summit of Copper Hill, Conn. Previous to 1760, extensive copper mines had been dug into this hill, and the old shafts and tunnels were utilized as a grim prison by the State until 1827.

Newkirk, in *Oklahoma*, a post-village, cap. of Kay co. Pop. (1897) 2,450.

Newman, JOHN HENRY, theologian and Roman Catholic prelate, was born in London, Eng., Feb. 21, 1801. He was educated at Trinity College, Oxford and was elected fellow of Oriel College in 1822, where he formed a friendship with John Keble and Dr. Whately; ordained a priest in 1824, became vice-president of Alban Hall in 1825, and tutor in Oriel College in 1826. In 1828 he became vicar of St. Mary's, Oxford, and of Littlemore. In 1833, Newman, Keble, and Pusey initiated the "Oxford movement" in favor of High Church doctrines, which they advocated in a series of *Tracts for the Times*. He manifested a growing tendency to Roman Catholicism, and, in 1845, became a member of that church, and was principal of the Oratory of St. Philip Neri, at Birmingham, from 1848 to 1852. Through many years following he wrote and published many papers embodying theological arguments, and especially defended his own change of faith in a work entitled *Apologia pro Vita sua* (1864). He

was made a cardinal-deacon in 1879, and is widely known in the evangelical world by his poems and hymns; among the latter the familiar *Lead, Kindly Light*. Died Aug. 11, 1890.

Newman, in *California*, a post-town of Stanislaus co., 23 m. from Modesto. Pop. (1897) 780.

Newman, in *Illinois*, a post-village of Douglas co., 52 m. E. of Decatur. Pop. (1897) 1,090.

Newmarket, *n.* A game at cards played by any number of persons, duplicates of certain cards being laid upon the table, and the corresponding cards to be played.—A woman's close-fitting outer garment.

Newnham College. See WOMEN'S COLLEGES.

Newport, in *Arkansas*, a post-town, cap. of Jackson co., 83 m. N.E. of Little Rock; has saw, shingle and planing mills; stair, oil, and stove works, foundries and machine shops. Pop. (1897) 2,750.

News-agency, *n.* An association or bureau for supplying telegraphic information to newspapers.—An agency for the sale and distribution of newspapers, magazines, &c., to dealers.

News-agent, *n.* A person who deals in newspapers and periodicals.

News-y, *a.* Full of news, gossip.

Newton, HUBERT ANSON, mathematician, was born in Sherburne, New York, March 19, 1830; the son of William N., who built the Buffalo section of the Erie Canal. He graduated from Yale College in 1850, winning the first mathematical prize. In 1853 he became tutor, and in 1855, full professor of Mathematics at Yale, which position he filled until his death. His scientific work includes the whole field of mathematics and astronomy, but he is chiefly notable for his discoveries and researches regarding the laws of meteoroids and comets and their connection. In this field he is regarded as the highest authority of the present generation, and to him, directly, and through his inspiration to others, is due the development of science in this special direction. More than half of his scientific papers refer to these subjects. He also wrote 125 articles on meteors in *Encyclopædia Britannica*, and the definitions in astronomy and mathematics in the *International Dictionary*, and was one of the editors of the *American Journal of Science*. He was active in founding the National Academy of Science, of which he was a member for life; and was for a time president of the Connecticut Academy of Arts and Sciences, and the American Association for the Advancement of Science. He was a progressive spirit at Yale, and influential in forwarding the improvements in the college quadrangle. He also took deep interest in the civic affairs of New Haven. Died Aug. 30, 1896.

Newton, JOHN, U. S. A., C. E., was born at Norfolk, Va., Aug. 24, 1823; graduated at West Point (1842); served throughout the Civil War, attaining the rank of major-general of volunteers (1863); was made brigadier-general and chief of engineers in the regular army (1884); was placed on the retired list (1886), and appointed commissioner of public works at New York (1887), a position which he resigned to become the president of the Panama R. R. Co. His most notable engineering work was the blasting of Hallett's Reef and Flood Rock, Hell Gate (*q. v.*). Died May 1, 1895.

Newton, in *Kansas*, a city, cap. of Harvey co., 27 m. N. of Wichita; has large carriage factory, and flour mills; planing mills; a gas-machine factory. Good building stone is quarried and coal mined in the vicinity. Pop. (1895) 5,148.

Nexus, *n.* [Lat.] A connecting link; a tie.

Ney'va, or **Neiva**, a town of the Republic of Colombia, cap. of a province of its own name, on the Magdalena river, about 132 m. S.W. of Bogotá.

Nez-Percés (*Pierced Nose*). North American Indians belonging to the family of Sahaptins, who dwell upon the Columbia river and its tributaries, between 45° and 47° parallel. It was formerly the custom of a branch of these Sahaptin tribes to slit their nose to receive a shell, hence their name. They are among the most interesting of the tribes of the Pacific coast, like fierce and yet kind. Their reservation is in N.W. Idaho, containing about 1,200 sq. m., with a population variously estimated, together with those who do not live on the reservation, from 1,400 to 8,000 souls. They live in part by agriculture and stock raising. Until 1877 they remained at peace with the whites, and often proved themselves valuable allies, and yet their treatment by the U. S. government has been very unjust, disregarding the treaties made with them, which culminated in war. In July, 1877, General Howard had a severe encounter with them on the Clear Water, losing 14 men in killed and over 20 wounded; some 60 of the Nez-Percés were reported killed and wounded, the remainder made good their escape. On August 9, a party of 182 U. S. troops, under General John Gibbon, overtook the Nez-Percés at Big Hole Mountain, Montana, under their chief, Joseph; a severe encounter took place. Gibbon had 24 men killed and over 40 wounded. Over 40 of the Indians were left dead upon the field; the rest escaped. On the 13th they were overtaken by General Sturgis's command, consisting of U. S. troops and some Crow Indian allies. Several hundred of their horses were captured. The Nez-Percés continued their flight across the Missouri river, toward Canada. On the 30th September they were overtaken by General Nelson A. Miles, at Bear Paw Mountain, near the head of Snake river, a tributary of the Missouri, Montana. A severe fight took place which lasted for four days, resulting in the surrender of the Nez-Percés on October 5th. They displayed great bravery and ability, and were armed with the most approved weapons. General Miles lost 22 killed and

45 wounded. The Indians lost 31 killed, 46 wounded. They numbered 350 in all, of which 160 were warriors. In their long flight they had travelled in all over 1,500 miles.

Niagara Falls Power-Plant. (*Engin.*) The utilization of a portion of the power going to waste over Niagara Falls was the subject of numerous schemes prior to 1889, when successful work in that direction was inaugurated. Judge Augustus Porter, in 1847, outlined a plan for constructing a system of canals and wheel-pits from which power might be taken, but no capital could be obtained for the project. Thomas Evershed, an engineer of Rochester, N. Y., devised a plan and interested some local capital in 1886, and a charter was obtained for the Niagara Falls Power Company. In 1889 the Cataract Construction Company was organized with capital in New York city, and con-

Fig. 3006.—NIAGARA POWER PLANT.
Sectional view of one of the great turbines.

tracted with the original company to erect a plant of 100,000 horse-power. Other companies, as the Niagara Development Company and the Niagara Junction Company, were formed to acquire title to a tract of land comprising 2½ square miles, and to construct railway approaches, &c., for manufacturers. A commission of most eminent engineers, known as the International Niagara Commission, was called together to consult as to the best methods of utilizing the vast power at command. The members were Lord Kelvin, of England; Prof. Cawthorne Unwin, of London; Prof. E. Mascart, of Paris; and Dr. Coleman Sellers, of Philadelphia. They met in London, and considered the utilization of compressed air and of electricity for conveying the power from the falls, and decided in favor of the latter. The plan of construction accepted by them involved the cutting of a canal, which was dug about a mile and a half above the American fall. This canal is a mile or more in length, and 188 feet wide at the river end, tapering to 116 feet. It carries 12 to 16 feet of water. Wheel-pits are cut into the side of the canal, and arrangements made so that the number of them can be increased when necessary. These pits are 178 feet in depth, 140 long, and 20 wide. At the bottom of the pits are placed turbine-wheels, each fed with water falling down a great pipe, with a useful head of 136 feet. In order that the weight of the water added to the turbine (40 tons), and its upright shaft (36 tons), and the dynamo above (40 tons) might not be too great on the bearings, causing undue friction, the water descending the pipe is admitted to the under side of the turbine, exerting its force upward as well as rotatively,

Fig. 3007.—NIAGARA POWER PLANT.
A friction-brake on one of the large upright shafts.

and taking most of the vast weight of 116 tons from the bearings. Each turbine is connected by a hollow steel shaft with a dynamo in the power-house over the wheel pit, and each dynamo develops 5,000-horse power. There are now 21 of these dynamos in operation and 5 of 10,000 h.p. each in the allied Canadian Niagara Power Company, making a total of 155,000 h.p. The turbines are made of bronze and rotate 250 times a minute. The dynamos are of the two-phase alternating type, constructed on special designs, with a stationary central armature and fields rotating outside, to obtain the required fly-wheel effect. The waste water from the wheel-pits is discharged through a tunnel a mile and a quarter in length, emptying back into the river below the falls. The tunnel is of horseshoe section, 21 x 19 feet, and will deliver 600,000 feet of water per minute, or about 1-27th of the flow of the falls. The tunnel is

mostly blasted through solid rock, and is cased with concrete made of one part Portland cement and three parts gravel. The wheel-pits were also blasted out, and reduced to correct shape with masonry walls. The canal is walled with masonry seven feet thick at the base. The power-house is of most substantial construction, being entirely of stone and steel. From these works power is furnished to manufactories on the reservation. The municipal lights and water-works of Buffalo, 20 miles distant, also use the power, and private corporations in Buffalo are also furnished at a level, moderate price. The system of distributing the power by wire is being extended to other neighboring cities.

Niagara University. (*Educ.*) A Roman Catholic institution, located in Niagara co., N. Y., 2 m. N. of Niagara Falls. Founded in 1856 as a seminary for the training of priests, it became in 1883 a general educational institution, under a charter from the State of New York. Besides a preparatory school, general collegiate instruction, and a theological course, there is a course in medicine, to which department alone women are admitted. In 1896 the university had 55 instructors, 240 students, and a library of 8,000 volumes, its income being \$60,000.

Niantic, in Illinois, a post-village of Macon co.

Nias, or Neas Isle, an island of the Eastern Archipelago, belonging to Holland, on the W. of Sumatra; Lat. between 0° 18' 54" and 1° 35' N., Lon. 97° and 98° E. Area, 1,575 sq. m. The surface is diversified, and the soil fertile. It has several convenient harbors. *Prod.* Rice, tobacco, sugarcane, coconuts, bananas, &c. The chief towns are Nias on the E., and Silorogang on the W. coast. *Pop.* Estimated at 170,000.

Nib, n. [*A. S. neb, nebb.*] The bill or beak of a bird.—The point of anything, particularly of a pen.

Nibbed (nibd), a. Having a nib or point.

Nicaragua Canal. (*Engin.*) Of all the proposed routes for a ship-canal from the Atlantic to the Pacific, the route across Nicaragua long met with most favor from Americans. This was surveyed, the desired concessions were obtained from the Nicaraguan government, and \$4,000,000 were expended in work. It was, however, in the hands of a company, not of the United States government, and its completion depended upon the disposition of Congress to aid the enterprise with money, or to back it in a way that would induce capitalists to invest their funds in the undertaking. The history of this project extends back to 1849, when a concession was awarded to what was called "the Vanderbilt Company." This company failed to do the work called for by the conditions, and their concession was abrogated in 1856, only to be indefinitely renewed the following year. As a result of the agitation over the 1849 concession, the United States and Great Britain created the Clayton-Bulwer treaty in 1850, specifying that "The governments of the United States and Great Britain hereby declare that neither the one nor the other will obtain or maintain for itself any exclusive control over the canal." In 1887 the Nicaraguan government granted another concession to the New York Nicaragua Canal Association, and the promoters also obtained a charter from the U. S. Congress, February 20, 1889, creating the Maritime Canal Company, while the Nicaragua Canal Construction Company was organized under the laws of Colorado. These companies succeeded in raising some money, and expended \$2,000,000 in 1890-91, according to the terms of the concession, and \$2,000,000 more the following year. In 1891 an appeal was made to Congress for funds to prosecute the work, and in 1892 the Senate voted \$100,000,000, but the House of Representatives killed the measure by inaction. Work was consequently suspended in 1893, pending the raising of further capital. At least two early surveys were made of the territory, but when the President appointed a commission of engineers in 1895 to examine the work done, they reported that the surveys were too incomplete to warrant the continuance of the work until they were properly made, but deferred a final judgment of the work until such a survey was obtainable. They, however, approved of the route chosen. In accordance with their recommendation, a government survey was made, and submitted to Congress, with a report, Feb. 7, 1896. The route, as then proposed, was 169½ miles long, from Brito, on the Pacific, to Greytown, on the Atlantic. Brito has an open roadstead, which would have had to be protected by stone dykes to form a harbor. Greytown has a harbor filled with drifting sands, which could have been made navigable by the completion of jetties then building, aided by dredging. From Greytown the projected route of the canal extended for almost 10 miles through low, swampy timber land. A system of three locks followed, with a total uplift of 106 feet. Three miles farther on was to be a cut called the Eastern Divide cut, nearly 3 miles long and 300 feet deep at its deepest point. This needed to be blasted through solid rock. The basin of the San Francisco River was next to be utilized by damming, the route following its bed 12½ miles to the San Juan, of which it is a tributary. Here an immense dam was to be built at Ochoa, with the rock taken from the Eastern Divide. It was proposed to make this 1900 feet long and 70 feet high, so as to raise the waters of the river and of Lake Nicaragua five feet to a level 106 feet above the sea. Beyond the dam the river would form the route of the canal for 64½ miles, and the lake for 56½ miles farther. The remaining 17 miles of excavated canal were to have three large locks, to bring the level down to that of the Pacific. A later survey, considering all possible routes, was made, reporting in 1901. Its report was in favor of a Nicaragua Canal, its cost being estimated at \$189,000,000.

There was a serious political obstruction in the way of the construction of this canal by the United States, consisting of the Clayton-Bulwer treaty above mentioned, which would interfere with the exclusive control of the canal by the United States. Various futile efforts for the abrogation of this treaty were made, a final successful one being reached and ratified on December 16, 1901. But before all the necessary legislation was obtained, an offer to sell all rights in the French Canal at Panama to the United States reopened the question, with the result that the N. route was abandoned and the Panama route adopted. See PANAMA CANAL.

Nicomachus, an eminent painter of antiquity, said by Cicero to have equalled Apelles. He lived about 350-300 B. C., and several of his works are noticed by Pliny, among them: *Apollo and Diana*; the *Tyndaridae*, and the *Rape of Proserpine*. He was known for the rapidity of his execution, and was the pupil of his father, Aristodemus.

Nigger, v. a. (*Local.*) To exhaust (land) by cropping excessively without fertilizing; sometimes with *out*.—To burn (logs, &c.) in clearing land.

Night-heron. (*Ornith.*) The common name of American herons (see *HERON*) of the genus *Nycticorax*, which are largely nocturnal in habits, breed in communities, and utter a hoarse note resembling *qua*. The

Fig. 3008.—THE NIGHT-HERON.

yellow-crowned night-heron (*N. violaceus*) inhabits all the warmer parts of America.

Night-ingale, FLORENCE, an English philanthropist, was born at Florence, 1820. She early commenced a career of practical beneficence by organizing associations of lady nurses for the English army hospitals in the Crimea, of which she became herself the superintendent; thus being the means of saving some hundreds of valuable lives. A national testimonial of \$250,000, presented to her in recognition of her noble services, was at her special request devoted to the formation and maintenance of an institution for the training and employing of public nurses for the sick and invalided. Miss N. has written *Notes on Nursing*, of which 100,000 copies sold in one year (1860); and *Notes on Lying-in Institutions, together with a Proposal for Organizing an Institution for Training Midwives and Midwifery Nurses* (1871).

Nihilianism, n. (*Ch. Hist.*) The doctrine that the human nature of Christ had no true subsistence.

Nilometer, n. An arrangement for gauging the height of the river Nile; the one now in use on the island of Rhoda, or Er-Rodah, opposite Cairo, is a square well, connected with the river by a canal, and containing a marble column inscribed with a graduated scale in cubits; 25 feet is an average and favorable rise. This nilometer was built in 847, during the reign of Al-Mutavakkil. In earlier times, nilometers seem to have been located at various places along the river, but that of Memphis, described by ancient writers, was probably the earliest.—Any automatic register of the height of any river.

Nilsson (nill'-s'n), CHRISTINE, singer, was born near Wexio, Sweden, on Aug. 3, 1843. She first sang in public in Stockholm, in 1860, and in 1864 appeared in opera, at Paris, as *Violetta*. She sang with great success in England until 1870, when she came to the United States for two years, repeating her triumphs in the New World; then returned to England, where she remained for several years, singing in opera, with the exception of the season of 1876, which was devoted to a tour through Scandinavia. After 1881 she sang only in concerts until 1888, when she retired altogether to private life, on the occasion of her second marriage, to Count Casa di Miranda. Mme. N. was first married to M. Auguste Rouzaud, in 1872; his death occurred in 1882. She was most successful in the rôles of *Mignon*, *Marguerite*, *Ophelia*, *Elsa*, &c.

Niminy-piminy, a. Excessively nice or delicate from affectation.

—*n.* Affectation of delicacy.

Nip'pur. (*Anc. Geog.*) See BABYLONIA.

Nit, adv. (*Slang.*) In no wise, not at all.

Nitr-, Nitri-, Nitro-. A prefix, derived from the Latin *nitrum*, niter, denoting the presence of nitro-

Nitrification, n. (*Agric. Chem.*) The conversion of nitrogenous organic matter or compounds of ammonia into nitrates, thus bringing them into a condition suitable for organic assimilation. There is also

Florence Nightingale

1820

abundant reason to believe that the nitrogen of the air directly undergoes this change. The origin of plant nitrogen has long been a mystery. This substance is never absorbed from the air, as in the case of oxygen and carbon, while more nitrogen is taken up than the soil seems capable of furnishing, in view of the fact that the nitrogenous element of fertilizers is largely carried away by the rains. Recent research has demonstrated pretty conclusively that gaseous nitrogen may be fixed in the soil by the action of micro-organisms, and that this process is constantly in operation. The view is entertained by some experimenters that this power is confined to a single agent, spoken of variously as a "ferment," an "organized structure," and as the "micrococcus nitrificans;" but much more probably it is possessed by many bacterial organisms. These bacteria occur in the soil in considerable variety and in great abundance, and under certain favoring conditions as capable of assimilating gaseous nitrogen and converting it into nitrates. One of these conditions is that of temperature. The range of activity of the nitrifying bacteria lies between 40° and 130° F., and increases from about 54° to 98°, where it reaches its maximum. At a temperature of about 200° F. these bacteria are destroyed, or at a much lower temperature under desiccation. A second necessary condition to nitrification is the presence of oxygen. There is also necessary the presence of a salifiable base, such as lime, potash, or soda, in whose absence nitrification cannot go on. If these conditions are present, nitrification takes place in every fertile soil. Of course the requisite bacteria must be present, but no soil is fertile in their absence. Under these conditions nitrification goes on actively, either the nitrogen of the air or that present in organic manures or ammonia compounds being converted into the corresponding nitrates of lime, potash, or soda. It is from these nitric compounds that plants obtain most, perhaps all, of their nitrogen. Some experimentalists claim that they obtain at least a part of their nitrogen from ammonia, but this is not positive, and it may be that the whole existence of plants is due to the vital activity of the minute organisms in the soil. In some plants of the leguminous family the debt is more immediate, the nitrifying bacteria making their home within the root of the plant. On the roots of the pea plant, for example, there occur certain rounded knobs or protuberances, whose purpose was formerly not known, but whose presence is now found to be essential to the life of the plant. Research has shown that these are due to the presence of bacteria, which have found a resting place in the plant tissues, where they accumulate nitrates, which are directly assimilated by the plant. The discovery of nitrification is one of the most recent additions to vegetable physiology, and is of peculiar interest in showing a new and important phase of the essential interdependence of organic forms. This is strikingly so in the case of the leguminosae, where the existence of the organism is dependent on the vital action of a seeming parasite.

Noailles (*no-vil*), PAUL, DUC DE, a French historian, was born in 1802; became a member of the Académie Française in 1849, and has published *Histoire de la Maison Royale de Saint-Louis*, and *Histoire de Madame de Maintenon*. He belonged to the same noble family as the Marquis de Noailles, appointed French minister to Washington in 1872. Died in 1885.

No'bel, ALFRED, a Swedish inventor and the discoverer of dynamite, which important explosive was produced by him in 1864. Nitroglycerin, discovered in 1847, proved too dangerous for ordinary use, from its great readiness to explode. To avert this danger N. instituted a series of experiments in 1863, soaking gunpowder with nitroglycerin for blasting purposes, while in 1867 he conceived the idea of mixing it with some inert and absorbent substance. The silicious infusorial earth, called in Germany *kieselguhr*, proved the substance best adapted for this purpose, the mixture being named by N. dynamite (*q. v.*). This quickly came into general use for mining, warlike and engineering purposes, and N. amassed a large fortune, which, on his death, Dec. 10, 1895, he left by will as a fund for the advancement of scientific and other investigations. The estate, which is valued at about \$10,000,000, is to be kept at interest and the income to be divided into 5 annual prizes: 1, for the best discovery during the year in physics; 2, for the best discovery in chemistry; 3, for the best in physiology and medicine; 4, for the best literary contribution to physiology or medicine; and 5, for the most useful efforts to promote the cause of peace.

No'ble, in *Oklahoma*, a N. E. co. *Cap.* Perry. *Pop.* (1897) 18,000.

No'bles, in *Minnesota*, a S. W. co.; *area*, 720 sq. m.; has several lakes and small streams. *Surface*, rolling prairie, timber scarce; *soil*, fertile. *Prod.* Live stock, butter, flax, hay, corn, wheat, and oats. *Cap.* Worthington. *Pop.* (1895) 11,905.

Noctilu'cin, *n.* The fluid secreted by animals and plants that shine in the dark, to which they owe their phosphorescence. In such animals, noctilucin is secreted by a special organ, and appears to be at once effectively luminous, but the luminosity ceases as soon as the substance is deprived of oxygen. Under certain conditions of temperature and humidity, it is also generated by dead animal matter, flesh, blood, and sometimes urine. Its light is invariable and monochromatic, and possesses always the same chemical properties. It can be obtained from certain myriapods, glowworms, and the phosphorescent surface of dead fish by scraping luminous matter on to damp filter paper. The secretion of noctilucin by superior lumin-

ous creatures, such as insects, is doubtless up to a certain point under the influence of the nervous system, so that they have the faculty of causing their light to cease at will, in which case the secretion is arrested for the time, but glowworms' eggs continue to glow for some time after they have been laid, so that they must also contain a small quantity of noctilucin. In the lower orders of animate beings, such as the infusorians (*Noctiluca*, &c.), to which the phosphorescence of the surface of the sea is principally due, there is also no doubt of the existence of a special organ for the production of the light; and, where there are scarcely any indications of a nervous system, the secretion of the material appears frequently to be susceptible to the influence of external circumstances.

Noctur'nograph, *n.* An instrument for recording night-work, as in factories, mines, &c.

Nogal'es, in *Arizona*, a post-town of Pima co., 75 m. S. of Tucson. *Pop.* (1897) 1,280.

No'gi, BARON, a Japanese general, born about 1850, a descendant of the Samurai, or military class. He took a prominent part in the war with China in 1894, and was afterward governor-general of Formosa, where he showed much administrative ability in pacifying the natives. In the war with Russia he commanded the army besieging Port Arthur, which surrendered to him January 2, 1905. He was promoted to lieutenant-general to the rank of general July 6, 1904. His two sons were slain during the campaign.

Nome, the largest city in Alaska, is situated on the north shore of Norton Sound, Bering Sea, at the mouth of Snake River. Gold was found in the beach sands here in 1899, and a city rapidly grew up, with 12,000 people in 1900. The gold output was \$5,000,000 in 1900; \$7,000,000 in 1901. The population had fallen off in 1906 to about 5,000.

Non'uplet, *n.* [*Fr. nonuple*] (*Mus.*) A group or nine notes that are to be played in the time of eight or six.

Nor'dau, MAX SIMON, writer, was born in Budapesth, in 1849; studied medicine, and after travelling extensively he practiced in his native place, and also in Paris, where he has resided of late; has written many newspaper articles, afterward collected in book form, and several novels and plays. He has claimed attention from the reading public chiefly by his book *Degeneration*, which made a sensation as attacking the so-called "decadent" school of literature.

Nordenskjöld (*nord'enshült*), ADOLF ERIK, a Swedish explorer, was born in Finland, Nov. 18, 1832. His father was a distinguished mineralogist; to this science his son turned his early attention. Dismissed from college for alleged anti-Russian sympathy, he left for Berlin. Subsequently he went to Sweden, and in 1858 began his career of Arctic adventure in an expedition to Spitzbergen. In 1863 he married a daughter of Count Mannerheim of Finland. In 1864 he led another expedition into Spitzbergen, and in 1870, accompanied by Dr. Breggen, the professor of Botany at Lund, he undertook the most successful journey which had been attempted over the ice through Greenland. The great difficulty of crossing the inland ice is due to the immense glaciers, always in motion, that drift slowly toward the sea. Chasms occur among them, of almost immeasurable depth, and make the way impassable. Nordenskjöld, however, started from the northern arm of a deep inlet called Auleitsivikfjörd, some 60 m. S. of the glacier which discharges at Jakobshaven, and 240 N. of the one at Godthaab. He commenced his inland journey on July 19, 1870, and advanced 30 m. over the glaciers to a height of 2,200 feet above the sea. The results of these researches were published in his *Redogörelse för en Expedition till Grönland* (1871). In 1875 he crossed the Kara Sea to the mouth of the Yenisei, going up the river in a small boat, and returning home overland. He visited the U. S. in 1876 as juror to the International Exposition at Philadelphia, and in 1878 started on his voyage in the *Vega*, partly under the auspices of the Swedish government, and partly through the support of two merchants, to achieve the northeast passage. The *Vega* was wintered in Bering Strait, and reached Japan Sept. 2, 1879, being the first vessel known to have rounded the northernmost point of the Old World. Nordenskjöld was created a baron in 1880, named a commander of the Legion of Honor, and a foreign knight of the Prussian Order of Merit for Arts and Sciences. In 1883, starting from Auleitsivikfjörd on July 4, he penetrated 84 miles further into Greenland than he had gone before, crossing a waste of snow to a height of 7,000 feet, and accomplishing results in the physical geography and biology of the Arctic regions that rendered the journey of inestimable value to science. The report of his voyage was published in several languages in 1884. Died Aug. 13 1901.

Nord'hoff, CHARLES, journalist and miscellaneous writer, was born at Erwitte, Westphalia, Germany, Aug. 30, 1830. He has resided in America, and his numerous works are chiefly devoted to American topics, political and social. Among his published volumes are: *Secession is Rebellion* (1860); *Cape Cod and All Along Shore* (1868); *Politics for Young Americans* (1875); *God and the Future Life* (1881); and several works relating to California and the Gulf States, &c.

Nor'dica, LILIAN (Mrs. Zoltain F. Dome), soprano vocalist, was born at Farmington, Me., about 1858. She was a distinguished pupil of the Boston Conservatory of Music, and finished her studies in Italy; she then went to England and achieved a great success, afterward appearing on the Continent and in the U. S. Her impersonation of *Marguerite* in *Faust* won the hearty approval of the composer, Gounod. In 1882 she married

Mr. Gower, who shortly afterward lost his life in an aeronautic expedition. After several years of unremitting study and professional activity, Mme. N. attained recognition as the first soprano of the Wagner opera at Bayreuth, in 1894. In 1896 she was married, at Indianapolis, Ind., to Mr. Zoltain F. Dome, who had appeared for the first time in opera, at the Bayreuth Festival, in 1894, in *Parsifal*, taking the title rôle.

Nor'folk, in *Massachusetts*, a post-town of Norfolk co. *Pop.* (1895) 856.

Norfolk, in *Nebraska*, a city of Madison co., 15 m. N. of Madison; has a foundry and machine shop, cannery, creamery, beet sugar factory, and other industries; an important shipping point. *Pop.* (1897) 3,730.

Nor'ia, *n.* [*Sp.*] A water-raising machine with travelling pots or buckets. The true Spanish noria has earthen pitchers secured between two ropes, which pass over a wheel above and are submerged below. It is rotated by the force of the current.

Nor'mal For'est. In forestry, a forest with divisions of equal areas of trees at different stages of growth, the divisions being numbered, each successive number containing trees 20 years older than the preceding; the object being to fix the amount of timber to be cut each year.

Nor'man, in *Minnesota*, a N. W. co.; *area*, 1,440 sq. m. *Rivers*, Wild Rice, Marsh, and White Earth. *Surface*, level; *soil*, very fertile; plenty of timber and good water. *Cap.* Ada. *Pop.* (1895) 13,470.

Norman, in *Oklahoma*, a post-village, *cap.* of Cleveland co., 50 m. S. of Guthrie. *Pop.* (1897) 2,500.

Norman French. A dialect of French, spoken by the Normans at the time of the conquest (1066), and introduced by them into England, where it continued to be the legal language for about 300 years. It coalesced to a certain extent with the Anglo-Saxon, which it greatly modified, and enriched it with terms pertaining to arts, sciences, religion, court-life, law, and higher culture. See ENGLAND, LANGUAGE AND LITERATURE.

Noropian'ic, *a.* (*Chem.*) Derived from opium.

Nor'ris, WILLIAM EDWARD, novelist, was born in London in 1847. He was admitted to the bar in 1874, but has never practiced; has written numerous works of fiction, among them: *Heaps of Money*, *Matrimony*, *No New Thing*, *A Bachelor's Blunder*, *Major and Minor*, *The Countess of Rudna*, &c.

North, JOHN THOMAS, capitalist, was born near Leeds, England, on January 30, 1842. He was apprenticed to a firm of millwrights, and after eight years' drill in mechanical work, he went to Peru to set up machinery and speculate. He condensed sea-water for domestic purposes, in a rainless Chilean town, and engaged in other ingenious and successful enterprises, chiefly the development of the famous nitrate fields of Tarapaca. He became the owner and operator of the most extensive nitrate deposits, and the largest exporter of nitrate of soda, which gave him the sobriquet of the "Nitrate King." Returning to England, he multiplied his fortune by starting and controlling speculation in the shares of nitrate works and nitrate railroads. In 1895 he presented himself as a Conservative candidate for Parliament, in West Leeds, and after a novel and lively campaign, almost won this naturally Liberal seat from Herbert Gladstone. Died May 5, 1896.

North Ad'ams, in *Michigan*, a post-village of Hillsdale co., 8 m. N. E. of Hillsdale. *Pop.* (1894) 461.

North Al'ton, in *Illinois*, a post-village of Madison co., 1 m. N. of Alton. *Pop.* (1897) 840.

North Am'herst, in *Ohio*, a post-village of Lorain co., 28 m. E. of Sandusky. *Pop.* (1897) 1,840.

North Bal'timore, in *Ohio*, a post-village of Wood co., 38 m. E. of Defiance; has natural gas; glass and brick works and other industries. *Pop.* (1897) 3,100.

North Branch, in *Minnesota*, a post-village of Chisago co., 12 m. N. W. of Center City. *Pop.* (1895) 1,141.

North Caroli'na, Univer'sity of. (*Educ.*) Located at Chapel Hill, Orange co., the university was founded in 1793, under a charter granted in 1789. Its first endowment was a gift of 20,000 acres of land in Tennessee from Benjamin Smith, who was governor of North Carolina, 1810-11. It is non-sectarian, and in 1896 had 38 instructors, 540 students, a library of 30,000 volumes, and an income of \$44,000.

North Cod'orus, in *Pennsylvania*, a township of York co.

North Cohas'sett, in *Massachusetts*, a village of Norfolk co., about 15 m. S. E. of Boston.

North Col'lins, in *New York*, a post-village of Erie co. *Pop.* (1897) 670.

—A township of Erie co.

North Colum'bia, in *California*, a post-village of Nevada co., about 9 m. N. of Nevada.

North Corn'wall, in *Connecticut*, a village of Litchfield co., about 10 m. N. W. of Litchfield.

North Cove Creek, in *North Carolina*, enters the Catawba river in Burke co.

North Cov'entry, in *Pennsylvania*, a township of Chester co.

North Dako'ta. One of the United States of America, and the twenty-sixth State to be admitted into the Union. It lies between Lat. 46° and 49° N., and Lon. 96° 25' and 104° W.; and was formerly the northern half of the Territory of Dakota (*q. v.*). Its northern boundary is the Dominion of Canada, its eastern the State of Minnesota, its southern the State of South Dakota, and its western the State of Montana. It has an area of 70,795 sq. m., of which 600 sq. m. are water surface. When admitted to the Union, in 1889, its population was about 37,000, but in 1900 had increased

to 319,146. The Red River of the North, which separates the State from Minnesota, flows north to Lake Winnipeg. The Missouri, in the western part of the State, flows south to the Mississippi. There are other large streams, and the drainage is abundant. Almost the entire soil of the State is fertile and some parts are exceptionally so, especially the valley of the Red River of the North, containing great wheat farms. This valley is a level plain, from 50 to 60 miles wide, sufficiently elevated above the river to be free from overflows, and contains the richest of bottom-land mold. The valley is also well wooded in parts. The James river valley is one of the most noted artesian-well districts in the world. The Mouse (or Souris) river enters the State from Assiniboia, and after a long sweep, passes out of it again into Manitoba. Along this river are valuable deposits of coal. Devil's Lake, in the N. E., is a veritable inland sea. In the valley of the Red river glacial drift is found beneath lake mud, and lake shore lines with sand and gravel beds have been traced around the entire valley, proving it the bed of an ancient lake, which has been named Lake Agassiz. The yield of wheat in the State was, in 1883, 26,438,208 bushels, but in 1908 had risen to 68,428,000 bushels. The winters are cold and rainless, and usually break in March. Farming begins early,

Fig. 3009.—SEAL OF THE STATE.

but plowing usually continues till about the middle of November. The dryness of the atmosphere renders the low winter temperature endurable by man and beast. The summers are warm by day and cool by night, with almost constant breezes. The autumnal weather is the most delightful of the year and frequently extends far into December. The State is crossed from E. to W. by the Northern Pacific and Great Northern Railways, while three other large systems enter it from the S., E., and S. E.—the Chicago, Milwaukee & St. Paul, the Chicago & North-western, and the Minneapolis, St. Paul & Sault Ste. Marie. Altogether there are within the State 3,905 miles of railway. The largest town in the State is Fargo, which had, by the census of 1900, 9,589 inhabitants, Bismarck, the capital having then a population of 3,319. The U. S. granted the State for educational purposes 2,000,000 acres of land. While Dakota was still a Territory it expended for public education \$10,000,000 in five years, and North Dakota entered the Union with 1,362 public schools, and with high and graded schools in its principal towns. By the census of 1900 the State had more than 900 religious organizations. It constitutes a missionary district of the Protestant Episcopal Church, with a bishop, and Jamestown is the seat of a bishop of the Roman Catholic Church.

North Dan'vers, in Massachusetts, a village of Essex county.

North Dan'ville, in New York, a township of Livingston co.

North Dart'mouth, in Massachusetts, a post-village of Bristol co.

North Dix'mont, in Maine, a post-village of Penobscot co.

North E'nid, in Oklahoma, a post-village of Garfield co. Pop. (1897) 400.

North Indianapolis, in Indiana, a post-town of Marion co. Pop. (1897) 1,850.

North Jud'son, in Indiana, a post-town of Starke co., 77 m. S. E. of Chicago. Pop. (1897) 680.

North MacGregor, in Iowa, a post-town of Clayton co. Pop. (1895) 599.

North Muskegon, in Michigan, a post-village of Muskegon co. Pop. (1894) 911.

North Par'ma, in New York, a village in Monroe co. (P. O., HILTON.) Pop. (1897) 520.

North Peo'ria, in Illinois, a post-village of Peoria co. Pop. (1897) 1,560.

North Platte, in Nebraska, a city, cap. of Lincoln co., Platte river, 271 m. W. of Omaha; has extensive railroad repair shops, and mills. Pop. (1897) 4,200.

North Springfield, in Illinois, a suburb of Springfield, Sagamon co. Pop. (1897) 1,400.

North St. Paul, in Minnesota, post-village of Ramsey co., 1½ m. from St. Paul; has manufacturing interests. Pop. (1897) 2,000.

Northeast'er, n. A wind blowing from the northeast; a northeasterly gale.

Northwest Territories of Can'ada. (Geog.) That part of Canada beyond and northwest of Manitoba, formerly known as Prince Rupert's Land, Hudson's Bay Territory, or the fur countries, purchased from the Hudson's Bay Company in 1870. This monopoly had held charter-rights over the whole of British America from the time of Charles I., but about 1860 British Columbia was withdrawn from its control as a crown colony, and the rapid growth of the Red river settlements soon after caused great friction. In 1870, at the end of tedious

negotiations, the Hudson Bay Company relinquished to Canada its charter-control of all Prince Rupert's Land for \$1,500,000 in cash, and about 7,000,000 acres of land, much of which has since become of great value, owing to the growing up of towns around the sites of the company's former trading-posts. Within a short time after Manitoba was set apart as a province, and settlers went thither in great numbers. The completion of the Canadian Pacific Railway across the continent induced a considerable settlement west of Manitoba, and certain embryo provinces were in 1882 marked out there, called provisional districts. They are:

Assiniboia, along the international boundary west of southern Manitoba, as far as the 111th meridian, and containing 95,000 sq. m. This is drained by the upper streams of the South Saskatchewan, Assiniboine, and Souris rivers, and contains a large amount of agricultural land, especially productive in wheat. It is traversed by several railway lines, and is dotted with villages.

Saskatchewan, north of Assiniboia, between the 51st and 55th parallels of latitude, from Lake Winnipeg west to the 111th meridian. This embraces the basin of the Saskatchewan river and its northern branch, and is more hilly, more forested, and less productive than Assiniboia or Manitoba. Its industries are mainly in cattle-raising, forestry, and fishing, and its inhabitants are few, except along the North Saskatchewan river, reached by railroad from Regina. Area, 111,000 sq. m.

Alberta, filling the elevated plains region between the western boundaries of these two districts and the Rocky Mountains, or eastern boundary of British Columbia, an area of 100,000 sq. m. Its altitude is too great and climate too cool and dry for general agriculture, but it pastures immense herds of cattle, horses, and sheep. The foothills of the mountains abound in coal of various kinds, particularly in the southern part, around Lethbridge and Fort McCleod, and in the Bow river valley; and its mining interests otherwise are considerable. The city of Calgary is a modern and handsome town of some 5,000 inhabitants. Banff and the Rocky Mountain Park (see NATIONAL PARKS) lie west of Calgary.

Athabasca lies north of Alberta, between the 111th and 120th meridians as far as the 60th parallel of latitude, and embraces the basin of Peace river and some other large streams emptying into Athabasca and Great Slave lakes. It is inhabited only by Indians and fur-traders, is timbered, rocky, filled with small lakes and streams, and will probably furnish gold, silver, copper, coal, petroleum, &c., in the future. Area, 122,000 sq. m.

Keewatin and Yukon are indeterminate judicial districts (see KEEWATIN, and YUKON), which may hereafter be given a more regular status. All the vast remainder, embracing the basins of Hudson Bay and the Mackenzie River, and north of the parallel of 60° N., constitutes the great ice-bound districts of *Mackenzie* and *Franklin*. *Keewatin* borders the western side of Hudson Bay, while the great barren Labrador peninsula, on the eastern side of the bay, has been made into a territorial district under the name of *Ungava*, the name *Labrador* being now restricted to its sea-coast section. *Yukon* comprises the gold-bearing region north of 60° bordering on Alaska. (See KEEWATIN and YUKON.) The population of this vast region is a thinly scattered one of Indians, Eskimos and fur-traders, its value for civilized purposes, outside of Yukon being very small.

In 1905 the four first-named territories were formed into the two provinces of *Alberta* and *Saskatchewan*, *q. v.*, *Athabasca* and *Assiniboia* being abolished.

The remaining districts are administered by a lieutenant-governor, appointed by the governor-general of the Dominion, an advisory council of his own selection, and a territorial legislature elected by the four organized districts. This assembly has control of the local finances, and of its own numbers and election, and thus grows with the advance of the region. The Northwest Territories are represented in the Dominion Parliament by two members in the Senate and four in the House of Commons. The population, of Indians and half-breeds, formed the ruling class and possessed certain privileges previous to the transfer of the region from the Hudson's Bay Company to Canada, out of which grew quarrels and conflicts, now happily settled. See RIEL REBELLION. These Territories have been scientifically explored of late, and are known to have great undeveloped resources. See CANADA.

Northwest'er, n. (Collog. northwest.) A wind or gale blowing from the northwest.

Northwestern University. (Educ.) A co-educational institution, maintained by the Methodist Episcopal Church, at Evanston, a suburb of Chicago. It was chartered in 1851 and organized in 1855. The schools are divided between Evanston and Chicago. The Garrett Biblical Institute at Evanston, though a separate corporation, serves as the theological department of the university, and includes a Norwegian-Danish and a Swedish theological seminary. The schools of law, medicine, pharmacy, and dentistry, as well as the woman's medical school, are located at Chicago. In 1896 the institution had 233 instructors, 3,016 students, and a library of 31,000 volumes. The income of the university in 1896 was \$573,000. A part of the institution is the Dearborn Observatory, with a telescope of 18½-inch aperture—the largest in existence at the time it was made.

Nor'ton, ANDREW, theologian, was born at Hingham, Mass., in 1786. After graduating at Harvard in 1804, he succeeded Dr. Channing as Biblical lecturer in that college, and from 1819 till 1830 held there the Dexter

professorship of Sacred Literature. Died in 1853. **His** most important literary effort is *Evidences of the Genuineness of the Gospels*.

Nor'ton, in Kansas, a N. W. co.; area, 900 sq. m.; intersected by the North Fork of Solomon river and by Prairie Dog creek. Surface, nearly all rolling prairie; soil, fertile. Products, corn, wheat, rye, broom corn, potatoes, butter, hay, sorghum; live stock. Cap. Norton. Pop. (1895) 8,671.

Norumbega, n. (Anc. Geog.) A region often mentioned by old geographers as near the Atlantic coast of North America, usually placed more definitely within the limits of New England. There has been much discussion over its location, and also as to the origin of the name, whether Indian, Spanish, French, or Norwegian. The river of Norumbega has been thought by many to be the Penobscot, and by others to be the Hudson. Professor Horsford, of Cambridge, Mass., was convinced that Norumbega is identical with Vinland, the North American settlements of the Norsemen, about 1006; and he wrote extensively to show the exact site of the lost city to be at the junction of Stony creek with the Charles river, at Watertown, Mass., where he built a monumental tower in honor of the Norwegian colonists.

Norwell, in Massachusetts, a post-town of Plymouth co., 7 m. E. of Rockland. Pop. (1895) 592.

Norwood, in Massachusetts, a post-town of Norfolk co., 14 m. S. S. W. of Boston; has ink works, tanneries, and railroad repair shops. Pop. (1895) 4,574.

Norwood, in Minnesota, a post-village of Carver co., 47 m. from St. Paul. Ships wheat, pork, lumber, and farm produce. Pop. (1895) 468.

Norwood, in New York, a post-village of St. Lawrence co., 25 m. E. of Ogdensburg; has manufactures of lumber, shingles, sash and blinds, and pulp. Pop. (1897) 1,600.

Noso-. A prefix, derived from the Greek *nosos*, disease, sickness.

Not-, Noto-. A prefix, derived from the Greek *notos*, the back.

Nothinga'rian, n. One who believes nothing; one who has no particular religious belief. Used also adjectively.

Nothor'oughfare, n. A blank or blind flange; a plate to close an opening, as in a pipe or a man-hole.

Nothosau'rus, n. (Palæont.) A genus of reptiles characteristic of an order of Saurapterygians, which lived in Europe in the Triassic period, and includes many species, of which *N. mirabilis* is best known. They were apparently fitted for terrestrial life, and preyed on other living creatures. Their remains are very abundant in the muschelkalk formations of central Germany.

Notorn'is, n. (Palæont.) A genus of purple water-rails incapable of flight, which has become nearly extinct in New Zealand within the historic period. The best-known species is *N. mantelli*, of which a few specimens may still survive. The bird is about 2 feet high, has a short strong beak, which, with the legs, is of a bright scarlet color. The neck and body are of a dark purple color, the wings and back being shot with green and gold. The tail is white beneath, and the wings are feeble in structure and plumage.

Not're Dame, in Indiana, a post-town of St. Joseph co., 1½ m. N. of South Bend. Seat of the University of Notre Dame, and St. Mary's Academy for Girls. Pop. (1897) 680.

Notre Dame University. (Educ.) A Roman Catholic institution, located at Notre Dame, Ind., which was founded in 1844, and is conducted by the members of the Congregation of the Holy Cross. It is the largest of the Roman Catholic colleges in the U. S., and possibly the most important. In 1896, it had 60 instructors, 630 students, and 50,000 volumes in its library. It has no endowments, its sole source of income being the fees of students, each of whom is charged \$300. For this sum, however, the student is lodged and fed. Among other things taught are phonography, telegraphy, and type-writing.

Noun'al, a. Pertaining to a noun; having the character or qualities of a noun.

Nounal Order or Arrange'ment. (Gram.) That arrangement of the words of an independent sentence which places the noun, or subject, first; then the verb, then the object or modifiers.

Novello, JOSEPH ALFRED, music publisher, son of Vincent N., was born in 1810. He established the publishing house of Novello, Ewer & Co., continuing and extending the business which his father had begun. He introduced Mendelssohn to the English public, and also inaugurated a system of cheap music printing, which brought copies of hitherto expensive publications within popular reach. He retired from business in 1856, and went to Italy, where he devoted attention to the study of nautical subjects, ship-building, &c. Died July 17, 1896.

Novello, VINCENT, musical composer and editor, was born in London, Eng., Sept. 6, 1781, and died Aug. 9, 1861. His early efforts in the line of music publication led to the final establishment of the firm of Novello, Ewer & Co., by his son, Joseph Alfred. He was eminent as a musical composer and organist, and as a painstaking editor of unpublished works of eminent musicians he did great service to musical literature.

Nov'elwright, n. A term of contempt for a novelist, one who produces novels mechanically.

No'vus Ho'mo, pl. NOVI HOMINES. [Lat. a new man.] (Rom. Antiq.) A man who was the first of his family to obtain a curule office; one who had risen to distinction by his own endeavors or deserts; contemptuously, an upstart, a parvenu.

NORTH DAKOTA

Indian Reservation Boundaries
Military Reservation Boundaries

State Capital * County Seat °
Places of 5,000 and over — FARGO
" " 2,000 to 5,000 — Bismarck
" " 1,000 to 2,000 — Hillsboro
" " 500 to 1,000 — Hope

Nowlin, in *South Dakota*, a S. W. central co.; area, 1,220 sq. m.; drained by Bad river and its tributaries. Grazing is the leading industry. Unorganized. Pop. (1895) 262.

Nu'bia, *n.* [Lat., *nubes*, a cloud.] A soft, light hood or head-covering worn by women; sometimes called a cloud.

Nuckolls, in *Nebraska*, a S. E. co.; area, 576 sq. m.; intersected by Republican and Little Blue rivers. Surface, undulating; timber scarce; soil, good for pasturage. Products, Corn, broom corn, wheat. Cap. Nelson. Pop. (1890) 11,417.

Num'bering-machine, *n.* Machines for printing consecutive numbers, as the pages of a book, are used by both printers and bookbinders, and vary from a somewhat complicated form of small printing-press to a form made resembling the hand-stamp. All of them employ figure-wheels, so geared as to bring to the surface figures showing the numbers from 1 to 10,000 or 100,000. For ticket-numbering they usually constitute a part of a special machine made for printing tickets in large quantities. These machines are also made so as to lock up with a form of type on any ordinary printing-press, thus numbering the sheets. For small work the hand-stamp type is used, being mounted on an upright handle, and the force of the downward pressure utilized to move the inking-apparatus and rotate the figure-wheels. Similar machines for exhibiting the number of strokes or impressions made by a machine are termed counters or counting-machines.

Nurl, *v. a.* To indent or flute the edges of, as a coin or screw-head, with a nurling-tool; to mill.

Nurling, *n.* The indentations or fluting on the edges of coins, the heads of screws, &c.; milling or reeding. The object of it on coin is to prevent the clipping or filing of the edges, which might be done without discovery, except by weighing. On screws, it is to make them more easy to grasp by the fingers and thumb.

Nurling-tool, *n.* A milling-tool; an implement with a rotating steel disk which impresses a design on an object when rotated in a lathe.

Nurses, Training of. The systematic training of attendants for the sick is a department of medicine which has come into existence within the last fifty years. Until 1848, what are now classed as "experienced nurses" were all that could be had, at best, and they were exceedingly few. In that year one of the first thorough training schools for nurses was founded by the St. John's Sisterhood, in London. In 1855, the heroic work of Miss Florence Nightingale, who had gone to the Crimea with 34 nurses to care for the wounded on the battle-fields, called attention to the inestimable value of organized and systematized nursing, and at the close of the war a fund of \$250,000 was raised to enable her to establish a school for the education of women as nurses, and in 1887 Queen Victoria gave \$350,000, the surplus of the Women's Jubilee Offering, to the founding of a similar institution, the

four central schools being situated in London, Edinburgh, Dublin, and Cardiff. In Germany, the late Empress Augusta, the Empress Frederick, and the late Princess Alice of Hesse have done much toward improving the methods and facilities of nursing, while in France the establishment of *L'école des gardes malades et d'ambulancières*, in 1877, raised nursing to somewhat the same plane in which it ranks in England, where only gentlewomen are permitted to enter the army and navy training service. In America it has become a distinct profession, many nurses being graduated yearly. There are 350 training schools in the United States and Canada, the most important being situated in the large cities in connection with both public and private hospitals, such as Bellevue, the City Hospital on Blackwell's Island, the New York Hospital, the Flower (homoeopathic) Hospital, and several others in New York; Hamilton Hospital, in Ontario, Can.; Johns Hopkins, in Baltimore; Massachusetts General Hospital, in Boston, and St. Luke's, in Chicago. In addition to these schools for regular nurses, the Babies' Hospital, in New York, has recently opened a training school for nurse-maids. Certain qualifications are absolutely essential in the applicant for training as a regular nurse; she must be in sound health, a physician's certificate to that effect being required; she must be unmarried, or widowed, and able to guarantee herself free from outside responsibilities; she must be over 21 years old (and usually over 23); she must have a cheerful disposition, good character, good social standing, and a good common-school education. The course and the methods are approximately the same in all the schools, consisting of lectures and practical hospital training, including a full course of obstetrical nursing.

The course of training is as follows: (1) The dressing of blisters and burns, applying fomentations, poultices, &c. (2) Cupping, leeching, and subsequent treatment. (3) The administering of enemata and use of female catheter. (4) Management of helpless patients; moving, changing bed and body linen, giving baths, preventing and dressing bed-sores, and feeding. (5) Aseptic and antiseptic treatment of wounds. (6) Bandaging, making bandages, covering splints, &c. (7) Cooking, preparing, and serving appropriate food and delicacies for the sick. (8) Massage. (9) Emergencies and how to meet them.

Instruction is given in ventilation and in the proper care of sick-rooms and utensils. Also in accurate observation of the sick in regard to the state of the excretions, expectorations, pulse, temperature, respiration, action of the skin, eruptions, sleep, mental condition, condition of wounds, appetite, effect of diet, stimulants, medicines, and management of convalescents. The instruction is given by the directress of the school, and by the senior nurses of the wards. The length of the course has been two years, but is now being raised to three, the initiative having been taken by the New York and St. Luke's Hospitals in New York city.

Nut'pick, *n.* A small steel or silver instrument with a point for picking the kernels of nuts from the shells.

Nut-pine, *n.* A pine-tree yielding nut-like edible seeds. There are several varieties. See *PINUS*.

Nyan'da, *n.* [Afr.] Cloth made from the bark of a fig-tree.

Nyanza (*nē-ān'za*), *n.* An African word, signifying lake, which is also the significance of Nyassa (*q. v.*). It has been particularly applied to two lakes of equatorial Africa, Victoria and Albert Nyanza, and more recently to a third lake, Albert Edward Nyanza. Victoria Nyanza, or Ukerewe, the first known of these, is a large fresh lake, discovered by Captain Speke in 1858, and further explored by Speke and Grant in 1861. Its S. point is in Lat. 2° 44' S., Lon. 33° E., the N. shore extending to some 20 miles N. of the equator. It lies at an elevation of 3,740 feet above the sea, and is approximately circular in form, with a diameter of about 180 miles. It has an area of 27,000 sq. m., being, with one exception, the largest fresh-water lake in the world. The Kitangulé is the principal river flowing into this lake on the W. Several streams flow into it from the S., and form the most southerly feeders of the Nile, which has its origin in this lake, flowing from its northern extremity. The Albert Nyanza, or Mwantan, discovered by Sir Samuel Baker in 1864, lies 80 miles to the N.W. of the Victoria Nyanza, and forms a part of the course of the Nile (*q. v.*). It lies 2720 feet above sea level, but in a deep rock basin, being 1470 feet below the general level of the country. It is 140 miles long, N. to S., and 40 wide, its waters being fresh and of great depth toward the center. A massive range of hills, called the Blue Mountains, with an elevation of nearly 10,000 feet, lies N. and W. of the lake, which receives its drainage. S.W. of this lake lies the Muta Nziye, discovered by Stanley in 1876, and named by him, in 1889, the Albert Edward Nyanza. It occupies the southern extremity of the great rock basin above mentioned, whose northern end is occupied by the Albert Nyanza, and drains into the latter lake.

Nyct-, Nycti-, Nycto-. A prefix, derived from the Greek *nyx* (gen. *nyctos*), night.

Nye, EDGAR WILSON (sobriquet, "BILL NYE"), humorist, was born at Shirley, Maine, Aug. 25, 1850; removed to Wisconsin in his youth; studied law, and was admitted to the bar in 1876. Finding little opportunity to practice, he began writing humorous sketches for the newspapers, under the pen-name of "Bill Nye." After a varied experience in the Far West, he removed to New York city, continuing his humorous writing, and also becoming a popular lecturer, part of the time in association with J. Whitcomb Riley. The last three years of his life were spent at his home in Asheville, N. C., where he died Feb. 22, 1896.

Nye, in *Nevada*, a S. co.; area, 16,908 sq. m. Surface, mountainous; timber scarce; agricultural products very small. Silver and gold-mining is the chief industry. Cap. Belmont. Pop. (1890) 1,290.

O The fifteenth letter, and the fourth of the five simple vowel series in the English alphabet. According to the existing pronunciation of the language it takes a position between *a* and *u*, and represents at least six different sounds; as, for instance, the long intonation, as in *moan, tone, gold*; the short sound as heard in *col, dodge, sod*; a sound like the French *ou*, as in *prove, do, moot*; a cognate but sharper sound, as in *book, soot, wolf*; and a tone like broad *a*, as in *form, bourne, &c.* The primary and natural sound of *O* is that heard long in *nōt*, and short in *nōt*. The Greeks had two forms of this letter, *o* (*omicron*, or little *o*) and *ω* (*omega*, or large *o*); the former of which was equivalent to the short, and the latter to the long pronunciation of this letter in other countries and later times. Among the ancients, *O* was a symbol indicative of triple time, from the idea that the ternary, or number 3, is the most perfect of numbers, and, accordingly, best described by a circle, the most perfect figure. In music, the *O*, or circle, is a note which the English style a *semibreve*, the French a *ronde*, and the Italians *circolo*. In Irish family nomenclature, the letter *O* followed by an elision, thus *O'*, and used as a prefix to certain names, signifies *son of*, and in this sense corresponds with the Gaelic *Mac* or *Mac*, and the English prefix of bastardy *Fitz*; as, *O'Brien*, son of *Brien*; *O'Donnell*, son of *Donnell* or *Donald*, &c. In Latin inscriptions, *O* signifies *optimus*; as *D.O.M.*—*Deo Optimo Maximo*. As a numeral, *O* signified 70 among the Greeks; in Middle Latin it signified 11; and with a dash over it, 11,000. In pharmacy, *O* is a contraction for *Oculus*, a pint or pound fluid; and in chronology, *O.S.* and *N.S.* stand for *Old* and *New Style*. In modern arithmetic, it is used for the cipher, and represents nothing.

O, *interj.* An exclamation employed in calling or directly addressing a person, or impersonated object;—used also as an impassioned exclamation indicative of desire, grief, surprise, pain, ecstasy, and the like.

O dear! and *O dear me!* [Corrupted from *It. O Dio mio!* *O my God!*] Exclamations expressive of various emotions, as those of fear, surprise, regret, consternation, pain, &c.

O, *n.* A circle or oval; something presenting the form of the letter *O*.

Oaf, (*ōf*), *n.* [A corruption of *elf*, *q. v.*] A changeling; a foolish child left by fairies in the place of another.—**A dolt**; a dunderhead; an idiot; a clodhopper; a gaby.

Oafish, *a* Doltish; stupid; dull; thickheaded; idiotic; resembling an oaf.

Oafishness, *n.* State or quality of being oafish; stupidity; mental dullness.

Oahu, *Wahoo*, or *Wahoo*, one of the Sandwich Islands; Lat. 21° 20' N., Lon. 157° 37' W.; it is 40 m. long, and 20 m. broad; pop. 19,126.

Oajaca, or *Oaxaca*, or *Guaxaca*, (*wa-ha'ka*), a state of Mexico, having Vera Cruz on the N., Tehuantepec on the E., the Pacific Ocean on the S., and La Puebla on the W. It lies between 15° 40' and 18° 20' N., and Lon. 94° 15' and 98° 15' W. Area, abt. 31,822 sq. m. Rivers, Alvarado, Rio Grande, and Verde. Surface, much diversified; soil, exceedingly fertile. Prod. Wheat, indigo, cotton, sugar, honey, cocoa, plantains, &c. Cochineal forms an important item among the exports. Pop. 611,850.

Oajaca, a city, cap. of the above state, abt. 210 m. S.S.E. of Mexico; Lat. 17° 3' N., Lon. 97° 15' W.; pop. 26,000.

Oak, (*ōk*), *n.* [A. S. *āc*, *auc*.] (*Bot.*) See *QUERCUS*.

Oak, in *Iowa*, a township of Mills co.

Oak-apple, *n.* A spongy excrescence found upon the twigs of the *Quercus pedunculata*. It is formed by the puncture of a cynips, and rises rapidly, being usually spheroidal in form, and about one to two inches in diameter. The oak-apple must not be confounded with those beautiful little excrescences so common on the underside of the leaves of the oak, and known by the names of *galls* and *spangles*. They are also produced by the puncture of different species of cynips. The oak-apple has some resemblance to the *bedeguar* of the eglantine, but is not so rough and fibrous on the surface. Oak-apples are very astringent, containing tannic acid, and are used both for making ink and for dyeing and staining.

Oak-bark, *n.* The bark of the oak-tree, used in tanning, and for other purposes.

Oak Creek, in *Wisconsin*, a post-village and township of Milwaukee county, about 90 miles east of Madison.

Oak'dale, in *Iowa*, a township of Howard co.

Oak'dale, in *Minnesota*, a township of Washington co.

Oak'dale, in *Missouri*, a village of Shelby co., abt. 10 m. N. of Jefferson City.

Oaken, (*ōk'n*), *a*. [A. S. *æcen*.] Made of oak, or consisting of oak; composed of branches of oak; as, an *oaken cudgel*.

Oake'sia, *n.* [From *W. Oakes* of New England] (*Bot.*) A genus of plants, order *Juglandaceæ*. *O. conradi*, the Plymouth Strawberry, is a low, bushy, tufted shrub about 1 foot high, common in some parts of the Northern States.

Oakfield, in *Iowa*, a post-village and township of

Audubon county, about five miles south-west of Exira.

Oakfield, in *Michigan*, a post-township of Kent county.

Oakfield, in *Missouri*, a post-village of Franklin co., abt. 35 m. W. by S. of St. Louis.

Oakfield, in *New York*, a post-village and township of Genesee county, abt. 250 m. W. by N. of the city of Albany.

Oakfield, in *Ohio*, a post-village of Perry co., abt. 24 m. S. by W. of Zanesville.

Oakfield, in *Wisconsin*, a post-village and township of Fond du Lac co., abt. 9 m. S.W. of Fond du Lac.

Oakfield Centre, in *Wisconsin*, a post-village of Fond du Lac co., abt. 12 m. S.W. of Fond du Lac.

Oak Glen, in *Minnesota*, a post-village and township of Steele co., abt. 32 m. W.S.W. of Rochester.

Oak Grove, in *Indiana*, a township of Benton county.

Oak Grove, in *Kentucky*, a post-village of Christian co., abt. 210 m. S.W. of Frankfort.

Oak Grove, in *Minnesota*, a post-village and township of Anoka co., abt. 10 m. N. of Anoka.

Oak Grove, in *Missouri*, a post-village of Jackson co., abt. 21 m. S.E. of Independence.

Oak Grove, in *Wisconsin*, a post-village and township of Dodge co., abt. 40 m. N.E. of Jackson.—A township of Pierce co.

Oakham, in *Massachusetts*, a post-township of Worcester co.

Oak Hill, in *Illinois*, a village of Lake co., abt. 32 m. N.N.W. of Chicago.

Oak Hill, in *New York*, a post-village of Greene co., abt. 30 m. S.W. of Albany.

Oak Hill, in *Ohio*, a post-village of Jackson co., S.S.W. of Columbus.

Oakland, in *Canada*, a village of Oxford co., abt. 8 m. S. of Brantford.

Oakland, in *California*, a city, cap. of Alameda co., on San Francisco Bay, opposite San Francisco. It contains many handsome public and private buildings, extensive manufactories, and is a most beautiful city, with many natural advantages. Pop. (1897) about 55,400.

Oakland, in *Illinois*, a post-village of Coles co., about 95 m. E. by S. of Springfield.—A twp. of Schuyler co.

Oakland, in *Iowa*, a village of Dubuque co., about 20 m. W. by N. of Dubuque.

—A township of Franklin co.

—A township of Louisa co.

Oakland, in *Maryland*, a village of Alleghany co., about 54 m. W.S.W. of Cumberland.

—A post-village, cap. of Garrett co., on the B. & O. R.R.

Oakland, in *Michigan*, a S.E. co. of the lower peninsula; area, about 900 sq. m. Rivers, Clinton, Shiawassee, Flint and Rouge, or Red, rivers. Surface, diversified; soil, fertile. Products, wheat, corn, oats, hay, butter, wool, and potatoes are the staples. It is one of the most productive counties in the State. It is intersected by 3 railroads. Cap. Pontiac. Pop. (1894) 42,668.

—A township of the above county.

Oakland, in *Minnesota*, a post-township of Freeborn co.

Oakland, in *Missouri*, a post-village of La Cade co., abt. 48 m. S.W. of Rolla.

Oakland, in *New York*, a post-village of Livingston co., abt. 250 m. W. of Albany.

Oakland, in *Ohio*, a p. v. of Clinton co., abt. 16 m. S. of Xenia.—A vill. of Fairfield co., abt. 12 m. S.W. of Lancaster.

Oakland, in *Oregon*, a post-village and precinct of Douglas co., abt. 18 m. N. of Roseburg.

Oakland, in *Pennsylvania*, a twp. of Butler co.—A twp. of Susquehanna co.—A twp. of Venango co.

Oakland, in *Rhode Island*, a village of Providence co., abt. 25 m. N.W. of Providence.

Oakland, in *Wisconsin*, a post township of Jefferson co.

Oakland, in *W. Virginia*, a post-village of Morgan co., abt. 28 m. N. of Winchester.

Oakland College, in *Mississippi*, a village of Claiborne co., abt. 70 m. S.W. of Jackson.

Oakley, in *Illinois*, a post-village of Macon co., abt. 9 m. E. of Decatur.

Oakling, *n.* A young oak.

Oak-opening, *n.* A forest glade, free from under-wood. (American.)

Oak Orchard, in *New York*, a post-village of Orleans co., abt. 40 m. W. by N. of Rochester.

Oak Orchard Creek, in *New York*, rises in Genesee co., and flowing a general N. course, enters Lake Ontario from Orleans co.

Oak-paper, *n.* Paper-hangings stained and grained in imitation of oak-wood.

Oak-pruner, *n.* (*Zoöl.*) See *STENOCORUS*.

Oak Spring, in *Iowa*, a post-village of Davis co., abt. 85 m. S.W. of Iowa City.

Oakton, in *Illinois*, a village of Massac co., abt. 20 m. W. by S. of Golconda.

Oakum, *n.* [A. S. *æcumba*, from *camb*.] Refuse of tow; the substance of old ropes untwisted and pulled into loose hemp, employed for caulking, &c.

Oakville, in *Michigan*, a post-village of Monroe co., abt. 35 m. S.W. by W. of Detroit.

Oakville, in *Missouri*, a post-office of St. Louis co.

Oakville, in *North Carolina*, a P. O. of Warren co.

Oakville, in *Texas*, a post-vill., cap. of Live Oak co.

Oakville, in *Virginia*, a post-vill. of Appomattox co.

Oak'y, *a*. Firm; strong; tough; resembling oak. (*n.*)

Oan'nes, *n.* (*Myth.*) The man-fish god of the Babylonians. He is represented as having a man's head under that of the fish, and with woman's feet joined to its tail. He is said to have issued out of the Persian Gulf, and to have founded the civilization of the Lower Chaldaea. See also *MYTHOLOGY*.

Oar. See *SECTION II*.

Oared, (*ōrd*), *a*. Equipped with oars;—chiefly used colloquially, and in composition; as, a *four-oared* racing-gig.

Oar-footed, *a*. Possessing feet that may be used as oars;—said of certain animals.

Oarsman, *n.*; *pl.* *OARSMEN*. One who rows; one who tugs at an oar.

Oar'y, *a*. Having the form, use, or character of an oar.

Oasis, *n.*; *pl.* *OASES* [*Gr.*: in Strabo, *oasis*, probably from *Ar. wah*, wonderful, excellent.] A fertile spot in a sandy, bleak, or barren desert,—particularly applied to such spots watered by springs in the deserts of Libya, Egypt, and other parts of Africa. (See *EGYPT*.) Three of these solitary places in the deserts of Libya were celebrated in ancient history under this name,—the Greater Oasis, according to Herodotus (B. C. 484–408), seven days' journey W. of Thebes: the Ammonium, the site of the famed temple of Jupiter Ammon, visited by Alexander III. (the Great), B. C. 333, with its celebrated oracle; and the Lesser Oasis. Juvenal is supposed to have been the first person banished to one of these solitary places, in the sandy deserts of Libya, in 94. Timasius, the master-general of Theodosius I., was banished by Entropius to the Oasis, in 396. Nestorinus, bishop of Constantinople, was also transferred from Petra to the Oasis, in 435. The Oases fell under the power of the Arabs in 943, and were visited by Poncet in 1698, by Browne in 1792, by Horuemanu in 1798, and by Calliaud in 1819.

Fig. 1977.—TEMPLE OF JUPITER AMMON, (Oasis of Siwah.)

Oasis, in *Wisconsin*, a post-village and township of Wausara co., abt. 30 m. N.W. of Sacramento.

Oast, *Ost*, *Oust*, and *Ooust*, *n.* A malt-kiln. (*n.*)

Oat, (*ōt*), *n.* [A. S. *ata*, *ate*.] The common name, chiefly used in the plural, of the genus *Avena*, (*q. v.*) The species *Avena sativa*, of which there are many varieties, is used for feeding horses.

Oat cake, *n.* A cake made of oat-meal;—a favorite article of food among the Scots Highlanders.

Oaten, (*ōt'n*), *a*. Made of oat-meal; as, *oaten* bread.

—Consisting of an oat straw or stem; as, an *oaten* pipe.

"When shepherds pipe on *oaten* straws."—*Shaks.*

Oath. See *SECTION II*.

Oath-breaking, *n.* Perjury; violation of an oath.

Oatland, in *Virginia*, a village of Loudoun co., abt. 150 m. N. of Richmond.

Oat-malt, *n.* Malt made of oats.

Oat-meal, *n.* The meal of crushed and pulverized oats; as, *oat-meal* porridge.

(*Bot.*) See *PANICUM*.

Ob, a Latin preposition, denoting, in its primary significance, before; ahead; in front; and hence, toward; against.

In another sense, it expresses *reversed* or *backward*.

Obadi'ah, (*Book of*) (*Script.*) One of the minor prophets, and the shortest book of the Old Testament, consisting only of 21 verses. Respecting the life and circumstances of the author nothing is certainly known; but in all probability the prophecy was delivered between the taking of Jerusalem by the Chaldeans (B. C.

CORN PRODUCT OF THE WORLD BY COUNTRIES (MILLIONS OF BUSHEL)

OAT PRODUCT OF THE WORLD BY COUNTRIES (MILLIONS OF BUSHEL)

588), and the destruction of Idumea, which took place a few years later; consequently, he was partly contemporary with Jeremiah. The almost verbal agreement between the first eight verses of this book and a portion of Jeremiah's prophecy (ch. xl. 19) has led to the opinion that the former had been borrowed from the latter; but the more probable view (from comparison of the two passages) seems to be that Jeremiah is indebted to Obadiah. Ewald is of opinion that both writers copied from some earlier prophet. The subjects of the prophecy are the judgments to be inflicted upon the Idumeans on account of their wanton and cruel conduct towards the Jews at the time of the Chaldean invasion; and the restoration of the latter from captivity. The book may thus fitly be divided into two parts: the first containing a reprehension of the pride, self-confidence, and unfeeling cruelty of the Idumeans, and definite predictions of their destruction (1-16); the latter promising that the Jews shall not only be restored to their own land, but possess the territories of the surrounding nations, especially that of Idumea (11-21). The book is characterized by animation, regularity, and perspicuity.

O'ban, a small seaport-town of Scotland, co. of Argyll, on the bay of Oban. 61½ m. N.W. of Glasgow; pop. 2,000.

Obliga'to, *a.* [It.] (*Mus.*) See OBLIGATO.

Oblava'te, *a.* [Ob and clavate.] (*Bot.*) Clavate by inversion.

O'compressed, (-prést',) *a.* (*Bot.*) Compressed in a manner contrary to the customary one.

O'con'ic, **O'con'ical**, *a.* [Ob and conic.] (*Bot.*) Inversely conical.

O'cor'date, *a.* [Fr. *obcordé*.] (*Bot.*) Inversely heart-shaped. *i. e.*, with the broad end forming the apex.

O'duracy, *n.* Quality of being obdurate; obstinacy in will; invincible hardness of heart; impenitence that cannot be subdued; inflexible persistency in sin.

O'durate, *a.* [Lat. *obduratus*, from *obdure*—ob, and *duro*, to harden.] Hardened in heart; made proof against good or favor; stubborn; unyielding; inflexible; persisting obstinately in sin or impenitence; stubborn in evil.—Made hard; harsh; rugged; rough; stiff; as, an *obdurate* consonant, an *obdurate* metal.

O'durately, *adv.* With obduracy; with obstinate impenitence; stubbornly; inflexibly; persistently.

O'durateness, *n.* Obduracy; stubborn in penitence; fixed persistence in evil.

O'beah, **O'bi**, **O'by**, *n.* A kind of occult worship, or necromantic ceremony, practised among the negroes in the West Indies.

O'bed, (*Script.*) The son of Boaz and Ruth, and grandfather of David.

Obedience, *n.* [Fr.; Lat. *obedientia*.] Act of obeying, or quality of being obedient; compliance with a command, prohibition, or known law and rule of duty prescribed; the performance of what is required or enjoined by authority, or the abstaining from what is prohibited, in compliance with the command given thereto.

Obedient, *a.* [Lat. *obediens*.] Yielding compliance with commands, orders, or injunctions; performing what is required, or abstaining from what is forbidden; dutiful; submissive to restraint and control; subservient.

Obediential, *a.* [Fr. *obéïentiel*.] In compliance with command or injunction. (*r.*)

Obediently, *adv.* With obedience; in an obediential manner; with due submission to commands or authority.

Obeisance, (-o-bā'sans,) *n.* [Fr. *obéissance*, from Lat. *obedientia*, from *obedire*, to obey.] A bow or courtesy; an act of reverence made by an inclination of the body or knee; a genuflection; an expression of respect.

Obei'sant, *a.* Disposed to obey; reverent; submissive; respectful.

Obelis'al, *a.* Presenting the shape of an obelisk.

Obelisk, *n.* [Lat. *obeliscus*; Gr. *obeliskos*, dim. of *obelos*, a pointed pillar.] (*Arch.*) A tall 4-sided pillar, gradually tapering as it rises, and cut off at the top in the form of a flat pyramid. The Egyptian *O.* may be described as large stones of quadrilateral form, diminishing from the base upwards, till, within about a tenth of the height, the sides converge to a point. The width of the base is usually about a tenth of the height, to that part where the sides begin to converge; they are commonly formed from a single stone, mostly of granite.—Pliny (23-79) mentions two that stood before the temple in Alexandria: one Cleopatra's Needle was given to the U. S. in 1877, and erected in the Central Park of New York in 1881 (see Fig. 82). The Emperor Augustus removed several from Egypt to Rome, and succeeding emperors following his example 48 in all were transported. Four of these were restored and set up by Pope Sixtus V. (1585-90). Another was set up by Innocent X., one by Alexander VII., and one by Pius VII. An obelisk was removed by the French from Luxor to Paris in 1836, and one other by the English from Alexandria to London in 1877.

(*Printing.*) Same as DAGGER, *q. v.*

—*v. a.* To mark or designate with an obelisk.

Obelize, *v. a.* To mark with an obelisk; to point out as doubtful.

O'belus, *n.*; *pl.* OBELI. [Lat.; Gr. *obelos*, a spit.] (*Printing.*) A mark, thus —, or ÷;—so termed from its resemblance to a needle. It was used in old editions of the classics to point out suspected readings. The common use of the line—in modern writing is to mark the place of a break in the sense, where it is suspended, or where there is an ungrammatical transition; but a paragraph introduced where the sense is suspended, is more properly marked by the sign of a parenthesis.

O'berland, a portion of Switzerland, generally called *The Bernese Oberland*, and consisting of portions of the three cantons of Berne, Uri, and Unterwalden; in a more limited sense it only embraces the three

adjacent valleys of Grindelwald, Häsli, Lauterbrunnen.

O'berlin, in Ohio, a town of Lorain co., located on the Lake Shore & Mich. South. R. R., 28 m. E. of Norwalk. It has some manufacturing interests, and is the seat of an eminent collegiate institution, founded in 1834 for the purpose of affording economical education by combining manual labor with study. Pop. (1897) abt. 4,490.

O'beron, (*Medieval Myth.*) The king of the fairies. Wieland's beautiful poem, and Weber's romantic opera of this name, the *Midsummer Night's Dream*, and innumerable other poems and tales of which he is the hero, have made the name of *O.* so familiar, that it will be unnecessary to do more in this place than to state the origin of the name. The name *O.* first appears in the old French *fabliaux* of Huon of Bordeaux; it is identical with Anberon, or Alberon, the first syllable of which is nothing more than the old German word *Alb*, *elf*, or *fairy*, which in the *Heldenbuch* and other old German poems is expressed variously by Alberich or Alban. His wife's name was Titania, or Mab, whose powers have been so beautifully depicted in *Romeo and Juliet*.

Obese', *a.* [From *ob*, and *edere*, *esum*, to eat.] Excessively embonpoint; extremely corpulent; gross; stout; fat; fleshy.

Obes'ity, **Obes'ness**, *n.* [Fr. *obésité*; Lat. *obesitas*.] Fatness, or excess of the adipose tissue. All persons as they advance in life become fat, either generally or in part; some show it externally in the fullness and roundness of their limbs and body, and the general expansion of their frames; others remain externally the same spare, attenuated persons in advanced life they were in youth, though the fatty deposit may have taken place internally. It would seem also that a tendency to obesity is hereditary in some cases; and in such cases it results in all probability from some peculiarity of the organism which interferes with the proper oxidation of ingested material, such as a disproportion between the lung capacity and the fat-forming processes. Much has been written on the best method of preventing and removing obesity; all, however, insist on the great principle of avoiding farinaceous, oily, and saccharine ingesta in every form; and when discretion is used, great advantage sometimes accrues from this plan to the patient. But, on the other hand, much evil may arise from the adoption of a disciplinary diet unwatched by a physiological observer; and this especially applies to the rapid reduction of obesity in those who are hereditarily predisposed to it.

Obe'y, (-o-bā'), *v. a.* [Fr. *obéir*; Lat. *obedire*—ob, and *audire*, to hear.] To hearken, listen, or attend to; to comply with, as the commands, instructions, or injunctions of a superior, or with the requirements of law; to yield submission to.—To be subject to or ruled by; to submit to the government, direction, or control of.

"Africa and India shall his power obey."—Milton.

—To yield to the impulse, power, or operation of; as, a ship *obeys* her rudder.

Obe'yer, (-o-bā'er,) *n.* He who, or that which, yields obedience.

Obe'y'ingly, *adv.* Submissively; obediently; subserviently.

O'bey's River, in Tennessee, enters Cumberland River from Overton co. Length, abt. 100 m.

Obfus'cate, **Obfus'cate**, *v. a.* [Prefix *ob*, and *fuscare*, to make dark; Fr. *obfusquer*.] To obscure; to darken; to dim; to cloud.—To confuse; to daze; to bewilder; to make heavy or stupid.

"A gentleman slightly obfuscated with wine."—Hazlitt.

Obfus'cation, *n.* [Lat. *obfuscatio*.] Act of darkening or confusing; state of being darkened, or bewildered.

O'bi, **O'by**, or **Ob**, a large river of Asiatic Russia, rising by two sources on the N.W. side of the Little Altai mountains, near the frontiers of China, Lat. 51° N., Lon. 89° E., and after a N.W. course of 2,700 m. falling into the Gulf of Obi, near Lat. 67° N., Lon. 72° E.—The Gulf of Obi is a long inlet of the Arctic Ocean, 450 m. long, by 100 m. broad.

Obidos, (-o-bee'doce,) a town of Brazil, abt. Lat. 1° 50' S., Lon. 55° 18' W. It is situated on the Amazons at the head of its tide-water, is regularly built, and carries on an extensive trade in cotton and cocoa. Pop. 6,000.

Obim'briate, *a.* [Ob, and *imbricatus*.] (*Bot.*) Having the imbrication depending downward.

O'blion, in Tennessee, a river formed by the union of several branches in Otton co., and flowing S.W., enters the Mississippi River from Dyer co.

—A N.W. co., adjoining Kentucky on the N., intersected by the Obion river, and numerous smaller streams; area, about 540 sq. m. Surface, nearly level; soil, fertile. Tobacco, cotton, corn and live stock are the staple products. Cap. Union City. Pop. (1890) 27,273.

Obispo, (-o-bees'po,) [Sp., a bishop.] A river of the Isthmus of Panama, flowing into the Chagres River near Cruces.

O'bit, *n.* [Lat. *obitus*—obec, to go down, to sink, to die—ob, and *eo*, *itum*, to go.] Death; demise; decease.—Funeral ceremonies.—A funeral service for the dead on the anniversary of decease.—A peculiar length of slate. Post obit. [Lat. *post obitum*.] After death.

O'bit'er, *adv.* [Lat.] Incidentally; casually; in passing; as, *obiter dictum*, a thing incidentally said.

O'bit'nal, *a.* [From Lat. *obitus*, death. See OBIT.] Belonging or having reference to obits, or the times of celebration of funeral ceremonies; as, *obit'nal* days.

O'bit'uarily, *adv.* After the manner of an obituary.

O'bit'uary, *n.* [Fr. *obituaire*, from Lat. *obitus*, death.] An account of a person or persons deceased; that which is caused by the *obit* or death of any one, especially a public announcement of a person's decease, accompa-

nied by a brief biographical notice of his life and character. See *Annual Index of Obituaries*, by the Index Soc. (*Eccle.*) In the Roman Catholic Church, a list of the dead, or a register of the days set apart for obit'nal solemnizations and services.

Object, *n.* [O Fr.; Fr. *objet*; Lat. *objectus*, from *obicio*—ob, and *jacio*, to throw.] That which is put against, in the way, or opposite; that about which any power or faculty is employed, or something apprehended or presented to the mind by sensation or imagination.—That to which the mind is directed for accomplishment or attainment; something presented to the senses, or the mind, to excite emotion, affection, or passion; that which is produced, influenced, or acted on by something else; end; aim; ultimate purpose.

(*Gram.*) That to which activity is directed; that which is influenced or acted by something else, as a noun or pronoun governed by a verb or preposition.

(*Metaph.*) *Object* and *Subject*, *Objective* and *Subjective*, are two sets of correlative terms much used in philosophy, and not always free from ambiguity. In philosophy there is a grand philosophical distinction, lying at the root of all knowledge, between that which knows (the subject) and that which is known (the object). The former is what is known among philosophers as the *Ego*, or conscious mind; the latter, as the *Nom ego*, or that which is known, with its modes and properties. But this distinction, though at first sight so clear, is not without its ambiguities, for we may find in the mind itself both the object and subject of thought. The feelings and emotions of the mind itself may become as it were objectified and contemplated by the *ego*. Hence, sir William Hamilton proposes that "when we wish to be precise, or when any ambiguity is to be dreaded, we should employ, on the one hand, either the terms *subject-object*, or *subjective-object* (and this we could again distinguish as absolute or as relative), on the other, either *object-object*, or *objective-object*." The terms *subject* and *object* were, for a long period, not sufficiently discriminated from each other. Even among the philosophical Greeks, the terms *hupokeimenon* and *antikeimenon* were used ambiguously, the former being used by Aristotle to signify both the subject proper (*id in quo*) and the object proper (*id circa quod*); while the latter he uses in the plural to signify in general the various kinds of opposites. To constitute a metaphysical object, actual existence is not necessary; it is enough that it is conceived by the subject. Nevertheless, it is customary to employ the term *objective* as synonymous with real, so that a thing is said to be *objectively* considered when regarded in itself, and to be *subjectively* considered, when it is presented in its relation to us.

—*v. a.* [Fr. *objecter*, Lat. *obicio*, *objectus*—ob, and *jacio*.] To throw or put before; to cast in the way or against; to expose prominently to view.

* Pallas . . . the mist *objected*, and condens'd the skies."—Pope.

—To oppose; to present in opposition; to offer oppositely;—with *to* or *against*; as, to *object to* the evidence of a witness.—To reproach with; to hold up in censure;—sometimes with *to*.

"He gave to him to *object* his heinous crime."—Spenser.

—*v. n.* To oppose in words or arguments; to offer reasons against;—generally followed by *to*; as, she *objects to* my company.

Object-glass, *n.* (*Optics.*) The glass in a telescope or microscope placed at the end of a tube next the object. See MICROSCOPE.

Object'ify, *v. a.* [Lat. *objectus*, and *facere*, to make.] To cause to become, or assume the character of, an object.

Objection, (-jick'shun,) *n.* [Fr.; Lat. *objectio*.] Act of objecting.—That which is, or may be, put forward in opposition; adverse reason or argument; reason existing, though not offered, against a measure or an opinion; fault found.—Cause of trouble or difficulty. (*r.*)

Objectionable, *a.* Justly open to objections; such as may be liable or likely to be objected against; as, an *objectionable* book or individual.

Objectist, *n.* A person learned in the objective philosophy.

Object'ive, *a.* [Fr. *objectif*.] Pertaining or having reference to an object.

(*Metaph.*) Relating to whatever is exterior to the mind; outward; exterior; extrinsic;—correlative to *subjective*. See OBJECT.

(*Gram.*) Noting the case which follows a transitive verb or a preposition; accusative.

Objective point. (*Mil.*) A point of concentration for the operations of an army.

—*n.* The object-glass of the microscope or telescope.

(*Gram.*) The objective case.

Object'ively, *adv.* In an objective manner.

Object'iveness, *n.* State, relation, or condition of being objective.

Object'ivity, *n.* [Fr. *objectivité*.] State or condition of being objective.

Object'ize, *v. a.* To make an object of, or to regard as, or place in the position of, an object.

Objectless, *a.* Without an object; purposeless; aimless.

Object'or, *n.* One who objects; one who raises difficulties; one who puts forward arguments or reasons against a proposition or measure.

Ob'jectant, (-jish'yant,) *n.* [From Lat. *objicere*, to object.] One who offers objections; an objector.

Objura'tion, *n.* [From *ob*, and Lat. *jurare*, to swear.] A binding by oath or adjuration.

Objur'gate, *v. a.* [From *ob*, and Lat. *jurgare*, to quarrel.] To reprove; to scold; to chide; to rebuke.

Objurgat'ion, *n.* [Lat. *objurgatio*.] Act of objurgating; reprehension; reproof; a chiding.

Objur'gatory, *a.* [Lat. *objurgatio*.] Administering objurcation or reproof; culpatory; as, an *objurgatory* lecture.

Oblan'ceolate, *a.* [Prefix *ob*, and *lanceolate*.] (*Bot.*) Inversely lanceolate, as a leaf.

Oblate', *a.* [Lat. *oblatus*, from *offero* — *ob*, against, and *fero*, *latus*, to bear.] (*Geom.*) Flattened or shortened; — a term applied to a spheroid, produced by the revolution of a semi-ellipsoid about its shorter diameter. Of this figure is the earth, and probably all the planets, having the equatorial diameter greater than the polar.

[Lat. *oblatus*, from *offero*, to offer.] Offered up; devoted; consecrated; dedicated; — almost wholly used in the titles of Roman Catholic orders.

n. (*Eccles. Hist.*) In the Roman Catholic Church the term Oblate was anciently applied to: 1. A person who, on embracing the monastic state, had made a donation of all his goods to the community. 2. One dedicated to a religious order by his parents from an early period of his life. 3. A layman residing as an inmate in a regular community, to which he had assigned his property either in perpetuity or for the period of his residence. 4. A layman who had made donation, not only of his property, but his person, as bondsman to a monastic community. — In modern times the Oblates are a class of religious bodies, which differ from the religious orders strictly so called, in not being bound by the solemn vows of the religious profession.

Oblate'ness, *n.* State or quality of being oblate.

Oblat'ion, *n.* [Fr.; Lat. *oblatio*, from *offero*, *oblatus*, to offer, to present.] Anything offered or presented in worship, reverence, or sacred ceremony; a sacrifice; an offering.

"The kind oblation of a falling tear." — Dryden.

(*Eccles.*) A contribution for the support of religious services, the clergy, and the poor, in the times of the early Christian Church.

Oblecta'tion, *n.* [Lat. *oblectatio*.] The act of gratifying exceedingly; delectation; delight; pleasure. (*R.*)

Obliga'do, a town of the Argentine Republic, on the Parana River, near Buenos Ayres.

Obligate, *v. a.* [Prefix *ob*, and Lat. *ligare*, to bind; Fr. *obliger*.] To hold by a constraining force or motive; to cause to be under obligation. — To bind by pledge, contract, or sense of duty; to hold firmly and formally to an act, implying constraint.

Obligation, *n.* [Fr.; Lat. *obligatio*, from *obligo* — *ob*, and *ligo*, to bind. See **LIGAMENT**.] Act of binding, obligating, or holding by constraint. — The binding power of a pledge, promise, vow, oath, or contract, or of law, civil, political, or moral, independent of a promise; that which constitutes legal or moral duty, and which renders liable to coercion and penalty for non-performance or neglect thereof; the binding force of civility, kindness, or gratitude, when the performance of a duty cannot be enforced, or the infraction thereof punished by law.

"No ties can bind, that from constraint arise,
When either's forced, all obligation dies." — Granville.

— An act by which a person becomes bound to do something to or for another, or to forbear something; state of being indebted for an act of service, good-will, or kindness; as, he placed me under many obligations to him.

(*Law*.) A bond containing a penalty with a condition annexed for payment of money, the performance of a covenant, or the like. It differs from a bill, which is generally without a penalty or condition, though a bill may be made obligatory.

Obligato, **Obligato**, *a.* [It., bound, compelled.] (*Mus.*) A term applied to all voices or instruments which are indispensable to the just performance of a piece. An instrument is sometimes *obligato* throughout a piece, in which case it would be called a *concerto* for that instrument but when an instrument is only *obligato* in certain parts, these parts are termed *obligato* or *solo* passages. In its more general acceptance, the word *obligato* refers to those auxiliary parts or accompaniments which cannot properly be omitted.

Obligatorily, *adv.* By constraint; under bond or obligation.

Obligatoriness, *n.* State or quality of binding, constraining, or coercing.

Obligatory, *a.* [Fr. *obligatoire*; L. Lat. *obligatorius*.] Imposing or implying an obligation; binding in law or conscience; necessitating fulfillment or forbearance of some act; constraining duty.

Oblige, (*ob-lîj'*); sometimes, but antiquatedly, pronounced *ob-leij'*. [Fr. *obliger*; Lat. *obligo* — *ob*, and *ligo*, to bind.] To bind, constrain, or compel by necessity or physical force; to bind or compel by legal or moral power; to necessitate; to bind or constrain by a sense of propriety, honor, or duty. — To do a favor to; to lay under obligation of gratitude; to please; to gratify; to bring under a sense of obligation; to afford gratification; to bind by some service rendered; to accommodate.

Obligee, *n.* [Fr. *obligé*.] The person to whom a bond is given, or he to whom another is bound.

Oblige'ment, *n.* Obligation. (*R.*)

Obliger, *n.* One who confers an obligation; one who binds another.

Oblig'ing, *a.* [Fr. *obligeant*.] Having the disposition to oblige or confer favors; granting favors; — hence, civil; kind; complaisant; courteous.

"So obliging that he ne'er obliged." — Pope.

Oblig'ingly, *adv.* With complaisance; kindly; civilly; gratifyingly.

Oblig'ingness, *n.* Constrained obligatoriness. — Disposition to courtesy or kindness; complaisance; civility.

Obligor, *n.* One who gives his bond to another; — opposed to *obligee*.

Oblig'ulate, *a.* (*Bot.*) Said of the corolla of a ligu-

late floret, when extended on the inner, instead of on the outer, side of a capitulum.

Obliqua'tion, *n.* [From Lat. *obliquare*, to turn obliquely.] Act of becoming oblique, or of deviating from a straight direction or course; a declination to one side; obliquity; as, the *obliteration* of the eyes. (*Newton*.) — Divergence from moral rectitude.

Oblique, (*ob-lîk'*) *a.* [Fr.; Lat. *obliquus* — *ob*, and *liquis*, awry.] Awry; aslant; inclined; not direct; deviating from a right line; not perpendicular or parallel; as, an *oblique* glance.

"It has a direction oblique to that of the former motion." — Cheyne.

— Deviating from rectitude; not straightforward; sinister; obscure; also, underhand.

"Critics . . . of oblique or imperfect views." — Browne.

— Unpropitious; envious; emulous. (*R.*) — Collateral; not in the direct line of descent; as, an *oblique* connection.

O angle. (*Geom.*) Any angle greater or less than a right angle. — *O-angled triangle*, a triangle with no right angle. — *O arch*, a skew-arch; an arch crossing in an oblique direction. — *O case*. (*Gram.*) Any case in nouns except the nominative. — *O circle*. A circle of projection whose plane is in an oblique direction to the axis of the primitive plane. — *O cylinder*, or *cone*. One whose axis is oblique to the plane of its base. — *O fire*. (*Mil.*) A fire directed in course from the perpendicular of the line fired at. — *O leaf*. (*Bot.*) An unsymmetrical leaf. — *O line*. (*Geom.*) When one straight line stands upon another, and makes unequal angles therewith, the angles are said to be *oblique*, the one being greater than a right angle, and the other less; — hence, a line is only oblique as it relates to another line; otherwise the word would be destitute of meaning. — *O motion*. (*Mus.*)

In contrapuntal music, that motion in which one of the parts holds on a sound, while the other rises or falls. — *O muscle*. (*Anat.*) The name given to several sets of muscles whose function is to perform a sideways or oblique action; thus we have the internal and external oblique muscles of the eye, the latter sometimes called the pathetic or *trochleares*, from the use ladies make of them to ogle; next, the external and internal abdominal oblique muscles, serving partly to turn round the trunk; and finally, a set of oblique muscles of the neck, moving the head round. — *O planes*. (*Dialling*.) Planes which incline toward the horizon. — *O sailing*. (*Naut.*)

The movement that occurs when a ship, being in some intermediate rhomb between the four cardinal points, makes an oblique angle with the meridian, and continually with both its latitude and longitude. — *O speech*. (*Rhet.*) That which is indirectly quoted from an original speaker. — *O system of coördinates*. (*Geom.*) In analytical geometry, a system wherein the coördinate axes are oblique to each other.

— *v. n.* To move in an oblique direction, or swerve from a perpendicular line. — (*Mil.*) To move forward obliquely, by stepping sideways either to the right or left.

Oblique'angled, *a.* Presenting oblique angles; as, an *oblique-angled* triangle.

Obliquely, (*ob-lîk'ly*) *adv.* In a line deviating from a parallel, perpendicular, or right line; indirectly; by a side glance; by an illusion; not in the straight or plain meaning.

Oblivity, **Obliviousness**. (*ob-lîk'vî-ty*) *n.* [Fr. *oblivité*; Lat. *oblivitus*.] State of being oblique; deviation from a straight line; divergence from parallelism or perpendicularity. — Deviation from moral rectitude.

"For a rational creature to oppose the will of God imports a moral obliquity." — South.

— Irregularity; a swerving or divergence from ordinary rules.

Oblit'erate, *v. a.* [Fr. *oblitérer*; Lat. *oblitero*, *obliteratus*, from *oblino*, *oblitus*, to daub or smear over — *ob*, and *lino*, to besmear.] To blot out; to erase; to efface; to expunge; to cancel; as, to *obliterate* a passage in a writing. — To wear out; to deface or destroy by time or other means.

"Wars and desolations obliterate many ancient monuments." — Hale.

— To reduce to a very faint, low, or imperceptible state; as, an *obliterated* pulse.

Oblitera'tion, *n.* [Lat. *obliteratio*.] Act of obliterating or erasing; effacement; a blotting, expunging, or wearing out; extinction.

Oblit'orative, *a.* Tending to obliterate or expunge; erasing.

Obliv'ion, *n.* [Lat. *oblivio*, *oblivionis*, from *obliviscor*, to forget — *ob*, and *obsolet*, *liviscor*.] Act of forgetting, or the state of being forgotten, or blotted out from memory; effacement from the mind or recollection; forgetfulness; cessation of remembrance. — A forgetting of offences, or official remission of punishment; an amnesty.

Obliv'ious, *a.* [Lat. *obliviosus*.] Promoting oblivion; causing forgetfulness. — Forgetful; evincing oblivion.

Obliv'iously, *adv.* Forgetfully; in an oblivious manner.

Obliv'iousness, *n.* State or condition of being oblivious.

Oblong, *a.* [Fr.; Lat. *oblongus* — *ob*, and *longus*, long.] Possessing greater length than breadth.

(*Bot.*) A term applied to bodies which are elliptical and blunt at each end, as in the leaves of *Hypericum perforatum*.

— *n.* (*Geom.*) A parallelogram which is equiangular but not equilateral. The term is synonymous with *rectangle*. A prolate spheroid is sometimes, though rarely, called an *oblong spheroid*.

Oblongish, *a.* Inclined to be oblong.

Oblongly, *adv.* In an oblong form.

Oblongness, *n.* State or quality of possessing greater length than breadth.

Ob'long-o'vate, *a.* (*Bot.*) Partly oblong and partly ovate, but having an inclination to the latter.

Obloquy, (*ob-lo-kwê*) *n.* [L. Lat. *obloquium*, from Lat. *obloquor* — *ob*, and *loquor*, to speak.] Language that casts contempt on men and their actions; contumelious speech; reviling or reproachful language; detraction.

Obmutes'cence, *n.* [Prefix *ob*, and Lat. *mutescere*, to grow dumb.] Loss of speech; silence. — A keeping silence; continued muteness; taciturnity.

Obnoob'by, in *Indiana*, the former name of a township of Fulton co.

Obnoxious, (*nôk'shus*) *a.* [Lat. *obnoxius* — *ob*, and *noxia*, harm, hurt, injury, fault.] Liable or subject to cognizance; exposed to blame or punishment; reprehensible; censurable; as, an *obnoxious* look. — Liable or subject to cognizance; exposed; answerable. — Not approved; hurtful; noxious; odious; detested; as, an *obnoxious* person, an *obnoxious* policy.

Obnox'iously, *adv.* In a state of sullection or liability; reprehensibly; odiously; offensively.

Obnox'iousness, *n.* State or quality of being obnoxious.

O'boe, *n.* [Fr. *hautbois*.] (*Mus.*) A wind-instrument of the reed kind, which at a very early date took its place as one of the essential instruments of the orchestra. It consists of a tube, made of box, ebony, or cocowood, about twenty-one inches long, narrow at the top, but gradually widening towards the lower end or bell, and divided into three pieces or joints. In the upper and middle ends are holes, by stopping or opening which with the fingers, the natural scale is formed, the intermediate semi-tones being produced by means of the keys, of which some hautboys have but two, while others have fifteen, and sometimes more; they are seldom made now with less than fifteen keys. Its range of available notes extends from B to G. in alt. The tone of the hautboy is rich and sweet, and is particularly adapted to *piano* and *dolce* passages. This term is also given by organ-builders to a reed stop similar in shape to the real hautboy, the sound of which it is intended to imitate. — (Also written *hautboy*.)

O'boeist, *n.* A performer on the oboe or hautboy.

Obola'ria, *n.* [From the form of the leaves resembling a small coin.] (*Bot.*) A genus of perennial plants order *Orobanchaceæ*, having leaves opposite, flowers axillary and terminal, sessile, with leaf-like sepals. — *O. Virginica*, the Penny-wort, has a stem 4-8 inches high, often in clusters, sub-simple, or with a few opposite branches above; corolla, pale-purple, or whitish, larger than the stamens. It is found in woods in the Middle States.

Obole, *n.* [Fr.] (*Phar.*) The weight of twelve grains.

Obolize, *v. a.* Same as **OBELIZE**, *q. v.*

Ob'olus, *n.* [Lat.; Gr. *obolos*.] (*Antiq.*) An Athenian silver coin, which was the sixth part of a drachma, equivalent in value to alt. 3 cents. — Also, an ancient weight, the sixth part of a drachm.

Obovate, *a.* [Fr. *obové*; Lat. *ob*, and *ovatus*, egg-shaped.] (*Bot.*) Inversely ovate, as a leaf.

Obovoid, *a.* (*Bot.*) Approaching the obovate form.

Obrajillo, or **OBRAXILLO**, (*o-bra-heel'yo*), a town of Peru, alt 50 m. N.E. of Lima.

Obreptitious, (*-tîsh'us*) *a.* [Lat. *obreptitius*.] Done secretly, or in a surreptitious manner. (*R.*)

O'Brien, WILLIAM SMITH, an Irish politician, B. of an ancient family, 1803, was educated at Harrow School, and Trinity College, Cambridge. In 1826, he entered the British House of Commons as member for Ennis, and, in 1835, was returned for Limerick, which city he represented for 13 successive years. Starting in political life as a Tory of the "bluest" type, O'Brien gradually veered round to liberalism, and eventually became a zealous adherent of the so-called "Young Ireland" party. In July, 1848, he took part in the insurrection which broke out in co. Tipperary, was arrested, tried at Dublin for high-treason, and sent as a political convict for life to Tasmania. There, his exemplary conduct, and chivalrous observance of his parole of honor, became so marked, that, in 1856, the British govt. granted him a free pardon, and he returned home. D. 1864.

O'Brien (*o-bri'en*), in *Iowa*, a N.W. co.; *area*, about 576 sq. m. *Rivers*. Little Sioux river, Floyd creek, and several smaller streams. *Surface*, level; *soil*, fertile. *Cap.* Primghar. *Pop.* (1895) 15,609.

— A village, former cap. of the above co., about 130 m. N.W. of Des Moines.

Obscene, (*ob-sçen'*) *a.* [Fr.; Lat. *obscenus*; most probably from *obscenus* or *obscævinus* — *ob*, and *scævus*, that is on the left, as an omen; Gr. *skaios*, left, ill-omened.] Impure; immodest; lewd; indecent; offensive to modesty, chastity, or delicacy; as, *obscene* language, an *obscene* book. — Foul; filthy; disgusting; offensive to the senses; as, *obscene* attire. — Dryden.

— Ill-omened; inauspicious; bodeful. (*A Latinism*.)

"Atheism, sailing on obscene wings." — Coleridge.

Obscene'ly, *adv.* In a manner offensive to chastity or purity; lewdly; unchastely; impurely.

Obscene'ness, **Obscen'ity**, *n.* [Fr. *obscénité*; Lat. *obscenitas*.] State or quality of being obscene; impurity in expression or representation; that quality in words or things which presents what is offensive to chastity, or purity of mind; ribaldry; lewdness.

Obscun'ant, *n.* One who obscures, or hinders mental enlightenment and the progress of knowledge.

Obscun'arism, *n.* The doctrinal system or principles of one who seeks to prevent the dissemination of knowledge, and the light of popular inquiry and progress.

Obscun'arist, *n.* An obscurant.

Obscura'tion, *n.* [Lat. *obscuratio*.] Act of obscuring

or darkening. — State of being darkened or obscured; as, the *obscuration* of the sun during an eclipse.

Obscure, *a.* [Fr. *obscur*; It. *oscuro*; Lat. *obscurus* — *ob*, and perhaps Gr. *skieros*, shady, from *skia*, a shadow, shade; Sansk. *sku*, to cover.] Over-shadowed; clouded; darkened; dim; destitute of light; imperfectly illuminated; as, an *obscure* grove. — Living in darkness; hidden; concealed; as, an *obscure* bird. — Remote from observation; retired; comparatively unknown or unnoticed; as, an *obscure* village. — Humble; mean; not noted or noticed; unknown; as, an *obscure* person. — Not easily understood; not obviously intelligible; abstruse; complex; illegible; as, an *obscure* passage in theology. — Indistinct; imperfect; incomplete; as, an *obscure* view of a distinct object.

— *v. a.* [Lat. *obscurare*.] To darken; to cloud; to make partially dark; to dim; to hide from the view; to make less visible or less legible; to make less intelligible; to make less glorious, beautiful, or noteworthy.

Obscurely, *adv.* Darkly; imperfectly; dimly; privately; not plainly or conspicuously; indirectly; by hints or allusions.

Obscureness, Obscurity, *n.* [Fr. *obscurité*; Lat. *obscuritas*.] State or quality of being obscure; darkness; want of light; state of being unnoticed or unknown; illegibility; humble condition; unintelligibility; as, he raised himself out of *obscurity*; *obscurity* of a meaning, &c.

Obscurer, *n.* He who, or that which, obscures.

Obsecrate, *v. a.* [From *ob*, and Lat. *sacrare*, to declare as sacred.] To supplicate; to beseech; to implore.

Obsecration, *n.* [Lat. *obsecratio*.] Act of obsecrating or entreating.

(*Rhet.*) A figure of speech in which the orator beseeches the aid of God or man.

Obsequience, *n.* Obsequiousness.

Obsequious, (*-sē'kwī-us*), *a.* [Fr. *obsequieux*; Lat. *obsequiosus* — *ob*, and *sequor*, to follow.] Meekly obedient or submissive to the will of another; abjectly compliant; meekly yielding to the desires of others; servilely or meekly condescending; compliant to excess; parasitical; toadyish; as, an *obsequious* admirer or follower.

Obsequiously, *adv.* With servile obedience; with abjectly prompt compliance; with obsequiousness, or fawning readiness.

Obsequiousness, *n.* State or quality of being obsequious; ready obedience; abject compliance; servile submission to the commands or wishes of a superior; mean or excessive complaisance; toadyishness.

Obsequy, *n.*; *pl.* **Obsequies**, (rarely used in the singular.) (*ob'sē-ki-ēz*) [Fr. *obseques*, from Lat. *obsequium* — *ob*, and *sequor*, to follow.] Funeral rites or solemnities; the last duties performed to a deceased person.

Observable, *a.* [Fr.; Lat. *observabilis*.] That may be observed or noticed; worthy of observation or particular notice; remarkable; as, an *observable* difference.

Observableness, *n.* State or quality of being observable.

Observably, *adv.* In a manner worthy of note or remark; in an observable degree.

Observance, *n.* [Fr.; Lat. *observantia*.] Act of observing; the act of keeping or adhering to in practice; attention; performance. — Thing to be observed; rule of practice or performance. — Ceremonial reverence in practice; performance of external rites, ceremonies, or service.

"Religion . . . consisting in a few easy *observances*." — *Rogers*.

Observandum, *n.*; *pl.* **Observanda**. [Lat.] Something to be observed or remarked.

Observant, *a.* [Lat. *observans*.] Observing; taking note or notice; attending, viewing, regarding, or remarking; as, an *observant* traveller. — Mindful; heedful; regardful; adhering to or observing in practice, — preceding *of*.

"She, now *observant* of the parting ray." — *Pope*.

— Submissively; scrupulously or carefully attentive.

Observantly, *adv.* With attentive observation, view, or regard.

Observants, *n. pl.* (*Ecc. Hist.*) A branch of the Franciscan friars, who, after the departure of the order from the strictness of its first rule, resolved to go back to its original acceptance; while the other party, who were called the Conventuals, preferred adhering to the relaxed regulations. See **FRANCISCANS**.

Observation, *n.* [Fr.; Lat. *observatio*.] Act of observing, or of taking notice; act of seeing or of fixing the mind on anything; attentive inspection or view. — Notion gained by observing; effect or result of taking cognizance in the mind. — Expression of what is observed or thought; note; remark. — Observance; adherence to in practice; performance of that which is prescribed.

(*Nat. Philos.*) Act of taking cognizance of some fact or event in nature, as any meteorological phenomenon, &c.

(*Astron. and Phys.*) Act of measuring with proper instruments the angular distance, altitude, &c., of the sun, and other celestial bodies.

Observational, *a.* Tending to, containing, or consisting of observations.

Observative, *a.* Observing; heedful; attentive; watchful.

Observer, *n.* [Lat.; Fr. *observateur*.] One who observes, remarks, or takes notice; as, "the *observer* of the bills of mortality." — *Hale*.

Observatory, *n.* A place or building destined for the purpose of making astronomical or physical observations, and furnished with appropriate instruments. Observatories are generally built in the form of a tower,

from which there is an unobstructed view of the heavens, and in which the instruments are protected from disturbing influences. For example, there are large astronomical telescopes always placed in the direction of the meridian, and the internal arrangement of the edifice is such as to facilitate astronomical observations. The roof of the observatory is also flat, to favor the view towards the horizon. The principal instruments used in an observatory are quadrants, sextants, and octants; transit, equatorial, parallactic, and circular instruments; achromatic and reflecting telescopes, night and day telescopes, chronometers, &c.; which will be found described under their proper heads. The Tower of Babel, erected about B. C. 2247 (*Gen.* xi. 1-9), is supposed by some writers to have been an observatory. The tomb of Osmandyas, in Egypt, was an edifice of this kind. Observatories existed among the Chinese and the Hindoos at a remote period. The observatory at Alexandria, built B. C. 300, was the most celebrated of ancient times. The first modern observatory was erected at Cassel in 1561. The Imperial O. of Paris was built in 1667, that of Greenwich in 1676, that of Berlin in 1711, and that of St. Petersburg in 1725. The first telescope used for astronomical purposes, in this country, was set up at Yale College in 1830, and the first O. building was erected in 1836 at Williams College, Mass. The National O. at Washington was built in 1842; that at Cambridge, about the same time, and each have subsequently been furnished with the best equatorials, and have done great service to science. O. has been erected upon many noted elevations, such as Mt. Washington in this country, and Etna and Vesuvius in Europe.

Observe, (*ob-zēv'*) *v. a.* [Fr. *observer*; Lat. *observare* — *ob*, and *servo*, to watch for, to guard, to keep, to hold.]

To take notice of; to watch; to mark; to heed; to see or behold with some attention; to take notice or cognizance of by the intellect; as, to *observe* a comet, to *observe* another person's dress or peculiarities, &c. — To utter or express, as a remark, opinion, or sentiment; to mention in a casual or incidental manner. — To keep religiously; to celebrate with devout or ceremonious care; as, to *observe* the Sabbath. — To keep or adhere to in practice; to comply with; to obey; to practice; as, to *observe* the etiquette of good society.

— *v. n.* To be attentive; to heed; to take notice.

— To comment; to make an incidental remark; to say casually, or in passing.

Observer, *n.* One who observes, or who remarks or takes notice, particularly one who looks to with care, attention, or vigilance; a beholder; a looker-on; a spectator; as, a keen *observer*. — One who keeps any law, custom, rite, or regulation; one who practises anything closely. — One who is bred or trained to, or habitually engaged in, habits of observation; as, a meteorological *observer*. — One who performs; one who fulfils or carries out; as, he is a strict *observer* of his word. — One who keeps or holds religiously; as, an *observer* of the duties of Christianity.

Observership, *n.* State, office, condition, care, or quality of an observer.

Observing, *a.* Paying particular attention; taking constant notice; closely attentive to all that passes; as, an *observing* writer.

Observingly, *adv.* With close observation; heedfully; carefully; attentively.

Obsession, (*-sē'sh-un*), *n.* [Fr.; Lat. *obsessio*.] Act of besieging, or state of being besieged. — In the language of exorcists, the state of a person who is said to be vexed or besieged by an evil spirit. O. differed from demoniacal possession; in the latter, the demon had possession of the patient internally; in the former, he attacked him from without. Thus, the state of Sara, the bride of Tobias, whose bridegrooms were killed by an evil spirit haunting her (*Tob. iii. 1*), was one of *obsession*.

Obsidian, *n.* [Said to be named after *Obsidius*, a person who first found it in Ethiopia.] (*Mon.*) A vitreous lava, produced in large quantities during volcanic eruptions by the melting of pumice-stone. It is a true glass, closely resembling furnace-slag, and consists of silicate of alumina, with varying percentages of soda, potash, lime, and oxide of iron. It is generally black or dark-gray, with occasional crystals of feldspar dispersed through its mass. It occurs in streams or detached masses near volcanoes, and is used by savage nations for making mirrors, axes, knives, &c. It often graduates into pumice-stone.

Obsidional, *a.* Pertaining, or having reference to a siege.

Obsidional crown. (*Rom. Antiq.*) A crown of honor given to a general who raised the siege of an invested place. It was formed of grass, growing on the rampart.

Obsignation, *n.* [Lat. *obsignatio*.] Act of sealing; state of being sealed or confirmed; — used, specifically, of sealing by the Holy Spirit; as, "the spirit of *obsignation*." — *Bp. Taylor*.

Obsolescence, *n.* State or quality of becoming obsolete.

Obsolescent, *a.* [From prefix *ob*, and *solere*, to use.] Passing into desuetude; becoming obsolete; going out of use.

Obsolete, *a.* [Lat. *obsoletus* — *ob*, and *solio*, to be accustomed.] Antiquated; gone into disuse; no longer current; out of date; gone by; as, an *obsolete* phrase.

(*Nat. Hist.*) Obscure; somewhat indistinct; rudimentary.

Obsolescence, *n.* State of being obsolete or out of use; state of being neglected in use; state of desuetude; quality of being no longer of current application.

(*Nat. Hist.*) Lack of development; obscurity.

Obstacle, (*ob'sta-kl*) *n.* [Fr.; Lat. *obstaculum* — *ob*,

and *sto*, to stand.] That which stands against or opposes; a stoppage; a hinderance; an impediment; an obstruction; anything that stands in the way and hinders progress, either in a moral or physical sense.

Obstetric, Obstetrical, *a.* [It. *ostetrica*, a midwife = Lat. *obstetrix*, from *obsto*, to stand before — *ob*, and *sto*, *statum*, to stand.] Belonging or relating to midwifery, or the delivery of women in childbed; as, the *obstetric* art.

Obstetrician, (*-trish'an*) *n.* One skilled in, or who practises, obstetrics.

Obstetrics, *n. sing.* The science of midwifery; the art of facilitating the delivery of women in parturition; obstetrics.

Obstetricy, *n.* See **OBSTETRICS**.

Obstinacy, *n.* [Lat. *obstinatio*; Fr. *obstination*.] Quality of being obstinate; a firm, and usually unreasonable, adherence to an opinion, purpose, or system; a fixedness of thought, belief, or judgment, that will not yield to persuasion, arguments, or other fair means; inflexibility; resoluteness; persistency; pertinacity; stubbornness; headstrong tenacity of will; as, *obstinacy* of disposition. — Fixedness impervious to, or proof against, application, or that yields with difficulty, and by slow degrees; as, the *obstinacy* of a disease.

Obstinate, *a.* [Lat. *obstinatus*, from *obstino* — *ob*, and *sto*, to stand.] Standing firmly against, or in opposition; inflexible; immovable; stubborn; persistent; self-willed; fixed firmly in resolution; pertinaciously adhering to an opinion, idea, or purpose, not yielding to reason, argument, or other means; — used, for the most part, in a bad sense, as indicative of unreasonableness; as, an *obstinate* man, an *obstinate* mule. — Not yielding, or not easily subdued, reined, or removed; as, an *obstinate* cough.

Obstinately, *adv.* Stubbornly; pertinaciously; persistently; with fixedness of purpose not to be shaken; in an obstinate manner; as, *obstinately* stiff-necked.

Obstinateness, *n.* State, quality, or condition of being obstinate; stubbornness; pertinacity in opinion or purpose; fixed determination.

Obstipation, *n.* [Lat. *obstipare*, to lean to one side.] Act of stopping up, as a way or passage.

Obstreperous, *a.* [Low Lat. *obstreperus* — *obstrepo*, to make a noise at — *ob*, and *strepo*, to make a noise.] Making a tumultuous noise; attended by clamor; vociferous; loud; noisy; as, *obstreperous* mirth.

Obstreperously, *adv.* With tumultuous or clamorous noise; loudly; vociferously.

Obstreperousness, *n.* State or quality of being obstreperous.

Obstruction, (*-strik'shun*) *n.* [Ob, and Lat. *stringere*, to bind tight.] State of being constrained; that which compels; bond.

Obstruct, *v. a.* [Fr. *obstruer*; Lat. *obstruo*, *obstructus* — *ob*, and *struo*, *structus*, to build.] To block up; to stop up or close, as a way or passage; to fill with obstacles or impediments that hinder passing; to barricade; as, to *obstruct* a road or river. — To stop; to impede; to be in the way of; to interrupt; to hinder from passing; as, fog *obstructs* the light of the sun. — To render slow; to retard; to clog; to impede; as, to *obstruct* progress.

Obstructer, *n.* One who, or that which, obstructs, checks, hinders, or opposes.

Obstruction, (*-strik'shun*) *n.* [Fr.; from Lat. *obstructio*.] Act of obstructing, or state or condition of being obstructed. — Anything that stops, bars, or closes a way, passage, or channel; that which impedes progress; obstacle; bar or barrier; impediment; hinderance; check; embarrassment.

Obstructive, *a.* [Fr. *obstructif*.] Having a tendency to obstruct; presenting obstacles or impediments; hindering; causing check or stoppage.

— *n.* One who stands in the way of political or social progress.

Obstructively, *adv.* In an obstructive manner.

Obstruent, *a.* [Lat. *obstruens*, from *obstruo*] Obstructing; blocking up; checking; hindering.

— *n.* Anything that obstructs the natural passages in the body.

Obtain, *v. a.* [Fr. *obtenir*; Lat. *obtineo* — *ob*, and *teneo*, to hold.] To get hold or possession of; to gain; to procure; to acquire; to win; to earn; as, to *obtain* a fortune by marriage. — To keep; to hold firmly to; to possess. (*R.*)

— *v. n.* To be received into customary or common use; to continue in use or application; to be established in practice; to subsist in nature.

"Sobriety hath by use *obtained* to temperance in drinking."

Bp. Taylor

Obtainable, *a.* That may be obtained; that may be gained or procured.

Obtainer, *n.* One who obtains.

Obtainment, *n.* Act of obtaining.

Obtend, *v. a.* [Prefix *ob*, and Lat. *tendere*, to stretch.] To pretend; to advance as the cause or reason of anything. (*R.*)

Obtension, *n.* Act of obtaining. (*R.*)

Obtest, *v. a.* [Lat. *obtestor* — *ob*, and *testor*, from *testis*, witness.] To implore; to beseech; to supplicate. (*R.*)

"Suppliants *obtest* his clemency." — *Dryden*.

— To invoke as a witness; to adjure.

— *v. n.* To protest. (*A.*)

Obtestation, *n.* [Lat. *obtestatio*.] Act of obtesting; supplication; entreaty. — Act of obtesting; protestation; earnest or solemn adjuration or injunction.

Obtrude, *v. a.* [Lat. *obtrudo* — *ob*, and *trudo*, to thrust.] To thrust in, into, or on; to throw, crowd, or thrust into any place; to present or introduce with authority or permission. — To offer with unreasonable importunity; to urge upon against the will.

— *v. n.* To thrust, or be thrust upon; to enter without in-

vitiation; to make an officious or unsolicited offer or visit; to put one's self forward with impudence and coolness.

Obtruder, *n.* One who obtrudes.

Obtruncate, *v. a.* [Ob, and Lat. *truncare*, to lop.] To lop; to deprive of a limb or branch. (R.)

Obtruncation, *n.* [Lat. *obtruncatio*.] Act of lopping or cutting off.

Obtrusion, (*tru'zhun*), *n.* [Lat. *obtrusio*, from *obtrudo*.] Act of obtruding; a thrusting in, or entrance without right or invitation.

Obtrusive, *a.* Disposed to obtrude anything upon others; inclined to intrude or thrust one's self among others, or to enter uninvited.

Obtrusively, *adv.* By way of obtrusion or thrusting upon others, or entering unsolicited; in an obtrusive manner.

Obtund, *a.* [Ob, and *tundere*, to strike repeatedly.] To dull, deaden, or blunt the edge of; to take away a sharp corner; to lower the power, pungency, or forcible action; as, to *obtain* the acrimony of the gall.—*Harvey*.

Obtundent, *n.* (Med.) A soothing preparation; a demulcent.

Obturator, *n.* [Fr. *obturateur*, from Lat. *obturare*, to stop up.] That which closes or blocks up an entrance, fissure, cavity, &c.;—chiefly used in reference to anatomical parts and organs; as, the *obturator* muscles.

O. muscles. (Anat.) Muscles which roll a limb outwards or inwards, as the *obturator externus* and *internus* of the thigh.

Obtuseangular, *n.* [From *obtuse* and *angular*.] Possessing angles that are obtuse, or larger than right angles.

Obtuse, *a.* [Fr. *obtus*; Lat. *obtus*, from *obtundo*, to strike, to beat, to blunt—*ob*, and *tundo* = Sansk. *tud*, to strike.] Blunt; not pointed or sharp—opposed to *acute*; as, an *obtuse* angle.—Dull; lacking acute intelligence or sensibility.

"Thy senses thus *obtuse*, all tastes of pleasures must forego."—*Milton*.

—Not sharp or shrill; dull; deadened; obscure; as, an *obtuse* sound.

Obtuse angle. (Geom.) An angle that is greater than a right or acute angle.—*Obtuse-angled triangle*, a triangle having an obtuse angle.

Obtusely, *adv.* Without a sharp or acute point; also, dully; stupidly; insensibly.

Obtuseness, *n.* State or quality of being obtuse; bluntness; dulness; want of quick sensibility; dulness of sound.

Obtusion, (*tū'zhun*), *n.* [Lat. *obtusio*. See *OBTUND*.] Act of making obtuse, dull, or blunt.—State of being deadened, dulled, or blunted.

"Obtusion of the senses, internal and external."—*Harvey*.

Obumbrate, *v. a.* [From *ob*, and *umbra*, shade.] To shade; to cloud; to darken; to obscure.

Obumbration, *n.* Obscuration; act of darkening. (R.)

Obuncous, (*ūnk'us*), *a.* [Lat. *obuncus*.] Excessively crooked or curved.

Obverse, *a.* [From Lat. *obvertere*.] (Bot.) With the base less broad than the top.—said of a leaf.

—*n.* [Fr. *obvers*; Lat. *obversus*, from *obverto*, to turn toward—*ob*, and *verto*, to turn.] (Numismatics.) The side of a coin which contains the principal symbol; usually the face in profile of the sovereign, or the emblematic type of the nation.—That which is involved by conjunction with another, or forms its correlative; as, the *adverse* of a proposition.

Obversely, *adv.* In an obverse manner.

Obversion, (*vēr'zhun*), *n.* Act of turning downward or toward.

Obvert, *v. a.* [Ob, and *vertere*, to turn.] To turn toward or downward.

Obviate, *v. a.* [Fr. *obvier*; from Lat. *obvius*—*ob*, and *via*, a way.] To oppose; to meet in the way; hence, to hinder; to withstand; to remove, as difficulties or objections.

Obviation, *n.* Act of obviating; state of being obviated.

Obvious, *a.* [Lat. *obvius*.] Open; exposed; subject; liable; as, *obvious* to dispute. (*Milton*).—Plain; clear; evident; manifest; readily comprehensible; easily perceived by the eye or the intellect; readily discovered, seen, or understood.

"All the great lines of our duty are clear and *obvious*."—*Rogers*.

Obviously, *adv.* Evidently; plainly; apparently; clearly; manifestly; naturally to be found and perceived easily.

Obviousness, *n.* State of being obvious, plain, or evident to the eye or the mind.

Obvolute, *Obvoluted*, *a.* [Prefix *ob*, and *volvere*, to roll.] (Bot.) Alternately overlapping, as the margins of leaves in a bud.—*Gray*.

Oby, *n.* Same as *OBEAH*, *q. v.*

Obyism, *n.* A species of witchcraft practised by some of the W. Indian negroes. See *OBEAH*.

Oc, *n.* A Turkish arrow.

Ocala, in Florida, an important city, cap. of Marion co., on the Fla. Southern and 2 other R.Rs., 50 m. S. W. of Palatka; in the phosphate-rock region, and ships largely of oranges and other fruits. Pop. (1897) about 4,750.

Ocaña (*o-kan'ya*), a town of the Republic of Colombia, about 60 m. N. W. of Pamplona. Pop. (1897) 7,100.

Occasion, (*ok-kā'zhun*), *n.* [Fr.; from Lat. *occasio*, from *occido*—*ob*, and *cado*, *casus*, to fall. See *CASE*.] A falling out, happening, or coming to pass; an occurrence, casualty, or incident; that which happens out of the natural order or sequence of events.

"The laws of Christ we find mentioned by *occasion* in the writings of the Apostles."—*Hooker*.

—Opportunity; convenience, favorable time, season, or circumstances; timely chance.

"Courage mounteth with *occasion*."—*Shaks.*

—Accidental cause; incident, event, or circumstance giving rise to something else.

"Her beauty was the *occasion* of the war."—*Dryden*.

—Incidental need; casual contingency or exigency; need; necessity; opportunity accompanied with requirement or demand; as, he is equal to the *occasion*.

On *occasion*, in time of necessity; as it occurs; from time to time; occasionally.

—*v. u.* [Fr. *occasionner*.] To cause incidentally to give rise to; to bring about; to influence; to cause; to produce.

Occasional, *a.* [Fr. *occasionnel*.] Happening by accident; casual; incidental; occurring at times, but not regular or systematic; made or happening as opportunity requires or admits; as, an *occasional* frolic.—Brought about or caused by accident; as, the *occasional* origin of a prodigy.—Produced or made on some particular event or emergency; as, an *occasional* quarrel.

Occasional cause. (Metaph.) See *OCCASIONALISM*.

Occasionalism, *n.* (Metaph.) The system of *occasional causes*, by which certain philosophers of the Cartesian school accounted for the apparent action of the soul on the body; *e. g.* in the phenomena of voluntary action. According to these theories (which were more or less clearly developed by different writers), the will was not the cause of the action of the body; but whenever the will required a motion, God caused the body to move in the required direction.

Occasionality, *n.* State or quality of being occasional, casual, or incidental; occurrence at intervals.

Occasionally, *adv.* In an occasional manner; on occasion; according to incidental exigency; at times, as convenience requires or opportunity offers; not regularly or systematically.

Occasioner, *n.* He who, or that which, occasions, causes, or produces.

Occasive, *a.* [Lat. *occasivus*, from *occidere*, to go down.] Pertaining, or having reference to the setting sun; descending; sinking in the west.

Occocation, (*ok-se-kā'shun*), *n.* [From *ob*, and *cacus*, blind.] The act or process of making blind. (R.)

Occident, (*ok-si'dent*), *n.* [Fr.; Lat. *occidens*, falling, from *occide*.] The quarter where the sun goes down or sets; the west; the western quarter of the hemisphere;—correlative to *orient*.

Occidental, *a.* [Lat. *occidentalis*.] Situated in, or having reference to, the west; western;—opposed to *oriental*; as, an *occidental* climate.—Setting after the sun; as, an *occidental* planet.

(Gem.) A term applied to those precious stones which possess an inferior degree of hardness and beauty.

Occipital, (*ok-sip'i-tal*), *a.* [Fr., from Lat. *occiput*, the back part of the head.] Pertaining or relating to the occiput, or back part of the head.

Occiput, *n.* [Lat., from *ob*, and *caput*, the head.] (Anat.) The back part of the head, the *occipital* bone being the opposite of the *frontal*—*sinciput*, as it is sometimes called—or forehead.—A muscle, thin, broad, and fibrous, extending from the base of the occipital bone to the ridge of the eyebrows, and called, from the place of its origin and insertion, the *occipito-frontalis*. This muscle corrugates the brows, and moves the scalp.

Occudent, *n.* That which closes up or shuts to.

Occclusion, (*ok-klū'zhun*), *n.* [From Lat. *occludere*, to shut up.] Act of shutting up; state of being shut up.—The transient approximation of the edges of a natural opening.

Occoquan, in Virginia, a small but rapid river flowing into the Potomac River between Fairfax and Prince William cos.

—A post-village of Prince William co., abt. 100 m. N. of Richmond.

Occult, *a.* [Fr. *occulte*; Lat. *occultus*, from *occulo*—*ob*, and *colo*, *cultis*, to till.] Concealed; hidden from the eye or understanding; invisible; secret; unknown; undiscovered; undetected; as, an *occult* art or science.

O. sciences. A term applied to the imaginary sciences of the Middle Ages. See *ALCHEMY*, *AMULET*, *ASTROLOGY*, *AUGURY*, *BIBLIOMANCY*, *DIVINATION*, *EXOCISME*, *KING'S EVIL*, *MAGIC*, *ORACLES*, *ROSICRUCIANS*, *SORCERY*, *SPIRIT-RAPPING*, *TABLE-TURNING*, and *WITCHCRAFT*.

Occultation, **Occulting**, *n.* [Fr.; Lat. *occultatio*.] Art of making occult, or state of being occult; as, a period of occultation.

(Astron.) The hiding of a heavenly body from our sight by the intervention of some other of the heavenly bodies; said particularly of the eclipses of stars and planets by the moon. It is sometimes called *lunar occultation*, or *occultation of stars by the moon*.

Occulted, *a.* (Astron.) Concealed by the intervention of some other heavenly bodies, as a planet by the moon.

Occulting, *n.* See *OCCULTATION*.

Occultly, *adv.* In an occult or secret manner.

Occultness, *n.* State of being occult, or concealed from view; secretness.

Occupauey, *n.* [From Lat. *occupo*. See *OCCUPY*.] Act of taking or holding possession.

(Law.) The taking possession by any one of a thing of which there is no owner, and the right acquired by such taking possession. See *PRE-EMPTION*.

Occupant, *n.* [Fr., from Lat. *occupans*—*occupo*.] One who occupies or takes possession; one who has possession; and sometimes one who first takes holding of that which has no legal owner.

Occupation, *n.* [Fr., from Lat. *occupatio*.] Act of occupying or of taking possession; as, the *occupation* of an enemy's country.—A holding, keeping, or using; tenure; use; possession; state of being occupied; as,

a house in the *occupation* of a tenant.—Business; vocation; calling; employment; office; trade; profession; that which engages one's time and attention; the business which a person follows to procure a living or obtain wealth.

O. bridge. (Civ. Engin.) A bridge carried above or beneath a line of railroad, and connecting the parts of an estate divided by the line.

Occupier, *n.* One who occupies or takes possession; one who holds or retains possession.

Occupy, *v. a.* [Fr. *occuper*; Lat. *occupo*—*ob*, and *capio*, to take, seize, hold. See *CAPTURE*.] To take possession of; to keep in possession; to possess; to hold or keep for use; as, we *occupied* elegant rooms.—To take up; to cover or fill; as, the book *occupies* all his time.—To employ; to use; as, the business *occupies* many hours.—To busy;—used in a reflexive sense; as, he *busies himself* about other people's affairs.

—*v. n.* To be an occupant; to follow business or occupation; to traffic or negotiate.

Occur, *v. n.* [Lat. *occurro*—*ob*, and *curro*, to run. See *CURRENT*.] To meet or come to the mind; to be presented to the mind, imagination, or memory; as, an idea has just *occurred* to me.—To appear; to meet the eye or observation; to be found here and there, or at various times; as, mistakes will *occur* in spite of every care.

Occurrence, *n.* [Fr.] Something which occurs; any incident, or accidental or fortuitous event; a contingency; that which happens without premonition, or being designed or expected; any single event or circumstance; as, the daily *occurrences* of life.—Occasional presentation.

Occurrent, *a.* Occurring, happening, or taking place; hence, incidental; casual; accidental; fortuitous.

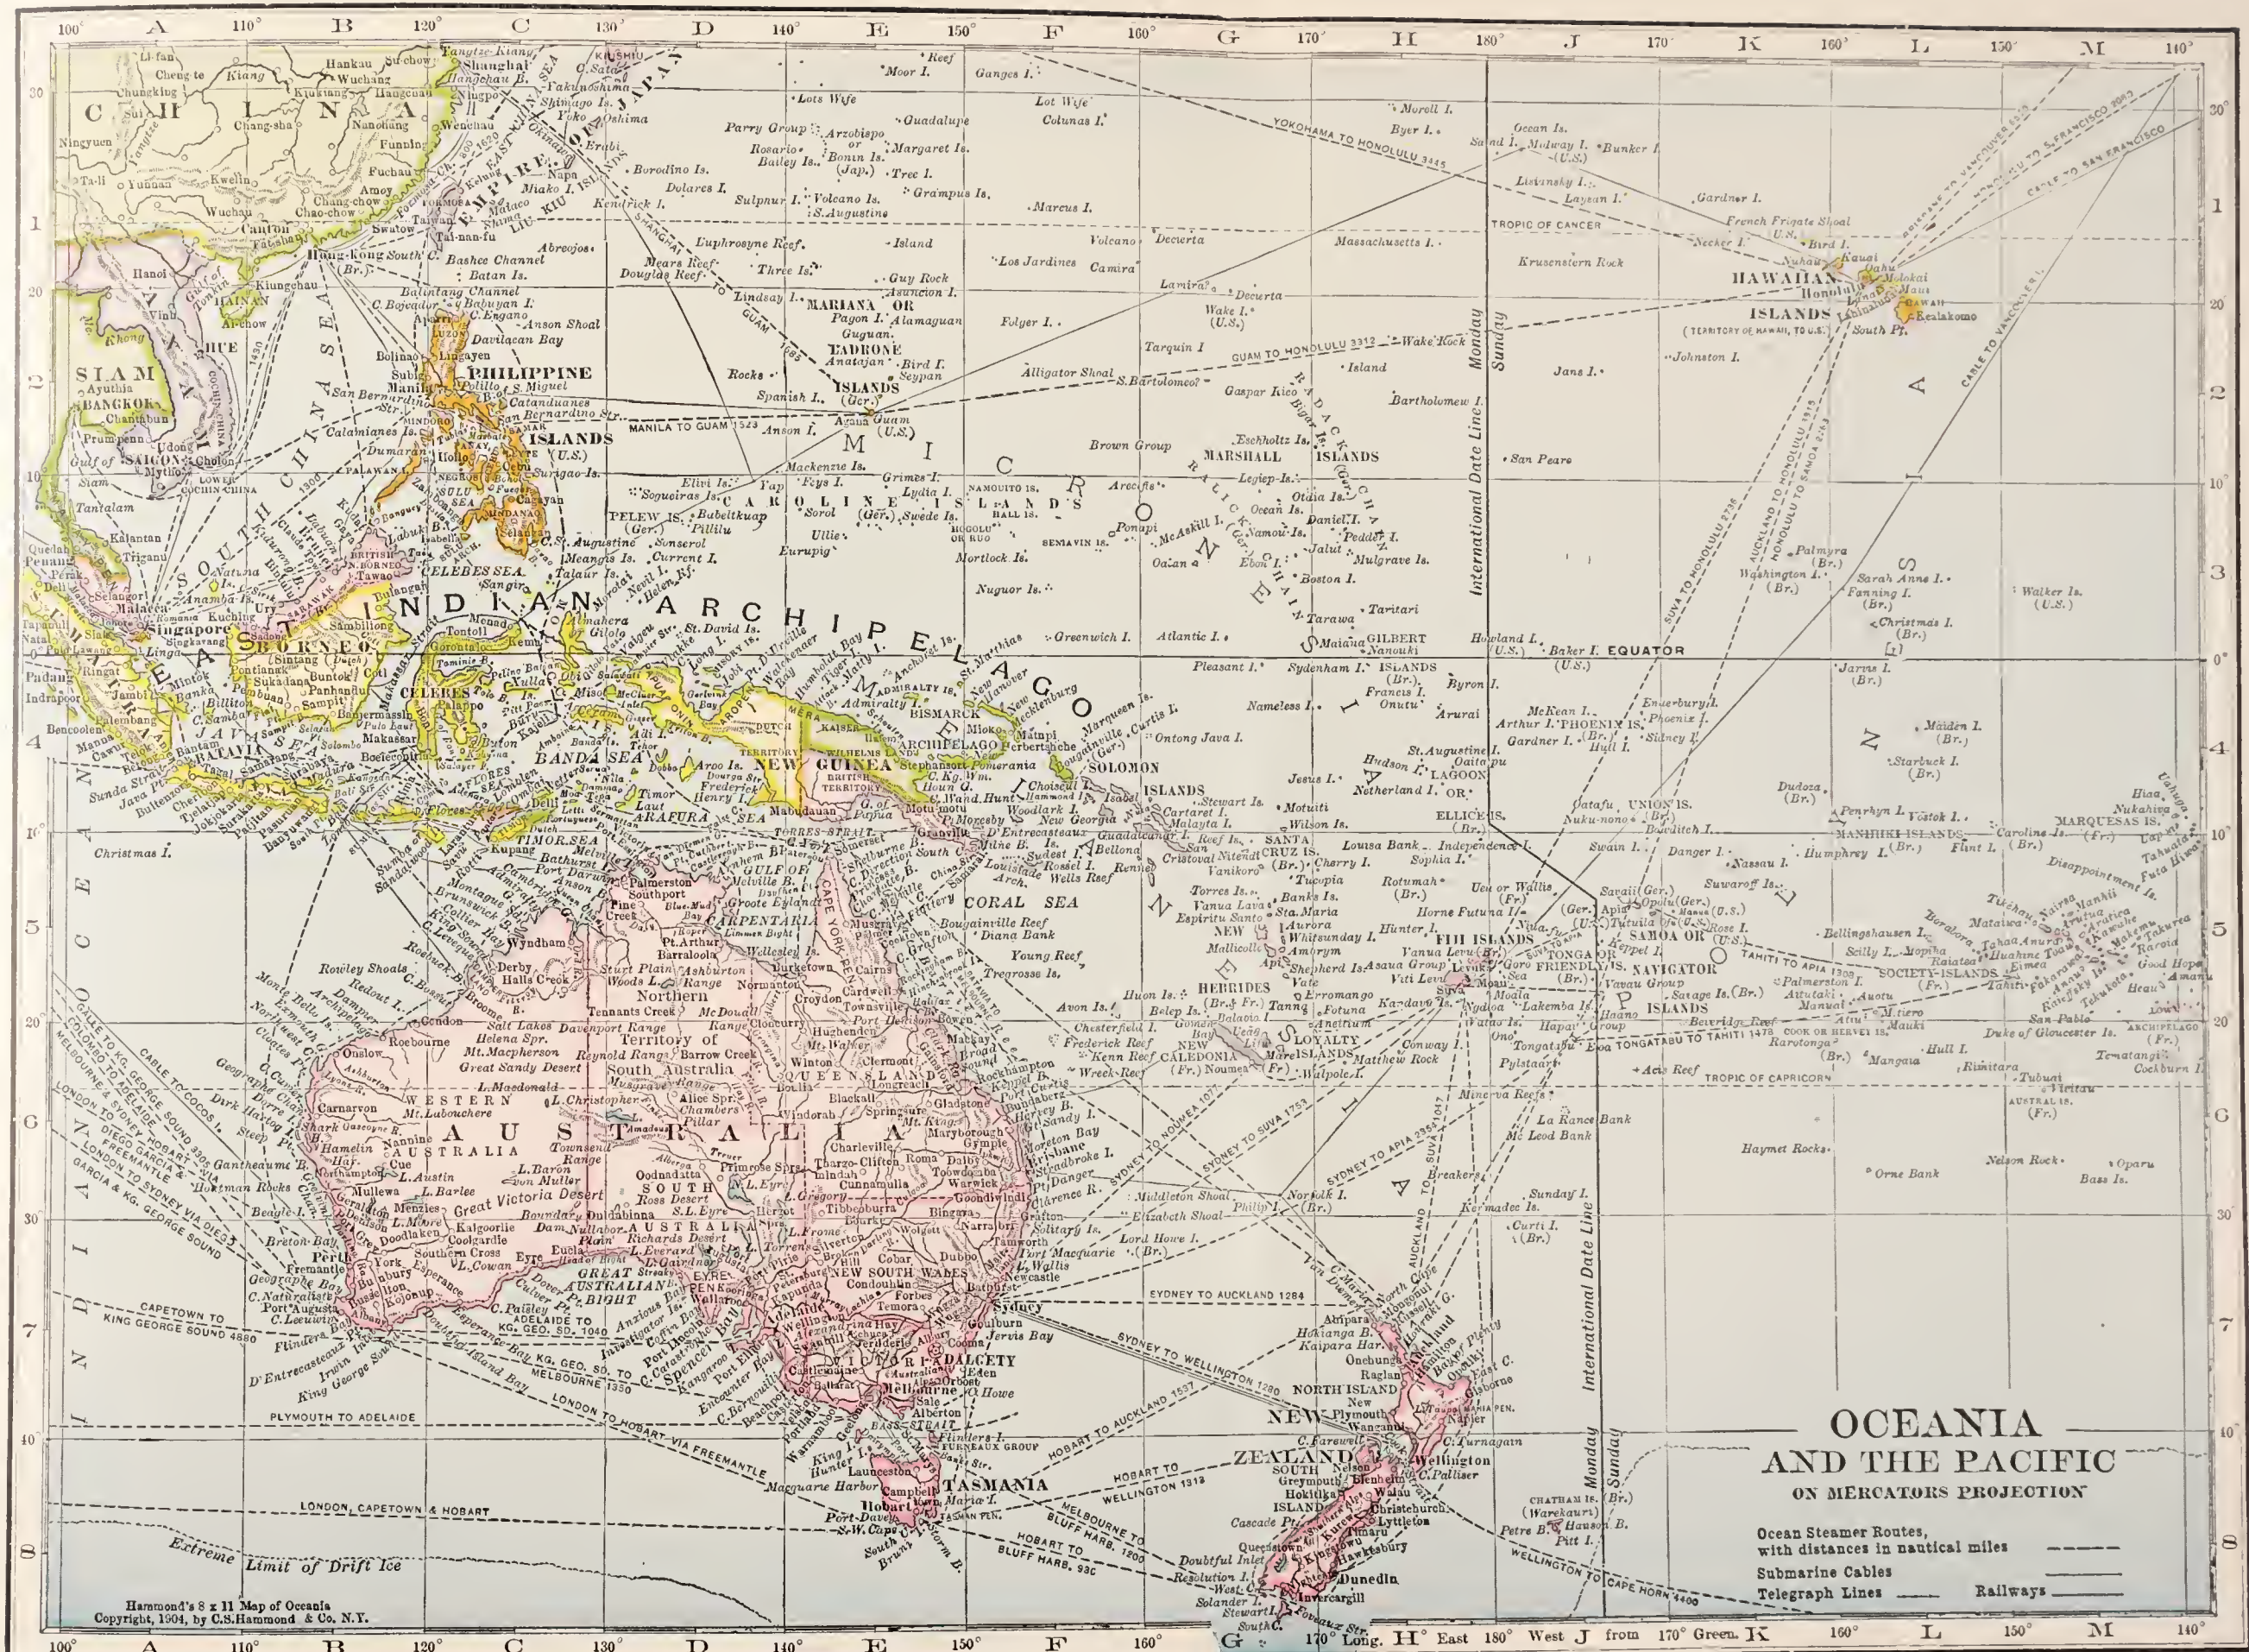

—*n.* [Lat. *occurrentis*.] An adversary; an opponent; one who meets.—An incident; an occurrence; an event.

Ocean, or **Sea**, (*ō'shān*), *n.* [Fr. *océan*; Lat. *oceanus*.]

The general name given to the whole volume of water which occupies the lower part of the surface of the world and surrounds the mainland on all sides. The surface of the earth is made up of about 200,000,000 sq. m., and of these the ocean occupies 143,259,300 sq. m., thus covering five-sevenths of the whole area of the earth. The bulk of dry land on the surface of the globe is found surrounding the north pole; while by far the largest extent of water is found in the southern hemisphere. In geography, the ocean is comprehended in five principal divisions: the Arctic Ocean, surrounding the north pole; the Antarctic Ocean, surrounding the south pole; the Atlantic Ocean, between Europe and America, and the Arctic and Antarctic oceans; the Pacific Ocean, between America and Asia; and the Indian Ocean, lying to the south of Asia, and extending between Australia and the Cape of Good Hope. Fr. in these larger divisions there branch off a great variety of smaller seas, which receive the name of bays, gulfs, and seas, or when they are of smaller extent, of straits, fiords, creeks, roadsteads, and harbors. The mean depth of the ocean is believed to be about 2,686 fathoms (12,480 feet, or nearly 2½ miles). The average depths of the main divisions of the ocean are as follows: Pacific Ocean, 2,500; Atlantic, 2,200; Indian, 2,300; Southern, 2,200; Arctic, 630; and Antarctic, 630 fathoms. The ocean consists entirely of salt-water. For ages it has been continually receiving the drainage of the land, besides having washed over the disintegrated materials of successive continents, it consequently holds in solution all the saline substances capable of being dissolved in cold water. By far the larger proportion of these, however, consist of common salt (chloride of sodium), the chlorides and sulphates of magnesia and lime being next in regard to quantity. In minute, but still appreciable quantities, also occur various salts of potash and ammonia, the iodide and bromide of sodium, carbonate of lime, silica, and a great number of other substances. The sulphate and carbonate of lime, and the silica, although the percentage of the two latter is small, are of great importance in the economy of animated nature, as they furnish the materials out of which the shells of the mollusca, the structures of the coral and other insects, and the shells and carapaces of the silicious infusoria, &c., are derived. Besides these saline and earthy ingredients, sea-water holds in solution metallic salts in extremely minute quantities, including gold and silver, of which the ocean as a whole holds a large quantity, which has been estimated as high as 2,000,000 tons. The whole of the saline matter contained is between three and four per cent., and the specific gravity of the water varies, according to the proportion of the saline ingredients, from about 1.026 to 1.030, pure water being supposed to be 1.000. Dr. Marcet, in 1819, made a series of experiments on this subject, and the general conclusions which he drew from them were as follows:—1. That the Southern Ocean contains more salt than the Northern Ocean in the ratio of 1.02919 to 1.02757. 2. That the mean specific gravity of sea-water near the equator is 1.02777, or intermediate between that of the northern and that of the southern hemispheres. 3. That there is no notable difference in sea-water under different meridians. 4. That there is no satisfactory evidence that the sea, at great depths, is more salt than at the surface. 5. That the sea in general contains more salt where it is deepest and most remote from land; and that its saltness is always diminished in the vicinity of large masses of ice. 6. That small inland seas, though communicating with the ocean, are less salt than the ocean. 7. That the Mediterranean contains rather larger proportions of salt than the ocean. (*Philos. Trans.* 1819.) The saline contents of the ocean are of immense importance in the

economy of nature. In fact, so great is their importance, that it is doubtful whether the present order of things could be maintained without them. By their beneficial action the freezing-point of water is lowered, and the tendency to give off vapor diminished. They also communicate a greater buoyancy to water, by which means the waters of the ocean are better fitted for the purposes of navigation. There is also reason to believe that the presence of these saline bodies in solution contributes in no small degree to the stability of sea-water, and that an ocean of fresh water would rapidly undergo changes which would probably render it incompatible with animal life. At the mouths of great rivers the ocean is often superficially freshened to a considerable distance from the shore. This is the case with the Amazon River to such an extent, that fresh water can be taken up from the sea-surface when out of sight of land, and the sea itself is rendered sensibly less saline at a distance of two or three hundred miles from its mouth. In the polar seas there are also extensive regions where large accumulations of fresh water from snow or glaciers melting in summer, render the surface-water comparatively fresh. The sea is only purely blue in the open ocean, or in very deep water out of the fouling influence of rivers, the washing away of coasts, or such currents as carry mud or impurities along with them. When perfectly clear, a white object, such as a plate, thrown overboard, is seen to become bluer and bluer as it sinks. The blue color of water, like the blue color of the sky, has not yet been scientifically explained. The phosphorescence of the ocean—a phenomenon regarded by all with wonder and admiration—prevails largely through the whole extent of the tropical seas, and proceeds from a great variety of minute organisms. They mostly shine when excited by a blow, or when a fish darts along, or an oar dips in the water. Between the tropics, the temperature of the ocean diminishes with the depth; in the polar seas, on the contrary, the temperature increases with the depth. The surface temperature in the polar regions is about 28° F., in equatorial regions about 85° F., while in the abysmal depths it varies from 32° F. to 36° F., the great mass of the ocean consisting of water below 40° or 45° F., the coldest water, as a rule, being found at the bottom of the sea. As we have before stated, the saline matter in solution influences the freezing-point of sea-water. This fact is of great importance in the economy of nature. In its natural state, sea-water freezes at about 28° or 29°; but when it has become concentrated by previous freezing, the congelation point is reduced to 15° or 16°, while water saturated with salt does not freeze at a temperature above 5°. One of the most interesting phenomena connected with the ocean is that presented in the daily ebb and flow of the tide. If it were not for the disturbing influences of the sun and moon, and of the winds, the surface of the ocean would be level, and would assume the form determined by the attraction of the whole mass of the earth, combined with the centrifugal force belonging to its velocity of rotation. This uniformity, however, cannot be established, on account of the tide, which is at different heights in different parts of the ocean at every instant. (See TIDES.) Wind-waves are small at their first origin, beginning with a mere ripple; but each, as it advances, acquires increased height by the continued pressure of the wind. The largest waves known are those off the Cape of Good Hope, under the influence of a north-west gale—the storm-wind of that region, which drives the swell round the cape, after passing obliquely over the surface of the South Atlantic Ocean. Waves forty feet in height are there met with in such gales; so that two ships in the trough of the sea, with such a wave between them, lose sight of one another from the decks. Waves of thirty-two feet from the trough to the crest have also been observed off Cape Horn. The waves in the N. Atlantic rarely exceed eight or ten feet in height. Besides tides and waves, there are other movements in the ocean which are of great importance; namely, the currents. (See CURRENT.)—In the ocean of the moderns, one of the most important circumstances known is the distribution of life. Until lately it was believed that below a certain comparatively moderate depth all animal and vegetable life ceased, on account of the increased pressure and the want of light and air. It appears that animal life exists at vast depths. The greatest depth recorded by the Challenger, in the Pacific Ocean, was 4,475 fathoms. A more recent sounding, taken off Japan, gives 4,655 fathoms. The greatest depth reached in the Atlantic is 4,561 fathoms, off Porto Rico, West Indies.

O'cean, *a.* Pertaining or having reference to the main or great sea; as, the *ocean wave*.
Ocean (*o'shun*), in *New Jersey*, an E. co., bordering on the Atlantic Ocean; *area*, about 578 sq. m. *Rivers*. Metetecunk and Toms rivers, Cedar creek, and other smaller streams. *Surface*, generally level; *soil*, fertile. *Min.* Iron in large quantities. *Marl* is also abundant. *Cap.* Toms River. *Pop.* (1895) 18,739.
Ocean City, in *New Jersey*, a post-borough of Cape May co., 10 m. from Atlantic City; a summer resort and camp-meeting site. *Pop.* (1895) 921.
Oceana (*o-she-ah'na*), in *Michigan*, a W. co. of the lower peninsula, bordering on Lake Michigan; *area*, about 750 sq. m. *Rivers*. White and Nottipekago rivers, besides several smaller streams. *Surface*, agreeably diversified; *soil*, fertile. *Cap.* Hart. *Pop.* (1894) 16,597.
Oceana, or **WYOMING COURT-HOUSE**, in *West Virginia*, a post-village, cap. of Wyoming co., about 58 m. S. of Charlestown.
Ocean'ia, or **Ocean'ica**. (*Geog.*) A name which is very often applied to the 5th division of the globe, comprising all the islands between the S.E. coast of

Asia, and the W. shore of America, including the Eastern Archipelago, Australasia, and Polynesia.

Oceanic, (*o'she-an'ik*), *a.* [Low Lat. *oceanicus*.] Pertaining to the ocean; found or formed in the ocean.

Oceanology, *n.* [Gr. *ōkeanos*, ocean, and *logos*, treatise.] A treatise upon the ocean; that branch of physical science which relates to the ocean.

Ocean Port, in *New Jersey*, a post-village of Moumouth co., abt. 3 m. W. of Long Branch.

Oceanus. (*Myth.*) The god of the sea, son of Coelus and Vesta, the husband of Tethys, and the father of all the water-nymphs, called Oceanides, and those presiding over fountains, streams, and rivers.

Oceanville, in *New Jersey*, a village of Atlantic co., abt. 16 m. E. of May's Landing.

Ocellary, *a.* Belonging or relating to ocelli. See **OCELLUS**.

Ocellated, *a.* [From Lat. *ocellus*, a little eye; Fr. *ocellé*.] Resembling an eye.—Presenting a configuration of little eyes, after the manner of a peacock's tail.

Ocellus, *n.*; *pl.* **OCELLI**. [Lat. dim. of *oculus*, eye.] A little eye; a minute ocular organ found in certain animals.

Ocelot, (*o'se-lot*), *n.* [Mex. *ocelotl*.] (*Zool.*) The name of several species of the family *Felidae*, generally smaller than the Ounce. They present considerable variety in the form and distributions of the markings of its coat; but, nevertheless, the coloring is always chaste and the assemblage harmonious; the rich red of the ground tint blending finely with the deep brown, or almost black color, of the borders of the spots. The common O., *Felis pardalis*, is about three feet and a half to four

Fig. 1978. — OCELOT, (*Felis pardalis*.)

feet in length, including the tail, which is between 11 and 12 inches. It is a native of the warm parts of America from Texas to Brazil, and of Sumatra, inhabiting the forests, and climbing trees in search of its prey, which consists of birds and small animals.

Oceo'la, or **OSCEOLA**, in *Indiana*, a post-village of St. Joseph co., abt. 8 m. E. of South Bend.

Oceo'la, in *Wisconsin*, a post-township of Fond du Lac co.; *pop.* abt. 1,500.

Ochil Hills, (*ok'il*), a range of mountains in Scotland, cos. of Perth and Fife. *Extent*. 24 m. long, and 12 m. in average breadth. The highest peak, Benclough, attains an elevation of 2,400 ft.

Ochlesis, (*ok-lé'sis*), *n.* [Gr. *ochlos*, a crowd.] (*Med.*) A morbid condition induced by the crowding together of sick persons under one roof.

Ochlocracy, (*ok'lok-ra-se*), *n.* [Fr. *ochlocratie*; Gr. *ochlokratia*—*ochlos*, the populace, the mob (akin to Lat. *vulgus*, Eng. *folk*, Ger. *volk*, and Fr. *canaille*), and *kratos*, might, power, rule.] A form of government in which the multitude or common people hold the reins of power; mob-law; red-republicanism.

"An ochlocracy is a noisy prelude to anarchy."—*Hare*.

Ochlocrat'ic, **Ochlocrat'ical**, *a.* Belonging or relating to ochlocracy; possessing the attributes or characteristic form of mob-rule; as, an *ochlocratic* government.

Ochlocrat'ically, *adv.* In an ochlocratic manner; mob-fashion.

Ochna'ceæ, *n. pl.* [Gr. *ochne*, the pear-tree.] (*Bot.*) An order of plants, alliance *Rutales*. *DIAG.* A one-seeded, finally apocarpous fruit, whose pericarp does not laminate, and a succulent coriaceous torus.—They are under-shrubs or smooth trees, with alternate, simple, stipulate leaves. Flowers, hypogynous, perfect, regular, and symmetrical, with the pedicels articulated in the middle; calyx and corolla usually with a quinary distribution, imbricated, the former persistent, the latter deciduous, stamens hypogynous, 5, 10, or numerous; anthers 2-celled, with longitudinal or porous dehiscence; style simple, with minute stigmas. Seed with very little or no albumen; embryo straight, with the radicle towards the hilum. The O. are natives chiefly of the tropical parts of India, Africa, and America. They are generally remarkable for their bitterness. Some, as *Gomphia parryiflora*, yield oil suitable for salads. The order includes 82 species in 6 genera.

Ochraceous, (*o-krá'shus*), *a.* [Fr. *ocreux*, from Lat. *ochra*; Gr. *ōchra*.] Of an ochre color, or a yellowish brown.

Ochre, (*ō'kr*), *n.* [Fr. *ocre*; Lat. *ochra*; Gr. *ōchra*, from *ōchros*, pale, yellow; Sansk. *hari*, yellow.] (*Min.*) A name applied to certain metallic oxides occurring in an earthy or pulverulent form, especially to such as are used for pigments, as red ochre, yellow ochre, &c.

O'chrea, *n.*; *pl.* **O'chreæ**. [Lat. *ocrea*, a greave.] (*Bot.*) A kind of sheath consisting of two stipules lapped round a stem.

O'chreate, *a.* (*Bot.*) Having ochreæ.

Ochreous, (*ō'ker-us*), *a.* [Fr. *ocreux*.] Consisting of, or containing ochre; resembling ochre; ochraceous; ochry.

Ochroite, (*ō'kro-it*), *n.* [Fr., from Gr. *okros*.] (*Bot.*) Same as **CERITE**, *q. v.*

Ochro'ma, *n.* [Gr., pallid hne.] (*Bot.*) A genus of plants, order *Sterculiaceæ*. The species *O. lagopus*, a West Indian tree, has an antisyphilitic bark, and spongy wood, which is sometimes used as a substitute for cork.

Ochry, (*ō'kér-y*), *a.* Pertaining or having reference to ochre; containing or resembling ochre.

Oci'la (or **OSCILLA**) **River**, rises in Thomas co., Georgia, and flowing S. into Florida, enters the Gulf of Mexico between Taylor and Jefferson cos.

Oci'mum, *n.* (*Bot.*) A gen. of plants, ord. *Lamiaceæ*, to which belongs the Basil, one of the most fragrant and aromatic of kitchen herbs. The most esteemed kind is *O. Basilicum*, the Royal Ocimum, or Sweet Basil, a native of Persia, the flavor of which somewhat resembles cloves, and is much used in cookery, as seasoning.

Oclau, (*ok'lau*), in *Georgia*, a creek flowing into the Ocmulgee River in Pulaski co.

Ocmul'gee (or **LITTLE OCMULGEE**) **River**, in *Georgia*, is formed by the union of several branches in Newton co., and flowing a general S.E. course, joins the Oconee at Colquitt in Montgomery co., to form the Altamaha.

Ocmul'gee Creek, in *Alabama*, enters Cahawba River in Dallas co.

Oco'na, a town of Peru, abt. 90 m. W. of Arequipa.

Oconee', in *Georgia*, a river formed by the union of numerous branches in Washington co., and flowing S.S. E. joins the Ocmulgee River in Montgomery co., to form the Altamaha River.

—A post-village of Washington co., abt. 147 m. N.W. of Savannah.

Oconee' Station, in *Illinois*, a post-village of Shelby co., abt. 22 m. N. of Vandalia.
